fessional education. Thus, if you happen to earn $2000 a year, put $20 a year into modern technical books, $20 into trade magazines and associational bulletins, $20 into personal efficiency engineering or experimental equipment. The records of big men show that an employee has the best chance of promotion who does what he has to do with rare skill, speed, or economy. The richest young man in America, John D. Rockefeller, Junior, affirms that success lies in the habit of doing *common things uncommonly well.*

Devote one evening a week to studying the qualifications, duties and responsibilities of the place next above yours, in line with yours. Don't study the man who holds the job—study the job. You are not trying to supplant him—you are trying to be ready for promotion in case he should leave, or to earn a similar position elsewhere. But you may properly cultivate the good qualities of the man higher up. What has he that you have not? More specialized knowledge—more power of execution — more personal influence — more physical endurance — more self-control—more tenacity of purpose? You will find one thing universally true: The higher a man climbs, the more he shakes off personal weakness, folly and eccentricity. A higher job is always harder on a man's lower tendencies. You can't break a single rule of health, efficiency or morality—and be as fit as you were before. What are these rules? How closely do you observe them? How much keener is the man above you in this matter?

Note the special kind and amount of technical education you will need in the higher position—then obtain catalogs of the different correspondence schools, and enter the course you deem best. If you are a manual worker, you probably need a specialized course in a higher form of industrial operation; but if you are an executive, you probably need a general course in the fundamentals of business conduct. The one course, however, that you certainly need is the basic study of personal efficiency—the modern science of managing your work, your time, your thought, your self, your future. We will gladly name good correspondence courses on request.

Aim to spend from two to four evenings a week in home study and experiment. A plan worth trying is to make Monday and Tuesday evenings work evenings — Wednesday evening play time — Thursday and Friday evenings work periods — and Saturday evening the crowning pleasure season. Or, you could well devote Monday, Tuesday and Wednesday evenings to promotion training, then have the remaining nights free of work-thought. For several years, when I was doing work peculiarly hard and unpleasant, as efficiency training, the only chance for professional study and creative thought was between the hours of 9 p. m. and 1 a. m. Some of our plans that have since proved most valuable were developed after midnight, when seclusion was perfect and mental focus powerful. We do not recommend the habit of midnight toil. But we are convinced that the young man who hopes to succed must be *willing* to work all night — he is so aflame with the ardor of ambition. A healthy grown person under forty should work an average of sixty hours a week; if his hands are not occupied all this time, his brain should be. With your eight-hour day goes eight-hour pay, the small, common pay of the millions of small men, who stop working when the whistle blows, and stop thinking before they commence. About the only thing you need to fear in business is the fear of doing too much. Crowd your capacity, then watch it expand. Brain-cells, unlike body-cells, have to be stimulated. When you turn on the electric light, think of the man who harnessed electricity — he has worked more than twelve hours a day for the past thirty years. The greater the force you command, the longer you must be on the job.

Search out the business problems that confront your head men, resolve to find a solution for one or more of those yet unsolved. They may concern buying,

SELF PROMOTION CHART

BY WHICH ANY PROFESSIONAL OR INDUSTRIAL WORKER, ON SALARY OR WAGES, MAY ENGINEER AND EARN PROMOTION FOR HIMSELF

DIRECTIONS. First read Mr. Purinton's article "The Job Higher Up." Then grade yourself on the following questions. Where answer is Yes, write numeral 4 in space opposite. Where answer is No, leave space blank. Where answer is partial affirmative, write numeral under 4 that you consider fair. Obtain your approximate percentage by adding numerals. Queries and problems will be gladly answered by Mr. Purinton, when addrest care Independent Efficiency Service, 119 West Fortieth Street, New York. Watch Efficiency Question Box in The Independent, or the mails, for reply. Readers must be answered in turn; therefore kindly exercize patience, if necessary.

1.	Do you believe that employees promote themselves?	.....
2.	Have you picked out the higher place you want—or one like it?	.....
3.	Are you regularly training yourself, in mind and body, for this position?	.....
4.	Would you rather do better work than receive higher pay?	.....
5.	Do you always blame yourself when failure and disappointment come?	.....
6.	Have you found at least four causes in yourself to explain why promotion is slow?	.....
7.	Would you rather work ten minutes over the hour than one minute under?	.....
8.	Do you spend at least 3 per cent of your salary for technical books, courses, journals, experiments?	.....
9.	Have you investigated two or more correspondence schools in your line?	.....
10.	Are you studying, or have you completed, a course in personal efficiency?	.....
11.	Did you ever stay awake till 2 a. m.—working out a business problem?	.....
12.	Do you average ten hours a day in professional activity, manual or mental?	.....
13.	Are half your evenings devoted to preparation for business advancement?	.....
14.	Is your greatest talent or power being used in your present position?	.....
15.	Does your chief rely on your work without having to inspect it?	.....
16.	Do your fellow workers all respect you, and like you?	.....
17.	Are all your criticisms of the company or officials made *to* the men concerned—not about them?	.....
18.	Would you rather be "called down" justly than boosted up unjustly?	.....
19.	Have you studied all the aims, policies, methods and products of your concern?	.....
20.	Are half your friends men who know more and earn more than you do?	.....
21.	Is your manner always kindly, your appearance always neat?	.....
22.	Have you learned from authorities how to eat efficiently, and think efficiently?	.....
23.	Do you keep silent regarding your ambition, preferring deeds to words?	.....
24.	Could you invest $1000 cash or more in a new business opportunity?	.....
25.	Do you keep your nerve, temper, health and optimism under all circumstances?	.....

Add column of numerals for your approximate grade in the science of self promotion

A $25,000 position—can you qualify?

The production-managership of a big corporation is open. The salary is $25,000 a year.

You want that job. You call on the president and try to "sell" yourself to him and the corporation.

What have you to offer? What are your talking points? Could you, with confidence, answer the advertisement for a $25,000 executive which appeared in a leading weekly magazine?

Do you really believe you are qualified for so responsible an executive position? Or do you realize that you cannot fill the place because you are one-sided? You are a capable traffic manager, office manager, auditor or credit man. But what do you know about the rest of the business?

The knowledge an executive must have

An executive must have a sound, general knowledge of business and the principles that underlie it. Have *you* that knowledge?

You cannot qualify for an executive position unless you know the fundamentals of business. Modern corporations have no high places for untrained men, or one-job men. For the big places, judgment and a broad knowledge, rather than specialization, are required.

The Modern Business Course and Service of the Alexander Hamilton Institute trains men in business principles. It trains men to be executives by teaching them business fundamentals. When you study it you get the benefit of the experience of thousands of successful men with all their errors eliminated.

A man with this training has a saleable asset. He does not lack talking points when the big opportunity comes to "sell" himself.

Now is the time to acquire that business training. The Modern Business Course and Service is designed for the spare time of busy men. You can study in your home, in the odds and ends of your time.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young men in their employ. Among the 60,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; George M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co., and scores of others equally prominent.

In the Standard Oil Co., 286 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 293; in the Pennsylvania Railroad, 92—and so on down the list of the biggest concerns in America.

Advisory Council

Business and Educational authority of the highest standing is represented in the Advisory Council of the Alexander Hamilton Institute. This Advisory Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W. Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Ahead in Business," which we will send you free, will repay you many times over. Every man with either a business or a career to guide to bigger, surer success, should read this book. Simply fill out and send the coupon below.

Business Position . . . . . .

or manufacturing, or selling, or advertising, or accounting, or operating, or cost-cutting, or time-saving, or help-handling, or a dozen other departments. You have some great, natural gift or leaning — every man has, for a special branch of industrial experiment and progress. What are you doing with your talent? Using it for promoting yourself? Or letting it lie buried under the routine of your day's work? Or throwing it away in mental, emotional or physical dissipation? Learn what your special power is, then focus it on a special problem of your employer; devise a practical solution, put your plan up to him—and yourself on the waiting-list for promotion!

Resolve to become your own critic, supervisor and inspector, thus guaranteeing the excellence of your work and saving time and trouble for your employer. Half the worry of the man higher up is caused by mistakes of employees. A big salary is the pay for big responsibility. When you make yourself always and utterly responsible, you put yourself automatically into the high official class, and only time is needed for demonstration. J. Ogden Armour, who employs 40,000 men and does a business of $500,000,000 a year, says that promotion is bound to come to the man who sets a new pace wherever he is—always working a little harder, and thinking a little more quickly, than the fellow beside him. Guaranteed recipe for promotion: Do your own work both faster and better than it was ever done before.

Expel from your mind, however, the idiotic notion that when you raise the quality of your work you bestow a benefit on your employer or customer. You serve yourself most when you serve others best. The world's big men grew into leadership not by working for a wage but by striving for a purpose. No man is great until he can do his best without remembering the matter of reward. How to reach the top of any business: Do your best because it is your best and nothing less will satisfy you.

Cultivate the spirit of coöperation. Also master the science of it. How quickly and gladly would you help a man over a hard place in some other department? How well do you know the relation of your department with every other? How fully have you learned the aims, principles, policies, methods and products of your company as a whole? Every phase of the business has a bearing on your work. If you look at nothing but your own little job, you are as poor a stick as a second baseman in a ball-game would be if he never watched the batter or first base! The fine plays in business result from the fine team work. The hight of a sound building is according to the breadth of its base; and to build a high career you must have, in the first place, a broad business knowledge.

A FEW personal suggestions, from the lives of men of power. Make friends with people of superior attainment—knowledge, skill, reputation, character, influence; the more big men you can meet, the sooner you are likely to advance; probably forty per cent of the sudden promotions to high places are at the instigation of magnates watching a fine worker when he did not know they were doing it. Pay small attention to your "social set"—they can't help you; they are likely to hinder you, and the less you dally with society the better chance you have to dominate the real world of real men. But don't neglect your personal appearance; always look your best; wear the styles that most become you; in choosing and caring for your business attire, be highly fastidious without being highly fashionable. Guard against flaws in your health equipment; a larger salary means more responsibility and more nervous strain; be prepared; avoid illness later by adopting now the most efficient habits of eating, sleeping, exercizing, working, resting and playing. Find where you stand in personal efficiency—apply several of our tests published recently in The Independent (now in book form). Carry a note-book with you always, and in spare time work out ideas for later development. Keep a filing system at home, with all the clippings you can gather, weekly or monthly, on personal and technical efficiency, from newspapers and magazines. Devote fifteen minutes a day, outside of business hours, to constructive thinking about your work, your field, your future.

Above all, don't envy the man who succeeds. Emulate him! Heed the words of Charles M. Schwab, who knows how to climb to the top, if any man does. Mr. Schwab says: "The high officials at the Bethlehem Steel Works are not geniuses or prodigies—they have won out by using normal brains to think beyond their manifest daily duty; they all began at the bottom and worked their way up, simply by using head and hands a little more freely and effectively than the average man. Success is a compound of superloyal service and a specialized brain."

Every good workman has two jobs—that of laborer for his employer, and that of promotion engineer for himself. How are you handling the second job?

CHINESE STUDENTS AT OUR EXPENSE

BY WILLIAM T. ELLIS

AUTHOR OF "MEN AND MISSIONS"

PRESIDENT ROOSEVELT wrought more mightily than even he knew, when, at the suggestion of a private citizen, he officially and publicly invited Chinese students to American institutions of learning, and lent his aid to the successful endeavor to have the remitted Boxer indemnity set apart for the education of Chinese students in America. Those two actions have become living strands, binding together the oldest and the largest republics.

So profound and far-reaching has been this unique expression of the diplomacy of democracy, in the life of both nations, that the time has come to consider whether a further expression of the idea is not practicable.

Why should not every alert and broad-minded American city, eager to serve the country and the world, as well as its own interests, make provision for bringing to its homes and schools one or more Chinese students, to be educated at the expense of the municipality? Thru the Educational Director of the Chinese Legation at Washington it should be possible to secure accredited, English-speaking young people, eager to fit themselves in America for the service of new China.

Such a plan may have vast consequences. Many, or most, German cities long ago adopted it with respect to Turkish students. The result is seen in the history of the present war. Had it not been for her sentimental associations with Germany, Turkey would doubtless never have made the present military alliance with the Teutonic powers. The young men educated in Germany are now in control of Turkey; just as the young men educated in American schools are now the dominant influence in Chinese public life.

Keen as they are to publicity values, American cities with the new civic pride would not be insensible to the advantage of sending back into the world's greatest market men imbued with their own spirit, loyal to them and to America, and eager to promote the mutual interests of China and America.

Incidentally, such a civic enterprize would increase local attention to international affairs, and would also give the community a topic for discussion that would wholesomely minister to local pride. Especially in cities where there are colleges, the plan is feasible and desirable. Before being officially acted upon it should be discussed by Chambers of Commerce, Rotary Clubs, Advertising Organizations, Women's Clubs, Schools, the newspapers and the other agencies that create public sentiment, so that back of the new hospitality, when it is extended, may be the genuine interest of the people.

A thousand American cities, with more than a thousand Chinese student guests—the suggestion is fraught with possibilities for international good will in the new day of world brotherhood.

Swarthmore, Pennsylvania

WHAT TO READ ABOUT NATIONAL DEFENSE

It is not sufficient to give a narrative of the events of the week and a discussion of their significance by the editors and outside experts. Readers of The Independent type want to follow up a subject and need to know where they can find further information upon which to base their opinions. To meet this demand we have decided to print frequently annotated lists of reference books on timely topics. The immediate question of the day is, of course, the preparation of the United States for war, and on this we suggest the following as helpful in various ways:

Military Obligations of Citizenship, by Leonard Wood. (Princeton University Press. $1.) Four addresses before schools setting forth the need of universal military training.

Military Unpreparedness of the United States, by F. L. Huidekoper. (Macmillan Co., New York, $4.) The authoritative and intensely interesting account of our military affairs from the opening of the Revolution thru the Spanish war; a story of courage, devotion and piteous waste of means and men.

Military and Naval America, by H. S. Kerrick. (Doubleday, Page & Co., Garden City, New York, $2.) Answers the constantly arising questions as to the organization, training, duties of all branches of the army and navy service.

Life at the United States Naval Academy, by Ralph Earle. (G. P. Putnam's Sons, New York, $2.) Describes the régime, the requirements, the methods of instruction, the history of Annapolis.

Story of the Submarine, by Farnham Bishop. (Century Co., New York, $1.) A short, untechnical description of the evolution, mechanism and possibilities of this new weapon.

Learning to Fly, by C. Graham-White and Harry Harper. (Macmillan Co., New York, 75 cents.) The personal rather than the mechanical side of aeronautics.

Awake U. S. A! by W. Freeman. (G. H. Doran Co., New York, $2.) Sets forth the present condition and deficiencies of the different branches of the service. Illustrated.

National Defense and *Military Training in Schools and Colleges*. (H. W. Wilson Co., White Plains, New York, $1.25 each.) Handbooks, gathering in small compass data, extracts from books and articles, bibliographies and information as to organizations. Most useful.

The Plattsburg Manual, by O. O. Ellis and E. B. Garey. (Century Co., New York, $2.) For officers and men, and for all citizens who would see just what learning to be a soldier means.

The Swiss Army System, by Remy Faesch. (G. E. Stechert & Co., New York, 25 cents.) A Swiss officer tells just how Switzerland makes its citizen army.

National Security League, 31 Pine Street, New York, publishes, and sends for postage, excellent pamphlets on all phases of preparedness.

Arms and the Boy, by L. R. Gignilliat. (Bobbs-Merrill Co., Indianapolis, $1.50.) By the head of Culver Academy, one of the great private schools, this deals with military training for schoolboys, and what is now being done here, and discusses the effect on the boy.

National Service. (Doubleday, Page & Co., Garden City, New York, $3 a year.) A monthly magazine advocating universal, short time, military training.

An Officer's Notes, by Capt. R. M. Parker. (G. N. Harvey, 109 Lafayette Street, New York, $2.) The textbook widely used in the Reserve Officers Training Corps, now being widely organized for civilians.

The New Oliver Nine

Was $100 Now $49

A TYPEWRITER REVOLUTION

New Machines for Half the Former Price

At the very height of its success, The Oliver Typewriter Company again upsets the typewriter industry. Just as it did in 1896, when it introduced visible writing and forced all others to follow. Now this powerful Company—world wide in influence—calls a halt to old expensive ways of selling typewriters. It frees buyers of a wasteful burden.

A company strong enough, large enough and brave enough to do a big, startling thing like this, deserves a hearing.

The full facts are set forth in our amazing exposure, entitled "The High Cost of Typewriters—The Reason and The Remedy." One copy will be mailed to you if you send us the coupon below.

HOW WE DO IT

Henceforth The Oliver Typewriter Company will maintain no expensive sales force of 15,000 salesmen and agents. Henceforth it will pay no high rents in 50 cities. There will be no idle stocks.

You, Mr. User, will deal direct now with the actual manufacturer. No middlemen—no useless tolls. We end the waste and give you the savings. You get the $51 by being your own salesman. And we gain economies for ourselves, too. So it isn't philanthropy. Just the new, efficient way of doing business to meet present-day economic changes.

Note this fact carefully. We offer the identical Oliver Nine—the latest model—brand new, for $49, the exact one which was $100 until March 1st.

THE LATEST MODEL

Do not confuse this offer of The Oliver Typewriter Company itself of a brand new latest model 9 with offers of second hand or rebuilt machines.

This is the first time in history that a new, standard $100 typewriter has been offered for $49. We do not offer a substitute model, cheaper, different or rebuilt.

Read all the secret facts in our document, entitled "The High Cost of Typewriters—The Reason and The Remedy." The coupon below mailed to-day will bring you one copy.

SAVE $51

This Oliver Nine is a twenty-year development. It is the finest, costliest, most successful typewriter we ever built. It is yours for 10 cents per day in monthly payments of $3.00. *Everyone* can own a typewriter now. Will any sane person ever again pay $100 for a standard typewriter when the Standard Visible Oliver Nine sells for $49?

Send to-day for your copy of our book and further details. You'll be surprised.

MAIL TODAY

FREE TRIAL

No money down—no C. O. D.

After you read our book you may ask for an Oliver for five days free trial. Be your own salesman. Save yourself $51. You decide in the privacy of your own office or home, as you use the Oliver. Then if you want to own an Ovlier you may pay at the rate of 10 cents per day.

Mail the coupon now for "The High Cost of Typewriters—The Reason and the Remedy." It rips off the mask. Cut the coupon out now.

If You Can Afford to Write a Letter
You Can Better Afford to Write It on

CONSTRUCTION BOND

To write a business letter on any kind of paper costs 10 to 50 cents. To write it on Construction Bond costs only 1-10 of a cent more than on shoddy paper.

And Construction Bond will give your letter the tone, the seeming importance, which gets favorable consideration, prompt action. That is what you want—must have—for every business letter. Else it is a waste to write it.

Confidence begets action; and Construction Bond inspires confidence. So you will reduce delays, get more business—even save money in the end—if you put Construction Bond character into every letter.

There is a top notch printer or lithographer in your locality who produces virile business stationery on Construction Bond. Ask us for his name and some letterhead suggestions that will help you.

Look for this watermark in the stationery of firms of recognized importance. You will find it frequently.

BOND

W. E. WROE & COMPANY, 200 EAST ILLINOIS STREET, CHICAGO

WAR GARDEN EFFICIENCY

THERE has never been a year in American history when it was so important for everyone who has even a small patch of ground available to do his or her part toward raising the foodstuffs which the country needs. And there has never been a year when the business of the seedsmen indicated such a widespread interest in garden-making.

The real test of these war gardens comes not in the spring, the season of enthusiastic beginnings, but later on in the season, when weeds and pests, drouth and heat, make the gardener's task a perplexing and difficult one.

To help in keeping these war gardens up to an efficient level of productiveness, The Countryside has established a War Garden Bureau which will deal freely and practically with all the problems involved in successful vegetable gardening.

Questions will be answered promptly if addressed to

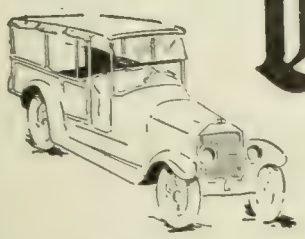
THE COUNTRYSIDE WAR GARDEN BUREAU
119 West Fortieth Street - - - New York City

BEST-SELLERS OF A CENTURY AGO

In 1793, Thaddeus M. Harris, librarian of Harvard, published "A Catalogue of some of the most esteemed Publications in the English Language," as a basis "for a small and cheap library intended to suit the tastes and circumstances of common readers." Dry as such a list necessarily is, it represents a very valuable index of the intellectual level and literary taste of our forebears in the last decade of the eighteenth century. The bibliographically inclined reader will, we are sure, textually devour the following facts and book titles:

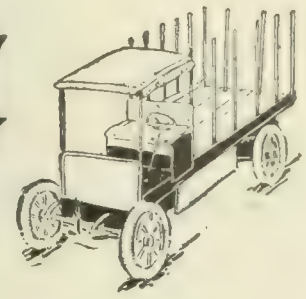
There are in the catalog 276 entries comprizing about 700 volumes. Since not all of the editions are specified, we can only make an approximate guess at the money value represented. Dr. E. L. Bradsher, of the University of Texas (see the October issue of the *Sewanee Review*), estimates the collection at $1500 in the money of that time.

Since the purchasing power of the dollar was then at least 6/8 times larger than at present, millionaire publishers and booksellers must have run the streets of good old Boston and Philadelphia.



In the Historical and Biographical sections we meet with names such as Jeremy Belknap (1744-98), author of a "History of New Hampshire" and of "American Biographies"; Gibbon, Goldsmith, Hume, Hutchinson, Johnson, William Robertson (1721-1793), a Scottish historian; Rollins and Voltaire. Of the forty entries in this section, seven pertain to the Colonies, one each to South America, the East Indies and West Indies.

The Natural History shelf contains Goldsmith's "History of Animated Nature," 1784 (our author is identical with the above named historian); Kirwan's "Mineralogy and Metallurgy," 2 volumes; Riley's "Beauties of Creation," 2 volumes, 1790, and Rousseau's "Botany" and "System of Natural History," 3 volumes, 1792.



Travel literature counts 24 entries; Bruce's "Travels to Discover the Source of the Nile," 6 volumes, 1790; Bartram's "Travels Through North and South Carolina," 1791, etc.

Under Poetry and Drama we find: Collins' "Poetical Works" (with his Life by Dr. Langhorne); Cowper's "Task and Poems"; Erasmus Darwin's "Botanic Garden"; Dwight's "Conquest of Canaan"; Gray's "Poems and Letters"; Milton's "Paradise Lost"; Pope's Works; his "Translation of the Iliad and Odyssey"; Scott's "Poetical Version of the Book of Job"; Shakespeare's Plays; Thompson's Works; Young's Works.

We stop here with the enumeration shelves, but as we look over the list we cannot help wondering whether the readers of The Independent of the year 2039 will puruse with an equally amused and interested smile the resuscitated catalog of the Harvard Classics by Dr. Charles W. Eliot.

The Independent
HARPER'S WEEKLY

Department of Motor Efficiency

A Complete Service for the User and Prospective User of Motor Trucks, Delivery Cars, Trailers, Tractors and Industrial Trucks

For several months The Independent has published articles on motor trucks as a part of its Department of Motor Progress. So far, these articles have been, quite logically we think, of a somewhat general nature. They have dealt with the motor truck in the abstract—as a great business building force. They have been paving the way for this latest progressive step: the formation of a complete, well-rounded, separate department devoted to all forms of commercial motor vehicles and all phases of their operation and maintenance. This department is to be called MOTOR EFFICIENCY.

Buying Motor Equipment for Efficiency

In business today there is no place for guesswork. You who are users of commercial cars will wish to know to a cent what they cost you to maintain. You should know absolutely that they are the types best fitted to your business. You should be able to say, with honesty, that your motor equipment is as economical and as efficient as such equipment can be—and that your records are adequate, accurate and up to date.

If you are a prospective purchaser of commercial cars, you will wish to find out exactly what type is the one type for you. You will want to find out all about garaging arrangements, loading facilities, routing methods—a dozen things that have a bearing on your pocket-book—before you buy.

To help analyze your needs and find the best way of meeting them—to provide information that will save you time, money and trouble—is the purpose of this new department of Motor Efficiency.

Under the direction of John Chapman Hilder, in co-operation with the Director of our Efficiency Service and the Manager of our Plan and Purchase Department of Business Equipment, The Independent-Harper's Weekly has established what we believe to be the first *complete* motor truck service ever offered by a publication outside of the trade field.

This department of Motor Efficiency has a great advantage for you in that it is thoroughly impartial and free from bias. It gives a free service to readers of this magazine and members of the National Institute of Efficiency, of which, as you know, The Independent is the official organ.

Please Do Not Hesitate to Write

All of you who use commercial motor vehicles, or who contemplate their use, are cordially invited to enlist the aid of this Motor Efficiency Service. Ask questions freely. It will be our pleasure to answer them fully, accurately and promptly.

Send for the Efficiency Check List

For your convenience we have prepared a new Motor Efficiency Check List. It will serve as a reminder of topics and articles concerning which you may wish to inquire. We shall be glad to send you one of these new Check Lists on receipt of the coupon below.

EIGHT GREAT SHORT STORIES
From American Literature

With Introductions by FREDERICK HOUK LAW

A WASTED DAY

BY RICHARD HARDING DAVIS

THE present is a romantic age, but its romance differs from that of times when the impossible, the improbable and the remote pleased people who ignored the actual. Our romance builds itself on real life, looking with keen eye at men and women about us and seeing ideals, aspiration and true nobility close at hand.

In his life and work Richard Harding Davis combined realism and romance. Adventurous as one of his own "Soldiers of Fortune," he yet lived a practical life. He was born in Philadelphia in 1864, and gained a good education in Lehigh and Johns Hopkins Universities. Entering journalism as a young man he continued in that work all his life. His first short story successes, "Gallagher," and other similar stories, are drawn from the newspaper world. Thru his remarkable ability to report great events clearly, forcefully and with judgment, Mr. Davis became a special correspondent and traveled over much of the world, including our own great West, parts of South America, and the many lands he visited as war correspondent for the *London Times* and the *New York Herald* in the Turkish-Greek War, the Spanish-American War, the South African War, the Russian-Japanese War, and the present Great War. His literary work grew out of his life. "Gallagher and Others," and "Van Bibber" are stories of American city life; "Soldiers of Fortune," "The Princess Aline," "The King's Jackal" and "Ransom's Folly" are romances of foreign adventure; "Our English Cousins," "Rulers of the Mediterranean," "Three Gringoes in Venezuela," "Cuba in War Time," "The West from a Car Window," "With Both Armies in South Africa," and "Somewhere in France" are graphic accounts of the correspondent's life. Mr. Davis' sudden death in 1916 cut short a career of unusual energy and productivity.

RICHARD HARDING DAVIS

"A Wasted Day" is a story of modern city life, showing outward realities but turning its principal attention upon inner life. Like all of Mr. Davis' work the story is excellent in technique, condensed, suggestive, with events foreshadowed and demanded by character, rising in power, realistic in detail and idealistic in theme. The author presents a number of widely divergent character studies; the millionaire thinking of $40,000 Correggio's, of landscape gardening, the control of a railroad, a Japanese loan, the building of an art gallery and the affairs of Petersburg and Vienna, but learning that individual life, however humble, is a worthy subject, and that wealth and power are subject to law; the judge, ordinary in his own personality but with something calm, deep and significant when invested with the dignity of the law; the criminal, capable of sending flowers to a mother or of holding devoted love. The story is likewise a study of American social and political life, sometimes satiric but in the main hopeful, reflecting the strong, rough and kindly forces that make for good. Fundamentally, it is a presentation of humanity, showing that at heart most people are forgiving, kindly and eager to help; that good exists in every type of man, and that knowledge of life creates sympathy. Such a story is not bald realism. It is wise, hopeful, creative idealism founded on fact. And that we call the higher type of modern realism.

WHEN its turn came, the private secretary, somewhat apologetically, laid the letter in front of the Wisest Man in Wall Street.

"From Mrs. Austin, probation officer, Court of General Sessions," he explained. "Wants a letter about Spear. He's been convicted of theft. Comes up for sentence Tuesday."

"Spear?" repeated Arnold Thorndike.

"Young fellow, stenographer, used to do your letters last summer going in and out on the train."

The great man nodded. "I remember. What about him?"

The habitual gloom of the private secretary was lightened by a grin.

"Went on the loose; had with him about $500 belonging to the firm; he's with Isaacs & Sons now, shoe people on Sixth Avenue. Met a woman, and woke up without the money. The next morning he offered to make good, but Isaacs called in a policeman. When they looked into it, they found the boy had been drunk. They tried to withdraw the charge, but he'd been committed. Now, the probation officer is trying to get the judge to suspend sentence. A letter from you, sir, would——"

It was evident the mind of the great man was elsewhere. Young men who, drunk or sober, spent the firm's money on women who disappeared before sunrise did not appeal to him. Another letter submitted that morning had come from his art agent in Europe. In Florence he had discovered the Correggio he had been sent to find. It was undoubtedly genuine, and he asked to be instructed by cable. The price was $40,000. With one eye closed, and the other keenly regarding the inkstand, Mr. Thorndike decided to pay the price; and with the facility of long practise dismissed the Correggio, and snapped his mind back to the present.

"Spear had a letter from us when he left,

(*From "Once Upon a Time"; copyrighted, 1910, by Charles Scribner's Sons. By permission of the publisher.*)

didn't he?" he asked. "What he has developed into, *since* he left us—" he shrugged his shoulders. The secretary withdrew the letter, and slipt another in its place.

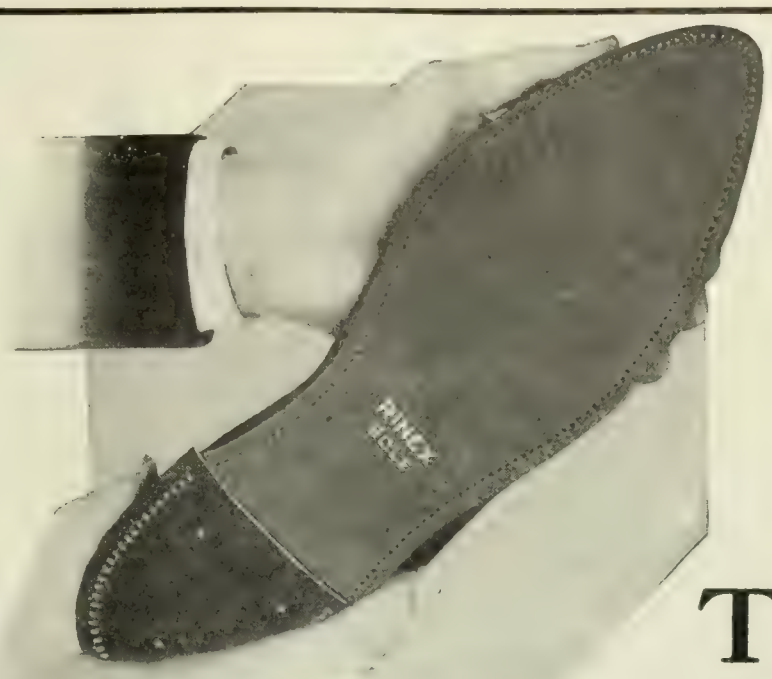
"Homer Firth, the landscape man," he chanted, "wants permission to use blue flint on the new road, with turf gutters, and to plant silver firs each side. Says it will run to about $5000 a mile."

"No!" protested the great man firmly, "blue flint makes a country place look like a cemetery. Mine looks too much like a cemetery now. Landscape gardeners!" he exclaimed impatiently. "Their only idea is to insult nature. The place was better the day I bought it, when it was running wild; you could pick flowers all the way to the gates." Pleased that it should have recurred to him, the great man smiled. "Why, Spear," he exclaimed, "always took in a bunch of them for his mother. Don't you remember, we used to see him before breakfast wandering around the grounds picking flowers?" Mr. Thorndike nodded briskly. "I like his taking flowers to his mother."

"He *said* it was to his mother," suggested the secretary gloomily.

"Well, he picked the flowers, anyway," laughed Mr. Thorndike. "He didn't pick our pockets. And he had the run of the house in those days. As far as we know," he dictated, "he was satisfactory. Don't say more than that."

The secretary scribbled a mark with his pencil. "And the landscape man?"



"Tell him," commanded Thorndike, "I want a wood road, suitable to a farm; and to let the trees grow where God planted them."

As his car slid downtown on Tuesday morning the mind of Arnold Thorndike was occupied with such details of daily routine as the purchase of a railroad, the Japanese loan, the new wing to his art gallery, and an attack that morning, in his own newspaper, upon his pet trust. But his busy mind was not too occupied to return the salutes of the traffic policemen who cleared the way for him. Or, by some genius of memory, to recall the fact that it was on this morning young Spear was to be sentenced for theft. It was a charming morning. The spring was at full tide, and the air was sweet and clean. Mr. Thorndike considered whimsically that to send a man to jail with the memory of such a morning clinging to him was adding a year to his sentence. He regretted he had not given the probation officer a stronger letter. He remembered the young man now, and favorably. A shy, silent youth, deft in work, and at other times conscious and embarrassed. But that, on the part of a stenographer, in the presence of the Wisest Man in Wall Street, was not unnatural. On occasions, Mr. Thorndike had put even royalty—frayed, impecunious royalty, on the lookout for a loan—at its ease.

The hood of the car was down, and the taste of the air, warmed by the sun, was grateful. It was at this time, a year before, that young Spear picked the spring flowers to take to his mother. A year from now where would young Spear be?

It was characteristic of the great man to act quickly, so quickly that his friends declared he was a slave to impulse. It was these same impulses, leading so invariably to success, that made his enemies call him the Wisest Man. He leaned forward and touched the chauffeur's shoulder. "Stop at the Court of General Sessions," he commanded. What he proposed to do would take but a few minutes. A word, a personal word from him to the district attorney, or the judge, would be enough. He recalled that a Sunday Special had once calculated that the working time of Arnold Thorndike brought him in $200 a minute. At that rate, keeping Spear out of prison, would cost $1000.

Out of sunshine Mr. Thorndike stepped into the gloom of an echoing rotunda, shut in on every side, hung by balconies, lit, many stories overhead, by a dirty skylight. The place was damp, the air acrid with the smell of stale tobacco juice, and foul with the presence of many unwashed humans. A policeman, chewing stolidly, nodded toward

Turn them over

WHEN you buy a pair of shoes, turn them over and see what kind of soles they have. If the soles are Rinex, have the salesman wrap them up—you've got your money's worth.

Rinex is the wonderful new shoe-sole material. It is neither leather nor rubber, but a material which combines the advantages of both.

It is more durable and uniform than leather and as light in weight; it is as flexible as rubber—and waterproof.

Rinex was invented and perfected in the great laboratories of the world's greatest rubber company. Unlike leather, it comes in just one quality—the highest possible.

So, whether you pay $4 for shoes, or $8, the word "Rinex" on the sole guarantees that you are getting the best sole-material ever devised by man.

Rinex Soles are also being put on by the best shoe-repairmen. Ask for them when you need new soles and see how much longer they last than leather and how much more comfortable they are.

By Professor HUGH FINDLAY, Garden Counselor of THE COUNTRYSIDE

THE United States depends not alone on her army and navy for the protection of her people and her honor; she depends most of all on the soil. Those who want to be in the ranks of producers or "fortifiers" can do this country no greater service than by mobilizing the best information on horticulture, and by strengthening every effort to increase the production of foodstuffs.

WHAT SUITS YOUR SOIL?

There are four general types of soil to deal with: sand, muck, clay and loam. The last two are the most common and very productive if properly treated and if the plants that are best adapted to these two types are raised.

Sandy soil is usually poor in plant food and dries out quickly after a rain, but if sufficient water is given to the plants during the dry season and humus in the form of stable manure is added, sand responds quickly with large crops. A little commercial fertilizer added at various times will hasten the growth of the crops which are best suited to sand, such as peas, peppers, water-melons, cantaloupes and sweet potatoes.

Muck, or peat, is the black soil formed by decaying plants and is full of spongy fiber. Such soil requires drainage before the mineral matter becomes available as plant food. If, in addition to this, an application of potash (wood ashes) and phosphoric acid are worked in such soil becomes very productive. A little lime is most valuable applied early in the spring before such crops as onions, celery and lettuce, which are best suited to muck, are planted.

The clay soil should be dug very early in the spring, turning under a considerable amount of manure and leaving the clods in the rough so that the elements may have a chance to work on them. Just before smoothing the soil, scatter over it a little lime and work this in for from three to five inches. The best crops for clay soil are cabbage, Brussels sprouts, and cauliflower (in light clay). Don't attempt to grow beans or sweet potatoes.

The loam is by far the best for general purposes, and the garden on the opposite page is planned for this soil. Apply a liberal amount of horse or cow manure if you can secure it, but if not, don't give up the idea of having a garden. Dig in some bone meal or high grade commercial fertilizer.

PREPARING FOR WINTER

We must keep in mind that the garden is planned to furnish a large assortment and continuous supply of vegetables through the summer season and, whenever possible, a sufficient supply to last through the winter. The summer crops are much easier to plan for and to raise than the fall and winter crops. Napoleon once said, "A good general always has enough soldiers." We may say that a good gardener has forethought enough to plan ahead and fortify himself long before the enemy is in sight. First, then, make a definite plan before planting. Second, measure the area to be used and decide on what vegetables you desire. Third, order enough seed and do it as early as possible. Fourth, and all important, know the "hardy" and "tender" sorts and arrange a succession of plantings not only to supply the table with fresh vegetables during the summer but to store away enough for winter.

It is the winter crop that is after all the most important; therefore prepare early and select from this ammunition of thirty distinct kinds of vegetables that may be stored, canned, or preserved, the varieties best adapted to the soil, temperature and moisture in your own garden. Beside the staple crop, potatoes, there are beets, carrots, parsnips, winter radish, horse-radish, rutabagas, salisfy, turnips, kohlrabi, cabbage, celery, chicory, parsley, onions, dry beans, pumpkins and hubbard squash. The vegetables best canned and preserved are peas, beans, corn, cucumbers, green peppers, tomatoes, cauliflower and cabbage (red).

The time for planting these vegetables depends upon the variety and the length of the season. The cool nights of northern summers are especially favorable for the growth of root crops, cabbage, etc.

The length of time from sowing the seed until the crop is ready to store plays a most important part in success or failure to fill the root cellar for winter. Such seeds as onions, parsnips, salsify and leeks should be in the soil as early as possible to insure a crop, but beets, carrots, celery and late cabbage may follow early peas, radish or lettuce. Squash and pumpkins may be successfully grown by planting the seed in the same rows but between the hills of corn late in June. After the ears are harvested cut down the corn stalks close to the ground and spread out the vines. Late turnips and winter radish may also be grown in the same way.

STORING THE MUNITIONS

In harvesting the crops for winter the cabbage keeps best if pitted out of doors, except in the extreme north where the winters are too severe. Dig a trench three feet wide and one foot deep. Place about six inches of clean straw on the bottom and fit in two tiers of cabbage close together leaving the roots sticking up. Cover the pile over with straw and place about every four feet a ventilator made of six inch boards, covered to prevent the rain from getting in, and as the cold weather increases keep adding soil so as to keep out the frost. Carrots, parsnips, beets and other roots may be stored in this way. The pit is opened at one end in order to get out a supply when needed. If the vegetables are stored in the cellar, it should be well ventilated and cool. The roots should never be washed before storing and they keep fresh much longer if covered with a little soil.

Build your garden fortifications early. Dig the trenches with the greatest care. Work the cultivator frequently to check the ever persistent attack of weeds. Store in your cellar or pit sufficient ammunition to last for a long siege and when the war ends the honor will go not only to the men who made our guns efficient and to the women and children who stayed at home and did their part but to the soil and those who made it yield the foodstuffs which are the ultimate ammunition of this and every other war.

"No, Don't Use Paint Here use STONE-TEX"

For **concrete, stucco, brick, stone** or **masonry walls** of any kind, STONE-TEX is admittedly the right coating. It is prepared specifically for use on such surfaces, and produces an **attractive, soft-colored, even finish** which wears better than paint, looks better, and will not chip, flake or peel off.

All masonry walls are more or less porous. During storms and damp seasons, they soak in moisture, making the building damp and unsanitary. The moisture also mixes with dust from the streets, producing unsightly streaks and stains.

But in Stone-Textured walls, the pores are filled with a hard, flint-like cement coating and all hair cracks are sealed. The building is dry at all times. The coating, being moisture-proof, retains its beauty for years, at the same time giving adequate protection against the elements.

Ordinary paints could not give such results. Being intended for wood, they offer little resistance to moisture, when used on masonry. So they soon flake and peel off, and the walls again must be coated. Don't use paint on masonry walls. Use Stone-Tex if only for economy.

STONE-TEX gives a beautiful, flat finish—most desirable for concrete, stucco, brick, etc. Equally suitable for new or old walls and furnished in a variety of pleasing tones. Protects the building against disintegration and lengthens its life. Applied with a brush.

Write today for free color card and handsomely illustrated STONE-TEX book giving full information.

THE TRUS-CON LABORATORIES

124 Trus-Con Bldg. **Detroit, Mich.**

Problems of waterproofing, dampproofing and hardening cement have been the province of the Trus-Con Laboratories for many years. The organization of this well known company includes a corps of expert chemists and chemical engineers, whose advice upon special problems in this field is at your disposal. This consulting service is without charge or obligation.

THE FOLLOWS EFFICIENCY BUREAU, E End Trust Bldg Pittsburgh, Pa

an elevator shaft, and other policemen nodded him further on to the office of the district attorney. There Arnold Thorndike breathed more freely. He was again among his own people. He could not help but appreciate the dramatic qualities of the situation; that the richest man in Wall Street should appear in person to plead for a humble and weaker brother. He knew he could not escape recognition, his face was too well known, but, he trusted, for the sake of Spear, the reporters would make no display of his visit. With a deprecatory laugh, he explained why he had come. But the outburst of approbation he had anticipated did not follow.

The district attorney ran his finger briskly down a printed card. "Henry Spear," he exclaimed, "that's your man. Part Three, Judge Fallon. Andrews is in that court." He walked to the door of his private office. "Andrews!" he called.

He introduced an alert, broad-shouldered young man of years of much indiscretion and with a charming and inconsequent manner.

"Mr. Thorndike is interested in Henry Spear, coming up for sentence in Part Three this morning. Wants to speak for him. Take him over with you."

The district attorney shook hands quickly, and retreated to his private office. Mr. Andrews took out a cigarette and, as he crost the floor, lit it.

"Come with me," he commanded. Somewhat puzzled, slightly annoyed, but enjoying withal the novelty of the environment and the curtness of his reception, Mr. Thorndike followed. He decided that, in his ignorance, he had wasted his own time and that of the prosecuting attorney. He should at once have sent in his card to the judge. As he understood it, Mr. Andrews was now conducting him to that dignitary, and, in a moment, he would be free to return to his own affairs, which were the affairs of two continents. But Mr. Andrews led him to an office, bare and small, and offered him a chair, and handed him a morning newspaper. There were people waiting in the room; strange people, only like those Mr. Thorndike had seen on ferry-boats. They leaned forward toward young Mr. Andrews, fawning, their eyes wide with apprehension.

Mr. Thorndike refused the newspaper. "I thought I was going to see the judge," he suggested.

"Court doesn't open for a few minutes yet," said the assistant district attorney. "Judge is always late, anyway."

Mr. Thorndike suppressed an exclamation. He wanted to protest, but his clear mind showed him that there was nothing against which, with reason, he could protest. He could not complain because these people were not apparently aware of the sacrifice he was making. He had come among them to perform a kindly act. He recognized that he must not stultify it by a show of irritation. He had precipitated himself into a game of which he did not know the rules. That was all. Next time he would know better. Next time he would send a clerk. But he was not without a sense of humor, and the situation as it now was forced upon him struck him as amusing. He laughed good-naturedly and reached for the desk telephone.

"May I use this?" he asked. He spoke to the Wall Street office. He explained he would be a few minutes late. He directed what should be done if the market opened in a certain way. He gave rapid orders on many different matters, asked to have read to him a cablegram he expected from Petersburg, and one from Vienna.

"They answer each other," was his final instruction. "It looks like peace."

Mr. Andrews with genial patience had remained silent. Now he turned upon his visitors. A Levantine, burly, unshaven, and soiled, towered truculently above him. Young Mr. Andrews with his swivel chair tilted back, his hands clasped behind his head, his cigarette hanging from his lips, regarded the man dispassionately.

"You gotta hell of a nerve to come to see me," he commented cheerfully. To Mr. Thorndike, the form of greeting was novel. So greatly did it differ from the procedure

of his own office, that he listened with interest.

"Was it you," demanded young Andrews, in a puzzled tone, "or your brother who tried to knife me?" Mr. Thorndike, unaccustomed to cross the pavement to his office unless escorted by bank messengers and plain-clothes men, felt the room growing rapidly smaller; the figure of the truculent Greek loomed to heroic proportions. The hand of the banker went vaguely to his chin, and from there fell to his pearl pin, which he hastily covered.

"Get out!" said young Andrews, "and don't show your face here——"

The door slammed upon the flying Greek. Young Andrews swung his swivel chair so that, over his shoulder, he could see Mr. Thorndike. "I don't like his face," he explained.

A kindly eyed, sad woman with a basket on her knee smiled upon Andrews with the familiarity of an old acquaintance.

"Is that woman going to get a divorce from my son," she asked, "now that he's in trouble?"

"Now that he's in Sing Sing?" corrected Mr. Andrews. "I *hope* so! She deserves it. That son of yours, Mrs. Bernard," he declared emphatically, "is no good!"

The brutality shocked Mr. Thorndike. For the woman he felt a thrill of sympathy, but at once saw that it was superfluous. From the secure and lofty hights of motherhood, Mrs. Barnard smiled down upon the assistant district attorney as upon a naughty child. She did not even deign a protest. She continued merely to smile. The smile reminded Thorndike of the smile on the face of a mother in a painting by Murillo he had lately presented to the chapel in the college he had given to his native town.

"That son of yours," repeated young Andrews, "is a leech. He's robbed you, robbed his wife. Best thing I ever did for *you* was to send him up the river."

The mother smiled upon him beseechingly.

"Could you give me a pass?" she said.

Young Andrews flung up his hands and appealed to Thorndike.

"Isn't that just like a mother?" he protested. "That son of hers has broken her heart, tramped on her, cheated her; hasn't left her a cent; and she comes to me for a pass, so she can kiss him thru the bars! And I'll bet she's got a cake for him in that basket!"

The mother laughed happily; she knew now she would get the pass.

"Mothers," explained Mr. Andrews, from the depth of his wisdom, "are all like that; your mother, my mother. If you went to jail, your mother would be just like that."

Mr. Thorndike bowed his head politely. He had never considered going to jail, or whether, if he did, his mother would bring him cake in a basket. Apparently there were many aspects and accidents of life not included in his experience.

Young Andrews sprang to his feet, and, with the force of a hose flushing a gutter, swept his soiled visitors into the hall.

"Come on," he called to the Wisest Man, "the court is open."

In the corridors were many people, and with his eyes on the broad shoulders of the assistant district attorney, Thorndike pushed his way thru them. The people who blocked his progress were of the class unknown to him. Their looks were anxious, furtive, miserable. They stood in little groups, listening eagerly to a sharp-faced lawyer, or, in sullen despair, eying each other. At a door a tipstaff laid his hand roughly on the arm of Mr. Thorndike.

"That's all right Joe," called young Mr. Andrews, "he's with *me*." They entered the court and passed down an aisle to a railed enclosure in which were high oak chairs. Again, in his effort to follow, Mr. Thorndike was halted, but the first tipstaff came to his rescue. "All right," he signalled, "he's with Mr. Andrews."

Mr. Andrews pointed to one of the oak chairs. "You sit there," he commanded, "it's reserved for members of the bar, but it's all right. You're with *me*."

Distinctly annoyed, slightly bewildered,

Think—What Would a Fire Do to *Your* Business Records?

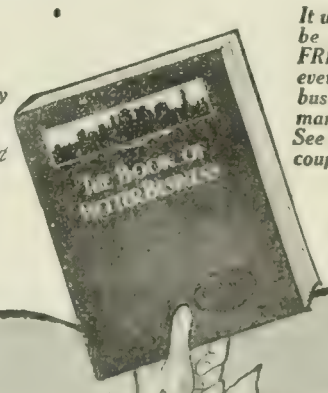
The priceless records that run your business—your correspondence, orders, notes, checks, leases, contracts, and other legal papers --are they absolutely safe?

Protect Them From Fire—Water—Mice

File them in Art Metal—that won't warp, stick nor burn!

Art Metal is equipment for every man's office. It is used in every land and climate, and by thousands of business offices like Edison, Delco Laboratories, big life insurance companies and railroads.

The files move in-and-out with rubber-tired ease. The sectional feature will save you 20% floor space over wood, and much useless walking. In short, Art Metal will save you money.



Send for the "Book of Better Business"

98 pages of systems, modern methods, and office appliances that make for *short cuts* in office routine. Pictures Art Metal in colors and illustrates the particular filing equipment *your business needs.* Contains definite suggestions that will help you to lay out your office, *whether large or small,* to save space, steps, friction and labor.

The price of the book is 50¢, but it will be sent FREE to any business man who will write for it on his letterhead. Clip the Coupon now, as a reminder to write — and for the address of your local dealer.

Your Books and How to Keep Them

The best way to keep books has been solved for all time by the Macey Sectional Bookcase.

The sectional idea as developed by Macey enables you to provide just the amount of space required and no more. Later you may add to your original purchase in sections, as your library grows, and arrange them in the best combinations for your available wall space. They fit on either side of doors, windows or fireplaces as if built to order. Period styles allow wide range af choice to match your other furniture.

The distinctive feature of sectional bookcases is this adaptability to space and requirement.

Macey Sectional Bookcases are sold by furniture stores everywhere. To assist you in making your selection in advance, from our many designs, we will mail a miniature copy of our catalog on request. Send for it today.

the banker sank between the arms of a chair. He felt he had lost his individuality. Andrews had become his sponsor. Because of Andrews he was tolerated. Because Andrews had a pull he was permitted to sit as an equal among police-court lawyers. No longer was he Arnold Thorndike. He was merely the man "with Mr. Andrews."

Then even Andrews abandoned him. "The judge'll be here in a minute, now," said the assistant district attorney, and went inside a railed enclosure in front of the judge's bench. There he greeted another assistant district attorney whose years were those of even greater indiscretion than the years of Mr. Andrews. Seated on the rail, with their hands in their pockets and their backs turned to Mr. Thorndike, they laughed and talked together. The subject of their discourse was one Mike Donlin, as he appeared in vaudeville.

To Mr. Thorndike it was evident that young Andrews had entirely forgotten him. He arose, and touched his sleeve. With infinite sarcasm Mr. Thorndike began: "My engagements are not pressing, but——"

A court attendant beat with his palm upon the rail.

"Sit down!" whispered Andrews. "The judge is coming.

Mr. Thorndike sat down.

The court attendant droned loudly words Mr. Thorndike could not distinguish. There was a rustle of silk, and from a door behind him the judge stalked past. He was a young man, the type of the Tammany politician. On his shrewd, alert, Irish-American features was an expression of unnatural gloom. With a smile Mr. Thorndike observed that it was as little suited to the countenance of the young judge as was the robe to his shoulders. Mr. Thorndike was still smiling when young Andrews leaned over the rail.

"Stand up!" he hissed. Mr. Thorndike stood up.

After the court attendant had uttered more unintelligible words, every one sat down; and the financier again moved hurriedly to the rail.

"I would like to speak to him now before he begins," he whispered. "I can't wait."

Mr. Andrews stared in amazement. The banker had not believed the young man could look so serious.

"Speak to him, *now!*" exclaimed the district attorney. "You've got to wait till your man comes up. If you speak to the judge, *now*—" The voice of Andrews faded away in horror.

Not knowing in what way he had offended, but convinced that it was only by the grace of Andrews he had escaped a dungeon, Mr. Thorndike retreated to his arm-chair.

The clock on the wall showed him that, already, he had given to young Spear one hour and a quarter. The idea was preposterous. No one better than himself knew what his time was really worth. In half an hour there was a board meeting; later, he was to hold a post mortem on a railroad: at every moment questions were being asked by telegraph, by cable, questions that involved the credit of individuals of firms, of even the country. And the one man who could answer them was risking untold sums only that he might say a good word for an idle apprentice. Inside the railed enclosure a lawyer was reading a typewritten speech. He assured his honor that he must have more time to prepare his case. It was one of immense importance. The name of a most respectable business house was involved, and a sum of no less than $900. Nine hundred dollars! The contrast struck Mr. Thorndike's sense of humor full in the center. Unknowingly, he laughed, and found himself as conspicuous as tho he had appeared suddenly in his night-clothes. The tipstaffs beat upon the rail, the lawyer he had interrupted uttered an indignant exclamation, Andrews came hurriedly toward him, and the young judge slowly turned his head.

"Those persons," he said, "who cannot respect the dignity of this court will leave it." As he spoke, with his eyes fixed on those of Mr. Thorndike, the latter saw that the young judge had suddenly recognized him. But the fact of his identity did not cause the frown to relax or the rebuke to halt unuttered. In even, icy tones the judge continued: "And it is well they should remember that the law is no respecter of persons and that the dignity of this court will be enforced, no matter who the offender may happen to be."

Andrews slipt into the chair beside Mr. Thorndike, and grinned sympathetically.

"Sorry!" he whispered. "Should have warned you. We won't be long now," he added encouragingly. "As soon as this fellow finishes his argument, the judge'll take up the sentences. Your man seems to have other friends; Isaacs & Sons are here, and the typewriter firm who taught him; but what *you* say will help most. It won't be more than a couple of hours now."

"A couple of hours!" Mr. Thorndike raged inwardly. A couple of hours in this place where he had been publicly humiliated. He smiled, a thin, shark-like smile. Those who made it their business to study his expressions, on seeing it, would have fled. Young Andrews, not being acquainted with the moods of the great man, added cheerfully: "By one o'clock, anyway."

Mr. Thorndike began grimly to pull on his gloves. For all he cared now young Spear could go hang. Andrews nudged his elbow.

"See that old lady in the front row?" he whispered. "That's Mrs. Spear. What did I tell you; mothers are all alike. She's not taken her eyes off you since court opened. She knows you're her one best bet."

Impatiently Mr. Thorndike raised his head. He saw a little, white-haired woman who stared at him. In her eyes was the same look he had seen in the eyes of men who, at times of panic, fled to him, beseeching, entreating, forcing upon him what was left of the wreck of their fortunes, if only he would save their honor.

"And here come the prisoners," Andrews whispered. "See Spear? Third man from the last." A long line, guarded in front and rear, shuffled into the court-room, and, as ordered, ranged themselves against the wall. Among them were old men and young boys, well drest, clever-looking rascals, collarless tramps, fierce-eyed aliens, smooth-shaven, thin-lipped Broadwayards—and Spear.

Spear, his head hanging, with lips white and cheeks ashen, and his eyes heavy with shame.

Mr. Thorndike had risen, and, in farewell, was holding out his hand to Andrews. He turned, and across the court-room the eyes of the financier and the stenographer met. At the sight of the great man, Spear flushed crimson, and then his look of despair slowly disappeared; and into his eyes there came incredulously hope and gratitude. He turned his head suddenly to the wall.

Mr. Thorndike stood irresolute, and then sank back into his chair.

The first man in the line was already at the railing, and the questions put to him by the judge were being repeated to him by the other assistant district attorney and a court attendant. His muttered answers were in turn repeated to the judge.

"Says he's married, naturalized citizen, Lutheran Church, die-cutter by profession."

The probation officer, her hands filled with papers, bustled forward and whispered.

"Mrs. Austin says," continued the district attorney, "she's looked into this case, and asks to have the man turned over to her. He has a wife and three children; has supported them for five years."

"Is the wife in court?" the judge said.

A thin, washed-out, pretty woman stood up, and clasped her hands in front of her.

"Has this man been a good husband to you, madam?" asked the young judge.

The woman broke into vehement assurances. No man could have been a better husband. Would she take him back? Indeed she would take him back. She held out her hands as tho she would physically drag her husband from the pillory.

The judge bowed toward the probation officer, and she beckoned the prisoner to her.

Other men followed, and in the fortune of each Mr. Thorndike found himself, to his surprize, taking a personal interest. It was as good as a play. It reminded him of the Sicilians he had seen in London in their little sordid tragedies. Only these actors were appearing in their proper persons in real dramas of a life he did not know, but which appealed to something that had been long untouched, long in disuse. It was an uncomfortable sensation that left him restless because, as he appreciated, it needed expression, an outlet. He found this, partially, in praising, thru Andrews, the young judge who had publicly rebuked him. Mr. Thorndike found him astute, sane; his queries intelligent, his comments just. And this probation officer, she, too, was capable, was she not? Smiling at his interest in what to him was an old story, the younger man nodded.

"I like her looks," whispered the great man. "Like her clear eyes and clean skin. She strikes me as able, full of energy, and yet womanly. These men when they come under her charge," he insisted, eagerly, "need money to start again, don't they?" He spoke anxiously. He believed he had found the clew to his restlessness. It was a desire to help; to be of use to these failures who had fallen and who were being lifted to their feet. Andrews looked at him curiously. "Anything you give her," he answered, "would be well invested."

"If you will tell me her name and address?" whispered the banker. He was much given to charity, but it had been perfunctory, it was extended on the advice of his secretary. In helping here, he felt a genial glow of personal pleasure. It was much more satisfactory than giving an Old Master to his private chapel.

In the rear of the court-room there was a scuffle that caused every one to turn and look. A man, who had tried to force his way past the tipstaff, was being violently ejected, and, as he disappeared, he waved a paper toward Mr. Thorndike. The banker recognized him as his chief clerk. Andrews rose anxiously. "That man wanted to get to you. I'll see what it is. Maybe it's important."

Mr. Thorndike pulled him back.

"Maybe it is," he said dryly. "But I can't see him now. I'm busy."

Slowly the long line of derelicts, of birds of prey, of sorry, weak failures, passed before the seat of judgment. Mr. Thorndike had moved into a chair nearer to the rail, and from time to time made a note upon the back of an envelope. He had forgotten the time or had chosen to disregard it. So great was his interest that he had forgotten the particular derelict he had come to serve, until Spear stood almost at his elbow.

Thorndike turned eagerly to the judge, and saw that he was listening to a rotund, gray little man with beady, bird-like eyes who, as he talked, bowed and gesticulated. Behind him stood a younger man, a more modern edition of the other. He also bowed and, behind gold eye-glasses, smiled ingratiatingly.

The judge nodded, and leaning forward, for a few moments fixed his eyes upon the prisoner.

"You are a very fortunate young man," he said. He laid his hand upon a pile of letters. "When you were your own worst enemy, your friends came to help you. These letters speak for you; your employers, whom you robbed, have pleaded with me in your favor. It is urged, in your behalf, that at the time you committed the crime of which you are found guilty, you were intoxicated. In the eyes of the law, that is no excuse. Some men can drink and keep their senses. It appears you can not. When you drink you are a menace to yourself, and, as is shown by this crime, to the community. Therefore, you must not drink. In view of the good character to which your friends have testified, and on the condition that you do not touch liquor, I will not sentence you to jail, but will place you in charge of the probation officer."

The judge leaned back in his chair and beckoned to Mr. Andrews. It was finished. Spear was free, and from different parts of the court-room people were moving toward

The Magic *of* Commercial Duplicator Methods

Talk about Aladdin!—1,000 sheets of paper in the morning—orders. 1,000 shipments that afternoon—the same orders filled. Picture this accomplished and all the clerical work of checking, recording, invoicing, shipping accomplished, too.

Here truly is modern business magic—the magic of Commercial Duplicator Methods, applied to order handling. Yet this magic is the daily experience of some of the biggest firms. Not only in order handling, but in other tasks as well.

Bulletins to salesmen and customers, dictated at four-thirty, are in the mail at five. Purchase department specifications, a dozen pages long, are reproduced a hundred times—as quickly as written. Drawings and sketches, no matter how detailed, are reproduced in as many as five colors at one operation. Every task listed on the coupon is done quicker and cheaper than you are now doing it.

197 Different Lines of Business Have Proved These Methods Right

197 different lines of business have responded to Commercial Duplicator magic. Yours will do the same. The methods are always simple; they work right in with what you are doing and save time and labor.

No rewriting by hand or machine, no carbon manifolding—that is the secret of Commercial Duplicator magic—that plus matchless speed in duplicating.

No other machine in all the world—no other method—can give you from 5 to 100 copies as quickly and cheaply. Speed with easy operation makes a bright boy and a Commercial Duplicator accomplish more than a dozen typists, and the work is accurate; it needs no checking.

Get these facts about what the Commercial Duplicator is doing for others—what it will do for you. Check the coupon. Mail today.

the door. Their numbers showed that the friends of the young man had been many. Mr. Thorndike felt a certain twinge of disappointment. Even tho the result relieved and pleased him, he wished, in bringing it about, he had had some part.

He begrudged to Isaacs & Sons the credit of having given Spear his liberty. His morning had been wasted. He had neglected his own interests, and in no way assisted those of Spear. He was moving out of the railed enclosure when Andrews called him by name.

"His honor," he said impressively, "wishes to speak to you."

The judge leaned over his desk and shook Mr. Thorndike by the hand. Then he made a speech. The speech was about public-spirited citizens who, to the neglect of their own interests, came to assist the ends of justice, and fellow-creatures in misfortune. He purposely spoke in a loud voice, and every one stopped to listen.

"The law, Mr. Thorndike, is not vindictive," he said. "It wishes only to be just. Nor can it be swayed by wealth or political or social influences. But when there is good in a man, I, personally, want to know it, and when gentlemen like yourself, of your standing in this city, come here to speak a good word for a man, we would stultify the purpose of justice if we did not listen. I thank you for coming, and I wish more of our citizens were as unselfish and public-spirited."

It was all quite absurd and most embarrassing, but inwardly Mr. Thorndike glowed with pleasure. It was a long time since any one had had the audacity to tell him he had done well. From the friends of Spear there was a ripple of applause, which no tipstaff took it upon himself to suppress, and to the accompaniment of this, Mr. Thorndike walked to the corridor. He was pleased with himself and with his fellow-men. He shook hands with Isaacs & Sons, and congratulated them upon their public spirit, and the typewriter firm upon their public spirit. And then he saw Spear standing apart regarding him doubtfully.

Spear did not offer his hand, but Mr. Thorndike took it, and shook it, and said: "I want to meet your mother."

And when Mrs. Spear tried to stop sobbing long enough to tell him how happy she was, and how grateful, he instead told her what a fine son she had, and that he remembered when Spear used to carry flowers to town for her. And she remembered it, too, and thanked him for the flowers. And he told Spear, when Isaacs & Sons went bankrupt, which at the rate they were giving away their money to the Hebrew Hospital would be very soon. Spear must come back to him. And Isaacs & Sons were delighted at the great man's pleasantry, and afterward repeated it many times, calling upon each other to bear witness, and Spear felt as tho some one had given him a new backbone, and Andrews, who was guiding Thorndike out of the building, was thinking to himself what a great confidence man had been lost when Thorndike became a banker.

The chief clerk and two bank messengers were waiting by the automobile with written calls for help from the office. They pounced upon the banker and almost lifted him into the car.

"There's still time!" panted the chief clerk.

"There is not!" answered Mr. Thorndike. His tone was rebellious, defiant. It carried all the authority of a spoiled child of fortune. "I've wasted most of this day," he declared. "and I intend to waste the rest of it. Andrews," he called, "jump in, and I'll give you a lunch at Sherry's."

The vigilant protector of the public dashed back into the building.

"Wait till I get my hat!" he called.

As the two truants rolled up the avenue the spring sunshine warmed them, the sense of duties neglected added zest to their holiday, and young Mr. Andrews laughed aloud.

Mr. Thorndike raised his eyebrows inquiringly.

"I was wondering," said Andrews, "how much it cost you to keep Spear out of jail?"

"I don't care," said the great man guiltily; "it was worth it."

PEBBLES

"What are the passengers looking out of the windows for?" asked a nervous lady as the conductor came thru the train.

"We ran over a cat, madam," said the conductor.

"Was the cat on the track?" she next asked.

"Oh, no, ma'am," assured the conductor. "The locomotive chased him up an alley."—*Lehigh Burr.*

Availing herself of her ecclesiastical privileges the clergyman's wife asked questions which, coming from anybody else, would have been thought impertinent.

"I presume you carry a memento of some kind in that locket you wear?" she said.

"Yes, Ma'am," said the parishioner. "It is a lock of my husband's hair."

"But your husband is still alive," the lady exclaimed.

"Yes, Ma'am, but his hair is gone."—*New York Times.*

The world has a lot of a number of things
That always are pleasant to see,
Of pretty girls' eyes and blackberry pies
And roses and pay days and glee;
And waffles and movies and blue china cups
And bargains and full dinner pails,
But pleasantest far are nice little pups
That wiggle and waggle their tails!

A nice little, brown little puppy, who seems
Just brimming with wiggles and wags,
His damp little nose, as pink as a rose,
Two ears that are pert little rags;
And half of him shrinking in fear of a spank,
And half of him wiggling a plea,
And all of him ready for any old prank—
There's nothing so pleasant as he!

And how can they say that a creature is dumb
That's wise in its own sort of way?
Altho we suppose there's little he knows,
Yet O, how he knows how to play!
He knows how to find all the fun as he goes
Thru his life in this sorrowing vale,
And especially we're glad that each little pup knows
How to wiggle and waggle his tail!
—*Morris Miller, in Detroit Journal.*

MOTOR EFFICIENCY SERVICE

JOHN CHAPMAN HILDER—DIRECTOR

HAVE YOU A DESTROYER AT THE WHEEL?

BILL SMITH, who runs the hardware and furniture emporium back home, called me into his store a while ago, when I was down for a visit, and poured out the bitterness of his soul.

"Remember last time you were here," he said, "you asked me why didn't I get a motor truck and gave me a lot of buzz-talk about how it would cut down my expenses? Well, I've just about decided to charge your dad ten or fifteen dollars extra on everything he buys to make up for the extra money the darn thing costs me. I don't know where you got all the dope you handed out to me, but I wish I'd never listened to it.

"Wait a bit," said I. "Tell me the whole story. Perhaps you didn't listen hard enough. Begin at the beginning. What kind of a machine did you buy? Maybe you didn't get the right one. I refuse to be blamed before making sure the mistake was mine and not yours. A man's considered innocent, you know, until he's proved guilty. If you can show me it was my fault, I'll repair the damage in any way you like. That's fair, isn't it?"

Bill scratched his ear and mumbled something in his whiskers. He seemed a trifle taken aback by the challenge. It was true that I had talked trucks to him some months before, but I had talked about them only in a general way and had said nothing on which he could corner me now.

There was a squealing of suddenly applied brakes outside the door and the vehicle in question came to an abrupt stop. The young man at the wheel jumped down and disappeared into the cellar of the store, leaving the engine running at a good pace.

"That's the brute," said Bill gloomily. "I call her Beauty and the Beast. She's a beauty to look at, but a beast every other way. She costs me more for gas, oil and tires and repairs than two of my teams did, to say nothing about the price I had to pay for her."

I went out and looked over the object of his wrath. It was difficult to refrain from laughing as I did so, for it was only too apparent where Bill's money was going.

"Well?" he queried.

"Well," I said, "I can tell you a few things right now. Come and look at the tires. See this rear pair. Great lumps out of them. Look at the surfaces. Like nutmeg graters. Know why that is? Because your boy doesn't know how to drive. I heard him stop just now. He ran right up to the door at top speed and slammed on the brakes; locked his wheels, probably. Yes, see those scrapes in the road? These expensive tires made them and suffered accordingly.

"The front ones have been abused, too. Those cuts are the result of crude maneuvering. That boy runs slap into curbs when he's turning in a narrow space. He doesn't know how to handle the truck. It's bad enough to mess up the tires this way, but it's throwing money into the stove to let them go on running, without trimming and cleaning and filling in the holes.

Bill grunted and gazed ominously in the direction of the cellar.

"Why's this engine running?" I asked. "There's a switch provided for the express purpose of stopping it when it isn't needed, and a nice big handle to start it with."

"I've spoken to him about letting it run," said Bill, uneasily. "He says it's hard to start and it don't use much——"

"LISTEN, Bill, that boy is putting things over on you. He simply isn't up to his job. Engines of this size are not hard to start, if you know how. And running an engine idle is the worst thing you can do to it. Besides wasting gas and oil, it causes rapid wear, because the power, ordinarily used in driving the truck, is dissipated in the form of heat and friction. It he lets the engine run idle, as he probably does, anywhere from five minutes to half an hour or more several times a day, depending on how long it takes to unload the goods, you can figure for yourself why the truck is expensive. Where do you keep it?"

"In my barn."

"Never occurs to you to have it cleaned and greased, does it?" I remarked, after an inspection of the less accessible parts. "The universal is as dry as a bone, caked with dirt and badly worn. That alone is enough to injure the engine seriously, to say nothing of driving gears and transmission. Chances are the clutch collar is dry, too. And I wouldn't be surprized if you found that the clutch needed refacing. A man who drives the way your bright young destroyer does invariably keeps one foot on the clutch pedal, slipping it just enough to wear out the facing in short order. Naturally, when the clutch fails to make a tight connection between the engine and the driving wheels much of the engine's power is wasted and that means fuel wasted."

Bill grunted and again cast a brooding eye in the direction of the cellar.

"Want to know a little more about the reason for repair expenses? Ever think about the relation between tires and springs? You ought to know these things, Bill. Why are springs put on a truck? To absorb road shocks and inequalities, so that the frame and the engine won't be racked to pieces. Springs are made up of a number of thin strips of resilient steel called leaves. When the spring is in action these strips rub against each other. In a new truck they are clean and have a film of lubricant separating the surfaces. After a while, however, this lubricant gets forced out and moisture and dirt work their way in. The surfaces of the leaves grow rusty. The spring loses its ability to absorb shocks. And this is what happens: all the work of cushioning, most of which ought to be done by the springs, falls to the lot of the tires. Solid rubber tires—or even pneumatic ones, for that matter—can't possibly stand up under the strain of this double duty. Besides wearing out the tires, neglected springs transmit jars and jolts to the frame, the engine and the transmission.

"Just look here, Bill," I said, pointing to one of the front springs. "Streaked with rust. That hole there is where a grease cup used to be. It's been knocked off, somehow. And the other cups are so caked up it's plain they haven't been turned down for weeks. Now, here's a rule that every truck owner ought to follow: Have the truck inspected, regularly, at the end of each day. Make someone responsible for its condition. Lay out a schedule for greasing and cleaning, and see that it is followed. Insist that weaknesses be remedied as soon as they are discovered, and that worn or broken parts be replaced as soon as they are found out. Your boy, Bill, has cost you a young fortune. It'll pay you to have him taught or to get a fellow who knows his job thoroly."

"Wait till he gets up out of that cellar," quoth Bill.

"But don't think he's the only one to blame for the money the truck has wasted for you. You're more to blame than he is. In the first place you don't need a truck more than half the size of this. That moving van body is absurd. What you want——"

"How do you know what I want?"

"From a general knowledge of your business. But we won't let it go at that. I'll come 'round tonight and prove to you, first, that the man who sold you this truck had you hypnotized, and then that you need something different."

Ask the Director of this Service anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, it is ready to give impartial information on any product. —Address Motor Efficiency Service, The Independent, New York.

LOOK these business-builders over. You don't speak of them as "a duplicating device"—"an addressing machine"—"a correspondence phonograph"—"an adding machine." You give them names, "Multigraph"—"Addressograph"—"Dictaphone"—"Burroughs" because you know that satisfaction lies in names with records for performance. What such names are to their respective fields, so FEDERAL is to haulage. A business builder, first and foremost, it saves you money—makes you money—aids your business growth.

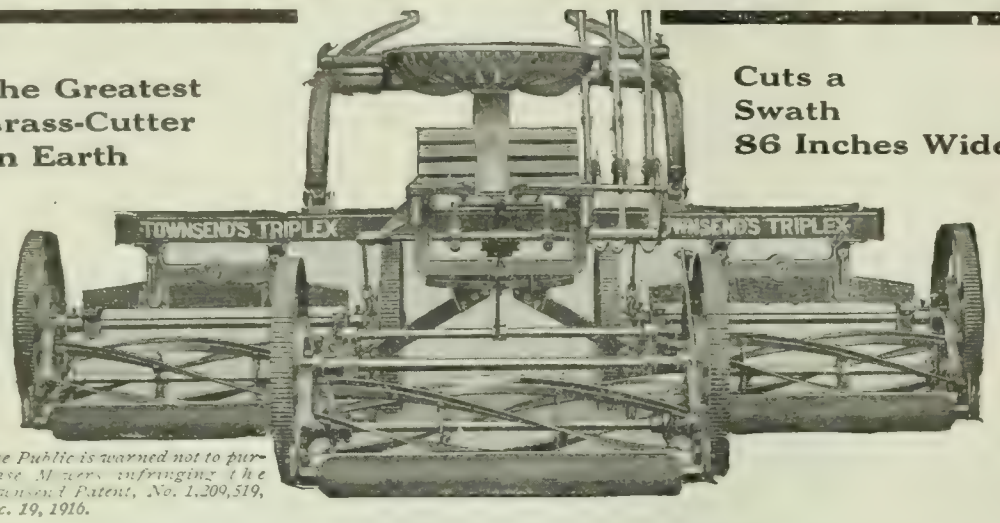
THE FEDERAL is a business builder because it meets the measure you apply to it. "Will it pay?" "What does it give for what it costs?" "Will it fit my business needs?"

Federal representatives expect these questions. They study your peculiar needs and answer you—in actual facts and figures given by other men in similar lines of business.

They show how FEDERALS cut down overhead by cutting haulage costs—how FEDERALS do more in a given time—work longer hours whenever emergency requires—never need a rest.

The also show how FEDERALS widen your delivery field. Thirty—forty—fifty miles, or even more, are easy distances for daily trips.

Outlying towns—distant shipping terminals—customers some miles away are brought right to your door. All this is business-building.



Write for "FEDERAL Traffic News"—a business-building publication. It covers very largely, actual haulage problems and their solution.

Federal Motor Truck Company, Detroit, Michigan

TOWNSEND'S TRIPLEX

The Greatest Grass-Cutter on Earth

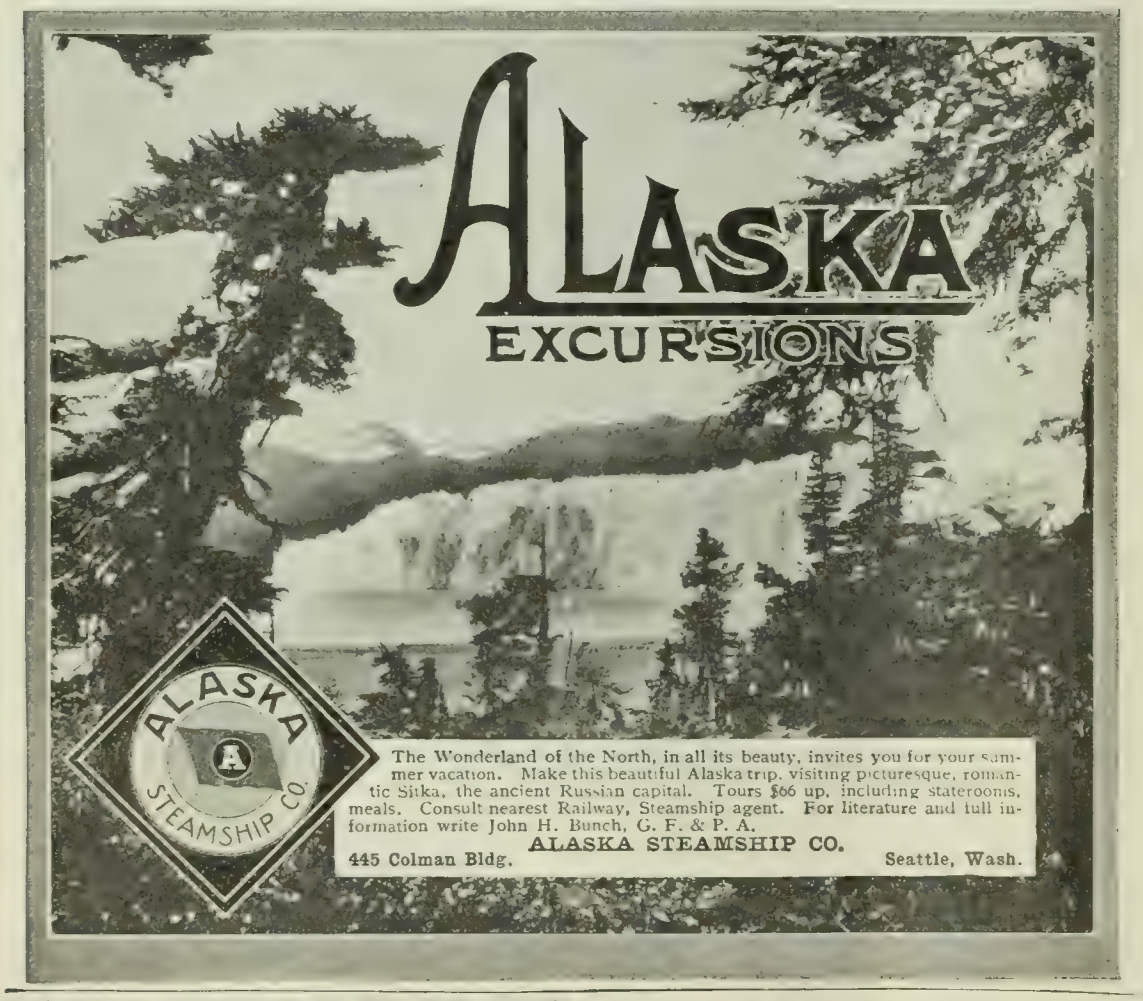
Cuts a Swath 86 Inches Wide

The Public is warned not to purchase Mowers infringing the Townsend Patent, No. 1,209,519, Dec. 19, 1916.

Floats Over the Uneven Ground as a Ship Rides the Waves

One mower may be climbing a knoll, the second skimming a level and the third paring a hollow

Drawn by one horse and operated by one man, the TRIPLEX will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost.



Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horse-drawn mowers with three horses and three men.

Does not smash the grass to earth and plaster it in the mud in springtime, neither does it crush the life out of the grass between hot rollers and hard, hot ground in summer as does the motor mower.

Write for catalogue illustrating all types of Townsend Lawn Mowers.

If you want to learn about a man's ancestry, with a view either of marrying him or of writing his biography, don't ask him, but go directly to the Eugenic Records Office of the Station for Experimental Evolution at Cold Spring Harbor, Long Island. If I had done that when I was writing the sketch of John Dewey I should have got in more information than I did. Professor Dewey was, as I said, a hard man to biographize. He is too modest even to boast of his ancestors, so I am grateful to Professor Davenport for coming to my aid with this new and interesting data as to Dewey's inheritance. It seems that radicalism is transmissible like red hair or bad temper and that the Dewey

blood contains a heretical determinant —or is it a disease germ?—which crops out in successive generations, as abolitionism, universalism and pragmatism.

In The Independent for March 26, Dr. E. E. Slosson writes interestingly of John Dewey. Looking for an hereditary basis for Professor Dewey's philosophic trend he inquires of the propositus and learns: "All my forefathers earned an honest living as farmers, wheelwrights, coopers. I was absolutely the first one in seven generations to fall from grace. In the last few years atavism has set in and I have raised enough vegetables and fruit to pay for my own keep." From this testimony Dr. Slosson concludes: "His ancestry is discouraging to those who would find an explanation for all things in heredity."

Altho I do not seek to explain "all things" (e. g., sunrise) by heredity, I think it is not justifiable to draw conclusions as to heredity from the testimony of one who is not an expert in the subject. No one would expect Professor Dewey to give expert testimony about his blood pressure or lymphocyte count; neither should one expect him to give valuable data touching his own heredity. Nor has he. A "farmer" may be a philosopher, a "wheelwright," an artist, and a "cooper" president of the village school committee. Also the phrase "first one in seven generations" would never have been used by an expert geneticist. What is meant clearly is, following the family *name* back seven generations. But this is not germane, since hereditary tendencies do not merely follow the family name.

The student of heredity, examining the personalities in various ancestral and many collateral lines of blood kinship to Professor Dewey finds some of them most significant. His mother's father was Davis Rich—a very noble man, of excellent judgment, large intelligence, and scrupulous honesty; an assistant judge in the county court; a man so highly regarded in his community as to be elected to the Vermont legislature. The mother's father's father is Charles Rich who was a reformer and philosopher. He was a champion of the Merino race of sheep, of the doctrine of the universal salvation of the human race, and, in 1813, of the rights of colored race. He was so fond of, and successful in, discussion that it is said he converted half of his town to universalism. An uncle of the preceding, Caleb Rich, had a speculative and inquiring mind, chiefly in religious matters. He was separated from his church for "errors of doctrine"; but was able by discussion to bring so many to his way of thinking that they founded a new sect with him as leader. He is said to be the real founder of the American branch of the Universalists. These are only fragments of John Dewey's family history but they suffice to show that his reforming and philosophic tastes and tendencies are family characteristics—that they have an hereditary basis. CHARLES B. DAVENPORT

Cold Spring Harbor, Long Island

A Desk and a System for every Business Man

HERE is a *new idea*—a device that looks like a desk, is used as a desk and is called a desk, but is really a kind of *filing cabinet* —built like a desk with radically new and useful features.

"Y and E" Efficiency DESK

Models and *complete systems* are offered for every business and professional man.

With 50 models to choose from, you can have a desk and a system as exactly fitted to your requirements as if built specially to order. In fact upon request we will design a special system for you, free of charge. "Y and E" Systems are famous throughout the world for the *satisfaction* and efficiency that they give.

By having all your papers, records and systems filed where so convenient to use, you save time and do better work. You also save the cost of a high-grade filing cabinet (or of a high-grade desk—according to how you consider it).

This is an intensely interesting proposition for everybody who wants order, efficiency and privacy, or who wants to get more work done in less time or to save money on necessary equipment.

Write us, today, for further information.

NEWS OF EFFICIENCY

The railroads of the United States have been divided into four departments, and the committee of railroad presidents in charge of each are already coöperating with the Government to ensure preferential use of all lines needed for purposes of national defense. A plan has been devised, it is announced, whereby the Government will advise the railroads of what services it requires and full responsibility will then fall upon the executives of the different systems. It is believed that national requirements can be fully met under the plan, without interference with the country's normal traffic.

* *

Dr. Hermann M. Biggs, New York State Commissioner of Health and an authority on diseases of the lungs, recently completed an exhaustive study of tuberculosis among the allied troops in France, and it is probable that the results of his inquiry will be utilized by the Government not only to detect and arrest incipient cases amongst United States soldiers but also in organizing military and internment camps along lines that will prevent the spreading of the disease.

* *

Advertising men in America are lining up strongly in support of the Government and the strongest possible prosecution of the war. In coöperation with leading business organizations, the Associated Advertising Clubs of America has offered its services to the Secretaries of War and the Navy, and named a National Advertising Board, with Mr. H. S. Houston, the president, as head. In a statement explaining the function of the Board, Mr. Houston says: "In making this offer to the Government we are following the admirable example of the advertising men of England, whose work, as every one knows, was largely responsible for the mobilization of Kitchener's great army of five million men. Advertising called to the colors also an army of investors equally large, who bought $5,000,000,000 worth of bonds. A like result can be secured in this country. . . . Our board will outline a campaign of paid advertising in the service of the Government, and it is proposed that every dollar possible be saved. Many publishers and billboard owners will count it a patriotic privilege to help, and the committee represents the very best advertising talent available."

* *

Advertising a commodity does not raise its price, according to an interesting investigation conducted by the Association of National Advertisers. An immense amount of data secured from the members goes to show that the price of nationally advertised goods has in many cases been actually reduced as the direct result of wide advertising and the consequently increased sales. Thus the makers of a famous camera have been able to reduce its price from $25 to $10 and at the same time to greatly improve the article. A leading hat manufacturer has similarly reduced his selling cost by seven cents a hat, and in spite of increased cost of workmanship and material the charge to the public has not advanced. The manufacturers of a famous breakfast food, a nationally known shaving stick, a well-known food specialty provide similar equally striking examples, and the principle applies through the entire automobile industry. Briefly, the Association finds advertising a proven "triumph of economical marketing."

* *

The booklet by Mr. Henry B. Joy, entitled "National Highways and Country Roads," which was recently issued by the National Institute of Efficiency as one of its series of Monographs of Efficiency, has been most cordially received. Among the letters which have been addrest to the author of the monograph is one from Colonel Roosevelt, who wrote "Your monograph on National Highways is admirable. I am greatly interested in it, and pleased with it. I particularly liked your phrase 'Tightening the Union' under the Border Highway map showing your Lincoln Way. You use exactly the words to express the idea!" Mr. Albert J. Beveridge, ex-Senator from Indiana, wrote: "I have read with keenest interest your article on National Highways and Country Roads and approve heartily every word you say. I consider this one of the completest and most convincing statements I ever have seen, if not indeed the very best of all on that important subject. Please accept my hearty congratulations. Your brochure has the force and dignity of real statesmanship . . . and your work will have a distinct place in American history."

The Lincoln Highway Association has ordered a special edition of the monograph for its own use in the furtherance of the gospel of better roads and more of them.

* *

Appropriate reference was made, at a meeting of the Board of Governors of the National Institute of Efficiency, held at the Aero Club of America on April 4, to the death of Mr. William B. Howland, founder and first president of the organization. The following resolution was unanimously passed: "Recognizing the great work done by Mr. Howland both as a personal exemplar of efficiency and as the founder of this Institute, the Board of Governors takes this occasion to express its profound regret at the loss it has sustained and directs that the memorial announcement recently sent to members of the Institute be spread upon the minutes."

* *

To fill the vacancy caused by Mr. Howland's death, the Board unanimously elected Mr. Melvil Dewey, who has been a member of the Board of Governors since the Institute was founded. Besides being widely known as the founder of the American Library Association, the Metric Bureau for establishing metric weights and measures, and the Spelling Reform Association, and as the former New York State Director of Libraries, Mr. Dewey has for many years been prominent in the broad efficiency movement to America, a notable contribution to it being his work in developing card filing systems. He is president of the Efficiency Society, and in other directions Mr. Dewey's activities are reflected in the fact that he is a trustee of Chautauqua Institution, and is the founder and president of Lake Placid and Riversea Clubs. Mr. Karl V. S. Howland, son of the late president of the Institute, was unanimously elected Executive Chairman of the Trustees of the Institute.

* *

The meeting pledged enthusiastic support to the movement for national efficiency in the light of the present crisis and decided that an early step in this direction should be the preparation and publication of one or more Monographs of Efficiency dealing in a practical and instructive way with the subject of Efficiency and National Defense.

* *

A notable instance of what women can do in the present crisis is the work already begun by the Militia of Mercy, which has enrolled 9000 women in New York to aid families of men of the Naval Reserve and other branches of the armed forces of the United States who have been called to the colors. The experience of England in the matter of the dependents of men in the fighting line has been kept in mind in formulating a scheme for ensuring the families of soldiers and sailors against undue hardship. The work demands not only the exercize of personal tact and the collection of a vast amount of data, but also considerable money, and a fund of $90,000 has already been pledged to carry on the work. Arrangements are complete for raising an additional $100,000. The Secretary of the Navy has formally accepted the Militia of Mercy's patriotic offer.

* *

The National Institute of Efficiency is to be strongly represented at the annual meeting of the American Academy of Political and Social Science which is to be held at Philadelphia on April 20 and 21. Topics of special interest, in view of present conditions, are to be discussed.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, etc., required by the Act of Congress of August 24, 1912, of The Independent, published weekly at New York, N. Y., for April 1, 1917:

State of New York, } ss.
County of New York, }

Before me, a notary public in and for the State and county aforesaid, personally appeared Karl V. S. Howland, who having been duly sworn according to law, deposes and says that he is the President of Independent Corporation, owner of The Independent, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, Independent Corporation; Editor, Hamilton Holt; Associate Editor, Harold J. Howland; Managing Editor, none; Business Manager, none, all of 119 West Fortieth street, New York, N. Y.

2. That the owner is Independent Corporation, 119 West Fortieth street, New York, N. Y. Names and addresses of stockholders holding 1 per cent. or more of total amount of stock: Charles B. Alexander, 165 Broadway, New York, N. Y.; James Douglas, 99 John street, New York, N. Y.; Hamilton Holt, 119 West Fortieth street, New York, N. Y.; Estate of William B. Howland, 119 West Fortieth street, New York, N. Y.; Harold J. Howland, 119 West Fortieth street, New York, N. Y.; Karl V. S. Howland, 119 West Fortieth street, New York, N. Y.; Theodore Marburg, 11 Mt. Vernon Place, Baltimore, Md.; John P. Munn, 277 Broadway, New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

INDEPENDENT CORPORATION,
KARL V. S. HOWLAND, President.

Sworn to and subscribed before me this 27th day of March, 1917. WESLEY W. FERRIN,
Notary Public, Kings County. Certificate filed in N. Y. County No. 87. New York County Register No. 7120.
(My commission expires March 30, 1917.)

The Market Place

FOOD AND FARM LABOR

At last we have two-dollar wheat. In the Chicago market on the 4th this price was reached, and on the following day sales were ready there at $2.07. At the same time the price of corn advanced to $1.27. These figures for corn had not been equaled in half a century. Never before have we had two-dollar wheat under normal conditions. In 1888 a small quantity was sold at this price because the market had been cornered by B. P. Hutchinson, a speculator well known in those days. The same price now is not due to manipulation; it is the actual value of the grain, determined by the great foreign demand, deficient crops here and all over the world in 1916, expected exhaustion of supply before the next harvest, and the recent loss of much acreage in our winter wheat states. There is great need of the widest possible cultivation in those states where wheat seed is planted in the spring.

The danger that there will be a shortage of food is fully realized at Washington, where the Department of Agriculture is devising plans for increasing this year's yield of grain and vegetables. In two or three western states there are to be conventions for consideration of the question. Railroad companies are giving aid. In the East the Delaware, Lackawanna & Western is urging farmers in the territory which it serves to produce as much food as possible and use every available foot of land. This, the company's president says in a letter addrest to them, is both a patriotic duty and an economic necessity. The company undertakes to provide special trains for perishable products, to assist in procuring labor, and to make a system of distribution in New York City that will guarantee honest treatment and the highest profits that are consistent with reasonable prices to the consumer. Wealthy owners of large suburban estates are preparing to cultivate all the tillable ground in them, except their lawns. There are signs that the yield of vegetables will be increased, for the sale of garden seeds by prominent firms shows a recent growth of 60 per cent.

Unfortunately the supply of labor is insufficient. Men have been drawn from the farms to munition factories. Farmers cannot get help by offering high wages. This lack of men may prevent the preparation of land for the large

crop of spring wheat that is so much needed. In New York the state's Industrial Commission publishes a warning that for lack of hired labor the state's crops will fall below those of recent years. The State Government, it says, should consider the expediency of "enlisting an agricultural army which will be given vocational training along farming lines." The problem may not be solved in that way, but it is one that demands careful consideration.

THE STOCK MARKET

In the first week of April, prices on the New York Stock Exchange have been affected by opinions and rumors about new national taxes, rather than by the war declaration, for that had been foreseen. There was a general downward movement in the last week of March. Monday, April 2, saw some recovery. The prompt election of a Speaker in the House exerted a favorable influence. Many had feared that a deadlock would delay action concerning the war. Announcement that there had been a large oversubscription in a very short time for the Pennsylvania Railroad company's new bond issue of $60,000,000 was regarded with much satisfaction, as indicating that other companies could turn to long-term bonds from short-term notes. On the other hand, reports of the same company's earnings showed a considerable decrease of net, because the wage increases for two months, due to the Adamson eight-hour law, had been added to the cost of operation. Nearly one-fifth of the day's business was in Steel shares, whose net gain was 2⅞. On the 3d, in a broader market of 918,000 shares, at the beginning there was a general advance, ascribed to approval of President Wilson's war message to Congress, published in the morning papers, but a reaction followed, and the net result was an average loss. Many were thinking of the coming new taxes, expecting that those upon excess profits would be severe.

This was the leading topic on the 4th, when the decline continued, but the net changes were small. Sales of Steel, with a loss of 1⅛, were 213,000 shares, or more than one-fourth of the day's transactions. On the 5th prices were again reduced, and apparently for the same reasons. The profits of industrials, it was said, would be cut down by taxes needed for large military and naval expenditures. The market was closed on the 6th, Good Friday. In the four days almost exactly one-fourth (802,000) of the shares sold were those of the Steel Corporation, showing a net loss of ¾.

The following dividends are announced:

American Telephone and Telegraph Company, $2.00 per share, payable April 16.

New York Central Railroad Company, $1.25 per share, payable May 1.

Pacific Gas & Electric Company, common, quarterly, $1.25 per share, payable April 16.

United Cigar Stores Company, common, quarterly, 2 per cent, payable May 15.

United Fruit Company, quarterly, 2 per cent., payable April 14.

Westinghouse Electric and Manufacturing Company, common, quarterly, 1¾ per cent, payable April 30.

Insurance

Conducted by

W. E. UNDERWOOD

HOW THE MONEY WAS DISTRIBUTED

Illustrative of the disposition made of the money collected as premiums for their policies by the fire insurance companies, is the published experience of The Home Insurance Company of New York for the year 1916. That company received $18,820,825.60 in premiums and $1,659,758.88 as income on its invested assets. It paid dividends to its stockholders amounting to $1,320,000, which, as we see, was borne by the investment income and not by the premium income.

The Home, in a diagram, shows what became of its premium income last year—the exact proportion of each dollar of disbursements. From this I construct the following statement, using $100 of premium income as a basis:

Paid in loss claims	$60.35
Paid to State Insurance Departments, taxes, licenses and fees	3.62
Paid for field supervision, state and special agents	4.88
Paid as commissions on business	20.01
Paid for printing, advertising and supplies	1.85
Paid for administration	5.86
Set aside for reserve required by law	1.59
Underwriting profit carried to surplus	1.84

It will be observed that the total of the first four items amounts to $88.86, which means that, on the average, out of every $100 in premiums collected by the company in every community during the year, $88.86 was returned to it in losses paid, taxes, licenses and for the services of special and local agents.

It should also seem reasonable by the patrons of this company that not only is its profit small—being but $346,303 on an overturn of nearly $19,000,000—but that its stockholders have been paid their dividends from the investment side of the business, and that both the underwriting profit and the surplus earned on investments—some $686,000—were carried to the funds held for the protection of policyholders. This illustration is fairly applicable to successfully conducted fire insurance generally.

W. H. E., Phoenixville, Pa.—The rates charged by the Educators' Beneficial Association of Lancaster, Pa., are probably adequate to pay the accident and sick benefits provided, in addition to which, I presume, the association possesses the power of assessing the members. I do not, however, understand how the old age annuity of $150 a year at and after age 65 is to be provided. If we assume that five per cent is continuously earnable on investments, we must have a capital sum of $3000 to secure an annual return of $150. I do not believe that a premium of $8 a year for Class A certificates, or $12 a year for Class B, is sufficient to pay all claims for sickness and accident, plus expenses, and leave sufficient surplus, including that forfeited by members who lapse, to aggregate a sum the earnings of which will yield the annuity promised.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

A Wasted Day. By Richard Harding Davis.

1. What is meant by calling the present a romantic age?
2. How does the romantic writing of today differ from the romantic writing of the past?
3. Point out elements of romance in the life of Richard Harding Davis.
4. Into what classes may Richard Harding Davis' writings be divided? From what sources did he gain material for his writing? From what sources should you gain material for your own composition work?
5. What is meant by "showing outward realities"? Why is it better to turn attention to "inner life"?
6. What characteristics make a story "excellent in technique"?
7. What is meant by "divergent character studies"? By a study of social life? By a study of political life?
8. In what way is "A Wasted Day" like "The Outcasts of Poker Flat"? How does it differ from "The Rose of the Alhambra"?
9. Comment on the effectiveness of the opening paragraphs of "A Wasted Day."
10. What values are added to the story by Mr. Thorndike's experiences in Mr. Andrews' office? Why are the incidents of the Levantine and the woman with the basket presented?
11. What elements are added to the story of Mr. Thorndike's experiences in court? How do those experiences affect Mr. Thorndike?
12. Write a story of ordinary life in which you try to present fundamental values.

SECTION II. ORAL AND WRITTEN COMPOSITION.

Back of the Brawn, the Brain. By Frank A. Scott.

1. Explain the sentence: "The blood of the soldiers must be mingled three parts with the sweat of the man in the mills."

Don't Muddle Thru. By Sydney Brooks.

1. Write a comparison or contrast between England at the beginning of the Great War and the United States today.
2. Write in a single paragraph the definite points presented in this article.

Making Ready the Army. By Newton D. Baker.

1. Stand before the class and give a short talk concerning the present work of the War Department.

Brothers in Arms. By the Marquess of Aberdeen and Temair.

1. From this article draw rules for writing a public letter.

The Job Higher Up. By Edward Earle Purinton.

1. Show how the author has made advantageous use of direct quotation.
2. Write a somewhat similar article concerning promotion in school work.

Motor Efficiency. By John Chapman Hilder.

1. Show in what ways this technical article is extraordinarily well written. Write a somewhat similar technical article.

History in the Making. By Donald Wilhelm.

1. Show in what ways this article is superior to the usual type of articles in daily newspapers.
2. Show how description has been used as a means of emphasis.

Editorial Articles.

1. Draw from the editorial articles a clear explanation of the causes that have led the United States into war.
2. Give orally an exposition of what every citizen may be expected to do for the United States in time of war.

The Story of the Week.

1. Give a complete narrative of the events in Washington that preceded the entrance of the United States into the Great War.
2. Write a paragraph of detail concerning the recent work of U-boats.
3. Write a paragraph of contrast in which you show what results have been gained by the Russian Revolution.
4. Write a short explanation of the present military situation in the Turkish Empire. Use a map or diagram.

In General.

1. Write a short composition in which you show in what ways this number of The Independent encourages the highest ideals of patriotism.
2. Write an exposition in which you discuss the educative value of the pictures in this number.
3. Show in what ways your own school paper could be improved by imitating some of the characteristic features of The Independent.
4. Write a story in which you tell the history of a single copy of The Independent.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.
PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. The Declaration of War—"The United States 'Falls In'," "History in the Making," "The President Speaks for War," "The Decision of the Senate," "The Decision of the House," "Cuba Enters the War."

PART I. AMERICAN INTERNATIONAL AFFAIRS.

1. State as clearly as you can the causes which have led the United States to declare war. Compare these causes with those which led each of the chief allies—Russia, France, England and Italy—into the war.
2. Compare the causes which have led to the present war with those which led to the War of 1812, the Mexican War, the Spanish-American War.
3. "He (the President) urged . . . an alliance with the present enemies of Germany," etc. If the President's suggestion is adopted what will become of the American policy as enunciated in Washington's Farewell Address?
4. ". . . some newspapers in Argentine . . . pointed out that the entry of the United States into the European war . . . portended the passing of the Monroe Doctrine," etc. Explain this statement.

PART II. THE WAR POWERS OF THE PRESIDENT AND OF CONGRESS.

1. Study carefully Article I, section 8, clauses 1, 2, 11-16, and Article II, section 2, of the Constitution.
2. Write a summary of the article "History in the Making." What do you learn about the procedure of Congress from this article?
3. Make a list of the public men mentioned in this article; add a brief descriptive phrase—e. g., La Follette, Senator from Wisconsin—to each name.
4. Compare the procedure incident to the declaration of war in this case with that in one or more of the following cases, (a) the War of 1812, (b) The Mexican War, (c) the Civil War, (d) the Spanish-American War.
5. What, according to the President, are the measures which the United States must take to make the war effective? Discuss the wisdom of each of these measures.

II. Organizing for War—"What Can I Do?" "Everyman's War," "Making Ready the Army," "Back of Brawn, the Brain," "Don't 'Muddle Thru'," "War Plans Mapped Out."

1. "Modern War is the united effort of a whole people." Organize what you gain from your reading into a series of topics under this sentence as your main heading.
2. Elaborate one or more of the following topics: (a) Military Organization, (b) Industrial Organization, (c) War Finance.
3. What can the women of the country do to help?
4. "America today is pretty much as Great Britain was in August, 1914," etc. What are the facts upon which this statement is based?
5. Note the series of "Don'ts" on page 118. What are the experiences of England upon which these "Don'ts" are based?
6. What concessions must be made to labor if the war is to be successful? What concessions must labor make?

III. The Human Element in Industry—"The Job Higher Up."

1. Study the complaints of the "man of forty-five" and the "efficiency record" of this same man. What conclusions do you draw?
2. Make an outline of the methods of self improvement given in this article. Which one, in your judgment, is the most important?
3. Explain this statement: "The way to get ahead is to look behind."
4. "Search out the business problems that confront your head man," etc. Which of these problems are mechanical? Which ones are human? Write a detailed description of one or more of these problems.
5. Explain the last paragraph in the article.

IV. Production, Distribution and Exchange—"The Market Place," "Railroad Rate Questions."

1. List the subjects discussed in the above references under the three headings given.
2. What has been the effect of the Adamson Eight Hour Law during the past two months? What changes in railroad organization are proposed as a result?
3. "At last we have two-dollar wheat. . . . It is the actual value of the grain." How is actual value determined? Taking the price of wheat as an example, discuss the relation between value and price.
4. "The danger that there will be a shortage of food is fully realized." If such a shortage comes what will bring it about?

American aid is being asked for the Huguenot Missions in Northern France and Belgium. Here, in spite of war conditions the few remaining ministers are bravely endeavoring to keep in existence the Protestant Christian forces. This work cannot be carried on unless generous America provides the necessary funds, and the Federal Council of Churches is coöperating with Dr. Anet of the Franco-Belgian Committee in raising the $100,000 necessary. Contributions should be sent to The American Huguenot Committee, Room 612, 105 East Twenty-second Street, New York City.

FOR YOUR WAR GARDEN

No end of tools may be found in the stores, but there are only a few which the garden maker, and especially the amateur, really needs. It is as true now as ever that he who tickles the earth with the hoe will make it laugh with the harvest. This does not necessarily mean the hoe of back-breaking memories, however, for the modern wheel hoe or cultivator will do the tickling just as effectively and with much less labor.

While the old-fashioned hoe is needed less than formerly, it cannot be dispensed with. It is important to choose a hoe of the right weight and one that has the right "feel." Also, it must be kept sharp and clean by the frequent use of a good file. The scuffle hoe can also be used to advantage in keeping down weeds.

A spade, a fork and an iron rake will be required as a matter of course. The rake is often overlooked when tools are ordered, but is always needed to smooth and pulverize the soil. With a garden line to make the rows straight and a trowel for transplanting, these are all the tools the garden maker really needs.

Altho not perhaps classed as tools, forcing frames and plant protectors may well be a part of the garden maker's equipment. Forcing frames make it possible for him to start tender seeds outdoors before the danger of frost has passed. They help him to grow melons, even in the North, and allow him to dispense with a hot bed in starting cucumbers and similar plants. Plant protectors enable the gardener to steal a march on the bugs which usually feast on young plants. Both the frames and plant protectors are worth much more than the few cents they cost.

REMARKABLE REMARKS

TY COBB—I like scrappy baseball.

W. J. BRYAN—Please enroll me as a private.

LILLIAN RUSSELL—Wash your soap before using it.

ANDREW D. WHITE—A republic cannot be made without republicans.

KING CONSTANTINE—We don't pretend always to be angels.

WILLIAM H. TAFT—Herr Zimmermann has no sense of humor.

JULIAN STREET—What are millionaires for if not to contribute?

REV. H. W. PINKHAM—I had as lief be a coward as be a perfect ass.

JUDGE JOHN M. KILLITS—A boy with the name John usually makes good.

EUGENE V. DEBS—Rockefeller has a billion dollars; he has not one comrade.

DR. D. A. SARGENT, of Harvard—There are such things as rhythmic affinities.

KING ALFONSO—I would be a good republican if I had not been born a king.

ED. HOWE—Everyone creeps up to the edge of hell occasionally and looks over.

JOHN MCCORMACK—I think Schubert's "Allmacht" is the greatest of all songs.

AMBASSADOR GERARD—I long ago made up my mind never to speak over ten minutes.

BILLY SUNDAY—If a minister believes and teaches evolution he is a stinking skunk.

ERNESTA D. BULLITT—Efficiency is the one crime worse than the seven deadly sins put together.

SIR RABINDRANATH TAGORE—Throw off the shackles of mundane occupation and dwell in the spirit.

REV. CHARLES R. BROWN—The loss of the capacity for moral indignation is infinitely worse than war.

PRESIDENT HIBBEN—I would like to see the Stars and Stripes planted somewhere along the Hindenburg line.

JOHN D. ROCKEFELLER, JR.—From a purely cold blooded business point of view, honesty *is* the best policy.

W. P. G. HARDING—I do not believe we ever approached a crisis so well prepared from a financial point of view.

REV. COURTLAND MYERS—If money were equally proportioned every family in America would have $1200 to live on.

MRS. AUGUST BELMONT—The modern tendency to disregard tradition is nowhere more evident than in the theater.

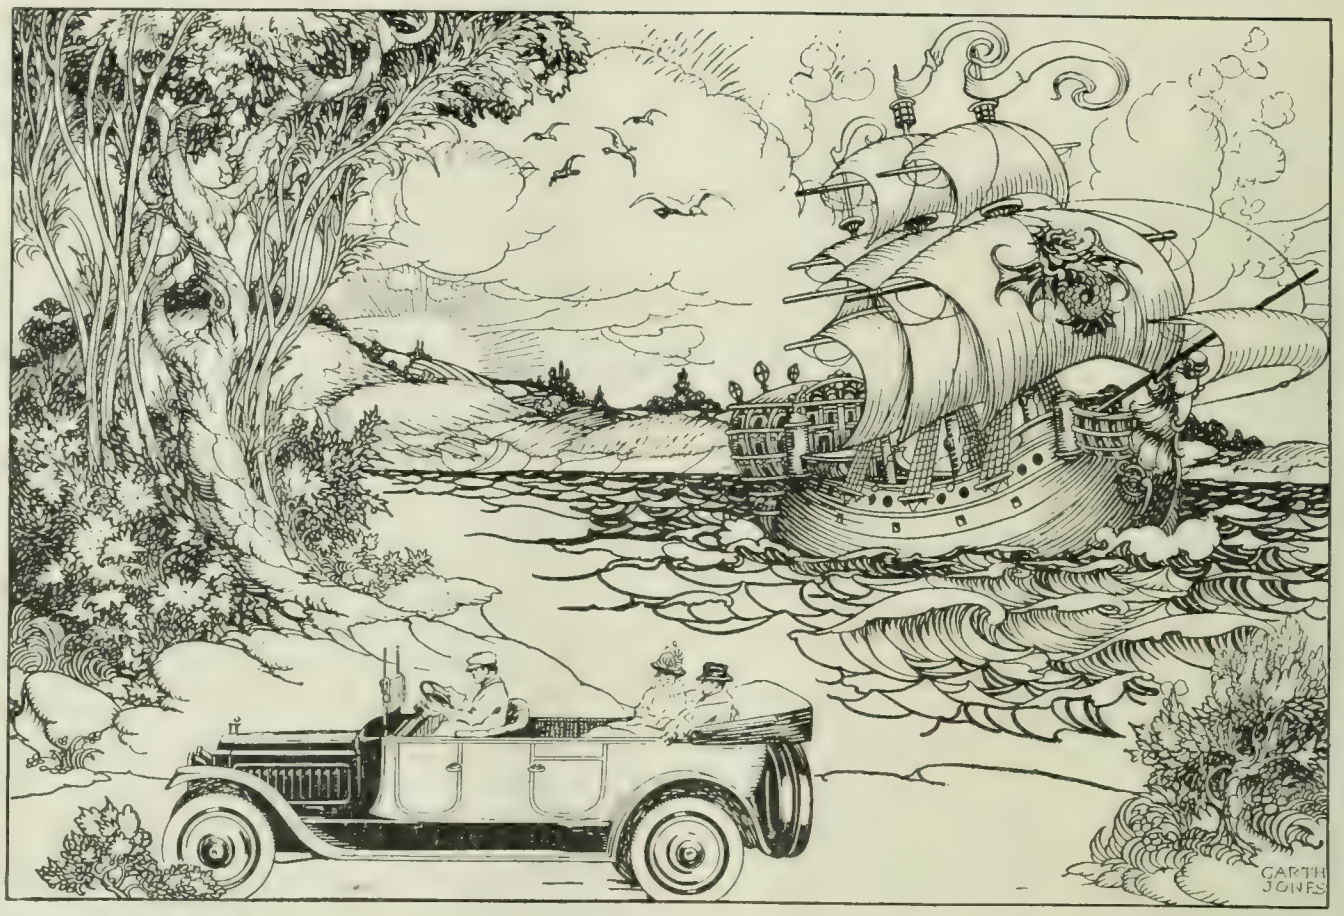
DEAN H. P. ALMON ABBOTT—Do not break an engagement just because you discover that the young lady has wealth.

MARGARET WILSON—The school buildings belong to the people and the great need of utilizing them for civic purposes grows daily.

PRESIDENT JACOB GOULD SCHURMAN—College clubs in large cities usually have contented themselves with being lounging places.

JACOB H. SCHIFF—Just as before I hated most intensely the Russian Government so now I love deeply the new Russia, the Russian people.

PAUL MILUKOV—The ideals which are represented by the provisional government of Russia are the same as underlie the existence of the United States.



EDWARD H. FORBUSH—"What are we going to do about the cat?" This question I have put to more than 500 correspondents and 175 of them answered, "Kill it."

JULIUS MOERSCH—America would be fortunate if it had for President a man of the type of Emperor William II, a man who is trusted and beloved by the people.

PROF. R. M. WENLEY—There is not one jot of evidence to prove that the soul lives after death but there is also not one jot of evidence to prove that the soul does *not*.

REV. CHARLES A. EATON—The Czar, the little father of all the Russias, is now looking for a job and the Kaiser with his heaven-pointed mustaches will soon be looking for one, too.

REV. KARL RIELAND—The cowbell, hammer and tongs, box banging, whistle and rattle music of modern dances has a real effect on the moral substance of those habitually swayed by it.

Economy! Cheapest power is that which makes best use of Nature's resources. With the gliding drive of a full rigged ship—plus a speed no craft ever had—the twelve agile and powerful cylinders of the Packard motor will carry you anywhere in greatest security and comfort—at least possible cost. The economical use of gasoline is one of the major advantages of the Twin-six. ❦ There are twenty and more Packard styles. Prices, open cars, three thousand fifty and thirty-five hundred dollars, at Detroit. ❦ ❦ Packard Motor Car Company.

THE NATIONAL TASK AND THE UNIVERSAL OBLIGATION

THE duty of the United States in the war seems to lie in several directions. But it forms one coherent whole, with a single central idea running thru it, and based upon a single solid principle. We must coöperate with and help our allies, for they face the common enemy, and the place to defeat the enemy is where the enemy is. We must relate our every effort to the sound principle enunciated by the President of "universal liability to service."

Our national task has several branches:

We must finance our allies.

We must feed our allies.

We must munition our allies.

We must reinforce our allies.

Without a dissenting voice the House of Representatives passed last week the bill to raise seven billions of dollars for the prosecution of the war, three billions of it to be loaned to our allies. It is altogether probable that before these words are read the Senate will have acted with equal unanimity and enthusiasm and the bill have received the approval of the President. We are going to finance our allies with alacrity and generosity.

The problem of feeding and munitioning our allies has two parts: that of producing food and materials of war and that of delivering them when they are ready. Already a nation-wide movement is under way for stimulating the raising of greater and greater crops; and the task of increasing our production of all kinds of munitions and war supplies is engaging the attention of the best minds in the nation. The problem of securing the delivery of these commodities is not so simple. For this purpose we need ships, more ships and yet more ships. We shall have available, as soon as the necessary repairs can be made, the German shipping which the Government has seized in ports in all parts of the country and of its possessions. But this tonnage will be far from enough. The Federal Shipping Board is undertaking the building of a great fleet of cargo carriers under the direction of General Goethals. The builder of the Panama Canal is accustomed to get things done, and his selection for the prosecution of this great work is earnest that it will be done, well done and speedily done.

The reinforcement of our allies will be a longer process. An armed force may be quickly raised, but it takes time to train it. This has always been true, but never so profoundly so as in this modern warfare that we are entering upon, in which fighting is a highly technical matter—depending for its effectiveness quite as much upon acquired knowledge and developed skill as on native courage and devotion. It will take time to make an armed force ready, which is all the more reason why the raising of the force must be begun at once and on a comprehensive and generous plan.

The one point on which there is likely to be the most disagreement is as to how this force shall be secured. Shall it be raised by voluntary enlistment or on the principle of universal service? The natural inclination of the American people is toward the voluntary system. They are accustomed to think of it as the true American way, the only way fit for free men in a land of liberty. But Abraham Lincoln insisted against serious opposition that the nation should resort to the draft to save the Union, and there never was a more pure-hearted apostle of liberty and democracy than he. And now Woodrow Wilson, apostle of the new freedom and ardent champion of democracy, appeals again to the principle of universal liability to service.

Lincoln and Wilson are profoundly right. They are right on every ground, theoretical and practical.

Democracy implies universal obligation; for democracy means equal rights, and wherever there are rights there are inseparable obligations. As free members of a nation, "conceived in liberty and dedicated to the proposition that all men are created free and equal," we demand from our common government equal protection in the enjoyment of our common rights and privileges. In turn we owe to our common government whatever service it needs for the protection of our common country and the prosecution of its high aims and purposes. All citizens must pay taxes in proportion to their ability; the proposition is undebatable. In like manner, all citizens must aid their country in war, in proportion to their ability; there is no more room for dissent here than there. Democracy cannot be divorced from the universal obligation to service.

The practical considerations lead irresistibly to the same conclusion. War cannot be successfully waged—and no nation has any right to enter a war which it does not propose to wage to a successful issue—with volunteer forces. The Civil War proved it; the experience of Great Britain in the present war has proved it. It is better to face this truth first than last.

The voluntary system takes away from industry and other indispensable pursuits men more needed by their country behind the lines than in the fighting ranks. The men who are to carry on all the multitudinous activities that make up modern warfare should be assigned to their respective duties—on the firing line, behind the

Drawn for The Independent by W. O. Morris

THE POSTSCRIPT

trenches, in the factories and workshops, on the farms, in the offices, everywhere at home and abroad—by those upon whom devolve the leadership of the nation's efforts. Only that way lies effectiveness. Only effective warfare is worthy warfare.

President Wilson in his proclamation to the American people declares with all the emphasis of the utmost simplicity: "The supreme test of the nation has come. We must all speak, act, and serve together."

There can be but one answer, We will.

UNITED WE STAND

NEVER in the history of the United States have the people of this country entered a war with such unanimity of mind and given it such united support. In the days when "an Englishman named George Washington took up arms against a German king called George III" we were very far from being united. A large and influential part of the population took the Tory side and all thru the Revolution the country was torn by dissensions. The War of 1812 was a sectional war. It was approved by a bare majority in Congress and New England threatened to secede because of it. The Mexican War was regarded with abhorrence in the north. Lowell wrote the "Biglow Papers" to prevent recruiting and the popular song of the day was:

> Go, go, go,
> Mr. Polk, you know,
> Bids you fight and kill and quell,
> Cut their throats and make them yell,
> Send their spirits down to hell,
> Conquer Mexico!

In the Civil War the country was not merely rent in twain but neither side was unified at first. There were seceders from secession in the south, while in the north the abolitionists agreed for once with their enemies, the pro-slavery men, in opposing a war for the preservation of the Union. Edward Everett said, "If our sister states must leave us, in the name of heaven let them go in peace," and Whittier in his poem "A Word for the Hour" wrote "Pity, forgive, but urge them back no more." All thru the war the copperheads and pacifists were active and well organized. The disloyal order, the Knights of the Golden Circle, at one time numbered nearly a million and could mobilize an armed force of 340,000 men. When conscription was adopted a mob ran amuck in New York City for four days with the connivance of the authorities. An orphan asylum was burned down and in the streets men and women joined in torturing and hanging and dismembering innocent persons. In New York City alone more than a thousand people lost their lives and more than a million and a half dollars' worth of property was destroyed by the draft riots. Does any one imagine that such scenes would be repeated if the present Congress should order a draft?

The opposition to our war with Spain was furious at the time and has not yet altogether died out. Two regiments of the New York militia, the Seventh and Thirteenth, refused to serve. The House and the Senate were long deadlocked on the question of supporting the President.

Not only is the United States more united than on any previous declaration of war, but it is more united than England was when she entered. The British Cabinet was divided and three members of the Government, Morley, Burns and Trevelyan, resigned rather than consent to participation in the continental conflict. The question was never put to Parliament, but it is evident that there were more members opposed to entering the war in the House of Commons August 3, 1914, than in the House of Representatives April 3, 1917. The opposition in the British press was outspoken up to the very last day. The London *Daily Chronicle* of August 3 said:

> Truth to tell, the issues which have precipitated the conflict which threatens to devastate the whole of Europe are not worth the bones of a single soldier.

And on August 4 the Manchester *Guardian* said:

> We hold it to be a patriotic duty for all good citizens to oppose to the utmost the participation of this country in the greatest crime of our time.

These are as emphatic as anything to be found in the opposition papers of the United States, yet Great Britain has since raised a volunteer army of five millions and is voluntarily spending $30,000,000 a day on the war.

The participation of Italy was preceded by violent political conflicts and riotous demonstrations for and against the war. In the Italian Chamber of Deputies there were seventy-four votes against war instead of the fifty in our House of Representatives. Yet Italy has shown no lack of united effort in the prosecution of her campaign.

It appears, then, America engages in this world war with greater unanimity than either of the other nations that entered of their own free will and with a single-mindedness never before manifested in its history. Our national motto was not true when it was adopted, but it is now. At last the American people, regardless of racial diversity, can say with sincerity: United we stand.

WHY WORRY?

THE common soldier, whatever his nationality, is generally a cheerful philosopher. Especially if he is a Frenchman. Here is the newest statement of the philosophy of the French *poilu:*

> Of two things one is certain: Either you're mobilized or you're not mobilized.
>
> If you're not mobilized there's no need to worry; if you're on the front, of two things one is certain: Either you're behind the lines or you're on the front.
>
> If you're behind the lines there is no need to worry; if you're on the front, of two things one is certain: Either you're resting in a safe place or you're exposed to danger.
>
> If you're resting in a safe place there is no need to worry; if you're exposed to danger, of two things one is certain: Either you're wounded or you're not wounded.
>
> If you're not wounded there is no need to worry; if you are wounded, of two things one is certain: Either you're wounded seriously or you're wounded slightly.
>
> If you're wounded slightly there is no need to worry; if you're wounded seriously, of two things one is certain: Either you recover or you die.
>
> If you recover there is no need to worry; if you die you can't worry.

Not bad philosophy, in the trenches or out.

EASTER AT ARRAS

THE battles that began on Easter Sunday with the bombardment of the German entrenchments in front of Arras resulted in the greatest victory yet achieved by the Allies in France. What the British failed to do in 1915, what they tried again in 1916 but still without success, this they have finally accomplished. They have smashed the Hindenburg line. They have crost the great divide at Vimy Ridge. They have ousted the invaders from the coalfield of Lens. They have captured fifteen thousand prisoners and two hundred cannon. They have advanced seven miles in seven days—

and the Belgian frontier lies only twenty miles ahead. When the Canadians on the morning of Easter Monday charged up the Vimy slope in the face of a storm of snow and shell they wrote a page of British history like to prove as memorable as those of Agincourt, Blenheim and Waterloo. The history of the Great War in France may be marked by three dates: September 6, 1914, when General Joffre stopped the Germans on the Marne; April 9, 1917, when General Haig drove the Germans back from Arras; and that third and final date, which no man can yet name, when the Germans shall be driven from France and Belgium.

LIBERTY OF DIFFERENCE

THE Rev. Wallace M. Short, whose article, "Why I Am Not a Prohibitionist," appears in the present number of The Independent, has recently published an account of the shabby treatment he received at the hands of his fellow Congregational ministers in Iowa. Because he honestly felt that he could not "make his reason and conscience consent to the prohibition doctrines and practise," a committee appointed by the Sioux Association of Congregational Churches and ministers adopted a majority report recommending that the association withdraw from Mr. Short the privileges of fellowship.

The reasons given for this action, when examined in the light of the evidence, carry more censure for the ministers who voted for it and signed it, than for the man who became the victim of their unchristian intolerance. The question whether the liquor men drew from Mr. Short's addresses arguments for their side of the issue; whether he occasionally drank a glass of beer, or was, without his choice, elected an honorary member of a bartenders' union years before in another city, is of less importance than the more vital question—whether a body of Congregational ministers, inheritors of a fine tradition of liberty of difference, should allow themselves to be stampeded by a few zealots who mistake narrow-mindedness for righteousness. The published correspondence shows that they, like the Jedburgh judges of border history, endeavor first to hang the accused and then to try him.

As for Mr. Short's arguments against prohibition—we frankly disagree with him. He does not seem to recognize the fact that in the regulation of human society two equally valid principles often come into conflict with each other. When this occurs the relative advantages and disadvantages of limiting the exercize of the one or the other must be weighed and decided. Whichever way the decision falls, it is always possible for some one on the minority side to make out a case of violation of some great principle, or right, in consequence of which the whole social structure is going to fall in a heap. Well—it seldom does!

The right and duty of intelligent communities to prohibit the sale of habit-forming drugs is well recognized. It is not done to browbeat the intelligent or to outrage the precious moral freedom of those who are capable of self-restraint. It is done for the protection of the innocent, the ignorant, and the morally weak—in short, for that large portion of every community, including our youth, which must be guarded against the wiles of persons whose profits as sellers increase in direct proportion to the degradation of the purchasers.

More and more it is coming to be recognized that no essential distinction can be made between the commercial exploitation of alcoholic beverages on the one hand, and that of opium, morphine, and cocaine on the other. If it is no violation of moral principle or personal liberty to prohibit the sale of the latter, neither is it in the case of the former. On the contrary, because, as Mr. Short says, "the business of the democratic state is the mutual protection of life, property, and liberty," it is in duty bound to take just such a measure as prohibition, for the protection of these three species of values often involves conflicts in actual practise. If a man resident in a city chooses to keep quantities of dynamite in his home, it is urgently desirable, for the safeguarding of life, that his personal liberty, as well as his right of possession, be curbed by law.

The objection which Mr. Short raises against the prohibition method of making people moral has enough reason on its side to make it appear plausible. But this plausibility disappears with the pointing out of the obvious fact that the same objection may be brought against every law designed to protect and promote the welfare of society. Laws against peonage, slavery, polygamy, child labor, etc., have all faced difficulties of enforcement. Laws must lead and educate the laggards of the community in public morals, as well as sanction what the majority of the more intelligent and progressive have recognized as of value in the collective experience.

VACATION IN WAR TIME

For many years The Independent has had the pleasant custom of filling its Vacation Number with letters from its readers telling of the good times they had in tent or boat, at home or abroad. But next summer will be different from every other and our Vacation Number must be different too. Every man, woman and child in the United States has been called to the colors and our leisure will be employed otherwise than in killing time. Some will be hunting wild animals more dangerous than mountain lions or scouring the sea for other devil fishes than the octopus. Some will be flying, drilling or nursing; some will be raising pigs or radishes; occupations that perhaps may prove more profitable and healthful than the customary pursuit of pure pleasure. Anyhow, we want to hear about it, so we put the question to our readers:

How do you intend to spend your vacation?

Write us of your plans, hopes and ambitions. Tell what you are going to do and what you think others could do. We will publish several pages of the most interesting communications in our Vacation Number of June 2 and pay five dollars apiece for those printed regardless of length. Send in the letters by May 10 and do not make them more than two or three hundred words long. Unused manuscripts will not be returned, so save a copy if you want to show your friends afterward how much better it was than those we printed.

THE CALL TO SERVICE

President Wilson's Proclamation to the People on April 15, 1917

My Fellow Countrymen:

The entrance of our own beloved country into the grim and terrible war for democracy and human rights which has shaken the world creates so many problems of national life and action which call for immediate consideration and settlement that I hope you will permit me to address to you a few words of earnest counsel and appeal with regard to them.

We are rapidly putting our navy upon an effective war footing and are about to create and equip a great army, but these are the simplest parts of the great task to which we have addrest ourselves. There is not a single selfish element, so far as I can see, in the cause we are fighting for. We are fighting for what we believe and wish to be the rights of mankind and for the future peace and security of the world. To do this great thing worthily and successfully we must devote ourselves to the service without regard to profit or material advantage and with an energy and intelligence that will rise to the level of the enterprise itself. We must realize to the full how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice it involves.

These, then, are the things we must do and do well, besides fighting—the things without which mere fighting would be fruitless.

We must supply abundant food for ourselves and for our armies and our seamen, not only, but also, for a large part of the nations with whom we have now made common cause, in whose support and by whose sides we shall be fighting.

We must supply ships by the hundreds out of our shipyards to carry to the other side of the sea, submarines or no submarines, what will every day be needed there and abundant materials out of our fields and our mines and our factories with which not only to clothe and equip our own forces on land and sea, but also to clothe and support our people for whom the gallant fellows under arms can no longer work; to help clothe and equip the armies with which we are coöperating in Europe and to keep the looms and manufactories there in raw materials: coal to keep the fires going in ships at sea and in the furnaces of hundreds of factories across the sea: steel out of which to make arms and ammunition both here and there: rails for worn out railways back of the fighting fronts: locomotives and rolling stock to take the place of those every day going to pieces: mules, horses, cattle for labor and for military service: everything with which the people of England and France and Italy and Russia have usually supplied themselves but cannot now afford the men, the materials or the machinery to make.

It is evident to every thinking man that our industries, on the farms, in the shipyards, in the mines, in the factories, must be made more prolific and more efficient than ever, and that they must be more economically managed and better adapted to the particular requirements of our task than they have been; and what I want to say is that the men and the women who devote their thought and their energy to these things will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefield or in the trenches. The industrial forces of the country, men and women alike, will be a great national, a great international service army—a notable and honored host engaged in the service of the nation and the world, the efficient friends and saviors of free men everywhere. Thousands, nay, hundreds of thousands, of men otherwise liable to military service will of right and of necessity be excused from that service and assigned to the fundamental, sustaining work of the fields and factories and mines, and they will be as much part of the great patriotic forces of the nation as the men under fire.

I take the liberty, therefore, of addressing this word to the farmers of the country and to all who work on the farms: The supreme need of our own nation and of the nations with which we are coöperating is an abundance of supplies, and especially of foodstuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without abundant food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail. The world's food reserves are low. Not only during the present emergency, but for some time after peace shall have come, both our own people and a large proportion of the people of Europe must rely upon the harvests in America.

Upon the farmers of this country, therefore, in large measure rests the fate of the war and the fate of the nations. May the nation not count upon them to omit no step that will increase the production of their land or that will bring about the most effectual coöperation in the sale and distribution of their products? The time is short. It is of the most imperative importance that everything possible be done, and done immediately, to make sure of large harvests. I call upon young men and old alike and upon the ablebodied boys of the land to accept and act upon this duty—to turn in hosts to the farms and make certain that no pains and no labor is lacking in this great matter.

I particularly appeal to the farmers of the South to plant abundant foodstuffs, as well as cotton. They can show their patriotism in no better or more convincing way than by resisting the great temptation of the present price of cotton and helping, helping upon a great scale, to feed the nation and the peoples everywhere who are fighting for their liberties and for our own. The variety of their crops will be the visible measure of their comprehension of their national duty.

The Government of the United States and the Governments of the several States stand ready to coöperate. They will do everything possible to assist farmers in securing an adequate supply of seed, an adequate force of laborers when they are most needed, at harvest time, and the means of expediting shipments of fertilizers and farm machinery, as well as of the crops themselves when harvested. The course of trade shall be as unhampered as it is possible to make it, and there shall be no unwarranted manipulation of the nation's food supply by those who handle it on its way to the consumer. This is our opportunity to demonstrate the efficiency of a great democracy, and we shall not fall short of it!

This let me say to the middlemen of every sort, whether they are handling our foodstuffs or our raw materials of manufacture or the products of our mills and factories: The eyes of the country will be especially upon you. This is your opportunity for signal service, efficient and disinterested. The country expects you, as it expects all others, to forego unusual profits, to organize and expedite shipments of supplies of every kind, but especially of food, with an eye to the service you are rendering and in the spirit of those who enlist in the ranks, for their people, not for themselves. I shall confidently expect you to deserve and win the confidence of people of every sort and station.

To the men who run the railways of the country, whether they be managers or operative employees, let me say that the railways are the arteries of the nation's life and that upon them rests the immense responsibility of seeing to it that those arteries suffer no obstruction of any kind, no inefficiency or slackened power. To the merchant let me suggest the motto, "Small profits and quick service," and to the shipbuilder the thought that the life of the war depends upon him. The food and the war supplies must be carried across the seas, no matter how many ships are sent to the bottom. The places of those that go down must be supplied, and supplied at once. To the miner let me say that he stands where the farmer does: the work of the world waits on him. If he slackens or fails, armies and statesmen are helpless. He also is enlisted in the great Service Army. The manufacturer does not need to be told, I hope, that the nation looks to him to speed and perfect every process; and I want only to remind his employees that their service is absolutely indispensable and is counted on by every man who loves the country and its liberties.

Let me suggest, also, that every one who creates or cultivates a garden helps, and helps greatly, to solve the problem of the feeding of the nations; and that every housewife who practises strict economy puts herself in the ranks of those who serve the nation. This is the time for America to correct her unpardonable fault of wastefulness and extravagance. Let every man and every woman assume the duty of careful, provident use and expenditure as a public duty, as a dictate of patriotism which no one can now expect ever to be excused or forgiven for ignoring.

The supreme test of the nation has come. We must all speak, act, and serve together!

WOODROW WILSON.

THE STORY OF THE WEEK

The Storming of Vimy Ridge

At half past five o'clock on Monday morning, April 9, the Canadians rose from the trenches which they had occupied for more than a year at the foot of Vimy Ridge and charged up the slope against the labyrinth of entrenchments that crowned the hilltops. In September, 1915, the British had made an equally gallant attempt to capture from the Loos side the hights behind which Lens is hid, while the French attacked the Vimy Ridge, but thru bad management of the higher command and the failure of ammunition at the critical moment they were driven back with frightful losses from the trenches they had gained. But this time there were no such blunders as lost the battle of Loos. The new British army has mastered the new art of war. The artillery had prepared a path for the attack by clearing away the barbed wire entanglements and smashing in the concrete caissons. The field had been accurately mapped from the bird's-eye views of the British airmen. The curtain of fire was lifted just at the right time as the troops advanced so there was no delay and no shooting of comrades as had happened before in this field. The steel-clad tanks lumbered out from Arras on radiating lines, pushed thru barbed wire barricades, scrambled over trenches and craters and wandered thru village streets heedless of shrapnel and rifle-ball.

The trenches were here held by Bavarians with Prussians kept in reserve.

THE GREAT WAR

April 9—Canadians take Vimy Ridge. Fourteen Austrian ships in American ports seized.

April 10—American liner "New York" hits a mine. British hospital ship "Salta" sunk in Channel.

April 11—British gaining ground east and north of Arras. Spain protests against sinking of Spanish steamer "San Fulgenio."

April 12—Bolivia breaks with Berlin. Argentine ship "Monte Protegido" sunk in European waters.

April 13—French and British reach suburbs of San Quentin. Russian and German Socialists negotiating peace terms.

April 14—Congress appropriates $7,000,000,000 for Allies.

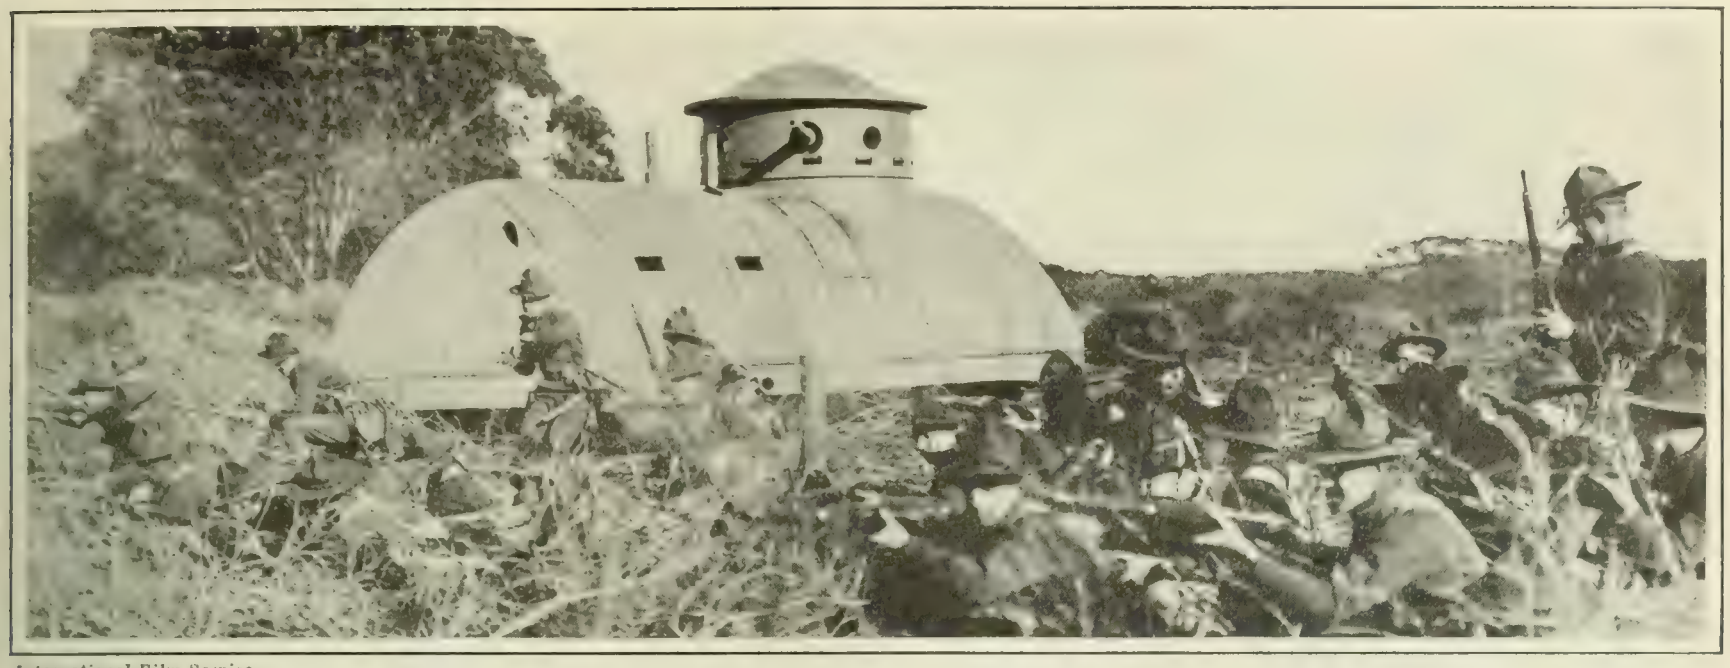
April 15—British enter Lens. Germans evacuate Dixmude.

But the British guns had placed a curtain of fire behind the front lines so when the Bavarians sent up their green rockets as signals of distress no help could come to them from the rear. When the Canadians reached them they surrendered with unprecedented docility and begged first for their lives and next for bread, for some of them had been without food supplies for days. At the end of the first day the Canadians had captured three lines of entrenchments and three thousand prisoners. Before the week was over they had some fifteen thousand prisoners, two hundred guns and large stores of ammunition. Among the guns were eight of the 8-inch howitzers and twenty-eight of the 5.9-inch howitzers. Besides these 250 machine guns were taken. Many of the guns were in working order and the shells stacked beside them were at once used against the retiring Germans.

As soon as Vimy Ridge was taken the British troops could overlook the city of Lens and the coal fields and factories that lie roundabout. By the following Sunday Lens was reached and the enemy cleared out of a semi-circle east of Arras to a distance of five to seven miles. The Germans have fallen back to what they call the "Wotan line," which runs north and south about eight miles east of Arras. The section extending from this to St. Quentin is called the "Siegfried line" and the southern section extending down to the Aisne is called the "Albrecht line." The three sections together constitute what the British call the "Hindenburg line."

The German Blockade

The destruction of belligerent and neutral shipping by the German submarines and mines continues at the same rate. The British Admiralty announces the loss of seventeen merchant vessels of over 1600 tons as well as two smaller and six fishing smacks during the week ending April 8. The Italian Admiralty reports the loss of five steamers and ten small sailing vessels for the same week.



Four neutral Belgium relief ships were torpedoed during the week altho they were outside the barred zone and plainly marked. Two British hospital ships have been sunk in the Channel.

REMAKING RUSSIA

The first photograph to reach this country of the Petrograd revolutionists demanding the abdication of the Czar. The soldiers who were ordered to fire on the crowds and disperse them refused to obey

International Film Service

PASSED BY THE U. S. CENSOR

It looks like real fighting, this sham battle of the National Guard in San Francisco. The track-laying tank paved the way for half a regiment to attack thru brush and sandhills. If its subsequent tests are as successful as this one we may add another "Made in America" to the list of war inventions

One of them, the "Salta," was sunk by a mine on April 10 and fifty-two lives were lost. She carried no wounded. The other, the "Gloucester Castle," which was torpedoed without warning in mid-channel on the night of March 30, was loaded with wounded but they were all saved.

The American liner "New York" had almost completed her voyage when she ran onto a mine five miles out from Liverpool bar. The mine was a small one probably laid by a submarine or by the Norwegian tramp with a hold full of German mines which was recently discovered near the mouth of the Mersey. A hole ten feet wide was made in the hull of the "New York" but all the passengers were removed in safety. Among them was a commission of American naval officers headed by Rear Admiral Sims which had been sent over to consult on coöperation with the British Admiralty.

The American State Department reports that from the beginning of the war to April 3, 1917, a total of 686 neutral vessels had been sunk and 79 others unsuccessfully attacked by German submarines. Of these 410 were Norwegian, 111 Swedish, 61 Dutch, 50 Greek, 33 Spanish and 19 American.

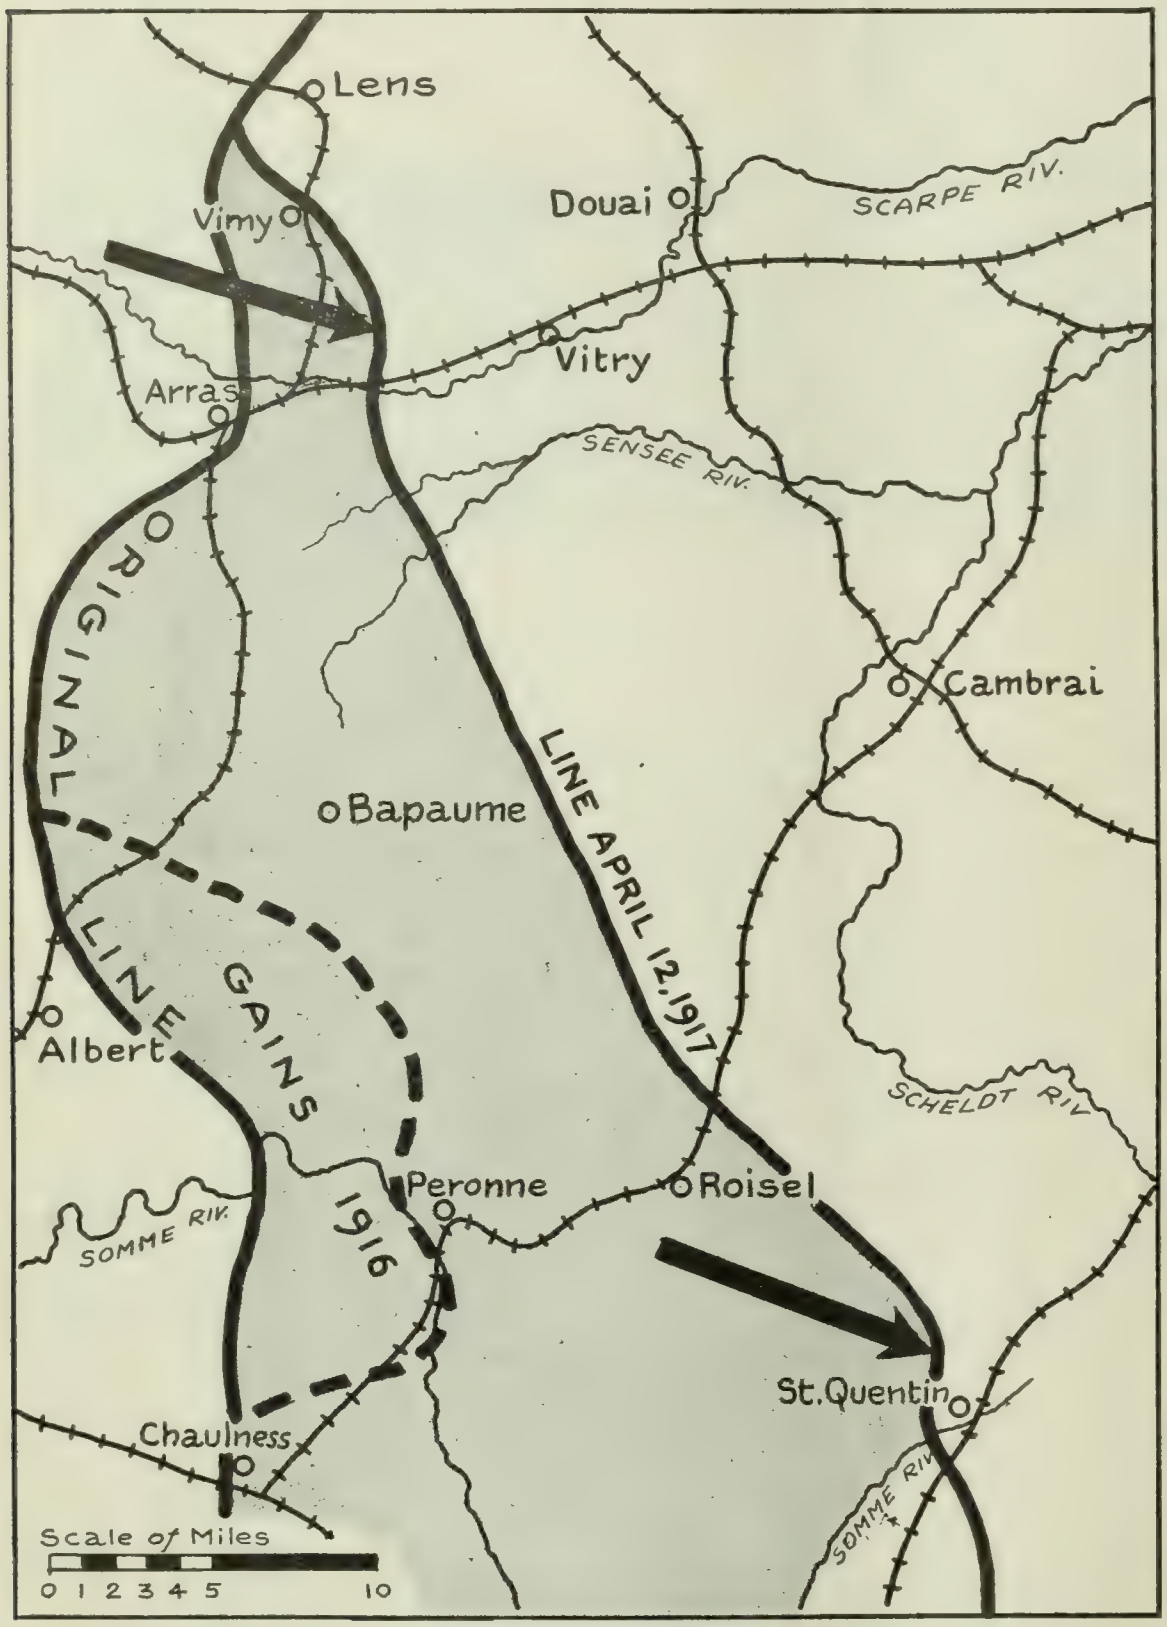
South America Versus Germany

The time is apparently approaching when the phrase "America joins the Allies" may be true in a broader sense than if used as applying only to the United States. Cuba alone has thus far actually entered the war, but Panama and most of the republics of Central America have committed themselves to the protection of our interests in that part of the world. Haiti and Santo Domingo have taken no action but they are at present virtually administered dependencies of the United States. The republics of South America, altho less directly under our influence and wholly free to choose their own diplomatic position, are without exception giving their moral support to the cause of the Allies.

Several nations will maintain neutrality for the present but not from any sympathy for the German cause. Thus the republic of Argentina has notified the Government at Washington that it recognizes the justice of our entrance into the war and considers that Germany has been guilty of "violation of the principles of neutrality established by the rules of international law." No nation could go farther than this without breaking off diplomatic relations with Germany altogether. The recent sinking of an Argentine sailing ship in the European war zone has greatly stirred public sentiment and has led to the temporary detention of German ships now in Argentine waters. Uruguay and Paraguay have officially exprest their sympathy with the action taken by the United States. Chile is officially neutral, but Dr. Alvarez, former Counselor of the Chilean Foreign Office, has declared that all Latin America owes and will give to the United States its unstinted support.

Brazil and Bolivia have broken off all diplomatic relations with Germany on the ground that citizens of both nations have lost their lives in consequence of the German submarine campaign. The formal declaration of a state of war with Germany cannot in either case be long delayed. The Brazilian navy is an excellent one with two modern dreadnaughts and a number of smaller craft.

War Measures Debated



The administration is determined to put thru its program of compulsory military service for physically fit young men who have nobody dependent on them and are not engaged in work essentially useful in wartime. Many members of Congress support the President in his stand and powerful influences are enlisted in his aid. Even ex-President Roosevelt, long President Wilson's political enemy, is now working to persuade Congress to agree to the plans of the administration. But attachment to the American tradition of voluntary military service is still so strong that the issue of the coming congressional struggle over conscription is still doubtful.

The espionage bill, providing for drastic restrictions on the activities of the press, is certain unless its terms are modified to encounter much opposition. Criticism centers on the clause which would punish by ten years' imprisonment all attempts to elicit military information which might be of value to the enemy. This and many other clauses of the bill are regarded as too elastically worded to conform to the constitutional guarantee of a free press. George Creel, a well-known magazine writer, has been appointed civilian chairman of a Committee on Public Information chosen by the President to control the publication of war news.

Chairman Adamson of the House of Representatives commerce committee has introduced a measure empowering the President to compel operation of privately owned railroads during the war; to control telegraph and telephone lines; to use the army for the protection of railroad lines and to draft employees of railroad, telegraph and telephone companies into the national service; and to increase the personnel of the Interstate Commerce Commission.

The $7,000,000,000 Loan

On April 14 the House of Representatives passed without a dissenting vote the largest loan ever voted at one time by any legislative body in the world. No such unanimity has been shown by Congress on any previous occasion since the diplomatic crisis with Germany first became acute. The present plan is to loan $3,000,000,000 to the Allies to finance the prosecution of the war, to use $2,000,000,000 worth of bonds for the military necessities of the United States and to keep $2,000,000,000 worth of certificates of indebtedness as an emergency fund until the receipts from the income taxes come in. The interest on the bond issue will be 3½ per cent. Many amendments to the loan bill were offered in the House, but the only important changes agreed to were the reduction of the maximum expenditure allowed for the flotation of the loan from $12,000,000 to $7,000,000, the limitation of the loan to nations at war with Germany and during the course of the war, and the prohibition of bond-selling below par.

THE RECOVERY OF FRANCE

The shaded area shows the gains that have been made in the Somme sector since the Germans established themselves on the original line in the fall of 1915. A greater advance has been made since February than in the two and a half years preceding. While the British are attacking at St. Quentin they have turned the end of the "Hindenburg Line" at Arras

Divided Councils in Russia

The newly established Provisional Government is meeting with serious difficulties from opposite quarters; from the adherents of the old régime and the extreme Socialists. A counter-revolution is threatened and it has been found necessary to arrest two cousins of the ex-Czar, Grand Duke Boris and Grand Duchess Marie Pavlovna, for complicity in royalist plots. On the other hand the radical wing of the labor party is trying to stop the war immediately by fraternizing at the front with their comrades in the German army. In fact the Socialists of the two countries have actually begun negotiations by way of Denmark. Philipp Scheidemann, who, as leader of that branch of the German Socialist party that supported the Government in the war enjoys imperial favor, has been allowed to go secretly to Copenhagen to talk over the possibilities of peace with Scandinavian and perhaps even with Russian Socialists there. It is said that German peace advocates had been preparing to ask the United States to undertake mediation with the Allies, but President Wilson's message put a stop to that plan and now the German Socialists have turned their attention to Russia. The German military authorities have, according to report, agreed to suspend operations against the Russian front until the success of the effort to induce Russia to make peace can be determined.

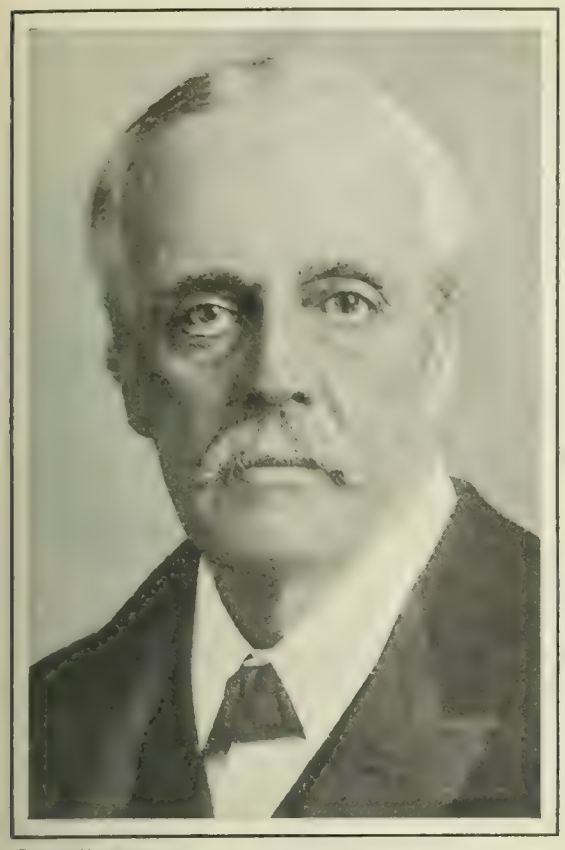
The Council of Workmen's and Soldiers' Deputies, which forms the radical wing of the Russian revolutionists, seems to be losing its faith in the Provisional Government established by the Duma. It even went so far as to send a committee to the Tauris Palace to arrest the members of the Provisional Government, but the soldiers on guard prevented it.

Russia Renounces Conquest

The Socialist supporters of the Provisional Government, in their desire for peace, are willing to forego the annexation of Constantinople, which the old régime had insisted upon and which Great Britain, France and Italy had conceded in April, 1915. The reactionary Premier, General Trepov, altho he remained in power only a few weeks, took occasion to make announcement of this agreement in order to have the Allies publicly pledged to this concession. But the new régime disclaims any intention of expansion at the expense of other nations, altho we may assume that it has not given up hope of recovering the Polish provinces held by Germany and Austria.

Prince Lvov, as head of the Provisional Government, has issued an appeal to the people for support in which he announces the new policy in these words:

The Government deems it to be its right duty to declare now that free Russia does not aim at the domination of other nations, at depriving them of their national patrimony, or at occupying by force foreign territories, but that its object is to establish a durable peace on the rights of nations to decide their own destiny.



The Russian nation does not lust after the strengthening of its power abroad at the expense of other nations. Its aim is not to subjugate or humiliate any one. In the name of the higher principles of equity it has removed the chains which weighed upon the Polish people. But the Russian nation will not allow its fatherland to come out of the great struggle humiliated and weakened in its vital forces. These principles will constitute the basis of the foreign policy of the Provisional Government, which will carry out unfailingly the popular will and safeguard the rights of our fatherland while observing the engagements entered into with our Allies.

The Provisional Government of free Russia has no right to hide the truth. The state is in danger. Every effort must be made to have it let the country respond to the truth when it is told, not by sterile depressions and not by discouragement, but by unanimous vigor, with a view to creating a united national will.

This will give us new strength for the struggle and will procure our salvation. In this hour of rude trial let the whole country find in itself strength to consolidate the liberty won and to devote itself to untiring labor for the welfare of free Russia.

What Is the Matter With Spain?

The outside world is almost entirely in the dark as to the meaning and extent of the political disturbances in Spain. The whole country has been put under martial law; a strict censorship has been imposed and we have no news, except a few meager authorized dispatches and the rumors that creep over the border, and which of the two sources is the more reliable none can tell. This reminds one of the silence that preceded the storm in Russia and indeed the situation seems quite similar. In Spain as in Russia there is a strong republican movement among the people but the leaders of the court, the church and army are pro-German. But King Alfonso is a man of different type from

Press Illustrating

AN ALLIED CONFERENCE HERE

The British Foreign Minister, Arthur J. Balfour, is coming to this country soon as the head of a commission which will discuss with our Government the coöperation of Great Britain and the United States in the conduct of the war. A French commission, headed by M. Viviani, Minister of Justice, will probably be in Washington at the same time

Emperor Nicholas. He has a stronger character and is as liberal as a king can be. He is married to an English wife and his sympathies are with the Allies.

The republican movement finds its chief support in the workingmen of the modern industrial district about Barcelona and in the miners of the north.

In March a manifesto appeared signed by twenty-six heads of labor organizations, reciting the grievances of the people and calling for a general strike to overthrow the Government, perhaps even the monarchy. The Government, however, took prompt action to quell the movement. Martial law was proclaimed, constitutional rights suspended and the press silenced. Sixteen of the signatories were arrested and the labor exchanges in Madrid and other cities were closed.

Besides such repressive measures the Government has started an investigation of the extent of unemployment and other causes of unrest. Spain has suffered all thru the war from the lack of shipping, but especially since the German warfare on commerce has been extended to the Atlantic. Coal and grain cannot be imported nor can wine and olive oil be exported. Trade with Spanish America has been largely cut off. Several Spanish ships have been sunk, the latest victim being the steamer "San Fulgencio." The Spanish Government has addrest a strong note to Berlin and it is quite likely that this may lead to war. In spite of the active pro-German propaganda that has been carried on in Spain by various agencies public sentiment is turning toward the Allies.

Austria Breaks With United States

In support of its ally the Austro - Hungarian Government has broken off all diplomatic relations with the United States. The initiative came from Austria, as the policy of President Wilson has been not to force the issue of peace or war with Germany's allies unless they actively supported Germany against us. When the news came from Vienna Baron Zwiedinek, the Austrian chargé d'affaires, asked for and received his passports. Spain was invited to take over the interests of American residents of the dual monarchy. As a precautionary measure the Federal authorities at once took possession of fourteen Austrian steamships of an aggregate tonnage of more than sixty-seven thousand stationed in American ports. This is not to be compared with the commandeering of German merchant vessels for war purposes which took place a week earlier, since its only purpose was to prevent the damage or destruction of the vessels by their crews. Even as it was, most of the ships seized were discovered more or less injured and unfit for immediate utilization.

The diplomatic relations between Austria-Hungary and the United States have not been normal at any time since the dismissal of Ambassador Dumba for encouraging plots against American industry. For several months Austria had no ambassador in this country, but eventually sent Count Tarnowski to Washington. Count Tarnowski was not, like Ambassador Dumba, personally objectionable to this Government and he would undoubtedly have been received but for the support given by the Austro-Hungarian government to the German war-zone proclamation. The United States then informed Austria-Hungary that no ambassador could be received so long as that Government endorsed unrestricted submarine war on merchant ships. Diplomatic intercourse was not, however, interrupted until several days after the United States had announced a state of war with Germany.

Allies to Hold Conference

Great Britain and France have arranged to send delegates to a war council in Washington in order to arrange the details of American participation in the Great War. The delegation will consist of statesmen and diplomats as well as of military and naval experts, because the purpose of the conference is a double one, to bring about an agreement on foreign policy and to determine the best way to utilize the man power and the natural resources of the United States for the triumph of the common cause. It is believed that the British and French representatives will try to induce the United States to agree not to make a separate peace. Other questions to be considered are the contemplated loan to the Allies, the assignment of a sphere of activity to the American navy, the transportation of munitions and foodstuffs across the Atlantic, and the feasibility of sending an army to the European battle front. The make-up of the conference has not been fully ascertained, but Foreign Secretary Arthur Balfour will probably head the British delegation, and M. Viviani, former Premier of France, and General Joffre, the most famous military leader of the Allied armies, will be among the representatives of France.

American Coast Defense Established

An executive order, made public April 13, announced the establishment of defensive areas at the entrance to the chief harbors of the Atlantic and Pa-

IN THE WAKE OF THE GERMAN RETREAT

As fast as the Allies recover the French towns, devastated ruthlessly by the Germans in their flight, engineers set about repairing as much of the damage as possible. This photograph of Noyon shows the work of cleaning up the débris just begun

cific coasts, the Gulf of Mexico and the insular colonies. No vessel will be permitted to enter the limits of these defensive areas except by the permission of the harbor patrol and by following certain definite routes. No vessel not belonging to the American navy will be permitted to enter these areas at night. Vessels disregarding the restrictions imposed upon their movements by the terms of the proclamation will not only run the risk of striking mines but make themselves liable to detention. One of the reasons for the coast defense restrictions is the presence of German commerce raiders in the western Atlantic. It will be the first task and for a long time the chief duty of the American navy to see that the ocean is kept free from these menaces to transatlantic traffic. It will also be necessary to find out whether the enemy has any base of supplies in American waters, and, if so, to detect and destroy it. The chief immediate importance of the entrance into the war of Latin American countries is the possibility of enlisting their cooperation to keep German submarines and stray cruisers from finding harborage on their shores.

Our New Food Dictator

Herbert C. Hoover, head of the American Commission for Relief in Belgium, has accepted the chairmanship of the newly created food board offered him by the National Defense Council. Altho he is still connected with Belgian relief work the actual control of relief inside Belgium has passed into other hands since the discontinuance of diplomatic relations with Germany, and the existence of a state of war between Germany and this country has reduced the American part in the relief work to furnishing funds for neutral agents to handle. In a published statement Mr. Hoover declared that the foremost duty of the United States to the Entente Allies is to see that they are adequately supplied with food. He warned Americans that there is danger of a world-wide famine unless we can eliminate waste and extravagance and develop our agricultural resources to the limit of possibility.

The warnings of Mr. Hoover are seconded by Federal and state officials, economists and business men in every part of the country. To conserve the wheat supply, seriously diminished by the dry weather which has prevailed until quite recently, various expedients have been suggested, such as the substitution of corn bread and changes in the milling process with the aim of utilizing more of the wheat kernel. Many believe that national prohibition for the duration of the war would help to solve the question, since large quantities of grain are used in the manufacture of alcoholic drinks. But the greatest menace of the situation is not the crop shortage but the scarcity of farm labor. The munitions factories and the raising of a volunteer or conscripted army will make further inroads upon the farming population

THE SPRING CAMPAIGN IS ON!

Sixteen thousand fans cheered as General Wood threw the ball that opened the big league baseball season last week. The Yanks enlivened the game by a smart military drill, but the Red Sox beat them, 10 to 3

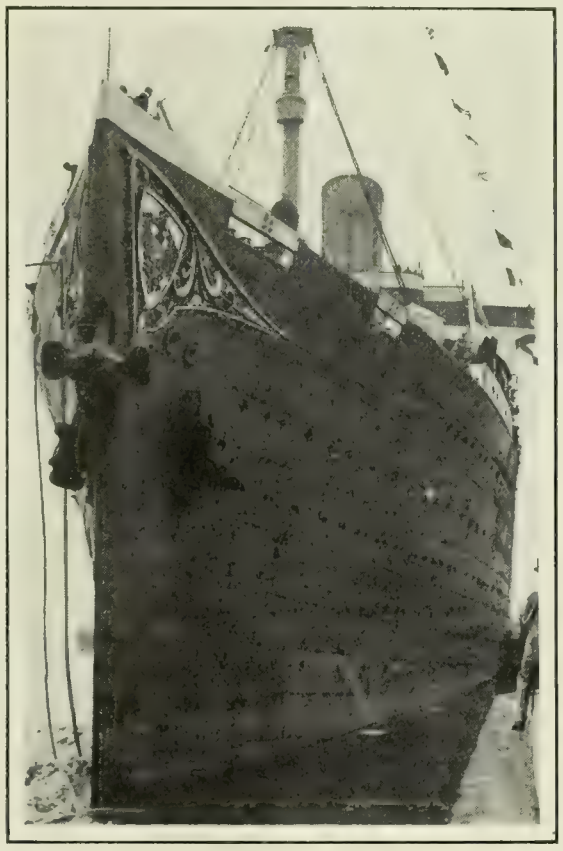
unless some way is devised to replace this labor. Boy Scouts, school associations and other organizations are endeavoring to mobilize the boys of America for work on the farms. It is seriously proposed in many quarters that the Government conscript for agricultural service persons already skilled in farm work or incapable of efficient service in the army or navy. An agricultural conference held at St. Louis under the chairmanship of the Secretary of Agriculture favored enlistment for agricultural work, a minimum wage for agricultural laborers and a guaranteed price for crops. In order to solve the problem of transatlantic shipment of foodstuffs and other needed supplies President Wilson has agreed to the proposal of the Shipping Board to build a vast fleet of cheap cargo ships. General Goethals, builder of the Panama Canal, has been requested to take charge of the work of construction.

Explosion at Eddystone

On April 10 the shrapnel loading building of the Eddystone Ammunition Company was wiped out by an explosion. The number of dead is placed at 122 and the number of seriously injured is even greater, nearly half of those killed or injured being girls in the employ of the company. The munitions plant, which was leased from the Baldwin Locomotive Company, was at work on a forty million dollar shrapnel contract for the Russian army. It was one of the largest munition factories in Pennsylvania, employing nine thousand workers in its various departments. Within a few weeks it is expected that all the material damage will be made good and the plant be again in complete operation. The owners are puzzled to account for the disaster as every possible precaution had been taken to prevent any accident. It is believed that German sympathizers may have caused the explosion and some of the survivors speak of warnings which they had received. An interned German sailor who had escaped from the "Prinz Eitel" was arrested as a suspect, but it is very possible that the incendiary was one of the workers in the plant who paid with his life for his fanatical act.

Labor in the War

Samuel Gompers, chairman of the committee on labor of the Council of National Defense has issued a statement on behalf of the committee announcing the basis for future coöperation between labor and the Federal Government. The committee recommended that "neither employers nor employees shall endeavor to take advantage of the country's necessities to change existing standards" and that all cases of labor disputes in such matters as hours or wages should await the investigation and decision of the Council of National Defense. The legislatures of the several states are urged to empower governors to modify the labor laws upon recommendation of the Council of National Defense in order to increase the productive power of the nation so long as the war places exceptional burdens upon industry. Safeguards of the health and welfare of workers are not, however, to be removed or diminished. The recommendations of the committee received the unanimous approval of the Council. If carried into effect they imply that there will be a general speeding up of industrial processes and that the eight-hour day will be disregarded except in those trades in which it is essential to physical health and efficiency. The influence of Mr. Gompers and other labor leaders is expected to reduce the danger of industrial strikes such as hampered the efforts of the British Government in the early stages of the Great War.



Negroes Pledge Loyalty

The persistent rumors that German agents have been active in stirring up disaffection among the negroes of the southern states have only served to evoke demonstrations of loyalty from representative leaders of the race. Robert Moton, of Tuskegee Institute, has pledged the services of his students to meet any need which may arise. Dr. Frissel, principal of Hampton Institute, has sent a letter to graduates of the institution urging them to inspire their people with patriotism and "to arouse that deep sense of loyalty to our country which has always been one of the noblest characteristics of the negro people." He exprest the opinion that the most immediate service which the negroes could

render would be to increase the food supply of the nation by efficient agricultural work. He advised them further to report to the proper authorities any word or act which might menace the Government or hinder the proper prosecution of the war. In Augusta, Georgia, 800 negroes held a patriotic mass meeting as soon as war was declared, and in many southern towns attempts are being made to organize regiments of negro volunteers. A very considerable exodus of negroes from the rural south to the cities of the north continues, but it appears to be due for the most part to the high wages and numerous opportunities for employment now offered in certain lines of industry which are stimulated by the war. This migration has the unfortunate effect of creating a labor shortage in some agricultural districts of the south.

Hesitating Mexico President Carranza's evident desire to keep Mexico neutral in the war between Germany and the United States may yet be overborne by the influence of the war party if reports from Mexican sources are to be trusted. Several of the leading Constitutionalist generals are known to be pro-German in sympathy and are also very much tempted by the offer of Texas, Arizona and New Mexico, as well as the possibility of expansion to the south at the expense of British Honduras and perhaps of Guatemala. The nations of Central America are, in varying degrees, in sympathy with the United States or under American diplomatic influence, and it is probable that in the event of trouble with Mexico we can count on allies to the south. German residents of Guatemala and other Central American republics are now concentrating in Mexico, but whether as refugees or as recruits for an army of invasion of the United States is uncertain. General Murguia is sending a large part of the federal army to northern Mexico to watch conditions on the American border and several recent attempts have been made to smuggle arms to some port on the western coast. But should the Mexican Government take an anti-American stand it will be due less to its own initiative or the machinations of German residents than to the action of rebel leaders.

Bull Moose Resuscitated A coalition convention of Progressives with radicals from other parties opened at St. Louis on April 13. The fundamental purpose of the meeting was to organize the liberal forces of the nation into a common "League of Liberals" which would carry on the work of reform outlined in the famous 1912 platform of the National Progressive Party. Altho the call for the convention long preceded the break with Germany, the delegates thought it advisable to announce a "war program for liberals" meeting the issues of the day. This platform declares for universal military service, taxation graduated according to ability to pay, freedom of political discussion during the war, no retrenchment of expenditures for education and research, national regulation of the food supply and of labor conditions in industry.

Lloyd George Welcomes America The speech of the Premier of Great Britain before the American Luncheon Club at the Savoy Hotel, on April 12, is recognized as ranking with the most important utterances of the war. The report says that "probably no unofficial event celebrated in England in the present generation brought together more men of prominence than this luncheon."

Premier Lloyd George delivered an address of considerable length from which we quote as liberally as possible:

The United States of America, of a noble tradition, never broken, never have engaged in a war except of liberty. This is the greatest struggle for liberty that they have ever embarked upon.

The road to victory, the guarantee of victory, the absolute assurance of victory, has to be found in one word, "ships," and a second word, "ships," and a third word, "ships." With that keenness which characterizes your nation, I see that they fully realize that, and I see today that they have already made arrangements to build ships by the thousand—1000 3000-tonners for the Atlantic.

We have been in this business for three years. We have made, as we generally do, every blunder. In consequence we got every bunker. But now we have got a good niblick stroke and we are right out on the course. May I respectfully suggest that it is worth a good deal to study our blunders so as to begin where we are now, not where we were three years ago.

America has helped us even to win the battle of Arras. She has been making guns, making ammunition, supplying us with fuel, supplying us with shell, and she has got all of that organization and has got that wonderful fertile adaptability and resourcefulness of the great people who inhabit that great country.

It was a bad day for the military autocracy in Prussia when it challenged the great Republic of the West. We know America, and we also know that now she has said it, she will do it. She will wage a strong and successful war—and there is something more important, she will insure a beneficent peace.

FOLLOW THE FLAG

By Theodore Marburg

Former United States Minister to Belgium

Follow the flag!

By every fireside where live the love of country and the love of justice is heard a sigh of relief that our flag is not, after all, to be trampled in the mire. Now that it has been raised aloft, follow it. Follow it even to the battle front.

Follow the flag!

It goes on a *high* mission. The land over which it flies inherited its spirit of freedom from a race which had practised liberty for a thousand years. And the daughter paid back the debt to the mother. Her successful practice of free institutions caused the civic stature of the citizen in the motherland to grow. It lit the torch of liberty in France. Then, moving abreast, these three lands of democracy imparted to it impetus so resistless that freedom is sweeping victorious round the globe. Today constitutional government is the rule, not the exception, in the world. Once more these three nations are together leading a great cause and this time as brothers in arms.

Follow the flag!

It goes on a *world* mission. If the high hope of our President is fulfilled, that flag will have new meaning. Just as the stars and stripes in it symbolized the union of free states in America, so now they may come to symbolize the beginnings of a union of nations, self-governing, and because they are self-governing, making for good will and for justice.

Follow the flag!

It goes on a *stern* mission. Follow it, not for revenge, yet in anger—righteous anger against the bloody crew who, with criminal intent, have brought upon the world the greatest sum of human misery it has ever known in all its history. Follow it till that ugly company is put down and the very people themselves whom they so grievously deceived and misled, by coming into liberty, will come to bless that flag and kiss its gleaming folds.

Follow the flag!

Too long it has been absent from that line in France where once again an Attila has been stopped. It has been needed there, God knows! And yet, tho not visible to the eye, it is and has been there from the beginning. It is there in the hearts of those fifty thousand American boys who saw their duty clear and moved up to it. Now at last it may be flung to the breeze in the front line, to be visible by day, and to remain at nightfall, like the blessings of a prayer fulfilled, in the consciousness of men. Follow it and take your stand beside the fifty thousand.

Follow the flag!

THE MACHINERY OF WAR

BY HOWARD COFFIN

Mr. Coffin's experience as a member of the United States Naval Consulting Board and as vice-president and consulting engineer of the Hudson Motor Car Company qualifies him particularly for his position on the Council of National Defense as chairman of the committee on munitions, manufacturing and industrial relations. This article is the second of the series published in The Independent by members of the Council of National Defense on their various departments of mobilization.—THE EDITOR.

THE conditions under which we are going into this war are different from the conditions that have confronted the nation in any previous war and are different, as a matter of fact, from those which confronted any country in Europe at the beginning of the present war.

In the first place we have had the lessons of two and a half years of modern warfare brought home to us.

In the next place, thru the legislative act creating the Council of National Defense and thru the coördinating influence of the civilian advisory commission assisting the Council, the entire resources of the country in the line of expert scientific business and technical brains have been brought to bear upon the national problem. The Council in its advisory commission, was the first authoritative channel for the accomplishment of this purpose.

We have learned, during the past two and a half years, that in modern warfare there are three great arms of service. These are the Army, the Navy, and Industry. They are interdependent. The Army and the Navy traditionally have been interdependent. And in the present war in Europe it has become very clear that these two military departments of war are absolutely dependent for their efficiency upon coördination and organization of industry.

But the problem of coördinating and organizing industry—the problem of mobilizing it, we might say—is in one respect distinctive. That is, we must disturb the everyday life of the nation as little as possible. To that end the advisory members of the Council are endeavoring to treat the problems of war exactly as we have been used to treating the problems of peace—the problems which meet us in our everyday business activities.

We have, in other words, three big fundamental considerations before us:

The first is to accelerate rather than to retard the flood of materials from this country to the Allies.

The second problem is to accomplish our own tremendous building program to supply the Army and Navy.

The third is so carefully to organize our industries and resources as to meet this, the greatest strain which has ever been put upon them, in such a way as to supply the needs of both the Allies and ourselves with the slightest possible disarrangement of our own economic and commercial machinery. We are discovering any weaknesses that exist in our manufacturing and producing facilities; we are correcting these weaknesses by the development of the sources of supply or by the conversion of proper percentages of manufacturing equipment from other kindred lines of industry.

All of these things must be achieved without destroying existing business organizations or agencies that have been built up thru a long period of years and without weakening our industrial units for important demands of peaceful commerce after the war.

I think that perhaps one illustration will make this situation clearer.

Our aeronautics industry is not well enough organized to supply the aircraft needed by ourselves in addition, perhaps, to a great many machines needed abroad. Consequently we turn to the nearest related industry. That happens to be the motor car industry.

We could, of course, take over the automobile factories to do this work. But if we should do so we should disrupt elaborate sales organizations built up thruout the United States. We should cause confusion. We should ruin many persons who have invested money in district sales agencies and in industries in turn dependent on them. Moreover, we should leave the manufacturing concern at the close of the war with its factory and equipment more or less intact but without the sales machinery which ten or fifteen years have been required to build up.

It was clear, therefore, that we ought to convert automobile building equipment into aeronautic equipment by carefully considered percentages. It will be possible, we ascertain, to convert twenty-five per cent of the producing equipment of a large number of automobile factories into the making of aeroplanes. We shall thus be able to accomplish our purpose, which is the production of a large number of aeroplanes at short notice, without weakening these concerns for the normal producing activities following the war.

Washington, D. C.

WHAT SHALL THE NAVY DO?

BY PARK BENJAMIN

In The Independent of April 7th, Mr. Benjamin, who is one of the foremost authorities on naval strategy in this country, began his series of informing articles on the part the United States must play in the war at sea. Mr. Benjamin is a graduate of the U. S. Naval Academy and an ex-officer of the Navy. During the Spanish War and for several years afterward he wrote on naval subjects for The Independent.—THE EDITOR.

SOME people who have recently been comparing more or less bewildering figures relative to tonage, armament, speed, movements and distribution of all sorts of naval vessels from dreadnaughts to motor boats, seem to think that a useful purpose may be served at the present moment, by sending our navy or a part of it to the North Sea. Certainly there is something to make the pulses leap in the thought of the Stars and Stripes flying from the mastheads of our own dreadnaughts as they sweep into action beside the great warships which as proudly wear the meteor flag of England or the tricolor of France or the banner of Savoy or the new scarlet of Russia; but, nevertheless, one must deal with the matter dispassionately and beware of misconceptions. Therefore I begin by remarking that homemade strategy and naval statistics are to the lay mind a delusion and a snare.

The trouble lies perhaps not in the figures, which mathematically cannot "lie," but in the deductions which the layman draws from them almost invariably under the assumption of "all other things being equal," or at least capable of exact expression. As a matter of fact, all other things are not equal, and so far from being capable of exact expression, they largely rest upon uncertainties and probabilities. It is common, for example, to arrange the navies of the world in an order of strength, and then to conclude that each in turn will of necessity prevail in war over the one which next follows it. Sometimes this order is based on tonnage, sometimes on the possession of capital ships, sometimes on the sum total of vessels of all classes, and inasmuch as it is an axiom that "good men in bad ships are better than bad men in good ships," one may even construct tables based on the presumed skill as well as on the numbers of the opposing personnels. In time of peace, such calculations may suffice to convey to the public crude general notions of relative efficiencies, but, in time of war, factors, before speculative, become actual, and conditions hitherto in a state of flux become permanent and solidified. For the "chances of war" must be taken with whatever force a nation has at the outset and with only such later additions as it may be possible to make while the conflict is in progress.

In modern times, two whole navies never simultaneously join battle. That happens only in one's club or front parlor. The days of duels between ships, such as the five frigate actions of the War of 1812, have gone by. The sea battle of the future is between groups of units, which may vary greatly in numbers and in individual strength and which may meet under all sorts of conditions, from the purely fortuitous to the scientifically prearranged. In such an action it by no means follows that the units which belong to the greater navy will be victorious. The British Navy, for reasons of state policy—and it is state policy that fundamentally determines the strength of navies everywhere—must maintain the two-power standard; that is, it must be able to overcome under any and all conceivable circumstances the foreign navy which on any basis of comparison is next in strength to itself, and then whatever other foreign navy is by the same test next in strength to the one which has been defeated. But the sea fight off Chile, despite this great superiority of the British Navy as a whole over the German Navy as a whole, nevertheless resulted in a German victory. History provides abundant similar instances. Why? Because the great basic factor of strategy is concentration—or, in more homely language, "getting there first with the most men"—and that may depend quite as much upon the skill which places the men and weapons as upon the men and weapons themselves. In the Chile action the Germans won because they got there first with the greater force. In the Battle of the Sea of Japan, the Japanese won because the Russians continued thruout to be the last to arrive and with the fewest men.

Napoleon defined war as "a business of positions," but the use made of the positions is quite as important. The past development of the German Navy is due to its disadvantage of position, as compared with that of the British fleet, by reason of which the latter now remains concentrated in home waters.

WHEN one undertakes to draw comparisons, these are some of the considerations to be borne in mind. And there are others which are even paradoxical if only "numbers" and "other things being equal" are to control the conclusion. Thus, when ships of a stronger navy engage similar ships of a weaker one, and each side inflicts equal damage on the other, the stronger antagonist increases in relative strength. For if A has twenty ships and B has ten, and each destroys five ships belonging to the other, then the relative strength of A increases from 2 to 1 before the action, to 3 to 1 afterward—as every checker player has always known.

It is not necessary for present purposes to elaborate this somewhat elementary discussion, since the sole object is to show that there are a great many factors other than numerical relations to be considered before it can be safely decided whether our naval force should be weakened to supplement that of the Allies, and that as these factors are largely strategic and have to be learned, the layman cannot be expected to know or with entire accuracy to improvise them. Nor should he be misled by present enthusiasms. Of course we would like to see the fleet, echoing Farragut's battle-cry "Damn the torpedoes," force its way into Wilhelmshaven or the Kiel Canal, and come to grips with the Kaiser's ships at their moorings. And who can help questioning whether the peril incurred is any more formidable to the powerful steel monsters of today than were the forts and mines and guarding ironclad at Mobile to the wooden walls which Farragut led to victory? But Great Britain has refused her whole naval might, and does not attempt a landing on the German shore. The isolated stretch of beach in Flanders is attractive, but the shallows there extend far out to sea, and the endless bombardment of Zeebrugge still seems barren of results.

The latest guess at the existing German battleship force is twenty-seven dreadnaughts and nineteen predreadnaughts, in comparison with which the British fleet is beyond doubt overwhelmingly the stronger. Manifestly if Great Britain declines to attack so inferior a force, the reason lies in the land fortifications and the mines and the submarines which protect it. It is certainly not apparent how our fleet—much less a part of it—can cross the ocean and then tackle not only those defenses, but a fleet larger in numbers than itself behind them, with any better chance of success, nor is it clear how the addition of our vessels to the British array would help to any controlling extent.

We have today fit for service thirty-seven battleships—twelve of the first line, typified by the "Pennsylvania" and "Arizona," and twenty-five of the second line, typified by the "Kansas" and "Nebraska." But we have no battle cruisers, and no more armored cruisers, scouts or destroyers than we urgently need at home. The larger vessels are wanted to replace the cruisers of the Allies, which ever since the war began have been watching harbors and steamer lanes. We have now to patrol the coast from Nova Scotia to the Panama Canal. As for destroyers, we not only need them for defense against German submarines, but for the protection of the battleships. Four destroyers should guard each of the capital vessels, so that, for this purpose only, we should have fully twice as many as we now possess. Others, of course, are building and are in all stages of completion; but unless some very special exigency arises, to detach for trans-Atlantic work any of those now available, seems hardly justified. The whole of our destroyers, if added to the submarine

© E. Muller, Jr.

"CHEEK BY JOWL OUR WATCH DOG

chasers in the British danger zone, would bear but a small ratio to the huge armada already engaged in that hunt.

If the German fleet could be induced to give battle, then, of course, it might be argued that any addition we could provide would be valuable to the British fleet, despite the latter's preponderance. But the German fleet insists on keeping itself shut up. The British are not doing it, for all their and our naval traditions are against "bottling" the enemy and in favor of getting him to come out and fight. It is only German logic which converts the Kaiser's array into a "fleet in being" purposely held in its base harbors to prevent the British fleet from making landings on the North Sea shore—a truly remarkable elucidation, which perhaps accounts for the brevity of its sallies to kill women and children in English watering places, and to take part in two sea battles, wherefrom it departed *sans adieu* and somewhat precipitately, thru a desire, of course, quickly t resume its "fleet in being" functions.

To people who are staying awake o' nights because of possi "raids" or other hostile attacks along the coast, any diminutio of our sea defenses will be unthinkable. The home-made strat gists are solemnly advocating the contribution of a few battl ships of the older types, which they think can conveniently l spared because outclassed by the newer dreadnaughts. "What the use of the 'Oregon' if half a dozen like her can be stood o by the 'Pennsylvania,' or of the 'Indiana,' which the 'Arizon might rip to pieces before the old fighter could get near enoug to render her guns effective?" they demand. The answer is tha after the dreadnaughts on both sides have met and got thr mauling and hammering one another, the unscathed reserve shi of the second line will become extremely important as again

)WL, GRAY HULKS IN A GRAYER SEA"

what is left of the victor, should the German vessels prevail—so important that Admiral Mahan long ago insisted that "the nation which can then (after the battle of the dreadnaughts) put forward the largest reserves of ships of the older types will *win*." The ships of Santiago, therefore, are far from useless—they may be very useful indeed—and we cannot spare them.

And there are the people who have already begun to howl to the Navy Department "to station a battleship before our harbor." That is not a battleship's business—and, what is more serious, it smacks of treason—for there is no surer way of consigning the fleet to destruction. It is really charitable to believe that only fools, in a cowardly and futile effort to save their own skins, would be willing to see each of our dreadnaughts overpowered in turn. And lastly the nervous—the very nervous—who so recently have been set trembling over the prospective shelling of New York for an hour by a battle-cruiser—"the bombardment of the city by fifty aeroplanes"—the terrors of a blockade, and the "landing of 100,000 troops in Massachusetts Bay"; it will be as a soothing ointment to assure them that the distinguished naval authority who recounted these horrors the other day was merely performing his bounden duty to think battles all the time, and not to omit any contingency however improbable, remote or seemingly absurd—and in addition that these particular atrocities had their genesis only in an imaginary Teutonic hypnotizing or bribery of the Allies whereby they were supposedly induced to step aside and unconcernedly watch the Germans wreak on us their amiable will. Neither pictures of this sort, nor the people who are scared by them, will help us to decide wisely whether to send the ships abroad or not.

New York City

HOUSETOPS

BY LOUISE AYRES GARNETT

I sing of friendly housetops; I sing of dripping leaves;
Of rain a-gently falling; of birds within the eaves;
I sing of early morning while sleeping masters lie
Beneath the many housetops whose housetop is the sky.
Glad roofs, that know their masters go journeying afar
To magic scenes Alhambran where castled dwellings
are!

I sing of friendly housetops; I sing of busy shoon;
Of pompous town-clocks striking the major stroke of noon;
I sing of hungry children a-trooping home from school;
Of brawny workmen resting by roadsides green and cool.
The housetops peeping downward where homely webs
are spun,
Rejoice the world is wagging so bravely in the sun.

I sing of friendly housetops; I sing of twilit calm;
Of little children lisping the tender Shepherd's psalm;
I sing of family circles; of shaded lamps a-light.
And sending thru the windows a welcome to the night.
The housetops peeping downward keep watch where hearthstones call,
And overhead the heavens keep watch above them all.

WHY I AM NOT A PROHIBITIONIST

BY REV. WALLACE M. SHORT

THE crucial question in the discussion of prohibition is not whether alcohol is beneficial or injurious to the human system, but whether our main dependence for the promotion of personal morals in America is to be the political body acting thru the police power by physical compulsion or the moral and spiritual forces operating in an atmosphere of faith and freedom.

If we shall decide that our chief reliance for the promotion of personal morals is to be the physical arm of the State, then one of our best known champions of prohibition is correct when he summarizes his argument thus: The use of alcohol is harmful, and, being harmful, its manufacture and sale should be prohibited.

In that case our method will be that of Frederick the Great, the father of Prussianism, who promulgated the famous decree that "the unenlightened must be compelled to be rational and happy."

We shall, of course, then always be meeting the embarrassing question as to who it is that is endowed of God and qualified by experience and training to determine what is harmful or beneficial for us all. The ready answer of the prohibitionist is that whoever can get the political power, he it is that is endowed and sent of God to compel us all to be rational and happy according to his program.

When the reformer can get the political power, then the discussion is closed regarding the best way for us all to engage in the pursuit of happiness. The minority, no matter how temperate and intelligent, has no rights that the majority is bound to respect. For the divine right of kings we have substituted the divine right of the majority.

If we accept the philosophy of the prohibitionist, then the chief striving of the church will be to get the political power to compel the observance of its program. Or, still worse, the chief effort of every would-be reformer will be to subdue the pulpit and the church to his political uses, giving always as the reason for his propaganda that he seeks power to do the people good, to compel those whom he regards as unenlightened to be rational and happy.

The third viewpoint in the Independent's series on Prohibition is presented by Rev. Wallace M. Short, a Congregational minister, who believes that "every man who votes for prohibition does four mischievous things." The Independent is glad to publish his discussion of the subject, for, tho it stands definitely for prohibition, it aims to present all sides of this great question, regardless of its own convictions. An article by William J. Bryan on "Prohibition's Progress" will conclude the series in an early issue. An editorial reply to Mr. Short will be found on another page.—THE EDITOR.

In this case there is no definable separation of church and state. The church exists, at least in large part, to teach the state what codes of conduct are best for the people. The state is the physical arm of the church to execute the church's teachings.

Under such a conception the teaching and inspirational power of the church decline—cannot help declining. The ministry becomes a secondary and subservient calling, attending mainly, under the dominance of the political reformer, to the externals of morality, and neglecting the study and nurture of the invisible spiritual cosmos that dwells within each man.

Moreover, as a matter of history and observation, no people play the political game more dishonorably than those who enter the political arena in the pharisaic spirit of "I am holier than thou" and in the undefined feeling that any method or spirit is justifiable for the promotion of a "righteous" cause.

But if, on the other hand, we shall decide that our main dependence in America for the promotion of personal morals is the moral and spiritual forces operating in an atmosphere of faith and fredom, then our prohibition friends have mistaken the basic principles of the institution of freedom —the American state, and of the institution of faith—the Christian Church.

I understand that the business of the democratic state is mutual protection of life, property, liberty. Its function is to see that each man has his freedom for self-realization—his chance to live his life unto God, and to find his own happiness in his own way. The state cannot compel a man to live his life unto God.

If every man who uses alcoholic beverages were thereby rendered dangerous to the liberty and security of his fellows, it would be necessary to the fulfillment of the governmental function of protection that all men be restrained from its use. But it is not true that any large proportion of the users of alcohol are so effected.

This being the case, government may rightly restrain the dangerous man, as it restrains the man who commits theft or murder. But with the personal habits of the temperate and self-governing man government has no concern. Here lies the province of the church. If the church believes there is a better way for him to live then the church may teach him. But the teaching must be in an atmosphere of freedom.

The method of the prohibitionist is contrary to the method of progress of all free peoples. The prohibitionist, like all governmental absolutists, would send his laws and ordinances ahead of human progress, accompanying his decrees with extraordinary and unusual military forces to carry them out.

No more shameless or portentous chapters have been written in modern political history than the unusual methods adopted in prohibition states for the attempted enforcement of prohibitory laws. Government has been taken out of the hands of the people, as in the ouster law of Tennessee, and the prohibition commissioner of West Virginia. Everywhere a financial premium has been offered both to the legal and to the extra-legal law enforcers—as in Iowa and in every prohibition state—by which legalized blackmail and rankling injustice are constantly carried on. These attempts at enforcement must break down of their own weight.

The habit of free peoples is for each person who sees—or thinks he sees—a better way, to put it into practice in his own life. If it is good, it wins its way, and becomes universal, or nearly universal, custom. Thus it may grow into the common law of the land.

Prohibition is a habit of mind. The prohibitionist, as soon as he gets a notion that some practice is good for the people, begins the physical push for its enforcement. Immediately calm thought and sincere truthfulness are at an end. Exaggeration, political intrigue, contention fill the air. In every place where he can get the power he closes the door to calm consideration of facts and principles, as he has done today on the Chautauqua platform and in the churches of many of our religious denominations.

When the man with the prohibition habit of mind sees an evil, instead of considering its real character and actual extent and seeking constructive methods for its cure, he attacks it with hysterical exaggeration and unthinking methods of suppression. He throws to the winds all considerations of justice and every established principle of human nature and of government and religion. He denounces government as the agent responsible for all moral delinquencies, and attacks with vulgar abuse every temperate and constructive mind that hesitates at his political cure-all.

The prohibitionist is a medicine man who, like all promoters of a patent cure-all, deals almost wholly in the exaggeration of human ills and in testimonials of wonderful cures. The testimonials may be obtained always in bewildering abundance. All one needs to do is to go to any community which has tried the prohibition medicine and select there all the good things that may be said about the community, and then parade these as evidences of the curative properties of prohibition.

If the prohibition medicine were merely harmless, we might submit to take a bottle of it whenever asked to do so, and raise no objections. But the fact is that every man who votes for prohibition does four mischievous things, any one of which must ultimately prove more than an offset for any good prohibition may accomplish.

(1) When the voter makes his cross in the little square which the prohibitionist indicates, he sets the police to interfere with the habits and rights of millions of the best men and women in America, and starts that endless political strife which makes it forever impossible to attend to the proper business of government without losing sight of that proper business in the interminable "wet" and "dry" conflict. These millions of best men and women will gladly coöperate in any intelligent and just methods for the advancement of all human welfare, temperance included. But they will never submit to have the majority tell them they shall not drink wine, any more than the prohibitionist would submit to be told by the majority that he must drink wine.

(2) The prohibition voter inserts the entering wedge to destroy all security of property in our great republic. If he may confiscate the property of one group of citizens in the name of reform, then he may do the same in another case. Any class of business men will resist such injustice in precisely the same way as do the distillers and brewers. If the prohibitionist will volunteer to share this hardship, then the public may think better of his justice and sincerity.

(3) The voter for prohibition enacts a kind of law which is in a wholly different class from all usual and just laws, and which the ordinary officials elected by the people have never proved adequate to enforce. Therefore, he must follow his prohibition vote with a vote for unusual financial emoluments for law enforcement, and with measures for taking the machinery of law enforcement out of the hands of the people by the appointment of state constabularies and commissions over which the voters have no power. No matter how much we clamor for respect for law, we get only growing contempt for it so long as we insist on these laws for which the normal man has slight respect.

(4) The prohibitionist drags the church into the arena of endless and bitter political strife, makes the ministers the feeble servants of the political reform machine, diverts ministry and church from the brotherly helpfulness of the Christ, teaches them to stand apart from personal touch with human need while doing the easy and characterless thing of voting to have the police do their true work.

No blessing so great could happen to the church people themselves who are under the domination of the political reformers as that their cure-all should be decisively rejected, so that they might be led back to God and his methods of brotherliness and teaching and faith for the regeneration of society.

In the discussion of prohibition the question of the effect of alcohol upon the human system is of minor importance when compared with the larger issue whether America, under the mask of democracy, is to fall back into the identical spirit and method of the autocracy and physical force of the middle ages, or whether we are to rise, thru intelligent discussion, to understand and practise the essential principles of the institutions of freedom and of faith.

THE PHILOSOPHY OF EASTER BONNETS

BY MAY BAKER MARSH

HAVE you ever whiled away a tedious sermon hour picturing the highly respectable audience shaken from its Sunday complacency by a sudden purging away of all the hat trimmings, the dashing plumes and gay gardens which so artfully concealed the grotesque deformities of the bare head-gear? Seriously, such a catastrophe would reveal a fair measure of woman's present productiveness because trimming her hat is almost the only creative thing she does and even here she no longer works with raw materials. Assembling finished products is for the most part all that society demands of her. Factory garments have replaced the home-made clothes of our grandmothers; baking corporations have assumed much of the Saturday activities that centered around the cook stove and filled the cupboards with breads and pies, with cakes and cookies. To be sure every hour of drudgery that can be eliminated by a labor saving device releases human energy for further production and offers to human beings a chance for a higher development, but to the person who is incapable of other creativeness and unable to direct his energies toward a higher fulfillment, release from work is a tainted blessing and a source of demoralization. How large an amount of this released time remains unutilized is evidenced by the popularity of the matinee and the movie which cater to the increasing ranks of pleasure seekers recruited from the throngs who are smothering their creative impulse with soft cushions of self indulgence. In his creative power man exhibits godlikeness, but the ability to consume we share with the worm on the vine.

In the sphere of pedagogics we have discerned the dangers and have introduced into the nursery and kindergarten the toys for building and the materials for creating, while removing those which serve only the impulse to destroy; we have modified the school curricula to supplant with constructive encouragement the medieval repetitions by rote; but toward the similar needs of adults we have been more blind. One by one have slipt away the educative, individual-molding functions which we prize so highly for our children. From woman's life especially have departed creative duties. With the factory like a greedy octopus grabbing away one task after another, she has little left except the function of assembling. She may assemble the equipment of her home so as to make it a thing of usefulness and a thing of beauty, she may assemble the garments her family are to wear, thus developing discrimination and artistic taste, but the vital joy of creating has almost disappeared, the deep delight of mobilizing her personal forces for a constructive task is dissipated.

EIGHT GREAT SHORT STORIES
From American Literature

With Introductions by FREDERICK HOUK LAW

THE REVOLT OF "MOTHER"

BY MARY E. WILKINS FREEMAN

AMERICAN short story writers have pictured every section of the United States, Bret Harte writing of early California; Thomas A. Janvier of Arizona; Hamlin Garland of the Middle West; George W. Cable of New Orleans; Thomas Nelson Page of Virginia; John Fox of Kentucky; Richard Harding Davis, O. Henry, Brander Matthews and many others of New York, and Mary E. Wilkins Freeman of New England.

The interest of the story of local color lies in descriptive elements that give its setting; in the atmosphere of definite place; in peculiarities of speech and action characteristic of particular locality, and more deeply still in fresh, original, unconventional human nature. The best stories of local color do not place the greatest emphasis on descriptions of place; they deal principally with human nature in the raw—rough, crude, elemental, the basic life of humanity. Such a story, by interpreting all life, reveals us to ourselves.

Mary E. Wilkins—now Mrs. Freeman—was born in the village of Randolph, Massachusetts, in 1862, and there lived for many years, interested in the country life about her, observing and understanding the character of simple people, and writing of life as it really is. Her college life at Mount Holyoke, and her experiences in Vermont and in her present New Jersey home, have given her less subject matter than did the rural life around Randolph. The titles of her stories show their character: "A Humble Romance," "A New England Nun," "Jerome, a Poor Man," "The Portion of Labor." She has written short stories, novels and plays and gained success in every field, her versatility being especially shown by the fact that she once won a prize of $2,000 for a detective story. Nevertheless her best work has been in presenting New England country life with sympathetic understanding and deep character-reading.

"The Revolt of Mother" is one of her most memorable New England stories. The plot is simple but powerful; the atmospheric effects are given with the least possible amount of description; the characters stand out sharply, vividly, presented without sentimentality or over-emphasis; the conversation is quick and pointed; the appeal is universal—felt wherever selfishness and inconsiderateness exist. What a picture of long-suffering womanhood is little "Mother" with her benevolent forehead, her smooth gray hair, her neatness and energy, her making of just the pies her husband wished, her thought of him in every moment, even in her anger! And what a picture of selfish but really loving manhood is "Father" with his laconic speech, set ways and final submission! The incidental pictures of Sammy, so like his father, and of Nannie, wistful and timid, in whose interest the mother-spirit in Sarah Penn rises to the supreme hight of rebellion, are contributing sketches that add to the effect. The story has the humor that lies close to pathos.

As a whole, "The Revolt of Mother" is very much more than a picture of New England farm life. It is a great story because it has artistic construction and a certain depth of appeal. It is not an allegory, but the problem that it presents reaches much farther than the hillsides of New England. One might say that Sarah Penn's words are the words of womanhood today: "I've got my own mind an' my own feet, an' I'm goin' to think my own thoughts an' go my own ways; an' nobody but the Lord is goin' to dictate to me unless I have a mind to have him."

MARY E. WILKINS FREEMAN

"FATHER!"

"What is it?"

"What are them men diggin' over there in the field for?"

There was a sudden dropping and enlarging of the lower part of the old man's face, as if some heavy weight had settled therein; he shut his mouth tight, and went on harnessing the great bay mare. He hustled the collar on to her neck with a jerk.

"Father!"

The old man slapped the saddle upon the mare's back.

"Look here, father, I want to know what them men are diggin' over in the field for, an' I'm goin' to know."

"I wish you'd go into the house, mother, an' 'tend to your own affairs," the old man said then. He ran his words together, and his speech was almost as inarticulate as a growl.

But the woman understood; it was her most native tongue. "I ain't goin' into the house till you tell me what them men are doin' over there in the field," said she.

Then she stood waiting. She was a small woman, short and straight-waisted like a child in her brown cotton gown. Her forehead was mild and benevolent between the smooth curves of gray hair; there were meek downward lines about her nose and mouth; but her eyes, fixed upon the old

Books of the Month

HURRAH AND HALLELUJAH
BY Dr. J. P. BANG

(With Introduction by Ralph Connor.)

A documentation, revealing the vicious ideas and ideals deliberately fostered among the people of Germany by her leading poets, professors and preachers. Astonishing evidence of the self-hypnosis of an entire nation! Every patriotic American will insist upon understanding the true extent of Germany's madness, revealed in this sensational self-indictment. *12mo. Net $1.00.*

GEORGE H. DORAN COMPANY, Publishers, New York

OPEN BOATS
BY ALFRED NOYES

The first authentic account of the grim tragedies which follow attacks of German submarines on unarmed merchant ships. A book of unvarnished facts, taken from reports of the British Admiralty. Mr. Noyes has been out with the British trawlers, and has seen with his own eyes the bitter drama of life and death which he so vividly depicts. *Cloth, 16mo. Net 50 cents.*

FREDERICK A. STOKES COMPANY.

OUR PART IN THE GREAT WAR
BY ARTHUR GLEASON

Author of "Young Hilda at the Wars," "Golden Lads," etc.

After two years' personal experience in the fighting districts, the author makes the war-stricken peoples and the results of German "frightfulness" an actuality to the reader; and by them he tests his native America, her response and her responsibility. Mr. Gleason is the only civilian, outside of Government officials, who has seen the German diaries found on dead and captured soldiers. *Illustrated. Cloth, 12mo. Net $1.35.*

FREDERICK A. STOKES COMPANY.

PINCHER MARTIN
BY "TAFFRAIL"

The story of an English sailor and his experiences in the present war, including a superb and thrilling description of the great Jutland battle in which his destroyer took a leading part. If you want to know what life on a fighting ship is like, this book will tell you, vividly, convincingly, and with a breezy humor that will remind you of Ian Hay's "The First Hundred Thousand." *$1.50 net.*

HOUGHTON MIFFLIN COMPANY, Boston and New York

RAYMOND: OR LIFE AND DEATH
With Evidence for the Survival of Personality After Death
BY SIR OLIVER LODGE

Sir Oliver's latest remarkable contribution to the literature of psychical research; presenting carefully weighed evidence to the effect that his son, Raymond (killed over a year ago in France), has been and still is in personal and intimate communication with those whom he knew in terrestrial life. *Illustrated. Octavo. Net $3.00.*

GEORGE H. DORAN COMPANY, Publishers, New York
Publishers in America for Hodder & Stoughton

THE PROVOCATION OF FRANCE
Fifty Years of German Aggression
BY JEAN CHARLEMAGNE BRACQ

It contains the text of Bismarck's confession of mutilating the Ems Dispatch, a new treatment of the Alsatian question, and a vivid account of the real attitude of France toward Germany. *Crown, 8vo, cloth, pp. vii + 202. $1.25 net.*

OXFORD UNIVERSITY PRESS AMERICAN BRANCH
34 West 33rd Street, New York City

THE SHIELD

In this remarkable book, published in Russia by the Society for the Study of Jewish Life (in which no Jews are allowed membership), fifteen of Russia's most important men of letters, publicists and scientists with one accord demand the abrogation of the Jewish disabilities. The work has been edited by Gorky, Andreyev and Sologub, who, together with Paul Milyukov (present Minister of Foreign Affairs), Korolenko, Merezhkovsky and Artzibashef are among the contributors. Foreword by William English Walling. *Cloth, 12mo, $1.25 net.*

ALFRED A. KNOPF, Publisher, New York

BRITAIN'S CIVILIAN VOLUNTEERS
BY THEKLA BOWSER

Special Introduction for American Edition by Arthur Stanley
Foreword by Kathleen Burke

The story of the most patriotic and spontaneous uprising for service ever known, this authorized account of Volunteer Aid Detachment work in all parts of Great Britain will be of immense value to Americans as an inspiration and guide. It points the way to service for every man and woman anxious to help in war relief work. Ready April 28th. *Illustrated. $1.50 net.*

MOFFAT, YARD & COMPANY, 116–120 West 32d St., New York.

GREENMANTLE
BY JOHN BUCHAN

Author of "The Thirty-Nine Steps," etc.

A glorious tale of mystery and romance. Mary Roberts Rinehart says of this book: "'Greenmantle' is wonderful! Quite the best story of adventure I have read in years. It rings true. Personally, I could not put it down. It ought to have a huge success!" *(Second edition now printing.) 12mo. Net $1.35.*

GEORGE H. DORAN COMPANY, Publishers, New York
Publishers in America for Hodder & Stoughton

I, MARY MacLANE
BY MARY MacLANE

The frankest and most startling personal record of a woman's life that has come up in generations. "*Mary MacLane's book is as great a piece of literature as I felt sure it would be, absorbingly interesting, and so original that no one else in the world could have written it.*"—*Gertrude Atherton. Cloth, 12mo. Net $1.40.*

FREDERICK A. STOKES COMPANY.

HONEST ABE
A Study in Integrity Based on the Early Life of Abraham Lincoln
BY ALONZO ROTHSCHILD

Author of "Lincoln: Master of Men"

A notable study of Abraham Lincoln written from an entirely new angle. The foundation of Lincoln's success was his reputation for absolute honesty. How he laid this foundation Mr. Rothschild tells in a book as inspiring as it is illuminating. "Lincoln: Master of Men" has been called the best popular study of Lincoln ever written, and this new book is sure to take an equally high place in American literature. *Illustrated. $2.00 net.*

HOUGHTON MIFFLIN COMPANY, Boston and New York

FINDING GOD IN MILLERSVILLE
A PERSONAL EXPERIENCE

A simple, straightforward story of the spiritual development of a man with no religious convictions; how he "found God" through finding "himself and the other fellow." Not an argument—a story with a message and a mission. Widely discussed—indorsed by leaders of thought among the clergy—called editorially "The greatest sermon ever preached by a layman." *Boards, with cloth back. 50 cents net.*

REILLY & BRITTON, Michigan Ave., Chicago

JESUS, THE CHRIST, IN THE LIGHT OF PSYCHOLOGY
BY G. STANLEY HALL

President Clark University, Editor "The American Journal of Psychology," etc.

Dr. Hall publishes the results of his twenty years' profound research, and vindicates the Divine Christ for the world to-day. It is the striking and reverent evidence of a great scientist on the Nativity, the Miracles, the Resurrection—all the great experiences and teachings of Christ. *Two Volumes. Boxed. Net, $7.50. At all bookstores.*

DOUBLEDAY, PAGE & Co., Garden City, New York

BETTER MEALS FOR LESS MONEY
BY A FORMER INSTRUCTOR IN A FAMOUS COOKING SCHOOL AND A PRACTICAL HOUSEWIFE

The title tells the story. Pages of practical suggestions by one who is daily solving the problem of high food costs and serving attractive meals; 700 reliable recipes, and tables showing food values, etc. *Ready this week. $1.25 net.*

HENRY HOLT & Co., 19 W. 44th St., New York

YOUR BUSINESS AND THE WAR

The Independent offers you the free service of its Efficiency Plan and Purchase Department to help you put your business house in order.

We are at war. It is a time for clear thinking and exact planning. It is a time to consider thrift, economy, cost-saving, organization, equipment, efficiency.

ARE YOU READY?

You will lose some of your valued men. How will you replace the lost effort? How will you keep your business machine running smoothly under the new war conditions? Have you figured out the way to meet the emergencies which are inevitable?

Is your business in "the third line of defense"? Do you know the list of "war trades" that experience has taught England must be carried on and not suffered to slacken? Do you know how this list compares with ours in the United States?

Have you arranged your office expenses on the budget system? Have you estimated what your business should cost for the next twelve months?

Have you considered how many machines there are on the market that will make your workers more efficient—and save many dollars in your pay-roll?

Without cost to you, The Independent-Harper's Weekly Efficiency Service stands ready to help you meet these questions squarely. Our files of information are at your service. Our expert counsellors are at your service.

This is a time to chart your course; to perceive your actual needs; to take an inventory of your dependable resources; to strike a balance on which you can proceed intelligently and with every possible chance of future surprise and shock eliminated.

IF YOU WILL WRITE

to our Plan and Purchase Department and ask for its Check List of useful suggestions as to appliances, and ways and means the chances are that you will get new light on some business problems that concern you now more than ever before.

When you get the Check List, mark it carefully. State your problem exactly and fully, and within a reasonable time you will receive a complete report on the matters you have indicated.

We have served hundreds of executives throughout the United States during the last few months in all lines of business endeavor. We are ready to help you now—without expense or obligation on your part.

The Independent-Harper's Weekly Efficiency Service
119 West Fortieth Street **New York City**

man, looked as if the meekness had been the result of her own will, never of the will of another.

They were in the barn, standing before the wide-open doors. The spring air, full of the smell of growing grass and unseen blossoms, came in their faces. The deep yard in front was littered with farm wagons and piles of wood; on the edges, close to the fence and the house, the grass was a vivid green, and there were some dandelions.

The old man glanced doggedly at his wife as he tightened the last buckles on the harness. She looked as immovable to him as one of the rocks in his pasture-land, bound to the earth with generations of blackberry vines. He slapped the reins over the horse, and started forth from the barn.

"*Father!*" said she.

The old man pulled up. "What is it?"

"I want to know what them men are diggin' over there in that field for."

"They're diggin' a cellar, I s'pose, if you've got to know."

"A cellar for what?"

"A barn."

"A barn? You ain't goin' to build a barn over there where we was goin' to have a house, father?"

The old man said not another word. He hurried the horse into the farm wagon, and clattered out of the yard, jouncing as sturdily on his seat as a boy.

The woman stood a moment looking after him, then she went out of the barn across a corner of the yard to the house. The house, standing at right angles with the great barn and a long reach of sheds and outbuildings, was infinitesimal compared with them. It was scarcely as commodious for people as the little boxes under the barn eaves were for doves.

A pretty girl's face, pink and delicate as a flower, was looking out of one of the house windows. She was watching three men who were digging over in the field which bounded the yard near the road line. She turned quietly when the woman entered.

"What are they digging for, mother?" said she. "Did he tell you?"

"They're diggin' for—a cellar for a new barn."

"Oh, mother, he ain't going to build another barn?"

"That's what he says."

A boy stood before the kitchen glass combing his hair. He combed slowly and painstakingly, arranging his brown hair in smooth hillock over his forehead. He did not seem to pay any attention to the conversation.

"Sammy, did you know father was going to build a new barn?" asked the girl.

The boy combed assiduously.

"Sammy!"

He turned, and showed a face like his father's under his smooth crest of hair. "Yes, I s'pose I did," he said, reluctantly.

"How long have you known it?" asked his mother.

"'Bout three months, I guess."

"Why didn't you tell of it?"

"Didn't think 'twould do no good."

"I don't see what father wants another barn for," said the girl, in her sweet, slow voice. She turned again to the window, and stared out at the digging men in the field. Her tender, sweet face was full of a gentle distress. Her forehead was as bald and innocent as a baby's, with the light hair strained back from it in a row of curl-papers. She was quite large, but her soft curves did not look as if they covered muscles.

Her mother looked sternly at the boy. "Is he goin' to buy more cows?" said she.

The boy did not reply; he was tying his shoes.

"Sammy, I want you to tell me if he's goin' to buy more cows."

"I s'pose he is."

"How many?"

"Four, I guess."

His mother said nothing more. She went into the pantry, and there was a clatter of dishes. The boy got his cap from a nail behind the door, took an old arithmetic from the shelf, and started for school. He

was lightly built, but clumsy. He went out of the yard with a curious spring in the hips, that made his loose home-made jacket tilt up in the rear.

The girl went to the sink, and began to wash the dishes that were piled up there. Her mother came promptly out of the pantry, and shoved her aside. "You wipe 'em," said she; "I'll wash. There's a good many this mornin'."

The mother plunged her hands vigorously into the water, the girl wiped the plates slowly and dreamily. "Mother," said she, "don't you think it's too bad father's going to build that new barn, much as we need a decent house to live in?"

Her mother scrubbed a dish fiercely. "You ain't found out yet we're women-folks, Nanny Penn," said she. "You ain't seen enough of men-folks yet to. One of these days you'll find it out, an' then you'll know that we know only what men-folks think we do, so far as any use of it goes, an' how we'd ought to reckon men-folks in with Providence, an' not complain of what they do any more than we do of the weather."

"I don't care; I don't believe George is anything like that, anyhow," said Nanny. Her delicate face flushed pink, her lips pouted softly, as if she were going to cry.

"You wait an' see. I guess George Eastman ain't no better than other men. You hadn't ought to judge father, tho. He can't help it, 'cause he don't look at things jest the way we do. An' we've been pretty comfortable here, after all. The roof don't leak—ain't never but once—that's one thing. Father's kept it shingled right up."

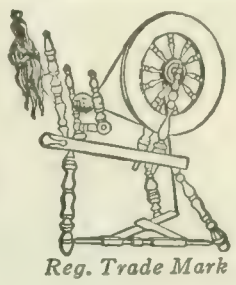
"I do wish we had a parlor."

"I guess it won't hurt George Eastman any to come to see you in a nice clean kitchen. I guess a good many girls don't have as good a place as this. Nobody's ever heard me complain."

"I ain't complained either, mother."

"Well, I don't think you'd better, a good father an' a good home as you've got. S'pose your father made you go out an' work for your livin'? Lots of girls have to that ain't no stronger an' better able to than you be."

Sarah Penn washed the frying-pan with a conclusive air. She scrubbed the outside of it as faithfully as the inside. She was a masterly keeper of her box of a house. Her one living-room never seemed to have in it any of the dust which the friction of life with inanimate matter produces. She swept, and there seemed to be no dirt to go before the broom; she cleaned, and one could see no difference. She was like an artist so perfect that he has apparently no art. Today she got out a mixing bowl and a board, and rolled some pies, and there was no more flour upon her than upon her daughter who was doing finer work. Nanny was to be married in the fall, and she was sewing on some white cambric and embroidery. She sewed industriously while her mother cooked, her soft milk-white hands and wrists showed whiter than her delicate work.



"We must have the stove moved out in the shed before long," said Mrs. Penn. "Talk about not havin' things, it's been a real blessin' to be able to put a stove up in that shed in hot weather. Father did one good thing when he fixed that stove-pipe out there."

Sarah Penn's face as she rolled her pies had that expression of meek vigor which might have characterized one of the New Testament saints. She was making mince-pies. Her husband, Adoniram Penn, liked them better than any other kind. She baked twice a week. Adoniram often liked a piece of pie between meals. She hurried this morning. It had been later than usual when she began, and she wanted to have a pie baked for dinner. However deep a resentment she might be forced to hold against her husband, she would never fail in sedulous attention to his wants.

Nobility of character manifests itself at loop-holes when it is not provided with large doors. Sarah Penn's showed itself today in flaky dishes of pastry. So she made the pies faithfully, while across the table she could see, when she glanced up

Summer Dress Cottons and Linens

White and Colors

Reg. Trade Mark

Now that the season is here for replenishing your Summer wardrobe, we offer a few timely suggestions regarding our well-assorted stock of seasonable fabrics. These are all of the usual McCutcheon quality and embrace everything that is new and fashionable for the coming season.

Voiles, Imported and American, printed and woven. 38 to 42 inches wide, 25c, 30c, 50c, 75c, 85c a yard.

Imported Handkerchief Linens, Fine sheer quality, soft finish, will not crease, in all the newest plain shades, 33 inches wide, at 85c a yard. White grounds with colored Dots, Checks, Stripes and novelty designs, 36 inches wide, at 95c a yard.

Nujol for Constipation

How Do You Expect *to* "Work Like a Horse"

—yet treat yourself as an intelligent farmer would scorn to treat his plow-horse? Your body demands careful attention, like any other finely adjusted piece of machinery. It responds just as readily to good treatment and suffers just as acutely from neglect.

Neglect of the bowel function and the habitual use of laxative pills and waters frequently result in chronic constipation. Drug "remedies" for constipation whip the bowels into action until eventually the system comes to demand the spur of a cathartic before it will work at all. For this reason physicians everywhere are recommending Nujol—the internal lubricant. Nujol, unlike physics or drugs, acts mechanically by keeping the intestinal contents soft and so facilitating normal movements.

Nujol being a lubricant, does not gripe or upset the system. It is tasteless, and easy to take.

The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol and its reputation is behind the product.

Nujol is the only remedy for constipation we manufacture. The genuine sold only in pint bottles bearing Nujol trade-mark. All bottles filled at our Nujol plant, absolutely modern and sanitary.

MOTOR EFFICIENCY SERVICE

The Independent-Harper'sWeekly 119 W. Fortieth St., New York

from her work, the sight that rankled in her patient and steadfast soul—the digging of the cellar of the new barn in the place where Adoniram forty years ago had promised her their new house should stand.

The pies were done for dinner. Adoniram and Sammy were home a few minutes after twelve o'clock. The dinner was eaten with serious haste. There was never much conversation at the table in the Penn family. Adoniram asked a blessing, and they ate promptly, then rose up and went about their work.

Sammy went back to school, taking soft sly lopes out of the yard like a rabbit. He wanted a game of marbles before school. and feared his father would give him some chores to do. Adoniram hastened to the door and called after him, but he was out of sight.

"I don't see what you let him go for, mother," said he. "I wanted him to help me unload that wood."

Adoniram went to work out in the yard unloading wood from the wagon. Sarah put away the dinner dishes, while Nanny took down her curl-papers and changed her dress. She was going down to the store to buy some more embroidery and thread.

When Nanny was gone, Mrs. Penn went to the door. "Father!" she called.

"Well, what is it!"

"I want to see you jest a minute, father."

"I can't leave this wood nohow. I've got to git it unloaded an' go for a load of gravel afore two o'clock. Sammy had ought to help me. You hadn't ought to let him go to school so early."

"I want to see you jest a minute."

"I tell ye I can't, nohow, mother."

"Father, you come here." Sarah Penn stood in the door like a queen; she held her head as if it bore a crown; there was that patience which makes authority royal in her voice. Adoniram went.

Mrs. Penn led the way into the kitchen, and pointed to a chair. "Sit down, father," said she; "I've got somethin' I want to say to you."

He sat down heavily; his face was quite stolid, but he looked at her with restive eyes. "Well, what is it, mother?"

"I want to know what you're buildin' that new barn for, father?"

"I ain't got nothin' to say about it."

"It can't be you think you need another barn?"

"I tell ye I ain't got nothin' to say about it, mother; an' I ain't goin' to say nothin'."

"Be you goin' to buy more cows?"

Adoniram did not reply; he shut his mouth tight.

"I know you be, as well as I want to. Now, father, look here"—Sarah Penn had not sat down; she stood before her husband in the humble fashion of a Scripture woman—"I'm goin' to talk real plain to you; I never have sence I married you, but I'm goin' to now. I ain't never complained, an' I ain't goin' to complain now, but I'm goin' to talk plain. You see this room here, father; you look at it well. You see there ain't no carpet on the floor, an' you see the paper is all dirty, an' droppin' off the walls. We ain't had no new paper on it for ten year, an' then I put it on myself, an' it didn't cost but ninepence a roll. You see this room, father; it's all the one I've had to work in an' eat in an' sit in sence we was married. There ain't another woman in the whole town whose husband ain't got half the means you have but what's got better. It's all the room Nanny's got to have her company in; an' there ain't one of her mates but what's got better, an' their fathers not so able as hers is. It's all the room she'll have to be married in. What would you have thought, father, if we had had our weddin' in a room no better than this? I was married in my mother's parlor, with a carpet on the floor, an' stuffed furniture an' a mahogany card-table. An' this is all the room my daughter will have to be married in. Look here, father!"

Sarah Penn went across the room as tho it were a tragic stage. She flung open a door and disclosed a tiny bedroom, only large enough for a bed and bureau, with a path between. "There, father," said she—

Why Abdominal Massage Keeps You Clean Inside

Physicians Make a Remarkable New Discovery

By J. G. BURNHAM

WHEN you bump your arm, your *instinct* tells you to rub the bruised spot. This brisk rubbing relieves the pain by restoring the normal, healthy circulation of the blood, revitalizing the cells and tissues which have been injured.

This old-fashioned method of keeping the blood normally active has at last been applied in the treatment of constipation, auto-intoxication, and the many serious and minor ailments resulting therefrom.

Massage, in simple language, is nothing but another *form of exercise.* A lively ten-mile walk will quicken the circulation, will expel the poisons of the system, will make you feel like a new person. Old fashioned, indeed, is the physician who underestimates the value of systematic exercise in fighting all those serious diseases and maladies that result directly from digestive disorders and intestinal poisoning.

Intestinal activity depends upon proper developments of the abdominal muscles.

In fact, the best informed schools of medicine have for many years recommended some form of daily physical exercise to all sufferers from debility, mental depression, physical exhaustion, headaches, vertigo, backaches, colitis, lassitude, indigestion, diabetes and their complications; or, where time for such cannot be spared, then its concentrated substitute, massage.

The primary object of quickening a sluggish blood circulation is to induce regular and normal action of the bowels and ejection from the body of its waste matter, which when retained in the colon generates poisons destructive to health and efficiency.

Not only is it now known that of all cases of sickness and disease, nine out of ten are due to internal uncleanliness, followed by colon poisoning, and it is also known that for the treatment of this causative condition, physics, laxatives, cathartics and other drugs are worse than worthless; they are habit-forming, pernicious and injurious for the simple reason that they are themselves poisonous.

The problem confronting physicians and thousands of sufferers from chronic constipation and auto-intoxication (self-poisoning) has been to find some means for the self-application of stimulating and strengthening massage of the colon and abdominal region—a perfect substitute for time-consuming and therefore often impossible physical exercise—as well as something that would make it totally unnecessary to use harmful drugs.

To meet this demand there has been invented a new device, the Kolon Motor, for which the most remarkable results are being reported by leading physicians, sanitariums, hospitals, gymnasiums and a large army of men and women who are using it in their own homes.

By its aid, normal and natural functioning of the bowels is instantly restored and resumed and the muscles of the intestines are exercised and strengthened to perform their duty without help. When the intestinal accumulations are promptly and effectually eliminated from the system, putrefaction and the formation of poisons is prevented and Nature quickly performs her work of reconstruction and repair of the tissues and organs of the entire body.

The effects of Kolon Motor Abdominal Massage might be compared to the usual forms of physical exercise so highly recommended, except that they are superior for the reason that the "treatments" are applied directly to the abdomen and intestines—the seat of practically all disease. Its advantage over manual (hand or osteopathic) massage lies in its economy and convenience, as the Kolon Motor massage is self-administered each day upon arising and retiring. A five minute "treatment" is sufficient. Moreover, although the Kolon Motor has been so successfully used in the treatment of disease, its value is incalculable when used daily for two or three minutes, to wake up the circulation in the morning, so filling you with energy, "pep" and vitality that work will melt under your touch—your brain will be clear as a bell—your whole system will show the result of this directly applied abdominal massage. The illustration on this page affords only an idea of this really wonderful new invention. A large picture of the Motor, with a full description, is included in a remarkable new book of health secrets, just published and which can be had free for the asking by addressing Martin's Method, Inc., Dept. 54, 38 East Thirty-first Street, New York City. This booklet, entitled "Colon Cleanliness," contains some truly amazing discoveries on the cause, source and proper treatment of disease as reported by many eminent authorities in the medical world.

A new and ideal substitute for time-consuming outdoor exercise.

If request is made promptly, by letter or on the coupon below, anyone interested can arrange to try the KOLON MOTOR in his own home without obligation. This free trial offer, however, is being made for a short time only, and it is advisable to act promptly. Sending the coupon does not obligate you in the slightest and may be the means of starting you on the road to genuine health.

MARTIN'S METHOD, INCORPORATED

Physicians Recommend This Hernial Appliance

It Is Sent ON TRIAL

THE fact that physicians in all parts of the country are enthusiastic over the many merits of the **Brooks Rupture Appliance** is, in itself, a mighty effective testimonial to its worth. And the testimony of thousands of pleased wearers is that they are obtaining relief when the failure of other methods had driven them to despair.

The **Brooks Rupture Appliance** is made to the order of the wearer. Therefore it satisfies completely. Because of the fact that it has no springs it may be worn with comfort in bed.

No Metal to Touch Flesh

There is no metal about the Brooks Appliance. Therefore, it may be worn against the flesh without discomfort. Water does not harm it. Its elastic cushion clings to the body and makes slipping impossible. A constant circulation of air takes place in this cushion.

A word from you will bring the **Brooks Rupture Appliance** on free trial to prove its worth. If you are not satisfied, your money will be cheerfully refunded. And the price you will find to be remarkably low.

But your case in our hands and it will be handled by a sanitarium, not by a factory. It will receive most careful thought and consideration.

You owe it to yourself to learn more about this Appliance which is proving a **relief to thousands** of rupture sufferers. Don't delay the day of *your* relief.

Use the Coupon. Use It Now.

BROOKS APPLIANCE CO.
Manufacturers of Orthopedical Appliances
490 State Street Marshall, Mich., U. S. A.

I should like to receive, in a plain wrapper and without obligating myself in any way, full details concerning the **Brooks Rupture Appliance.**

"there's all the room I've had to sleep in in forty year. All my children were born there—the two that died, an' the two that's livin'. I was sick with a fever there."

She stepped to another door and opened it. It led into the small, ill-lighted pantry. "Here," said she, "is all the buttery I've got—every place I've got for my dishes, to set away my victuals in, an' to keep my milk-pans in. Father, I've been takin' care of the milk of six cows in this place, an' now you're goin' to build a new barn, an' keep more cows, an' give me more to do in it."

She threw open another door. A narrow crooked flight of stairs wound upward from it. "There, father," said she, "I want you to look at the stairs that go up to them two unfinished chambers that are all the places our son an' daughter have had to sleep in all their lives. There ain't a prettier girl in town nor a more ladylike one than Nanny, an' that's the place she has to sleep in. It ain't so good as your horse's stall; it ain't so warm an' tight."

Sarah Penn went back and stood before her husband. "Now, father," said she, "I want to know if you think you're doin' right an' accordin' to what you profess. Here, when we was married, forty year ago, you promised me faithful that we should have a new house built in that lot over in the field before the year was out. You said you had money enough, an' you wouldn't ask me to live in no such place as this. It is forty year now, an' you've been makin' more money, an' I've been savin' of it for you ever sence, an' you ain't built no house yet. You've built sheds an' cow-houses an' one new barn, an' now you're goin' to build another. Father, I want to know if you think it's right. You're lodgin' your dumb beasts better than you are your own flesh an' blood. I want to know if you think it's right."

"I ain't got nothin' to say."

"You can't say nothin' without ownin' it ain't right, father. An' there's another thing—I ain't complained; I've got along forty year, an' I s'pose I should forty more, if it wa'n't for that—if we don't have another house. Nanny she can't live with us after she's married. She'll have to go somewheres else to live away from us, an' it don't seem as if I could have it so, noways, father. She wa'n't ever strong. She's got considerable color, but there wa'n't never any backbone to her. I've always took the heft of everything off her, an' she ain't fit to keep house an' do everything herself. She'll be all worn out inside of a year. Think of her doin' all the washin' an' ironin' an' bakin' with them soft white hands an' arms, an' sweepin'! I can't have it so, noways, father."

Mrs. Penn's face was burning; her mild eyes gleamed. She had pleaded her little cause like a Webster; she had ranged from severity to pathos; but her opponent employed that obstinate silence which makes eloquence futile with mocking echoes. Adoniram arose clumsily.

"Father, ain't you got nothin' to say?" said Mrs. Penn.

"I've got to go off after that load of gravel. I can't stan' here talkin' all day."

"Father, won't you think it over, an' have a house built there instead of a barn?"

"I ain't got nothin' to say."

Adoniram shuffled out. Mrs. Penn went into her bedroom. When she came out, her eyes were red. She had a roll of unbleached cotton cloth. She spread it out on the kitchen table, and began cutting out some shirts for her husband. The men over in the field had a team to help them this afternoon: she could hear their halloos. She had a scanty pattern for the shirts; she had to plan and piece the sleeves.

Nanny came home with her embroidery, and sat down with her needlework. She had taken down her curl-papers, and there was a soft roll of fair hair like an aureole over her forehead; her face was as delicately fine and clear as porcelain. Suddenly she looked up, and the tender red flamed all over her face and neck. "Mother," said she.

"What say?"

"I've been thinking—I don't see how we're goin' to have any—wedding in this room. I'd be ashamed to have his folks come if we didn't have anybody else."

"Mebbe we can have some new paper before then; I can put it on. I guess you won't have no call to be ashamed of your belongin's."

"We might have the wedding in the new barn," said Nanny, with gentle pettishness. "Why, mother, what makes you look so?"

Mrs. Penn had started, and was staring at her with a curious expression. She turned again to her work, and spread out a pattern carefully on the cloth. "Nothin'," said she.

Presently Adoniram clattered out of the yard in his two-wheeled dump cart, standing as proudly upright as a Roman charioteer. Mrs. Penn opened the door and stood there a minute looking out; the halloos of the men sounded louder.

It seemed to her all thru the spring months that she heard nothing but the halloos and the noises of saws and hammers. The new barn grew fast. It was a fine edifice for this little village. Men came on pleasant Sundays, in their meeting suits and clean shirt bosoms, and stood around it admiringly. Mrs. Penn did not speak of it, and Adoniram did not mention it to her, altho sometimes, upon a return from inspecting it, he bore himself with injured dignity.

"It's a strange thing how your mother feels about the new barn," he said, confidentially, to Sammy one day.

Sammy only grunted after an odd fashion for a boy; he had learned it from his father.

The barn was all completed ready for use by the third week in July. Adoniram had planned to move his stock in on Wednesday; on Tuesday he received a letter which changed his plans. He came in with it early in the morning. "Sammy's been to the post office," said he, "an' I've got a letter from Hiram." Hiram was Mrs. Penn's brother, who lived in Vermont.

"Well," said Mrs. Penn, "what does he say about the folks?"

"I guess they're all right. He says he thinks if I come up country right off there's a chance to buy jest the kind of a horse I want." He stared reflectively out of the window at the new barn.

Mrs. Penn was making pies. She went on clapping the rolling-pin into the crust, altho she was very pale, and her heart beat loudly.

"I dun' know but what I'd better go," said Adoniram. "I hate to go off jest now, right in the midst of hayin', but the ten-acre lot's cut, an' I guess Rufus an' the others can git along without me three or four days. I can't get a horse round here to suit me, nohow, an' I've got to have another for all that wood-haulin' in the fall. I told Hiram to watch out, an' if he got wind of a good horse to let me know. I guess I'd better go."

"I'll get out your clean shirt an' collar," said Mrs. Penn, calmly.

She laid out Adoniram's Sunday suit and his clean clothes on the bed in the little bedroom. She got his shaving-water and razor ready. At last she buttoned on his collar and fastened his black cravat.

Adoniram never wore his collar and cravat except on extra occasions. He held his head high, with a rasped dignity. When he was all ready, with his coat and hat brushed, and a lunch of pie and cheese in a paper bag, he hesitated on the threshold of the door. He looked at his wife, and his manner was defiantly apologetic. "*If* them cows come today, Sammy can drive 'em into the new barn," said he; "an' when they bring the hay up, they can pitch it in there."

"Well," replied Mrs. Penn.

Adoniram set his shaven face ahead and started. When he had cleared the door-step, he turned and looked back with a kind of nervous solemnity. "I shall be back by Saturday if nothin' happens," said he.

"Do be careful, father," returned his wife.

She stood in the door with Nanny at her elbow and watched him out of sight. Her eyes had a strange, doubtful expression in them; her peaceful forehead was contract-

ANNOUNCING A POPULAR EXPLANATION OF WHAT MODERN CHEMISTRY IS DOING FOR THE WORLD

Triumphs of Industrial CHEMISTRY

BY

EDWIN E. SLOSSON

This is the age of Chemistry. It has made a new world out of the old one by freeing man from the limitations of nature.

It has altered the balance of power among nations, revolutionized warfare and transformed the life of man. Yet to many well informed persons Chemistry is a dark mystery, a sealed book, an area of ignorance, because—it has never been presented to them in a language that they understood.

That is why The Independent has decided to undertake a popular explanation of what modern chemistry is doing for the world. A series of twelve articles on the products and processes of applied Chemistry at the present day will be published to include such topics as:

1. Nitrogen for Fertilizers and Explosives; the New Electrical Processes
2. Potash and Phosphates, the Other Two Essential Plant Foods.
3. Coal Tar Products, Dyes, Medicines, Photographic Chemicals.
4. Cellulose, Paper, Celluloid, Synthetic Leather, Silk and Rubber.
5. Electrical Furnace Products, Carbides, Carborundum, Acetylene.
6. Rare Metals and New Alloys.
7. Sugar, Candy, Alcohol.
8. Corn Products, Glucose, Starch, Syrup.
9. Cotton Products, Salad Oil, Margarine.
10. Petroleum Products, the Motor Car and the Diesel Engine.
11. Synthetic Perfumes and Flavors.
12. Radium and the Constitution of the Atom.

The articles will be written by Edwin E. Slosson, Literary Editor of The Independent. He is exceptionally well-fitted by training and experience to interpret the science of Chemistry to the layman. For thirteen years he was Professor of Chemistry in the University of Wyoming and Chemist of the Wyoming Agricultural Experiment Station. He was given the degree of Doctor of Philosophy by the University of Chicago for research in Organic Chemistry under Prof. Julius Stieglitz, now President of the American Chemical Society. He lectured on Chemistry for four years in the Columbia School of Journalism and has written many bulletins and magazine articles on the subject.

THE TRUTH PUBLISHING FOUNDATION, Eufaula, Ala.

ed. She went in, and about her baking again. Nanny sat sewing. Her wedding-day was drawing nearer, and she was getting pale and thin with her steady sewing. Her mother kept glancing at her.

"Have you got that pain in your side this mornin'?" she asked.

"A little."

Mrs. Penn's face, as she worked, changed, her perplexed forehead smoothed, her eyes were steady, her lips firmly set. She formed a maxim for herself, altho incoherently with her unlettered thoughts. "Unsolicited opportunities are the guide-posts of the Lord to the new roads of life," she repeated in effect, and she made up her mind to her course of action.

"S'posin' I *had* wrote to Hiram," she muttered once, when she was in the pantry "s'posin I had wrote, an' asked him if he knew of any horse? But I didn't, an' father's goin' wa'n't none of my doin'. It looks like a providence." Her voice rang out quite loud at the last.

"What you talkin' about, mother?" called Nanny.

"Nothin'."

Mrs. Penn hurried her baking; at eleven o'clock it was all done. The load of hay from the west field came slowly down the cart track, and drew up at the new barn. Mrs. Penn ran out. "Stop!" she screamed —"stop!"

The men stopped and looked; Sammy upreared from the top of the load, and stared at his mother.

"Stop!" she cried out again. "Don't you put the hay in that barn; put it in the old one."

"Why, he said to put it in here," returned one of the haymakers, wonderingly. He was a young man, a neighbor's son, whom Adoniram hired by the year to help on the farm.

"Don't you put the hay in the new barn; there's room enough in the old one, ain't there?" said Mrs. Penn.

"Room enough," returned the hired man, in his thick, rustic tones. "Didn't need the new barn, nohow, far as room's concerned. Well, I s'pose he changed his mind." He took hold of the horses' bridles.

Mrs. Penn went back to the house. Soon the kitchen windows were darkened, and a fragrance like warm honey came into the room.

Nanny laid down her work. "I thought father wanted them to put the hay into the new barn?" she said, wonderingly.

"It's all right," replied her mother.

Sammy slid down from the load of hay, and came in to see if dinner was ready.

"I ain't goin' to get a regular dinner today, as long as father's gone," said his mother. "I've let the fire go out. You can have some bread an' milk an' pie. I thought we could get along." She set out some bowls of milk, some bread, and a pie on the kitchen table. "You'd better eat your dinner now," said she. "You might jest as well get thru with it. I want you to help me afterward."

Nanny and Sammy stared at each other. There was something strange in their mother's manner. Mrs. Penn did not eat anything herself. She went into the pantry, and they heard her moving dishes while they ate. Presently she came out with a pile of plates. She got the clothes-basket out of the shed, and packed them in it. Nanny and Sammy watched. She brought out cups and saucers, and put them in with the plates.

"What you goin' to do, mother?" inquired Nanny, in a timid voice. A sense of something unusual made her tremble, as if it were a ghost. Sammy rolled his eyes over his pie.

"You'll see what I'm goin' to do," replied Mrs. Penn. "If you're thru, Nanny, I want you to go upstairs an' pack up your things; an' I want you, Sammy, to help me take down the bed in the bedroom."

"Oh, mother, what for?" gasped Nanny.

"You'll see."

During the next few hours a feat was performed by this simple, pious New England mother which was equal in its way to Wolfe's storming of the Heights of Abraham. It took no more genius and audacity of bravery for Wolfe to cheer his wonder-

Super-Preparedness

What Profit It Holds for You

THE time to prepare for war is before you have it. The time to prepare for illness is before you have it. The time to cure indigestion, constipation, biliousness, dyspepsia, and other digestive troubles is before you have them. The time to cure tuberculosis is before it becomes active; the time to cure any, and all troubles of a physiological character, and a physical character is before they develop. This is genuine preparedness. The benefit of such an action is not only complete freedom from distress, but also the possession of greater energy, physiological, physical, and personal, with which the daily tasks are met, and rendered a profit, instead of a disadvantage.

Life consists of an effort on the part of the body and personality to prepare to meet the conditions of environment. Every day is a day of preparedness, but the body and mind need guidance and inspiration, if the highest form of preparedness, and if complete preparedness to meet all adverse conditions is to be developed. Conscious Evolution is a scientific, simple, and practical method by which the positive evolutionary principle is applied to the mind and body, and greater preparedness, super-preparedness, is the result.

Preparedness is but the ability of the body and personality to meet the ordinary conditions of environment.

Super-preparedness is the ability of the body and personality to meet the extraordinary and the extreme conditions of environment.

Super-preparedness means health power, vital power, personal power, mental power, thinking power, will power, in superabundance. The possession of these will make health and success for you inevitable.

Super-preparedness through Conscious Evolution will reduce your stress of life to a minimum, and increase your rewards to a maximum.

Conscious Evolution is a science of life—a science through which life of the cells and life of the personality is developed. With more life and with better life, all of the problems of life are solved. Not only are the physiological and physical troubles reduced to a pleasure, but the problems of the mind, the problems of the personality are made easy of solution, when the energy of mind and personality is developed through Conscious Evolution.

Conscious Evolution gives superabundance of energy in every department of personality and in every cell; it amplifies, increases and develops life. *Conscious Evolution is a science of life.*

A Startling Book

Swoboda has written a book describing his remarkable discovery of Conscious Evolution, which will be sent free on request. In this book you will find a message so vital that no man or woman who values success and happiness can afford to ignore it.

Every page is alive with startling truths and priceless information akin to self-evolution, and the book contains letters from hundreds of pupils testifying as to almost magical results achieved through Swoboda's remarkable system.

No matter whether you are "feeling fine" or are physically down and out—no matter whether you are 16 or 90 years of age—no matter whether you are just putting your foot on the lower rung of the ladder of success or are perched at the top, Swoboda's book may contain the greatest discovery you ever made. It has proved the turning point in the lives of thousands, it may very easily prove the turning point in your life.

Remember that a "brilliant mind in a half-alive body is like gold in a spent swimmer's pocket," and that personal efficiency — the power to do and earn—is in almost direct proportion to the power your body supplies to your brain. Swoboda's book points the way to a thoroughly successful life—a life which is the envy of those who do not have it. Mail the coupon today—the book is yours. And you will be in line for super-preparedness.

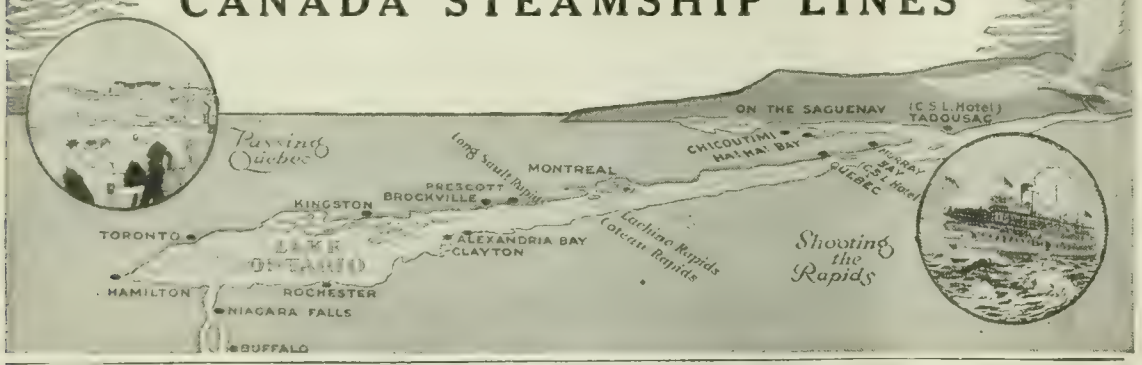
The Glorious Saguenay—
NIAGARA to the SEA

SINCE the historic days when Jacques Cartier sailed up the St. Lawrence under the banner of Old France, this famous region where the river meets the sea has been the goal of all travellers who love Nature in her full majesty.

Less than four days return journey from Montreal on the magnificent steamers of the Canada Steamship Lines the Saguenay River trip has become one of the most convenient and enjoyable trips in North America.

From Montreal you journey down the romantic St. Lawrence towards the sea, stopping at old Quebec, with its famous miracle-working shrine of Ste. Anne de Beaupré, beautiful Murray Bay and picturesque Tadousac at the foot of the Laurentian Mountains, where the traveller will find up-to-date Canada Steamship Hotels, with golf links and a salt-water swimming pool at Murray Bay. Leaving Tadousac you begin the journey up the glorious Saguenay with its stupendous Capes, "Trinity" and "Eternity," higher than Gibraltar.

A thousand miles of travel—a thousand thrills of pleasure.



Fares From Niagara Falls:

Explain your situation and ask as many questions as you like. They will be answered by experts, freely, fully, promptly and helpfully.

There are many practical, helpful articles for garden makers in every number of

The Countryside

ing soldiers up those steep precipices, under the sleeping eyes of the enemy, than for Sarah Penn, at the head of her children, to move all their little household goods into the new barn while her husband was away.

Nanny and Sammy followed their mother's instructions without a murmur; indeed, they were overawed. There is a certain uncanny and superhuman quality about all such purely original undertakings as their mother's was to them. Nanny went back and forth with her light loads, and Sammy tugged with sober energy.

At five o'clock in the afternoon the little house in which the Penns had lived for forty years had emptied itself into the new barn.

Every builder builds somewhat for unknown purposes, and is in a measure a prophet. The architect of Adoniram Penn's barn, while he designed it for the comfort of four-footed animals, had planned better than he knew for the comfort of humans. Sarah Penn saw at a glance its possibilities. Those great box-stalls, with quilts hung before them, would make better bedrooms than the one she had occupied for forty years, and there was a tight carriage-room. The harness-room, with its chimney and shelves, would make a kitchen of her dreams. The great middle space would make a parlor, by-and-by, fit for a palace. Upstairs there was as much room as down. With partitions and windows, what a house would there be! Sarah looked at the row of stanchions before the allotted space for cows, and reflected that she would have her front entry there.

At six o'clock the stove was up in the harness-room, the kettle was boiling, and the table set for tea. It looked almost as home-like as the abandoned house across the yard had ever done. The young hired man milked, and Sarah directed him calmly to bring the milk to the new barn. He came gaping, dropping little blots of foam from the brimming pails on the grass. Before the next morning he had spread the story of Adoniram Penn's wife moving into the new barn all over the little village. Men assembled in the store and talked it over, women with shawls over their heads scuttled into each other's houses before their work was done. Any deviation from the ordinary course of life in this quiet town was enough to stop all progress in it. Everybody paused to look at the staid, independent figure on the side track. There was a difference of opinion with regard to her. Some held her to be insane; some, of a lawless and rebellious spirit.

Friday the minister went to see her. It was in the forenoon, and she was at the barn door shelling peas for dinner. She looked up and returned his salutation with dignity, then she went on with her work. She did not invite him in. The saintly expression of her face remained fixed, but there was an angry flush over it.

The minister stood awkwardly before her, and talked. She handled the peas as if they were bullets. At last she looked up, and her eyes showed the spirit that her meek front had covered for a lifetime.

"There ain't no use talkin', Mr. Hersey," said she. "I've thought it all over an' over, an' I believe I'm doin' what's right. I've made it the subject of prayer, an' it's betwixt me an' the Lord an' Adoniram. There ain't no call for nobody else to worry about it."

"Well, of course, if you have brought it to the Lord in prayer, and feel satisfied that you are doing right, Mrs. Penn," said the minister, helplessly. His thin gray-bearded face was pathetic. He was a sickly man; his youthful confidence had cooled; he had to scourge himself up to some of his pastoral duties as relentlessly as a Catholic ascetic, and then he was prostrated by the smart.

"I think it's right jest as much as I think it was right for our forefathers to come over from the old country 'cause they didn't have what belonged to 'em," said Mrs. Penn. She arose. The barn threshold might have been Plymouth Rock from her bearing. "I don't doubt you mean well, Mr. Hersey," said she, "but there are things people hadn't ought to interfere with. I've

been a member of the church for over forty year. I've got my own mind an' my own feet, an' I'm goin' to think my own thoughts an' go my own ways, an' nobody but the Lord is goin' to dictate to me unless I've a mind to have him. Won't you come in an' set down? How is Mis' Hersey?"

"She is well, I thank you," replied the minister. He added some more perplexed apologetic remarks; then he retreated.

He could expound the intricacies of every character study in the Scriptures, he was competent to grasp the Pilgrim Fathers and all historical innovators, but Sarah Penn was beyond him. He could deal with primal cases, but parallel ones worsted him. But, after all, altho it was aside from his province, he wondered more how Adoniram Penn would deal with his wife than how the Lord would. Everybody shared the wonder. When Adoniram's four new cows arrived. Sarah ordered three to be put in the old barn, the other in the house shed where the cooking-stove had stood. That added to the excitement. It was whispered that all four cows were domiciled in the house.

Toward sunset on Saturday, when Adoniram was expected home, there was a knot of men in the road near the new barn. The hired man had milked, but he still hung around the premises. Sarah Penn had supper all ready. There were brown-bread and baked beans and a custard pie; it was the supper that Adoniram loved on a Saturday night. She had on a clean calico, and she bore herself imperturbably. Nanny and Sammy kept close at her heels. Their eyes were large, and Nanny was full of nervous tremors. Still there was to them more pleasant excitement than anything else. An inborn confidence in their mother over their father asserted itself.

Sammy looked out of the harness-room window. "There he is," he announced, in an awed whisper. He and Nanny peeped around the casing. Mrs. Penn kept on about her work. The children watched Adoniram leave the new horse standing in the drive while he went to the house door. It was fastened. Then he went around to the shed. That door was seldom locked, even when the family was away. The thought of how her father would be confronted by the cow flashed upon Nanny. There was a hysterical sob in her throat. Adoniram emerged from the shed and stood looking about in a dazed fashion. His lips moved; he was saying something, but they could not hear what it was. The hired man was peeping around a corner of the old barn, but nobody saw him.

Adoniram took the new horse by the bridle and led him across the yard to the new barn. Nanny and Sammy slunk close to their mother. The barn doors rolled back, and there stood Adoniram, with the long mild face of the great Canadian farm horse looking over his shoulder.

Nanny kept behind her mother, but Sammy stepped suddenly forward, and stood in front of her.

Adoniram stared at the group. "What on airth you all down here for?" said he. "What's the matter over to the house?"

"We've come here to live, father," said Sammy. His shrill voice quavered out bravely.

"What"—Adoniram sniffed—"what is it smells like cookin'?" said he. He stepped forward and looked in the open door of the harness-room. Then he turned to his wife. His old bristling face was pale and frightened. "What on airth does this mean, mother?" he gasped.

"You come in here, father," said Sarah. She led the way into the harness-room and shut the door. "Now, father," said she, "you needn't be scared. I ain't crazy. There ain't nothin' to be upset over. But we've come here to live, an' we're goin' to live here. We've got jest as good a right here as new horses an' cows. The house wa'n't fit for us to live in any longer, an' I made up my mind I wa'n't goin' to stay there. I've done my duty by you forty year, an' I'm goin' to do it now; but I'm goin' to live here. You've got to put in some windows and partitions; an' you'll have to buy some furniture."

"Why, mother!" the old man gasped.

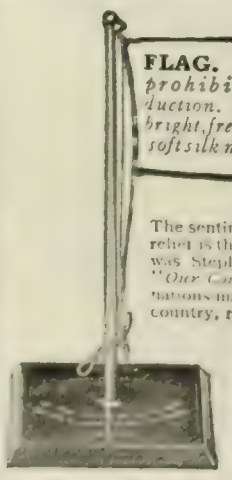
THE PULLMAN COMPANY



Coast to Coast.

Through the far-reaching service of the Pullman Company it is often possible to arrange a railroad journey so that the night may be spent on the train, thus effecting a saving in hotel accommodations and the hours often unnecessarily used for day time travel.

The Pullman car includes in its construction not only the asset of increased safety, but every convenience afforded by the most modern hotel that can possibly be adapted to the limitations of car construction. And the service further includes the personal attention of employes trained to anticipate the individual requirements of the traveling public.

In the deserts of the Southwest; in the western mountains; in rural communities throughout the country, everywhere, regardless of local conditions, the traveler today can obtain, wherever he may board a Pullman, the same high standard of service that he would find in a Pullman car leaving the terminal of the great metropolis.

Standardized and extended to serve in equal measure travelers in practically every community, the facilities which the Pullman Company affords for convenience, safety and comfort are equalled by no other similar organization in the world.

SHOW YOUR COLORS!

Here is a beautiful desk flag that will appeal to every loyal citizen of the United States. Flag is silk, attached to silver staff imbedded in solid metal pedestal. About 7 inches high.

The sentiment inscribed on the pedestal in bas-relief is that of every red-blooded American, as it was Stephen Decatur's a hundred years ago: "*Our Country*—In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

"You'd better take your coat off an' get washed—there's the wash-basin—an' then we'll have supper."

"Why, mother!"

Sammy went past the window, leading the new horse to the old barn. The old man saw him, and shook his head speechlessly. He tried to take off his coat, but his arms seemed to lack the power. His wife helped him. She poured some water into the tin basin, and put in a piece of soap. She got the comb and brush, and smoothed his thin gray hair after he had washed. Then she put the beans, hot bread, and tea on the table. Sammy came in, and the family drew up. Adoniram sat looking dazedly at his plate, and they waited.

"Ain't you goin' to ask a blessin', father?" said Sarah.

And the old man bent his head and mumbled.

All thru the meal he stopped eating at intervals, and stared furtively at his wife; but he ate well. The home food tasted good to him, and his old frame was too sturdily healthy to be affected by his mind. But after supper he went out, and sat down on the step of the smaller door at the right of the barn, thru which he had meant his Jerseys to pass in stately file, but which Sarah designed for her front house door, and he leaned his head on his hands.

After the supper dishes were cleared away and the milk-pans washed, Sarah went out to him. The twilight was deepening. There was a clear green glow in the sky. Before them stretched the smooth level of field; in the distance was a cluster of hay-stacks like the huts of a village; the air was very cool and calm and sweet. The landscape might have been an ideal one of peace.

Sarah bent over and touched her husband on one of his thin, sinewy shoulders. "Father!"

The old man's shoulders heaved: he was weeping.

"Why, don't do so, father," said Sarah.

"I'll—put up the—partitions, an'—everything you—want, mother."

Sarah put her apron up to her face; she was overcome by her own triumph.

Adoniram was like a fortress whose walls had no active resistance, and went down the instant the right besieging tools were used. "Why, mother," he said, hoarsely, "I hadn't no idee you was so set on't as all this comes to."

PEBBLES

Ginger—Garn, yer father couldn't pass the doctor!

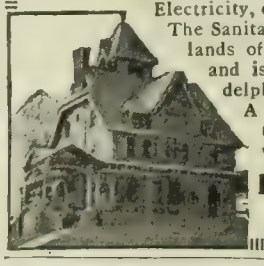
Puddin'—Burr! Yours can't pass a pub. —*Sydney Bulletin.*

It is an open question whether our food troubles are aggravated more by our possession of too few acres or too many wise-acres.—*London Opinion.*

Officer—Do you know anything about field drilling?

Private—Field drilling? Oh, yes, I used to have a job in an artesian well company. —*London Opinion.*

Little Benny was looking at a picture of Elijah going to heaven in a chariot of fire. Pointing to the halo about the prophet's head, Benny exclaimed: "See, mamma, he's carrying an extra tire."—*Passing Show.*



"The cook wants to borrow something from the library. Shall I let her have it?"

"Certainly. If she gets interested in a story she may stay until she finishes it. Give her one of those long English novels in four volumes."—*Louisville Courier-Journal.*

The other night
I went to the theater
With a lowbrow friend.
And the orchestra played
"Little Brown Jug,"
And he thought
It was the national anthem
And stood up.
And I did, too,
Darn him.—*Arkansas Gazette.*

What to Read about Civilian Service

Without the army behind the lines, the army out of uniform, the men at the front must fail. The books of this week's list tell a few of the tasks that belong to this great rearguard and how it should set about its work.

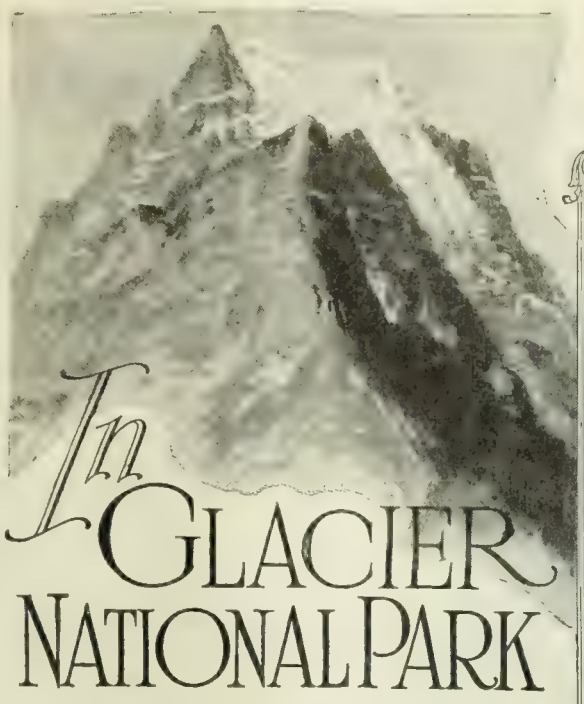
Mobilizing America, by Arthur Bullard. (Macmillan Company, New York, 50 cents.) A clear, general discussion of the problems before us, soldier and civilian alike, by one who has for two years, in France and England, watched democracies organizing for war.

International Finance, by Hartley Withers. (E. P. Dutton & Co., New York, $1.25.) A readable, dependable discussion of the management of money in the present crisis. Emphasizes the patriotic service of the small investor, the man with a little bank account.

Doing Their Bit, by Boyd Cable. (E. P. Dutton & Co., New York, $1.) A graphic account of how England supplies munitions to the Allies, of the enormous amounts needed, of the "speeding up" that makes the supply possible, and of the horrible results of shortage.

England's Effort, by Mrs. Humphry Ward. (Charles Scribner's Sons, New York, $1.) Deals especially with the share of women in the work of equipping and caring for the armies of the Allies.

Way of the Red Cross, by Vivian and Williams. (G. H. Doran Company, New York, $1.) An excellent survey of the organization, showing just how it is doing its work in the Great War.



Industrial Preparedness, by C. E. Knoeppel. (Engineering Magazine, New York, $1.) A comparison of the German industrial organization as a preparation for war with our own entire lack of system.

First Aid to the Injured (30 cents), *Home Care of the Sick* (50 cents), *Home Dietetics* (75 cents, National Red Cross. Washington, D. C.) The three books used in the classes that fit for service as Red Cross assistants in base hospitals or wherever need be.

America and the New Epoch, by C. P. Steinmetz. (Harper & Bros., New York, $1.) A plea not for the German spirit or the German political practise, but for German coöperative methods in industry. A warning of the disaster threatened by our competitive methods.

PAMPHLETS. *Role of Chemistry in Time of War*, by A. S. Cushman. (5 cents. Superintendent of Documents, Washington, D. C.) *Medico-Military Aspects of the European War.* (60 cents. Superintendent of Documents, Washington, D. C.) *War Department Document 527.* (War College, Washington, D. C.) Study of the places of origin and ability to produce supplies needed in vast quantities in time of war. *War Department Document 517.* (Army War College, Washington, D. C.) On the mobilization of industries and the utilization of resources of the country in emergency. *War and the Cotton Trade, Prices and Earnings in Wartime.* (The Oxford Press, New York, 8 cents each). *Railways as a Part of a System of National Defense*, by W. L. Park. (Illinois Central Railroad, Chicago.)

ARTICLES. *The Independent*, February 17, 1917 (Mobilization). *The Century*, March, 1916 (Industrial Mobilization). *The Forum*, March, 1917 (What Our Manufacturers Are Doing for Europe). *The World's Work*, March, 1917 (Organizing the Nation's Fighting Strength). *Scientific American*, March 3, 1917 (Our Industrial Mobilization. Progress of the Work of the Council for National Defense).

In GLACIER NATIONAL PARK

AT GLACIER NATIONAL PARK refined hotel comforts contrast with Nature's wildest, most tremendous sights.

Last year thousands more tourists than in any previous year scaled its Alpine heights—fished its tumbling streams—rode by launch on its azure lakes—motored through its pine-laden valleys. Modern hotels-in-the-forest and chalets. Tepee camps. Vacations $1 to $5 per day.

Glacier Park is on the main trans-continental line of the Great Northern Railway. Visit Glacier National Park, the Spokane Country, and the wonderful Lake Chelan Region, directly en route to the Pacific Northwest.

A camping tour 'long the shores of Lake Chelan is a big experience. Then go on to Seattle, Tacoma, Puget Sound, Portland, Astoria, Vancouver, Victoria—each with a delightful resort-country of its own—and Alaska.

The twin Palaces of the Pacific—S. S. "Great Northern" and S. S. "Northern Pacific"—three times weekly between Portland, Astoria and San Francisco. Folder on request.

Dept. 10, Columbus, Ohio

OUR DOLLARS BEHIND THE WAR

BY WILLIAM G. McADOO

SECRETARY OF THE TREASURY

THE Administration has asked Congress for authority to issue $5,000,000,000 of government bonds to meet the situation which is created by the war with Germany.

At the time of writing congressional leaders were undertaking to give the measure the right of way and indications showed that it would undoubtedly meet with prompt approval by both the House of Representatives and the Senate.

The proposed bonds will be exempt from taxation and bear interest at 3½ per cent per year. Two billion dollars of these bonds will be required to finance, in part, the expenditures involved in the proper organization and efficient operation of the Army and Navy and the conduct of the war generally.

Of course, a large amount of additional revenue will have to be raised by taxation, but this problem is under consideration by the Ways and Means Committee of the House. It will naturally take a reasonable time to discuss and agree upon the new items of taxation, which should not and, I am confident, will not become the subject of partizan treatment.

Three billion dollars of the proposed issue of bonds should be used to supply credit to the governments making common cause with us against Germany to enable them to secure essential supplies in the United States and carry on the war with increased effect.

The most serviceable thing we can do immediately for the common cause is to furnish credit to these foreign governments who, in conjunction with us, are fighting Germany. The financial aid ought to be extended at the earliest possible moment. It will be trebly valuable and effective if it is extended now.

The purpose is to purchase the obligations of the foreign governments to which credit is given; such obligations to bear the same rate of interest and, in other essentials, to contain the same terms and conditions as the bonds of the United States.

The bonds of the United States will be offered as a great popular loan and the widest opportunity will be given to the public to subscribe and, by subscribing, to perform one of the most patriotic services that can possibly be rendered to the country at the present time.

The laws of the United States forbid the payment of commissions on sales of government bonds, and in view of this fact it is extremely gratifying to have received so many offers from bankers and others thruout the country of the free use of their services and facilities in making the proposed bond issue a success.

It is the purpose of the Treasury Department to make use of these offers and to seek the assistance of the Federal Reserve banks, the national banks, the state banks, the trust companies, the savings banks, the insurance companies, the private bankers and investment bankers thruout the country in the public offering that will be made of the Government's bonds. Every governmental agency, such as the Internal Revenue offices and even the post offices, will be asked to assist in this patriotic work.

When the Congress shall have granted the necessary authority to make public offer of the bonds, I shall take the benefit of the counsel of the most experienced bankers and investors in the country as to the best means of making the offering a success.

The wealth of the United States is so great, the investment resources of the country are so large, the strength of our banking situation is so phenomenal, and the patriotism of our people is so strongly aroused, that I am thoroly confident that when the Government offers its bonds for public subscription the amount will be overwhelmingly subscribed.

Kirby in New York World

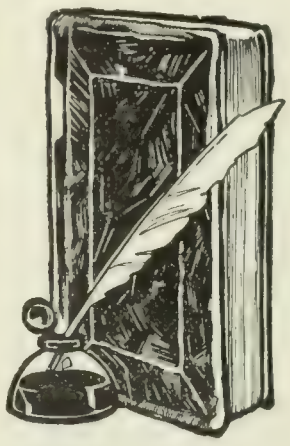
THE FIRST SHOT

Insurance

Conducted by

W. E. UNDERWOOD

W., Pickford, Mich.—I do not find the name of the Agricultural Life Insurance Company of Bay City, Michigan, in either the Michigan Insurance Department's report or any of the reference hand books, from which I conclude it has not begun to transact business. Stock in a new life insurance company must be regarded as a speculation for a number of years after it starts.



M. A. P., Hollywood, Calif. — As annuities, which for many years has been a neglected branch of life insurance, the companies making no special efforts to sell them, seem to be gaining in public favor, it is desirable to know that they are granted by all the principal companies. Their rates vary. You inquire in this connection as to the safety of the Metropolitan Life. Nothing in the life insurance line is safer. I understand it sells an attractive annuity contract.

J. A. R., Evanston, Wyoming.—Unlike life insurance, accident and health insurance are actuarially devoid of the statistical elements which make their operations certain. I am, therefore, unwilling to advise in favor of insuring in any of the numerous small mutual associations which are springing up all over the country. That business needs capital behind it if the policyholder is to have the security needed. In reply to your question as to the financial standing of the Aetna Life, which writes health and accident, will say that it is one of the largest and best insurance companies in the country.

F. P. S., Sulphur Springs, Ohio—You will be best served if I quote you the participating rates of a few leading companies, the non-participating rates of two others and then the net cost in all during five years. At age 35 on $1000 Ordinary Life the participating rates are as follows in the companies named: Northwestern Mutual, $26.88; Mutual Benefit, $26.35; Union Central, $24.89; Metropolitan, $22.90; Provident Life & Trust, $25.45; Prudential, $21.90. Rates on non-participating policies in two companies selected are: Travelers', $20.91; Connecticut General, $21.66. The net cost of $1000 Ordinary Life, age 35, during five years ending with 1915 were: Northwestern Mutual, $107; Mutual Benefit, $107; Union Central, $106; Metropolitan, $110; Provident Life & Trust, $108; Prudential, $106; Travelers', $105; Connecticut General, $109. Replying to your other question, I am of the opinion that the use of surplus by the Union Central in raising its capital from $100,000 to $2,500,000, on which the stockholders get ten per cent annual dividends has the effect of impairing confidence in the management.

F. E. D., Evart, Mich.—The Knights Templars and Masonic Mutual Aid Association of Cincinnati was organized in 1891 to insure members of the Masonic fraternity only, on the assessment plan. In 1907 it remodeled its system of rates effective January 1, 1908, dividing the membership into two classes: those paying a yearly increasing rate and those paying level rates. All premiums are payable quarterly. The Association retains the power to levy additional assessments. All sums collected in excess of death claim requirements constitute what is called a "Permanent Fund"—a sort of reserve. What the amount of this fund is, I am unable to say, for it is not carried as a liability as in old line life insurance. Nor as the result of the absence of specific statistics of the Association is it possible for me to quote the net cost to members. The Association has always met its obligations in full and has never levied any extra assessments. At the beginning of 1916 its assets were $522,607; its liabilities, $123,597; surplus (which may be the Permanent Fund), $399,028. Presumably as the result of the increase in rates, the insurance in force which amounted to $20,069,000 at the end of 1907, fell to $11,962,000 at the end of 1915.

A long clean unbroken record

For 107 years the records of the stockholders' meetings of the Hartford Fire Insurance Company of Hartford, Conn., have been kept in the same little book that is now carefully preserved in the safety vaults of the company. This little volume tells the story of the Hartford from 1810 to the present time. It records the growth of a great insurance corporation that at the close of business on December 31, 1916, had paid out in losses $198,044,354.97, and is financially impregnable. Such is the long, clean, unbroken record back of the

INSURANCE *Service* OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been fairly met and promptly paid. The Hartford was founded by empire builders—men of the same character and affiliations as the founders of the United States. The Hartford has grown great, as the country has grown great, by steadfast adherence to the traditional integrity of its founders. Are you fully insured? Look over the list below and check the forms of insurance which interest you. Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Housetops. By Louise Ayres Garnett.

1. Show in what ways this poem is like Milton's "L'Allegro" and "Il Penseroso." Tell why you like the poem.
2. Explain the following expressions: scenes Alhambran; shoon; webs; wagging; the tender Shepherd's psalm. What does every expression add to the poem?
3. What pictures could be drawn in illustration of the poem?

The Revolt of Mother. By Mary E. Wilkins Freeman.

1. Show how the Short Story has described life in every section of the United States. Plan to read at least one short story concerning each of the important sections of the United States.
2. What are the characteristics that make a local color story interesting and valuable? Why is it that the best local color stories are universal in interest?
3. What is the characteristic type of Mary E. Wilkins Freeman's work? From what sources has she drawn her subjects?
4. What are the characteristics that make "The Revolt of Mother" a great story?
5. Compare or contrast this story with the other stories that have been printed in The Independent.

SECTION II. GRAMMAR.

1. Give the syntax of the nouns in any advertisement in this number.
2. Give the syntax of the prepositional phrases in any editorial article.
3. Count the number of simple, of compound, and of complex sentences in the first editorial article. Tell what advantages the writer gained by his use of sentence-types in that proportion.

SECTION III. COMPOSITION.

Follow the Flag. By Theodore Marburg.

1. Show in what ways this passage of rhythmical prose is like poetry. What is the effect of repeating "Follow the flag"?
2. Point out figures of speech. Tell why they have been used.
3. Write a composition on "Reasons Why the United States Has Entered the Great War."

What Shall the Navy Do? By Park Benjamin.

1. Write a composition concerning the differences between modern naval warfare and naval warfare of former times.

The Machinery of War. By Howard Coffin.

1. Write a composition on "How the United States May Organize Its Industries for War."

Our Dollars Behind the War. By William G. McAdoo.

1. Write an explanation of the means by which the United States Government will raise funds for the war.

Why I Am Not a Prohibitionist. By Rev. Wallace M. Short.

1. Write an argument for or against "The divine right of the majority."
2. Give your own reasons for believing that prohibition should be "a law," or "a habit of mind," or a combination of the two.
3. Read the editorial article called "Liberty of Difference." Give your reasons for agreeing with Mr. Short or with the writer of the editorial article.

Editorial Articles.

1. Show, from "United We Stand," that the country is more united today than in any previous war, and write an explanation of the causes that have made public opinion so unanimous.

The Story of the Week.

1. Write in a single paragraph the principal thoughts presented by Lloyd George in his address to America.
2. Write a summary of recent events in the Great War.
3. Write an explanation of the new policy of the Russian Government.
4. Explain the present state of affairs between Russia and Germany.
5. Write a short paragraph of cause and effect concerning the way in which the Great War has affected Spain.
6. Write an argument for or against the statement: "War with Mexico is probable."
7. Write a very short news item concerning the break with Austria.
8. Write a paragraph of detail telling what means have been taken to protect the American coast.
9. Write an editorial article concerning the appointment of a food dictator for the United States.

In General.

1. Write a short article on "How The Independent has made me more patriotic."
2. Write a story based on a series of pictures cut from The Independent.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.
PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. Public Opinion and the War—"United We Stand," "Follow the Flag."

1. Study the conditions in this country during one or more of our earlier wars. Do you think the first sentence in the editorial is justified?
2. Explain the quotation: "An Englishman named George Washington took up arms against a German king called George III."
3. Do you get an idea of lack of enthusiasm for the Civil War from your reading of the account of the war in your textbook?
4. How do you account for the difference in attitude in the United States at present and the attitude of the English at the beginning of the war?
5. What, according to Theodore Marburg, are the motives which are leading us into war?

II. Organizing for War—"The Call to Service," "The Universal Obligation," "The Machinery of War," "Our Dollars Behind the War," "What Shall the Navy Do?" "Our New Food Dictator," "Labor in the War," "Debating War Measures."

1. What is the Council of National Defense referred to in "The Machinery of War"?
2. Mr. Coffin says: ". . . there are three great arms of service . . . the Army, the Navy and Industry." Can you add to the list of agencies which must be organized if we are to make effective war?
3. On the basis of Mr. Coffin's article, explain what we must do in the way of "coördinating and mobilizing industry."
4. Answer the question: "What Shall the Navy Do?"
5. What measures are being taken in your community to carry out the President's proclamation (a) for conserving the food supply? (b) for mobilizing and conserving the labor supply?
6. How can you answer the President's "Call to Service"?

III. Our Friends and Our Enemies—"Allies to Hold Conference," "Lloyd George Welcomes America," "Austria Breaks with United States," "South America Versus Germany."

1. What do the delegates from England and France hope to accomplish by their visit to the United States?
2. Why did Ambassador Page make a special point of the fact that, "For the first time we are coming to war with the Old World"?
3. Why, according to Lloyd George, has the United States been so slow in coming into the war?
4. Explain the present status of our relations with Austria. What has brought this condition about?

IV. Financing a War—"Our Dollars Behind the War," "The $7,000,000,000 Loan."

1. Read Article I, section 7, clause 1; Article I, section 8, clause 1 and 2 of the Constitution.
2. What special financial measures did Congress adopt during the Civil War? During the Spanish-American War? What measures will it probably adopt now?
3. What will be done with the $5,000,000,000 which the Secretary of the Treasury proposes to borrow?
4. What sorts of taxes will probably be laid by Congress?
5. Explain the method of borrowing money which the Government will probably use.

V. The Anglo-French Advance—"Easter at Arras," "The Storming of Vimy Ridge."

1. Sum up the progress made by the Allies in their advance during the last fortnight.
2. Elaborate the statement "The battles that began on Easter Sunday with the bombardment of the German entrenchments in front of Arras resulted in the greatest victory yet achieved by the Allies in France." With what other victories must it be compared?
3. ". . . they wrote a page of British history like to prove as memorable as those of Agincourt, Blenheim and Waterloo." Recall the salient facts in each of these allusions.

VI. Russian Politics and Foreign Policies—"Divided Councils in Russia," "Russia Renounces Conquest."

1. Explain the significance of the new Russian Government's proclamation to the people.
2. What are the programs of the various political groups in Russia? Which groups are at present united and in control of the Government? Which groups are in opposition?
3. "A counter revolution is threatened," etc. What would be the effect of this counter revolution on internal conditions? on Russian foreign relations?
4. What did Russia hope to accomplish when she entered the war? How has her purpose changed? How do you account for this change?

JUST A WORD

The overthrow of the Russian monarchy has meant the return of a great number of political exiles from Siberia, and to aid these martyrs the Society of the Friends of Russian Freedom is planning to raise a great fund in America.

One of the first celebrations of the Russian revolution was held by this Society in New York recently, and as an outcome a cable was sent to the new Russian Minister of Foreign Affairs, Professor Paul Milukov, in Petrograd. This message stated that with his approval, the Society of the Friends of Russian Freedom would like to undertake the raising of money for the relief of the political exiles returning to Russia; the fund raised to be administered by a committee in Petrograd to be appointed by Professor Milukov.

RUSSIA BREAKS FREE

The answer came at once, "Thanks for the suggestion. Accept most heartily."

The Friends of Russian Freedom are certain that a great number of Americans are keenly in sympathy with these men and women who have sacrificed everything for the sake of that democracy which has at last triumphed.

The money is needed now and to that end the Society is bending every effort. To plead their cause Boardman Robinson has made the powerful little sketch above, representing the giant of Russian democracy breaking the age-long shackles of autocracy.

The Independent hopes that many of its readers may share in the privilege of helping to ease the suffering that these shackles have caused. Checks and money orders should be made payable to Hamilton Holt, treasurer, and sent to Paul Kennaday, secretary, Room 720, 70 Fifth avenue, New York City.

REMARKABLE REMARKS

ED. HOWE—Nothing can be done to satisfy the Irish.

HORATIO PARKER—The French Orchestra is very silky.

E. S. KAISER—This is a good time to junk the junkers.

WILLIAM H. TAFT—Mexico is an international nuisance.

SECRETARY DANIELS—We are in this war with both feet.

DOUGLAS FAIRBANKS—I only regret that I have but one life to write.

E. H. FORBUSH—There may be 50,000,000 cats in the United States.

CHANNING POLLOCK—Our crying need is an institution of unlearning.

BILLY SUNDAY—Try praising your wife, even if it does frighten her at first.

WILLIE COLLIER—Fluffy little blond haired ladies are not natural man haters.

WOODROW WILSON—I beg your tolerance, your countenance and your united aid.

MARIE CORELLI—On whatever day you sow your wheat, you cannot stop its growing on Sundays.

MINNIE MADDERN FISKE—The national theater will not be a theater at all, but a traveling company.

COUNT VON REVENTLOW—Without a German victory the German monarchy will soon cease to exist.

CHARLIE CHAPLIN—Up to a few years ago we did not know that the Chinaman had a sense of humor.

GEN. LEONARD WOOD—Stick to your present duties until such time as the Government calls for you.

REV. EDWARD YOUNG—Mothers have been the best recruiting officers from the days of Sparta till now.

THEODORE ROOSEVELT—In order to make an effort equal to that of Canada we ought to equip 5,000,000 men.

GEN. SAM HUGHES—With proper training an American soldier will prove more than a match for any German.

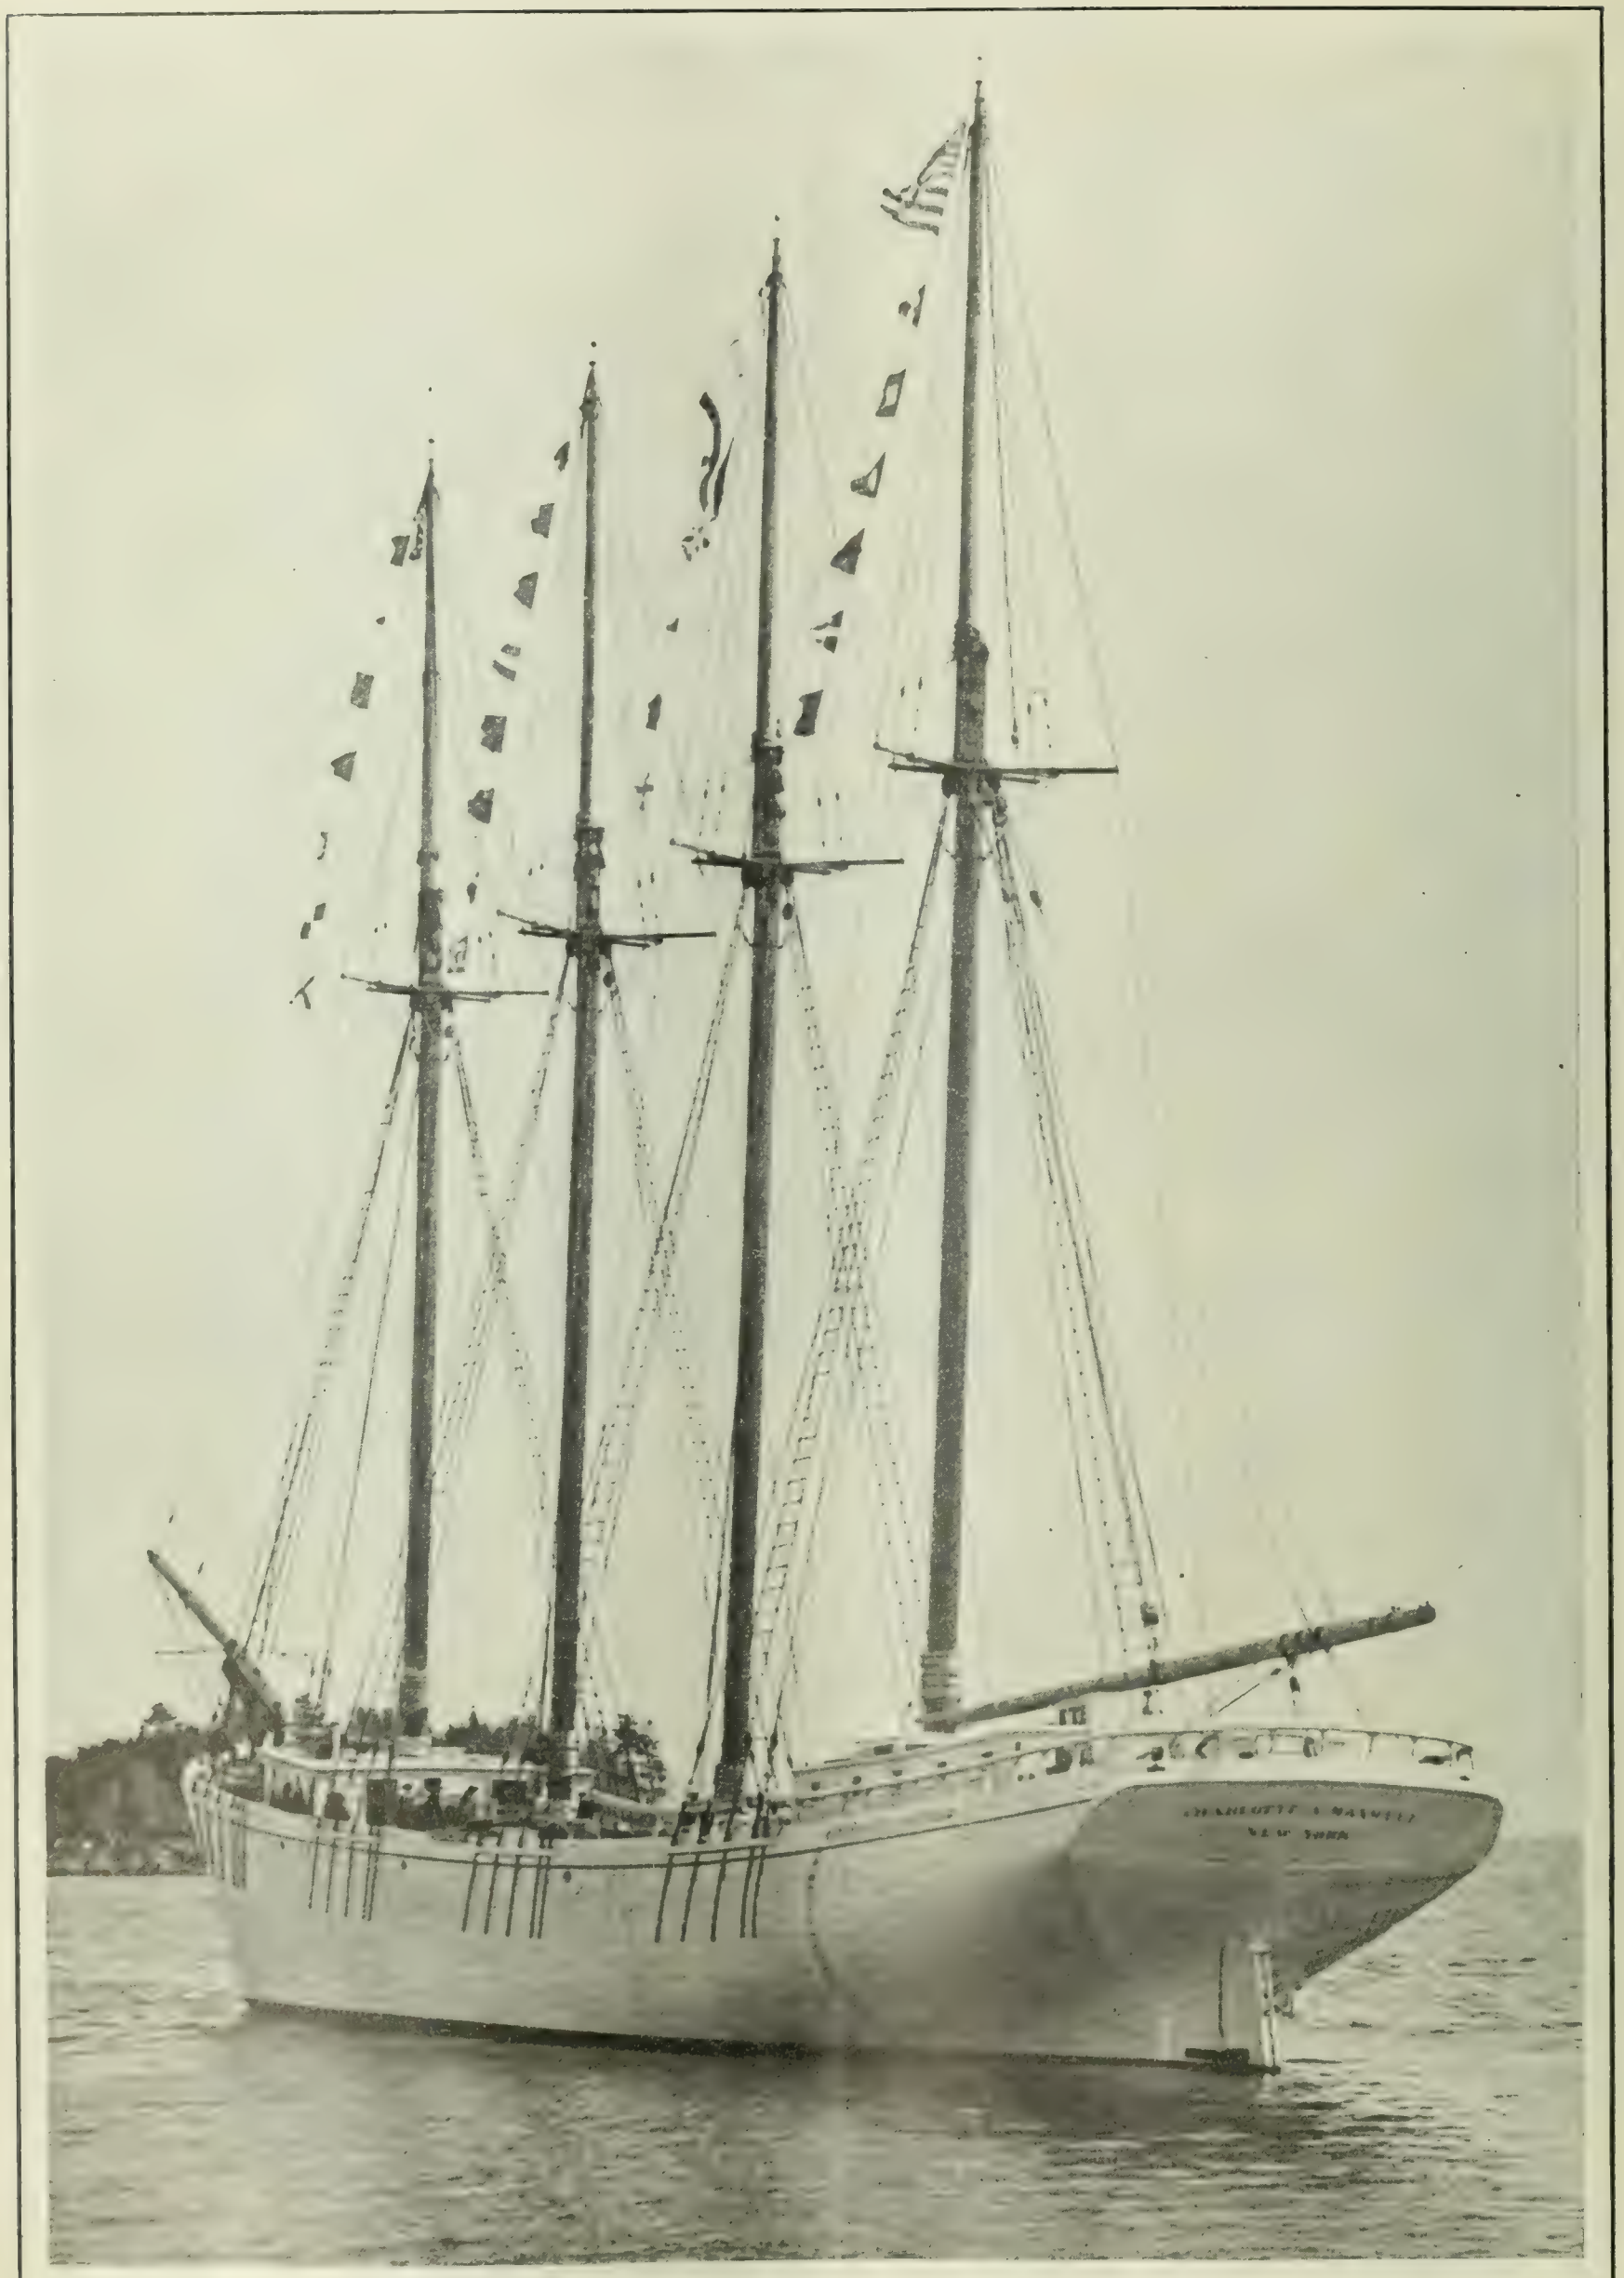
JOSEPH H. CHOATE—We are going into this war on the great American plan; go in first and get ready afterward.

REV. JOHN HAYNES HOLMES—No order of a President or a Governor will persuade me or force me to this business of killing.

SECRETARY HOUSTON — Many families should now consider the advisability of keeping a pig if sanitary regulations permit.

JOHN D. ROCKEFELLER, JR.—I've been thru school and college, but my boys taught me more in a few years than I ever knew before.

PROF. RUDOLF EUCKEN, of Jena—In the life of our society after the war a man must be estimated solely by the manhood in him.



WALTER PRICHARD EATON—There is no more art in the motion picture than in one of those fascinating railroad folders picturing Glacier National Park.

IRVIN S. COBB—Only yesterday John L. Sullivan was my idea of manly perfection. Today I find my dreams realized in the beautiful youths who pose for the union suit "ads."

CARDINAL MERCIER—If there is a people in the world whose role it is to safeguard the liberty of labor, is it not the nation which half a century ago placed the crown of glory upon Lincoln?

CONGRESSMAN BRITTEN — Any young man who runs away from his country's call to hide behind the skirts of a young, inexperienced and giddy girl will ultimately prove a slacker to his family.

REAR-ADMIRAL FISKE—The "Louisiana" could be gotten ready to go out and fight tomorrow, but if she should have to fight a highly trained German ship of the same type she would probably be sunk in an hour.

© *International Film*

CAN THE OLD NEW ENGLAND SHIPYARDS WIN THIS WAR?

The four-masted schooner—invented in New England, named in New England dialect, built into one of New England's chief industries and mourned in every New England seaport since steam superseded sails—has come back into its own, for upon our production of wooden shipping largely depends the Allies' victory over Germany's U-boat blockade

A Journal of Civilization

FOOD OR DRINK?

WE must conserve our food supply. The Great War is being fought on both sides on short rations, and the pinch of privation will sooner or later be at our own vitals. The world's food crops were lamentably short at the last harvest, and they promise to be no better this year.

Our first great duty of coöperation in the war is to feed our allies; for it would be fatuous to refuse to admit that the German submarine campaign is forcing the British and French peoples to tighten their belts. What must we do to meet this obligation without imposing too great suffering or unnecessary sacrifice on our own people?

We must raise every pound of food we can.

We must eliminate every ounce of waste and extravagance we can.

We must save food by abolishing drink.

Drink is made from food. Beer is made from barley and sugar; whiskey from rye or corn. What we drink we cannot have to eat.

England cut her production of beer in half and saved five hundred and seventy million pounds of barley, seventy-two million pounds of sugar, and thirty-three million pounds of other grain products a year.

If the United States were to cut its consumption of drink only in half, enough breadstuffs would be saved to provide *eleven million loaves of bread a day.*

In this great national crisis, shall men drink or women and children eat?

CONSCRIPTION

AMERICA has arrived at democracy. It is face to face with equality. It must take it or leave it, and the choice must be made now.

For a hundred years we have talked democracy and profest it. At an earlier time we had it; for in the days of the Indian wars all men were equal before God and the scalping knife. There were volunteers, but also there was obligation. Every man had to train. Every man had to provide himself with gun and ammunition, and he was under no misapprehension about his duty.

Then came independence, nationality and the professional army. The military obligation of every citizen continued in legal theory. Practically, it was ignored. Training day was forgotten, and even the militia was filled by voluntary enlistment.

The Mexican War made no real demand upon resources or people. The Civil War was won by the North after four years of ghastly, murderous blundering. The response to Lincoln's call for volunteers was quick and brave, by souls whose natures were quick and brave. But to our eternal shame a million men who loved America for what America could do for them found ready reasons why they should sell shoes or army blankets, or other useful stuff instead of serving at the front. The draft became necessary. But instead of being made equal and democratic and intelligent it was bungled and made a cause of bitterness. Any rich man could evade it by buying a substitute. The poor man could not.

The experience taught us nothing, and we went into the Spanish War the most incompetent, unthinking, irresponsible lot of warriors that ever preferred typhoid to bullets. Some day the true history of those years will be known by the people as it is now known by students, and the people will understand what would have happened to us if Great Britain had permitted German intentions to work their will.

Democracy means equality of obligation even more than it means equality of opportunity. It means equality in the supreme obligation, to give everything that one has, both property and life, when the necessity arises. A small professional army is necessary to maintain instruction, to study problems, to meet emergencies, to organize. But a professional army, relied on as the defense of a government, is a fit arm for monarchy only. A volunteer army is an aristocracy, in about the best sense of the word; but an aristocracy it is, and a volunteer army system is irreconcilable with democracy. Democracy must come to universal military obligation, or it must go out of business.

This country in particular needs conscription for military and for other than military reasons. We need it for patriotic and moral reasons. It would bring men together, the East with the West, the North with the South, the men of the seaboard, the prairies and the mountains. It would open the hearts of men to the realities of comradeship and brotherhood. It would improve the health of a population that has become too sedentary. Thru discipline it would make men more efficient for

© Underwood & Underwood

"A NEW CHAPTER IN THE HISTORY OF MANKIND"

When the International War Council arrived in Washington on April 22 the British High Commissioner, Arthur J. Balfour, congratulated the United States on turning the first page in "a new chapter in the history of mankind." "That self-governing communities are not to be treated as negligible simply because they are small," he said, "that the ruthless domination of one unscrupulous power imperils the future of civilization and the liberties of mankind, are truths of political ethics which the bitter experiences of war are burning into the souls of all freedom-loving peoples. That this great people should have thrown themselves whole-heartedly into this mighty struggle, prepared for all the efforts and sacrifices that may be required to win success for this most righteous cause, is an event at once so happy and so momentous that only the historian of the future will be able, as I believe, to measure its true proportions"

business and industry, and as the experience of Australia has demonstrated, it would rid the community of hoodlumism and loafing.

Our prejudices against universal service have been fed by a proper hatred of the Prussian system, but between the universal requirement of Prussian militarism and the universal requirement of French or Swiss or Australian democracy the difference is as wide as between light and darkness, or good and evil. Universal subjection to a kaiser and universal coöperation of free patriots are two different things.

We must have conscription now. We must have it because it is necessary. We are entering into a war that will call for all our strength and for all our common sense. We cannot play war this time. We must have selective conscription, and it must be so broadly conceived that it will enable the Government to put the right men in the right places, sending every man into precisely that service, military or noncombatant, where he, rather than some one else, is particularly needed. We must have such conscription because it is vital to our national unity, vital to our democracy, and vital to our manhood.

THE CONSCRIPTION OF WEALTH

THE pay-as-you-go proposal of the American Committee on War Finance seems to have gained extraordinary support, considering the short time since it was launched.

The reason for this is twofold. First, Americans are essentially patriotic and are wont to flock to the country's support in times of national trouble or danger. Second, there is an inherent and quite understandable justice in the proposition that if one man gives his life to a cause the other man should give his money. The scheme put forward by the American Committee on War Finance is that incomes from $2,000 up should be subject to a graduated tax beginning at two per cent. The scale of increase is such that no one would have a net income of over $100,000 while the war lasts. Moreover, there is a provision that until the debt incurred by the war is paid, this heavy schedule of taxation shall continue.

This is hitting wealth pretty hard, and perhaps the American Committee on War Finance may be suspected of disingenuous tactics in asking for considerably more than they expect or hope to get. Whether this is true or not, the main proposition that the war can be paid for and ought to be paid for largely by the people who can do it without real hardship is a sound one.

Undoubtedly there are objections to the plan of the American Committee on War Finance. There have always been objections to new proposals, no matter how wise and necessary history has proven them to be. That the banking interests of New York have vigorously assailed this scheme for the conscription of wealth does not entirely discredit it. The arguments so quickly marshaled against it in the daily press do not discredit it either.

These arguments have been twofold. First, there is the contention that if you tax rich men out of all annual net income above $100,000, you will cripple new industry. Those who argue thus apparently imagine that new industries in the United States are created mainly by the surplus incomes of rich private individuals. They ignore the fact that in at least nine cases out of ten today corporations furnish the capital to finance industrial enterprises; and that this capital would not be taxable under the scheme of the American Committee on War Finance. There are, of course, a few enormously rich individuals who would be effectively deprived of immense volumes of income which they might, or might not, as the case may be, use for industrial extension and for the maintenance of industries already in existence. But it is more than probable that the Government would use this money quite as beneficially during the war as would these individuals.

The other principal argument against the conscription of wealth and the pay-as-you-go plan is that the present generation should not be charged with the war because future generations will receive the benefit of it. A well known representative of business says: "This generation has got to do all the fighting. It ought not to be compelled to pay the entire bill also." The fallacy of this line of reasoning comes from the fact that "this generation" that does the fighting, or the bulk of it, consists principally of comparatively poor people, with incomes of less than $1000 a year. The plan set forth by the American committee would not have the effect of making these people—the fighting portion of our citizenship—pay for the war. Furthermore, while we should like to think that future generations would receive the whole benefit of wars in permanent peace, history proves that we cannot entirely rely upon such immunity from conflict. Future generations may have troubles of their own. To burden the coming men, women and children with a debt that they have had no part or voice in incurring might be just if we could at the same time insure them against various kinds of obligations which they may be subject to.

The pay-as-you-go plan has received quite an astonishing amount of support from labor and farmer organizations, but what is more significant is that it has gained the confidence of enormous numbers of business men, lawyers, doctors, educators, writers, clerks, bankers and public servants in every part of the country who themselves will have to pay their share of the increased income tax.

At the present writing it seems probable, if not certain, that military conscription will receive the sanction of Congress. The moment the compulsory service bill is signed it is evident that the country will immediately demand that incomes shall be forced to fight, as well as men.

A PLEA FOR CONTENTED IGNORANCE

THE onlooker sees both sides of the game and up to a year ago it was the peculiar privilege of Americans to read the statements given out on both sides and compare them with the course of events. In April, 1915, the British censorship put up the bars against the exportation of any German newspapers and magazines to America, but we still had the wireless despatches from Berlin to Sayville and such cablegrams and letters from American correspondents in Germany as were permitted to pass the British blockade or were smuggled thru the lines. But of course these channels of communication

closed as soon as we broke with Germany, and henceforth we can look at Europe only thru London's eyes. The British Government has never allowed the daily announcements of the German War Office to be published until it has expurgated from them whatever it believed to be false or calculated to disquiet the people. The American papers have got considerable amusement out of comparing the original despatches as received direct by wireless with the version that filtered thru London, but now this source of amusement is shut off. Any news we get from the Central Powers will have to run the gantlet of at least three censorships, the German, the British and the American; and we may imagine how little will be left of it.

Not only are we shut off from our enemies, but we shall learn less about our allies than before, for a neutral may know many things which would not be permissible to one of the warring nations. For instance, the *Nation,* the most progressive of British weeklies and the most friendly to America, was stopt from circulation in this country as soon as the United States declared war. All the belligerents are blindfolded and now that we are engaged in the war we will know no more about it than the peoples of France, Germany, Russia, Italy, England and Australia.

The Germans pride themselves on keeping English and French papers accessible as usual in the newsstands and cafés, while no German papers are allowed to reach the public in France, England or the United States, but this does not indicate that the German people are any better informed than other people, for the foreign papers are belated and read by few while the German press, always muzzled and state-controlled even in time of peace, now puts forth only such views as the Government wishes, and unfortunately its version of events is all too docily accepted.

The American people, on account of their isolation and the inaccessibility of enemy intelligence, will have even less opportunity to follow the course of events and to understand their significance than the British, French or Germans. Our Government will know more, for it will share in part in the secrets of the Allies, but the people will know less and they should cheerfully resign themselves to the necessity of being kept in ignorance and even deceived.

Anyone who can compare what is printed in the European papers with what is cabled to us and can compare what the people there say with what is published in their papers will realize how little opportunity we have of forming a correct judgment from the carefully expurgated news transmitted to us. The war office statements of the various belligerents may tell the truth, but rarely the whole truth. If we had had only the German reports to depend upon what idea would we have received of the battles of the Marne and Verdun? On the other hand, while the English papers were congratulating the Rumanians on their invasion of Austria and General Townshend on his glorious victory at Ctesiphon, both these armies were suffering irretrievable defeat.

Of course the geographical results of a battle become known sooner or later to anybody who can stick pins in a map, but the meaning of the movement may remain quite obscure. Most unreliable of all is the information as to internal conditions and public opinion in allied or enemy countries. For instance we learn from *The Nineteenth Century* for March, 1917, that

> The Progressive or Liberal element, by far the biggest factor in Russian politics, sharply dissociates itself from all thought of a revolution. . . . What we must bear in mind is that the Progressive movement in Russia is national in spirit, constitutional in its aims and unmistakably loyal to the Czar.

But before this reached its readers the Progressives had overthrown the Government, torn up the constitution, and imprisoned the Czar. The British Government admits having knowledge of the Russian revolution as early as March 9, but the people of England did not learn of it until a week later and the people of America first heard of it from Berlin by wireless.

We call attention to these instances of unreliability for the purpose of warning our readers not to believe all they hear or at least not to act upon it. They should in wartime exercize a discriminating skepticism and repress their idle curiosity. Those whose business it is to act will learn as much as possible about what is going on behind the screen. The rest of us must cultivate the contentment of ignorance. The American public has been accustomed to the fullest and promptest news, and how to get along without this privilege just when they are most intensely interested will be one of the hardest lessons they have to learn. But secrecy is essential to success in war and a censor is a necessity as well as an annoyance.

Drawn for The Independent by W. O. Morris

UNIVERSAL SERVICE

THE STORY OF THE WEEK

To Draft or Not to Draft

The plan of selective conscription favored by the administration is slowly winning to its support a secure majority of Congress. There is little doubt of the position of the Senate. Chairman Chamberlain, of the Committee on Military Affairs, has been for years an ardent advocate of universal service and has backed the President's plan with great vigor. On April 21 the Senate voted to take up the army bill by a majority of 53 to 5; setting aside immediate consideration of the espionage bill in order to give the army plan early attention. Senator Gallinger, of New Hampshire, and Senator Nelson, of Minnesota, led the attack on the compulsory plan and urged the example of Canada as an excellent illustration of the possibilities of the volunteer system.

The House of Representatives, on the other hand, contains a large amount of sentiment opposed to conscription. The House Military Committee by a vote of 12 to 8 reported a bill providing for a volunteer force of half a million after the regular army and the National Guard have been recruited up to full strength. By this plan the President would be authorized to resort to conscription should an adequate number of volunteers not be forthcoming, but Congress avoids the responsibility of enacting a compulsory service law. If the friends of universal service in the House are successful, the bill as reported from committee will be modified to correspond to the principles of the Senate measure.

Fourteen citizen training camps have been authorized for the intensive training of reserve officers and candidates for commissions in the army. The maximum attendance at each camp has been limited to 2500, and the army authorities expect to obtain 10,000 trained officers from these camps. Instruction at the camps will begin in May in order that a full complement of officers may be ready to take charge of the first half million volunteers or drafted men enlisted under the army bill which Congress will adopt. Other training camps may be established later in the summer. At present there is a strong agitation to secure payment for those who are studying to be officers so that no one may be prevented from attending training camps because of lack of means.

Volunteering is still slow and it may be some time before the regular army and the National Guard can be filled up to their full complement unless compulsory service in some form is adopted. In order to prevent men from dodging military service by contracting family obligations the War Department has issued a public statement to the effect that men of military age who have married since the existence of a state of war with Germany will be regarded as on the same basis as unmarried men in respect to military liability. There are about seven million young men in the United States subject to draft under the Senate plan, but as all of those engaged in occupations of national importance or otherwise ineligible will be excused, it is estimated that the number of men available for the army will be in the neighborhood of two millions.

THE GREAT WAR

April 16—Great French drive started on Aisne, south of Laon. German provinces of Brazil in revolt.

April 17—Parliament extends its life until November. British hospital ships "Donegal" and "Lanfranc" sunk.

April 18—Hungarian Premier, Count Tisza, resigns. General Maude defeats Turks on Tigris, 12 miles south of Samara.

April 19—Heavy German counter-attacks on Aisne futile. Prieto replaces Romanones as Spanish Premier.

April 20—American flag flown over Houses of Parliament. Turkey breaks with United States.

April 21—German destroyers shell Dover and Calais; two destroyers sunk. Strikes in Germany over reduction of bread ration by one-fourth.

April 22—Balfour, Bridges, Cunliffe and other representatives of the Allies arrive in Washington.

Banks Take War Securities

Altho the great seven billion dollar war finance measure has not yet been placed before the investing public, a test of the financial condition of the country was made by the first offering of war securities to the banks. In order to meet current expenses prior to the enactment of the war finance measure, the twelve federal reserve banks offered two hundred million dollars worth of treasury certificates at three per cent interest to state banks, trust companies and private banks. The loan was heavily oversubscribed within three days after it had been offered and it is probable that additional certificates will soon be issued to cover the amount of oversubscription.

Balfour Welcomes America as Ally

Arthur James Balfour, British Foreign Secretary and head of the commission to the United States, has gone to Washington to confer with President Wilson. He refused to discuss specific questions of policy before seeing the President, but he exprest the pleasure he felt at being in the United States on such a mission and the gratitude of the Allies for the good work done by Mr. Hoover in feeding and befriending the Belgian people and by Ambassador Gerard in alleviating the condition of prisoners of war. He continued:

These are the memorable doings of a beneficent neutrality. But the days of neutrality are, I rejoice to think, at an end, and the first page is being turned in a new chapter in the history of mankind.

Your President, in a most apt and vivid phrase, has proclaimed that the world must be made safe for democracy. Democracies, wherever they are to be found, and not least the democracies of the British Empire, will hail the pronouncement as a happy augury.

That self-governing communities are not to be treated as negligible simply because they are small, that the ruthless domination of one unscrupulous power imperils the future of civilization and the liberties of mankind, are truths of political ethics which the bitter experiences of war are burning into the souls of all freedom-loving peoples. That this great people should have thrown themselves whole-heartedly into this mighty struggle, prepared for all the efforts and sacrifices that may be required to win success for this most righteous cause, is an event at once so happy and so momentous that only the historian of the future will be able, as I believe, to measure its true proportions.

England Rejoices Over American Participation

For the first time in history a foreign flag was hoisted over the Houses of Parliament when the Stars and Stripes were hoisted with the Union Jack on the Victoria Tower at Westminster, April 20. On the same day in St. Paul's Cathedral the American and British colors were entwined and the audience that filled the vast edifice sang "The Battle Hymn of the Republic" and "God Save the King." The sermon was preached by Bishop Brent of the Philippines. The King and Queen and various members of the royal family were present at the service, many cabinet officials, members of Parliament, the mayors and aldermen of the twenty-six boroughs of London, the commissioners of Australia and New Zealand, the American Ambassador and American naval officers.

Both Houses of Parliament past unanimously—with the exception of one independent Irishman—the following resolution:

This House desires to express to the Government and people of the United States of America their profound appreciation of the action of their Government in joining the Allied powers and thus defending the high cause of freedom and rights of humanity against the gravest menace by which they ever have been faced.

Mr. Bonar Law in moving the resolution said:

I read the other day a characteristic extract from a German newspaper in which it was said America was going into the war for nothing. From their point of view the statement is true. America, like the British Empire—I wish to make that plain—is animated by no love of conquest, no greed for territory, no selfish ends. The aims and ideals to which President Wilson has given noble expression in his recent speech are our aims, our ideals also. As we found out earlier, so the American people have now found out that there is no method by which these aims can be secured except by fighting for them.

BUCKING THE LINE

For the first time the Allies are using their superiority in numbers by attacking all along the German line from the sea to Switzerland. On the northern end the Belgians have advanced at Dixmude; at the southern end the French have invaded Alsace. But the chief gain is in the center, where the Germans evacuated the angle near Paris (shaded on the map) and retired to a new line previously fortified. But the Allies are striking at both ends of this line; the British at Lens and the French at Laon, and both together at St. Quentin in the middle

Ex-Premier Asquith in seconding the resolution said:

America sees in this clear issue something of wider import than the vicissitudes of the battlefields, or even of a rearrangements of the map of Europe on the basis of nationality. The whole future of civilized government and intercourse, in particular the fortunes and faith of democracy, has been brought into peril. In such a situation aloofness is seen to be not only a blunder but a crime. To stand aside with stopt ears, with folded arms, with averted gaze, when you have the power to intervene is to become not a mere spectator, but an accomplice.

There was never in the minds of any of us a fear that the moment the issue became apparent and unmistakable the voice of America would not be heard. She has now dedicated herself without hesitation or reserve, heart and soul and strength, to the greatest of causes, to which, stimulated and fortified by her comradeship, we here renew our fealty and devotion.

The Greatest Battle of the World's History

The British and the German reports agree on one point; that the world has never seen so great a battle as that which began on April 6, 1917, and is still raging all along the 125-mile line from Lens to Reims. The German withdrawal from the old positions on the Somme, the Oise and the Aisne, which they began on March 16, was completed in thirty days and they are now established in their new system of entrenchments, commonly called the "Hindenburg line," altho the "Nibelungen line" would be more appropriate since its sections get their names from the medieval classic. The northern stretch, that runs west of Arras, is called the "Wotan line"; the central section, before St. Quentin, the "Siegfried line," and the southern, reaching to the Aisne, the "Albrecht line." The British are fighting the god, the French the gnome and both together the hero.

That the Germans did gain time and save men by withdrawing from their old trenches before they were forced out of them is shown by the fact that the French and British have not yet got their guns in position to make a serious attack upon the new German line. When they came up to the central section of it at St. Quentin and La Fère they called a halt for further preparations. But at the northern and southern ends they struck before the Germans had withdrawn and inflicted terrible losses. More than 33,000 Germans have been taken prisoner and with them more than 330 guns since the attack was launched on April 8. This means that the Germans lost within ten days more troops than the United States had ready for action before the war. The way the Allies have smashed the enemy's line wherever they had made their preparations for attack shows what fate would have befallen the Germans if they had not anticipated it by moving out of their old line.

Haig Versus Hindenburg

The British began their attack on the north end of the German line on the morning of Monday, April 9. The French began their attack on the south end the following Monday morning. The British objective was the town of Lens, which has been for more than a year within three miles of their lines but inaccessible by reason of the encircling hills. From the statements of prisoners it appears that the Germans were planning to evacuate their positions about Lens and Arras on April 19, but ten days before the appointed date the British delivered their blow. The Canadians carried Vimy ridge by storm and from this vantage point they could look down on the mines and manufactories of the Lens region.

The British have not yet attempted to drive the Germans from the city of Lens, but have contented themselves with the capture of Lievin, one of its suburbs. The Germans are evidently preparing to leave, for they are doing whatever they can to destroy its value as an industrial center by burning the shops and coal machinery.

Nivelle Versus Hindenburg

The French attack, delivered a week later than the British, was equally successful and even more injurious to the Germans. Its objective is Laon, the cornerstone of the new German line and one of the strongest military positions in northern France. It was first fortified by the Romans and became the capital of the Carolingian kings. Here Blücher defeated Napoleon in 1814 and in 1914 the Germans took Laon again as they had also in 1870.

The city stands on high ground protected by hills on the west and south. But on the east the land is lower and leveler and it is on this side that the French have planned to approach. The Germans after their retreat from the Marne in the fall of 1914 established themselves on the bluffs along the northern bank of the Aisne and it is from this position that the French are now trying to dislodge them. The French Monday like the British was stormy, but the troops carried the German lines in spite of the snow and sleet. On a twenty-five mile front between Soissons and Reims they took two or three German lines and captured 17,000 prisoners in the first three days. East of Reims also they made advances of a mile or more.

General von Hindenburg rushed reserves to the threatened sector and delivered counter-attacks in massed formation regardless of the slaughter inflicted by the French artillery, but he was not able to regain any of his lost trenches. The only success claimed by the Germans is the capture of 3000 French prisoners. The number of new German troops brought into action on the Aisne is said to be upward of 300,000 and this diversion of his forces to the French front may prevent Hindenburg from carrying out the plan of making a drive at Russia.

Batchelor in New York Evening Journal

THE MASTER STRATEGIST

Austrian Plea for Peace

Karl the Kaiser, kneeling amid the sobbing congregation before the altar of St. Stephen's Cathedral, Vienna, prayed:

> Almighty God, who hast promised us that the patient shall taste abundant peace, Thou knowest what patience we observed toward our enemies until righteous self-defense compelled us to draw the sword. . . . The ruler and people of Austria, kneeling this day before Thy holy throne, promise to build a church dedicated to Our Lady, the Queen of Peace, where a solemn service will be held every year to commemorate peace day and a requiem mass on All Souls' Day for Austria's fallen warriors. O Lord, bless this undertaking and grant us peace in our days.

No one need question the sincerity of his petition tho it remains to be seen whether the newly crowned emperor will or can make it possible for his enemies to bring his desire to pass. His army and navy are under the command of German officers. German garrisons occupy the strategic points of the country. Should he attempt to desert his allies the empire would be liable to be crushed between the upper and nether millstones of Germany on the north and Bulgaria and Turkey on the south.

But Bulgaria at least seems ready to join with Austria in a peace movement. The ministers of the Entente Powers in Switzerland have been approached by Austrian and Bulgarian emissaries desirous of discussing terms of peace. Count Czernin von Chudenitz, whom the Emperor appointed last December as Austro-Hungarian Foreign Minister, made public announcement that the Central Powers were willing at any time to enter a general conference of all the belligerents without the interruption of hostilities. Count Czernin showed himself very reluctant to sever diplomatic relations with this country and the Austro-Hungarian Government has so far abstained from declaring war upon the United States.

Since the revolutionary Government in Russia has renounced all intentions of annexing alien territory the Austrian papers have been permitted to say that Austria also is willing to relinquish her conquests and that there is now no reason why the two countries should continue fighting one another.

Austro-Hungarian Politics

Immediately upon his accession the young Emperor showed his determination to undertake the reform of his realm and the reconciliation of its rival races even in the midst of the war. The new Premier of the Austrian empire, Clam-Martinicz, is a Czech by race, and he set himself to win over the Czechs who at the beginning of the war offered all possible obstruction to the Austrian military movements, even trying to secede and set up an independent Bohemia. Hundreds of the Czechs are said to have been shot in these disorders and many more imprisoned. The declaration of the Entente Allies that the liberation of the Czechs and their kin, the Slovaks, was one of their aims in the war revived the hopes of the Czechs and caused a renewal of the agitation for independence. Premier Clam-Martinicz caused the remission of the death sentence that had been imposed upon the leaders of the nationalist movement for treason and endeavored to conciliate the Czechs by concessions on language and other crucial questions.

How well he has succeeded in gaining the confidence of the Czechs and other minor races whom he has been courting will be seen next month, for Emperor Charles has taken the bold step of convening the Austrian parliament, altho German critics warn him that it will be ruinous to reëstablish parliamentary government in this crisis.

In Hungary a virtual revolution has been accomplished in the overthrow of the veteran statesman, Count Tisza, leader of the pro-German party. On February 22 a very bold speech was made in the Hungarian Chamber by a member of the Opposition, Mr. Hollo, who accused Germany of having brought on the war by her greed for conquest. To this Premier Tisza responded by a defense of Germany but he refused to enter into a discussion of peace terms or to permit the introduction of a bill for electoral reform. The radicals in the Hungarian parliament declared they had no quarrel with the Russian republicans. The stormy scenes resulting from this conflict brought about the suspension of the parliamentary session and the calling of the leader of the Opposition, Count

OUR ALLIES' CALL

The *London Sphere* calls this view of Trafalgar Square "a national service extravaganza," but it points out that the posters "convey an undeniable truth." Their plea to Englishmen ought to find its response here, too

Andrassy, to form a coalition cabinet in the place of Tisza.

Strike in Berlin

In spite of the stringent censorship enough information has transpired to show that very serious strikes took place in various industrial centers and that the Government was obliged to make important concessions. The immediate cause of the movement was the cutting down of the bread allowance by one quarter for soldiers and men at hard labor who have hitherto been allowed larger rations than the rest of the population. The authorities promised to compensate by increasing the allowance of potatoes and meat, but the assurance was not everywhere received as satisfactory. The metal workers proposed to cut down their hours of labor by one-fourth, but were dissuaded from this by the argument that this would not be fair to their comrades in the trenches.

The leaders of the unions and Socialists exerted all their influence to prevent violent demonstrations or a general cessation of work because of the encouragement that would be given to the enemies of Germany. But it appears that the strike in the Berlin districts alone included 125,000 workmen from the machine, electrical and munition plants.

The attitude of the authorities was very different from what it used to be under such circumstances. The strike leaders were received on the first day by the Burgomaster and Food Commissioner, who promptly agreed that representatives of labor should be placed on the boards of food control.

The War on Maritime Commerce

There is no slackening in the activity of the U-boats. On the contrary, the report of the British Admiralty for the week ending April 15 showed the loss of nineteen vessels of more than 1600 tons and nine under that tonnage, as well as twelve fishing vessels, which is somewhat higher than the average of the preceding weeks. Italy for the same week reports the loss of seven ships including two small sailing vessels. How much French or neutral shipping was destroyed is not disclosed. But it is said that Norway has in the course of the war lost 420 ships with an aggregate tonnage of 650,000, which amounts to nearly a third of the Norwegian merchant marine. The Norwegian press complains that the Government does not allow its merchantmen to arm in self-defense yet permits the export of nickel to Germany for the manufacture of torpedoes. Many vessels plying between Norway and England recently have disappeared and it is charged that the Germans are not content with torpedoing the ships but also shell the boats so there may be no survivors to tell the tale.

In spite of the losses the traffic keeps up, as indeed it must unless England is to starve. The arrivals and sailings of merchant vessels of all nationalities at the ports of the United Kingdom amount to over 4700 a week. The imports from England entered at New York for March amounted to $25,500,000, nearly twice the entries for the preceding month. The total imports of New York from all quarters for March, 1917, reached nearly $148,000,000, which is only a little lower than March, 1916. The effectiveness of the British blockade is shown by the fact that goods from Germany for March amounted to only $5447, altho before the war they averaged a million a month.

The U-Boat Menace and Our Duty

It is a serious question how long the shipping of the Allies can stand the losses inflicted by the U-boats. Certainly the rate of destruction exceeds the rate of construction at present. The names and tonnage of the vessels sunk are not made public, but if they average the same as in earlier months the total loss must run to about 600,000 tons a month, which is equal to all of the German ships seized by the American Government. The effect of it is seen already in the shortage of food in England.

What the United States can best do to help is made plain in a message to the American people from Admiral Sir John Jellicoe, First Sea Lord, from which we quote a few paragraphs:

> We have bought large quantities of wheat in Australia, but as the round voyage takes four times as long as that to America the bringing of this wheat takes four times as much tonnage as the carrying of American wheat to the Allied powers. We therefore require all the wheat we can obtain from America and Canada.
>
> Against a submerged attack a host of small craft forms the best protection. We can use everything from destroyers to tugs of any size. The danger of showing a periscope when the submarine may have a bomb dropt on it, or be rammed, is one which our enemy does not like to face. But these craft must be used in the zone where submarines operate, and such a zone is hardly likely to be extended to the American coast.
>
> German submarines cannot operate over there effectively without a base, and I am sure that your magnificent navy will have no trouble in patrolling the Mexican Gulf coast, on which a base might exist, while the entrance of Cuba into the war on the side of the Allies deprives the Germans of the best place they might have obtained for such bases.

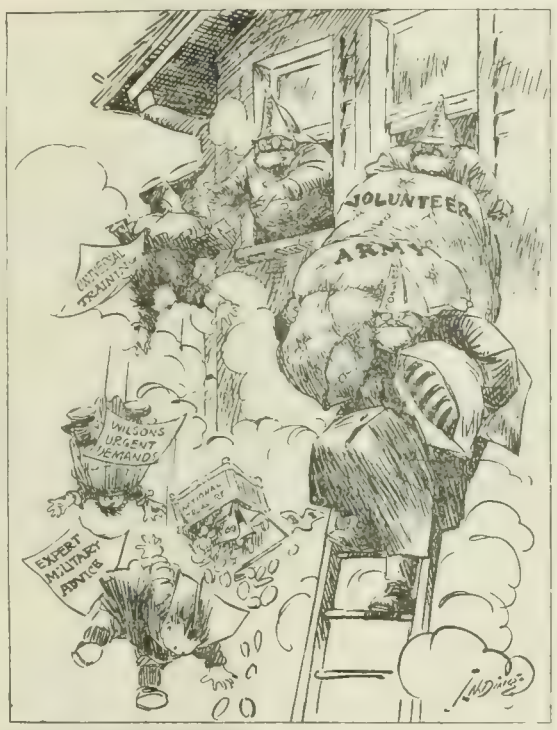
The announcement of our navy department that a German submarine fired a torpedo at the destroyer "Smith" elicited an official denial from Germany which states that "no submarine is yet in the western half of the Atlantic."

German Opinion

It is, for reasons that we discuss editorially on another page, difficult to form any adequate idea of the temper of the German people and their power of resistance. It is obvious that there is widespread disaffection on account of the food shortage and a general desire for peace, but so far the opposition to the Government has not gone farther than a demand for moderate reforms in the elector law. The British correspondents report that the morale of the German troops is broken and that the prisoners now captured are of inferior fighting stock and deeply dispirited. This is quite likely, but since the same reports have come from the front for more than a year it is difficult to put much confidence in them. The retirement in France was accounted for to

the satisfaction of the German people as a strategic movement for the purpose of gaining a stronger position and greater freedom of action. But the heavy losses about Arras and on the Aisne will not be so easily explained away and it remains to be seen how the German people will take their most serious defeat on the French front.

The German Government is the only one of the belligerents which sticks to the custom of making public its casualties. These are not summed up, but the British intelligence office which keeps account of the German casualty lists reports the following totals from the beginning of the war to the end of March, 1917:



GERMAN LOSSES

Killed or died of wounds.....	960,760
Died of sickness	63,920
Prisoners or missing	512,858
Wounded 2,643,428	

But in spite of these losses it is generally admitted that the Germans have put into the field a larger force than they have had before. This has been accomplished by extending the age limit, admitting men previously rejected as incapable and especially by releasing men from factories, farms and public services by the employment of women and prisoners and the forced labor of deported Belgians, French and Poles. According to the military expert of the London *Times* the German army started in the spring campaign 700,000 stronger than it ever had been.

But however confident of their strength and strategy the Germans may be they are now beginning to realize the hopelessness of any ambitious plans of conquest. The desire for peace, if not stronger than before, is at any rate more frequently voiced. The Socialist paper *Vorwärts* puts it most plainly:

> The German Government must tell the people the whole truth, and that is, that one cannot dictate terms to a hostile world.
>
> Matters between the Central Powers and Russia on the basis announced in the Russian program can be settled without a further drop of blood being shed. Neither Germany nor Austria-Hungary wishes to humble Russia nor keep a bit of her territory. In Germany, as in Austria-Hungary, we wish for peace, and the Provisional Government's statement shows that the same feeling in Russia is very great.

CONGRESS IN ACTION

Throwing the children out the window and carrying the feather-bed downstairs

Hunting the Submarine The first encounter in the naval war between the United States and Germany took place on April 17 some sixty miles off Sandy Hook. According to the crew of the destroyer "Smith" a German submarine discharged a torpedo at the destroyer, but missed its target by thirty yards. The periscope of the submarine and the wake of the torpedo were visible from the destroyer in spite of the darkness of early morning when the attack occurred. The Navy Department sent out wireless messages warning vessels nearing the American coast to be on the lookout for the new peril, and destroyers, submarine chasers and other units of the naval coast patrol were sent out to hunt the submarine. The significance of the incident lay in the possibility that Germany has planned a submarine campaign off the Atlantic coast. The voyages of the "Deutschland" and the attacks of the "U-53" on Allied commerce near the New England ports showed the nation several months before the renewal of unrestricted submarine warfare that a trans-Atlantic voyage presented no difficulties to the German submarines. But, however great may be the cruising radius of this type of ship, a base of supplies is essential to any attempt at a prolonged blockade, and if the Germans intend to keep a submarine fleet near the American coast they must have a naval base not far from our ports. Since all attempts to find such a base on the coast of the United States have failed, many are inclined to locate it somewhere on the Gulf of Mexico or in the Caribbean.

The Alien Enemy The President's proclamation announcing what acts will be considered treasonable so long as the United States is at war, based upon the Federal criminal code, extends to alien residents as well as to American citizens. The President points out that aliens resident in the country "owe allegiance to the United States and its laws." Among the actions specified as treasonable are "the acquisition of any property with knowledge that it is to be of assistance to the enemy," and "the publication of statements or information which will give or supply aid and comfort to the enemies of the United States." To be aware of treasonable acts and to refuse to divulge them is counted "misprision of treason" and may be punished by seven years of imprisonment.

In order to handle the problem presented by the enemy alien or the disloyal citizen the administration is seeking wider powers than the existing law will allow. The espionage bill, which drastically restricts the freedom of the press in the matter of communicating

WE'LL RALLY 'ROUND THE FLAG!

An open-air concert is nearly as good an outlet for patriotism as a parade. New Yorkers used this one, led by the Junior Naval and Marine Scouts, as a prelude to "Wake Up, America" day, the 19th of April

military information, is the chief measure under consideration to strengthen the executive in coping with the internal perils of the nation.

The Sinews of War Following the example set by the House of Representatives the Senate passed the $7,000,000,000 war loan without a dissenting vote. Minor amendments made in the Senate delayed the final authorization of the loan, but none of these made any fundamental change in the measure as it left the House. Some of the Senators exprest the opinion that it was a matter of indifference to the United States whether the $3,000,000,000 loan to the Entente Allies would ever be repaid or not; that the money should be regarded as our contribution to the common cause.

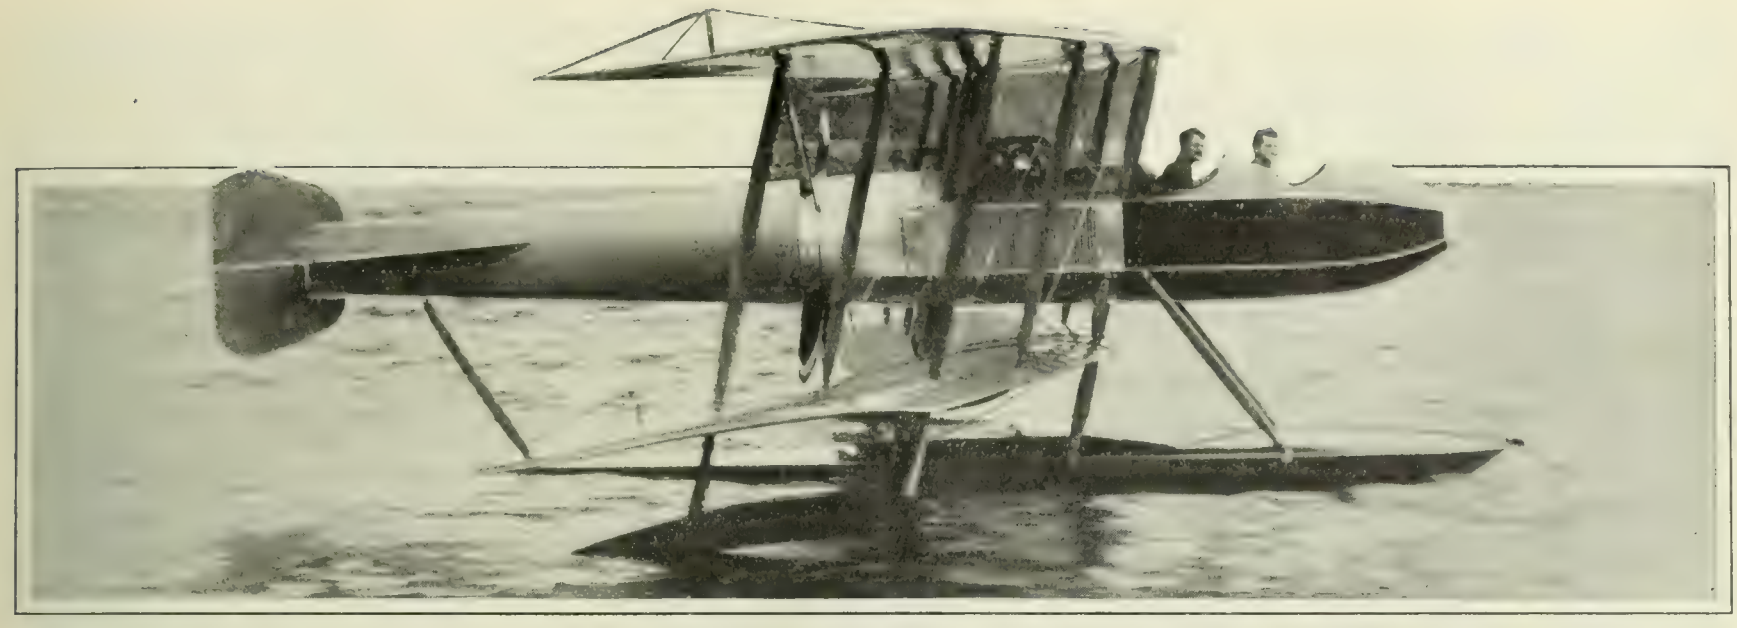
The cost of the war for the first year will be met in part by $2,000,000,000 worth of bonds and in part by over $1,800,000,000 of increased taxation; thus sharing the immediate burden equally between the present generation and the future. Secretary McAdoo of the Treasury submitted suggestions as to avenues of taxation to the committees of the House and of the Senate in charge of the revenue measures. The income tax exemption limit may be lowered to $1500 for unmarried persons and $2000 for the married. Large incomes will be subject to very drastic increases of the supertax. The rate of taxation on excess profits will also be substantially increased. New duties will be imposed upon various classes of imports, altho under the abnormal conditions of trade now prevailing these duties will bring in far less revenue than if imposed during a period of general peace. Excise taxes on liquor, tobacco, mineral water, sugar, and other commodities; assessments on motor vehicles and musical instruments; taxes on passenger and freight fares; stamp taxes on tickets to places of amusement, are among the many proposals which will be considered by Congress.

The Food Problem If the United States fails to cope with the threatened food shortage it will not be from underestimating the seriousness of the situation. President Wilson's call to national service, printed in The Independent of April 21, devoted the greater part of its appeal to the imperative need for maintaining an adequate food supply for our civil population, our army and navy, and our allies. Secretary Lane of the Interior has issued a statement pointing out that we had at least no reason to fear an insufficiency of land for agricultural purposes. Two hundred and forty million acres of unallotted public lands in the western states are still open to settlement, and any citizen of the United States who has not already located a homestead may apply for any number of acres of farming land up to 160 in the restricted sections or 320 in the unreclaimed sections. Grazing land may be had up to 640 acres.

General Roosevelt? The War Department has decided to refuse any individual offer to raise troops for volunteer service in the Great War. The general staff of the army believes that to permit the organization of such volunteer forces would run counter to its policy of universal military service and would take from the country many men of military training and ability who are wanted to strengthen the regular army and the national guard and to train inexperienced recruits. This puts an end to Colonel Roosevelt's plan of recruiting a division and taking it as soon as possible to France.

Governor Whitman of New York is resolved to secure the services of Colonel Roosevelt for the national guard of the state, since he seems to have little prospect of a national commission. Governor Whitman has received many letters from persons eager to serve under the ex-President and he believes that it would be possible to recruit a new division with Roosevelt as its major general. The War Department announces that under existing law the states have the right to organize new units of the national guard.

Preparing for the Allies Conference The Federal authorities have shrouded the details of the coming conference of the Allies in Washington with a thick veil of secrecy in order to prevent any conspiracy against the distinguished delegates from France and Great Britain. Certain facts have, however, been made known to the press. The four commissioners from France will be M. Viviani, former Prime Minister of the Republic, Marshal Joffre, Vice-Admiral Chocheprat and the Marquis de Chambrun. The staff of Marshal Joffre includes a Major Dreyfus, who is undoubtedly the Alfred Dreyfus who played the leading part in the most sensational state trial in recent French history. Captain Tardieu has been chosen the French High Commissioner with authority over all French missions in the United States. Major General Leonard Wood, as ranking officer on the active list of the United States Army, will be the chief military official in the American delegation which has been chosen to welcome the visiting commissioners in the name of the country. It is understood that the French and British commissioners will communicate to the American Government the exact terms of peace which the nations they represent will demand from the Central Powers.



© *Paul Thompson*

PUBLICITY MANAGER OF THE WAR

The new view of censorship, taught to European nations by this war, is embodied in President Wilson's recent creation of a war publicity bureau, with George Creel, experienced newspaper man and press representative, at its head

Wilson Warns Mexico The critical state of our relations with Mexico still affords a striking contrast to the assurances of support received by the United States from nearly every other Latin American republic. When the Mexican Ambassador, Ignacio Bonillas, appeared at the White House, President Wilson received him with consideration but worded his greeting in such a way as to convey a distinct warning to the Mexican Government that no hostile policy could be tolerated. "I shall welcome the day," said the President, "that brings me convincing evidence that a Constitutional Government has been established in Mexico, both willing and able to afford to American citizens and their property the same measure of protection and to apply to them the same impartial administration of justice that is afforded and is applied to nationals or the citizens or subjects of other foreign countries."

Equal Suffrage in Rhode Island On April 17, the Rhode Island House of Representatives concurred with the state senate by a vote of 71 to 20 in approving the extension of presidential suffrage to the women of the state, and on the following day Governor Beeckman signed the bill and made it law. Rhode Island is thus the first state east of Ohio to give women the right to vote in presidential elections. Complete equal suffrage by constitutional provision now exists in the states of Wyoming, Colorado, Utah, Idaho, Washington, California, Oregon, Arizona, Kansas, Montana and Nevada and in the territory of Alaska. Presidential suffrage, which does not require an amendment to the state constitution, has been established by the legislatures of Illinois, North Dakota, Indiana, Ohio, Rhode Island and, so far as the primary election is concerned, Arkansas. Several provinces of Canada have extended the suffrage to women within the last few months.

THE SEAPLANE AS COAST PATROL

OUR FLEET IN THE AIR

BY HENRY WOODHOUSE

"A GERMAN destroyer was sunk and another was damaged severely last night off the Belgian coast by British aeroplanes."

"In the afternoon a British aeroplane destroyed a German submarine off Middlekirk, on the Belgian coast. It was seen to break in half."

"A squadron of naval seaplanes attacked and destroyed the Chikaldir Bridge, seventeen miles east of Adena (Gallipoli)."

The above quotations are taken from scores of items of the same nature in the British official reports. Our files show so many of these reports, in fact, that the news agencies and correspondents in Europe consider them too common to report by cable.

For Great Britain, France and Germany each have over 10,000 aeroplanes, one-third of which are in daily operation, and such events as those reported above and raids in which a number of squadrons of aeroplanes participate are daily occurrences. Just how many of the aeroplanes in use are used exclusively in naval operations cannot be estimated, for the line of demarcation between naval and land operations is entirely lost so far as the air service is concerned.

Naval aeronautics as an applied science is in its infancy, but there are definite indications of the course of developments. In a general way, the development of air fleets will be on the same lines as the development of sea fleets; the maneuvering will be on the same basic principles of strategy and tactics as are followed for sea fleets, excepting that the air fleets have a boundless ocean of air, boundless vertically as well as horizontally. An air fleet can fly over or under the enemy's air fleet, and can make its base in a lake in the midst of mountains or in a shallow bay, where no ship of the sea can go. It can operate on land and across promontories, and fly over mountains. In other words, the base of an air fleet can be established almost anywhere, whereas bases for ships of the sea can be established only in a few favorable places where the water and coastal conditions permit.

As expert on aeronautics for The Independent, Mr. Woodhouse will write from time to time on important phases in the development of our air service for war efficiency. Mr. Woodhouse is one of the governors of the Aero Club of America, and he is the managing editor of "Flying."—THE EDITOR.

Bearing in mind the sharp lines of demarcation where the Navy usually ceases to operate and the Army begins to operate, and vice versa, we must admit that the operations of naval air fleets in the present war are positively revolutionary, because we find hundreds of cases where naval aviators flying land aeroplanes, as well as seaplanes, made raids which took them for several hundreds of miles over the enemy's country.

There have been hundreds of raids of Allied naval aeroplanes overland in the interior of Germany, in the Balkans, Mesopotamia, Asia and Africa. Likewise, there have been numerous raids by the naval aeroplanes of the Central Powers inland on Russian, French and British soil.

There are records of flights by naval aviators over mountains, and dirigibles have been flying over mountains for years. For instance, on September 15, 1916, naval aviators flying land machines bombed bases in the interior in Bulgaria, and on September 17, 1916, a seaplane of the Royal Naval Flying Corps bombed a town in Palestine forty-five miles from the coast, crossing mountains several thousand feet high on its outward journey. The Italian naval aviator, Angelo Guenzi, on January 10, 1917, flew a hydroaeroplane from the naval base at Gesto Calendre to a hight of 18,000 feet, which is higher than some of the highest mountains. Zeppelins are also capable of reaching hights close to 20,000 feet.

The official reports give many instances where army and navy aero squadrons have coöperated in bombing expeditions. Likewise, there are numerous instances of attacks on ships at sea by army aeroplanes.

Perhaps most revolutionary of all was the appointing of Sir Percy Scott, a naval man, to take charge of the anti-aircraft defenses of London.

All demarcations have been wiped out, and as a matter of fact, both Great Britain and France have now put their air services under a Minister of the Air, who supervises, in a general way, both the army and naval branches of the air service. The supervision deals essentially with getting the equipment and the personnel, and carrying out the broad policy of the Defense Councils. The details of operation are, of course, left to the army and navy authorities. The German air services have always coöperated very closely. A step toward very close coöperation between the U. S. Army and Navy was taken in the early part of March, 1917, when the Joint Board of Aeronautics decided to establish joint training stations.

THE functions of vessels of war were defined by Sir Percy Scott some time ago as follows:

Defensive:

1. To attack ships that come to bombard our ports.
2. To attack ships that come to blockade us.
3. To attack ships carrying a landing party.
4. To attack the enemy's fleet.
5. To attack ships interfering with our commerce.

Offensive:

1. To bombard an enemy's port.
2. To blockade the enemy.
3. To convoy a landing party.
4. To attack the enemy's fleet.
5. To attack the enemy's commerce.

The official reports of the employment of seaplanes in the Great War show that air fleets have been used to perform every one of the aforesaid functions—and more. Hundreds of aerial attacks on ships and submarines have taken place. Besides attacking ships, convoying ships and landing par-

ties, protecting commerce, bombarding the enemy's ports, and attacking the enemy's commerce, the naval air fleets of the warring nations have done many other things, including attacking munition factories far inland and strategical places. In other words, the naval air services have widely extended the functions of navies.

Naval aero squadrons equipt with guns have also flown inland and attacked bodies of troops with their guns and bombed railroads far inland.

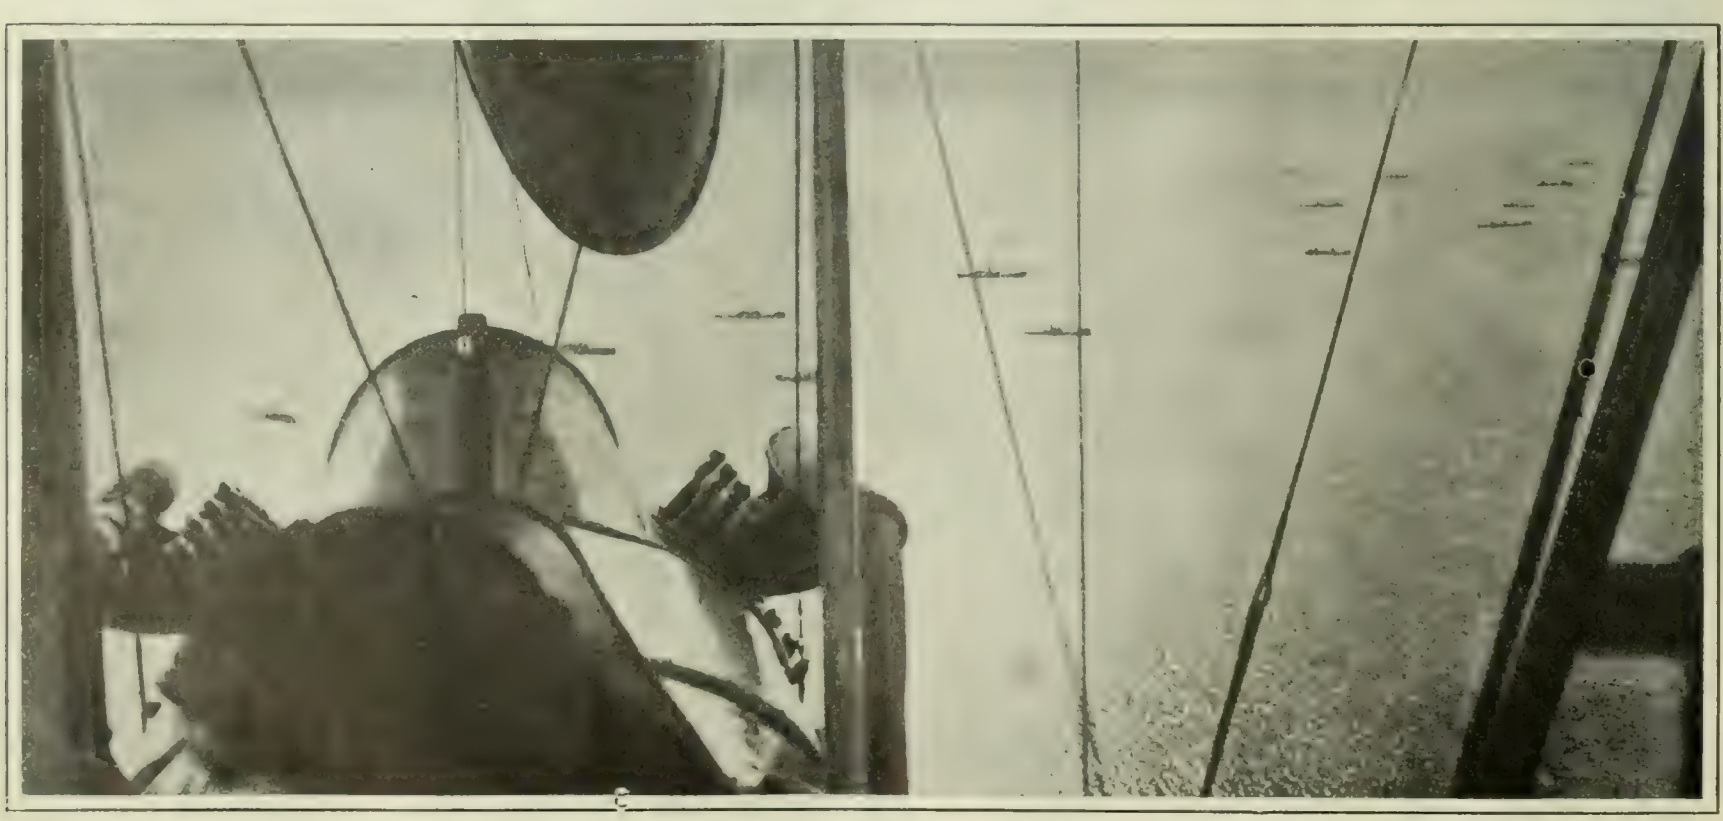
Scouting may be taken as the equivalent of the work of the cruisers; torpedo launching and bomp dropping, as the equivalent of the work of the destroyers; and the combined damage done by the dropping of several tons of explosives carried by aero squadrons may be taken as the equivalent of the work done by a battleship.

Rear Admiral Bradley A. Fiske, U. S. Navy, has pointed out that 100 battleplanes carrying three-inch guns would have a defensive power equivalent to 60,000 rifles. They would have this additional advantage that, whereas 60,000 infantrymen would be hard to transport to any one place, the battleplanes could easily cover a line of 300 miles; could be mobilized quickly, for instance, at any one point between New York and the Chesapeake to prevent the landing of an invading force. Admiral Fiske very aptly points out that this extreme mobility of power is unknown in any other arm of our defenses. And it would take a tremendous length of time to equip and train 60,000 infantrymen, whereas it would take a comparatively short time to get ready 100 battleplanes with the trained aviators and equipment necessary.

Aeroplanes nowadays are increasing in size and power, and aeronautic engineers consider it quite practicable to build aeroplanes that will carry between thirty and fifty tons. This may sound extreme at the date of writing, but it does not sound half as extreme as it sounded in 1908 to say that some day an aeroplane would go up to a hight of 7000 feet with twenty-one passengers, which is exactly what was done in England in July, 1916.

We can look forward to amazing and speedy progress in the construction and application of aircraft. Half a dozen of the nations have between 2000 and 12,000 aviators each, and they have been trained since the beginning of the Great War. Canada did not have any aviators at the beginning of the war, but she has sent 600 aviators to England in twenty months.

The Great War was only a few months old when the first aerial operation in coöperation with the fleet was carried out. That was the raid on Cuxhaven, accomplished by a British naval aero squadron supported by British cruisers. The Germans fought in defense with Zeppelins, seaplanes and cruisers. The aircraft were the dominant element in this engagement.



THERE are numerous services which aircraft can render as auxiliaries of the navy. Dirigibles and aeroplanes, as auxiliaries of navies, have rendered the following services:

They have attacked ships and submarines at sea with bombs, torpedoes and guns; bombed the enemy's bases and stations; attacked the enemy's aircraft in the air; served as the eyes and scouts of fleets at sea; protected ships at sea and in ports against attacks from hostile submarines and battleships; defended naval bases and stations from naval and aerial attacks; convoyed troopships and merchant ships on coastwise trips; patrolled the coasts, holding up and inspecting doubtful ships and convoying them to examining stations, and searching the coasts for submarine bases; prevented hostile aircraft from locating the position and finding the composition and disposition of the fleet, getting the range of ships, naval bases, stations, magazines, and so forth; located and assisted trawlers, destroyers and gunners in capturing or destroying hostile submarines; coöperated with submarines, guiding them in attacks on ships; located mine fields and assisted trawlers in destroying mines; directed the planting of mines, minimizing the time required for mine planting; served as "spotters" in locating the position of hostile ships and directing gunfire; carried important messages which could not be entrusted to wireless owing to the possibility of the enemy wireless picking up the messages, such as communicating to incoming ships information regarding the location of mines, submarines, and courses; carried out operations over land and sea intended to divert the attention of the enemy while strategical operations were being carried out by the fleet or squadrons; made it possible for commanders to get films of theaters of operation, photographs of the location, composition and disposition of hostile naval forces, and photographic records of conditions and of the movements and operations of their own, as well as of the hostile naval forces.

In the United States we are just beginning to realize the importance of aeronautics, and we are just taking steps to organize our air service. The entire country is coöperating with the Army and Navy in developing the air service. About 6000 applications have been received from young men who want to join the air service, mostly college men, several hundred of whom are now learning to fly at their own expense, so as to be ready for an emergency. Several prominent men, like Rodman Wanamaker, H. P. Davison and Harry Frank Guggenheim, have offered, thru the Aero Club of America, the use of their air cruisers and seaplanes for aerial coast patrol.

With such popular interest we may expect this country—the country of Langley, the Wrights, Curtiss, and other pioneers in aircraft—to take giant steps in the development of our much needed air service.

New York City

AN AIR SCOUT'S STRATEGIC VIEW OF BATTLESHIP MANEUVERS

THE CORNELL BOYS WHO SAILED LAST WEEK FOR THE AMBULANCE CORPS IN FRANCE

FOR FRANCE!

BY THEODORE STANTON

Independent readers need no introduction to Mr. Stanton: during the fifteen or more years that he was Paris correspondent of The Independent he wrote frequently on European affairs of particular interest in this country. Mr. Stanton has also been European agent of the "North American Review," and Paris agent of the New York Associated Press, and he was at one time Berlin correspondent of the New York "Tribune." At present he is in the United States, but in close touch with affairs and opinions in France, and he therefore bases on considerable knowledge his advice as to what America can do for France.—THE EDITOR.

WHAT can we do best and quickest, in the present crisis, for France and our other Allies? I shall deal only with what we can do in a military way, and I shall still further limit myself by stating what we can do immediately and not a year hence, when the war will probably be over.

In this juncture, we are continually mixing up two very different military questions. We do not distinguish clearly between the organization of a home army and the sending of an expeditionary force to France; and yet the two problems are much more distinct than most people seem to imagine. One—the expeditionary force—in order to be a success and attain its real purpose requires immediate action; the other—the creation of a home army—is sure to drag on for months to come before it even gets started.

I am therefore much more interested in the first of these matters, for when the German mad dog is once run to earth, then we can let a proverbially pow-wowing Congress and a still sleeping public opinion waste time before arming this rich but defenseless country.

But at present we are much like a landlord placidly examining architect's plans for the improvement of his burning hotel when he ought to be telephoning for the fire-engine. And yet, in our case, we have the fire-engine, with steam up, all ready for action—it is even in action—lacking only the captain and a fireman or two, while we go on calmly studying plans.

Everybody in these United States should know, but I am surprized to find that so many do not, that the French, British and Canadian armies at the western front all contain Americans. Tho the number of our countrymen in the first two armies may be comparatively small, it is very large in the last named, the estimate running from 7500, who have declared officially their American citizenship, up to a figure sufficiently large to make a fair-sized division.

But the exact total of American infantrymen in France and Flanders is immaterial, it is at least great enough to form the nucleus of a division of seasoned veterans right on the firing line who are accompanied in some instances by young American volunteer officers, often from our best families—John Bigelow's grandson is one of these—who have also had months of experience on the battlefield. In a word, we have at this very moment in Europe a body of infantry unsurpast by that of any of the Allies.

Nor is our armed force actually in Europe limited to this body of infantry. We have with the French an excellent flying corps which is also the equal of any of the airmen in the ranks of the Allies. This fact has already been officially recognized by the Paris War Office.

Several months ago the French Government gave this group a separate organization of its own and has repeatedly honored it with military distinctions of every sort; and it is universally admitted in France that our young aviators have in every respect been worthy of these honors.

So here we have at this very hour on the western front an infantry division and a flying corps—a very necessary adjunct in the present war—both thoroly trained and fighting every day, who count in their midst many men who have been mentioned in dispatches, who have received the various military medals of both France and England, and who have buried some of their fallen comrades in foreign graves.

Military interpreters act an important part in this war where so many races are brought together on the same front. The last time I made inquiries on the subject, I learned that there were many hundreds of them in the Franco-British and in the Belgian-British armies.

A goodly number of our American young men who have resided in Europe and are expert in the modern tongues have been with our Allies, as interpreters, since the very beginning of the hostilities. They could be immediately detailed to our expeditionary force, where the best of them could be promoted to that important branch of the service—another peculiar development of the present war—known as *officier de liaison*, a class of élite officers who speak the languages and carry orders at the points where the armies of different nationalities meet. Here again we have at the front another element of our future expeditionary force waiting merely for the coming of the force.

THERE is still more to my catalog of what this flower of our American youth, who saw what was coming and gallantly acted while the rest of the nation slept—some are still slumbering—have done on the western front. Furthermore, we have there and have had there for some two years, two well-equipt thoroly experienced ambulance corps, almost wholly composed of fine-spirited college boys and college alumni

of the more recent classes. Last week's Bordeaux steamer, for instance, took out a score of Cornell students whom I helped to select, and a finer lot of lads it would be hard to find. These ambulance drivers have also many times received deserved honors at the hands of the foreign military authorities. They have not hesitated to face death and have in some cases fallen before it like the other youth of Europe and the British colonies. Tho scattered all along the western front, they could in twenty-four hours join our splendid infantry and flying corps contingents and thus still further perfect our expeditionary force, which, my readers will begin to see, is practically in Europe already.

But the presence of ambulances presupposes hospitals. We have them, too, and they are also of the first class. Between Paris and the firing line we have several of the best installed military hospitals which have been seen in this or any other war, hospitals managed by American business men and executive American women, with able American surgeons, physicians and trained nurses presiding over the wards. They, too—managers, doctors and nurses—have had over two years' experience in caring for the sick and wounded of all the belligerents and for scores of American young men in foreign uniforms.

It should be noted that all this—the sending of the soldiers, ambulance drivers, doctors and nurses—has been done by private initiative and often by individual initiative. We owe this fine military part which America, in spite of America, has been playing in Europe, and for which Europe has thanked us repeatedly, not to our Government, not to the Washington War Department, not even to the American Red Cross, we owe it to a clear-headed and far-seeing minority among us, who saw and felt the danger the moment Belgium was invaded. We have here one of the finest examples of true civism that has been seen in this nation since the Civil War and the popular uprising against the oppression of Cuba. And now the constituted federal authorities are given the opportunity to help on and complete the work so nobly begun by our unofficial citizens.

What do our fine boys in Europe lack that their splendid vanguard may become the main army? Our red-tape military bureaucrats at Washington who want everything "just so" before they will move, will point out that our little army in Europe is wanting in artillery and cavalry, or something else, tho even here it is known that some of our energetic young Americans are in the foreign artillery and cavalry, a fact which has its practical side for future expeditionary force. But the real essential need is a commander-in-chief and perhaps a little body of subordinate officers. But we have on this side of the ocean plenty of officers all ready to go, who could be supplemented, if necessary, by our military attachés at our European embassies and legations. The general and these subordinates could reach Bordeaux in ten days and there is no good reason why we could not have a superb division on the western front—in fact, it is already there—within a month.

In this connection, this fact should be brought before the American public—unless we act and act promptly, we will wake some fine morning and learn that these energetic boys of ours over there, disgusted as in the past by the mollycoddleism of the American people and the do-nothingness of the American Congress, will take the matter into their own hands, organize their division under foreign officers and be financed, where necessary, by the Allies. There is nothing chimerical about this. The American flying corps has for months been commanded by a French officer, and the latest cablegrams tell us its members are now wearing American uniforms. This same cable informs us that a Texan youth, who, let it be remembered, is fed and clothed by Canada, went to the attack the other day with a small American flag attached to his bayonet and fell wounded, an American at heart, but a Britisher as regards uniform. When Italy entered the war, her two volunteer regiments in the French army immediately took off their French uniforms, donned that of their native land and hastened to the Italian front. Are we going to continue to leave our soldiers in the service of foreigners? If we do, we are bringing them down to the level of the Hessians of the American Revolution and the Swiss Guards of the French Revolution.

I believe that the quickest way to accomplish the purpose which every American has at heart, if he is worth being an American, is to send forthwith to France Theodore Roosevelt, or some regular army general, along with a little body of officers, as explained above. My suggestion, if carried out as regards Roosevelt, would not conflict with his raising a division here. That could be done by his subordinates. His recruits would assemble all the more readily and drill with all the more earnestness if they knew that their popular chief was on the firing line awaiting their coming.

This question of sending Roosevelt to Europe is being judged here exclusively from the American standpoint, instead of from the European standpoint, or rather from the French standpoint. Anybody in touch with French public opinion knows that no American would create in France the enthusiasm that Roosevelt would, and his speaking French with remarkable ease, if not with perfect correctness, is a very important consideration under the circumstances, which would not tend to decrease this enthusiasm. And enthusiasm is as much needed in France at the present moment as soldiers, food or money. Tho the French heart remains as brave as ever, there is a sadness spread over the country which all family letters reveal. And how could it be otherwise where are already deaths in every family and more to come, where fathers, husbands and brothers are languishing in foreign prison camps, where in the "invaded regions" whole families are broken up perhaps never to come together again, where homes and farms are being ruthlessly destroyed by relentless retiring invaders? These sorely stricken people want sympathy and cheer, and the presence there of Americans in American uniforms, and an ex-President of the United States leading them—the French are very *protocolaire* even in their misery—such a tangible, visible participation in the weal and wo of France will in itself be a victory for the Allies.

Nor would such an organized American body at the front be beneficial to France and the Allies alone. I can conceive of nothing that would so spur on to action the loquacious and chicken hearted congressmen, nothing that would so speed up enlistments, nothing that would so loosen the purse-strings for the coming gigantic loan, nothing, in a word, that would so help on the substitution in this nation of virility for emasculation as the reports our newspaper correspondents at the front would cable to our metropolitan journals about the every act of the valiant regiments of Americans taking their share in the dangers of the firing line along with all the soldiers of liberal Europe.

LIEBKNECHT OR HOHENZOLLERN?

By Percy MacKaye

Liebknecht or Hohenzollern: which shall wear
The conqueror's laurel?—Flouted, and confined
By prison bars, one sends his fearless mind
Forth with the sons of freedom everywhere
To fight for Man: the other, by the glare
Of his own earthly glory stricken blind,
Gropes to usurp the seat of God, behind
Whose shadow waits the angel of despair.

Liebknecht or Hohenzollern?—Nay, not long
The answer shall delay—not long, before
The Prussian czar shall with the Russian lie,
And, resurrected from the tombs of wrong,
Shall rise a new-born people, mid the roar:
"Liebknecht! Long live Liebknecht and Liberty!"

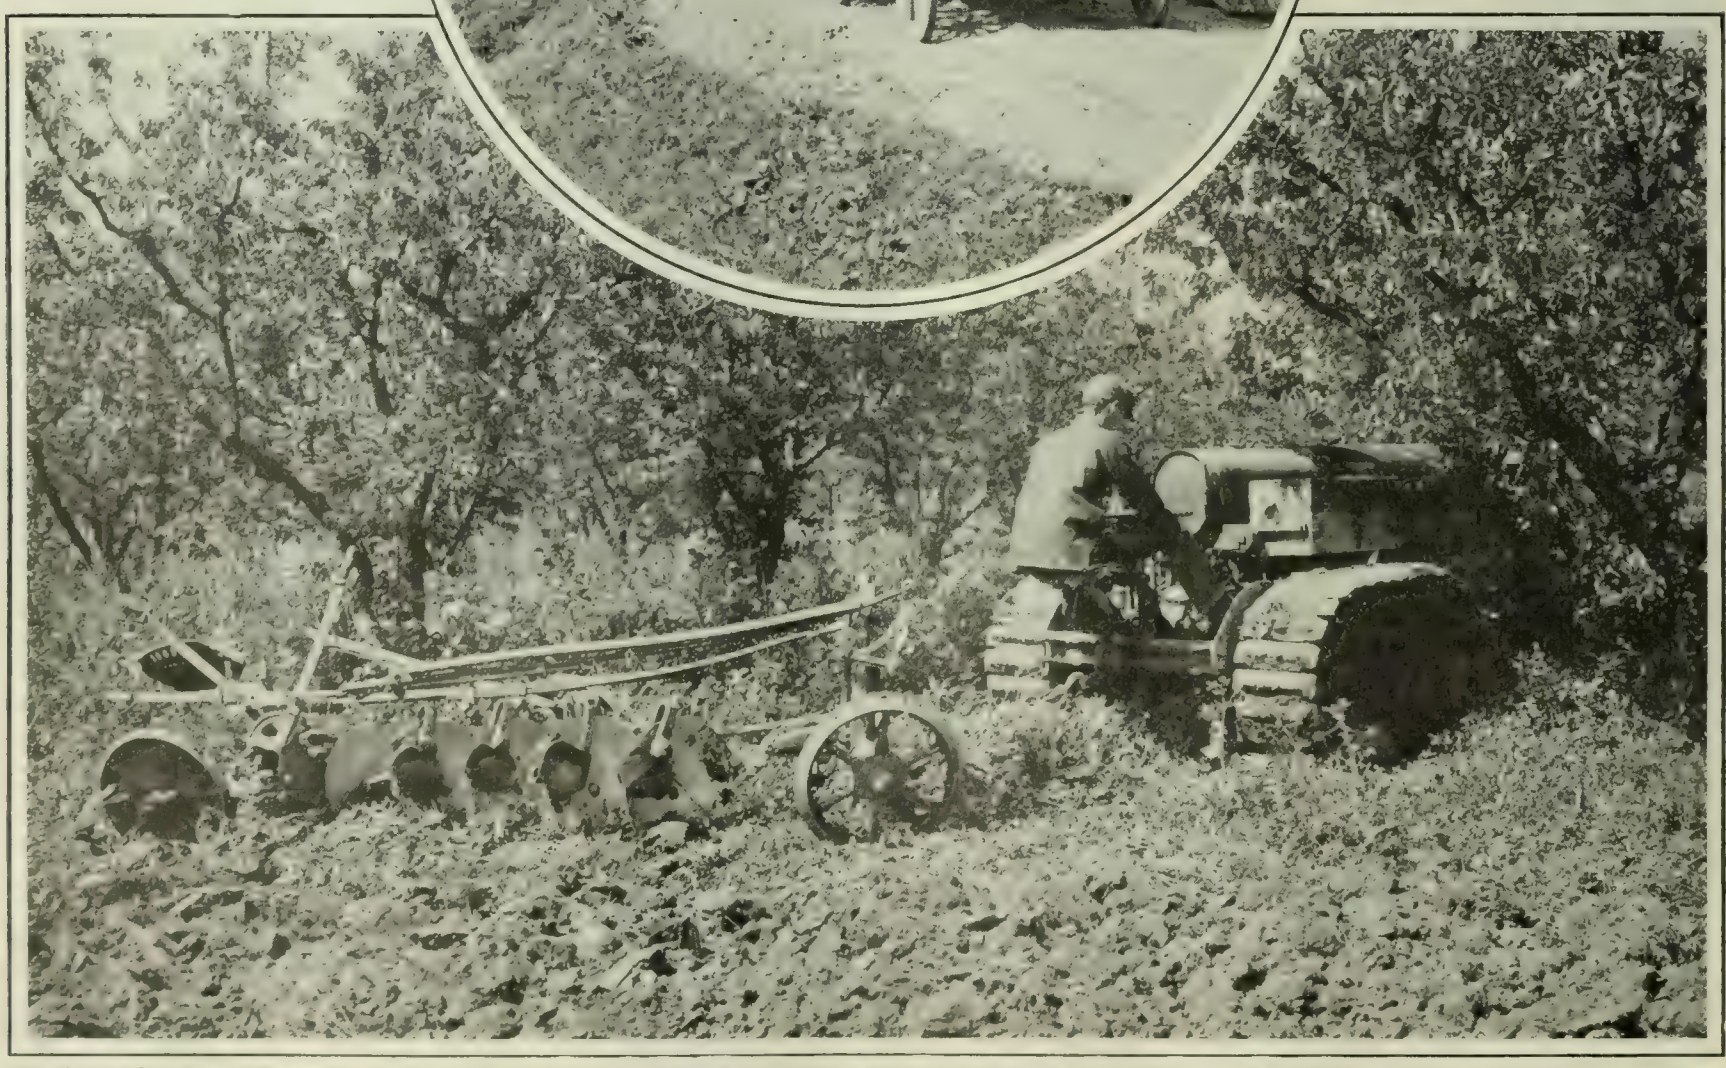
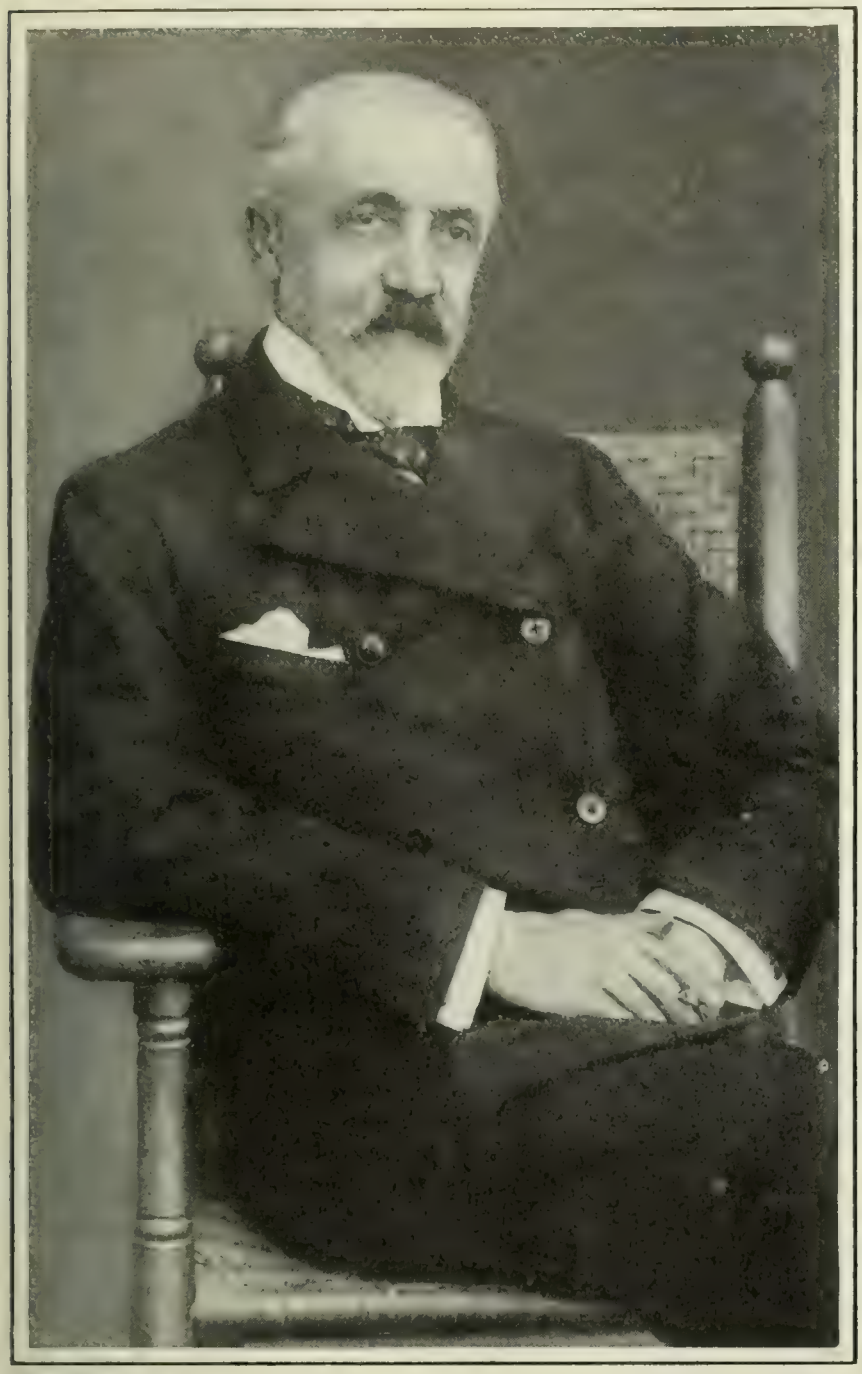
There are Americans fighting under the flags of the Allies; and soon there may be Allies fighting under the Stars and Stripes. This crowd in New York's "Little Italy" is greeting the Italian regiment just raised to join the United States Army



Photographs from Arthur L. Dahl



The battlefields in this country are showing the scars of our own spring drive. The tractor, prototype of the army "tank," leads the way in the great agricultural advance

For once we may emphasize all the harrowing details, abundant in the photographs above and below, which show two stages of American preparedness for war efficiency in crops

In fact the farm horse's days are numbered, for the tractor is the man-of-all-work on American farms nowadays. It can plow, harrow, seed and cultivate, do all the heavy hauling, and even entertain the summer boarders by a hay ride

Herbert C. Hoover is to leave Relief Work in Belgium, to mobilize our food contribution to the fighting strength of the Allies

WHAT CAN I DO?

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

WAR power has become the measure of man power.

The supreme efficiency test is no longer personal. It is national, international, universal.

"How can I defend home and honor and loved ones, how can I serve my country best, how can I do most to help end the war?" This heart-searching, mind-gripping, soul-rousing question has become the greatest in the life and purpose of every true American. How shall we answer it?

Not by waving flags, burning red-fire, talking patriotism, cheering martial music; but by putting into national operation, as world patriots, the efficiency methods we have learned as individuals.

For two years Independent readers have been studying with us how to do more, think more, save more, have more, be more, for themselves. This training, promptly and fully applied to national war problems, will make this body of readers a great civilian army, three hundred thousand strong, every member a soldier and an engineer—a moral soldier, a mental engineer!

The deciding power of the war will not be military force. It will be the unity, loyalty, practicality, frugality, morality, productivity of the people at home. We should all enlist! We should be able to say of our country "Every citizen is a soldier!" We should be at least as ready to *live* our patriotism as the boys at the front are ready to die for theirs. We should want marching orders, military discipline, for everyday life.

We should understand that every one of us, man, woman or child, has a personal duty and responsibility of American defense and universal brotherhood as morally binding as the law that says traitors must be shot. Everybody is a slacker who does not render now a personal patriotic service. The new patriotism calls for intense, practical thought, and methodical, individual action.

What are we *doing*, systematically and effectively, as loyal Americans?

Efficiency plans for immediate action are as follows. Consider them all, adopt or improve on as many as you can, request more details if they are needed.

GET THE FACTS

1. Get the facts about national defense. Learn what is wanted most, where and how you can help. Secure a list of recent publications from The Independent, club with friends and buy several, inform yourself at once on the greatest national crisis and epoch in the history of America.

ENLIST

2. Join a patriotic organization. This should be, preferably, a national body with a local branch. Before joining any, find what the leading organizations are doing, and which appeals to you most. A few of the greatest are: National Council of Defense, National Security League, American Red Cross, Militia of Mercy, National League for Woman's Service, National Committee of Patriotic and Defense Societies (a clearing house for twenty-eight organizations, approved by Secretary of War Baker). Apply to National Institute of Efficiency, Union Trust Building, Washington, D. C., for list of these various war bodies created for civilian use.

Kirby in New York World

COME ON, BOYS; I NEED YOU!

READ

3. Agitate the question of a War Efficiency Library for your community. Everybody you know, from eight to eighty years of age, ought to read up on the matter. How can they, if they haven't the books? Why not start a popular subscription, headed by some of your most influential citizens? For $100 you could buy a splendid assortment of patriotic books—for $50 you could make a fine beginning. Ask The Independent how to carry forward this plan.

Harding in Brooklyn Daily Eagle

TAKE ONE!

MOBILIZE THE NEWS

4. Conduct a war efficiency file or scrapbook. Watch metropolitan dailies and national weeklies for accounts of new ways to render civilian service. Keep clippings, try out ideas available.

GARDEN

5. Plant a home garden—and resolve to make it permanent. You will not only reduce living costs and increase health for your family, you will directly support the boys at the front by adding to the national food supply. Valuable sources of information: National Emergency Food Garden Commission, Washington, D. C.; Agricultural Extension Department of your State University; the Countryside War Garden Bureau, 119 West Fortieth street, New York.

SERVE THRU YOUR JOB

6. Turn your vocation to account. No matter what your occupation is, you can make it serve the country; either individually, or collectively thru professional or industrial organizations to which you belong, or should belong. Examples of business patriotism: The National Agricultural Society has undertaken to mobilize the nation's farm resources, by improved method and increased production; the National University Extension Association has outlined plans for technical preparedness training; the Associated Advertising Clubs of America have created a National Advertising Board, to help the Government secure funds and recruits by publicity methods equal to the famous ones of Kitchener; the American Federation of Labor has called volunteers to the work of building 1000 ships in a year with a total capacity of 3,000,000 tons—or more than all the shipyards of the world are now building! Even dentists are offering to repair, without charge, teeth of applicants for the army. What can you do, in your profession, to make your industrial service count as much as military service would?

SAVE

7. Tithe your income, put the amount away every week. This war is a crusade. There will be destitution and suffering, there may be famine or scourge; and in your community or circle of friends there will surely be cases of war need, war heroism, that a very little money at the right time would relieve with a practical ministration of divine sympathy. Dedicate a war fund, keep it in the bank.

ECONOMIZE

8. Make a study, and practise, of close personal economy. Eat less. Americans with a fair income eat 30 per cent more than is good for them; start now to emulate the English people, who are now living on about half their former rations—and not starving, either.

Satterfield in Harrisburg Patriot

HOW MUCH, UNCLE?

Forget the "latest styles," be ashamed to want to look stylish at the expense of being useful. Spend your money instead on appliances that save money at home and in business. Mrs. Wilson, First Lady of the Land; Mrs. Marshall; the wives of members of the Cabinet; the officials of the General Federation of Women's Clubs, representing 250,000 members; all have agreed to reduce their scale of living, to buy simple food and inexpensive clothing, to watch and prevent household and personal waste, and to devote money and time thus saved to preparedness and relief work. To follow such a noble resolution will soon be as fashionable as it always has been sensible.

BE READY

9. Be ready for local defense. Why, where, when, how, would the enemy menace your home, community or place of business. Don't wax hysterical, but keep your eyes open, wherever you live, or work, or travel. Report immediately to authorities of justice any person who talks or acts suspiciously. Watch unknown characters in the vicinity of public buildings or utilities. Organize local vigilance committes, under expert supervision.

BE FAIR

10. But be courteous and fair to all Germans and German-American citizens. Believe them loyal till proven otherwise. Much that looks like patriotism is merely prejudice. For example, a crowd of impulsive American schoolboys lately refused to sing German songs in the German classes, and went on riot and strike till the weak-kneed principal cut out the good old German songs. A mob of street-corner gossips muttered a vague suspicion that a German storekeeper had insulted the flag, the rumor went running like fire, the police had to be called to protect the innocent German from his patriotic (?) neighbors, and it took the poor fellow a long time to regain the custom he lost thru so mean a lie told about him. A family of German children, loyal and true, were made miserable by the taunts and insults of their companions. We should fight prejudice as keenly as we fight Prussia. A good plan would be to employ German artizans and trade with German dealers known to be anti-Kaiser, to a special degree while the war lasts; we ought to help restore to them the custom they are sure to lose by reason of the unreason of hot-headed German-haters.

THINK TWICE

11. Recognize and mobilize your personal resources. What are they? Time, thought, emotion, action, possessions. How much time do you waste every day? Redeem half of it—a dozen patriotic organizations could use it, and the habit of saving it should be worth

Ding in New York Tribune

UNIVERSAL TRAINING FOR THESE

Satterfield in Harrisburg Patriot

READY!

much to you when the war is over. Think why the war came here, and how you were responsible. (Oh, yes—we have all been somehow responsible.) Omit foolish talk; don't argue, boast, jest or complain about the war. Actualize your sympathies, turn them into energies. Offer quickly anything you can spare—whether a vacant lot for gardening, a pile of old clothes, or a bundle of old newspapers. All can be utilized. Personal thoughtfulness and promptness from 100,000,000 citizens will double the nation's resources.

SACRIFICE

12. Put the main issue first, keep it clearly first. *How much are we going to sacrifice?* That is the main issue. Our mills and factories and fields, our guns and ships and railroads, even our military forces and billion-dollar levies, are but the empty shell of our defense. The life in our defense is the spirit in us. A real personal sacrifice from every American old enough and strong enough to make it—here is the clue to the end of the war. The Kaiser will be conquered by armed and trained unselfishness, and by nothing else. If we have sons or brothers to yield up, we must do it loyally, and smile them a brave good-by. If we are compelled to go hungry, we must be glad of the chance to serve by starving. If we should be wounded, in heart or body, we must remember that the spirit grows immortal and invincible thru suffering. The dead and dying millions call to us to be a nation of moral soldiers, mental commanders, spiritual victors. We don't need a musket, to answer the call. We need but the will to serve and to sacrifice, just where we are.

Your War Service Problem

We are at war. The United States wants men and women to work. What are you going to do? What part are you going to take? What place are you going to fill in the President's "Service Army"? How are you going to apply your special accomplishments most efficiently where they will count most? How are you going to fit in?

The Independent has asked me to turn my Efficiency Question Box into a War Service Question Box, and I welcome the opportunity to render what service I can in the form of counsel and guidance. I shall be pleased to answer personally either by mail or thru the columns of The Independent any questions that you may ask to help you make yourself more useful in the Nation's crisis. The Independent offers this service without expense to you. We request that you make your inquiries clear, definite and specific. Mail them to War Efficiency Question Box, The Independent, 119 West Fortieth Street, New York.

EDWARD EARLE PURINTON.

THE WASTE OF OVERWORK

BY PAULINE GOLDMARK

RESEARCH SECRETARY OF THE NATIONAL CONSUMERS' LEAGUE

MODERN warfare does not stake all upon the fighting lines. Now as never before the whole country plays its part in mobilization. We have learned that the army in the field cannot exist a day without the support of the industrial forces. This is now a commonplace of military science. Yet in the first shock of the world war England forgot that the workers at home are strategically the sustaining line of her defense. She has paid high for this neglect.

The withdrawal of hundreds of thousands of men from industry caused a shortage of labor that could only be remedied by the sudden conversion of women and young girls by thousands into factory hands. The unprecedented demands for immediate supplies of munitions, uniforms, shoes, surgical supplies, blankets, suits and equipment of all kinds would at any time have taxed production to the breaking point. In this crisis national disaster would have followed, if drastic measures had not been applied. Production had to be increased at any cost. The labor laws were abrogated by special emergency orders and pressure was put on every establishment making war supplies to yield its maximum output. The fervor of patriotism sustained the workers thru the first months of this crucial period, but the effects soon became evident. Human effort cannot be screwed to the sticking point indefinitely. With failing energy, the loss of production became so serious that official inquiry was demanded. England with her back to the wall, making the fight of her life for sheer existence, could not allow herself any humanitarian restraints. The wage earners' welfare was considered only on brutal grounds of economic necessity.

THREE official inquiries were instituted—by the Home Office, the British Association and the War Office, the latter by the Committee on the Health of Munition Workers under the chairmanship of Sir George Newman. All brought the nation's best resources of science and business experience to the study of the national dilemma. Their findings showed the rapid increase of sickness and days absent for men and women alike under the strain of Sunday work, overtime and night work. A rising sickness rate is significant as a symptom of overfatigue, for a tired worker grows "stale" and succumbs more easily to minor illnesses. The Newman committee cites a typical munition works employing some 14,000 persons when the war first broke out. By March, 1915, the number was upward of 36,000 and the percentage of sickness increased from 2.9 to 4 per cent. In two departments the rate "among men on overtime was 5.5 as against 3.7 among these on double shift." Moreover, among 1000 men in one of these departments the rate reached 8 per cent and is explained as due to "the greater age of the workers, a fifteen-hour day, frequent Sunday work and the special strain of the work."

Almost as if in a laboratory experiment, England put her experts to discover how the country's man power could be used to its best advantage. These trained investigators measured output scientifically. They measured the "progressive diminution of the power of the workers to resist fatigue and to recover from it"—fatigue produced by continuous overtime and lack of a weekly day of rest. One of the observers, Prof. Stanley Kent, explains that man has a certain fund of energy to expend day by day and can expend no more. "The men will work twelve hours a day," he says, "instead of ten, but the closeness of their application will be less thruout the entire period." The loss of time in a group of employees, Professor Kent discovered by close observation, varied from 18 to 27 per cent. This is the so-called "slacking" during a long shift—often unconscious on the part of the operative—which upsets anew the old theory that output increases proportionately with increased hours. Moreover, the quality of the output is adversely affected during the whole period of work.

Another expert, Dr. H. M. Vernon described the beneficial effect of shorter hours. Women operatives engaged in moderately heavy labor increased their output 8 per cent when their hours were reduced from sixty-eight to fifty-nine a week. On further observation he suggests that "an equally good total output could be maintained if the actual working hours were reduced to fifty-six or less per week."

Regarding Sunday labor, the Newman committee insists that it is a costly experiment. The country cannot afford, it says, "the extravagance of urging armies of workmen toward relative incapacity and neglect of physiological law." One foreman said he did not believe in "a holiday on double pay." Another remarked that Sunday work gave "six days' output for seven days' work on eight days' pay."

"Taking the country as a whole," Sir George Newman summarizes his findings, in 1916, "the munition workers in general have been allowed to reach a state of reduced efficiency and lowered health which might have been avoided *without reduction of output* by attention to the details of daily and weekly rests."

The uselessness of long hours when continued for any protracted period has never been proved more convincingly than by England's experience. She is retrieving her errors in part at least: the weekly day of rest is being generally restored, and overtime has been materially curtailed. In the Crown owned factories women now have an eight hour day. Elsewhere, the factory inspector reports in 1916, "There is a marked reduction in the latitude sought (by manufacturers) and allowed (by the Home Office)." It is not too much to say that the managers appreciate, as they never have before, the evil result of excessive strain. Tho Great Britain may not have reformed her practise entirely, the question for us is whether America can afford to disregard this painfully acquired and costly experience. We must not repeat England's mistake of gaging our industrial policy to a short crisis. We need the unstinted exertions of all the men and women producing the supplies on which our success depends. We shall draw on all our stores of energy, but wo betide the country which exhausts the powers that make its workers fit.

IN wartime no sacrifice is too great. Acting in this temper, labor in America magnanimously pledged its wholehearted support to the government. But in mistaken zeal it has gone further and would tear down the essential safeguards of the health and vigor of the working people. There are sinister indications of this tendency. Both labor organizations and manufacturers' associations have during the past fortnight gone on record as favoring longer hours for women. At a recent hearing of the New York Industrial Commission on a pending legislative bill, several persons frankly stated that even the child labor laws should be relaxed, and others who opposed the measure were held to be unpatriotic.

In the difficult times confronting us, when women and children wage earners will be subjected to new and trying conditions, there is the more need of calm and sober judgment. Women will fill the gaps left by men. Their own trades —the great needle industries—will be the first to expand. Shall we, like England, fail in forethought and statesmanship and allow the established safeguards of our industrial life to crumble before our eyes? Is it not time to call a halt? Women's efficiency will not be increased, if their working hours are pushed beyond the legal limits. The industrial standards which this country has established during the past quarter century limiting hours of work and child labor experience shows to be based on sound principles. The very readiness of the wage earners to do their part, puts a special duty on the state to protect them. These workers who in the supreme test the President says "will be as much a part of the great patriotic forces of the Nation as the men under fire" must not be plundered of their health and working efficiency. As Mrs. Florence Kelley writes in protesting to Governor Whitman against the Johnson bill, we are in danger of killing the "industrial goose that lays this Nation's golden eggs in wartime as at all other times."

New York City

WHAT'S THE MATTER WITH GERMANY?

BY CARL W. ACKERMAN

As war correspondent for the United Press Associations Mr. Ackerman spent nearly two years in Europe, chiefly in Berlin and with the German army on eastern and western fronts. He came back to the United States with Ambassador Gerard.—THE EDITOR.

THE Germany I knew in 1915 is not the Germany of today. The war has not only depleted stocks, robbed the country of food, caused depression and hatred, but it has gnawed the German character. Altho the Allied armies have not invaded Germany; altho this nation has not been destroyed like sections of Belgium, France and Poland, still the war has eaten into Germany's heart. Wars sometimes have indirect effects which are greater and more horrible than the direct effects. Invasion is not the only thing which brings suffering. The blockading of a nation and of a nation's mind is as terrible as an invasion.

The kind, patient, honest Germans I met two years ago when I crost the border at Bentheim have changed. But I have changed, too. I entered Germany sympathetic. I felt that Germany had not had a fair chance. I told the Germans I met that I felt so. And, as long as I accepted what they said—everything they said—I was a friend. But as soon as I questioned them or doubted what I heard I was regarded suspiciously. I learned by bitter experiences that a neutral view of the war was not possible—in Germany. One must be for Germany or one is against Germany. There is no middle ground.

After spending two years there during the war, after following many phases of the political, military and economic changes and after ten trips to the fronts in Belgium, France, Poland and Rumania, I felt that I had had an opportunity to observe Germany as it was and is! If my eyes were opened by what I saw and heard, perhaps others who were friendly to Germany may be interested in knowing whether the ideal they picture in their own minds is real. Does the Germany which before the war made such strides in international commerce and science, the Germany which had no poor, the Germany which made the world believe it was honest and sincere, still exist?

I was in St. Quentin, France, at the headquarters of General von Below, when news came May 8, 1915, that the "Lusitania" was torpedoed. I read the bulletins as they arrived. I heard the comments of the Germans who were waging war in an enemy country. I listened as they spoke of the loss of American and other women and children. I was amazed when I heard them say that a woman had no more right on the "Lusitania" than she would have on an ammunition wagon at the Somme. I left St. Quentin the next day for Brussels. Here I was permitted by the General Government to send a despatch reflecting the views of the German army in France about the sinking of the "Lusitania." I wrote what I thought was a fair article. I told how the bulletin was posted in front of the Hotel de Ville and how the officers and soldiers marching to and away from the front, stopped, read, smiled and congratulated each other because the German "navy was at last helping the army win the war." There were no expressions of regret over the loss of life. These officers and soldiers had seen so many dead, soldiers and civilians in Belgium and France, that death no longer shocked them.

The telegram was approved by the military censor and forwarded to Berlin. I stayed in Belgium two days longer, went to Louvain and Liège and reached Berlin, May 12. The next day I learned at the Foreign Office that my despatch was stopped because it conflicted with the opinions which the German Government was sending officially by wireless to Washington and to the American newspapers. I felt that this was unfair, but I was subject to the censorship and had no appeal. I did not forget the incident because it showed a striking difference of opinion between the army, which was fighting for Germany, and the Foreign Office, which was explaining and excusing what the army and navy did. The army always justified the events in Belgium, but the Foreign Office did not. That was the first event which made me feel that even in Germany, which was supposed to be united, there were differences of opinion.

In September, 1915, while the German army was moving against Russia like a surging sea, I was invited to go to the front near Vilna. During the intervening months I had observed and reported as much as possible the growing indignation in Germany because the United States permitted the shipment of arms and ammunition to the Allies. In June I had had an interview with Secretary of State von Jagow, in which he protested against the attitude of the United States Government and said that America was not acting in as neutral a manner as Germany did during the Spanish-American War. He cited page 168 of Andrew D. White's book in which Ambassador White said he persuaded Germany not to permit a German boat, laden with ammunition and consigned to Spain, to sail. I thought that if Germany had adopted such an attitude toward America, that in justice to Germany Washington should adopt the same attitude. After von Jagow gave me the facts in possession of the Foreign Office and after he had loaned me Mr. White's book, I looked up the data. I found to my astonishment that Mr. White reported to the State Department that a ship of ammunition sailed from Hamburg, and that he had not protested altho the naval attaché had requested him to do so. The statements of Dr. von Jagow and Mr. White in his autobiography did not agree with the facts. Germany did send ammunition to Spain, but Wilhelmstrasse was using Mr. White's book as proof

Underwood & Underwood

THE BULWARK OF GERMAN MILITARISM

General von Hindenburg, idealist, strategist, leader; and General von Ludendorf, executive, master of detail—these two form the link between the ambitions of the Kaiser and the implicit service of the German people

that the Krupp interests did not supply our enemy in 1898.

The latter part of September I entered Kovno, the important Russian fortress, eight days after the army captured the forts. I was escorted, together with other foreign correspondents, from one fort to another and shown what the 42 centimeter guns had destroyed. I saw 400 machine guns which were captured and 1300 pieces of heavy artillery. The night before, at a dinner party, the officers had argued against the United States because of the shipment of supplies to Russia. They said that if the United States had not aided Russia, that country would not have been able to resist the invaders. I did not know the facts, but I accepted their statements. When I was shown the machine guns, I examined each one and discovered that every one of the four hundred was made at Essen or Magdeburg, Germany. Of the 1300 pieces of artillery, every cannon was made in Germany except a few English ship's guns. Kovno was fortified by German artillery, not American.

A few days later I entered Vilna; this time I was moving with the advance columns. At dinner that night with General von Weber, the commander of the city, the subject of American arms and ammunition was again brought up. The General said they had captured from the Russians an American machine gun. He said they were bringing it in from Smorgon to show the Americans. When it reached us the stamp, written in English, showed that it was manufactured by Vickers, Limited, England. Being unable to read English, the officer who reported the capture thought the gun was made in the United States.

In Rumania last December I followed General von Falkenhayn's armies to the forts of Bucharest. On Thanksgiving Day I crost by auto the Schurduck Pass. The Rumanians had defended, or attempted to defend this pass by mounting armored guns on the crest of one of the mountains in the Transylvanian Alps. I examined a whole position here and found that all these turrets were made in Germany.

I do not doubt but that the shipment of arms and ammunition to the Allies has been a great aid to them, but, when Germany argued that the United States was not neutral in permitting these shipments to leave American ports, Germany was forgetting what her own ammunition and artillery factories had done for Germany's enemies. When the Krupp works sold Russia the defenses for Kovno, the German Government knew these weapons would be used against Germany some day, because no nation except Germany could attack Russia by way of Kovno. When Krupps sold war supplies to Rumania, the German Government knew that if Rumania joined the Allies these supplies would be used against German soldiers. But the Government was careful not to publish these facts in German newspapers. And, altho Secretary of State von Jagow acknowledged to Ambassador Gerard that there was nothing in international law to justify a change in the Washington position, von Jagow's statements were not permitted to be published in Germany.

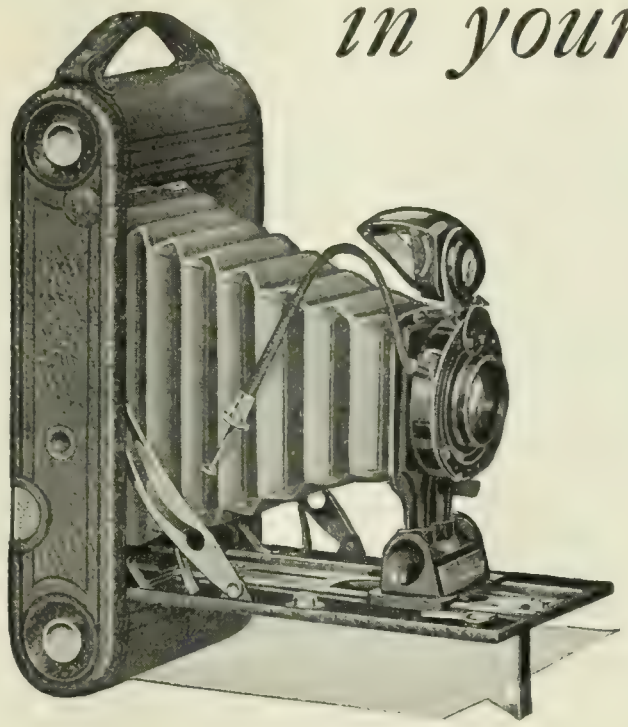
One of the arguments the Foreign Office used when Ambassador Gerard discussed submarine warfare or arms and ammunition with the officials, was that President Wilson would not be able to adopt a determined policy toward Germany because of the German-Americans. Gerard has always been fair to the German-Americans. He told von Jagow and Zimmermann repeatedly that if the relations between the two countries ever came to a break, the German-Americans would be among the most loyal supporters of the United States. Zimmermann, who at that time was Under Secretary of State, and later succeeded von Jagow as head of the Foreign Office, insisted that the German-Americans would never support Wilson against the Fatherland. Zimmermann said this to Gerard and Henry Morgenthau, former Ambassador to Turkey. Certain German-Americans, too, traveled back and forth to Germany to inform the Imperial Government that they would not permit Washington to break with Berlin. This information was contrary to Ambassador Gerard's, but the Ambassador felt that he was right. He often remarked that when the German-Americans learned the facts about the "Fatherland" during war time, they would change their opinions. Gerard never believed in a German-American revolt, which Zimmermann prophesied repeatedly. Gerard knew the German-Americans and other Americans who sympathized with Germany would change their views if the facts were fairly presented. I have always had the same impression. When Zimmermann spoke to me about the power of the German-Americans, I told him I thought his ideas were not fair to these Americans of German descent, that of the ten million of such citizens here, 99 per cent would be loyal and that the disloyal ones would be found to be Germans, not Americans.

I believe there are many German-Americans who still feel that Germany has been wronged and that Germany, fighting for her existence, is justified in using every weapon to defend her country. I think Germany is justified in using every weapon she can obtain, but its use must be legal and humane. Desperation does not justify any act. There is in the first place no justification for desperation itself. The fact that Germany is desperate is not the fault of the United States nor of other neutrals. The fault is the Kaiser's. He listened to the advice of his generals and the Rhine valley industrial leaders at the beginning of the war. He sided with the Rhine ammunition millionaires when they demanded an invasion of Belgium. When the Kaiser accepted the advice of the same officers and leaders by beginning an unlimited submarine warfare, the fault was not America's for opposing it, but the Kaiser's for beginning it. President Wilson was as patient and just as any human being could be. The Kaiser knew diplomatic relations would be severed if von Tirpitz's policies of sea murder were adopted by Germany. Gerard left no doubt about it at the Foreign Office. But the Kaiser was willing to take a chance. Zimmermann told him the German-Americans could be relied upon to work for Germany. The pacifists could be counted upon to oppose war and certain American newspapers could be depended upon to argue against an aggressive war. The Kaiser figured that he was safe as far as effective action by the United States was concerned, at least this year. And he believed the war would be over before the United States could act.

I do not believe that any fair-minded, real American of German parentage or grandparentage, or of German sympathy will support the Kaiser against President Wilson. Some German-Americans have been working here to get an embargo on the shipment of supplies to the Allies, because they believed it unneutral. Surely they did not know that Germany equipt Kovno, that Germany shipped arms to Spain, that Germany supplied Rumania. Surely they do not know that the Germany that *was*, the Germany they pictured in their minds, is not the Germany of today. If German factories supplied Russia when the German Government knew the supplies would be used against Germany; if Krupp built Rumanian defenses and sent supplies after the beginning of the Great War, could Germany honestly accuse the United States of not being neutral by permitting American factories to make supplies, as long as the buyer was able to deliver most of them? The difference was that England, France, Russia and Italy could transport their goods across the ocean. Germany could not, but wherever Germany could ship by land she did so.

As President Wilson said in an address early in the war, the people of this country are drawn from many nations and it would be but natural for their sympathies to be with the country from which they came. It was but natural that the Americans of German parentage should be the defenders of Germany at the beginning of the war. It was but natural that they should subscribe large sums of money for the German Red Cross and for hundreds of other relief organizations. But do these thousands of Americans who gave these millions know what became of them? Have they ever read in German newspapers acknowledgments of them? Have the German papers ever given these sympathetic Americans credit for their work?

I was in Germany two years and I read the newspapers daily. I recall only two times when funds from the United States were acknowledged in the press. At one time Judge Nippert, of Cincinnati, came to Germany for the American East Prussian Relief Fund. Americans had subscribed several mil-



lion marks for the reconstruction of East Prussia and statements were printed about this work. At another time, when the submarine "Deutschland" returned, an item was printed that each member of the crew had been given money by generous-hearted New Yorkers. But these are the only two instances. Never was a word printed in the newspapers about the millions collected here by Dr. Bernhard Dernburg for the German Red Cross. Never has anything been published to show what was done with this money. As far as Americans have been able to learn, this money has never reached Germany. Some of it was used for propaganda purposes here, some was used to purchase supplies, some was used to maintain the market value of the mark. Very little, if any, reached the German Red Cross. Very little was used to alleviate suffering on the battlefield. Those generous-hearted German-Americans were deceived, as they were misled by the arms and ammunition arguments.

If the millions of dollars subscribed for relief in Germany was spent in honorable work, why did Dr. Dernburg refuse to make a statement for publication in the United States and Germany of the amount collected and the method of the expenditure? Why did Dr. Dernburg say that the German Government did not want these facts published? If Dr. Dernburg used this money for relief purposes it is not too late today to give an acknowledgment.

In the United States there are a great many Poles and Germans with relatives abroad. They have been sending money to Germany and agents there have been distributing it. Have the contributors here ever received acknowledgments of how much money their relatives were paid? Do they know that one of the agents lived in the Hotel Adlon in Berlin like a millionaire and pocketed forty per cent of the money received? Do they know that another committed suicide when he was caught by the American Embassy? Do they know that a woman who collected funds here for widows and orphans in Berlin was charging $800 a month and expenses to deliver the money to the poor? Do they know that the German Government protected an American in Berlin who was acting as a Red Cross agent for Dr. Dernburg, after the State Department ordered Ambassador Gerard to take his passport?

The Germany that German-Americans here defended and helped no longer exists. The Germany of 1915 has disappeared. In its place is a desperate nation, armed to defy the world and confident that there is not sufficient force in the whole world to defeat the German army. The blockade has starved Germany not only physically but mentally. Germany has been cut off from the opinions of the outside world. The censorship has forbidden American news agencies to furnish news reports of the real situation here. The men who were the intellectual and business leaders of Germany in 1915 are like men who have been shut up in one room for two years and prevented from commu-

Put a "two-c" in your pocket.

It fits.

The 2C KODAK Jr.

For pictures of the somewhat elongated post-card shape, but just a trifle smaller,—2⅞ x 4⅞ inches And this elongated shape in the picture makes possible a slim, thin camera, that *fits the pocket.*

The 2C Autographic Kodak Junior has a capacity of ten exposures without reloading, it has the Kodak Ball Bearing shutter with cable release, working at speeds of 1/25, 1/50 and 1/100 of a second and of course the usual "bulb" and time actions. The camera has brilliant reversible finder, two tripod sockets, black leather bellows, is covered with fine grain leather, is well made and beautifully finished. It is autographic, of course, and is extremely simple to use.

Furnished with a choice of lens equipment as listed below:

No. 2C Autographic Kodak Jr., meniscus achromatic lens,	$12.00
Ditto, with Rapid Rectilinear lens,	14.00
Ditto, with Kodak Anastigmat lens, *f.7.7.*,	19.00

All Dealers'.

EASTMAN KODAK CO., ROCHESTER, N.Y., *The Kodak City.*

NEW BOOKS

Standards of American Legislation

ERNST FREUND

A contribution to the rapidly growing movement for the improvement of statute law. The book contains information of interest to lawyers and to students of social problems.

264 p. cloth; $1.50, postage extra.

Unfair Competition

W. H. S. STEVENS

The author has endeavored to set up an economic criterion for the determination of what constitutes fair and unfair competition, and the book will prove of decided value to all interested in the problems connected with trusts.

348 p. cloth; $1.00, postage extra.

The Biology of Twins

HORATIO H. NEWMAN

Many questions relative to twinning have been answered in this volume partly through a study of human twins and partly through a much more detailed study of twinning in other mammals.

195 p. cloth; $1.25, postage extra.

A Chemical Sign of Life

SHIRO TASHIRO

A new chemical method is here proposed by which vitality may be detected and measured. The author describes a series of tests by means of which one is able to distinguish living from dead tissue.

151 p. cloth; $1.00, postage extra.

For Early Publication

The Electron: Its Isolation and Measurement and the Determination of Some of Its Properties, Robert A. Millikan. Price, $1.25.

Food Poisoning, Edwin Oakes Jordan. Price, $1.00.

Religions of the World, George A. Barton. Price, $1.50.

nicating with progress. They have become selfish. They hate. They defy everything and everybody. They cheat. They deceive their best friends. They tell Americans one thing and the German people the opposite.

Is there anyone willing to defend this Germany against the United States today?

New York City

PEBBLES

"What's the feminine of cowboy?"
"Milkmaid."—*Penn Froth.*

Telegram from the Front—"Send 2,000,000 pairs of pyjamas. The Russian army is about to retire."—*Lehigh Burr.*

She—Have you heard about the new big guns in France?
He—Somme guns!—*Cornell Widow.*

"I can't find that record by Sousa's band; do you know what became of it?"
"No! I guess somebody stole a march on us."—*Harvard Lampoon.*

First Frosh—Jack has got an awful cold seat in chapel.
Second Frosh—How's that?
First Frosh—He sits in Z row.—*Squib.*

We do not wish to inject any element of farce into a serious situation, but it looks as if Cuba and Bulgaria were going to have a hard time getting at each other.—*Sun Dial.*

Billy—Did you hear that Reginald has had to have his left arm taken off at the wrist?
Willy—That's a pity. How can the dear boy tell time?—*The Lamb.*

Freshman (in awed voice)—See that big fellow over there, he broke three records last week.
Sweet Young Thing—Mercy, I wouldn't let him run the Victrola.—*Penn Froth.*

Shears—How is it that young Scribleigh has been attending church so regularly of late?
Typo—Why, he says that he likes to go where he is always sure of having his contributions accepted.—*A. W. B. in The Lamb.*

Lord D'Aliverus—These blawsted Americans turn everything the wrong way.
Miss Tootsie Myliens—How so, my lord?
Lord D—Why, they talk about the Russian bally, when any awss can see they mean the bally Russians!—*Jack-o'-Lantern.*

The attorney for the gas company was making a popular address.
"Think of the good the gas company has done!" he cried. "If I were permitted a pun, I would say, in the words of the immortal poet, 'Honor the Light Brigade.'"
Voice of a consumer from the audience—"Oh, what a charge they made!"—*Youth's Companion.*

There was an old lady of Leeds
Who tried, in turn, *all* of the creeds,
When, disgusted, she found
That each left her a-ground,
She attended to other folks' needs!
—*London Opinion.*

The teacher was trying to show the children how it was that our forebears were so ignorant of other countries. She talked for an hour about the lack of knowledge of navigation, the smallness of ships and the fear of the unknown. Then she noticed that Jimmy was not attending.
"Why was it that we knew so little about other countries 400 years ago, Jimmy?" she said, springing the question upon him.
"Please, miss," said Jimmy, without a moment's hesitation, "because we weren't born."—*New York Globe.*

Bran
at Breakfast

The time for bran food is at breakfast, to start the day aright.

Not once-in-a-while, but every day, to keep one in good spirits and good health.

The best way to serve it is in Pettijohn's. This wheat food is a dainty. The bran is hidden, and it comes in flake form. That's essential.

Pettijohn's delights folks. And when they learn the bran effects they will not go without it.

One week will prove this. See what a change it makes.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

The New Books

PROPHET OF PREPAREDNESS

Mr. Marcosson's little book can easily be read in an hour and is worth several. It is a vivid showing of the kind of man *Leonard Wood* is — one of "strong mind, great heart, true faith and willing hands." It is an epitome of his career and instinct with his spirit—a triumphant and useful career, and a spirit inspiring confidence. As physician, Indian fighter, rough rider, governor, pacifier of the Moro head hunters, he has been a success. He suffered yellow fever in his efforts to conquer that Cuban terror, and he conquered it. We do not forget that Waring was also there. In the struggle for preparedness, General Wood is likened to Lord Roberts, who saw the handwriting on the wall and in vain interpreted it to England. The terse and earnest words of the general, almost a complete speech, are quoted to give his convictions on this racking question.

Leonard Wood, by Isaac F. Marcosson. John Lane Company. 75 cents.

ENGLISH LITERATURE

With the issue of the fourteenth volume of the *Cambridge History of English Literature*, there is completed an imposing publishing project. As fourteen volumes of continuous literary history, it is impressive; as the joint production of over one hundred collaborators, including writers of the first eminence in scholarship, it is monumental; as a critical enterprize, it is a thing of magnitude and significance. The bibliographies in themselves form probably the most valuable book-record of the subject in print.

A specialists' history of English literature must in the nature of things present to its editors particular and difficult problems. The cutting up of the field is, of course, the first. In this respect the *Cambridge History* is, in the main, well proportioned; and it devotes adequate, even generous, space to the background of literary history, and to its connection with the current of political, social, philosophical, theological, and even scientific and educational ideas. Major figures are separately treated, in almost every instance by competent scholars, with proportional attention to facts, with good sense and apt appreciation, and with effective consideration of the place of the individual in the literary spectacle of his time. The scholarly tone of the work is conservative, and it is relatively free from super-subtle or controversial discussion — the single marked instance of exception being Professor Manly's chapter on "Piers Plowman." If there is a defect in the organization of the

"Well! Where has the Money Gone?"

Face to face with the New Month—and nothing but empty pockets and bills, Bills, BILLS

That's the dramatic, pitiful situation which confronts thousands of men and women the first of each month. And the irony of it is that the great majority of them are earning good salaries. But instead of forging ahead they are "going behind."

Far more deadly than the spectre of Poverty is the skeleton-in-the-closet of Debt. Poverty is honorable. Debt is humiliating. Hunger and want can be helped by Charity, but Debt can be wiped clean only with Cash.

Are You Living Under False Pretenses?

There are thousands of men and women whose lives are a mockery of lies. They masquerade under the pretense of prosperous family life. Behind the scenes are their creditors waiting to collect for groceries, coal, clothing, rent, medicine and the other necessaries of everyday life. You know this picture is true! You may not be one of the unfortunates in the clutches of Debt but there are many who are, and who cannot somehow free themselves.

SUCCESS OR FAILURE—Which? Asks James J. Hill

"If you want to know whether you are going to be a success or failure in life," said James J. Hill, "you can easily find out. The test is simple and infallible. Are you able to save money? If not, drop out. You will lose. You may not think it but you will lose as sure as you live. The seed of success is not in you."

Forging Ahead in Life and Saving Money

On the other hand you know men and women who are steadily forging ahead. They always seem to have "plenty to do with"—money, luxuries, vacations, automobiles, and other material blessings which are denied you.

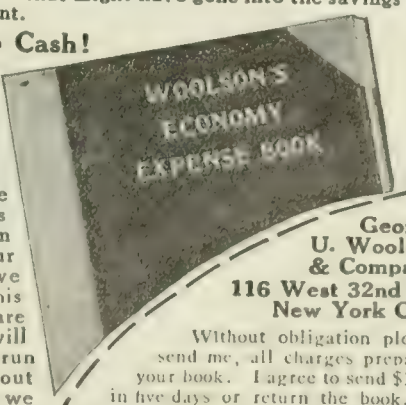
Don't blame your predicament to the "high cost of living." The fault is that you spend as you go without knowing what becomes of the money. You have no system of controlling your hard earned dollars. You let them slip through your fingers for this thing and that on impulse without rime or reason.

A Tested System of Accounting For Personal and Household Expenses

Woolson's Economy Expense Book has proven truly a God-send to thousands of people because it has taught them a sure way to manage their finances. With it you know every minute just where you are money-wise. It automatically shows every dollar and penny of income and outgo; just how much for groceries, dress, rent, insurance, medicine, carfare, etc., and all this automatically. It's as simple as A B C. Once you've started the Woolson Book you'll find it fascinating, interesting and a miser for saving.

Over 80% of Family Trouble is Due to Money Matters

A surprisingly large number of American families are bankrupt. They should according to all sane business principles be in the hands of a receiver. They spend their incomes haphazardly and unintelligently. The sole reason for this condition is their failure to place the family finances on a business basis.



The WOOLSON ECONOMY EXPENSE BOOK Will Put Your Finances Under Control in a Systematic and Effective Manner

Two minutes daily is sufficient to keep the Woolson Book up to date. At the end of each week and month and year you will not only know where every penny went but you will have an analysis and comparative table of all the various expenditures showing just what it went for. Every detail of money management is provided for by a simple, easy-to-keep system that a 12-year old child could handle.

The Woolson Economy Expense Book was originated by an Expert Accountant. It has for fifteen years been in successful use by people of large and small incomes. It will keep track of your money for four solid years. Think what it would mean to you to know how many dollars during the past year went for needless expenditures that might have gone into the savings bank account.

Send No Cash! Study the Book First

work, it is that the single chapters, dealing in the larger part with individual writers or groups, are not completely merged into a conspectus of literary change and development. This defect, however, is one which, in the very nature of the scheme, it would have been difficult to eliminate.

The second obvious matter of inquiry is whether the numerous contributors are the right men and have been assigned the right tasks. It may be said immediately that the names of the writers upon the figures of greater importance are, in the main, sufficient warranty of first-rate scholarship. The chapters generally show thoro acquaintance with the literary domain and perceptive study of the individual; and it is specially noteworthy that the minor chapters are handled as conscientiously as the more significant, and often with proportionately greater historical detail. The editors seem, however, to have shown a rather regrettable lack of humor in handing over all the "plums" in the undertaking to Professor Saintsbury. It is, in the first place, absurd, and even a little shameful, to have it appear that in the present state of literary scholarship one man can speak with equal and with dominant authority upon Chaucer, Shakspere and Milton. If the editors' choice was decided by their wish to have the larger luminaries handled by a critic able to transmute leaden scholarship into golden generalities, one may question their discrimination upon this very point. Professor Saintsbury has the encyclopedic gift, but his angular and cryptic style and his show of erudition are no part of the equipment of a critic of distinction.

On the whole, however, this task of producing a collaborative history of English literature at once scholarly in its conception and execution, and popular in its appeal, has been met as intelligently and managed as competently as human beings are entitled to expect. The result is an emphatically valuable contribution to literary study and to general knowledge.

The Cambridge History of English Literature; ed. by A. W. Ward and A. R. Waller. 14 vols. G. P. Putnam's Sons. $38.50.

MY COUNTRY

Unlike most books about government, intended for instruction in "civics," John A. Lapp's *Our America*, deals with very concrete problems and relations in the economic and social life of ordinary folks. It is all about work and exchange and transportation and police, fire and health protection, and the expanding state and national problems arising out of the fact that we are living close together and trying to do a multitude of things. There are suggestive questions for study and discussion and well selected references at the end of each chapter and good, interesting illustrations thruout. In many ways this is the best book on "the elements of civics" that we have seen. Like most works about government intended for use as school texts this lacks a certain fervor and enthusiasm without which

civics will never carry the conviction that should be its most distinctive and valuable feature. Yet the book is well worth while even for people who are "out of school."

Our America, by J. A. Lapp. Indianapolis: Bobbs-Merrill Company. $1.25.

A SURVEY OF SURVEYS

In *The Social Survey*, Dr. Carol Aronovici of the Philadelphia Bureau for Social Research shows the values of this sort of social stock-taking in the practical task of readjusting methods to meet new needs. In addition to the general chapters the book contains sections on city plans, the local government, industry, health, education, recreation and delinquency. There is a classified bibliography, a list of agencies devoted to survey work, and an indication of current sources of information.

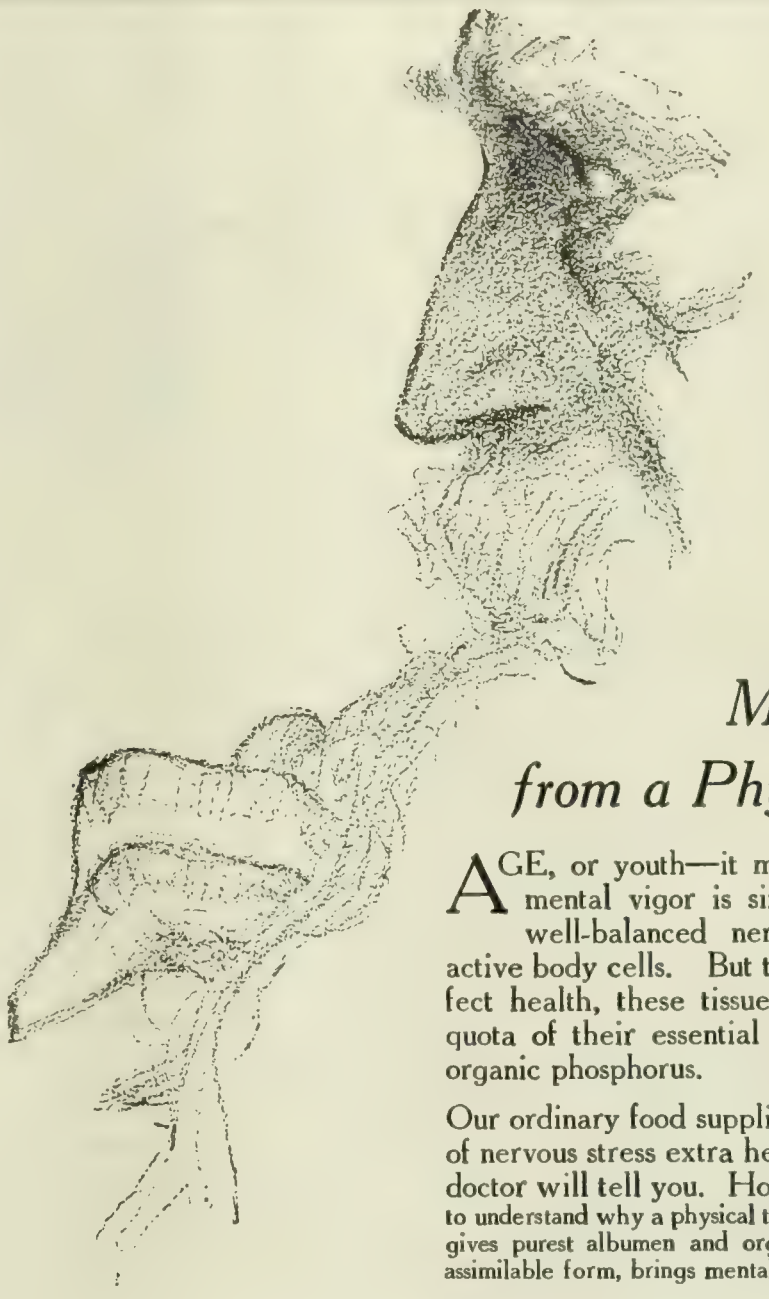
On the whole, this makes a useful introduction to the subject for the general reader, as well as a convenient manual of reference in regard to the important surveys already completed. The work is characterized thruout by an active appreciation of the value of facts as a guide to conduct, and of the value of vision in guiding research.

The Social Survey, by Carol Aronovici. Philadelphia: The Harper Press. $1.25.

RECENT VERSE

All's Well, by John Oxenham, is a book of popular, sentimentally religious verse, a hymnal of consolation for those whom the war has stricken. It is not poetry. (G. H. Doran Company, $1.)

The Land We Love, by Wendell Phillips Stafford, is a book of carefully written verse, stiff and conventional in manner but full of social idealism. Most of the themes chosen are patriotic or devotional. "The Boyhood of Jesus" is one of the best poems. (A. F. Stone, St. Johnsbury, Vermont, $1.25.)



Retrogression and Other Poems, by William Watson, is a book that devotes much space to epigrammatic criticism of critics and poets. Occasional clever lines remind one of Pope, but the book will add little to Mr. Watson's reputation as a poet. (John Lane Company, $1.25.)

Verses, by Hilaire Belloc, is a volume of clever philosophical verse by a gentleman who makes it evident that he loves children, comrades and good old wine and that he has an intense dislike for modern science and such progressive modern thought as is the inevitable result of scientific discovery. (Laurence J. Gomme, $1.25.)

For the Belgian Scholarship Fund Prof. John Cunliffe has made a collection of *Poems of the Great War*. Like all anthologies half of it should have been left out. Despite, perhaps because, of this it is peculiarly interesting and representative, a collection of verse exceedingly impressive both in form and spirit. (The Macmillan Company, $1.50.)

Jordan Farms, an epic in homespun, by Frederick E. Pierce, is a rather interesting narrative in blank verse. The story of two men, a waster and a builder, is told by their neighbors in the New England town. At times, to be sure, the verse falls away from poetry, but there are warm flashes of inspiration also, and beautiful lines. (Yale University Press, $1.)

In *Sunflowers*, Willard Wattles has made a cheery collection of verse about Kansas, its history, life, crops, flowers. These topics permit the inclusion of Blake and Whittier, and among the moderns, Vachel Lindsay holds up the tradition of boyant optimism that belongs to western verse. (Chicago: A. C. McClurg, $1.)

Mental Vigor from a Physical Tonic

AGE, or youth—it makes no difference—mental vigor is simply the reflection of well-balanced nerves and full-blooded, active body cells. But to be kept thus in perfect health, these tissues must be fed a full quota of their essential foods,—albumen and organic phosphorus.

Our ordinary food supplies them, but in times of nervous stress extra help is needed, as your doctor will tell you. How easy it is, therefore, to understand why a physical tonic like Sanatogen, which gives purest albumen and organic phosphorus in easily assimilable form, brings mental vigor.

Easy, likewise, to understand why the venerable John Burroughs was able to write:

"Sanatogen gave me strength, steadied my nerves and greatly improved my sleep."

And why Sir Gilbert Parker, younger and intensely active, wrote:

"Sanatogen is to my mind a true food tonic, feeding the nerves, increasing the energy and giving fresh vigor to the overworked body and mind."

Once *you* have tried Sanatogen for yourself you will understand why so many prominent people vouch for its merit. *Give it this trial today.*

Sanatogen is sold by good druggists, $1.00 and up.

Sanatogen received the Grand Prize at the International Congress of Medicine, London, 1913.

Free Trial Offer.

On request we will send a 25-gram Trial Package of Sanatogen, also Richard Le Gallienne's booklet "The Art of Living," touching on Sanatogen's kindly help and giving other aids for better health. Address the Bauer Chemical Co., 26R Irving Place, N. Y.

The Market Place

THE STOCK MARKET

Prices were depressed in the New York stock market on Monday, the 16th, by action which may reduce the value of ship company shares and by expectation as to the effect of the new national taxes. It became known that the British Government had requisitioned all of the International Mercantile Marine Company's ships that are under the British flag, about 90 per cent of the tonnage. The Government pays, it is said, $10 a ton for carrying freight, while the prevailing open rate is nearly $100. Before the war it was $4 or $5. Freight rates generally may be reduced if our Government builds 3000 wooden ships in a few months. Mercantile Marine common shares lost 6 points, and the preferred shares 9½. Other declines were United Fruit 7, and Atlantic, Gulf & West Indies 6¾. Sales of Mercantile Marine were 147,000 shares, or more than one-fifth of the day's transactions. Motor stocks were weak, and Steel lost nearly 3 points. On the 17th the downward movement in ship stocks was checked, and there was a small net gain for Mercantile Marine, which led the market with 150,000 shares, or one-quarter of the total. Motors continued to decline, and there were fractional losses for nearly all the industrials. The coming taxes, it was said, must cut down their profits. Railroad shares were firmly held, owing to the prevailing belief that the companies will be permitted to increase their freight rates.

In a narrower market on the 18th there were only slight changes for a large majority of the stocks. But the decline of motor company shares became more pronounced. The prices of some of them were the lowest recorded in two years. The current argument to their disadvantage is that while the companies must pay more for their steel raw material, taxes on machines will probably be increased, and the proposed higher taxes on incomes will discourage the buying of automobiles. On the 19th there were additional losses for these shares, altho most of the industrials showed small gains. The tax argument cut 6 points from the price of American Tobacco. Railroad shares remained almost stationary, those of the New Haven company excepted. These lost nearly 4 points, closing at 39¾. This weakness was due to the reported application of the com-

MOTOR TRUCKS

BUYING EQUIPMENT FOR EFFICIENCY

THE secret of Motor Efficiency lies in the fitness of the equipment for the work it has to do.

It is well to realize that neither prejudice nor sentiment is a justifiable basis for appraising the fitness of a truck for a job.

That a friend of yours tried one make and liked it, or another make and disliked it, is of no consequence so far as your problem is concerned.

The appearance of a truck is the last thing to think about.

Price is the next to last thing to think about. The cheapest truck might prove the most expensive and the most expensive might prove the cheapest.

Find out what you want done. Then pick the truck that will do the work—at the lowest cost, for the longest time.

Insist on figures. A little simple arithmetic applied to your hauling or delivery problem will be a more efficient guide to right buying than a mile of specifications.

To assist you with this arithmetic is one of the main purposes of our Motor Efficiency Service. Call on us freely, and often.

MOTOR EFFICIENCY SERVICE

THE INDEPENDENT-HARPER'S WEEKLY

119 West Fortieth Street, New York City

pany in Connecticut for permission to issue $50,000,000 of preferred stock. It has no stock of this kind now, and the payment of dividends on its common stock of $157,000,000 was suspended three years ago. Net earnings would have permitted only 2¾ per cent last year, and 1½ in 1915. The proposed issue of preferred would not improve the dividend prospects of the common shares. Some thought the $50,000,000 might be used in taking up the company's recently renewed notes for $45,000,000. It was difficult to see how the company could market new preferred stock for which no dividend was in sight.

THE STEEL TRADE

Prices are still rising in the steel industry. Supply at the base is increasing, for the output of pig iron, only 2,645,251 tons in February, was 3,250,757 tons in March, the largest quantity produced since November. Price concessions have been granted to the Government by the steel manufacturers. For plates $2.90 per hundred pounds will be paid, and for bars $2.50. These prices are far below current rates, and may be less than cost of production. The copper companies were induced by the Council of National Defence to sell 45,510,000 pounds of their metal to the Government for 16 2/3 cents a pound, the annual average for ten years immediately preceding the war, and about half of the prevailing price now. But this quantity is less than 3 per cent of the annual output, and 16 2/3 cents gives most of the companies a profit. The steel manufacturers could not sell at the average for those ten years, except at a considerable loss, for since the beginning of the war many of their prices have been multiplied by three, or even by four. The great advance for finished steel has been caused in part by several increases of wages. On April 3 the Steel Corporation added 10 per cent to the pay of its 270,000 employees and about $20,000,000 to its annual payroll. Other companies at once took similar action. This was the fourth addition of 10 per cent for the Corporation's men since January of last year. At the Corporation's annual meeting last week, Judge Gary said $10 had been offered for such plates as the company was selling to the Government for $2.90, but the Government will take only 4 or 5 per cent of the company's output, which now exceeds the entire quantity produced in Germany and still is less than half of this country's product. The Corporation pays $45,000,000 of taxes and expects to pay $60,000,000 in the near future, but its net earnings for the December quarter were $105,000,000, and those for the March quarter, not yet reported, probably exceeded $110,000,000. While steel orders given by our Government must be filled before those of other buyers, an exception is made, at the Government's request, with respect to contracts with our Allies in Europe.

R. L. ALSAKER, M.D.

Does Red Meat Cause Rheumatism? By R. L. Alsaker, M.D.

DEAR DOCTOR ALSAKER: I am 43 years old. Have hardly had a sick day in my life, except the usual diseases of childhood and an occasional cold in the fall or spring, when most people seem to catch cold. For the past three years I have had occasional pains in the shoulder, the knee joints, and in the little finger of the left hand.

My doctor tells me that I have rheumatism and that I must stop eating meat—especially red meat—beef, lamb, etc. I eat very little meat. My breakfast consists of bacon and eggs or one mutton chop, rolls and occasionally wheat cakes (never more than three), or toast and a cup of coffee. And I eat a little fruit and oatmeal with cream and sugar. For lunch a couple of soft boiled eggs and a piece of pie or cake and a glass of milk. Sometimes I take Boston baked beans instead of eggs and tea instead of milk. For dinner we have soup, a roast of some kind, or broiled or baked fish, with potatoes and other vegetables, and occasionally a salad, but I don't care much for raw food, and always a dessert—ice cream, stewed fruit, pie or cake—and after dinner coffee. I will confess to an occasional cocktail before dinner, but I seldom drink between meals—not even water. I usually smoke a cigar after lunch and always after dinner.

If red meat causes rheumatism, why should I have it and the other members of the family, who eat meat as frequently as I do, be free?

W. J. L.

THIS gentleman seems to think that he has been quite well, though he and real health have not been on speaking terms for some years. Those who are well do not have colds. Colds are a warning, a danger signal, showing that the body is full of impurities and waste.

Pains that travel from joint to joint, usually called rheumatic pains, are another sign that the blood is charged with impurities.

This gentleman seems to think that he has been prudent about his eating, when in fact he has been careless. At 43 everybody owes it to himself and family to know how to eat so as to have health. Eggs, meat, fish and milk are proteids (albuminous foods). The body needs a limited amount of these foods, but if they are taken in excess, as they are when eaten at every meal, they build rheumatism, catarrh, bronchitis, asthma, colds, Bright's disease and other ills.

No comment is needed regarding smoking and liquor.

Why does not every member in this family have rheumatism? Because individuals differ, and what will express itself as rheumatism in one may take the form of a different disease in another individual. I do not know this family, but without knowing them, I am sure that there is not a healthy member in the household. Each and every one who lives in this manner must from time to time have some kind of physical trouble.

Red meat does not in itself cause rheumatism, though overeating of meat often helps to build the trouble. I have to fall back on experience and say that I have had numerous cases of rheumatism of all kinds—gout, lumbago, muscular rheumatism, rheumatism of the joints, chronic and acute—and every case, without exception, has recovered, and it has never taken longer than four months. Many of these patients had had rheumatism from ten to thirty years, during which time they had consumed vast quantities of drugs and had gone to springs and had been boiled out, without special benefit.

In only one case was meat taken away temporarily, yet all the rest recovered, *so red meat does not cause rheumatism.*

These sufferers recovered through proper living, especially through correct eating. If this gentleman will eat and drink as he should, he will recover, as all the rest did. There are no *ifs* and *buts* about it—he will get well and stay well. What is more, right eating will make his whole family well. And they won't need any drugs or operations. It is natural to be well, and those who follow Nature's laws will always have health. Proper eating is the most important, in fact the dominating, health factor. Everyone who has rheumatism can eat his way out of it and into health. No one need be sick. Mother Nature has given us hundreds of good things to eat, and you can eat every one of them and enjoy good health and long life—if you eat them right.

Realizing the universal need of clearly defined instruction on the important subject of Eating, I have published in book form a complete and practical home study course on regaining and maintaining health.

This course is unique, in the true sense of the word. It is entirely free from fads. There is no attempt to exploit anything in it—except the truth. It simply tells in a straightforward way how to prepare, combine and eat the foods which are within the reach of everybody—city or country, rich or poor, meat eater or vegetarian, young or old, so as to produce perfect health. There is no tiresome use of so-called scientific words, such as calories and vitamines, in the work.

There are explicit directions for the pregnant woman, the nursing mother, the infant, the child, the youth, the adult, and the aged. It shows the well how to eat to remain well, and gives instructions for feeding the sick so that they will soon recover. It tells you how to get thin and how to gain weight and keep well.

It is impossible to give a comprehensive description of this practical home study course in health building in this short article. For that reason I have arranged with my publisher, Frank E. Morrison, Dept. 84, 1133 Broadway, New York City, to send to any reader of THE INDEPENDENT who will request it, a 48-page reprint taken from my home study course, "EATING FOR HEALTH AND EFFICIENCY," absolutely free. These pages embody information and instruction of great value to any person wanting or in need of advice concerning the importance of proper eating. They will enable you to determine in your own home whether the complete work is needed by you or the family. An acceptance of this offer places you under no obligation to my publisher or myself. It does afford you an opportunity to learn how to get health instruction for the mere price of a postage stamp or postal card—better ask for it NOW.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. LITERATURE.

Liebknecht or Hohenzollern. By Percy MacKaye.

1. What opposing principles are represented by the names "Liebknecht" and "Hohenzollern"? How does the poem emphasize those principles? What is the purpose of the poem? Why has the poem been printed at this time?
2. What is the purpose of the first eight lines? Of the last six lines? What riming system has been followed? Give a definition of "sonnet." What is the history of the sonnet form? What famous authors have been noted for sonnet writing?
3. Explain: "conqueror's laurel," "flouted." Find an example of personification; of metaphor; of climax.

SECTION II. WORD STUDY.

The New Books.

1. Give the derivation and the meaning of every one of the following words: epitome; terse; racking; collaborators; bibliographies; adequate; controversial; obvious; encyclopedic; cryptic; erudition; conventional; epigrammatic; anthologies.
2. Use the words in sentences concerning the books you have read in school.

SECTION III. ORAL OR WRITTEN COMPOSITION.

The Waste of Overwork. By Pauline Goldmark.

1. Write a paragraph in which you give detailed proof of the statement: "Modern warfare does not stake all upon the fighting lines."
2. Prove, by reference to statistics, that "Sunday labor is a costly experiment."
3. Explain orally what is meant by "The Waste of Overwork."

What Can I Do? By Edward Earle Purinton.

1. Stand before your class, without notes, and explain clearly what is meant by saying: "The deciding power of the war will not be military force."

For France! By Theodore Stanton.

1. Write a clear explanation of what the United States is already doing for France.
2. Explain clearly in what ways the United States may aid France still further.

Our Fleet in the Air. By Henry Woodhouse.

1. Stand before your class, without notes, and give a short talk on "The Importance of Aeronautics."

What's the Matter with Germany? By Carl W. Ackerman.

1. Write a paragraph of contrast on "The Germany of 1915 and the Germany of Today."
2. Give a clear explanation of the sentence: "Germany is justified in using every weapon she can obtain, but its use must be legal and humane."
3. Prove, by means of specific instances, that "The blockade has starved Germany not only physically but mentally."

Editorial Articles.

1. Prove, from "Conscription," that "A volunteer army system is irreconcilable with democracy."
2. Stand before your class and speak for or against the proposition, in "The Conscription of Wealth," "Incomes should be forced to fight, as well as men."
3. Read "A Plea for Contented Ignorance." Give a talk in which you present the advantages and the disadvantages of censorship of news in time of war.

The Story of the Week.

1. Write a short editorial article in which you present reasons for believing in the final success, or failure, of the German U-boat campaign.
2. Write a short news item concerning the present condition of English commerce.
3. Write a paragraph of cause and effect concerning the recent strike in Berlin.
4. Give an oral exposition of the present state of affairs in the Austrian Empire.
5. Write a paragraph of detail in which you show how the United States will raise money for the war.
6. Write a public notice concerning alien enemies, and treason, to be translated into foreign languages and posted in public places.
7. Write a short news item concerning the conference of the Allies in Washington.
8. Write an editorial article in which you praise Ex-President Roosevelt for his recent patriotic offers.

In General.

1. Cut out the most attractive advertisements, mount them suitably on paper, and then write an article in which you explain the characteristics of good advertising.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE JULIA RICHMAN HIGH SCHOOL, NEW YORK CITY

I. Organizing for War—"Conscription," "Food or Drink?" "For France," "What Can I Do?" "Balfour Welcomes America as Ally," "General Roosevelt?"

1. Why was conscription unwise or inadvisable in the earlier wars of the United States? Is conscription advisable now?
2. What sort of service have Americans been rendering thus far in this war? How should this service be reorganized so as to become more effective both for the United States and for her Allies.
3. Analyze the article "What Can I Do?" under the following headings: (a) military preparedness, (b) industrial preparedness, (c) non-military personal service.

II. Financing the War—"The Conscription of Wealth," "The Sinews of War," "Banks Take War Securities."

1. Explain as fully as you can the difference between the "pay-as-you-go" financial policy and the policy of taxing future generations in order to carry on a successful war.
2. What are the arguments in favor of the "pay-as-you-go" proposals of the American Committee on War Finance? The arguments against them?
3. Why are the banking interests opposed to these proposals? Labor and farm organizations in favor of them?
4. Make a list of Secretary McAdoo's suggestions as to avenues of taxation. Which of these contain new ideas? When were the others previously tried in the United States?

III. Freedom of Speech and of the Press—"A Plea for Contented Ignorance," "The Alien Enemy."

1. Look up the history of the Alien and Sedition Acts of 1798 and the consequences of these enactments. How do the proposed laws now before Congress differ from those of 1798?
2. In view of the First Amendment to the Constitution what constitutional justification is there for the Espionage Bill which Congress is now considering?
3. What are the arguments for a rigid censorship? Against it?

IV. Conditions in Germany—"What's the Matter with Germany?" "Liebknecht or Hohenzollern?" "German Opinion," "Strike in Berlin."

1. According to Carl Ackerman, what change has come over Germany during the past two years? What has caused this change?
2. "Liebknecht or Hohenzollern: which shall wear the conqueror's laurels?" What does this mean?
3. Explain the significance of the contrast in the first eight lines of MacKaye's sonnet. The allusion in the second part.
4. What are the chief sources of the present unrest in Germany? What effect will this unrest have on German military plans?

V. Austro-Hungarian Politics and Policies—"Austro-Hungarian Politics," "Austrian Plea for Peace."

1. Make a study of the Austro-Hungarian form of government and of the relation of such races as the Czechs and the Slovaks to the Government.
2. Why is the convening of the Austrian Parliament "a bold step"?
3. "Thou knowest what patience we observed toward our enemies," etc. To what does the Emperor Charles allude?
4. What was Austria's purpose in entering the war? How has that purpose changed?

VI. Latin America and the War—"Wilson Warns Mexico."

1. In general, what is the attitude of the South American and Central American States toward the present war? What is Mexico's attitude? Why is Mexico's position more important than that of Argentine or Chile?
2. What would be the effect if the Latin-American States should enter the war against Germany?

VII. The Labor Element in Industrial Efficiency—"The Waste of Overwork."

1. What are the elements that make for the most effective labor conditions? How far have these elements been insured by legislation in your state?
2. "The uselessness of long hours . . . has never been proved more convincingly than by England's experience." What are the facts?
3. What is the danger that confronts America in the present crisis? How can this danger be averted?

VIII. The Progress of Woman Suffrage—"Equal Suffrage in Rhode Island."

1. What sort of suffrage have the women of Rhode Island obtained? How does this differ from woman suffrage in California? In Massachusetts?
2. Name the states in which women now have complete equal suffrage? Partial suffrage?
3. In how many provinces of Canada is the vote still restricted to men? Which provinces are they?

A War Call for Business-Trained Men and Women

THE supreme call upon our young manhood today is for the military and naval service of our country. Next in its urgency comes the call upon all who are engaged in commerce or industry to work with redoubled intensity and with higher efficiency.

Behind every first-class fighting man there must be scores of people whose chief duty it is to maintain the business life and prosperity of the nation. That is the way to make certain of victory. "Keep the fires burning."

Taking Up New Tasks

The first war-time demand of American business is for men and women to take up the tasks dropped by those who go to the front. While the men in khaki are away, business must not be crippled; on the contrary, we must drive ahead faster than ever and thus open up bigger opportunities for them on their return. To accomplish that undertaking will require that tens of thousands of young men and women shall quickly fit themselves for new business positions.

You may be one of these tens of thousands. Will you be equipped to meet the demand upon you when it comes? You must be ready within the next few months.

The second war-time demand of American business is for men and women already in responsible positions to adjust themselves quickly to the new conditions which war will thrust upon them. Executive heads will be called upon to reorganize and train their forces rapidly. Sales executives will be called upon to find new markets abroad and to hold their domestic markets through better business-building methods. Office and shop executives will be compelled to handle their business—and especially business conducted through correspondence—with increased skill and to insist upon greater personal efficiency all along the line.

You may be one of these thousands. Are your plans made? Are you equipping yourself and your organization for the test? There is no time to be lost. Our first large army will be raised this Summer. We must all be ready for whatever readjustments may be needed in the Fall.

When Peace Dawns

The ending of the war will lead the way, unless all present indications fail, to a further enormous expansion of American business.

To Presidents and General Managers:

If you see ahead of you the problem of building up quickly a trained and efficient commercial organization, ask us to send you full information as to our methods. Among the hundreds of companies in which our work has been thoroughly tested and approved are:

American Steel Export Company
Robert H. Ingersoll & Brother
First National Bank of Chicago
Bowring & Company
Pettingill-Andrews Company
McGraw Publishing Company
Diamond Chain and Manufacturing Company
Carter's Ink Company
Penton Publishing Company
Massachusetts Employees' Insurance Association
Eaton, Crane & Pike Company
Texas Company
Macbeth-Evans Glass Company
Regal Shoe Company
Phoenix Mutual Life Insurance Company
American Optical Company
Lamson Company
Cosmopolitan Shipping Company
General Electric Company
New Jersey Zinc Company
Pacific Commercial Company

The immense markets of our allies and friends — of England, France, Belgium, Italy, Russia, Japan, Brazil, China, of all the great democracies of the world—are now thrown wide open to us. In Russia alone 170,000,000 people, who were formerly served chiefly by German merchants and bankers, are now turning eagerly to the United States. The $3,000,000,000 now to be loaned to our brethren in arms across the seas will come back to us many times over in the peaceful years to come. The recent enormous extension of American shipping and manufacturing facilities and of financial power will all be utilized.

The prospects for continued rapid expansion of American manufacturing, trading and banking, both at home and abroad—even during the war—are staggering. It is bound to create an unprecedented demand for men and women who have energy, brains and *sound business training.*

Will YOU be ready when peace dawns?

Fortunately, the same preparation that will help you meet the emergencies of war-time business will equip you also to take advantage of the wonderful opportunities of American commerce after the sword has been sheathed.

Three Courses of Training

Three courses of training, conducted by the Business Training Corporation, are especially well adapted to the needs of business men and women engaged in executive positions, in office work, or in any form of selling. Any one of these courses may be completed in a few months by devoting to it only a portion of your spare time at home; attendance in classes is not required. The courses are under the personal direction of men of national reputation in their fields. They are authoritative, thorough and practical from beginning to end; yet the fees are unusually low. The courses offered by the Business Training Corporation have the cordial indorsement of thousands of able business men and women throughout the country.

The Course in Foreign Trade is of peculiar value at this time to all whose business is in any way affected by the overseas expansion of American trade and investment; this includes men connected with export and import houses, shipping and transportation companies, banks, investment houses, and all lines of manufacturing which now or later may reach foreign markets. The Course is under the direction of Dr. Edward Ewing Pratt, who has had the assistance of seventeen other well-known export men. It has received the active support of many semi-public bodies and business associations throughout the United States.

The Course in Business English deals with one of the most important activities of present-day business. It is concerned only incidentally with the mere correct *handling* of correspondence; its chief function is to give a practical training in *methods of building up business* through the effective use of well-planned and well-written letters, booklets and reports. Hundreds of progressive companies are using the Course as a means of developing constructive ability throughout their organizations. Its value to the man or woman of considerable business experience who is reaching out for more responsible duties at a higher salary can hardly be over-stated.

The Course in Business Essentials is for men and women of less experience who are looking for a training in the *fundamentals* of business efficiency and success. It is designed primarily as a means of shortening the period of probation and of routine work in business. The training is widely recognized as being of remarkable value to ambitious men and women engaged in all forms of commercial activities.

Remember that, unless you are one of the comparatively few called upon for special service, your foremost duty is to handle your present job and the new business duties which will come to you, if you are ready, with the greatest possible skill and good judgment. In all probability that is *your best way* to help to win—and to shorten—the war with Germany.

In this case your duty to yourself and to those who depend upon you is identical with your patriotic duty. You owe it to yourself to secure an equipment which will carry you through the special requirements of war-time and through the dazzling opportunities of peace-time with equal success.

Send for information. It will cost you nothing and will not involve you in the slightest obligation. Delay is costly. Tear out the coupon now and mail to Business Training Corporation, Dept. 155, 187 Madison Ave., New York City.

JUST A WORD

The wireless operator, photographed on the cover of The Independent this week, suggests a new field of many possibilities in woman's work. It was only a few weeks ago that the first course in wireless operating was opened for women at Hunter College in New York and indorsed by the National League for Woman's Service as a wise and important phase of woman's work in war time.

That it is more than an emergency opportunity has already been proved by the permanent positions offered to women wireless operators in this country. The Navy has also asked for women radio operators for shore duty to take the places of men called to sea.

REMARKABLE REMARKS

REV. DR. W. S. BUSTARD—To hell with the Kaiser.

RENE VIVIANI—All the forces of freedom are let loose.

JAMES J. CORBETT—Aggressive fighters are a rarity these days.

CRITIC W. C. BROWNELL—Nothing is in better taste than piety.

JOHN D. ROCKEFELLER, JR.—The father owes it to the boy to be his pal.

HORATIO PARKER—A cradle song for trombones sounds preposterous.

REV. JOHN HAYNES HOLMES—If war is right, then Christianity is wrong.

WILLIE COLLIER—The minute I step on the stage I can "feel" my audience.

E. H. FORBUSH—A dozen five-cent traps will beat any cat alive in catching rats.

PROF. GILBERT MURRAY—Nations do not go to war for remote philanthropic objects.

BENTON CHINN—Every man General Lee commanded at Gettysburg was a conscript.

RICHARD LE GALLIENNE—What joy to feel ourselves perfect instruments of the cosmic music.

ED. HOWE—It is the business of every live newspaper to raise the devil in some way every day.

DR. LUDWIG DARMSTADTER—It is mainly true that the Yankees are idiots, but much depends on who says so.

JULIA H. GALLAHER—The principal thing to be considered in cooking spinach is to have it retain its bright green color.

BILLY SUNDAY—I've been preaching for twenty years, and I never saw a town with so much vim, ginger, tabasco and pepperino as little old New York.

REAR-ADMIRAL FISKE—In the summer of 1913 the German fleet carried out maneuvers which showed a grasp of naval warfare far beyond anything we had ever shown.

What to Read about Food in War Time

Whatever else the war may bring to the United States, two matters are already plain. We must not only feed ourselves this year, but we must send more food to Europe than ever we have done. Growing larger crops is half this task, but making the most of what we raise is surely the other half and the following books and papers deal with both problems:

Short Rations, by Madeleine Z. Doty. (Century Company, New York, $1.50.) Late in 1916 the author traveled thru Germany, and her story shows just what it means for a nation to be short of food.

Germany's Food, Can it Last? German case as presented by German experts. (University of London Press, 2 shillings.) An immensely interesting account of the far-sighted scientific plans carried out by Germany to make the utmost of food stuffs.

Household Management, by Kinne and Cooley. (Macmillan Company, New York, $1.10.) A textbook, but equally useful as a guide to any one seeking an understanding of the theory and practise of feeding a family nutritiously and economically.

Manual of Gardening, by L. S. Bailey. (Macmillan Company, New York, $2.) A scientific but not technical, very inclusive, entirely dependable guide for every owner of a patch of ground.

Food, What It Is and What It Does, by Edith Greer. (Ginn & Co., Boston, $1.) A small book packed with needful information as to comparative values, preservation, preparation and wise use of all foods.

PAMPHLETS. *Food Economy in War Time*, by Woodward Hopkins. (G. P. Putnam's Sons, New York, 15 cents.) *Production and Thrift.* (Department of Agriculture, Ottawa, Canada.) *Food Supplies in Wartime.* (Oxford Press, New York, 5 cents.) The publications of the Department of Agriculture at Washington include a great number of pamphlets invaluable to farmer and housekeeper at the present time. Among those just issued with reference to the immediate crisis are the *Spring Garden Series, Poultry Series, Thrift Series* and *Bulletin 647*, which gives detailed directions for growing on a quarter acre enough vegetables for the year for a family of six. *Doing for the Housekeeper* (Superintendent of Documents, Washington) shows what may be had from our Government for the asking. From the various state agricultural schools may be had information fitted to the given locality and on special problems. *Food. What to Buy. How to Cook It. How to Eat It.* (Life Extension Institute, 25 West Forty-fifth Street, New York, 10 cents.) The account of the diet squad experiment in feeding New York policemen on 25 cents a day, with menus and recipes. Among the Columbia War Pamphlets (Columbia University, New York) already issued are *Enlistment for the Farm*, by John Dewey, on the part school children may take in the nation's task: *Mobilizing the Country-home Garden: Food Preparedness*, a survey of our food situation. In preparation are one on the all important topic of *Farmer and Speculator: City Gardens*, by H. G. Parsons, of the New York Botanical Gardens; and a *Directory of Service* which tells the work in which citizens are needed and organizations to which they may apply.

ARTICLES. *The Independent*, April 14, 1917 (War Garden). *Scientific American*, January 20, 1917 (Our Waning Food Supply. Economic Condition of Germany). *New Republic*, February 24, 1917 (Agricultural Mobilization). *Countryside*, May, 1917 (Countryside Women Wanted).

Variety-Quality-Value

The Gorham idea of Service is embraced in three words, Variety - Quality - Value

— a Variety so liberal as to insure finding what you want — a Quality so dependable as to make you satisfied with what you buy — and a Value so substantial as to justify what you spend.

It is impossible to buy any silverware more artistically designed — more perfectly made, more dependably priced, or silverware which enjoys anything like its prestige and reputation among American families.

Gorham Sterling Silverware bearing this trade-mark is sold by leading jewelers everywhere —

"TO CALL TO FRESH VIGOR OUR LIFE-LONG FRIENDSHIP"

M. Viviani, Vice-Premier of France, phrased admirably the attitude of the French commissioners to the International War Council here when he said "We have come to this land . . . to call to fresh vigor our lifelong friendship . . . which these tragic hours have raised to all the ardor of brotherly love. . . . From today all the forces of freedom are let loose." This group, just landed in Washington, includes (from left to right) Secretary of State Lansing; General Joffre; General Scott; M. René Viviani, Vice-Premier of France; and Ambassador Jusserand

EVERY TUB MUST STAND ON ITS OWN BOTTOM

THE lesson of the war is local self-sufficiency. It is a war for independence, not merely the independence of Belgium, Serbia and Rumania, but of England, Russia and the United States, not so much political as economic independence. The visions we used to have of world-wide interdependence, universal free-trade, unrestricted migration and complete cosmopolitanism have vanished from our view. We may retain our faith in them as ultimate ideals, but they cannot be our immediate aims. The world advances by zigzags and it is now upon the other tack, heading toward nationalism, particularism, localism, of every sort. The published terms of the Allies provide for the creation of several new nationalities, Poland, Armenia, Bohemia, Jugoslavia, each with its own language and laws, and other nationalities, Lithuania, Ukrainia, Ireland, Zion, are clamoring to be born. The great empires of the nineteenth century seem likely to be broken up.

But this political fission, however far it may go, is not so important as the cultivation of a new spirit of local self-reliance, the reversal of the former trend toward excessive specialization and the disposition to lean upon strangers. If it was cheaper to buy foreign food that settled it in the minds of most people and those who insisted that not every question could be determined by reference to the ledger, but that there were higher and human interests to be considered, were laughed at as fools or denounced as agents of the trusts. Consequently those who pleaded for protection and other forms of encouragement of local industries had to meet the opposition on its own low level and to disguise their measures as "tariff for revenue only."

But the war has awaked the world to a better realization of fundamental principles and the old mercenary school of political economy is discredited by the present crisis. England, the leading free-trade nation of the world, is now enforcing prohibitive protection. America, under the control of the free-trade party, is now called upon to cultivate not merely national but local independence. To many of our readers this will seem but another instance of reversion toward barbarism imposed by war, and we shall not gainsay them, for whatever the theory of it the duty of the hour is plain.

This duty is the home production of necessities and the curtailment of imported luxuries. By "imported" we mean not merely articles made in another country, but those made in another state, county, town or farm. America has reached the same conclusion as Voltaire's Candide at the end of his adventurous career, "Let everyone cultivate his own garden." Washington is giving us lessons in backyard agriculture. Schools of domestic economy are urging the housewives to renounce their dependence upon the delicatessen and revive the home industries of their grandmothers. Sheep are to take the place of lawn mowers in the parks and potatoes are to be grown on vacant lots. Each city is to be fed from its suburbs so far as possible and altogether the people of this country are to become more neighborly.

In the old days each town was an independent economic unit and each farm prided itself on its self-reliance. The tailor and the shoemaker went into the home to make clothes and shoes from home-grown materials. There was no worry over Germany's monopoly of dyes, for madder was grown in the garden and butternuts and applebark got from the trees. The sugar trust was impotent when honey, maple sugar and sorghum syrup could be made at home. The pioneer homestead had no need for money except to buy certain tropical products such as spices, tea, coffee, rice, cotton and indigo and manufactured products such as tableware, ironware and notions.

There is no need to return to such primitive conditions and it would be absurd to abolish the factory system. But we may admit that it was not wise for New York City to become so dependent upon Washington for its apples, upon Colorado for its potatoes and upon Florida for its beans, and we may say that the Indians of Oregon were foolish to sell their salmon and buy Norwegian sardines. Anyone who takes an afternoon ride thru rural New York and New England and notes the abandoned farms, the empty schoolhouses and deserted churches of once thriving communities will realize that there was something wrong with the policy that produced them. Railroads and steamships are great blessings, but we have overused them. Cheap transportation has turned out to be very expensive and the needless shipping of things back and forth across the continent accounts for a large part of the cost of living.

The issue of the war is now turning on whether England or Germany is self-supporting. Germany strove for years before the war to keep up her home-grown food supply in spite of increasing population and in so far succeeded that she is holding out at the end of the third year of war, with all her commerce cut off and her foes outnumbering her six to one. England pursued the opposite policy and allowed her agriculture to decline while she bought in the cheapest market to be found anywhere on the planet. This was the correct policy—from the monetary point of view—and England waxed wealthy. But five-sixths of her bread must come from abroad and all her gold cannot bring it to her. She has, we hear, only about six weeks' supply of food on hand and more shipping is being sunk in a month than Great Britain or the United States build in a year. Warnings she had in plenty, but she staked her life on the old school of political economy and her fleet. Two of her Cassandras are conspicuous; Kipling the militarist and Lloyd George the pacifist. If England had followed Kipling's advice conscription would have been adopted after the Boer War and the Great War might have been decided in 1914, or better still, avoided. If England had followed Lloyd George's advice the ducal estates would have been broken up into small farms and the vast game preserves would now be raising food. How the Tories laughed at Lloyd George when he complained that the pheasants pecked the turnips. They had never heard of such a thing, and when he proved it by the farmer that made no difference to them. What were turnips compared with pheasants? But now in the hour of their distress the Tories have called upon Lloyd George to save them and they listen humbly when he tells them to eat their pheasants and go to raising turnips. England's political independence is now seen to depend upon her economic independence and we believe that the same is true, in some degree, of other places than England.

OUR COUNTRY, RIGHT

WE have always objected to the use of that misleading phrase "Our country, right or wrong," because it implies that a nation should have no conscience and should not repent its misdeeds. But at least an equal objection to the saying is its subtle implication that we are doing something that won't bear analysis. If it is ever appropriate, now is certainly not the time when the United States is engaged in the most righteous and completely justifiable war which we have ever fought. With a good conscience we can say "Our country, *right*," without weakening our assertion by a superfluous explanation of what our attitude would be if it wasn't.

We fought the Revolutionary War because we could not tolerate the ignorant interference of King George the Third and his ministers in affairs that concerned the colonies. But the rule of the British monarch was mild, constitutional and parliamentary compared to that of the autocrats of Central Europe.

We fought the War of 1812 because we resented the seizure of our ships and the impressment of our seamen. But nothing in the whole category of wrongs that provoked us to war then could be compared with the wholesale murder of our citizens on the high seas by the German submarines. The "continental system" of Napoleon and the "orders in council" of the British ministry were vexatious enough, but they did not involve massacre of neutral civilians.

We fought the Mexican War to transfer the South-West from Mexican to American control. By the Zimmermann plot our enemies have schemed to transfer this region back again to Mexico, altho it had in the meantime been settled and developed by millions of Americans.

We fought the Civil War to prevent the rise of a new republic based on negro slavery. The Germans have begun their attempt to build up a vast empire by reducing to political subjection every region that their armies could reach and by enslaving in the most literal sense of the word thousands of Belgian workmen.

We fought the Spanish War because we could not tolerate Spanish misrule in Cuba. But nothing in the history of Cuba exceeds in atrocity the German occupation of Belgium and northern France, and the Turkish attempt to exterminate the whole Armenian race has no historical parallel whatever since the Tatars overran Asia and eastern Europe.

Every evil against which the United States has ever made war it now meets once more in an aggravated form; and if we are now wrong we have never been right.

A LATE SPRING

AS soon as war is declared, said William Jennings Bryan some months ago, a million men will spring to arms over night. Where they would find arms to spring to he did not say, altho this is a point worth attention, since it was a full year before our munition works could turn out the guns needed by the Allies in 1914. The days have gone by when a minute man could snatch down his flintlock from over the fireplace, hang his powder horn over his shoulder and step forth ready for service. Military service is no longer "soldiering," but one of the learned professions and skilled trades.

We have now been a month at war, and so far there are no signs of the spring of the million men. It is, however, believed that an army of half a million at least may be raised by conscription and that they may be drilled and equipt for service in the course of a year.

OUR ALLY ARMENIA

SINCE the Russian revolution overthrew the hateful autocracy which has so long been the Achilles heel of the Grand Alliance there is not one of the nations with which we are now associated of which we need be ashamed or distrustful. But we should not forget that we have other allies than the nations which march to the front under their own flags and are privileged to send diplomatic representatives in the name of a sovereign state. There are the submerged and half-forgotten peoples who cannot stand in their own strength to fight the Central Powers, but have better cause to wish the victory of the Grand Alliance than any member of it. Of all the nationalities crushed and broken by the cruel progress of this war none has suffered so greatly as Armenia. When we read of the sack of a Belgian or Polish village we are rightly stirred with pity and indignation, but what shall be said of the government which drove more than half a million men, women and children from their homes to perish in the desert? American soldiers will be sent, of course, to whatever field of action where they can best assist the general cause; but we confess that we should like, for reasons of pure sentiment, to see the American flag floating by some new-chosen banner of a free Armenia on the hills of Asia Minor. In view of the long service of thousands of American teachers, doctors and missionaries in that neglected corner of the world, it could scarcely be matter for surprize if our people should single out from the leagued nations afflicted Armenia as the particular ally and protegé of the United States.

THE PLANET MARS

THIS has been called a world war, but even that term is inadequate. It is a war between two worlds. Except for short frontiers bordering on such neutral countries as Switzerland the whole of the area occupied by the armies of the Central Powers is cut off by continuous lines of entrenchment or vigilant blockading fleets from every other country on the planet. The ties of commerce, travel, mail traffic, submarine cable, even wireless communication, have one by one been severed so completely that only the faintest echoes and rumors from that other world reach our ears. Never in modern times has so great a region been so completely isolated; tho it is cut off from our civilization not by distance as are the planets, nor by mountain barriers as was India, nor by a wall of stone as was the ancient China, but by a wall of fire such as Wotan kindled about Brünnhilde.

For convenience let us call this other world the planet Mars, since it is smaller than our Earth and is notoriously given to war. In fact, the only remaining point of contact between this planet and ourselves is the line of battle. The Martians are little known to us, we cannot understand their attitude on certain ethical questions, even their logic appears to be different from ours. But we know a few external facts about their civilization. We know that Mars is a self-supporting planet which

finds within its own limited borders every necessity for sustaining a great war from grain and rubber to copper and guncotton. Some of our scientists have calculated that so small a planet must sooner or later run short of some necessity, but at present it seems to lack nothing that our world can supply. We know that Mars, altho divided into different peoples (such as the Germans, Hungarians, Bulgars and Turks), is now practically a political unit and is administered by a uniform system which contrasts most markedly with the chaos and disunion of our own world. We know that the Martians, altho far more like the dwellers of the Earth than most of us are willing to admit, are all idolaters who pay to certain individuals known as kings, sultans and war-lords what seems to us a superstitious reverence, and that they have a strange and terrible religion called *Weltpolitik* which calls for human sacrifices.

The purpose of the Great War is to bridge the horrible chasm which separates the two worlds and bring back Mars to be once more part of the Earth. We intend to convert Mars, by the sword if that is the only way, to our own religion of freedom and democracy. We hope also to profit in our turn by the knowledge and experience of the Martians, who may tell us some day how it was that so small a planet could so long withstand the vastly greater numbers and resources of our world. When the day of peace and reconciliation comes we will have much to learn from each other and we will be able to explain and to understand much that now seems to us incomprehensible. What cannot be tolerated is that the two worlds should remain divided and the abyss of antagonism and misunderstanding never be closed.

THE WORLD'S NARROWEST ESCAPE

NOW that it is all over we are free to tell each other in what peril every free nation stood during the March days when we could get no news from Russia. The Duma has triumphed, and whether Russia meets victory or defeat in the remaining months of the war, or even whether an attempt is made to restore Czardom, matters comparatively little since the critical moment has been safely passed. It is no longer possible for the autocracies of Prussia and Austria to gain either material or moral support from a Russian autocracy, and the entrance of America into the Great War has brought against the Central Powers a preponderance of military force which nothing but aid from Russia could counterbalance.

Suppose that the Imperial Court had triumphed over the Russian people. This would probably have meant a speedy peace with the Central Powers and a withdrawal of Russia from the Entente. The nations of western Europe alone would probably be a match for the Central Powers, but they could hardly hope for decisive victory with all the troops in the eastern theater of war thrown into the scale against them. After the conclusion of a compromise peace there would have been every reason to expect a renewal of the old Holy Alliance of Russia, Austria, and Prussia; with Turkey, the lesser German states, and two or three of the Balkan countries added for good measure. If this diplomatic realignment of the nations had occurred, and the possibility of it was seriously discussed not many weeks ago in every belligerent and neutral country, the greater part of the armies of the world would have compacted under autocratic auspices into one great military alliance capable of crushing any revolutionary movement from within and coping with any hostile alliances which might be formed by other nations. When we see how nearly equal are Germany and Austria to all the forces which the rest of the world has yet been able to send against them, we can imagine what a menace they would be with the aid of hundreds of millions of Russians organized by Prussian system and dominated by Prussian diplomacy. Neither the Roman Cæsars nor Napoleon at the hight of his power could so subject the nations to their will as the rulers whose domains would stretch from the Arctic to the Persian Gulf and from Belgium to the Pacific.

That this should not be was determined by God and Man when the red flag was raised above the palaces of Petrograd.

THE BATTLE OF THE TYPES

THERE is an internecine war going on in Germany which fills large space in the papers and excites hot partizanship. The immediate question is whether Latin or Gothic type shall be used in prints. Really, however, the issue is broader than it seems, for Germany stands at the fork of the road with two diverging lines of policy open to her. One leads toward cosmopolitanism, the other toward nationalism. Those who favor the first urge that Germany should adopt free trade since England is becoming protectionistic, and should strive for closer intercourse with the outside world. The opposing party advocates an isolated and self-sufficient Germany or Central Europe and the cultivation of the nationalistic spirit by all means. The former party naturally favors the shape of letters used in English and in all the languages of Latin origin. The latter party argues that German literature can be properly printed only in the original German text.

The controversy is an old one, altho the war has brought it up in an acute form. Up to the end of the nineteenth century the Latinists were gaining on their opponents in Germany. Almost all scientific books and periodicals and many of the trade papers and radical journals were printed in Latin type and it seemed likely that the Gothic would gradually sink into disuse.

But with the intensification of the German national spirit preliminary to the Great War there was a movement to discard Latin letters and all words of Latin origin. So the "telephone" became a *Fernsprecher* and the "villa" a *Landhaus*, and it was regarded as unpatriotic to use any but Gothic type.

From our standpoint it seems that in this typographical battle the Latinists are on the right side, for the Gothic letter is less legible than the Latin. But we must admit that it would be easy to devise a form that would be better than either. In both print and script our *e's* and *c's*, and our *n's* and *u's* are too much alike. There is not much danger of confusing a consonant with a vowel, but *n* and *u* are so often mistaken in script that it has become customary in writing for the press to overline the *n's* and underline the *u's*, but this is an awkward expedient. Practical tests in the psychological laboratory on speed and accuracy of reading have shown that some slight modifications of a few of our ordinary Latin types would greatly relieve the present strain on the eye and attention.

Benjamin Franklin, who, among other things, was a good printer, opposed the tendency to do away with capitals on nouns, the long ſ and italics in the interests of uniformity, for as he says:

> Certainly the omitting this prominent Letter makes the Line appear more even, but renders it leſs immediately legible; as the paring all Men's Noſes might smooth and level their Faces, but would render their Phyſiognomies leſs diſtinguiſhable.

Franklin was doubtless wrong in urging the retention of the long ſ because it is so easily confused with *f*, but he was right in his main contention, that irregularity is conducive to legibility. The capitalizing of substantives as used to be the custom in English and is still in German is a great assistance in grasping at a glance the structure and meaning of a sentence. In reading aloud one sometimes has to go back and correct an emphasis because he has mistaken a noun for a verb or adjective of the same spelling. It is of less importance to be able to distinguish at sight a common from a proper noun. In fact there is a tendency to do away with capitals as far as possible, and many nouns and adjectives which, as derived from proper names, were capitalized a few years ago are now put into lower case. Italics also are being tabooed in America. But the present movement for the disuse of capitals, italics and punctuation marks certainly means an increased burden upon the reader. The modern printer is sacrificing attractiveness as well as legibility in his desire to obtain a level line and even page. Uniformity is the foe of beauty. Irregularity and diversity are what give pleasure and interest.

THOSE NIBLICK FEET

WE often used to wonder why so many ladies, otherwise attractive, had such ungainly gaits. We too hastily assumed that it was because they were careless of appearances or had never been trained in the art of graceful walking. Now we know the poor things can't do otherwise than totter and wobble because of the deformity of the lower extremities of the lower limbs. The recent styles have forced upon our attention the unpleasant fact that a large proportion of American women—we are unable to state the exact percentage—have club feet. What is more surprizing, the deformity is not congenital, but seems to be artificially induced by a painful process requiring specially constructed and expensive shoes. The most common distortion is *talipes equinus*, by which the sole of the foot is deflected some forty-five to sixty degrees from the horizontal at the front by means of plano-concave heels several inches in hight. This is frequently complicated by *talipes varus* or *valgus*, by which the foot is deflected thirty or forty-five degrees—judging by the eye—from the perpendicular in a centripetal or centrifugal direction. The aim seems to be to bring the feet in shape and size to the *kin lien* or "golden lilies" so much admired in China. But if our ladies are to get their foot fashions from the antipodes they should be warned that this form of deformity is already *passé* in China. All the club women of China now are unclubbing their feet. Since the custom only lasted a thousand years—a mere passing fad, as things go in China—it is hardly worth while for our ladies to take it up. We suggest that the Canton Reform Club of Big Feet Women send some orthopedic missionaries to America to cure our ladies of the Chinese totter.

HOW TO OBEY THE LAWS

ONE of the most fictitious of legal fictions is that everybody knows all the laws of the land by heart and that ignorance of law is no excuse. It is especially absurd in such a time as this when new and complicated regulations are being suddenly applied to the ordinary affairs of life. More than one innocent American has already been shot dead for passing along a street hitherto public, and in the future many well-meaning citizens will be in danger of condign punishment for selling or saying something contrary to some unheard-of ruling.

The same difficulty has arisen in other belligerent countries, especially in Germany, where the regulations are more numerous and more rigidly enforced than elsewhere. The Reichstag has endeavored to meet it by passing a law establishing Information Bureaus in all parts of the country. From these anyone can learn without cost whether a proposed act is permissible or prohibited and just how to shape his conduct in conformity with the law.

Now if it is proper to learn from an enemy—and *fas est et ab hoste doceri* is an old maxim—here is an institution we might well adopt. In the United States we have some fifty different sets of laws and thousands of new ones added every year besides local regulations innumerable. Yet there is no way by which a would-be law-abiding citizen can learn what he ought or ought not to do. The executive departments of the Administration decline to commit themselves to an opinion as to the scope and meaning of the laws they enforce. They merely refer the inquirer to the text. The courts refuse to pass upon a hypothetical case. You have first to commit a crime before you can find out if it is a crime. The men who make the laws profess ignorance as to the extent of their applicability and there is no reason to question this profession. The only way for the private citizen to be safe is to consult a lawyer at his own expense and even then he is not safe, for the lawyer will not guarantee that his opinion is correct.

YOUR TOWN IN WAR

What is your community doing to carry into effect the proclamation of President Wilson urging the enlistment of all Americans in a great Service Army?

The Countryside wants to hear just what concrete work—organization, drill, relief, co-operative gardening, food conservation—is being done today in your suburb or village by the people as a community.

Five Dollars will be paid on acceptance for every letter on this subject we consider good enough to publish.

Be terse, accurate, and direct, and don't take over five hundred words to tell your story. Photographs help. Address

The Editor of THE COUNTRYSIDE.

THE STORY OF THE WEEK

Petain, Chief of Staff

General Petain, who commanded the French army defending Verdun during the critical stages of the battle in February and March, 1916, was appointed chief of staff at the Ministry of War by the French cabinet on April 29.

The appointment of General Petain to a position of authority was discust when General Joffre, after placing the French armies in a high state of organization, was made a marshal of France and retired from active service, but it was understood that Petain's insistence on fuller authority than the cabinet was willing to grant caused the appointment of Nivelle instead. It is not yet known just how wide control his position as chief of staff at the Ministry of War will carry. He will probably succeed to the duties laid down by Minister of War Lyautey, after the latter quarreled with the Chamber of Deputies and returned to the colonies.

General Petain has the reputation of being above all a fighter, "The Man Prepared," as Mr. Purinton called him in his article of that title in The Independent of June 26, 1916. When the war started he was only Colonel Petain, but by September 14, 1914, he had become a general of division.

The Second Battle of Arras

On Monday, April 23, the British started a second offensive in front of Arras. The first offensive, that of Monday the fortnight before, gave them Vimy ridge and a host of prisoners at comparatively small cost. But this time the Germans were not caught napping and the British gains have been slighter and much more expensive. In the interval between the two attacks Hindenburg visited the front in person and stiffened up the defensive. Heavy reinforcements have been brought and, according to the British account, a large part of the reserve of several hundred thousand men which he had gathered for an offensive in some quarter has been used up on the Arras front.

Lens, which the Germans were preparing to evacuate before this, they still occupy and now apparently intend to hold. The British, on their part, show no disposition to attempt the capture of Lens, altho it is within a couple of miles of their positions at Loos and Lieven. They have directed their new attack eastward, instead of northward, with Douai as their objective. Half way between Arras and Douai is the new system of German defenses known as the Wotan line. At daybreak Monday the Canadian, Scottish and English troops charged the German trenches along a seven mile front and from that hour till the end of the week the struggle continued without cessation. Both sides agree that the slaughter was unprecedented, tho each ascribes the greater loss to the enemy. The territorial advantage lies with the British, who gained several villages and held them in spite of repeated counter-attacks made in the old Prussian fashion of massed troops of five or six thousand men in the face of the murderous fire of the British artillery. The British Minister of Munitions states that the expenditure of six inch shells and larger was six and a half times that of the second week of the battle of the Somme last year, and consequently unequalled in the history of the world. Never also has the world seen such fighting in the air. On the 23d the British Royal Flying Corps broke their record by bringing down forty German machines in fights extending up to 15,000 feet above the ground. They carried their bombing and photographing raids 45 miles behind the enemy's lines and lost only two machines during the day. The German losses in the air are said to be three and a half times as heavy as the British, yet complaint has been voiced in Parliament that the latter are greater than they should be because of inefficient machines. According to this protest the British lost 56 aviators in January, 119 in February, 152 in March and 319 in the first three weeks of April.

At the French end of the line there has been little activity during the week. The British and French seem to alternate their attacks week by week, tho whether this is accidental, intentional or due to lack of coördination is a question. According to the French estimates the Germans lost more than 200,000 men on the Aisne during April. Twenty thousand were taken prisoners.

Food Shortage in England

The U-boat campaign is already making a serious reduction in the English food supply. For many years before the war agriculture in Great Britain had been on the decline and the country was becoming increasingly dependent on importations. Arable land went out of cultivation and was turned into game preserves and lawns. This year the Government urged the utilization of all waste and pleasure grounds for growing crops. but this plan could not be fully carried out because of the lack of labor. Several thousand farm laborers who were serving in the trenches were brought back, but now the military authorities have called for 500,000 more men to fill up the gaps in France and this will further reduce the yield of crops. In the period between June and the August harvest there is ordinarily only about food enough to last six and a half weeks on hand. Now of course the stock is much less than usual and importation is restricted. The Germans calculated that if they

WHEN GOVERNMENTS GARDEN

The parks and public squares of Paris have been plowed and planted for three seasons now, and there's nothing unusual in this woman digging her bit in the Tuileries. But a vegetable garden in Washington, just across from the White House, is more novel. President Wilson turned over the first spadeful of earth and the White House staff promises to continue the good work till the crops are harvested

Ding in New York Tribune

MANY HANDS MAKE LIGHT WORK

could sink a million tons of shipping a month England would be reduced to surrender by June. They have so far destroyed shipping at only half or two-thirds that rate and we cannot say how far this has curtailed the supply of oversea food. At the end of the first month of the German blockade it was announced that "less than 16 per cent of the wheat destined for Great Britain had been sunk." But in March and April the loss of ships has been greater than in February. So it is to be feared that about a fifth of England's bread is now being cast upon the waters. In February Premier Lloyd George warned the people that "our stocks of food are low, alarmingly lower than within recollection." The British Food Controller, Baron Devonport, tried at first to limit the consumption of food by appeal.

But in spite of the earnest newspaper propaganda and official warnings only a small part of the British public, some say a tenth, followed the injunctions of the Food Controller and he is now obliged to adopt compulsory measures. Lord Devonport has established one meatless day a week for all hotels, restaurants and clubs. This is Tuesday for London and Wednesday for the provinces. Potatoes are prohibited except on meatless days and Fridays. Only five ounces of meat, weighed uncooked, is permitted to each person. Light pastries, tea cakes, frosted and chocolate cakes, and expensive confectionery are prohibited.

In the House of Lords on April 25 the Food Controller announced:

> If our shipping resources were assured we could undoubtedly carry on, but they are not assured. Our shipping is being depleted every day in large volume, and altho our existence depends thereupon, it is at the moment a wasting security. As there is no immediate prospect of our locked up shipping being released from its present occupation we have to face this grim fact.
>
> Unless we exercize sufficiency of self-denial in the consumption of bread, I tell you the blunt truth, we shall not get thru to next harvest without severe privation and all that it involves.
>
> Who can say when the war will end? We must be prepared for all contingencies, even the failure of the present year's harvest. The continuance and increase of the enemy's submarine activity is another factor without which our outlook upon the future cannot be complete. There is no margin for risks.

From this we may infer that Lord Devonport is planning to commandeer all the food in the United Kingdom and put the whole population on limited rations.

THE GREAT WAR

April 23—British begin new attack on Arras front. British Admiralty reports loss of sixty-four vessels in the week.

April 24—German counter-attack on Gavrelle. British attack Bulgars near Lake Doiran.

April 25—French attack Germans and Bulgars north of Monastir, Serbia. Strikes in German munition works continue.

April 26—German destroyers bombard Ramsgate.

April 27—Guatemala breaks with Germany.

April 28—Canadians take Arleux, two miles from Wotan Line. House and Senate pass draft act.

April 29—Pétain, defender of Verdun, made Chief of Staff. British take a mile of German trenches in front of Wotan line.

Congress Indorses Conscription

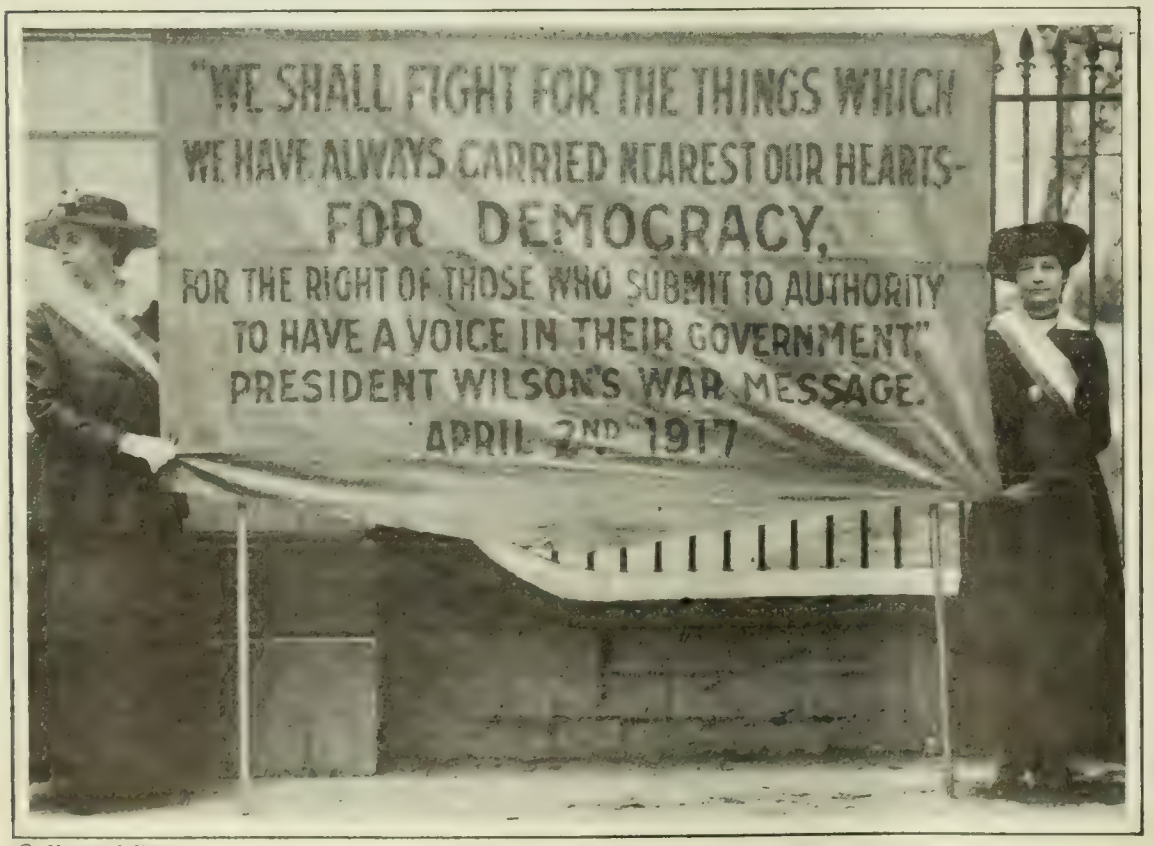
With a readiness that surprized everyone opposed to compulsory military service and nearly everyone in favor of it, Congress agreed to President Wilson's military recommendations. The vote in the Senate was a foregone conclusion, but the collapse of the opposition to the administration program in the House of Representatives was quite unexpected. The Military Affairs Committee of the House had recommended a preliminary trial of voluntary enlistment before resorting to the draft, and Champ Clark descended from his chair as Speaker to make a furious attack on conscription. The friends of voluntary service did rather more than their share of the debating, and Miss Rankin, representative from Montana, was so imprest by the trend of sentiment that she sent a message to some citizens of her native state asserting that she knew of no one in the House who was in favor of the President's plan. And yet when the amendment offered by Representative Kahn of California to place the new citizen army on a compulsory basis was taken up by the House acting as a committee of the whole it was carried by the decisive majority of 279 to 98. The roll call vote on the amendment was equally decisive, 313 to 109. The great majority of those who stood out for voluntary service on the test vote decided not to carry their opposition to conscription to the point of voting against the army bill which embodied it, and so it passed the House by 397 votes to 24. A majority of the obstinate twenty-four belonged to the President's own party.

In the Senate there was comparatively little opposition to the administration plan for the selective draft, but a large amount of time was taken up in the discussion of certain details, especially the advisability of authorizing Ex-President Roosevelt to recruit a force of volunteers for immediate service in France. An amendment offered by Senator Harding of Ohio making it possible for the ex-President to raise four divisions of infantry composed of volunteers over the age limit of the selective draft passed the Senate, but a similar amendment was defeated in the House. The test vote on the principle of the army bill came in the Senate on an amendment authorizing a call for half a million volunteers. This was rejected by a vote of 69 to 18. Only eight of the eighteen advocates of the volunteer system voted against the final passage of the army bill; Senators Gore, Hardwick, Kirby, Thomas and Trammell, Democrats, and Borah, Gronna and La Follette, Republicans.

The army bills as passed by the Senate and by the House of Representatives are not in all respects alike, and important adjustments will have to be made in committee before both branches of Congress can agree upon a common measure. Both bills authorize the President to raise the regular army and the national guard to full wartime strength by volunteer enlistments and to raise a citizen army of five hundred thousand by selective conscription, the quota of each state being in proportion to its population. Persons exempt from the draft include Government officials, persons engaged in industries essential to the prosecution of the war, those having dependent families, those physically unfit, and clergymen or persons belonging to religious sects opposed to war. Other conscientious objectors receive no consideration. The chief difference between the House and Senate bills is that the Senate plan makes the ages subject to the selective draft 21 years to 27 inclusive; the House plan 21 to 40 inclusive.

America Receives French Commission On April 24 the war commissioners from the French Republic reached Hampton Roads and thence proceeded to Washington on the President's yacht, the "Mayflower." Up to this time the movements of the commission had been kept a profound secret in order to prevent any interference by the common enemy. When the presence on American soil of the French commissioners was once known their journey became a triumphal progress, a continuous ovation without parallel in the diplomatic history of the United States since the visit of Lafayette. The favorite of the crowds was Marshal Joffre, whose picturesque personality and military achievements have made him as familiar to the American people as any figure in the whole course of the Great War. Some may have been disappointed to discover that the "Major Dreyfus" in the party was not, after all, the hero of the famous state trial, but they were amply compensated for the disappointment by having the opportunity to meet in person Marshal Joffre, M. Viviani, and many other great Frenchmen of whom they had so often heard. Among the prominent visitors were the Marquis de Chambrun, a descendant of Lafayette and a leader in the Chamber of Deputies; M. Hovelacque, Inspector of Public Instruction; M. Simon, for many years Inspector of Finances, and Admiral Chocheprat.

No sooner had the French war commission reached Washington and paid their respects to President Wilson than they began consultations with the British commissioners and the civil and military heads of the American army and navy. Of course the details of the discussions on the prosecution of the war are still kept secret, but it is generally believed that the French are urgently desirous of seeing an American army on French soil as soon as may be feasible. The British do not oppose the sending of an expeditionary force across the Atlantic, but they regard as of far greater importance the regular transportation of foodstuffs and of munitions of war. There is no real divergence in policy between the British and the French representatives, but it is natural that a nation undertaking to control the sea routes and to supply its allies with the necessities of war would be most imprest by the danger of a shortage of goods, while a nation repelling an invader from its own soil would more greatly dread a shortage of man power. While the war conferences are progressing the commissioners will send to their home governments accounts of agreements reached and decisions made in regard to such questions as the distribution of the three million dollar loan among our various allies, the problem of maritime transportation, the methods of coping with the submarine peril, the mobilization of American resources for the purposes of war, and, perhaps, the participation of American troops in the fighting on the western front.



Root to Go to Russia Elihu Root, former Secretary of State, has accepted the President's offer of the chairmanship of the American war commission which will be sent to Russia. With him will rest the responsibility for the diplomatic side of the mission. The chief purpose of the United States in sending the commission is, however, to rehabilitate the economic condition of the country in order to put it in fighting trim to renew the offensive against Germany. The aid which the United States will extend will probably include a very considerable share of the total war loan to the Allies; but President Wilson intends that we shall loan Russia not our money alone but our business efficiency as well. For example, the transportation system of Russia has so completely broken down that altho Russia is one of the greatest of the grain producing countries in the world it has sometimes been impossible to feed either the soldiers at the front or the civilian population in the towns. The advice of experienced American railroad men should certainly help to extricate the Russian authorities from some of the difficulties of this situation. Of course, American aid to Russia during the war is largely conditioned upon the continuance in office of the present progressive government and the present war policy, as the success of either the reactionaries or the extreme Socialists would probably lead to the conclusion of a separate peace with Germany.

TURNING GERMANY OUT OF CHINA

When diplomatic relations were broken and the German Consul recalled, the Tientsin chief of police speeded the parting guest at the gate of the German concession

© Harris & Ewing

IN THE WORDS OF MR. WILSON

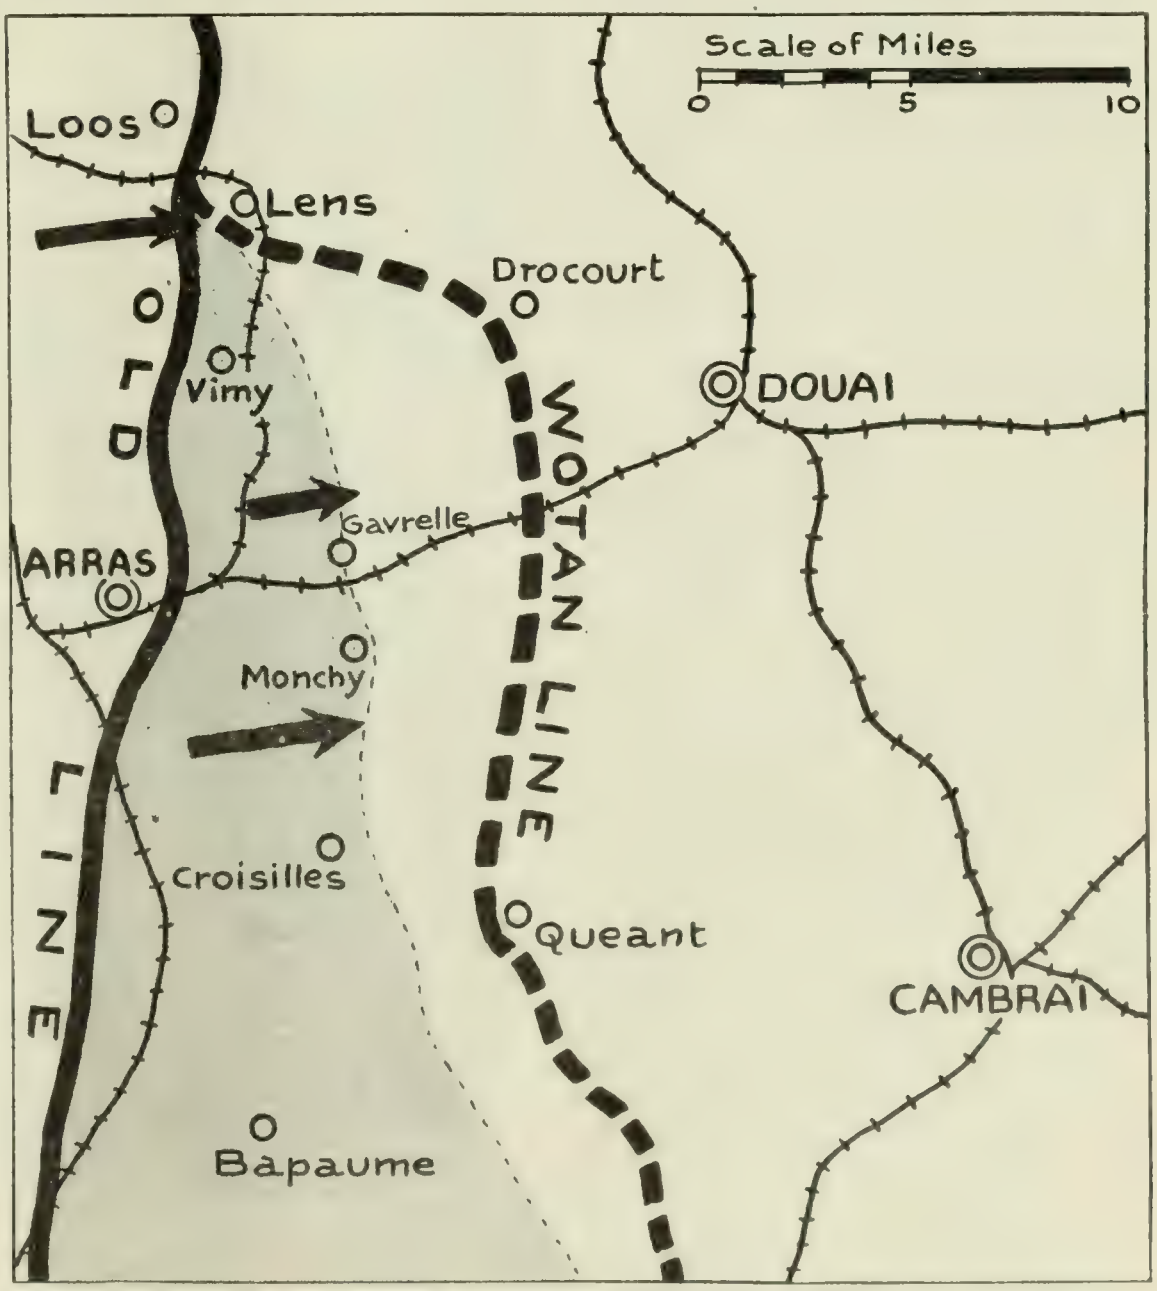
The suffragists who believe in a Federal amendment for woman suffrage have stood their ground at the White House gates for several months now waging a banner campaign on the President. Their latest slogan, from President Wilson's war message, ought to convince even its author

Riots in Brazil The republic of Brazil, on the verge of entrance into the Great War, is embarrassed by internal friction. In Porto Alegre anti-German riots resulted in the burning of nearly three hundred buildings belonging to the German residents. On the other hand, German settlers in the states of Rio Grande, Parana and Santa Catharina have in many cases risen in insurrection against the national authority. The German population in this section of the republic is estimated at half a million and it is totally out of sympathy with the Portuguese-speaking majority of Brazilians; forming, in fact, a state within the state. The republic of Uruguay seems to feel some alarm lest the Germans of southern Brazil determine to cross the boundary between the two nations and carry on a campaign in Uruguay. Some ardent Brazilians advocate sending an army of

two hundred thousand infantry to the European battlefields.

Warlike sentiment is rising as high in Argentina as in Brazil, altho the former country still maintains diplomatic relations with Germany. The Argentine Government has compelled subjects of the Central Powers to leave certain districts and especially to keep away from the arsenals and munitions factories, and mobs in Buenos Aires have attacked the German legation and the offices of German owned newspapers. Many of the interned German steamships taken into custody by the Argentine Government have been found to be seriously damaged by their crews.

In response to Argentine public sentiment the Government has sent to Germany a diplomatic note demanding satisfaction for the sinking of the sailing ship, "Monte Protegido," on April 13. If the German Government attempts to evade responsibility for the loss of the vessel Argentina may break with Germany. The people of Argentina blame the Germans for the sinking of another Argentine vessel, the "Curumalan," which disappeared somewhere in the Atlantic without leaving a trace.



Big Business and the War The report of the finance committee of the Chamber of Commerce, representing business interests of the country, is noteworthy for its recommendations as to the best methods of meeting the cost of the war. The authors of the report believe that as much as possible of the expense incident to a state of war should be met by taxation rather than by loan for the reason that "war borrowing leads to extravagance; war taxation leads to economy." An excess profits tax is recommended, but the committee insists that it be limited strictly to wartime and in no case be retroactive. An increase of 50 per cent on first class mail matter might yield a $100,000,000 revenue in the course of a single year. Stamp taxes, increased customs duties and increased personal income taxes are approved, but the committee does not believe that the tax on corporation incomes or the inheritance tax should be changed. The Chamber of Commerce plans to take a referendum to test the sentiment of the business men of the nation in regard to methods of raising war revenues.

American Trade Increases The recently published trade figures for the month of March show that the German submarine blockade has not been at all successful in the attempt to drive American commerce from the seas. The total value of the imports during the month amount to more than $270,484,000, the largest import value during any month of American history. The exports for the same month were worth over $551,278,000. This record has been only once surpast, in January of this year. February exports were much less than those during the past month because many shipowners feared to risk entering without escort or armament the danger zone established by the German Government. The importation of gold during March totaled nearly a hundred and forty millions, and the net balance of imports of gold for the last nine months was over six hundred and fifty millions. This explains in part the ability of the United States to lend large sums to the Entente Allies.

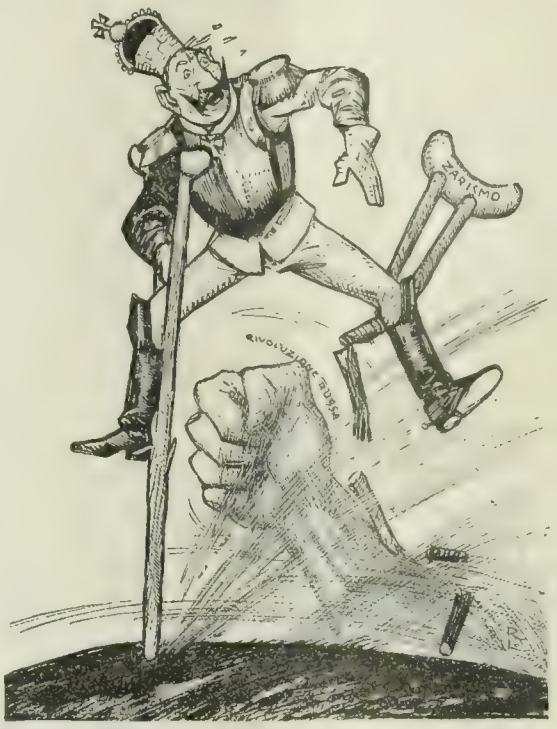
Railroad Affairs The Supreme Court has affirmed the decree of lower courts enjoining the Southern Pacific Railroad from disposing of timber or minerals on the land received by Congressional grant. By the same decision the Government won its suit against the Southern Pacific Railroad to regain 2,300,000 acres of Oregon and Washington land worth $30,000,000. The railroad forfeited its title to the land grants by charging more for the lands sold to individual settlers than the maximum price per acre established when the railroad was endowed with the land in question. This violation of the terms of the original grant led to the passage in 1916 of the Chamberlain-Ferris act which divested the railroad of its lands and provided for their disposition by the Federal Government. The constitutionality of the Chamberlain-Ferris law was therefore involved in the case brought before the Supreme Court.

The Interstate Commerce Commission has not finally determined whether or not to grant a general advance in railroad rates, but it has permitted the railroads to file supplemental tariffs covering the desired 15 per cent increase. The new tariffs will be subject to suspension, complaint, investigation and correction. If they are finally approved they will go into effect on the first of July. The railroad companies complain that operating expenses are increasing far more rapidly than revenues and point to the decrease in net income during February of more than $22,000,000 as proof of their contention.

Coal Miners Get Wage Increase The high cost of living has compelled coal miners in the Pennsylvania fields to break their contracts and ask for increased wages. Representatives of fifty-five thousand soft coal miners met a committee of operators in Philadelphia and demanded a one-third increase in wages but compromised on a twenty per cent increase. A strike of these men had been ordered, but it was postponed in view

THE BRITISH DRIVE ON THE WOTAN LINE

The most fiercely contested battle of the war is now being fought on the Arras front, where the British are approaching the new entrenchments known as the Wotan Line, between Drocourt and Queant, where the Germans established themselves after their withdrawal last month from the old line. The capture of Vimy ridge brought the British to the environs of Lens and they are also trying to advance, thru Monchy and Gavrelle, along the railroad to Douai



of the national crisis and the possibility of a peaceful settlement. The victory of the soft coal miners encouraged the anthracite miners to look for a similar increase. Long term wage agreements had been made by the anthracite men in 1916 which were not due to expire till 1920, but the spokesmen of the union pointed out that the price of food had so greatly advanced within a year as to make the established rates intolerable. The operators recognized the force of this argument and agreed to an increase in wages aggregating over thirty million dollars a year. The wage increases in the coal industry will result in enhanced coal prices which will in turn unfavorably affect the profits of the railroad companies.

Hoover Urges Economy

Chairman Herbert C. Hoover of the American Food Board warns the nation that "the total stock of food today available in the Allied world is simply not sufficient to last until September if America continues its present rate of consumption." He asserted that England, France and Italy must have from us during the next three months more than twice as much as we normally export, and that in order to meet this demand it is not sufficient to increase our agricultural production, we must also eliminate waste and decrease consumption. To carry the Allies over to the next harvest we must reduce our wheat consumption by thirty per cent; an amount equal to one loaf of bread each week for every man, woman and child in the country.

Ex-President Roosevelt, seconding Mr. Hoover's appeal, explained that the principle of universal service in war time should apply not to the army only but to agriculture as well, and that if there should be a shortage of farm labor which could not be met in any other way the authorities should commandeer labor to assure a plentiful production of foodstuffs for ourselves and our Allies. He recommended also that no grain be diverted from food into intoxicants.

Secretary Houston of the Department of Agriculture told the Senate that the needs of the nation required that the department be given enlarged authority and power. He desired legislation authorizing the Government to make a survey of the national food supply; to establish market grades and classification of farm products; to license, supervise and, if necessary, operate plants, mills, packing houses, breweries, storage houses, canneries and all other establishments manufacturing food products; to give preference to farm equipment, seeds and fertilizers in transportation; to utilize the telegraphic market news service to secure comprehensive information from all shipping areas; and, in case of extreme emergency to permit the Government to purchase, store and distribute food products, and to empower the Council of National Defence to fix maximum and minimum food prices.

L'Asino, Italy

THE KAISER'S PROP

William: "Heavens, what shall I do now?"

To carry this broad program into effect will require the expenditure of about $25,000,000. Two million more farmers and farm laborers are required at present to produce the necessary food supply. Secretary Houston estimates that there are two million boys between the ages of fourteen and nineteen not now engaged in work of national importance who might be available during the present emergency. There are also several hundred thousand retired farmers in the country, many of whom would be willing to return to their old occupation while the national need required their services. Secretary Wilson of the Department of Labor suggests that many wage earners might be allowed to leave their regular employment for temporary agricultural service during the harvest season.

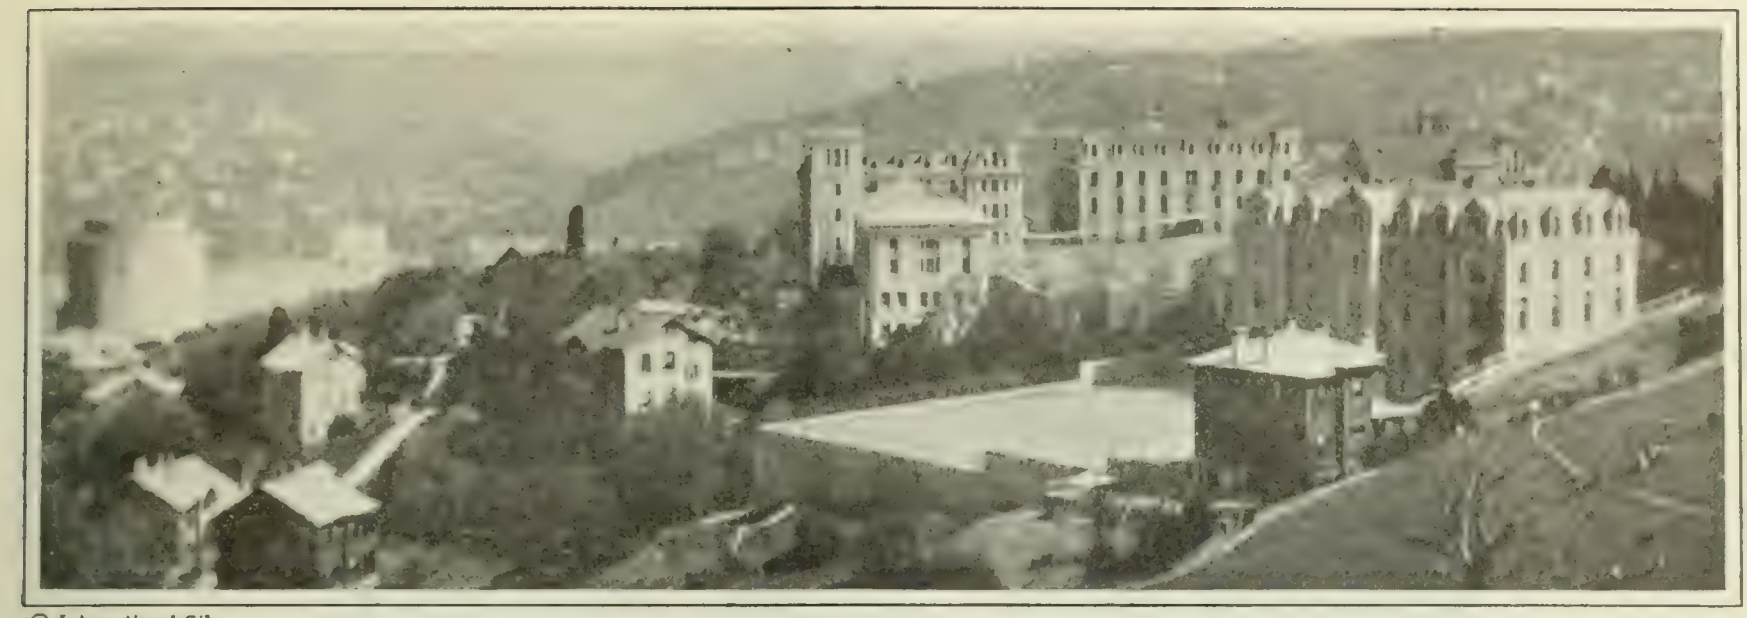
ROYALTY SEVERAL TIMES REMOVED



The revolutionists in Petrograd are seeing to it that no traces of Czardom are left in new Russia. Even the emblems on public buildings and the portraits of the royal family have been destroyed

Consequences of the Break with Turkey

The severance of diplomatic relations between the United States and Turkey, which was the logical consequence of the war with Germany and the break with Austria-Hungary, may have important results. Hitherto the United States has not recognized the independence of Egypt from Turkish suzerainty which resulted from England's participation in the war, nor the independence of the Arabs who successfully revolted against Ottoman rule. Influential Jews are urging that it would be a logical step for the United States to issue a pronouncement at the present time in favor of an independent republic of Palestine, thus realizing the long-cherished hopes of the Zionists. Another probable consequence of the break with Turkey is the cessation of most of the relief work in Armenia, Syria, Palestine and Constantinople to which American generosity has so largely contributed. The Swiss *Neue Zuricher Zeitung* rebukes the Turks for ingratitude in severing relations with a nation which had done so much to lessen the famine and suffering of Turkish subjects in every part of the Ottoman Empire. It may be safe, however, to hazard the guess that the Sultan's German and Turkish advisers will be very little troubled by the destitute condition of the non-Mohammedan races of the Empire. Of course, American missionary and educational activities will also be suspended thruout Turkey.

U-Boats Do Double Damage

The report issued by the British Admiralty covering the week ending April 22 showed that more than twice as many vessels had been sunk as in any previous week. The losses included forty ships of more than 1600 tons, fifteen under that tonnage and nine fishing vessels. This brings the total up to 243 British vessels lost since February 17, not counting the fishing smacks and the shipping of other belligerents and neutrals. Without this knowledge it is impossible to say how seriously the German submarines have affected the traffic on which the British Isles are dependent for their supplies, but it is evident that their depredations were worse in March than February and worse in April than March. The rate of destruction must now be about a million tons a month, which was the German estimate of what was necessary to starve out England.

ROBERTS COLLEGE, CLOSED ON ACCOUNT OF THE WAR

Following the break between Turkey and the United States comes the report from Constantinople that Roberts College, founded, supported and chiefly taught by Americans, must be closed, together with its Bible House, headquarters for American missions in Turkey and the Balkans

The new U-boats are larger and have a wider radius. They are now provided with armored conning towers so thick that it takes a four-inch gun to penetrate.

It is said that the German shipyards are turning out submarines at the rate of two or three a week. It requires about eight months to construct them and it takes as long to make a torpedo. Officers and crew are trained in about three months.

The shorter nights and the calmer waters of the summer will give the German U-boats a greater chance to do their deadly work. Rear Admiral Sir Dudley de Chair, the naval head of the British war mission now in Washington, has informed our naval authorities how many U-boats the British have sunk or captured, but this information has not been given out to the public on either side of the Atlantic yet.

We cannot know, therefore, whether the British are destroying submarines as fast as the Germans can build them or not.

But it is clear that the Germans are destroying merchant ships faster than they can be built. The British shipyards are concentrating all their energies on the construction of standardized types of two, three and five thousand tons, but their rate of output of mercantile steamers is only a million tons a year.

That is to say the Germans are now destroying about as many vessels in a single month as the British or the American shipyards constructed in the year 1916.

Here, according to the British war mission, is where America can best help. The Federal Shipping Commission, with the $50,000,000 appropriated by Congress, is engaged in the construction of a thousand ships of about 3000 tons each. They will be furnished with oil-burning engines and have a speed of ten to twelve knots an hour. It is expected that the first of them will be ready for service in October and thereafter they will be turned out at the rate of three a day.

If then Great Britain can only hold out till fall this fleet of American merchantmen will be ready to bring relief.

Hospital Ships Sunk

The Germans are carrying out ruthlessly their threat to sink any shipping, even Red Cross vessels, in the barred portion of the English Channel. Their latest victims are the hospital ships "Donegal" and "Lanfranc," torpedoed without warning on the evening of April 17. The former was carrying home slightly wounded British soldiers and of these 29 were lost as well as 12 of the crew. The "Lanfranc" carried 167 German wounded as well as 234 British wounded. Of the wounded Germans 152 were safely transferred to the boats, but 15 were lost. Of the British wounded and crew 19 were lost. An eyewitness reports that the British soldiers in spite of their wounds stood at attention on the deck of the sinking ship and sang popular songs while their disabled comrades were being lowered to the boats on stretchers, but the Germans behaved in a cowardly and brutal manner, fighting with each other and crowding into a lifeboat so that it overturned. The British Admiralty has announced that since the distinctive marking and the lighting of hospital ships serves to render them more conspicuous targets for the German submarines the British hospital ships no longer bear the Red Cross insignia, but that German wounded will be carried on the same vessels as the British. One of these two ships sunk was designated as a hospital ship, the other was not, but both suffered the same fate. As a reprisal for such attack on hospital ships the British airmen made a raid on Freiburg in Baden and dropt bombs on this historic town. The Germans have protested against this as a violation of The Hague rules forbidding the bombardment of unfortified places.

Our First Shot

The distinction of firing the first American gun in the war fell to Lieut. Bruce R. Ware of Newton, near Boston, and it occurred on the anniversary of the battle of Lexington, April 19. Lieutenant Ware had been transferred from the battleship "Texas" to the swift American liner "Mongolia," which had been built for the Pacific trade but is now plying between the United States and England. On the last afternoon of the voyage a periscope was seen dead ahead.

The submarine went under to avoid being run down and rose again two minutes later on one side a thousand yards away. The stern gun was instantly trained upon her and fired. The shell shattered the periscope and the submarine disappeared, presumably to rise no more.

British Take Samara

The Turkish troops driven out of Bagdad are being pursued up the Tigris by the Anglo-Indian troops under General Maude. They tried to make a stand before the city of Samara which is seventy miles up the river from Bagdad. Here the Turks had prepared a well protected position of iron-roofed dugouts on the west banks, but in a battle that began on Saturday, April 21, and continued till on Monday they were expelled with heavy losses. About 700 prisoners were taken as well as 15 Krupp guns and 1200 rifles. After the British had taken the railroad station on the western banks the city of Samara on the other side was evacuated.

Samara is the last station on the Bagdad railroad and unless this has been extended since the war began the retreating Turks will have to follow the caravan route to the west, where they will be in danger of being cut off by an advance of the Russians from the north. The British found at Samara 15 locomotives and 224 freight cars which the Turks had not time to destroy in their retreat.

The capture of Samara was made possible by a defeat of the Turks on the eastern side of the Tigris the week before. Finding it difficult to dislodge the enemy from their entrenchments on the Diala General Maude feigned a retreat and by withdrawing his advanced detachments enticed the Turks to follow, when they were attacked in the flanks by another force that had made a night march on the left. A desert mirage interfered with the fighting, but when this lifted the British artillery guided by aeroplanes were brought into action. The Turks lost 200 dead and 700 wounded. The total British loss was about 200.

Harris & Ewing

WALTER S. GIFFORD

THE MOBILIZER-IN-CHIEF

BY DONALD WILHELM

IN Washington—in an office with bare walls, a green rug, a desk, a table, three chairs—is the Captain of the Minute Men—the Mobilizers. He is young—apparently in his thirties—a lithe, active man working expertly in an office surcharged with tenseness, order and efficiency.

Walter S. Gifford, Director of the Council of National Defense, was chief statistician of the American Bell Telephone Company when the members of the Naval Consulting Board were named by the Administration, and the Committee of Industrial Preparedness, a part of the board, was organized. Mr. Howard E. Coffin, vice-president of the Hudson Motor Car Company, was made chairman of that committee; Mr. Gifford, "loaned" by his company, was made secretary.

Very swiftly this committee began to make history by getting an inventory, for use in the event of war, of nearly thirty thousand plants, to the end that the Government might know if watchmakers could make fuses, say, and jewelers make gages, and manufacturers of textile machinery make field kitchens; which companies could do the most work, which the best work, and so on.

The committee had hardly accomplished its pioneer task when the Council of National Defense, patterned on the Lloyd George plan and composed of seven Cabinet ministers and seven commissioners who are specialists in as many fields, was created by Congress. The Secretary of Agriculture, David F. Houston; the Secretary of Commerce, William C. Redfield; the Secretary of War, Newton D. Baker; the Secretary of the Navy, Josephus Daniels; and the Secretary of Labor, William B. Wilson, are the Cabinet members who serve on the Council of National Defense. The other members of the Council are Julius Rosenwald, president of Sears, Roebuck & Co., president of the Chicago Bureau of Public Efficiency; Daniel Willard, president of the Baltimore & Ohio Railroad Company; Howard E. Coffin, vice-president and consulting engineer of the Hudson Motor Car Company; Franklin H. Martin, general secretary of the Clinical Congress of Surgeons in North America, regent and secretary-general of the American College of Surgeons; Bernard Baruch, New York broker; Samuel Gompers, president of the American Federation of Labor and editor of its official magazine, first vice-president of the National Civic Federation; and Hollis Godfrey, president of Drexel Institute in Philadelphia, author of "The Man Who Ended War."

The Council of National Defense took over the work of the Naval Consulting Board. It absorbed the work of the Committee of American Physicians, which already had achieved miracles toward the mobilization of 27,000 American medical men. It extended its jurisdiction to the organization of 280,000 miles of American railways, to the telephone and telegraph systems, to other business and professional factors that would, in one way or another, be of aid to the Government in time of war.

The articles published in The Independent by the director, the commissioners and by other members of the Council of National Defense, afford some idea of the achievements of the Council, without which already there would be confusion without end.

It is making a science of coöperation; it is demonstrating that perhaps the most patriotic, and certainly the most expert, of all Americans are the business and professional men. These business men, who are for the most part giving themselves without pay, very swiftly are putting an end to the traditional conflict between American Government and American business life because they are putting an end to incompetency and to political prejudice in our Government departments, and, incidentally, like true American minute men with an expert captain at their head, they are showing foreign governments a thing or two.

Washington, D. C.

A NATIONAL PICTURE PUZZLE

BY WALTER S. GIFFORD

DIRECTOR OF THE COUNCIL OF NATIONAL DEFENSE

I AM asked "What does it mean to say that the Council of National Defense is mobilizing the resources of this nation?"

It means, as I see it, order. It means that everything should proceed in orderly fashion rather than in confused chaotic fashion. It means a definite channel for the definite things to be accomplished. It means responsible people responsible for important matters, and the avoidance of duplication of effort and division of responsibility.

The whole problem is like a picture puzzle: You have to catch each piece up and put it into the right place. It's like a picture puzzle except that the pieces never have been put together and some pieces don't belong and you have no box to throw them into when they get mixt or you get tired! It is simple enough, however, if you see that the piece you have in view will fit, but you must have in mind some scheme. You can't build blindly.

This leads to one of the reasons why, very often, people who want to help cannot be used. But because they don't understand organization often they don't understand why they can't be used. That's one of the difficult things. There are many patriotic, enthusiastic people who have ideas, often pet ideas, and it is necessary frequently to tell them that the particular way they have organized their idea, or the particular field, is such that it doesn't fit into the organization. It's very hard to say so, usually, because of the spirit that prompts the effort, but someone has to say so, in order to get the job done right.

The situation before us is this: Our problem isn't, in the first instance, one that demands hasty, hysterical action. Fortunately in this country we have concerns that have been making munitions. The question of supplying men to be raised within a year for the Army and Navy should not be a difficult one, but merely one of good sense business organization. The problem of supplying the civilian population and their needs will be complicated only by the condition of the harvests and by causes that might have occurred had there been no war—weather, for instance, and of course by the absence of men, and by the demands of our Allies and their civilian populations. Let it be understood, in other words, that there are no more people to feed and clothe in this country than there were before war broke out and therefore the problem only becomes serious in so far as it is necessary for us to feed and clothe our Allies, which may mean some sort of restrictive measures here. Of course we might say that ultimately we shall take many million men away. If that should happen our problem would be made more serious, due to depletion of our man power, but such a situation is, at worst, many months off.

OUR program at first should by all means be to maintain the normal economic and industrial conditions of the country as they are. No changes should be made in hours of labor, in the welfare of workers or in pay unless and until conditions have arisen which make such changes imperative and necessary—clearly necessary. The important thing is for us to maintain with the least possible upset our present economic system. To this end the Government should buy its materials on some basis that will allow a fair profit to the producer, otherwise bankruptcy will result and a complete disruption of our economic system will occur.

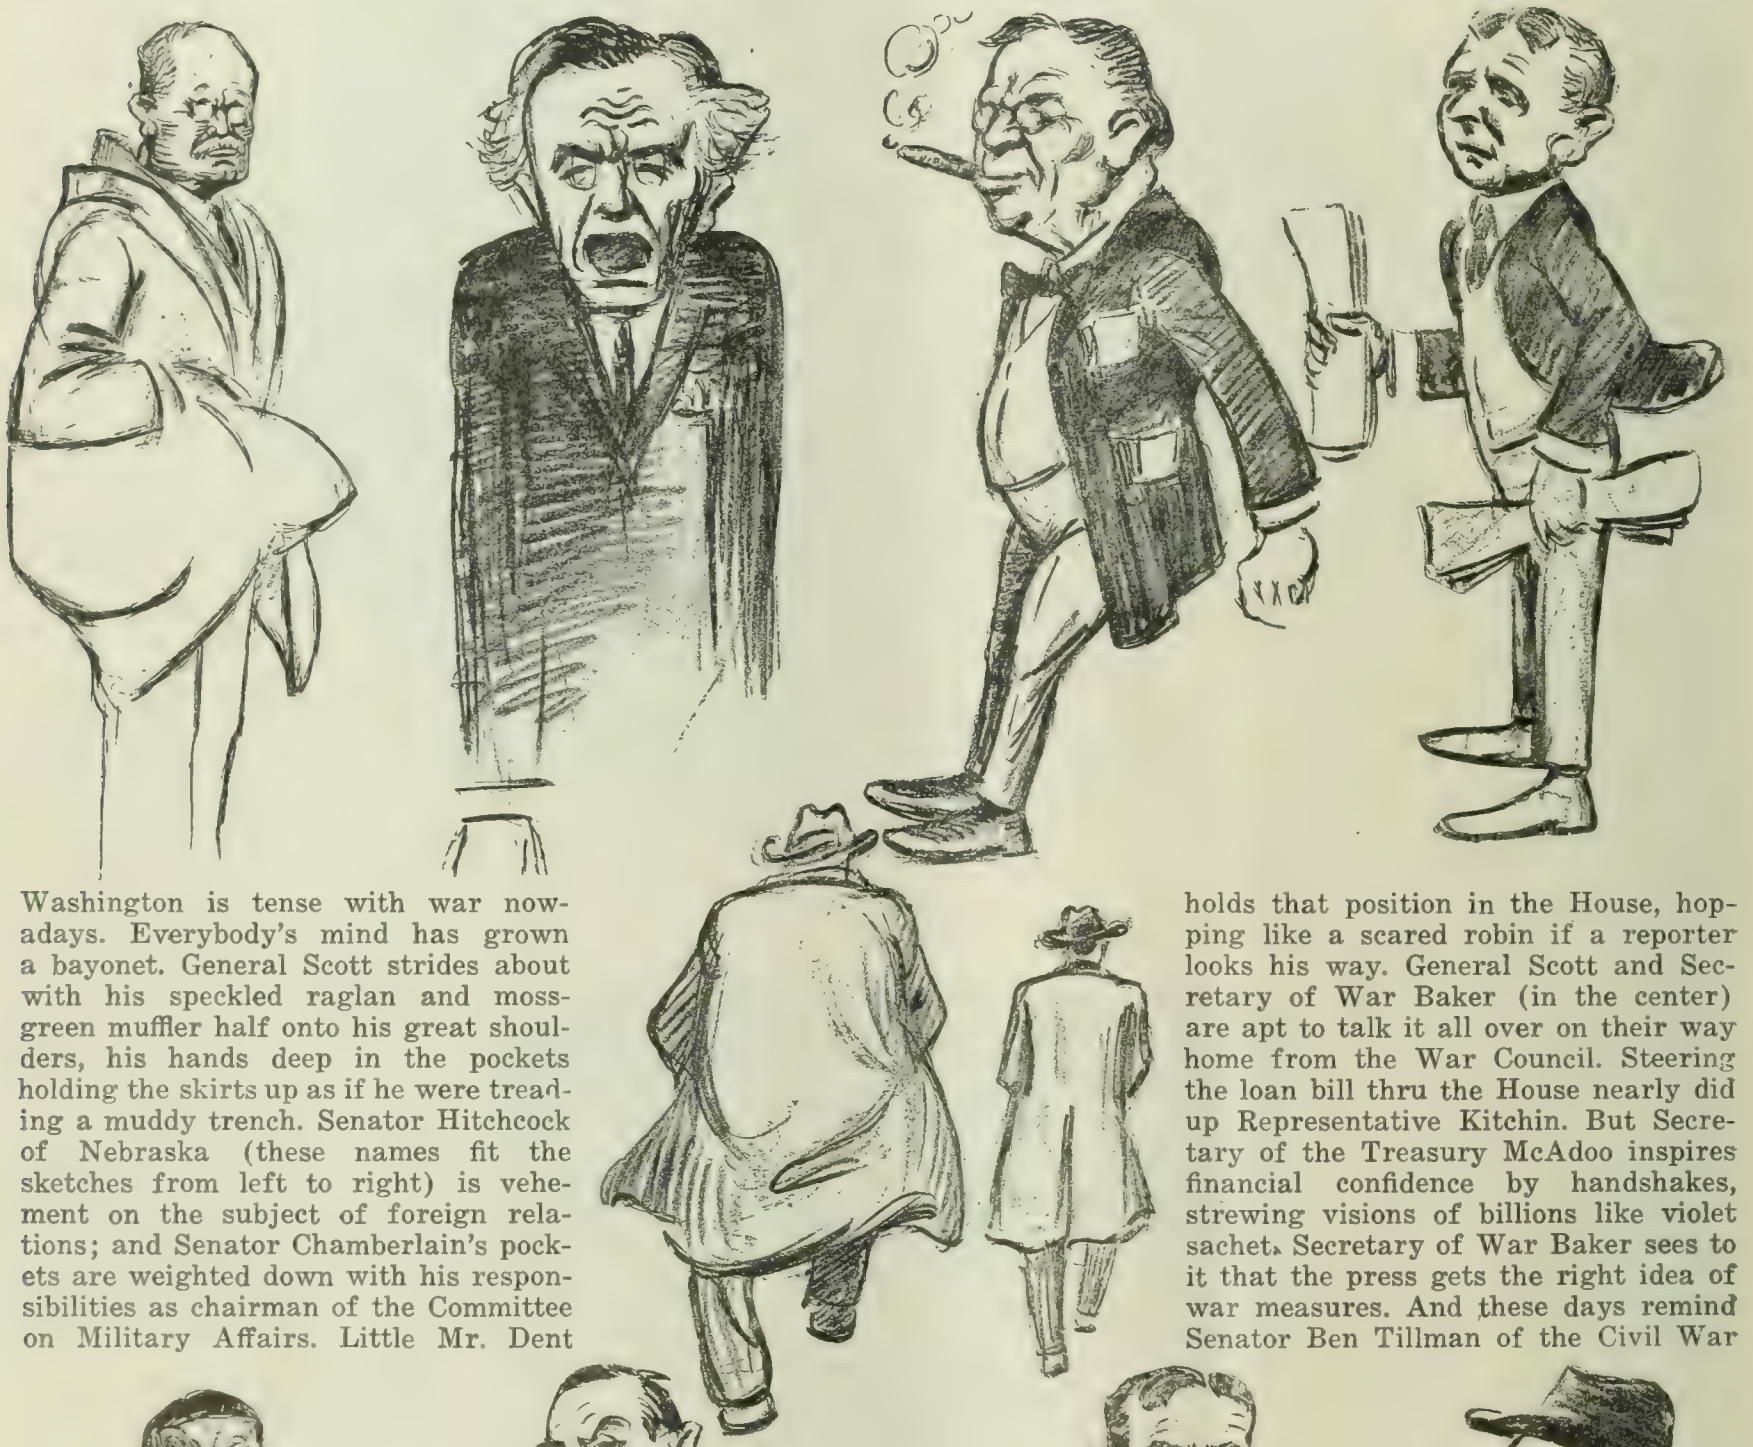
I think Labor will sit tight and work, if it is treated fairly. If it is clearly understood that the producers are obtaining only a reasonable profit I think Labor will be willing to remain quietly at home in the factory and offer no objection to working under the conditions which obtained in peace time and even under conditions which have been changed due to absolute necessity, on account of the war. For it will be remembered that other men are at the front fighting while these men are at home with their families, comfortable. It is plain, to look at the other side of the problem, that any scheme which requires Labor to endure more hardships than are necessary would certainly not be efficient and under no conditions would be justified. The only object in view must be to win the war and for everyone to endure sacrifices to the limit for this end. If these sacrifices are made unnecessarily great, looked at from the point of view of the good of the nation, they are wasteful and not useful in assisting to win the war. We must not work men twenty-four hours a day; do that and they break down and the nation suffers.

Our problem is a tremendous problem, yet it is a relatively simple problem when compared to what most people think it is. We have people who want to inventory the whole country and whole sections of the country. But what do we want such an inventory for? Let's stick to the problem we have before us and let every move that we make be a move toward the solution of the kind of things we have to solve. Let us drop other moves. Then the matter becomes simple in comparison with what it would be if we grabbed every idea and associated it with American defense. Let us apply a test to anything that anyone wants us to use. Let us inquire: Does this actually help a particular plan of war that was given us to carry thru? Will it help the Allies? Will it help the Navy? Will it help the Army? Will it help the civilian population? And if so, is it necessary?

Of course all this is only the story of the way I see the situation. Conditions may be changed absolutely in six or eight months and many different measures may be necessary. But we must not undertake now things that may not be necessary for some months or years to come—that is an essential thing to remember.

We have the advantage of European experience. Much of this experience can be made use of in this country, but, on the other hand, much of it does not fit in.

Ours is a problem of itself. We must approach it, we must handle it, with that thought in mind.



Washington, D. C.

THE KEY-PIECE OF "THE PICTURE PUZZLE"

POLITICIANS ARE PEOPLE

BY LOU ROGERS

Washington is tense with war nowadays. Everybody's mind has grown a bayonet. General Scott strides about with his speckled raglan and moss-green muffler half onto his great shoulders, his hands deep in the pockets holding the skirts up as if he were treading a muddy trench. Senator Hitchcock of Nebraska (these names fit the sketches from left to right) is vehement on the subject of foreign relations; and Senator Chamberlain's pockets are weighted down with his responsibilities as chairman of the Committee on Military Affairs. Little Mr. Dent holds that position in the House, hopping like a scared robin if a reporter looks his way. General Scott and Secretary of War Baker (in the center) are apt to talk it all over on their way home from the War Council. Steering the loan bill thru the House nearly did up Representative Kitchin. But Secretary of the Treasury McAdoo inspires financial confidence by handshakes, strewing visions of billions like violet sachet. Secretary of War Baker sees to it that the press gets the right idea of war measures. And these days remind Senator Ben Tillman of the Civil War

WOMAN'S PLACE

BY MAUDE WETMORE

CHAIRMAN OF THE NATIONAL LEAGUE FOR WOMAN'S SERVICE

WHEN the United States went into war with Germany there was a woman in Chicago who had organized an Allied relief group. She wanted to know how she and her associates could divert their activities toward participation in the work that women would have to do for America. By going to Boston, thence to New York and thence to Philadelphia, at the cost of much expense and discomfort, and after innumerable conferences with people who always sent her on to somebody else, her opinion was confirmed that women would have a very important work to do indeed; but nobody had been able to tell her satisfactorily just exactly where she and her associates were going to fit in. And so she went back to Chicago in virtually the same state of mind as when she came away — determined simply to "do something."

Had there been a central bureau of registration and information for women's work such as it was found necessary to establish in England when it was discovered there how badly the women were needed, our Chicago friend might have found out all that she wanted to know in forty-eight hours thru the simple expedient of an exchange of letters. Her case, moreover, is simply typical of that of thousands of willing, capable women who are anxious to help fill the genuine need for women's work in this war, but who could not in the absence of a clearing-house of information find places for themselves and therefore have plunged into "doing something" and hoping that somehow, somewhere, good would come of it.

It was for the purpose of correcting these conditions and to make the most of the patriotic enthusiasm of women and put it to work without waste or lost motion that the National League for Woman's Service was established. And now that it has its Bureau of Registration and Information in Washington, under the supervision of the Department of Labor, there is no need for any woman who wants to serve the nation to spend much time or trouble finding out what she can do.

A score of the leading women's organizations of the country are now systematizing and coördinating their patriotic service with the activities of this bureau without losing their individual identities and without the confusion and overlapping and waste of energy that occur when many organizations attempt to take part in a great national movement without a systematic plan of action. Among the associations coöperating with the league are the D. A. R., the Council of Jewish Women, the Colonial Dames, the Collegiate Alumnae, the National Civic Federation, the Federation of Day Nurseries, the Girls' Friendly Society, the Surgical Dressings Committee, the Garden Clubs of America. And there are several others equally prominent.

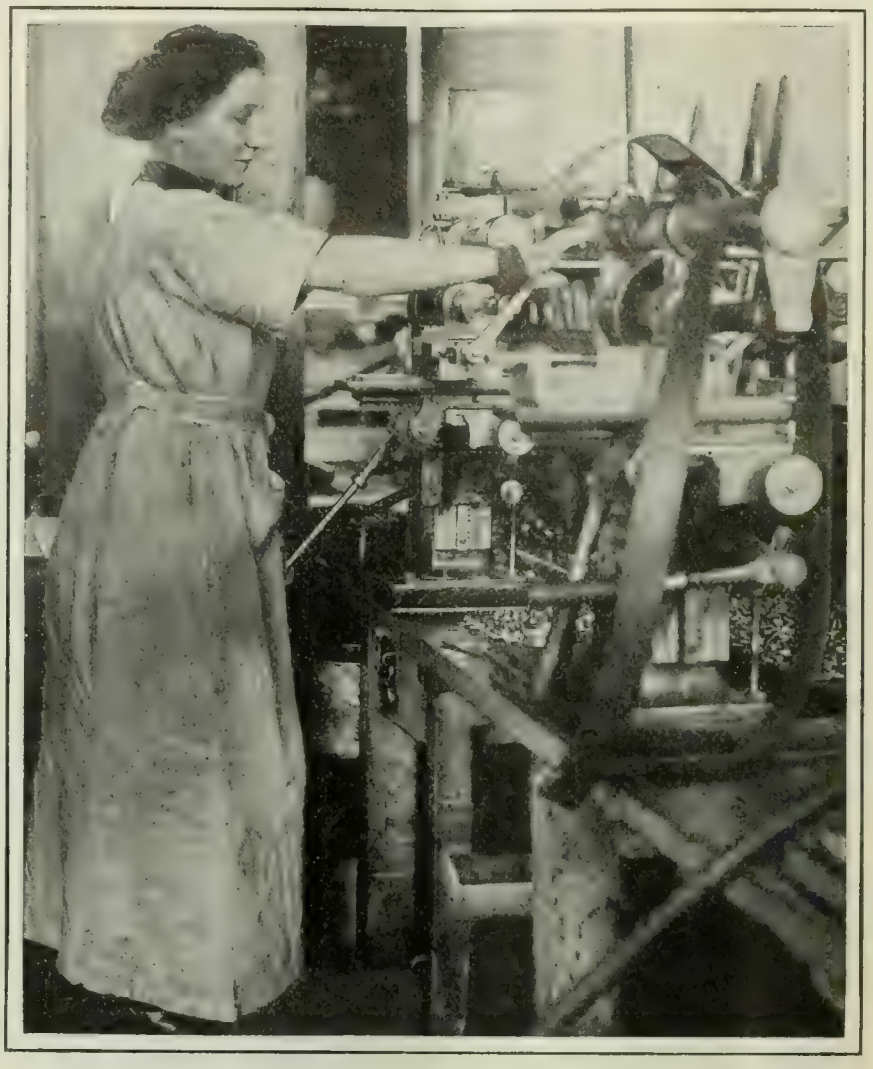
© American Press

FARMING CAN BE WOMAN'S WORK

Kadel & Herbert

THERE ARE ELEVATOR GIRLS IN NEW YORK NOW

The first thing for women to do, it seems to me, is to face the question of what is the most important thing to do. There are innumerable things which women can do, but some of them might better be left undone or left to men while women concentrate on those tasks for which they are most suited or which it is more expedient for them to perform. The great majority of women will serve their country best by becoming more efficient and more earnest in the everyday work they are doing now. The war has already demonstrated that bread is as essential as bullets, and that the issue probably will be determined by the food supply. The food problem, already acute in the United States, can be solved by women, and very simply. By planting gardens, by encouraging others to do likewise, by preventing waste in buying, preparing, cooking, and serving, and by doing without unnecessary articles of diet, women can render valuable service.



There is nothing spectacular, nothing obviously heroic, about this sort of service, and it brings no outward glory, but it is vastly more valuable to the nation than joining a women's aviation corps, or learning to become a crack pistol shot. It is true there are individual women who are splendid aviatrices and crack shots, and it is conceivable that they may be of use in the military arm of the Government, but for large numbers of women to engage in such activities

would be simply ridiculous. We have plenty of able-bodied men to take the posts of physical danger; and we have no women to spare from women's work.

Systematic coördination and, above all, preparation, is needed, however, even for the tasks which have been women's specialties for centuries. Millions of women who are efficient housewives, judged by ordinary home standards, nevertheless do not know where or how they could improve themselves until it is pointed out by an expert.

That is why the league thinks every woman should avail herself of the opportunity to increase her efficiency and to coördinate her efforts with those of other women. Thruout the thirty-five states in which the league is now organized we are telling the women that they must get expert advice as to what to plant and how to take care of it; they should attend lectures on home economics so as to supplement their own knowledge and experience with the latest and best information available. Many women, especially those of the so-called leisure class, have little or no experience in home economics, and for them to do their part, to cut down expense or release others for war service, preparation is a prerequisite. Hence we have training classes in home economics as well as in agriculture and the numerous other fields in which women are fitted to serve.

In England the war has been a great equalizer of the sexes. Women have taken the places in industry formerly held by men, and it is to be expected that large numbers of women will refuse to go back to their old spheres. In America, too, the war has opened many doors to women, and the change in their economic status will be permanent. A large number of self-supporting young women are being trained as wireless operators, for example. This class, started in New York as an experiment, is now a success, and it has opened a permanent means of livelihood for women. Just now women radio operators are needed by the Navy for shore duty to take the places of men called for sea duty; but when the war is over these girls are going to stay at wireless work.

ONE WOMAN'S PLACE IN AN AUTOMOBILE FACTORY

The responsibility for improving our national life and fulfilling our national ideals should be evenly divided between men and women. And just as men must discipline themselves and prepare to carry their full share, so must women. Women must realize the interdependence of the individuals that comprize the nation; they must learn to think nationally, and in this period of stress they must recognize that they can afford to give nothing less than their best. Where women are needed to supplement the forces of men in the industries those who are fitted or experienced must come forward and their home interests must be looked after by others. Our women must do everything possible to enable their men to give full service. In Detroit, for example, the league is encouraging its members to learn their husbands' business, so that when the man is called to take his place in whatever line of defense he is needed in the wife may be able to maintain the family's economic status. Upon women rests the responsibility for maintaining the home standards.

Only by preparation and coördination of effort can women be as effective as they should be. The National League for Woman's Service is now coöperating with the National Council of Defense, with the Department of Labor, and in New York with the State authorities, particularly in the taking of the military census. Women's work and women's welfare in the war are so important, however, that a National Woman Power Board should be appointed by the President, and be provided with the requisite machinery.

Washington, D. C.

REMEMBRANCE

BY MURDOCK PEMBERTON

When I leave the bank at the end of the day,
I always pause for a moment
To say a few words to Maggie
Who scrubs the marble in front of the cage
Where I keep daily accounts;
Not that Maggie has much to say,
But I love the odor of lye and soap in hot water.
There is something haunting in the steam that rises
from suds,
Something that takes me back
To a sunny, pine-floored kitchen
Where scrub-day was bake-day as well,
And as the loaves rose and browned in the oven
I would sit on a stool, my feet off the floor,
Watching a woman scrubbing,
Knowing that when she got up from her knees
And had dried her hands
She would take the bread from the oven,
Dump the loaves from the pans,
And after some endless minutes
Would cut me the end of a loaf,
Buttered with freshest of butter,
And sometimes added to that grape jam
Or honey from bees fed on clover.

Yesterday Maggie was fired,
Going the way of many Maggies before her,
For she broke a sacred tradition:
She started in on her scrubbing
Before the President had left his office.
Everyone, except old Maggie,
Knew the President couldn't stand the sight of a woman
scrubbing,
Just as everyone knew he was a self-made man
And had risen from humble beginnings.

SUPPORT THE BRITISH FLEET

BY PARK BENJAMIN

THE British fleet, which is decisively superior to that of Germany, is massed in home waters. It can be immediately and effectively concentrated against the German high seas fleet should the latter move from its present refuges into the North Sea. It also covers all British lines of communication from the Atlantic, and intercepts all German sea communications thereto. And it protects the British islands from invasion. It is a superior force, maintained at a decisive point. Its mission is the command of the sea. With the command of the sea no other object bears comparison. And this can only be finally attained by battle—by fighting for it. No matter what terms may afterward be granted, no matter what gains afterward given up, no matter what grace afterward accorded to the vanquished enemy, he must not be warded off but struck down, not driven away but destroyed, and this incessantly and remorselessly. That is the inevitable and unchangeable law of naval warfare, and all naval strategy aims to fulfil it.

Because of its commanding position flanking the outlets from the North Sea to the Atlantic, because of its greatly superior strength, and because the bases whereat it gathers are close to its sources of supply and repair, the British fleet has great strategic advantages over that of Germany. The German Empire recognizing its own corresponding disadvantages, almost immediately after its constitution began the development of a navy with a program which it summed up as "the creation of a fleet of such strength that even for the mightiest naval power a war with Germany would involve such risks as would jeopardize its own supremacy." German naval expenditures rose from ten millions of dollars yearly in 1875 to a hundred millions yearly at the beginning of the present war. But it remained evident none the less that for the control of Germany no other power existed in Europe save that of the British fleet.

NATURALLY it was supposed that within a very brief period after the outbreak of hostilities a decisive action would be fought between the rival forces. Altho more than two years and a half have elapsed, this has not come to pass. As a necessary consequence of not commanding the sea Germany has lost her colonies and her commerce stands paralyzed. She has accepted the position of an inferior naval power and in so continuing, abnegates all hopes of ultimate naval success.

Of the four principal actions which have been fought, two were thousands of miles away from the North Sea, and those which there took place were not decisive. If the game so far has been fairly played according to rule, no change in the strategic relations of the opposing fleets has yet occurred.

But the game has not been fairly played. For some years the submarine has been sufficiently understood to enable a forecast of its capabilities to be drawn, and to permit its assignment to a place in the existing order of things which is not wholly revolutionary.

This is the third of Mr. Benjamin's articles for The Independent on the United States Navy as a factor in the Great War. "The Submarine Scare" began the series on April 7; his second article, published in the issue of April 21, was "What Shall the Navy Do?" Mr. Benjamin is a graduate of the United States Naval Academy and an ex-officer of the Navy.—THE EDITOR.

When the use of it by the Germans became actual, the military world stood aghast. It expected destruction, but not murder. It could picture the great battleship reeling under the fatal thrust, but not the methodical sinking of the peaceful carrier crowded with women and children; or that blistering shame, the rending of the hospital ship on its errand of mercy to friend and foe alike. It had learned to respect and admire the fine skill and abilities of the officers and gentlemen—seamen all—of the Imperial German Navy, but it turned aside in measureless contempt from the savages of the Hohenzollern marine, from the skill which is that of the assassin, and from the courage which is shared with the cornered rat.

IT is this illegal, this unexpected and ruthless use of the submarine which Admiral Jellicoe now declares "has changed naval warfare"; changed it so completely that from the standpoint of the British fleet the German high seas fleet may be virtually disregarded, for "our *only active enemy*," he says, "is the submarine engaged in piracy and murder." The term "command of the sea" requires a new qualification, and means for our allies and ourselves not only the annihilation of the German high seas fleet, but even before that, the extermination of the German sea vermin.

Most people think that the German U-boats' work is the comparatively respectable torpedoing of war vessels, or, in the case of a slow and unarmed merchantman, the saving of the cost of torpedoes—worth some thousands of dollars each—by coming to the surface and leisurely shooting up the unwarned victim. The mine-laying submarine is becoming even more dangerous. Such vessels may possess neither gun nor mobile torpedo, but only an array of contact mines—as many as thirty-five in the larger craft—which can be planted and anchored along the shipping lanes, or indeed wherever the depth of water serves. They are dropt from the submerged U-boat as it moves slowly along, each mine, as it strikes bottom, releasing itself from its anchor, and while still held by its cable, rising to an adjusted depth below the sea surface. They literally pulverize small vessels and smash in the bottom of the heaviest dreadnaught.

The warship may surround herself with a screen of destroyers—sometimes three screens of them—and with the merchantman may hide herself in great clouds of black smoke which baffles the periscope, or disturb the aiming of the torpedo of the supposed nearby U-boat by changing course every five minutes; but the mine waits in ambush for the fatal touch. Where there is clear water today, there may be a mine field tomorrow. The invisible submarine may plant mines at a harbor mouth or far in the offing.

That is the blockade now around the British islands. It is intended to starve the people into submission by destroying the food ships attempting to traverse the danger zone. And Germany believes this can be done before October 1st next, and in this belief sees another reason for confining her capital ships to their harbors. For why risk them in combat with a superior force when submission thru starvation means the transfer of that superior force unscathed to herself? That would give Germany a navy nearly four times as powerful as our own.

Night and day the hunt for German U-boats continues, and night and day, in foul weather or fair, and everywhere around the British coasts brave men (for the danger of the work is extreme) are sweeping the bottom of the sea for the constantly renewed mines, trying to drag them to the surface and destroy them faster than the German submarines can put them down. And the bulldog Britisher tightens his belt and holds on at half-rations. There is every reason of sentiment why we should help him: but sentiment aside, we don't know what may be under the horizon for us if we don't help him, and therefore, we have got to do it.

BUT what is to be the influence of this sort of warfare upon the naval strategy and the naval tactics of the future? Are both to be revolutionized? Naval strategy is only the proper use of means to attain ends, which are, as Mahan says, "founding, supporting and increasing, as well in peace as in war, the sea power of the country." It is hard to believe that the principles which withstood the transition from sails to steam have been already shaken, or that anything more has happened than the addition of a new element to those extraneous and often chance factors which, like resource limits and political influences, sometimes show that, on the sea, the race is not always to the swift, nor the battle to the strong.

But if the modification is to be as profound as Admiral Jellicoe's words seem to imply, then the consequences may be indeed revolutionary. Consider, for example, concentration—the "getting there first with the most men": of

what avail is this if the command of the sea can be secured by the inferior fleet without any battle at all? Since the three-fold sinking of the British cruisers "Hogue," "Cressy" and "Aboukir," ships have been warned to separate when one is attacked, and to leave the victim helpless to her fate. But is not to mass vessels also to herd the sheep for the killing? And if vessels are thus aggregated, is their defense as completely dependent on themselves as it is upon external shields or screens? Does any battleship fleet today dare to anchor in U-boat infested waters without encompassing nets and patrols, or in case of protracted stay in bays or harbors, without mines for its own protection, or sweepers for those which the enemy will industriously plant before the entrance?

And as for tactics, conceive the feelings of the admiral who finds that his adversary's battle line is beginning to draw across the bows of the leading ship of his own column—"to cap," as the term is—with the obvious intention of converging the fire of all upon that leading ship, and then upon the others successively, and who, of course, essays to turn aside into parallelism with his antagonist's vessels; conceive his dilemma should a bunch of hostile periscopes appear on the side toward which he wants to turn. Not to turn is to be smashed by gunfire; to do so is to be blown up by the U-boats. This one instance may suffice roughly to illustrate a tactical trouble.

The simplest strategic analysis of the present situation leads to the following conclusions:

1. The Hohenzollern submarines must be exterminated, and meanwhile neutralized. The latter is more immediately our task. Submarines or no submarines, it is for us to feed the Allies, and Great Britain in particular. The British islands are like a ship at sea. Their communications with sources of supply must not be cut off. Therefore, we must keep them free and open with all the power of the land.

2. The command of the sea, now held by the British, must never pass to the German fleet. To prevent this, the German fleet must be utterly destroyed. And for that purpose the warships of the United States now stand

> "—like greyhounds in the slips
> straining upon the start."

THE BRITISH FLEET CAN USE THESE WARSHIPS

IN THE SERVICE ARMY

"WE MUST ALL SPEAK, ACT AND SERVE TOGETHER"

THE LEWIS GUN ACCEPTED

Marines Accept Lewis Machine Gun The United States Marine Corps, after testing rival types of machine gun, announces the adoption of the Lewis gun as the official weapon of that type for the corps. Two thousand Lewis guns have been ordered. The gun, altho the invention of an American, has been twice rejected by the military authorities of the United States and extensively employed by the British during the Great War.

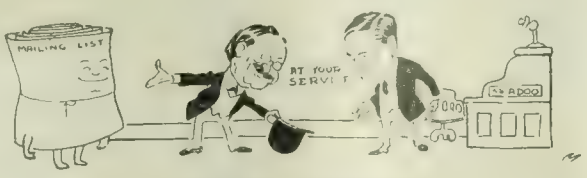
Farmer Wilson Part of the national grounds in Washington, D. C., lying across Pennsylvania avenue from one of the gates of the White House has been turned over to the White House employees for the cultivation of a model garden under the direction of the Department of Agriculture. The surplus products will be sold for the benefit of the Red Cross. President Wilson turned over the first spadeful of soil to inaugurate the interesting experiment.

Loyal Wisconsin All doubts as to the attitude of the State of Wisconsin toward the vigorous prosecution of the war have been set at rest by the unanimous vote of the State Senate creating a Defense Council of twelve men to coöperate with the Governor in investigating the resources of the state available for the needs of

THE LAST OF LIQUOR

war. At patriotic meetings held in different parts of the state German-Americans took a conspicuous part. In one town a body of veterans of the Franco-Prussian War marched in a procession carrying American flags.

Bread or Beer? The grain shortage, aggravated as it is by the entrance of the United States into the Great War, has given prohibition the greatest impetus it has ever received in this country. Farm bureau managers and officers of agricultural associations representing more than 25,000 farmers met at the College of Agriculture of Cornell University to demand the total prohibition of the manufacture of liquors made from grain. The Duffy Whiskey Company, of Rochester, has achieved the honorable and unique distinction of voluntarily closing a big distillery in order to save grain for food.



Saving War-Precious Metals The precious metal, platinum, valuable for purposes of peace and war alike, is now selling at over a hundred dollars an ounce and the price is still rising. In view of the threatened platinum famine the Government has been mobilizing the jewelers of the country, who possess most of the stock of the metal in the country, to coöperate with the authorities in conserving the supply and keeping it available for the use of the nation. Copper is a less costly metal, but its war-time value is inestimable, and Secretary Daniels of the Navy justly expresses his gratitude at the decision of the big copper manufacturers to sell to the Government all the copper it needs at the average market price for the last ten years instead of at current commercial rates. The resulting saving in cartridge cases for the navy alone is placed at $850,000.

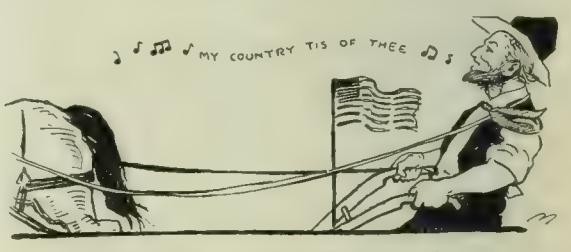
FARMER WILSON

Free Grain from Canada The Canadian Government has placed wheat and wheat products on the free list. Under the reciprocal clauses of the American tariff, the United States admits wheat and its products freely from any country which places no duty on our own exports of these commodities. Therefore the two countries are now an economic unit in wheat production, and a surplus in either will supply the other's want.

Mail Order List Offered to Nation The Standard Mail Order Company has offered to Secretary McAdoo its mailing list of nearly a million customers, many of them residing in the rural districts, to aid the Government in marketing the bond issue, and has promised to address all circulars without cost to the Government.

A NATIONAL MAILING LIST

Can You Build a Ship? The United States Employment Service has opened a bureau for the enrollment of workmen needed in the



CAN YOU BUILD A SHIP?

construction of the fleet of wooden ships with which the Government hopes to break thru the German submarine blockade, as the renowned wooden horse once penetrated the walls of Troy. Many thousands of skilled carpenters and shipbuilders will be needed, and the Employment Service is on the lookout for skilled workmen.

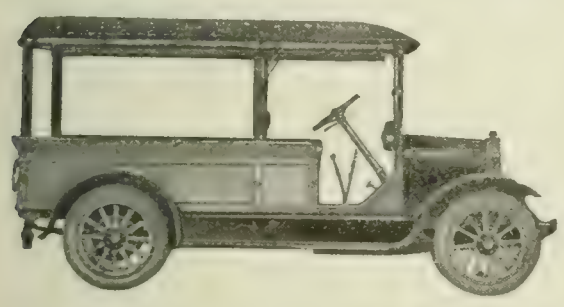
Utilizing the Professors Columbia University has started the publication of a series of "War Papers," bulletins dealing with various aspects of preparedness. They are similar in their form and purpose to the pamphlets issued by the faculties of the British universities in 1914, except that they stress propaganda less and emphasize the practical ways in which American citizens can make themselves useful to the country in war-time.

The Plow Follows the Flag A "committee of safety" organized in two counties of Georgia has undertaken to furnish flags to be fastened to plows as a sign that the farmer deems himself enlisted in the national service. The

NAIL A FLAG TO YOUR PLOW!

motto of the organization is "Nail a flag to your plow and work for your country as you would fight for her."

The High Cost of Patriotism The United States Senate has requested the Federal Trade Commission to investigate the manufacture of American flags in order to ascertain whether the manufacturers and merchants are not taking advantage of the present unprecedented demand to manipulate prices. An Ohio flag dealer reports that the manufacturers who supplied him had increased their wholesale prices by about four hundred per cent. The manufacturers, on the other hand, insist that they are so swamped with orders that they cannot by any possibility supply the demand. But the nation has not yet apparently acquired the habit of flying the colors of our Allies as well as the Star Spangled Banner.

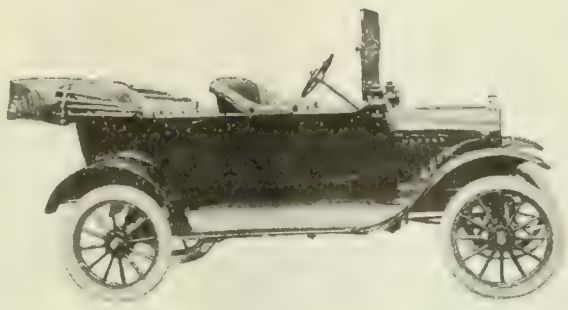


MOBILIZING OUR MOTORS FOR WAR

BY JOHN CHAPMAN HILDER

DIRECTOR OF THE INDEPENDENT-HARPER'S WEEKLY MOTOR EFFICIENCY SERVICE

WHEN the first excitement of the war declaration had somewhat subsided, motorists all over the country began to wonder how they could help. Naturally enough, at the outset, pleasure car and truck owners expected that their machines would be commandeered by the Government. It had happened in Europe and it was a reasonable expectation here, considered superficially, in the flurry of the moment.

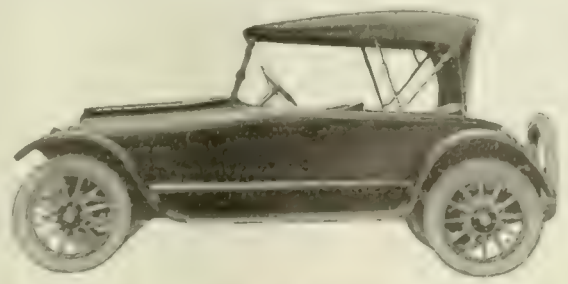


Recent announcements from headquarters, however, have made it plain that commandeering in general will not be necessary. In Europe the situation was different from our own. Motor car factories over there had never been keyed up to quantity production. It was impossible for them to meet the suddenly quickened and enlarged demand for machines. The only way France and England could get the cars was by seizing those already in operation. In this country we have been making motors on an enormous scale for years. Our factories are ready for practically any contingency. Last year we manufactured 1,500,000 machines—almost twice as many as exist in all other countries combined. If necessary our output could probably be doubled. And since all our makers have agreed to cooperate with the Government in supplying its needs, the reason why wholesale commandeering will not be resorted to here is obvious.

LIGHT TRUCKS CAN BE OF USE IN MANY WAYS

But while the authorities expect not to be obliged to take possession of all the cars now running, they have foreseen that circumstances may make limited commandeering imperative. There are certain exposed regions along our coast to which the railroads would be unable to transport large bodies of men quickly and on short notice. For defensive purposes, therefore, the War Department recommends that voluntary motor truck, motor car and motorcycle companies be formed as soon as possible in all states—especially in those along the Atlantic, Gulf and Pacific coasts. These volunteer companies will include the necessary officers, drivers and mechanics and will be used, when occasion requires, for quickly moving bodies of troops or supplies to particular points.

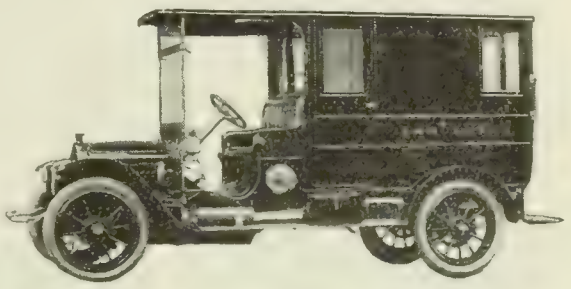
The work of directing the formation of such volunteer companies has been delegated to the Volunteer Motor Transport Committee, consisting of Alfred Reeves, National Automobile Chamber of Commerce, chairman; A. G. Batchelder, A. A. A.; Coker F. Clarkson, S. A. E.; Edward H. Broadwell, Motor and Accessory Manufacturer; Roderick Stephens, Motor Truck Club of America, and Shelby A. Falor, Federation of American Motorcyclists. The committee will operate under the Advisory Commission of the Council of National Defense.



A FORD OWNERS' MACHINE GUN CORPS IS NOW BEING ORGANIZED

A volunteer motor transport reserve company will consist, in the case of trucks, of the following: A captain, who will have general supervision over the organization; one truck master, three assistant truck masters, one mechanic, two helpers, two cooks, one watchman and thirty-three chauffeurs. These men will bear titles from sergeant first class to corporals and privates, and will have charge of an equipment of twenty-seven cargo trucks, preferably of the one and a half and three-ton sizes, one repair and kitchen truck, two oil and gasoline supply trucks and one motor car and one light repair truck. The personnel may be increased by adding assistant chauffeurs and cooks when needed.

Pleasure car and motorcycle companies will be organized along similar lines, this form of organization and the regulations governing it being at present the same for volunteer companies as for motor companies in the regular army. Three motor companies will constitute a battalion, with a major in command.



Service in these volunteer companies, according to Col. Chauncey B. Baker of the Quartermaster's Corps, will probably extend over only a day or two at a time and privately owned pleasure cars and trucks will be used only when there is not time enough for regular army vehicles to be brought up.

Here, then, is one thing you can do, if you own either pleasure or commercial cars, or both. Correspond at once with the Volunteer Motor Transport Committee at the offices of the National Automobile Chamber of Commerce, 7 East Forty-second street, New York, and get information on how to proceed to organize a motor company in your locality.

FOR SPEEDY DISPATCH BEARING OUR RUNABOUTS ARE SUPREME

One great lesson we have learned from Europe is the mistake of taking skilled labor from its work and putting it on the firing line. We know that industry must go on, that it is essential to our economic welfare to disturb, as little as possible, the working schedules of our factories and our farms. The Government showed that it had this principle in mind when it called on the Motor Truck Club of America to get recruits for forty truck trains and asked that men be drawn not from among actual truck drivers, but from other pursuits, so that business firms using trucks might not suffer from a loss of trained drivers. It is the intention of the Motor Truck Club to recruit college men and others whose business affiliations lie outside of the vital industries.

WE NEED MORE AMBULANCES

In a recent address, Joseph Husson, editor of *The Commercial Vehicle*, said: "War finds us prepared in motor trucks, unprepared in personnel to operate them, and sadly unprepared in roads over which they can be run. There are approximately 250,000 motor trucks of all classes and sizes in use in the United States today in all lines and all classes of business. The total present output of motor trucks of all kinds is close to 700 per day, altho not all of these are suitable for war service. Six of our truck makers can supply 100 trucks a day suitable for army needs, under present manufacturing conditions, and this output can be almost doubled by them should the necessity arise. Our Government has already something over 2000 trucks, which it purchased for use with the Mexican expeditionary force. These are all available and most are ready for active service on the moment. Yet only 11.3 per cent of our 2,451,660 miles of roads are surfaced and can possibly be used for truck work every month of the year.

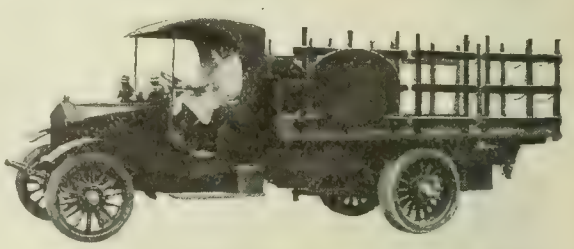
"One of our greatest problems in connection with the motor transportation needs of the army is to obtain competent motor truck drivers. To secure these from among the ranks of the passenger car owners and chauffers and to train novices seems the most advisable method. It will be necessary to establish training camps in various parts of

WE CAN MAKE CARS FASTER THAN THE ARMY WOULD NEED THEM

the country in which truck driver applicants can be trained first hand in driving trucks over all sorts of roads."

The forty truck trains already called for by the Government are only about one-tenth of the number which will eventually be needed. Trucks are plentiful. But we must have men to operate them. Columbia, Yale and Princeton have already begun to coöperate with the club. Fourteen hundred volunteers are needed immediately. They will be called into active service as soon as the companies are trained and equipt. If you are a truck owner you can help to do your bit by joining the Motor Truck Club and rounding up men to be trained as drivers. Address the club at 1790 Broadway, New York City.

Any mention of mobilizing our motors for war suggests speedy touring cars carrying officers, motorcycles rushing intrepid despatch bearers from place to place, ambulances full of wounded, "tanks" rooting up trees, trains of trucks bearing cargoes of food and munitions, busses transporting troops, and General Gallieni's fleet of taxicabs turning the Boches away from Paris toward Berlin. It is natural that these things should come to mind in connection with motors and war. And it would be impossible to overestimate the part these types of gasoline machines have played in helping to decimate the Hun.



We must remember, however, in preparing to add our strength to that of our allies, that we have still another motor at our command. It is less spectacular, perhaps, and it gets thru a prodigious amount of work with placid deliberation, yet in the eyes of many who know, it has a greater significance than all our war cars.

I refer, of course, to the farm tractor.

If we are to succeed in our job of food purveyors to the rest of the civilized world, we must go to the bulk of our farmers and sell them the tractor idea. If conservatism still balks the sale of tractors we must find some way of enforcing their use.

There are in this country 25,000,000 draft horses and mules. It takes the yield of at least 125,000,000 acres to feed the work animals on our farms. They eat annually $2,000,000,000 of food. Their work capacity is limited. The time they waste is scandalous. Horses are the least efficient form of power known to man. And yet farmers cling to them as if they were wonder-workers.

In the April crop report issued by the Department of Agriculture appears a recent (February) count of all the gasoline and kerosene tractors in actual use in this country. Steam driven tractors, tractors purchased but not delivered, tractors out of commission or not to be used this season, and tractors employed for road or work other than farming are excluded.

LORRIES, AS THE ENGLISH CALL THEM, ARE BETTER FOR WAR THAN TRAINS

The total number in all states combined is but 34,371. Maine, for instance, has only fifty-three and at the latest census her farms numbered 60,006 and averaged 104 acres apiece. Arkansas has only 336 tractors—and 214,275 farms averaging eighty-five acres. Mississippi has only 377 tractors—and over 275,000 farms. Most of the other states are equally deficient.

When you consider that even the smallest tractor can do the work of four horses—at a lower cost and at higher speed—it is easy to see what effect the universal use of tractors would have on our annual agricultural yield.

If you live in a farming community you can help in the war by doing everything in your power to banish wasteful, antiquated horse power and to substitute the farm tractor. Any of the tractor companies will gladly send demonstrators and lecturers. Organize a tractor exhibition. Talk tractors. Sell the tractor idea.

A NEW SOCIAL INVENTION

BY AGNES S. BRUNDIN

ASSOCIATE SECRETARY OF THE CONGRESS OF FORUMS

THE industrial age is producing a new kind of man. The tendency in a machine-age is mechanical, yet today there is evolving a new type—the type which is eliminating the idea of the impossible. With the imagination born of living in an age of experiment and invention, men are making an experiment of democracy, to establish the possibility that human beings can control the social and economic conditions under which they exist. This experiment is called the Open Forum.

Peter Cooper, who established Cooper Union in New York City, in 1854, was probably reaching further into the future than he realized; and when Charles Sprague-Smith held the first Forum meeting in 1897 a beginning in applied democracy was made which was to gain momentum until, today, over two hundred Open Forums thruout the United States and Canada are in active existence, with prospects of a national movement of unrealized scope and influence.

The movement is especially active in and about New York and Boston, where the New York Congress of Forums and the Boston Ford Hall Foundation operate. Twenty-five New York Forums got together in February, 1916, and formed the Congress of Forums, Inc., with headquarters at 12 West Eleventh street, for the purpose of coöperation and to assist other Forums which were being established. The Congress built up a national advisory board of representative men from the various political, economic, educational and religious groups who see in the movement a democratic method which promises to have a large share in shaping the national thought of the future and in bringing about an adjustment between different conflicting elements in society. The Congress has a staff of workers in charge, who are doing their utmost to respond to the hundreds of inquiries on establishing new Forums which have come into the office from all parts of the country during the past few months.

While the orthodox churches are attending to the spiritual needs of the people, while the schools are failing to keep step with modern industrial life, the Open Forum is here as a democratic institution of the people. From the Open Forum platform the expert delivers his message to people of every race, of every shade of political and religious adherence who, in turn, may question him, discuss with him, or differ from him, to gain some idea of the real worth of a problem affecting the welfare of society. Nor is the welcome limited to the expert and the practical man; it includes the man with a vision, a plan untried.

Where a Forum has been in operation for any length of time, a decided effect upon the people has been noticed. There is more tolerance toward other views, more sympathetic interest in the lives of others, regardless of race or religions; more knowledge of ideas other than those exprest in partizan newspapers, in churches, in schools or in the home. Here men and women think for themselves, feel a new self-confidence, a new self-respect, a new responsibility toward themselves and toward society. In truth, here is the new democracy which every American has held as an ideal and which has caused the opprest of every land to look to America as a land of promise.

New York City

DAYLIGHT SAVING

A BRIEF FOR DEBATE

RESOLVED, That a law be enacted requiring all clocks in the United States to be set one hour ahead of the present standard time from April first to November first of each year.

A bill providing for daylight saving was introduced at the last session of Congress by the Hon. William P. Borland, but failed to pass. A new bill is being discussed in the Senate now. There are two movements for daylight saving, one to set the clock one hour ahead the year around, and the other for the summer months only. The latter plan is the one chosen for this debate, which was prepared by Edith M. Phelps.

AFFIRMATIVE

I. Our present system of standard time does not give us the greatest possible benefit of the daylight hours.

A. For the average worker with hours from 8 to 12 and 1 to 5, there is more daylight time before work begins in the morning than after it ends at the close of the day. On January 1 there are 53 more minutes of daylight before 12 than there are after 1 o'clock. On April 1 the difference is 1.52 hours; on June 1, 1 hour and 4 minutes; in October, 1 hour and 21 minutes.

B. Much daylight is consumed in sleep and in preparing to go to work before the working day actually begins.

C. The recreation of most people and the meal at the close of the day must largely be taken after the daylight hours are over.

II. To set all clocks ahead one hour during the summer months will remedy most of the disadvantages.

A. Sleep will not be interrupted so early as now by the coming of daylight.

B. There will be an hour of daylight time added to the part of the day utilized by most people for recreation and social intercourse.

III. The change will result in improved health.

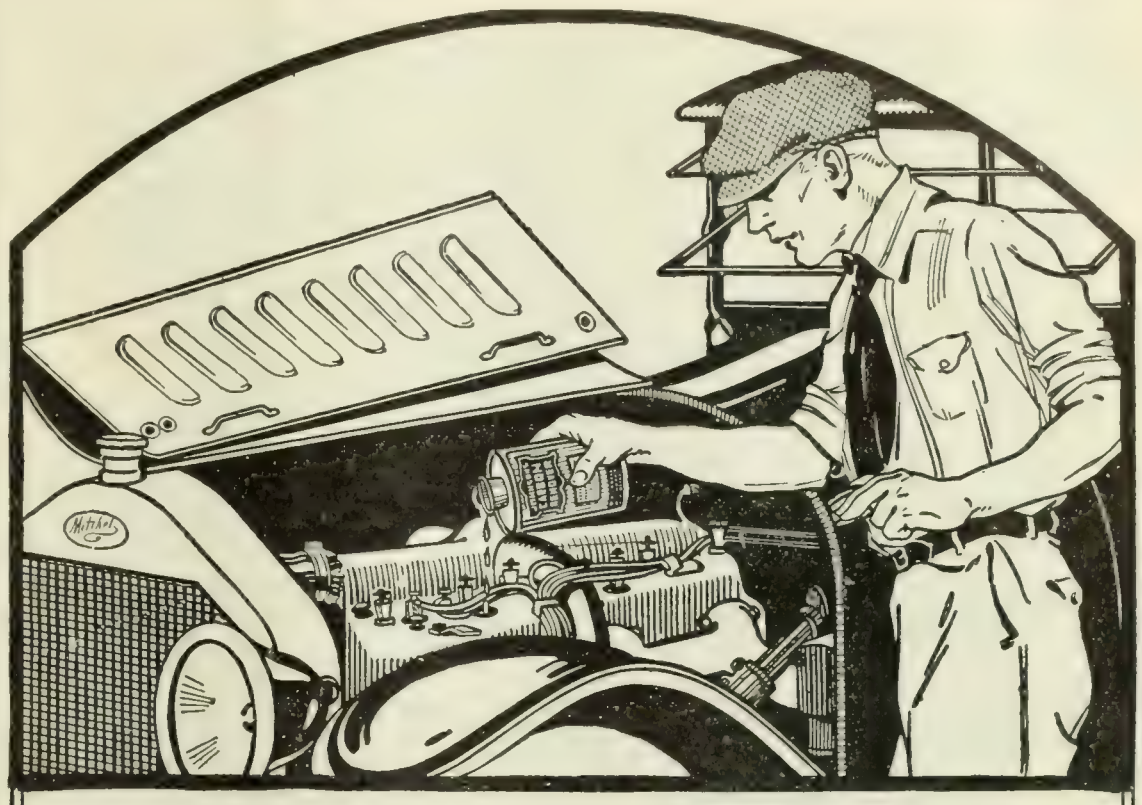
A. There will be more restful sleep during the latter hours of the night.

B. Saving of eyesight by substituting an extra hour of daylight for one of artificial light.

C. Saving of strain and exhaustion by substituting an hour of work in the cool of the morning for one in the heat of the afternoon.

D. An extra hour of daylight for outdoor exercize or sport.

IV. The change will be an advantage from an economic standpoint.



A. There will be a great saving in the use of artificial light. It is estimated that this would save New York City $1,500,000 annually in gas alone. Citizens of Detroit save about $300,000 each year.

B. Economic production will be increased because of increased efficiency on the part of the workers. There will be less strain and fatigue because of the greater use of daylight and the greater opportunity for outdoor recreation.

V. There would be other advantages.

A. There would be better opportunities for additional education in evening classes, lectures, etc.

B. The social life of the nation would

Put New Life in Your Engine

A DOSE of Johnson's Carbon Remover—the engine laxative—will increase the power of your car—improve acceleration—stop that knocking sound—quiet your motor—save your batteries—and reduce your gasoline consumption from 12% to 25%.

JOHNSON'S CARBON REMOVER

It is a harmless liquid, to be poured into the cylinders. It softens the carbon and releases it from the metal. It then burns, powders, and is blown out through the exhaust. Five minutes' time and no labor required. You will save from $3.00 to $5.00 over any other method, without loss of time and with very much better results.

Use It Every Thousand Miles

If you will use Johnson's Guaranteed Carbon Remover every 1000 miles you can keep your motor clean and sweet, and always at its highest efficiency, and you will secure the maximum power and speed from the minimum amount of fuel.

Special Offer

If your dealer cannot supply you with Johnson's Carbon Remover use attached coupon. For a limited time we will include, gratis, a half-pint sample of Johnson's Stop-Squeak Oil—our new product. It instantly penetrates between the leaves of springs thoroughly lubricating them and giving perfect spring action.

USE THIS COUPON

S. C. JOHNSON & SON, Dept. I-5, Racine, Wis.

I enclose $1 for which please send me by prepaid express enough Johnson's Carbon Remover to thoroughly clean an ordinary motor three times. Also send half pint of Johnson's Stop-Squeak Oil free.

Ease your feet
by removing the cause of the trouble

Foot troubles are generally due to misplaced bones. Fallen arches often cause pains in feet, legs, thighs and back. Callouses on sole are due to pressure from some metatarsal bone.

The Wizard
Adjustable
Callous Remover & Arch Builder

gives instant relief by supporting the bones in normal position, with soft inserts in pockets. Any adjustment, shape or location easily made. Builds up fallen arches. Removes pressure on callouses and they disappear. Relieves pain in bunions. No metal—no breaking in. Made of leather, soft, flexible, featherlight; feels fine. Arch Builder and Callous Remover combined, or either separate. Ask your shoe dealer for Wizards. Guaranteed to relieve or money refunded.

If your feet bother you, our book, "Orthopraxy of the Foot," will help you. Free. Write.

WIZARD FOOT APPLIANCE CO., 1658 LOCUST ST., ST. LOUIS, MO.

be improved by the longer hours for companionship outside working hours.

C. All classes would be benefited.

VI. The change could be effected without difficulty.

A. There is no scientific objection to the plan.

1. Astronomers generally agree to the change. Meridians of longitude were made for man's convenience.

B. It would not work hardship to railroad schedules as the change would be uniform all over the country.

C. Relations with Europe would be improved, as it would tend to lessen the differences in time between the two continents.

VII. There is ample support in favor of the change.

A. Benjamin Franklin recommended it in 1784 for Paris.

B. It was adopted by Germany in May, 1916, and has since been adopted by nearly every European country and by Australia and Nova Scotia.

C. Results seem to have been satisfactory. The French Chamber of Deputies passed a bill recently making the change a permanent one. Germany has adopted the plan again for 1917. England found the plan a success financially.

D. Cleveland and Detroit set the clock one hour ahead in 1914. Officials and commercial organizations declared it was a success.

E. The plan is favored by the American Federation of Labor, by the Advisory Committee of the Council for National Defense, by the Merchants' Association of New York City, by the Chicago Association of Commerce, and by the chambers of commerce of many large cities, and by other commercial and scientific associations.

NEGATIVE

I. Conditions existing under our present system of standard time are satisfactory.

A. Much of our prejudice against artificial light is unfounded—it was due to the days of candles and of ill-smelling kerosene.

B. Many people find that they can work better at night than in the day.

II. Few advantages, if any, would be effected by the proposed change.

A. No permanent change would be effected in people's habits. As soon as they were accustomed to the change the tendency would be to get up later.

B. There would be no benefit to people in farming districts where work is regulated necessarily by sunrise and sunset or climatic conditions.

C. There would be no benefit to people in mines and factories worked during the entire twenty-four hours. In France it was computed that only one-fifth of the people would be affected.

D. Many people would merely change their nominal and not their actual hours of work.

III. On the other hand the proposed change would work serious inconveniences and possible danger.

A. Those who begin work now very early in the day would have to get up in the dark thus using more rather than less artificial light, and, at some seasons, requiring more fuel.

B. The necessary change of railroad schedules twice a year would work serious inconvenience to the roads with great danger to passengers of accidents and collisions.

C. Navigation depends mainly on the tides and on the daylight and here a change would be inconvenient and dangerous. Observations of the Weather Bureau cannot be changed and an exception would have to be made for such work. This would lead to the use of two kinds of time which would be confusing.

D. In latitudes where the daylight time is already very long, and especially where the weather is extremely warm, the change would be harmful.

IV. The proposed change is unnecessary.

A. Hours of work could be arranged to take advantage of the daylight without

changing the clock. This is already done in many industries such as farming, building, etc.

B. In France, schools, colleges and barracks have adhered to the custom for some time of rising an hour earlier in summer.

V. The change would be undesirable for other reasons.

A. Various legal complications will arise—for instance, the difference between burglary and larceny, time of payment of notes, etc.

B. It would make serious inroads on the incomes of the lighting companies. Some English electric light companies have found it necessary to increase their rates.

C. People actually prefer the evening hours for their recreation. With the rise in the scale of living there is always the tendency to extend the evening hours spent in recreation and to rise later in the morning.

D. The change in time would upset our relations with other countries.

E. The plan is not adapted to this country because of our large territory and the great variation in the time between sunrise and sunset.

VI. The plan has not operated as expected where it has been tried.

A. The saving of fuel in Great Britain was found to be less than was expected. There was an actual increase in the amount of petrol used for motoring.

VII. There is a great deal of opposition to the change.

A. Scientists and astronomers are not generally in favor of the change. The French Academy of Sciences reported against it.

B. The English House of Parliament rejected the plan in 1908 and again in 1911. It was adopted ultimately as a war measure.

C. The committee from the American Railway Association states that such a change is not warranted from a scientific standpoint.

VIII. Prof. Edward C. Pickering, Director of the Harvard College Observatory, says it "is a form of self-deception like doubling your wealth by calling a nickel a dime, or keeping cool by changing the scale of your thermometer.

THE NEW BOOKS

WILL AMERICA BE SWAMPED?

The Tide of Immigration is a timely book on a most important topic. Dr. Frank Julian Warne gives a careful résumé of the history of immigration to the United States, its sources and variations, the conditions and forces which have affected the quantity and character of the tide, and some brisk chapters on distribution, traditional policies, various methods of restriction, etc.

He is of the opinion that after the European war the flow of immigration will be greatly increased, and urges careful consideration and speedy action on the part of our government looking toward a proper and stable national policy, more effective methods of distribution and assimilation, and the establishment of a wise program of restriction. His drawings and diagrams bear eloquent testimony to the cogency and reasonableness of his arguments and conclusions.

The Tide of Immigration, by F. J. Warne, D. Appleton & Co. $2.50.

OUR STATE GOVERNMENTS

Professor Arthur N. Holcombe, of Harvard, in his *State Government in the United States,* and Professor John Mabry Mathews, of Illinois University, in his *Principles of American State Administration,* have rendered us a real service in pointing out the weaknesses in our system of state government and in indicating possible methods of reform.

Professor Holcombe's discussion is broader in scope tho less analytical than that of Professor Mathews. He deals with the entire system of state government—legislative, executive and judicial. For the most part he is content to set before his readers the facts about state government: its origin, its development, the relation between the voters and the legislative and executive departments, the modifications which have come about as the result of agitation, and the outlook for further reform.

Professor Mathews, on the other hand, has confined himself to a study of state administrative organizations and functions. He discusses only the powers and duties of the governor, the heads of departments, and the special administrative boards and commissions, but he approaches his subject in the spirit of a man with a positive program. He insists on keeping before his readers the haphazard organization, the countless incongruities and absurdities which result from a complicated mass of separate and disjointed authorities over which no one, not even the voter, has any adequate control. In spite of the all pervading gloom, however, Professor Mathews is conscious of a ray of hope. Many of the states have awakened to the necessity for reorganization; some of the work of reorganization has already been done.

State Government in the United States, by Arthur N. Holcombe. The Macmillan Company. $2.25. *Principles of American State Administration,* by John Mabry Mathews. D. Appleton & Co. $2.50.

A SPIRITUAL PILGRIMAGE

The sensation caused in the church circles of England by the withdrawal of Rev. R. J. Campbell from the pastorate of the City Temple, London's great Congregational church, in order to enter the Anglican Church and be reordained as a priest in that communion, has been revived and increased by the publication of *A Spiritual Pilgrimage,* the story of his ecclesiastical wanderings written in response to the challenges of his former associates. Instead of writing a theological argument to sustain his position, he has taken the longer, and vastly more interesting method of setting forth the entire story of his life, so far as his church relationships and religious history are concerned. This he considers his *apologia,* and it may well be received as such.

The son of a United Methodist preacher, Mr. Campbell's boyhood days were spent among Presbyterian relatives in the north of Ireland. He became a communicant in the Anglican Church, but revolted from it when he left Oxford and was ordained to the Congregational ministry. After half a dozen years of brilliant service, he was called to the City Temple pulpit. He now writes as a priest of St. Philip's Cathedral Church in Birmingham.

Into this history of his variegated religious and ecclesiastical experience, Mr. Campbell has wrought such interpretations as would account, in his judgment, for the changes he has made. He apparently attributes his final step to his own temperment, early training in Ireland, the formative influences of certain high churchmen during his Oxford days, his growing feeling for sacramentalism and the conviction that only the "historic episcopate" and "apostolic succession" can ensure sacramental grace and give "the altar" its true place as the center of Christian life and worship.

But the careful reader will surely gather from this narrative that other causes operated to take Mr. Campbell into the Anglican Church and priesthood. The "New Theology" controversy, a most important episode of his life, is passed over lightly. This venture of the author brought the sharpest criticism upon his head from his nonconformist brethren, who felt that on account of Mr. Campbell's prominent position in London, their churches were in danger of being misrepresented. At the same time, some of the Anglican divines extended their sympathy to the

earnest, but somewhat erratic, young preacher and indulged in only a mild refutation of his contentions. It is evident that the sensitive soul of the intellectually beaten clergyman never wholly recovered from the harsh and almost cruel criticism and isolation then visited upon him by non-conformists. The fact that he was obliged to reverse many of his positions and finally withdrew his book from circulation could not efface the sting and bitterness of that experience. He acknowledges that without the backing of the City Temple, he could not have withstood such a severe trial. When health made it necessary for him to leave the London pulpit, he could hardly find a congenial home in non-conformity.

Soon after the "New Theology" controversy, he was faced in his own studies by the far-reaching results and difficult problems of New Testament criticism, particularly that of the Gospels, the Christ-Myth theories, and the eschatological interpretation of Jesus' teaching.

Mr. Campbell practically acknowledges that these problems have, so far, been too much for him. They seem to have driven him far a-sea, and when the storm came on, he was glad to seek the harbor of a sympathetic church home. Any account of his ecclesiastical change which fails to emphasize these spiritual buffetings and intellectual defeats does not do justice to the subject and leaves his former associates still asking, "Why?"

Certainly the non-conformists will not find in *The Spiritual Pilgrimage* a justification for Mr. Campbell's submission to reordination. When from the vantage ground of his new and "higher" position, Mr. Campbell lectures his "former coreligionists," as he styles them, on church union, catholicity and universal brotherhood, they will find it hard to read his words with equanimity, to say nothing of assent.

A Spiritual Pilgrimage, by Rev. R. J. Campbell. D. Appleton & Co. $2.

HIGH SCHOOLS

From time immemorial, as we learn from ancient records, the induction of the adolescent into the mysteries of life, into the secrets of the tribe, into the rites and ceremonies of the religious organization, and into the tricks of his trade, constituted the central fact in all educational systems. In a study of origins and tendencies of secondary education, Frank W. Smith traces the development of aims and methods in mankind's treatment of the adolescent from primitive times to our own day. The relation between the educational institution and the economic and social conditions is emphasized consistently, and there is brought together a wealth of illustrative material. The probable content, method and organization of the high school of the twentieth century, when the domination of the colleges on the one hand and the limitations of the elementary schools on the other, will be removed, and the high school will have come to its own, are discussed.

The conflicts regarding educational

The maker's name tells who made the lamp; the mark MAZDA tells what standards of excellence governed its making :: :: :: ::

MAZDA

"Not the name of a thing, but the mark of a service"

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

CAMPAIGN DIARY OF A FRENCH OFFICER

By Second Lieutenant René Nicolas. Translated by Katharine Babbitt. One of the most extraordinary close-range pictures of modern warfare that has yet been written. "The spirit of the book stirs one indescribably."—*New York Globe.* $1.25 net.

OBSTACLES TO PEACE

By S. S. McClure

"THIS IS NOT AN ORDINARY WAR BOOK. It is calm, restrained, and impersonal, with the truth flashing from it like a flame. With the detached mental attitude of a scientist the author states facts gleaned from first hand observation, quotes the direct statements of high officials and makes lavish use of official documents. By a strange literary and emotional chemistry this unpromising material is transmuted into a book more absorbing, more thrilling, and more convincing than the skilled artisan in best selling fiction can ever hope to achieve."—*New York Sun.* *$2.00 net.*

AT ALL BOOKSTORES **HOUGHTON MIFFLIN COMPANY** BOSTON AND NEW YORK

No Time Like the Present

TO make permanent provision for dependents, securing to them a monthly income for life.

In order to acquire the protection which life insurance affords, it must be taken when you can secure it. When you become uninsurable you will feel the need of it—but it will be too late.

Berkshire Life Insurance Co. **Pittsfield, Mass.**

aims, characteristic of much of the current discussion, center largely about the high school. Professor Snedden considers these in *Problems of Secondary Education,* a series of twenty-five "letters" to superintendents, college presidents, principals and teachers. The restatement of aims in terms of concrete purposes of obvious value to men and women living today, and the adaptation of materials and methods to the attainment of these aims, constitute the text of these articles. The book will be of real service to those concerned with the readjustments taking place in our educational systems.

The High School, by F. W. Smith. Sturgis & Walton. $2. *Problems of Secondary Education,* by David Snedden. Houghton, Mifflin Company. $1.50.

HERMES AND THE HETAERA

Never has any one written more loftily of Greece as a memory of vanished glory and a realization of the dreams of an ardent and pure spirit than has Robert Hichens in his latest novel, *In the Wilderness.* Sharply contrasted with the peace and austere beauty of Olympia, the dusty, crowded marts of Constantinople stand out in sinister splendor, cruel and evil, yet with a barbaric fascination. Each typifies a woman who shapes a man's soul; in Stamboul he sinks lowest; in Greece he rises to his highest happiness and unconscious goodness. The cruelty of a good woman drives him into the desert of an intrigue with a clever, intellectual huntress of men whose assumed sympathy is a quicksand and whose relentless pursuit ends in restless disillusion. Both women are cruel, but it is a pitiful hero who is so absolutely at the mercy of any woman—bad or good. The novel, however, is worth reading for its marvelous descriptions of Athens, Olympia, Constantinople and a little cathedral town in England.

In the Wilderness, by Robert Hichens. F. A. Stokes Company. $1.50.

EVOLUTION

Altho Professor Morgan calls his series of lectures *A Critique of the Theory of Evolution,* he makes it clear first that he accepts evolution as a demonstrated fact, and second that he recognizes several theories as objects of his criticism. The argument is concerned chiefly with demonstrating the universality of the Mendelian mode of inheritance, in domesticated plants and animals as well as in wild forms. Natural selection, from the point of view of recent studies, especially the experimental studies, must mean not merely the preponderance of individuals having advantageous characteristics, as the result of mutations, but also the increasing probability that because of this preponderance certain kinds of mutations will occur in the future. There is no evidence that characters are changed by selection, or by "domestication."

Much of the material used by Professor Morgan is derived from his own experiments in the inheritance of scores of characters in fruit-flies, in the

origin of many characters, and in the correlation between visible body characters with definite elements in the chromosomes of the reproductive cells. It is the last series of facts that are Dr. Morgan's most significant contribution to the science of biology and to the philosophy of evolution.

A Critique of the Theory of Evolution, by T. H. Morgan. Princeton University Press. $1.50.

WORTH WHILE ESSAYS

Mr. Owen Wister, in his preface to *An Apology for Old Maids and Other Essays*, says that it is such essays as these which "save our face" when we as a nation are judged by our literary output. The American novel, indeed, with few exceptions, is not an object of patriotic pride. It is rife with our materialism, our loose thinking, our cheap taste. But in such books as Mr. Sedgwick's the spirit of conservatism, of classicism, is vindicated. In a style of austere and lucid delicacy these thoughtful, scholarly essays draw the reader apart from the hurly-burly of life to survey it from a detached viewpoint. It may be argued that by this very aloofness of spirit the book loses something of the close intimacy with human struggles which would give it greater vitality. But for all its detachment it is never lacking in insight; and in these days of weary darkness and suffering, its quiet dignity and earnest thoughtfulness make strong appeal.

An Apology for Old Maids and Other Essays, by Henry Dwight Sedgwick. The Macmillan Company. $1.50.

BUSINESS AS APPLIED SCIENCE

The efficiency with which a particular business enterprize is conducted may perhaps be measured in terms of the profits produced. But the efficiency with which business in general is conducted is not so easily indicated. We have to look not only to the percentage of failures among all business ventures, but to the margin of profit or loss upon which business is conducted. The attempt to introduce system and formulated principles in the organization of business is a comparatively recent phenomenon, and is in many ways radically different from traditional accounting and planning. In the second volume of the Harvard Business Studies, *An Approach to Business Problems*, Arch Wilkinson Shaw, the editor of *System*, has reprinted a course of lectures that attempt to analyze sound business practise. The chapters deal with location, equipment, construction of plants, the selection of materials, organization, labor problems, creating and supplying markets and administration. The author is one of the few authoritative writers on business problems who recognize that "business" is an evolving relationship and not a fixed institution, and that therefore the principles developed are not in the nature of eternal verities. He also recognizes the organic aspect of economic relations in his emphasis upon the interdependence of the various factors involved in business practise.

An index would have added to the

value of the book, altho the analytical table of contents contributes toward making this one of the most useful attempts to combine economic principles with inductions from the best current usage.

An Approach to Business Problems, by A. W. Shaw. Harvard University Press. $2.

A GOOD MATCH

Social snobbery is one of the ugliest forces in conflict with young love. It often dulls the tip of Cupid's arrow or bends the shaft. It puts Cupid in jail and kidnaps his destined victim. Social snobbery makes marriages that would never be made in Heaven and prevents marriages that might achieve Heaven after a while. *The Balance*, by Francis R. Bellamy, is a well-written novel that owes its plot to this force. If the Schroeders of the Schroeder Grocery Stores had not demanded large means of the man who was to marry their daughter Carrie, Sammy, who eventually became S. Sidney Tappan, Playwright, would not have invested his little all in the plumbing business, and lost it. Nor would he have written a sensational play for the money to be had from it. Nor would he have married his first wife for altruistic reasons. He and Carrie would have worked out their salvation together sooner and more happily. The story is a logical and true to life.

The Balance, by F. R. Bellamy. Doubleday, Page & Co. $1.35.

NEW FICTION

In Spacious Times, by Justin Huntly McCarthy, is a wholesome old-fashioned romance of the great days of Queen Elizabeth and tells the love story of one of the great queen's "sisterkins." (John Lane Company, $1.35.)

The Way of the Wind, by Eugenia Brooks Frothingham, is an emotional love story of the affection between a woman with strong maternal instincts and a charming "prodigal son." (Houghton, Miffin Company, $1.40.)

Readers who enjoy the extravagant fictions of the Irish mind in full and free activity, will be pleased with the imaginative tales of Padna Dan and Micus Pat as told in *The Whale and the Grasshopper*, by Seumas O'Brien. They are not without wit and philosophy. (Boston: Little, Brown & Co., $1.35.)

In *A Portrait of the Artist as a Young Man*, a naturalistic novel in some ways remarkable, James Joyce gives the childhood, adolescence and young manhood of an artistically inclined middle-class Irishman. But the book in many places is exceedingly coarse, so marring uncommon beauty, descriptive power and insight. (B. W. Huebsch, $1.50.)

Grant Richards has dealt skilfully, delicately, convincingly with the old theme of the girl of the under world who truly loves as fine a specimen of the cad as ever was drawn. He does not pay the bill, his family are rather helped than hurt, no one suffers but the little French danseuse who was bound to suffer anyway, and yet, the story is a tract, and not the title, *Bittersweet*, but grey ashes are the adjectives that fit the impression left by this direct, restained recital. (Dodd, Mead & Co., $1.40.)

A delicate study of child nature is the title story of Leonid Andreyev's *Crushed Flower*. Judas Iscariot and Others and another short sketch of Good Friday are powerful character studies. Beneath the sureness of touch which is the mark of the

MORE COMPANY. 350 More Building, St. Louis, Mo.

Russian writer, all these somber tales show that equally Russian characteristic, the curious deep sympathy with all men of whatever mind or circumstance. (A. A. Knopf, $1.50.)

In *Brandon of the Engineers*, by Harold Bindloss, Dick Brandon is turned out of the English army for losing important papers. He comes to this country, gets work as an engineer in Central America, and makes an important discovery which helps his country and enables him to win his sweetheart. Interesting but not important. (F. A. Stokes Company, $1.35.)

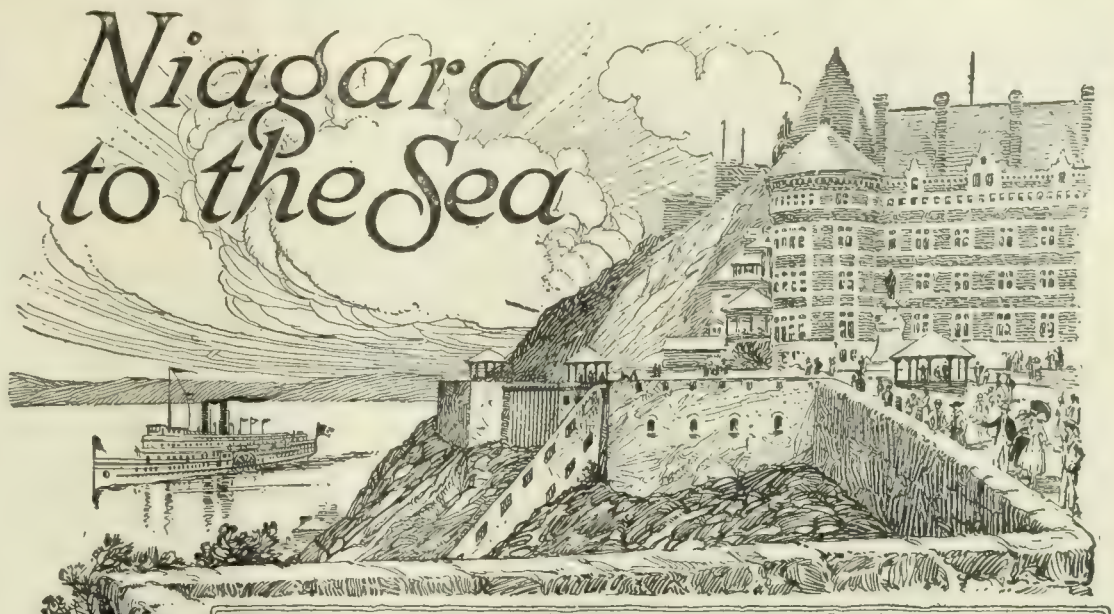
Henry Kitchell Webster's new novel, *The Thoroughbred*, is pleasant and trivial. A young husband fails in business and he and his wife, accustomed to large means, must live on $22.50 per week. This beggarly wage, which enables many men to raise families, suffices to teach the Blairs that life is worth living! (Indianapolis: Bobbs-Merrill Company, $1.35.)

Hugh de Sélincourt's *Soldier of Life* is a quite ordinary and typical Englishman, who was crippled and brought home to fight a new battle with hallucinations and the fear of insanity. It is a subtle analysis of mental states and most interesting psychologically from beginning to end. James Woods's character, developing and deepening thru the love of a good and oracular woman, achieves poise and victory in a very heartening way. (The Macmillan Company, $1.50.)

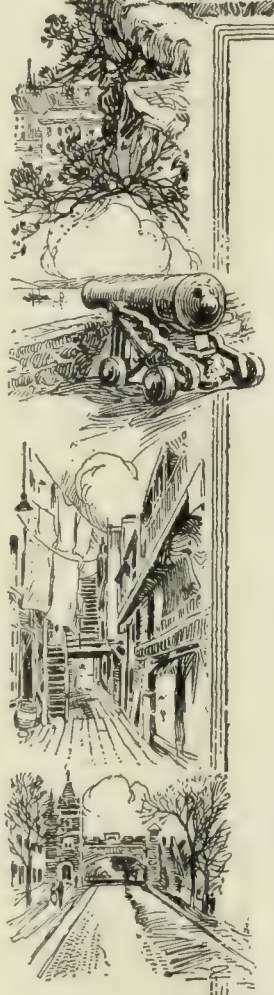
LATIN AMERICA

David Hannay's life of *Porfirio Diaz* is no dry and superficial statement of facts, but a most readable and enlightening story of Mexico and its people from 1854. (Henry Holt & Co., $2.)

Annie S. Peck is a peculiarly fit guide to Latin America. The information in *The South American Tour* has been collected "con amore" and is exhaustive in the detail that the traveler desires. The new edition makes this, perhaps, the most satisfactory book of its kind on the market. (G. H. Doran Company, $3.)



The Andes of Southern Peru, by Isaiah Bowman, is a scientific work of large scope with many plans, maps, and illustrations. While a physical geographer might be better equipped to make use of the valuable information collected in this book, there are many pages interesting to the casual reader. (Henry Holt & Co., $3.)



Unity of the Americas, by Robert E. Speer, clearly shows that the unity so desired today is not to be easily achieved, and gives an insight into some of the existing conditions in South America which must be first understood by us of the North before any unity can be attained worthy of the name. (Missionary Education Movement, 25 cents.)

Renaissant Latin America, by Harlan P. Beach, gives a graphic account of the work of the Panama Congress of missions and missionaries in 1916. The exchange of ideas was noteworthy as delegates were present from nearly all over the world, and from these workers Dr. Beach has collected a most interesting fund of facts. (Missionary Education Movement, $2.)

What Is the Matter With Mexico? Caspar Whitney, in answer, describes the people, their character, their political development, with many illustrative anecdotes. He sketches the century's history briefly, that of the past four years in detail, scoring heavily our vacillations and our departure from our methods with Diaz. (The Macmillan Company, 50 cents.)

For those who have impressions of "conspiracy" as the root of the Mexican War, the opening chapters of Farnham Bishop's *Our First War With Mexico* will be enlightening. He traces much of the difficulty to fundamental differences between the Mexican and the Anglo-Saxon mind, and to misunderstandings of the intent of the United States Government. (Charles Scribner's Sons, $1.25.)

Arriving at Historic Quebec

On one of the magnificent steamers on the route

Niagara to the Sea

The all-water trip to Montreal, Quebec and the Saguenay River by the steamers of the Canada Steamship Lines is one of the grandest trips in America for health and recreation.

The mighty heroes of North America are no more, but Quebec, cradle of New France, where they walked and talked still survives; quaint, historic, ancient; majestic in its beauty and isolation.

Every hour of the 1000 mile journey has its revelation of beauty, grandeur and historic interest—Niagara, the most sublime of all nature's handiwork, Toronto, "The Queen City of Canada," the fairylike Thousand Islands of the St. Lawrence, the thrilling descent of the marvelous rapids, the great Canadian Metropolis Montreal, the miracle-working shrine of Ste. Anne de Beaupré just an hour from Quebec, the stupendous Capes "Trinity" and "Eternity"—higher than Gibraltar—on the Saguenay River are all on this route. Up-to-date Canada Steamship hotels at Murray Bay and Tadousac.

A thousand miles of travel—A thousand thrills of pleasure

PLANNING THE FUTURE AMERICA

BY HENRY A. WISE WOOD

Mr. Henry A. Wise Wood, acting as a delegate of the National Institute of Efficiency, of whose Board of Governors he is a member, read the following paper at the meeting of the American Academy of Political and Social Science which was held in Philadelphia on April 20.—THE EDITOR.

ONE of the chief faults of our happy-go-lucky America is its complete absorption in affairs of the moment. It lives wholly in the present, thinking little of its past, and not at all of its future.

A huge, good-humored, industrious but untrained multitude, it wanders contentedly along without thought of a destination. Having neither a consummate leader, nor a chart, nor a goal, its pain and its pleasure are almost the sole directors of its course.

If things go well, it believes itself to be upon the right path; if they go ill, its members rush hither and thither in pained confusion, until a more comfortable path is found, when it moves off along that course, with no eventual objective in view.

When the guiding force of a people is compounded of the thought of all of its members, that people must necessarily move and develop by a succession of loosely related experimental steps. A people must grope or be led. Democracies usually grope, with occasional periods during which, having fallen under the influence of men of foresight and strength, they are directed along preconceived routes towards clearly defined objectives.

There are times when a people have become so preoccupied by their local affairs that they are deaf to suggestion however beneficial which calls for a change of thought and action. In such a state of inertia were the American people at the beginning of the present war, and until the aggressions of Germany grew to be intolerable.

There are other times when a people, having been aroused out of intellectual lethargy into a state of acute cerebration, are mentally mobile and may easily be led into new paths, if those paths meet with their approbation. In such a state of intellectual fluidity are the American people at the present time.

This, then, is the opportunity of the dreamer of dreams; of the man of vision who believes he can serve his country by pointing out to it the highway to a great national destiny. To such a man time is nothing, obstacles are as nothing, and the labor, and sweat, and pain of the builders are as nothing. To him the goal, the goal only, is reality. That end achieved, and he knows the memories of the struggle will grow golden, and these become the traditional glories of the nation. Need an American be ashamed to confess that he wishes his country to become the great empire of the twentieth century, democracy's greatest empire?

In the United States we have the largest group of educated members of the white race to be found anywhere in the world. They constitute the only great two-ocean nation and are astride the temperate zone; they are industrious, ingenious, and enterprizing. They possess an aptitude for the farm, the forest, and the mine, the laboratory, the factory, and the sea, and occupy a territory rich in every natural resource. They are peace loving and benevolent.

What shall such a people do with their future? Shall they permit it to develop haphazard; shall they advance without plan or direction to an unforeseen destination? Shall they not, instead, determine their future, make of it a carefully thought out enterprize, and create and organize the means necessary for its accomplishment, as a definite national undertaking?

Being among those who believe that the future should be the result of design, not of chance, I make bold to point out what in some respects I believe to be America's future place among nations.

America has long been one of the world's greatest producers of foods and raw materials. This advantage we must not surrender; we must not permit our growing industries and increasing tendency towards urban life to lead us to curtail our output of natural products. On the contrary, we must strive, by better methods of cultivation, conservation, replenishment and working, to increase vastly the output of our natural substances, and to reduce their cost in the world's markets.

Having at hand the necessary raw materials, a populace unequalled in ingenuity, of high technical skill in the arts and easily taught new processes of manufacture; having a home market so vast that standardization becomes possible to an extent not possible elsewhere, and having the largest accumulations of free capital, there lacks nothing but the undertaking of the project to make of our country the foremost workshop of the world.

We must recover our maritime supremacy, and become the world's chief sea carrier. Once again must the American flag be the flag oftenest seen upon the waters of the earth. During the year 1914 only 9.8 per cent of our foreign trade was carried in American bottoms; in 1830 it was 90.3 per cent. It is inconceivable that we should not instantly abandon the policies which have been making for our maritime suicide, and adopt others which will restore to us our birthright of sea use, which we have so recklessly tossed into the laps of other nations.

Germany's profits upon the sea carriage of our own goods and people have built her merchant fleets, have helped to develop her shipyards, and have gone far towards the creation of her

only-second-to-Great Britain's naval power. We are now rendering a similar service for Japan. To carry our own exports, imports, and passengers, whether in the Atlantic or Pacific, must henceforth be our inexorable purpose. American ships for Americans and their goods, this must be our slogan.

In order to become the world's foremost manufacturers and merchants, we must become the world's chief bankers. Where foreign enterprizes may borrow, there they will trade. The American banker and American salesman must go abroad hand in hand.

The nation's surplus capital must be set to work for the nation wherever, beyond the seas, good returns in interest and trade are forthcoming. And selected youth must be especially trained for the handling of America's banking and commercial interests abroad, trained in the languages, manners and customs, tastes and prejudices, of all foreign peoples. For this work there should be created a great national institution, subsidized by the Government, with training field stations in all countries. Such an institution could provide us also with consuls, so that trained Americans should replace our untrained consuls—many of whom are of foreign citizenship and their loyalty not always to be depended upon.

In planning the future it must not be overlooked that security is an essential condition of over-world trade, the security of the individual American, and of his property.

Under insecure conditions American over-world trade can neither take firm root, nor prosper. Therefore, if we wish to found a great world serving industrial democracy, we must lay down and inexorably maintain the principle that wherever an American happens rightfully to be, there his Government will insist upon the security of his life and property.

We must accept and vigorously act upon the age-old saying: Fast bind, safe find. We now see that no nation can carry the commerce of the world in one hand, and an empty blunderbuss in the other. That commerce can no more be safeguarded by treaties than can a treasure by a copy of the eighth Commandment pasted upon the door of the vault which holds it. We now know that no one but the well intentioned respects treaty or commandment; that the ill intentioned respects only superior power. We therefore must hold superior power. We must be respected not only because of our intellectual and material usefulness to our neighbor nations, but also because of our ability, our readiness, and our determination, everywhere and upon every occasion, to support with force, if need be, the rights even of the humblest of our people, be those rights assailed by a nation little or big. The egis of America must protect the American, as did that of Rome, the Roman. Upon no other terms can a nation win either the respect or the trade of the world. We must have both.

DID YOU BORROW THIS COPY?

Or Did You Buy It on the News Stand? Haven't You Become a Regular Subscriber Yet?

The Independent's Story of the Great War is of new interest to the men and women of America, who must sharpen their vision, co-ordinate the daily news and think clearly on the new problems of the hour.

So you would enjoy The Independent much more if you received it every week direct as soon as published—for The Independent is a "journal of the hour" and you should read it while the events are red-hot. The Independent is called the "most satisfactory war journal in America."

You should keep all the copies in your home for ready reference, for The Independent is contemporary history.

ESTABLISHED 1865

Diversified Investments For Your Present Funds

Successful, experienced investors agree that for utmost safety it is advisable to select investments secured by properties of varied character and location.

We have an exceptionally broad list of diversified 5½% and 6% securities in denominations of $100, $500 and $1,000 suitable to the most exacting requirements. We offer and recommend for your present funds four bond issues secured by these different classes of property.

Established Industrial Property—Company's earnings largely in excess of principal and interest requirements.

Farm Land—Well located and under profitable cultivation.

Improved Chicago Real Estate—Large value, ample earnings and strong ownership.

Natural Resources—Power plant in successful operation. Substantial cash investment behind the bonds.

All these recommendations are based on long experience, complete investigation by our experts and outright purchase. Write for circular No. 982 AB giving details.

MARKET PLACE TALKS

BY LUIGI CRISCUOLO

THE "OLD GLORY" LOAN

A PROMINENT banking institution makes the following statement in its April bulletin: "In view of much that has been said of the ability of the banks to take a great Government loan, it is well to emphasize the fact that it is far more desirable to have the loan taken by private parties. If the banks create new credit, the effect will be to inflate the situation and increase the reserve requirements. Moreover, the bank situation should be kept free and strong to deal with the business situation. The late British loan was floated without bank subscriptions and bank subscriptions to the late $150,000,000 Canadian loan were all declined when it was found the loan could be filled without them."

The entrance of the United States into the war and the recent proposal to expend billions on the army and navy give but a small indication of the extent of the financing to be done for the purpose. At this writing it is intended to ask for a loan of $7,000,000,000, three billions to be loaned to the Allies on pledge of their own bonds, while two billions in bonds and two billions in short term certificates of indebtedness are to be issued for our own purposes. The initial offering of the long term bonds is expected to take place about July first, but already $200,000,000 in 3 per cent certificates of indebtedness have been offered to banks and over-subscribed many times.

The bonds will probably bear 3½ per cent interest and be free of income taxes, altho there has been a controversy as to the advisability of issuing so great an amount of tax-free bonds. The argument against them is that the very wealthy investors might anticipate excessive war taxes and sell their present holdings of corporation bonds and buy the tax-exempt Government issues. It is obvious that if the ultra-wealthy were to be subjected to a super-tax of from 33 1/3 per cent to 40 per cent on their incomes, the effect would be to cut down their income on 5 per cent bonds to 3 per cent. It is conceivable that in such an event it might be profitable for them to shift their investment into the Government loan. However, it does not follow that this will be done because while the 3½ per cent rate on Government bonds will be permanent, the 40 per cent tax on income may be only a matter of a few years. Future generations should be taxed for a substantial proportion of the obligations now incurred.

Eliminating entirely the matter of taxation and the methods by which the loan is to be raised, the subject of immediate interest is: can we raise $7,000,000,000 without a disturbance to our finances? The best answer to this is a comparison of our present resources with their status in 1898 when the last war loan was raised and 1914 when the present war began. Also a contrast with the present financial position of our Allies, two of which were, up to the war, the world leaders in finance. England has been second to no nation in ability to gather funds from all parts of the world, while the thrift and wealth of the French people are proverbial. As a nation of investors, France was particularly singular in its number of very small investors—people who placed as low as one hundred francs (about $19.30 normally) in government or corporation bonds. Are we to emulate the French *paysan* in the hour when our country needs our dollars?

The United States loan of 1898 was a twenty-year 3 per cent issue in the amount of $200,000,000. It was offered at par in June and by July 15th was oversubscribed seven and one-half times, the subscriptions aggregating $1,500,000,000. It is significant that applications for amounts of $500 and less numbered 232,224, with the total amount subscribed at $100,000,000. No subscription for $5000 or over was allotted bonds. These bonds sold later in the year at 107¾, in 1899 at 110¾, in 1900 at 112¼, and have sold in each year to 1917 at not less than par.

Since 1898 the country has passed thru the period of business expansion of 1901-6, the panic of 1907-8 and the war depression of 1914-15. It is now in the midst of industrial activity without comparison in the history of the world. It is a prosperity which would not have been experienced at this time excepting for the war, but it is nevertheless a real prosperity and shows evidence of continuing for some years.

In the two and one-half years of the war we have repurchased from European holders $2,100,000,000 of our own security issues besides $2,600,000,000 of various foreign securities, principally those of the Allies. A trade balance of less than $500,000,000 in the twelve months ended June 30th, 1914, has been changed to a balance of $2,000,000,000 at the end of June, 1916, and to over $2,500,000,000 in the eight months ended February 28th, 1917. Sales of stocks on the New York Stock Exchange increased from 48,000,000 shares in 1914 to 233,000,000 in 1916, while sales af railroad and miscellaneous bonds increased from $427,000,000 in 1914 to $845,000,000 in 1916.

The banking prosperity is worth no-

ticing; bank clearings for the whole country increased from $69,000,000,000 in 1898 to $155,000,000,000 in 1914 and to $261,000,000,000 in 1916.

The wealth of the United States was placed at $94,000,000,000 in 1900 and at $187,739,000,000 in 1912, while recent estimates place it at $200,000,000,000, and the income at $50,000,000,000 annually. Against these resources, the debt of the United States has been less than $1,000,000,000, which is estimated to be the amount of the national revenues for 1916. England, with a wealth figured at $85,000,000,000, has a current war debt of over $16,000,000,000, or 28 per cent; France, with wealth of $50,000,000,000 has a debt of $10,000,000,000, or 20 per cent.

The United States war requirements of $7,000,000,000, a part of which will be raised by bond issues and a part possibly by taxation, amount to but 3½ per cent of our national wealth. Figuring on 5 per cent of our wealth, we could follow the methods adopted by the European powers and provide $10,000,000,000, 10 per cent would provide $20,000,000,000, while 20 per cent would provide $40,000,000,000. There is no question in the minds of those best qualified to judge as to the ability of the country to absorb a loan of $7,000,000,000. The immediate problem is the *means* to be adopted in selling the bonds. They will be in popular form, probably in denominations of $20 and upward. This may make it possible for every person possessing a twenty dollar bill, which is but an obligation of the Government not bearing interest, to exchange it for a bond of that same Government bearing perhaps 3½ per cent interest.

Every individual's money will be required. It should not be a question of waiting until someone else invests. Every man, woman and child having idle money should place it in these bonds. We know of no better investment so far as safety of principal is concerned, and if precedent is a guide there is also a possibility of a profit in the next few years. It is true that the process of making investors out of people of small means is rather a slow process, less than one-fifth of one per cent of our people owning bonds, while in England and France over 11 per cent of the people have purchased war bonds.

Bankers all over this country have been advertising to the public or writing their clients to the effect that subscriptions to the Government Loan would be accepted and no commission or other charge made in connection with the subscription.

It is the duty of every citizen or resident of the United States to lend as much financial support to the Government as he can, even at sacrifice. War of a necessity causes many to sacrifice life as well as goods. Upon the success of the "Old Glory Loan" may depend not only our own liberty but that of the millions of our Allies who are fighting for Democracy and Humanity. We should all do our utmost to make it a success.

Investments Backed By America's Greatness

EVERY first mortgage bond, safeguarded under the *Straus Plan,* is in the broadest and truest sense an investment backed by the nation's prosperity and greatness.

SECURITIES founded on the land and the improvements thereon, which give it value and earning power, are always last and least affected in a period of stress. This fact is a particularly valuable guide in war-time.

UNDER our Plan, each issue of bonds we purchase and offer to investors, is a direct first mortgage on a high-grade building and land, maturing serially in two to ten years. Price to net 5½-6%. Write for our valuable Booklet, "Acid Tests of Investments in War Time" and for

Circular No. F-712.

We will accept subscriptions for present or future United States War Loans without profit or commission.

Conducted by

W. E. UNDERWOOD

RESERVE OF THE MACCABEES

This department is in receipt of a communication from a member of the Maccabees (a fraternal life insurance order) resident at Ventnor, N. J., protesting against a statement made in our issue of February 19, last, in which, replying to some inquiries respecting insurance in assessment associations, I stated in substantial effect that no scheme of life insurance might be regarded as a secure and permanent one that did not provide for a mathematical reserve based on some standard table of mortality. Quoting from my article, I said: "As neither the Modern Woodmen nor the Maccabees maintain a reserve of that character, I cannot regard their insurance as possessing the essentials of permanency and security."

The Modern Woodmen order is mentioned with the Maccabees in my reply only because the person who made the original inquiry included them, and not because I regard them as on a parity. In point of security the Maccabees' is much the superior plan.

Thru an inadvertence, I failed to state that since 1904 the Maccabees have maintained a 4 per cent reserve on all insurance written since that year; but that all the contracts in force prior to that time have been left without that protection.

My New Jersey correspondent tells me that as an insurance critic I should know "that at this date, and for considerable years past, the Maccabees have maintained just such a reserve, and all policies at the date of change to reserve system were valued and adjusted to the necessary reserve."

Continuing he says: "The reserve table is based on the National Fraternal Congress table of mortality and is based on 4 per cent. Under it the Maccabees have accumulated assets of $21,000,000."

Getting back to the question: I did not say that the Maccabees does not maintain a reserve. My only assertion is that the reserve it does maintain is not sufficiently comprehensive to cover all of the order's outstanding contracts.

Let us now compare it with the Masonic Mutual Life Association of Washington, D. C., a fraternal life insurance association. That is a full 4 per cent reserve, and it is charged as such in the liabilities. At the end of 1915 the amount of the Masonic Mutual's reserve was $749,900 on $11,052,500 of outstanding insurance. On the same date, quoting from the Michigan Insurance Report, the reserve of the Maccabees (not charged

as a liability, either) was $13,035,383 on outstanding insurance of $373,243,321. The reserve of the Maccabees is seventeen times the amount of that of the Masonic Mutual, while its contingent insurance liability (outstanding insurance) is thirty-four times that of the Masonic Mutual. Therefore if the reserve of the latter is sufficient—and it is—the reserve of the Maccabees is not.

Reporting on the adequacy of the rates of the Maccabees, an impartial authority, "Best's Life Insurance Reports," says: "They are adequate for new business, provided the organization can accumulate the 'mathematical reserve' contemplated and at the same time make up the deficiency caused by the low rates in use prior to the change. . . . The statement shows an apparently good surplus over all liabilities, but if the order maintained as liability a sufficient reserve for the protection of contracts this surplus would not be shown, but instead there would be a large deficiency."

I now return to what I wrote on February 19: "If the amount of money collected per year for every member of the orders named, each contributing his proper share, based on age, as indicated by some reliable table of mortality, does not include a sum which invested at interest will under the requirements of that mortality table, annually offset the increasing cost due to advancing age, then it is not good life insurance. As neither the Modern Woodmen nor the Maccabees maintain a reserve of that character, I cannot regard their insurance as possessing the essentials of permanency and security."

The management of the Maccabees claim that as to outstanding insurance on members admitted prior to August 1, 1904, the increasing cost is provided for, and they believe that as they mature as claims they will be cared for. This can be done by increasing the yearly contributions from those members if they will respond to the calls. Will they? Can they? The burden is bound to become grievous to some of them unless mitigated by funds now on hand in the order's treasury. Can any of these be so applied? As the reserve on the new business is not held as a liability, the question is a fair one.

H. G. R., Bergen, N. Y.—The Michigan Mutual Life is a safe old line company with assets of $12,841,896 and surplus of $1,187,338. I do not know why it retired from New York, but conclude it disagreed with some of the provisions of the changes made in the laws in 1906. The net results of the legislation enacted on the report of the Armstrong Committee have been generally beneficial to the companies and the public. Some of the changes made were drastic, perhaps unnecessarily so. The evils attendant on writing deferred dividends—and they were numerous—were extirpated with the proscription of that form of policy. Provisions regulating expenses, requiring annual accounting with policyholders, standard forms of policies are all gains. The provision limiting amount of business annually strikes me as reactionary since expenses are limited. Taken by and large the new laws set up a healthier condition. There are about 250 life companies in the United States and yet there are but 35 (including 12 locals) doing business in the state.

HOUSE PLANS FREE

What would you have to pay for a set of House Plans measuring up to the quality we furnish—$100? Yes, probably $250, or more. Do you want such a set of architect's working drawings ABSOLUTELY FREE? We will publish two or three House Plans each month in our magazine—THE TOUCHSTONE—and you can secure any one of them FREE OF CHARGE by subscribing to THE TOUCHSTONE—a magazine devoted to Art, Music, Fiction, Poetry, Architecture, Gardening, Education, the Stage, Home Making and the Crafts, as well as planning Houses. Any man or woman of culture in town or country, will enjoy it so much that after a year's reading the interest will be permanent. Bear in mind that we give a set of Complete House Plans ABSOLUTELY FREE. When you get your first copy of TOUCHSTONE MAGAZINE, study the plans for ten minutes and you, too, will be a convert to their idea of comfort, simplicity and beauty. Select the home that suits you, any time during your subscription, and we will send you the plans *free*. These houses represent all that is modern, artistic and economical. Try getting a set of REAL HOUSE PLANS elsewhere and see what they will cost you.

Send six cents in stamps for book showing 14 HOUSES with exteriors and floor plans.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Write a brief for a composition in which you will show how the United States may increase its food supply.
2. Write a paragraph of detail in which you show how any school student may assist the national government in eliminating waste of any kind.
3. Write a short argument on the proposition, "The expenses of war should be met by taxation rather than by loan."
4. Write a composition of cause and effect on the topic, "Many important results have followed the break with Germany."
5. Give a short oral report concerning the ways in which the submarine war is affecting England.
6. Prepare an address of welcome suitable to be given to the British and French representatives now visiting this country.
7. Make a clear oral report concerning the events of the Great War during the past week.
8. Write a composition in which you explain how and why the war is affecting South America.

Your Town in War.

1. Write a letter suitable for publication in *The Countryside* telling what your neighborhood is now doing as national service.

The Mobilizer-in-Chief. By Donald Wilhelm.

1. In what respects is the first paragraph remarkably effective?
2. Condense the article into a single item of four or five lines.

A National Picture Puzzle. By W. S. Gifford.

1. Explain in what way this article illustrates the characteristics of the author as given in the article called "The Mobilizer-in-Chief."
2. In what way is the title effective? Give rules for the writing of titles.

Support the British Fleet. By Park Benjamin.

1. Write a short summary of the reasons presented by the author for aiding the British navy. Define "précis." Certain English schools give much attention to writing the précis. What advantages do students gain from the work?

Mobilizing Our Motors for War. By John Chapman Hilder.

1. Imagine that you have been asked to address a small society of automobile owners. Prepare a patriotic address that would interest the society.

In the Service Army.

1. Prepare a somewhat similar list of items concerning patriotic work that you have noticed in your immediate vicinity.

Planning the Future America. By Henry A. Wise Wood.

1. Make a brief of the points to be considered in planning the future America. Show that your brief has been prepared in conformity with the rules for brief-making.

Woman's Place. By Maude Wetmore.

1. What advantage does the author gain by using a specific instance in the first paragraph?
2. Write in one paragraph an answer to the question, "What is woman's place in time of war?"

Daylight Saving. By Edith M. Phelps.

1. Give an oral explanation of what is meant by "Daylight Saving."
2. Stand before your class, without notes, and give any part of the debate.

SECTION II. LITERATURE.

Remembrance. By Murdock Pemberton.

1. Give reasons for or against calling "Remembrance" a poem.
2. What does it tell us concerning the life and the spirit of the one who speaks? Concerning the life and the spirit of the bank president?
3. To what universal interests does the work appeal?

SECTION III. WORD STUDY.

1. Give the derivation of and the meaning of every one of the following words prominent in the news of the week: riots; insurrection; ardent; arsenals; torpedo; insignia; reprisal; trenches; mirage; ovation; expeditionary; traffic; periscope; compulsory; enlistment.
2. Use the words in sentences concerning the events of the week.

SECTION IV. GRAMMAR.

1. Choose sides for a contest in syntax. Let every contestant select from The Independent three expressions whose syntax seems difficult to explain. The contestants should ask and answer questions from alternate sides until all the questions have been asked. The teacher will act as judge. The side making the larger number of correct answers will be declared winner.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Causes of the Present War—"Our Country Right."

1. Note the opening statements in the five paragraphs which begin: "We fought the Revolutionary War," "We fought the War of 1812," etc. Are these statements justified by the facts in each case?
2. Is the closing statement in each paragraph justified by the facts?
3. "If we are wrong now we have never been right." Why?

II. Organizing for War—"The Mobilizer-in-Chief."

1. What does the title of the article mean?
2. Study the composition of the Council of National Defense. Show why each of the members was given a seat in the council.

III. Our Allies and Our Enemies—"Our Ally Armenia," "The Planet Mars," "The World's Narrowest Escape," "Consequences of the Break with Germany," "America Receives French Commission," "Root Goes to Russia."

1. "There are submerged and half forgotten peoples," etc. Show that President Wilson remembered this fact when he wrote his message to Congress.
2. The editorial "The Planet Mars" is an allegory. Translate this allegory into direct narrative English.
3. What are the facts which justify the first sentence in the editorial "The World's Narrowest Escape"?
4. ". . . the French are urgently desirous of seeing an American army on French soil," etc. "The British . . . regard as of greater importance the regular transportation of food stuffs and of munitions of war." Which party would you favor?
5. What aid will the United States probably bring to Russia?

IV. Our Naval Campaign—"Support the British Fleet."

1. What has the British navy accomplished thus far during the war? What has it failed to do?
2. "There is every reason of sentiment why we should help him," etc. Discuss this statement; show what it means.
3. What form will the help which the American navy is to bring probably take?

V. American Foreign Trade—"Planning the Future America," "American Trade Increases," "U-Boats Do Double Damage."

1. "They constitute the only two-ocean nation and are astride the temperate zone," etc. What is the commercial significance of this fact?
2. "America has long been one of the world's greatest producers of foods and raw materials." Give some statistics in support of this statement.
3. "We must recover our maritime supremacy." How did we lose this maritime supremacy? What are we doing to recover it? (See news item "U-Boats Do Double Damage.")
4. Compare the figures given in the news item "American Trade Increases" with those for one or more months in previous years, e. g., 1914, 1910, 1905, etc.

VI. Financing the War—"The 'Old Glory' Loan," "Big Business and the War."

1. Answer the question, "Can we raise $7,000,000,000 without a disturbance to our finances?"
2. Compare the relation of national wealth to national debt in England, France, Russia and the United States. What conclusions do you draw?
3. Why are government bonds more popular as investments in England and in France than in the United States?
4. What means of taxation are proposed by the finance committee of the Chamber of Commerce? What do you think of these proposals?

VII. Organizing the World's Food Supply—"Food Shortage in England," "Hoover Urges Economy."

1. What steps are being taken in England to overcome the food shortage? Why are these measures necessary?
2. What measures are recommended for the United States?
3. What would be the effect of the adoption of one or more of Secretary Houston's proposals, e. g., "to license, supervise, and, if necessary, operate plants, mills," etc.; "to empower the Council of National Defense to fix maximum and minimum food prices"?

VIII. War and the Women—"Woman's Place."

1. What is the purpose of the National League for Woman's Service?
2. "The great majority of women will serve their country best by becoming more efficient . . . in the every day work they are doing now." How does this apply in your case?
3. "In England war has been a great equalizer of the sexes." Show how this is apt to be the case in this country, also.

White
Sixteen valve 4

IN the new White motor, four cylinders accomplish the result of two or three times this number. Performance is even more satisfactory because of greater freedom from complications and is indefinitely *maintained at its best* by the simplicity and ruggedness of four-cylinder construction.

Bodies by Léon Rubay

THE WHITE COMPANY
CLEVELAND

The End of the sale of the new Encyclopaedia Britannica printed on genuine India paper Is Here

On May 26th (possibly earlier) **the last** remaining set of the "Handy Volume" Issue of the Encyclopedia Britannica, printed on genuine India paper, **will be sold.**

We have now so few sets left and these are going so fast, that there is no time to write for information.

THEREFORE—In order that everyone may ***make sure,*** *before ordering, that he will find the Encyclopaedia Britannica* ***useful,*** *we have arranged with merchants in 305 cities to show sets in each style of binding.*

Go TODAY to the store in your city, listed on this page or page opposite, and examine the volumes. Make certain that the Britannica will prove *useful* and *helpful* to you and then ORDER AT ONCE.

For each set that we can deliver we could sell ten if we could get them. BUT—two essentials for *making* genuine India paper—flax from Belgium, Germany or Ireland and Russian hemp—are absolutely unobtainable.

When the last set is sold you will not be able to buy a set at any price.

CHANDLER SIX $1395

Chandler Power IS Power

CHANDLER power is power on the hills and mountain sides; it is power in the mud and sand.

Four years of skilful and conscientious manufacturing effort have developed and refined the Chandler motor to a point approximating perfection. Chandler owners long ago named it The Marvelous Motor, and now, more than ever before, it is the wonder Six, powerful, flexible and enduring. On high gear and without apparent labor it pulls the hard, steep grades and winding hill roads where other motors shift to second.

In crowded traffic it responds to every demand.

On open roads it answers every call for speed.

The Chandler motor is a fact-motor.

What any Chandler will do every Chandler can do.

The Chandler Company has never built a special demonstrating car.

The Chandler Company has never furnished to any Chandler dealer a special gear ratio.

Every Chandler is a demonstrator.

FIVE PLEASING TYPES OF BODY

Seven-Passenger Touring Car, $1395

Four-Passenger Roadster, $1395 *Seven-Passenger Convertible Sedan, $2095*

Four-Passenger Convertible Coupe, $1995 *Limousine, $2695*

All prices F. O. B. Cleveland

Write us today for catalog and booklet "See How the Chandler Checks With High-Priced Cars." This booklet tells how other medium-priced sixes do not check with high-priced cars. Write today, and see your dealer. Address Dept. F.

REMARKABLE REMARKS

MAXIMILIAN HARDEN—A league of nations is on its way.

E. H. FORBUSH—The great majority of cats are "out nights."

FRANK CRANE—If you are not curious it is a sign that you are stupid.

JAMES J. CORBETT—Most boxing bouts are little more than stalling matches.

AMBASSADOR GERARD—You can't get liberty unless you do something to get it.

GERMAN MINISTER OF MUNITIONS GRONER—The worst enemies are among us.

SENATOR BRANDEGEE—Must we get off the face of the earth; lie down and curl up?

PROF. GEORGE B. FOSTER—Religion is intrinsically a relaxation from overstrain.

ROBERT E. SPEER—Those of us who were not born with a cross must find one.

CHARLIE CHAPLIN—Perhaps the audience doesn't know why it laughs, but I do.

PAUL N. MILUKOV—Our revolution was the shortest and least bloody of any in history.

LORD NORTHCLIFFE—To pretend that the war can be won by the submarine is preposterous.

EUGENE V. DEBS—It is better to live for your country than to die for Rockefeller and Morgan.

CORNELIUS VANDERBILT—Huge armies have not saved Russia or France from being invaded.

LORD CURZON—The Germans will not succeed in starving England or her Allies into surrender.

DR. HAHN, leader, Reichstag Conservatives—Germany's future is a future ot battle and conquest.

RICHARD LE GALLIENNE—Our immortal bodies seem but imperfectly tempered to bear the celestial pressure.

CHANCELLOR VON BETHMANN-HOLLWEG—Wo to the statesman who does not recognize the signs of the times!

HERBERT C. HOOVER—The relief commission has only thirty vessels. It should have seventy to feed Belgium alone.

PREMIER LLOYD GEORGE — America—after great patience—decided it was no use to wave a neutral flag in the shark's teeth.

JOHN D. ROCKEFELLER, JR.—It is regrettably true that there are capitalists who regard labor as their legitimate prey.

ED. HOWE—I have dined at many famous places in many parts of the world, but the Child's Restaurants suit me best of all.

LILLIAN RUSSELL—It may seem a bold and indelicate comparison but people who spend their time in ferreting out the business of other people are buzzards.

LEO LEOVITCH TOLSTOY—I predict that when Germany attempts to invade Russia from the Baltic, Sweden will join Germany iu an attempt to capture Petrograd.

DR. DERNBURG—We demand that where all give the same and the utmost, political injustice, social inequality and out of date castes be thrown overboard as quickly as possible.

HORATIO PARKER—The greeny delight which flows from our finest modern oboe is no more like the stolid scarifying squawks of the early Victorian instruments than strong brandy is like maraschino.

What to Read about Russia

Daily and uncensored despatches are of course what we wish to read about the youngest republic. But since these are out of the question, the best we can do is to find books that show conditions up to this year, and articles upon the present situation by those whose knowledge of Russia as it was gives them some clue to the real meaning of the scant news that now comes to us of Russia as it is.

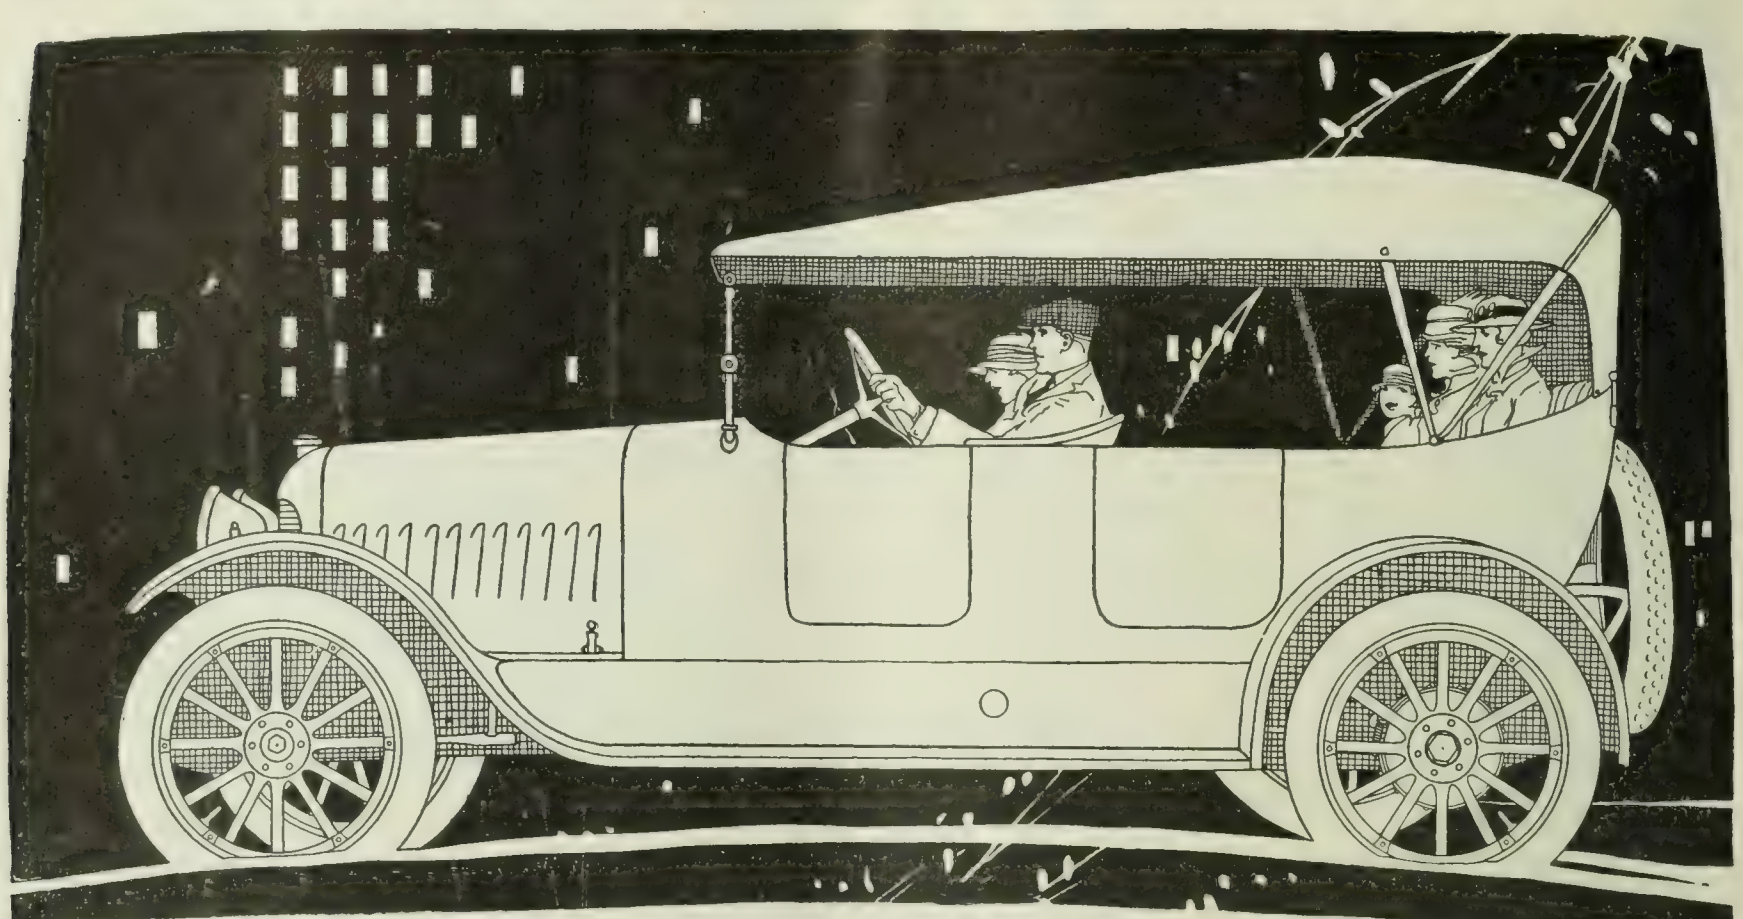
Russia and the World, by Stephen Graham. (Macmillan Company, New York, $2.) Published early in the war, the fruit of long knowledge of the land and the people, this is a most sympathetic description of Russia and her problems.

Russia in 1916, by Stephen Graham. (Macmillan Company, New York, $1.25.) Shows many of the changes war had brought up to last summer. Slight but based on three seasons' personal observations.

Russia and Democracy, by G. de Wesselitsky. (Duffield & Co., New York, 75 cents.) A clear, brief explanation of the historical and economic grounds for the long standing hatred of the Russian people for Germany and the Germans.

The Russians, by Richardson Wright. (F. A. Stokes Company, New York, $1.50.) The correspondent of the *New York World* and the *London Daily Press* covers a broad field, and answers more of the questions Americans are asking than do most books on Russia.

Field Notes from the Russian Front. (Scribner, New York, $1.50.) *Russian Campaign*, April to August, 1915. (Scribner, $2.) *Russian Advance.* (Doubleday, Page & Co., Garden City, New York, $1.25.) These three books by Stanley Washburn, correspondent at the front, cover the work of the Russian army up to September of last year.



Ideals and Realities in Russian Literature, by P. A. Kropotkin. (A. A. Knopf, New York, $1.50.) More informing and more interesting than studies by foreign critics, is this history of Russian writers by a Russian.

Siberian Exile System, by George Kennan. (Century Company, New York, 2 vols., $6.) The work that first told the world of the iniquities of the Russian autocracy. The prisons of Siberia were still unchanged when, last month, the revolution opened their doors.

Life Story of a Russian Exile, by Marie Sukloff. (Century Company, New York, $1.50.) The autobiography of a peasant girl who threw the bomb that killed a military governor. Shows of what mould are the men and women who have brought about the Russian revolution.

Sweet Scented Name, by Fedor Sologub. (Putnam, New York, $1.50.) A group of recent newspaper stories that show what Russian folk like in the daily paper.

ARTICLES. *Independent*, March 26, 1917 (Freeing Russia, G. J. Sosnowsky). April 2, 1917 (Zemstvo Russia, S. N. Harper). *National Geographic Magazine*, March, 1917 (Russia's Democrats, Montgomery Schuyler). *Outlook*, March 28, 1917 (Victory of the Russian People, George Kennan). May 2, 1917 (The New Russia, B. Shatzky). *North American Review*, April, 1917 (New Russia, G. Borgan). May, 1917 (Russia and the Revolution, Charles Johnston). *New Republic*, April 7, 1917 (Russian Democracy, L. S. Friedland). *Review of Reviews*, April, 1917 (Russian Revolution, I. D. Levine).

A Sensible Car for Now—

GRANT SIX

$875

FOR the average man the GRANT SIX is now the sensible car to buy. It affords the essential qualities of a good motor car with a minimum investment and at minimum operating expense.

The GRANT SIX is a good looking, full powered full-sized five passenger car. It meets the demand of business and professional men for a car of befitting quality but without unnecessary extravagance. It is sturdy and dependable. Its reputation for economy is unrivalled. Twenty miles per gallon of gasoline, 900 miles per gallon of oil, are average records.

The power ratio to car weight, one horsepower for each 110 pounds, is among the highest in the light six class. This is the secret of GRANT SIX performance, which has never been equalled by a car of its price.

This season's production will be 20,000 cars. It will pay you to make careful comparison of GRANT SIX value and performance before buying any car.

There's a Grant dealer near you—Look him up.

GRANT MOTOR CAR CORPORATION, CLEVELAND

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

A Journal of Civilization

THE BUSINESS IN HAND

WE should begin sending fighting men to France immediately, and continue to send them in increasing numbers until the war is won.

France has made no false representations and has hesitated at no sacrifice. She is far spent, but she keeps up the heroic fight without cessation. When, therefore, France says that she needs American soldiers and needs them now, it is our duty to take her at her word. Marshal Joffre has brought this word and it is enough for us to know.

There should be no display, and no consideration of personal ambition in meeting this duty. We should not wait until the big army that is to be raised by conscription is ready. No part of that army will be ready in any comprehensive sense of the word until it has been for some months in contact with actual war conditions at the front. All that can be done here in a preliminary way is to instil the rudiments of drill and discipline, and arm and equip. That preliminary preparation has already been applied to many thousands of national guardsmen. These men can be forwarded, a few thousand at a time, to receive their further hardening back of the battle lines, and the stream can be broadened from month to month.

The psychological effect of the landing of American soldiers in Europe, of which much has been said, will not be unimportant, but it must not be thought of as the chief consideration. Our men are needed at the front not primarily to carry banners and to inspire, but to fight. France and Great Britain will give the last men they have, but they have not enough. It is for us to pour in tens of thousands, then hundreds of thousands and if at last it is necessary, millions of men to bring this conflict to an end which shall be overwhelming and final. It must be a conclusion the nature of which the dullest mind in Central Europe can never misunderstand or question, to the end of all time.

It is true that military operations can constitute only a part of the tremendous task that we have undertaken. We must send mechanics by thousands. We must send food by hundreds of thousands of tons. We must send other supplies in endless variety. We must build thousands of ships. We must patrol the seas, convoy fleets, and destroy submarines. We must build aeroplanes and train and send aviators. We must give money without stint. But not for a moment may we assume that all of these things together discharge our obligation. War is fighting, and we must fight. The more swiftly and heavily we fight, in addition to doing all the other things that we must undertake, the sooner the war will be over and the more surely will the security of the civilized world be achieved.

Get the troops ready. Equip and arm them rapidly. Get them to France. Do it swiftly, continuously and persistently. That is the business in hand.

DUTY AND THE CONSCIENTIOUS OBJECTOR

THE measure for compulsory military service which has received the approval of Congress exempts no one on the ground of conscientious scruples except the few who belong to religious organizations which make opposition to war an article of their creed. Needless to say, this will leave subject to the draft many young men who have opposed our entrance into the Great War and are still perplexed as to their duty in time of war. Perhaps a word of friendly counsel may prevent some of these young men from resisting the operation of the law before they have clearly understood the situation that now exists.

Before Congress declared war it was your right as a citizen to exert your personal influence in every legitimate way to prevent your country from making what you felt to be an unwise decision. The constituted authorities of the nation, deriving their power from the will of the majority, decided to enter upon the war policy which you opposed and there is no possibility of that decision being soon reversed. Therefore, the question of peace or war no longer exists and an attempt to revive it is as impossible now as an attempt to change the issue of the battle of Waterloo. The question of peace and war has been settled, battle has been joined, and the only possible present issue is, who shall win the war. Or, in other words, you can do nothing to prevent a war with Germany which has already occurred, but you can do something to prevent a victory over Germany which has not yet been achieved.

It is true that we honor Chatham and Burke for upholding the cause of the colonies against the British king, and that today we applaud Liebknecht's bold stand against the Kaiser's policy. The Independent has never taught the Prussian doctrine that obedience to the State comes before every other duty. In certain extreme cases it might be right to resist a military law, just as it might be right to resist a fugitive slave law or a law punishing heretics with death. But to justify such resistance on the ground that you think

a law or policy merely unwise or mistaken is an insult to democracy; it implies that a majority of your fellow citizens cannot legislate unless you approve. In time of war this is the test: do you wish to have the enemy win the war? If you do, you are at least consistent in your faith. If not, you are hardly acting conscientiously in obstructing the conduct of the war by your Government.

In the cases where we approve or condone continued opposition to war after it has once begun, it is because the conscientious objector *does* think it would be better for the world if his country should lose. Burke did not merely dislike the attempt to coerce the American Colonies, he rejoiced to see them resist. Liebknecht is distinctly a pro-Ally. Of course, such men are technically traitors, but they may be justified by a higher loyalty than that to the State. But can that be the case with you? Do you really, as a convinced pacifist, wish the most aggressive military machine in the world to triumph over our good-natured, tolerant, pacific democracy? Even if we are wrong in resenting the murder of our citizens on the high seas, is the murderer more right than we? Would you rather have the future map of Europe drawn up by Hindenburg than by Wilson? If you can answer all these questions in the affirmative, then only you may be justified in refusing to serve your country's cause. But in that case you are not a pacifist. You are an apologist of tyranny and an ally of militarism. You are the sort of man who would write in hearty commendation of the late lamented Duke of Alva's benevolent rule over the ungrateful Dutch provinces.

THE DIPLOMATIC GAME

THE announcement in the newspapers that Mr. Balfour has brought his bag of golf clubs with him to America is more important than it seems. It is an indication—not as it might be interpreted by the thoughtless—that he is going to waste his time in idle amusement, but on the contrary that he means business. If chess is the pastime of the strategist, golf is the sport of the statesman. The *Hamburger Fremdenblatt,* in discussing the character and career of Sir George Buchanan, the British Ambassador to Petrograd, explains his success in getting the Russians to unite with the British by his passion for golf, "if one can speak of passion in connection with this cold game of meadow billiards." The Hamburg paper analyzes the theory of it with true German thoroness:

> Golf is a recreation which seems inseparable from English statesmanship. All eminent Englishmen of the day are, or were, golfers—to mention only Lloyd George, Asquith, Balfour, and Kitchener. The conditions in which this rather tiresome game is played do really produce the qualities necessary for any statesmanlike or diplomatic work.
>
> Golf requires the patience of an angel, superhuman endurance, and an equable temperament. One must be able to keep cool in order to keep on beginning over and over again attempting to get the ball a stage further. One strikes a thousand times in vain in the air, and ninety-eight times out of a hundred the treacherous ball goes an inch to right or left just before it reaches the goal. Golf teaches one to endure, to keep one's eye upon the ball, to direct one's attention to nothing but the goal. Silent, tough, resigned, unbroken, in the heat of summer and the cold of winter, the good golfer walks round his field, keeps his eye on the ball, and steers for his goal.

President Wilson is also a golf player, and we presume that many a knotty problem in international relations will be worked out on the Washington links.

President Roosevelt preferred the livelier tennis, and while he was volleying over the net at Baron Speck von Sternburg he was outwitting Germany in the Pacific and Carribean. Roosevelt and Wilson; tennis and golf; both games are good; both temperaments are needed.

PEACE IN WARTIME

THERE is a curious passage in L. P. Jack's volume of war essays, "From the Human End," that is worth quoting just now:

> I believe that the war has brought to England a peace of mind such as she has not possest for generations. This statement, I should like to say, is not an experiment in paradox but a sober statement of a psychological fact. It is, to some extent, a personal confession; but one which I should not dare to make were there not abundant evidence of its being a common state of mind. In spite of all we have suffered and have still to suffer: the loss of our friends and kinsmen; the awful anxieties for those at the front; the knowledge of the immense miseries of the nations at war; the grave uncertainties of the future—in spite of this, and all else in the catalog of evils, I am convinced that the mind of England is much calmer than it was before the war. To judge by my own observation, I would say further that the calmest people are precisely those who have suffered, or stand to suffer, most; or else they are the people, of whom the soldiers at the front are the chief, who are making the greatest exertions and facing the greatest sacrifices in the common cause. That element of "poise" in life, which Matthew Arnold valued so highly, has become an actual possession of millions in whom twelve months ago it was utterly lacking.
>
> It seems a strange phenomenon, one we could hardly have predicted in advance of its actual appearance, and to those who hear of it from afar perhaps incredible. And yet it is nothing more nor less than the peace of mind which comes to every man who, after tossing about among uncertainties and trying his hand at this and that, finds at last a mission, a cause to which he can devote himself body and soul. At last he has something to live for; and tho the living may be hard and costly he makes no complaint; all that is well repaid by the harmony which comes from the unitary aim of his life. It is so with nations. . . . England spending her money, and knowing for what she spends it, has more peace of mind than England making her money, but in grave doubt and uncertainty as to the social and individual uses to which it will be put.

It must have seemed to many Americans who read this passage a few months ago that the distinguished Oxford philosopher was indulging in one of his puzzling paradoxes. But already we begin to realize its truth. The action of Congress in declaring that Germany is at war with us brought to our minds a certain sense of relief which was felt even while we realized the added anxiety and burden it laid upon us. The strain of indecision was relaxed. The effort to maintain neutrality and inactivity in the midst of the world conflict was abandoned. The direction, if not the path, of duty was suddenly revealed to each of us. The minor annoyances and petty ambitions of our common life were reduced to their real insignificance by the majesty of our national resolution. Tho we have not really entered upon the war yet it is already apparent that in sharing the dangers of the belligerent peoples we shall also receive a share in the spiritual blessing that has been bestowed upon them, the blessing of peace of mind.

YERBA MATÉ

IN such books of South American life as White's "El Supremo" and Hudson's "The Purple Land" maté drinking fills as much space as beer drinking in stories of Germany or tea drinking in stories of Japan. These rapturous descriptions of the unfamiliar beverage arouse the reader's thirst, and if he is not satisfied with printer's ink he may seek to buy a sample at his grocer's. He is likely to be disappointed, for the cup—or rather the gourd—that cheers but does not inebriate the southern half of the hemisphere is almost unknown in the northern. There are, however, a few enterprizing dealers who handle yerba maté, tho —shame on them—they put it in Oriental packages with the picture of a pagoda on one side and a geisha girl on the other.

This gives the impression that yerba maté or so-called "Paraguayan tea" is a surreptitious substitute for tea instead of a rival, having, indeed, some points of superiority

Drawn for The Independent by W. C. Morris

"WE MUST PAY WITH OUR BODIES FOR OUR SOULS' DESIRE"—THEODORE ROOSEVELT

over either tea or coffee. It contains less than a tenth as much tannin as tea and 2.5 per cent of the alkaloid, thein or caffein, in place of the 4.5 or more in tea. It is therefore less hard on the stomach and less likely to form a habit than is common tea or coffee. A free bulletin of the Pan-American Union of Washington describes the method of preparation.

As its name implies—yerba maté, the gourd-herb—is steeped in a gourd and the South American custom is to suck it thru a silver tube or bombilla, but a teapot and teaspoon do just as well. The beverage is agreeable to most people at first taste, tho some dislike the smoky flavor, which comes from drying the leaves over open fires. Anyway, it is worth trying, and it costs only 25 cents per half pound package.

Drink America first.

THE NICARAGUA CASE

THE Colombia case is still before Congress, and it is hard to see how it can ever be satisfactorily settled since it has been causing increasing irritation on both sides for the last thirteen years. The Nicaragua case is likely to cause us still more trouble in the future unless we settle it soon.

The two cases are alike in origin. When we concluded a treaty with Panama in 1903 for constructing a canal, Colombia considered her rights infringed. When we concluded a treaty with Nicaragua in 1916 for constructing a canal, Costa Rica and Salvador considered their rights infringed. Colombia asked to have the question referred to The Hague Court, but since the United States declined to consent to this the case could not be carried to the Court nor could the Court act on its own initiative.

But Central America is in a different situation. The five republics have a Central American Court of Justice for the purpose of settling disputes among themselves, and to this Costa Rica and Salvador appealed. This court was established by the convention signed at Washington in 1907, and it is well known that our Government took an active part in the movement that resulted in its formation in the hope that it would put a stop to the frequent revolutions on the Isthmus. The United States is bound in honor to do what it can to sustain the Court. If it breaks down in this, its first important case, the cause of international arbitration will be seriously discredited.

As the matter stands now Nicaragua refuses to acknowledge the right of the Central American Court to pass on the validity of her treaty with the United States. As quoted in the official report of the Court published in the supplement to the *American Journal of International Law* for January, 1917, the Government of Nicaragua says that:

> It does not, and cannot, admit the unrestricted power that the Court arrogates to itself to take cognizance of all the differences that may arise between the Central American states, because nothing that affects the sovereignty and integrity of the five republics is involved in the treaty stipulations; because no nation on earth would submit to the arbitrament of strangers its security and preservation; and because the powers actually conferred upon the Court do not extend to controversies that arose prior to the conventions.

Confronted by this refusal of Nicaragua to acknowledge its jurisdiction in the case, the Court could only confess its helplessness to the world and proceed to adjudicate the cases on *ex parte* testimony in the absence of the defendant and render a verdict by default in favor of Costa Rica and Salvador.

We shall not here attempt to determine the merits of the case. Central American diplomacy is as much of a puzzle as the Schleswig-Holstein question. We cannot blame Nicaragua for being unwilling to submit the treaty to the Central American Court, for the Court was packed against her in advance. Nicaragua's northern neighbors, Salvador and Honduras, are just as much opposed to the treaty as her southern neighbor, Costa Rica, for they also claim rights in the territory covered by the proposed canal or its terminal harbors. Guatemala sympathizes with them, so as we might expect the Court stands four to one against Nicaragua.

The United States, which has the greatest interest in the proposed canal, would not have a chance to present its side of the case before the Court of Justice.

The United States is thus placed in an embarrassing situation. Our Government would of course dislike to see the Central American Court of Justice discredited, yet on the other hand it cannot be expected to support Costa Rica, Salvador and Honduras in their efforts to overthrow its treaty with Nicaragua. We have agreed to pay Nicaragua $3,000,000 under the treaty of 1916 for the right to construct a transisthmian canal, and it begins to look as tho we ought to begin work on it soon. The Panama Canal has been closed most of the time since it has been "open" and even now is not safe for the passage of our fleet. The war has shown us the importance of interoceanic communications, and two canals would be more than twice as good as one for defensive purposes. The experts of the Third Canal Commission estimated that a canal thru Nicaragua could be constructed in ten years and would cost $200,000,000. The Panama route was chosen in preference because it was supposed to be $58,000,000 cheaper and capable of being made at sea level.

But the Panama Canal, even with locks, has cost us $400,000,000 and Congress is considering the proposal to pay out $25,000,000 more to Colombia to clear up our title. With the experience gained at Panama and with more efficient methods of excavating, we could reduce the cost of construction considerably.

But whether we wish to begin work on the Nicaragua Canal now or not, it is important that we hold our option and not leave it open to be grabbed by whatever country has the power after the war. It is also important that we gain the good will of the chain of little republics running down the isthmus, for only thru them can we have a railroad connection with Panama. The alienation of even such tiny states as Costa Rica and Salvador is more dangerous to us just now than the alienation of such a vast empire as Russia or China, for any harbor on the Central American coast may harbor submarines or give supplies for sea raiders. It pays to keep on very good terms with one's neighbors.

Our Government would not willingly infringe upon the rights of the tiniest state. The Senate added an amendment to the Nicaraguan treaty expressly declaring that it was not "intended to affect any existing right of any of the said named states." This points the way to a solution of the difficulty.

Let our Government open negotiations with Salvador and Honduras over their claims in the Bay of Fonseca and with Costa Rica over her claims in the San Juan River. If an agreement can be reached with them, we could enter upon the construction of the Nicaragua Canal with a clear conscience and an unclouded title.

THE STORY OF THE WEEK

Visiting Commissioners Tour the Country

The French commissioners, having determined to "see America first," left Washington for an extensive tour in the eastern and middle western states. On Sunday, April 29, the British and the French commissioners visited Mount Vernon to pay respect to the memory of George Washington, and to lay wreaths upon his tomb. M. Viviani delivered an oration in French on the significance of America's entry into the Great War as the logical fulfilment of the ideals which Washington implanted in the nation which he founded, and Mr. Balfour spoke as the representative of the British commission. After their visit to Mount Vernon, the commissioners returned to Washington to meet the Senators and Representatives on the floor of Congress.

The authorities at Washington arranged for the French commission a week's itinerary including Chicago, Kansas City, St. Louis, Springfield, Illinois, Philadelphia, New York and Boston. On the afternoon of May third the party left Washington and on the following day reached Chicago. The warmth of his reception in Chicago tempted Marshal Joffre to make the most extended speech he had yet delivered on American soil. The great cordiality with which the people of Chicago greeted M. Viviani and Marshal Joffre was the best answer to Mayor Thompson's remark when the visit to Chicago was first announced, that he thought he would be "presuming considerably to take the position that all of the people of Chicago were in favor of the invitation." A few days after making this ungracious remark the mayor consented to head the reception committee which greeted the envoys in the name of the city.

Preparations are being made for visiting commissions from Italy and from Japan to consult with the United States Government upon questions of war policy. President Wilson has not yet announced the full list of members of the American commission to go to Russia. It is thought probable that he will select some prominent radical or even a leader of the Socialist party as a member in order to reassure certain Russian revolutionists who have criticized the appointment of Mr. Root as head of the commission.

Congress Fights Censorship

Neither the declaration of war nor the enactment of compulsory military service aroused such stubborn opposition as has the Administration's espionage bill. Almost all of this opposition has centered on the provisions for censorship of military information which might be valuable to the enemy. In both the House and the Senate there was marked distrust of the broad powers of press control conferred by the bill upon the President, and the newspapers of the country, even those which had supported the Administration upon every other point, were almost a unit against the censorship. The Publishers' Association of New York City adopted resolutions asking Congress to remove from the espionage bill every provision invading the freedom of the press. President Wilson endeavored to reassure his critics by explaining that he did not desire the power to suppress criticism of his Administration, but only to prevent the publication of military secrets. Both the House and the Senate adopted amendments to the effect that no provision of the bill should be construed as restricting "any discussion, comment or criticism of the acts or policies of the Government or its representatives." This did not satisfy the opponents of the censorship, who pointed out that the publication of news items on military conditions might be even more important to the American public than it would be to the enemy and that the power to censor information about the condition of the army or navy implied the power to conceal inefficiency and hush up scandals.

On May 4 the House of Representatives eliminated from the espionage bill the section relating to press censorship and substituted an amendment by Representative Gard of Ohio which provided that cases of alleged violation of the press regulations should be tried by a jury, and that "the jury trying the case shall determine not only whether the defendant or defendants did wilfully and without proper authority publish

THIS WEEK'S WHO'S WHO

In the national enthusiasm over French and British commissions here we have hardly had a chance to appreciate another war mission to Washington, sent by the Cuban Government and headed by Colonel Aurelio Hevia. To go or not to go seems to be the dilemma of Elihu Root, appointed by President Wilson to head an American commission to Russia. Socialists—and others—are suggesting that a less conservative representative than Mr. Root would be best suited to the present status of affairs in Russia. The man who stamped out fevers in Havana and in Panama (these names fit the photographs from left to right), Surgeon-General William C. Gorgas, will command the U. S. Red Cross units ordered overseas

THE FRENCH OFFENSIVE

General Nivelle's attack is directed against the two sides of the angle about the fortress of Laon. He has broken into the old German line where it runs along the bluffs north of the Aisne and also east of Reims near Moronvilliers. Craonne has been taken by the French

the information relating to the national defense, as set out in the indictment, but also whether such information was of such character as to be useful to the enemy." This provision makes the jury in effect judges of the law as well as of the facts and puts the whole burden of proof upon the prosecuting authorities. Even in this amended form, the censorship has still to face the risk of defeat in the Senate. Censorship of cables and of international telegraph and telephone lines has already been established by executive order.

The Capture of Craonne The British and French have been attacking the Hindenburg line on alternate Mondays. The British led off with an assault of the north end of the line on April 9; the French offensive on the south end began April 16; the British made another attack on April 23; and the French started their second offensive on April 30. Of course in between these major movements the fighting in each sector has been incessant and exceedingly violent. Hindenburg's reserves, consisting of young and fresh troops, are being rushed to the imperiled points, but have never succeeded in recovering any considerable part of the ground lost, tho many places have changed hands repeatedly. For instance, the old windmill of Gavrelle was taken eight times within a week by the Germans and regained as often by the British assaults. The chief gain at this end of the line is the capture of the village of Fresnoy by the Canadians. This is four miles east of the line held by the British before they started their offensive on April 9.

The new French offensive extends over a distance of sixty miles along the southern front. On the eastern end of this line the Germans were pushed back upon Moronvilliers, but they still hold the hights about Reims, from which they are bombarding the city and its famous cathedral. The chief vantage so far attained by the French is the town of Craonne on the edge of the plateau north of the Aisne River and southeast of the fortress of Laon. Here the Germans had dug in so deeply that they were not able to get out in time to get away. The French official despatch describes this incident as follows:

A French assaulting wave of infantry found a deep cavern at the foot of a steep cliff in Chivy Ravine, west of Craonne, into which the grenadiers threw grenades while their comrades continued to advance up the slope. When they arrived at the top they observed a column of smoke pouring out of a hole on the summit of the plateau, and soon afterward a crowd of Germans numbering about 200 in all came out, having climbed 180 steps thru a chimney cut in the solid rock from the cavern below. The French had scaled the cliff quicker than the Germans had come up the stairs and they took all the Germans prisoners.

Gains and Losses It is now nearly a month since the Anglo-French campaign began in France, but it is not yet possible from the data made public to estimate its success or prognosticate its outcome. The Allies have occupied the ground evacuated by the Germans and have made inroads on the new system of fortifications prepared by Hindenburg. The British, in the capture of Vimy ridge, and the French, in the capture of Craonne plateau, have gained points of real strategic importance which imperil the German positions beyond. But on the other hand the Allies have not yet captured any fortress or city of importance. Lens, La Fere and St. Quentin, which have been within their reach for some time and repeatedly reported likely soon to be taken, are still unmolested. The superiority of the Allies in aircraft and artillery, except perhaps in guns of large caliber, has been demonstrated. It has also been proved that the Allies can take and hold the strongest fortifications the Germans can construct. This, however, does not necessarily imply that the Allies can "break thru the German line," in the popular sense of the words, or that they can, without impossible sacrifices, drive the Germans out of the invaded territory. Whether this can be accomplished or not depends upon which side can longer stand its losses. The French have taken some thirty thousand and the British some twenty thousand prisoners. The Germans claim some six thousand.

The real test is, of course, how the man-power holds out, and here we have nothing but guesswork to go on. We are told that the unprecedentedly large number of German prisoners and their manifest discouragement indicate a breaking down of the enemy's *morale*, but it is unsafe to count much on this.

Colonel Repington, the military expert of the London *Times*, says that the Germans had at the beginning of the spring campaign more men than ever before, and he calculates 6,000,000, of whom 4,500,000 are in the field on both fronts, 500,000 on their lines of communication, and 1,000,000 in the depots in Germany. The annual increment of young men coming to military age is 500,000, but the new German law that calls into national service every male from 17 to 60 has added more than this to the field forces. He estimates the number of German divisions in the west at 155. But Colonel Repington is more liberal in his estimates of enemy strength than other experts. The French Headquarters figures that the German forces on April 1 totaled 219 divisions.

The total German casualties from the beginning of the war to the end of March, as added up in London from the official German lists, amount to 4,180,000. Of these 950,760 are counted as killed, or dead from wounds or disease. Doubtless a quarter of a million must be added for the casualties of the spring campaign.

The French and British losses are not known but are said to be "only one-half as large proportionally as in the Somme offensive of last year." The Somme losses were said to be 400,000.

THE GREAT WAR

April 30—British Admiralty reports fifty-nine vessels lost during past week. Russians withdraw from Mush, Turkey.

May 1—Russian Provisional Government puts discipline in hands of committees of soldiers in each army, and declares that it is opposed to separate peace.

May 2—British destroyer sunk in Channel. Chancellor of Exchequer tells Parliament that British national debt is $19,270,000,000.

May 3—Canadians take Fresnoy on Wotan front. Bohemia put under martial law.

May 4—Russian Council of Workmen and Soldiers declares for peace without annexation or indemnity but votes to sustain Provisional Government. Nils Pecanha succeeds Lauro Muller as Foreign Minister of Brazil.

May 5—Hughes's new National Party wins in Australia. French take four miles of trenches and 6100 prisoners on Aisne.

May 6—Dutch fishing fleet held in port because of U-boat attacks. International Socialist Congress discusses peace terms at Stockholm.

The Toll of the U-Boats

Readers who are accustomed to consider the figures given in the cablegrams instead of the headlines attached to them must have reached the conclusion for themselves that there was no justification for the assumption that the U-boat campaign was a failure. On the contrary it was evident in spite of the misleading figures put forth by the British Admiralty and the secrecy maintained by the other belligerents that the losses had steadily increased ever since February 1 when the Germans began their attempt to blockade England. But even those readers who have been critical of the prevailing optimism were startled at the statement made by Secretary Lane in his address before a joint meeting of State Governors and the Committee of National Defense on May 2 that during the preceding week the loss of shipping amounted to 400,000 tons. This estimate is considerably larger than any based upon the figures given out from London and tends rather to confirm the Berlin reports of the destruction wrought by the U-boats. Mr. Lane concluded:

> If this keeps up for any length of time it would lay England and France prostrate, unless we are able to come to their support, or some measure is devised to put the submarine out of business.

That there had been no considerable slackening of the activity of the German submarines is shown by the report of the British Admiralty for the week ending April 29. This gives thirty-eight merchant vessels of over 1600 tons sunk, instead of forty for the week before, and thirteen vessels of lesser size as well as eight fishing smacks. Besides the merchant shipping eight British fighting ships are reported lost during the week. These figures, tho doubtless correct as far as they go, do not tell the whole truth, for it does not include the losses of other belligerents such as France, Italy and the United States, or of neutrals such as Norway and Sweden, nor does it give the names or tonnage of the vessels sunk. If the ships lost averaged the same size as in February the tonnage destroyed of British merchant shipping alone would be over 200,000, and it might easily be much more.

Norway reports the loss during April of seventy-five vessels and more than one hundred lives. At this rate the Norwegian merchant marine would be wiped out in a year and a half.

Dr. Karl Helferrich, German Minister of the Interior, told the Reichstag committee that submarines during the first two months of their new campaign destroyed more than 1,600,000 tons of freight shipping, of which 1,000,000 was British. He estimated the remaining tonnage available for British trade at seven to ten millions. The British figures for February and March are about 900,000 tons. For April it seems probable that the total tonnage destroyed amounts to a million and a quarter.

However we may figure it the situation is serious, for all the shipyards in the world turned out less than two million tons in 1916, and the total tonnage in existence is less than 50,000,000.

British Admiralty Criticized

On account of its inability to cope with the U-boat menace and even more for its attempted concealment of the seriousness of the situation, the Government has been sharply attacked in press and Parliament. The London *Times* says:

> If fuller details were furnished the case would be found still worse. The sense of security engendered is dangerous, because it is false and a bad preparation for the trials which are certainly coming. It would be far better to tell the whole truth.

Admiral Lord Beresford declared that the losses are appalling and that he was inclined to risk the penalties of the Defense of the Realm Act and tell the people himself because until they were informed they would not realize the importance of economy.

The First Lord of the Admiralty, Sir Edward Carson, on being heckled in Parliament, admitted that more submarines were operating than hitherto and that the shipping losses were increasing. He later stated that it was suspected that German submarines were finding their way out from enemy ports thru neutral waters. This seems to refer to the Scheldt, which is the outlet for Antwerp but under Dutch control. It is curious to recall that when the Dutch wanted to fortify the mouth of the Scheldt before the war they were prevented from doing so by the intervention of Great Britain, which feared that the Netherlands might come under the control of Germany and Belgium be choked off. Now we have the reverse of this anticipated situation, for the Germans hold Antwerp and are only prevented from using it as a seaport by such opposition as the Dutch can interpose on the Scheldt.

In order to stop the submarines at their exit the British Admiralty has extended its barred zone in front of the German coast. It is said that the mines, chains, nets and other unspecified contrivances in this field have been very successful in destroying submarines. The statement of Vice-Admiral von Capelle, German Minister of the Navy, that during February and March only six U-boats were lost, is denied by the British Government which, however, refused to disclose the number of enemy submarines destroyed or captured. The Admiralty believes that the Germans have reached their maximum of destructiveness, for they can only turn out two or three submarines a week and the British navy has for some time been able to keep pace with that.

WHEN THEY REACH THE BOTTOM

THE CASE OF KAISER VS. GERMANY

Germany Versus Guatemala

The Republic of Guatemala has set an example to the rest of Central America by breaking off all diplomatic relations with the German Empire on account of the latter's policy of unrestricted submarine warfare. Other Central American republics have exprest official sympathy with the United States in its stand for neutral rights, but Guatemala has been the first to sever relations with Germany. Señor Mendez, the Guatemalan minister to the United States, declares that one of the impelling causes which led his Government to make its decision was the existence of German intrigues against the republic. Guatemala has a large element of German business men and planters who are more loyal to the interest of their Fatherland than to the country where they reside. Even more important than the influence of Guatemala's action on the rest of Central America is its apparent effect on Mexico. The pro-German, or perhaps rather anti-American, section of the Mexican people appears to be somewhat intimidated by the prospect of diplomatic isolation from all the other Latin-American states, and it is rumored that the Carranza government even contemplates bidding for the favor of the United States by breaking off relations with Germany. Ambassador Fletcher's statement to the Mexican press, assuring the Mexican people that the United States intended no interference in Mexican affairs and would put no pressure upon the republic to force it to abandon neutrality, has had a very reassuring effect upon public opinion. Luis Cabera, minister of finance, has written Secretary Lane that no consideration could induce his government to take hostile action against the United States.

The Crisis in Brazil

The whole of Latin America is debating the advisability of following the example set by the United States and Cuba in declaring war on Germany, and it is impossible to say of any one of the republics now neutral that it will be so six weeks later. Within four days after the Brazilian Government, which had already broken off diplomatic relations with Germany, issued a formal proclamation of neutrality in respect to the war between the United States and Germany, a cabinet crisis pointed to the triumph of the war party. Dr. Lauro Muller, Minister of Foreign Affairs and one of the most eminent of Latin American diplomats, resigned office because of the popular criticism directed against him as a representative of the German element in the republic. Dr. Souza Dantas, formerly Minister to Argentina, has succeeded Dr. Muller. Other indications of war are the reported detention of the Brazilian Minister to Germany in Berlin after his recall by his home Government, and the confident prediction of Ambassador Da Gama that Brazil would soon abandon neutrality.

A break with Argentina was postponed by the prompt apology of the German Government for the sinking of the "Monte Protegido" and the promise of satisfactory reparation. A convention of Argentine Socialists in Buenos Aires voted by a small majority in favor of continued neutrality. The Chilean Minister to Germany is reported to have asked for his passports, and it is possible that the "A B C powers" may have agreed upon a common policy with which to confront the menace of German submarine warfare. Venezuela, while still neutral, announces its cordial approval of the action of the United States in defending maritime rights against Germany.

Two American Steamers Sunk

The American armed steamer "Vacuum" about a hundred and forty miles out from Liverpool was torpedoed on the morning of April 28. She was a tank vessel of 2551 gross tonnage owned by the Vacuum Oil Company of California and was returning in ballast. She had been provided with a gun crew from the United States navy, but the submarine was not seen until its periscope appeared within two hundred feet of the starboard beam and the torpedo had been launched. The explosion blew up the steel deck and the ship sank in about twenty minutes. The submarine circled around the vessel and shelled the wireless house so no distress signals could be sent out. On account of the high seas running only about half of the 47 men aboard could be saved. Among the lost were 13 Americans, including Lieutenant C. C. Thomas of the navy and four gunners. The other American victim of the U-boats was the steamer "Rockingham," which sailed from Baltimore for Liverpool on April 16 with a cargo of 4000 tons valued at $2,000,000. The vessel was worth $1,300,000. All of the crew of 47 were saved except two engineers killed by the explosion.

Joffre Wants an American Army

The emphasis which the visiting French commission lays upon the necessity of sending an army to France forthwith will probably completely alter the plans of the War Department. The army chiefs have had in view the raising of an army by draft to be trained on American soil for a period of six months or a year before it is sent to "somewhere in Europe." The reasons for this policy were many: the present need to utilize all available transport tonnage to carry foodstuffs and war munitions, the difficulty of fully equipping even a small army for immediate service, the necessity of retaining experienced army men and national guardsmen to officer and instruct the wholly untrained recruits raised by the compulsory service law, and the necessity of a long period of training for volunteers. But the opinions of the French army, as voiced at Washington by Marshal Joffre, will undoubtedly carry great weight both with the general public and with the military profession.

Marshal Joffre's formal statement was somewhat curtailed in the official translation and portions of his remarks on the advisability of sending an American force to the front were omitted. But it is no secret that the burden of his speech was his earnest desire to see the American flag in the trenches. He supplemented his formal statement by answering questions put by the newspaper correspondents who interviewed him. The marshal exprest his belief that American recruits could be trained in France. He was opposed to the suggestion to withdraw the American troops now serving in the French Foreign Legion and in British and Canadian regiments for the purpose of forming an American army out of troops already fighting in France. Such a plan would add nothing to the present strength of the Allied line, and the presence of American forces is desired for the actual strength which they would bring as well as for the moral reinforcement arising from the presence of our flag.

Announcement has been made that approximately 125,000 men have applied for membership in ex-President Roosevelt's proposed army division and

have been accepted on the condition that Congress makes the necessary provision for sending them to the front. Only men over twenty-five have been enrolled, since the organizers of the volunteer system have no desire to take men who in any case would be subject to early conscription. The majority of the Roosevelt volunteers are from the southern and southwestern states. Secretary of War Baker declines to make any statement on the question of sending a division to Europe, intimating that all speculations on this point are premature.

War Finance Secretary McAdoo of the Treasury announces that he has made arrangements for popular subscription to the first $2,000,000,000 of the war loan. The bonds will be dated July 1, 1917, with interest payable semi-annually on the first of January and of July at the rate of 3½ per cent a year. Subscriptions will be received to the fifteenth of June, and the agencies authorized to accept subscriptions include banks, trust companies, bond houses, post offices, express companies, newspapers and volunteer associations. The advantages of the "liberty loan" to the small investor are important. The bonds will be in small denominations, they are exempt from income and property taxes, and if any subsequent series of bonds is issued at a higher rate of interest at a later period of the war these 3½ per cent bonds will be convertible into bonds at the higher rate of interest. While the subscriptions to the "liberty loan" are coming in, the Federal Government will issue Treasury certificates in blocks of two hundred million apiece as frequently as may be necessary to steady the money market.

During May the first instalment of the loans to France, Italy and Russia will be made. Loans to Belgium, Serbia and others of the Allies are also under consideration, altho the risk is greater in loaning money to nations whose resources are relatively slight and whose future independence is uncertain. No matter which of the Allies share in the loan, most of it will be spent in the United States for the necessities of war, and thus the whole immense financial transaction involved in raising the "liberty loan" and in lending it again to our Allies will consist essentially in a redistribution of credits within the United States.

The Ways and Means Committee of the House of Representatives has found no little difficulty in arriving at an agreement on the degree and kind of direct taxation necessary to pay the cost of the war. It appears probable that the exemption limit for the income tax will be lowered to $1000 for unmarried persons and $2000 for married persons, and a graduated supertax will be imposed varying from 1 to 33 per cent. The excess profits tax will also be considerably increased. The total yield of the war taxation bill is expected to be in the neighborhood of $1,800,000,000. One interesting proposal to meet immediate financial difficulties is a 50 per cent addition to this year's income tax which would probably mean $162,000,000 increase in revenue. This provision has been criticized on principle as retroactive taxation, but it finds precedent in 1867. But drastic as is the new taxation, Senator Kenyon finds it inadequate. In a speech before the Senate he proposed that the Government commandeer for the duration of the war all private incomes in excess of $100,000 a year.

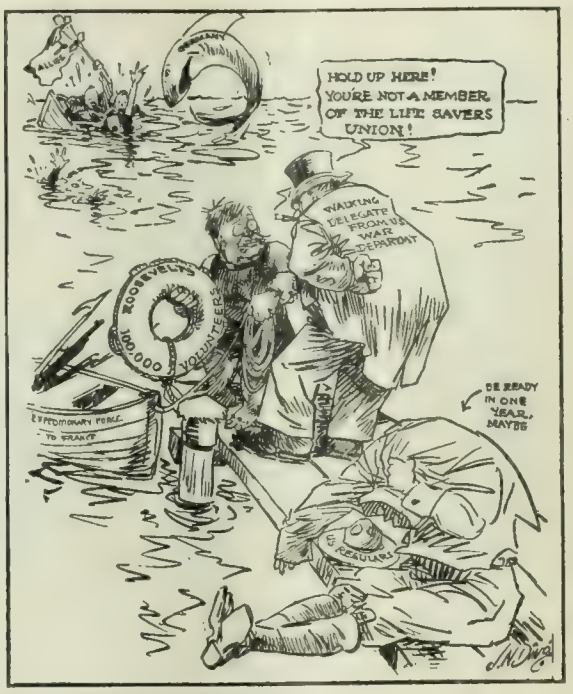
THE CALIFORNIA CORPS IS READY



These Red Cross dogs—before the war everyone called them German sheep dogs—are a valuable factor in the work of rescuing the wounded. The First Ambulance Corps of the United States Red Cross, established in Pasadena, has trained several of them to take to Europe

Nationalizing Agriculture The administration's proposals for the regulation of American agriculture as embodied in the bill introduced by Chairman Lever of the Agricultural Committee of the House of Representatives are more drastic than had been generally anticipated. The provisions of the bill empower the President, under the war clause of the constitution, to fix maximum and minimum prices for the necessities of life and the articles required for their production, to regulate establishments engaged in such production, to prevent hoarding and market manipulation, to compel railroads to give preference to the movement of needed supplies, to levy import duties to prevent "dumping," and to limit the use of grain in the manufacture of liquor. The control of foodstuff distribution is the chief aim of the bill, but its terms are sufficiently broad to cover other necessities such as fuel and clothing. Another measure, authorizing the expenditure of $20,000,000 for a nation-wide food survey and increasing the personnel and enlarging the powers of the Department of Agriculture, has already been favorably reported from committee in the House of Representatives. The Senate has authorized a $10,000,000 appropriation for the purchase of nitrates from Chile and their distribution at cost to eastern farmers.

Not satisfied with the paternalistic legislation projected by the Federal Government, many are demanding the immediate establishment of maximum and minimum prices for the principal articles of food, the conscription of farm labor or the commandeering of unused land. President Townley of the Farmers' Non-Partisan League, which includes some eighty per cent of the North Dakota farmers and is the dominant political organization among the wheat growers of all the northwestern states, proposes the most radical program of all. He would have the Federal Government take over and operate not only all the packing plants, canneries, mills, warehouses, grain elevators, and storage plants, but also seize and distribute among the farmers all idle land now in the hands of speculators. He also advocated loans to farmers, the fixing of retail food prices by law and the exclusion from military service of all persons engaged in agriculture. To solve the question of labor shortage various plans have been proposed. Senator Hale of Maine has introduced a resolution for transferring to this country German war prisoners in England and France so as to relieve the present burden upon those countries of feeding the prisoners and perhaps also to secure their services in agriculture. A temporary importation of Oriental labor has also been suggested. Some who object to letting down the bars for Chinese or Japanese immigrants suggest that the Philippines can supply this country with a large supply of cheap and skilful agricultural labor.

Building Our Wooden Walls

Major General George W. Goethals, head of the United States Shipping Board Emergency Fleet Corporation, has contracted with the Foundation Company of New York for the building of the first ten ships of the wooden merchant fleet which will transport food and war munitions to our European Allies. One thousand of these vessels will ultimately be constructed. After the first ships have been constructed, if the model proves a satisfactory one, the rate of production can be very greatly increased by the adoption of a uniform type and the making of standardized parts. The estimated total output from all the American shipyards will be at the rate of 200,000 tons a month in wooden vessels, and 120,000 tons a month in steel ships. This is not as rapidly as the German submarines are now sinking merchant ships trading with the Allies, but as England and other shipbuilding nations will also continue to turn out new ships it is very possible that Germany will be unable to destroy the aggregate increase in maritime tonnage and the submarine blockade will therefore have failed, unless the British are starved out within the six months before the first ships of the new cargo fleet will be ready for use. The wooden cargo ships will be built capable of carrying defensive armament so that the submarines may find the ships no easy prey.

Ding in New York Tribune

HOLD UP, THERE! YOU'RE NOT A MEMBER OF THE LIFE-SAVERS' UNION!

Navy Fully Recruited

Altho the regular army and the national guard are still short of their authorized strength, the navy and the marine corps are both recruited beyond the present provision of the law. By April 29, the marine corps reached its full authorized strength of 17,400 men, and two days later the enlisted personnel of the navy exceeded the required eighty-seven thousand. During the month of April alone over twenty-three thousand enlisted in the navy and more than forty-six hundred in the marine corps. The chief reason why these branches of the service were so speedily recruited was the high probability that the navy of the United States will see active service before army volunteers are sent to the front. Volunteers for the navy and for the marine corps are still being received, as the authorities expect that Congress will shortly vote a very considerable increase in the naval personnel. Should Congress authorize the desired additions to the naval establishment a special week, known as "marine corps week," will be set aside in June for an especial effort to complete the recruiting of the corps.

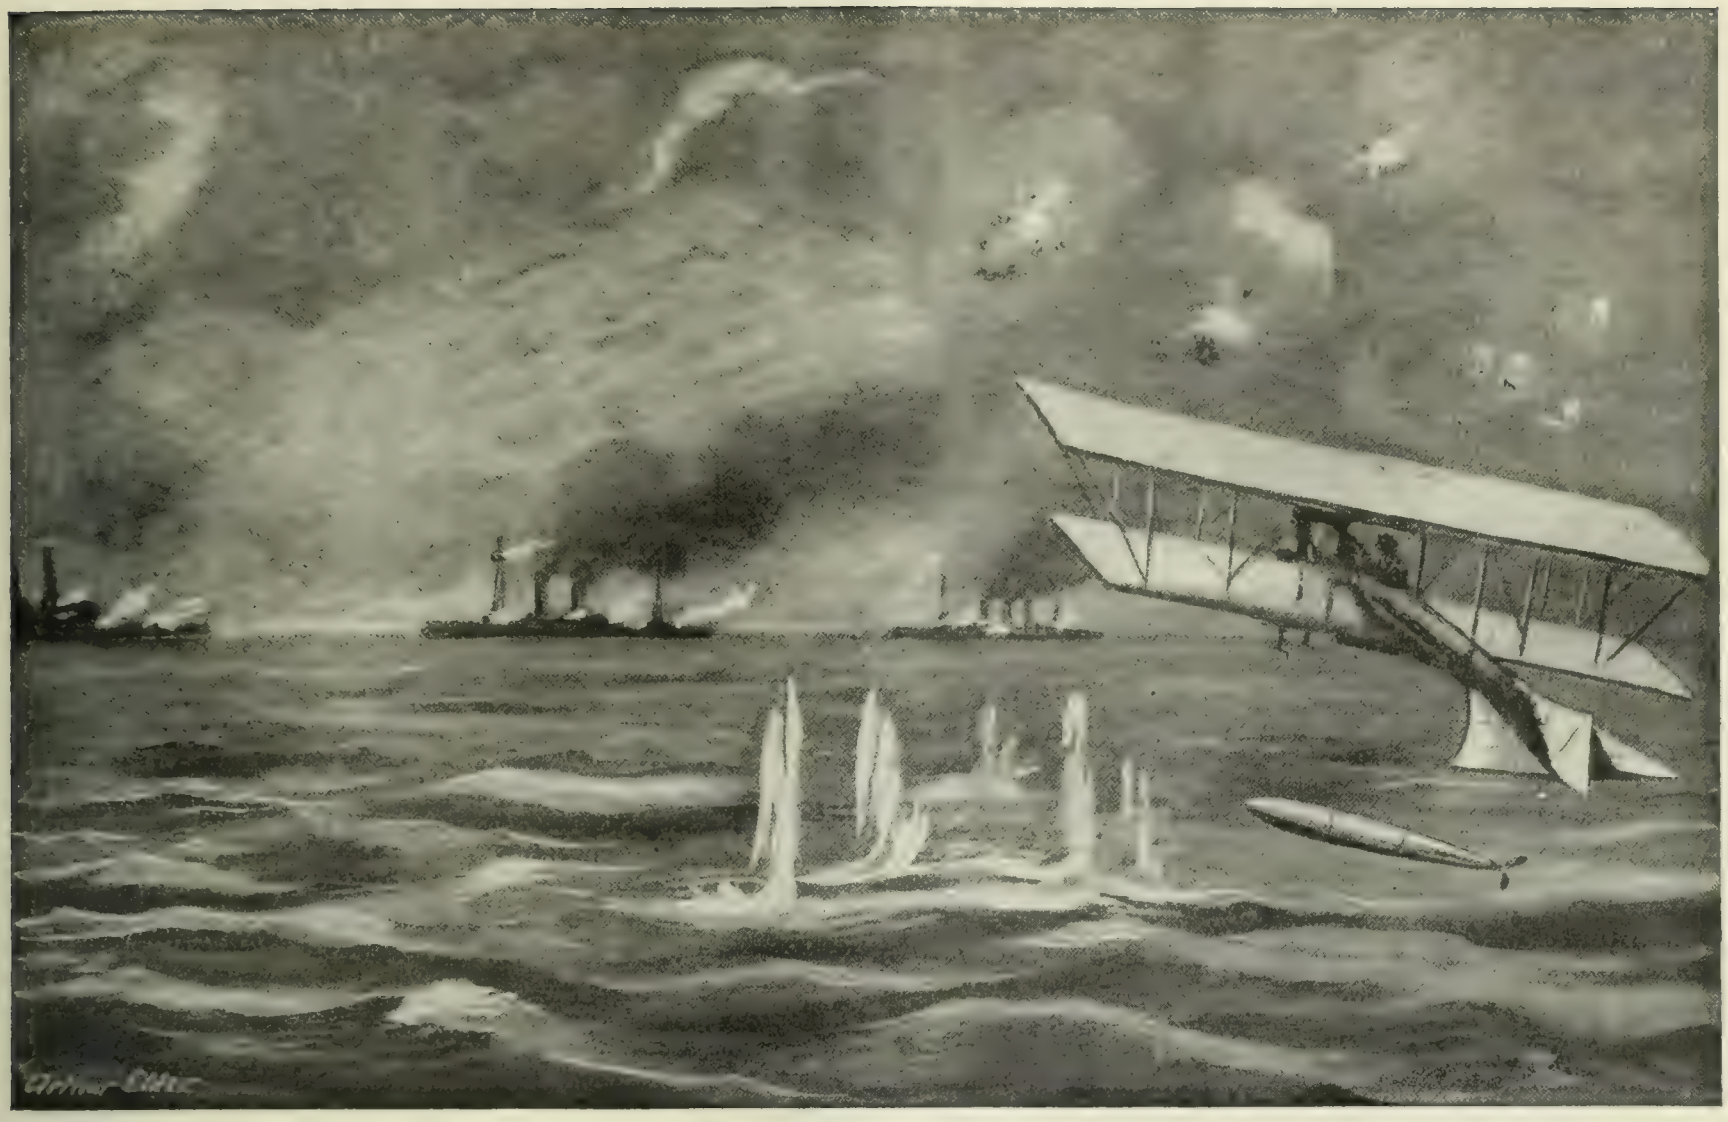
WHAT A SHELL GOES THRU

This diagram of the cracking effect of a big shell explosion shows the difficulty of digging defenses deep enough to escape artillery fire. The dugout in the lower left corner is well below the bottom of a shell crater, but the explosion must crumble it all the same



No May Day Strikes

During the latter half of April the European despatches were so filled with rumors of impending outbreaks that the uncritical reader might well have expected a revolution in Germany on the day devoted to labor demonstrations. But so far as is known May 1 passed more peaceably than it ordinarily does in peace time. Most of the workmen did not even take a holiday but stuck to their tasks and no cases of serious disorder are reported. This suppression of all manifestations of the discontent and unrest that undeniably exists among the German people was accomplished thru the combined influence of the military and civil authorities and the leaders of the Social Democratic party.

The Government is now working hand in hand with the leaders of the majority of the Socialist party in the maintenance of order and in their effort to negotiate a separate peace with the Socialists now dominant in Russia. The working classes of Germany seem to have been convinced that peace is likely to come soon thru the U-boat blockade, the weakening of Russia and the successful defense in France. They have been assured that the victory of the Allies would mean the loss of German colonies, the partial dismemberment of the German and Austro-Hungarian empires, and the imposition of such heavy punitive indemnities that the workingmen of Germany would be virtually the slaves of the Allies for all time to come.

Wisconsin Legislature Expels Socialist

State Senator Frank Raguse, a member of the Wisconsin Legislature from a Milwaukee district, so greatly offended his colleagues by a disloyal speech that he was expelled from office by an almost unanimous vote. Such action, altho very unusual, is legal by the Wisconsin constitution, which provides that either house of the Legislature may by a two-thirds vote expel a member for contempt or disorderly behavior. Mr. Raguse, who is a German by birth, accused the American Government of having plotted the destruction of the "Maine" in order to bring about the Spanish-American War, and remarked that the same spirit was evident today, as "patriotism can be created in only two ways: you must destroy people or you must destroy property." Later, when threatened with expulsion, Mr. Raguse explained that he spoke only of false or jingoistic patriotism and intended no slur on the real love of country. But he refused to sign a prepared retraction disavowing any remarks which "savored of disloyalty."

A PROPHECY COME TRUE

This drawing of a torpedo-plane is reproduced from The Independent of Nov. 2, 1914, in which Mr. Benjamin first explained the "flying-fish" attack

THE FISKE TORPEDO-PLANE

BY PARK BENJAMIN

"LONDON, May 2.—The Admiralty announces that the British steamer 'Gena' of 2784 tons was sunk May 1, by *a torpedo discharged from a German seaplane* off Aldeburgh (Suffolk, England)."

The foregoing despatch sets forth the first use by the Germans in the present war of the torpedo-plane invented by Rear-Admiral Bradley A. Fiske, U. S. N., and described in full for the first time by the present writer in The Independent of November 2, 1914, with the illustration here reproduced. A mobile torpedo, similar to the torpedoes projected under water by submarines, is supported on an aeroplane frame directly below the aviator's seat and is so arranged that by pulling a single lever it is freed and its propelling engine started. The torpedoplane, as Admiral Fiske calls it, is launched either from the land or from the deck of a ship, rises some 6000 feet and stays at that elevation until its target is sighted, whereupon it rapidly descends at a precipitous angle. If the objective is a transport or other weak vessel, it may approach before firing to a distance of about 1500 yards; but if armed vessels are attacked this interval is augmented. The torpedo's nose at the moment of release is pointed directly at the target, and this release occurs when the torpedo-plane is about twenty feet above the water. The torpedo automatically takes a certain depth, and rushes upon its prey unerringly in a straight line and at a speed of some thirty-five miles per hour. It carries enough high explosive to blow up or put out of action any vessel, however strongly armored.

The formidable character of this new weapon was quickly recognized everywhere except in the United States Navy Department. Since The Independent published its description it was used by Lieutenant Boyle of the British Navy to sink four Turkish vessels in the Sea of Marmora. It was experimentally tested by Captain Guidoni of the Italian Navy upon the standard naval target 3000 yards distant and made nine hits out of a possible ten. When it was brought—and repeatedly brought—to the notice of the United States Navy Department, it was ignored, in accordance with a persistent policy of decrying naval aviation in general, in consequence of which our fleet today is without such scouts and therefore in comparison with the German fleet, which is amply supplied with them, is pretty nearly blind. Whoever is responsible for this obduracy and neglect should be held accountable for whatever disaster may result from such a policy.

Meanwhile, and as usual, having been the first to invent a new weapon, we do nothing to avail ourselves of it until after other nations have done so. This is the way we acted with respect to the submarine, the telescope gun sight (which has made modern naval gunnery possible) and the machine gun. And in the present latest instance of the lack of foresight of the Navy Department we have now the humiliation of witnessing the invention—not of some unknown genius but of the ablest inventor the Navy itself has ever produced—adopted by the public enemy and liable to be turned against ourselves at any time.

THE Allies are now clamoring for help from the American inventor to save them from starvation. It has become desperately necessary for our own sake, as well as theirs, to find a way of detecting and destroying the German submarines—or, better still, of annihilating the bases on the German coast wherefrom these sea vermin emerge, and wherein the German high seas fleet is harbored. In the writer's opinion, the only promising means at the present moment is the Fiske torpedo-plane. The German fleet is reported to be in the Kiel Canal and in Wilhelmshaven. It is apparently practicable to drop the mobile torpedoes into the canal. No aiming is necessary. Even if after immersion they run into the banks and explode they will tear therefrom great masses of earth and masonry revetment and hurl them into the canal prism, thus choking the passageway—as the Culebra slides choked the Panama

Canal. This may operate to cut in two the fleet therein and prevent junction of the divisions, enabling each to be dealt with separately. Such torpedoes as travel in other directions in the canal will destroy everything afloat which they may happen to encounter. To drop them into Wilhelmshaven is to blow up any vessels within their range, and the closer together the ships are moored the more of them will be destroyed. To whatever extent the German vessels are sunk or made useless, in like proportion will the entrance of an attacking fleet be facilitated and the bases themselves be destroyed. Without bases for replenishment of mines, torpedoes, food and fuel, the submarines become harmless.

We should have built long ago large numbers of torpedo-planes and tried them out. It is not too late, even if the English and the Italians and (most exasperating) the Germans have shown us the way, for us to do so now. At all events the present need is too urgent, even if the country can patiently witness the spectacle, for us to permit Admiral Fiske and his friends to undertake this work, for the safety of the nation, at his and their own cost and expense.

New York City

RIGHT MAKES MIGHT

BY SAMUEL GOMPERS

In this article Mr. Gompers, presenting the problem of labor mobilization, continues The Independent's series of articles by members of the Council of National Defense on their various departments of organization for war. For about twenty-five years Mr. Gompers has been president of the American Federation of Labor, an organization in which over two million workingmen stand together to obtain "an equitable share of the fruits of their labor." He is also first vice-president of the National Civic Federation.—THE EDITOR.

AS our national crisis became steadily more and more acute, it became more and more clear that no practical program of defense could be adopted and executed without the coöperation of the men and women who use the tools. For tools are the basic agencies of our civilization.

In no previous war has organized labor had a direct part to play. In no previous war has organized labor had representatives in the councils authorized to deal with the conduct of war. For this war is one in which the armies and navies at the front are dependent, as is civilization itself, on the men and women in the factories and fields. It is clearly just as essential to protect all these auxiliaries at home from baneful economic and industrial evils as it is to safeguard the lives of the men at the front. Nothing could be more evident. Labor must see to it, as part of patriotic duty, that the rights of working people be kept at heart. The experience of England shows how necessary it is that this thought be kept clearly in mind. We must profit by that experience.

And further than that:

We have heard the claim that democracy is not and cannot be efficient.

With the people of the United States rests the responsibility of demonstrating that democracy, as exemplified in America, can—in war as well as in peace—prove itself to be efficient.

TO make this country efficient in the highest degree coöperation between the agencies of the Government and particular units is necessary. That coöperation is dependent very largely upon the men and women who handle the tools. I think the great lesson to be got from English experience is that coöperation in the form of good results cannot be got from underfed workingmen and women. They must be paid enough to permit them to live decently. They must not be asked to work over eight hours a day, six days a week. They must not be asked to work unnecessarily in unhealthful conditions.

Of course, if you want to get all there is in men in the shortest possible time, work them twenty-four hours a day. You can do that two days in succession. But at the end of the second day they will be worthless.

This democracy will prove itself most efficient if it does not ask its workingmen and workingwomen to work more than eight hours a day. This fact has, to my mind, been amply demonstrated. Many of our ablest employers have laid it down as a law that labor shall not be asked to work more than six days a week, eight hours a day. Let me quote one of them, Henry Ford:

"Employers who are hostile to the eight-hour day," Mr. Ford says, "do not know their business. Eight hours is long enough for anybody to work. A man can't work more than eight hours and do good work. We've proved it often. We have had the eight-hour day in force in the Ford factory for three years and we have made more money each succeeding year under it. It has proved its own merit. When you get down to eight hours you observe a wonderful increase in efficiency. After we put the rule into effect our product simply skyrocketed in output. The men are full of efficiency, life, ginger. They feel this way: 'Well, here's eight hours of hustle. I'll hustle and earn my fair wage, and then I've got all the rest of the time to myself. I can improve myself. I'm not worn out, tied down.' I don't know what the increased profits have been to our company. But we've got so much money we don't know what to do with it. The eight-hour day has increased our earnings by millions and made our men better off. And it would be the same for other properly conducted businesses."

The eight-hour-day six-days-a-week rule—so Mr. Ford and many other manufacturers have demonstrated—is a principle. It is no longer debatable. To break away from such a principle in a time of stress such as this would be to display enterprize instead of judgment and to prove that in time of war democracy as exemplified in America stands ready to defeat its own ends.

It has also been established as a principle that good working conditions —good light, sanitation, etc.—are essential to maximum output.

IN a word, good working conditions are as essential to high production as high production in this time of stress is essential to the maintenance of a battle-front. It would seem to be treason to the best interests of this country to desert such principles now. Now more than at any time in our national history we do not want production to fall off; rather, we want to accentuate it. Now more than ever we want the army in the factories and fields to be an army of strength fighting for democracy; we don't want a nation of working people with hearts and bodies weakened. We need, rather to strengthen our men and women for the war and for the reconstruction after the war.

It is on these grounds that the committee of which I am the head recommended to the Council of National Defense the adoption of resolutions urging the maintenance of existing legislative and administrative standards. The adoption of this resolution, coming just at a time when not a few efforts were being made to induce legislatures to repeal laws that had been got with difficulty and when other attempts were being made to take advantage of our national situation, was most salutary.

For war is the open season of a large class of unpatriotic persons who are ready to make the best of all opportunities afforded by national distress. Our committee has an enormous program directed to the carrying out of this resolution and to the mobilization of every possible ounce of labor energy, to the end that the world "may be made safe for democracy."

The supreme thought that I have in coöperating and in asking the coöperation of the men of labor in America is to demonstrate that democracy does not spell inefficiency, but, on the contrary, to demonstrate that the democracy of America can show to the whole world that in war as in peace it is united for any emergency.

Washington, D. C.

M-E-N

BY DONALD WILHELM

AUTHOR OF "THE STORY OF STEEL"

A GREAT captain of industry said to me, two months before America's declaration of war, "I tell you, the big problem that is confronting all industry today is Men—M-e-n." (He spelled it out impressively.)

I went to a farmer to ask how farmers in general were getting on with the old, old problem of the farmhand. He threw up his hands in despair, and said something to the effect that there isn't such an animal as a farmhand. "The farmhand has gone to the factories," he said, in substance, "and my crops have gone to the dogs!"

I went to a factory not twenty-five miles away. I sought out the proprietor. "I'm so busy trying to keep costs down that I can't talk to anybody," he cried, almost hysterically. "I tell you I *am* doing a tremendous business, but I'm not making as much as some of my men. I used to, with the same organization, but my records show that labor costs more—much more—and isn't as productive as it was. I don't dare say anything, tho. I hardly dare go into the plant because every time I meet one of my men, almost, I have to give him a raise to keep him working."

A workingman—a "handy man"—in another plant described the same startling condition: "Today I asked the boss for a raise and he took a good ten minutes to explain to me that he couldn't raise me again right away, but that he would just as soon as he could. He said he was very sorry. What would he have done in 1914, before the war? He'd have fired me on the spot and picked up some one else."

"These are parlous days, aren't they?" I said to this man's boss, a plant superintendent, to whom I went to confirm the story. This superintendent—a quiet individual with blue eyes that often smile before his lips have parted—listened. At last a little grimly he said: "I guess we downtrodden 'bosses' will have to organize!" A little later, with his own characteristic humor, he admitted "Labor these days is King."

Then, to illustrate the kind of a time he had been having: "Mark Twain, coming back from Europe on his last trip, was asked, on the pier, if he had had a good time at the King's dinner. His answer was 'No, but the King did!'"

These rather typical conversations just before our declaration of war are signs that the pendulum had swung since 1914.

Thru the winter before the outbreak of the war in Europe—the winter of 1913-14—our industrial field was cluttered with idle men. A year later there were fewer.

Two months ago—before our own declaration of war—there were not nearly enough men to fill the vacancies.

In 1914 employers were able to pick "selected men" from the army of the unemployed. The result was we had the rule of the most desirable—the rule of Youth, to illustrate, and the passing of "old men past forty." We heard much, also, of undesirables—men who smoked cigarets, or left-handed bank clerks, or office boys with more enterprize than judgment.

In 1914 things industrial were bad—so bad that there were, on the East Side and elsewhere, threats against all those who were successful in business and ominous efforts even against government itself. "Just such a winter," it was then observed, "will some day awaken America to its own industrial staggerings. It will jam the cities a little fuller. It will jam the jails and bread lines and saloons and lodging houses a little more and pack the city hospitals and frighten employers until—"

BUT the Great War in Europe worked miracles in America.

The third winter after the panic winter of 1913-14 hardly any loiterers were to be found in the city that is the Sick Man City of America in times of industrial distress—hardly any even in its East Side saloons. The whole labor world had been elevated, it seemed, at least one level, so that now there were no dregs.

The munition plants got many of the "undesirables," tho, in their hurried need for organization they hired and fired extensively—some of them firing 400 of every 500 men hired, a curious commentary on our American educational effectiveness. Some of them since have taken a lesson from well-established employers who, feeling the necessity of conserving men and of building better men, have been in the last few years using admirable intensive methods to encourage men to do their best; that is, in recognition of the scarcity of men, with infinite patience some American employers try every man at one job and another, encouraging him, educating him, doing anything to get him really fitted into an organization.

Other employers insured their men, furnished them medical service, sold them stock, gave them pensions, or raises, or—this was particularly common—bonuses which cannot, as is often mistakenly believed, easily be discontinued later on when the labor scarcity is over.

Before our own declaration of war, to resume, "old men" were working in the places where they could work—many of them were back in old places as salesmen again; some of the really old were doing delivery service. And young men were in the jobs they could do best.

At Eddystone, Hopedale, Pittsburgh, other munition centers, were to be found some college undergraduates who were trying, in short order, to get money enough to carry them thru succeeding college years. Young men everywhere were being courted by "scouts," who work, mostly, at "so much for every young man brought in." Lo! Even the poor farmhand had thrown aside his pitchfork and had done with his traditional $25 a month, his "three squares and roof that doesn't leak." Section hands were at machines, so that railroads had to import Mexicans and use negroes by the score and did not dare to court a strike. "There never was anything like it!" exclaimed a Bridgeport workman. "I used to be working on a railroad all the livelong day. Now I'm making more money here in a day than I used to make in a week, straightening rifle barrels. I tell you, it's a regular workingman's dream now!"

This "dream" is difficult of presentation.

And it had some very immediate effects. One effect, for instance, was noted by a woman member of the State Industrial Board of Pennsylvania: "There is the greatest change imaginable in the faces of your workers here," she told the plant manager of the Eddystone Ammunition Company. "Perhaps you don't observe what a tremendous change has occurred in your men and women in two years. When you started here you had a haggard lot of people. Now they all look better fed, better clothed, happier—much happier! They'll never go back to the old life if they can help it!"

THIS "dream" has been to millions of working people something very real, as real as two eggs for breakfast where there was only bread and coffee before. It has had consequences. Nevertheless there have been many, and there are still some, who have dismissed it with some convenient aphorism such as "O, it's just a nightmare! It's a boom at best—after the boom will follow the deluge! Why? Well, because in America it always has."

Of course it is very easy to base definition of the future on premises from the past—so easy that nearly all reactionaries habitually do it.

But let us look a little more closely, and follow a little more patiently this "dream."

Let us go to a few men who are not reactionaries, that is, who believe that sometimes there are new things under the sun!

"If I choose my premises from things as they are, which is the intelligent thing always to do," argued a professor in economics, "I should say that our tremendously high prices are due to five causes: The increased gold supply is one cause—one that is given little attention; others are short crops, increased exports with no importations,

increased consumption by men better paid than ever before, and, most important of all, I think, increased consumption by those who are here in America earning more than ever before. If high wages continue, the wealth of the world will be more widely distributed than ever before. And high wages will continue, if the shortage of able-bodied men continues. We shall have as a result something of a social revolution."

SINCE it seemed that the supply of able-bodied men was the crux of the whole situation, I made off to Ellis Island to ask the views of Commissioner of Immigration Frederick P. Howe. I went to see him before the President's war message—before our declaration of war.

"After the world war," the Commissioner said, "there will be a world-wide shortage of men on one hand and an unparalleled demand for them on the other. Such a period has not confronted Europe since the beginning of the industrial revolution and probably no such condition ever confronted the world before. It may result in a reversal of positions of employer and employee."

All students were by no means agreed, I found as I went about investigating, that after the war there will be an "unparalleled demand" for labor in Europe, because, some of them said, there will not at once be found places or means to put the millions now in the trenches to work.

Just here it is worth noting that labor, left free, seeks the best market for its services. To illustrate: Again and again alien labor has streamed to this country because this country needed it and was willing to pay for it. And again and again the aliens have left. For instance, in 1907-1908 their exodus kept regular pace with the spread of depression.

Many Americans think, vaguely, that the aliens will come to the rescue of the manufacturers, railroads, and other employers again. Many of them say that our boom will continue at least two years, despite readjustment. Therefore, they argue, as soon as the Europeans lay down their arms they will turn and make off to help America in its labor dilemma!

But will aliens come from Europe to help employers in America?

AFTER the war there will undoubtedly be thousands of able-bodied Europeans who will desire deliverance from militarism or other tyranny, but many of these will be unable to stir from their heritage.

There will be thousands, too, who will seek deliverance from taxes that, even before the war, were almost unendurable, and thousands who, with a new love of freedom got by life in the trenches, will migrate if they can. But it may be that many of the European governments will prohibit migration, or discourage it in such ways virtually as to prohibit it altogether.

And now other things have happened —as if to establish a new order of things beneath the sun.

First, labor got made into law the literacy test—to do what it was meant to do—to ward off labor from our shores.

Next, the Russian Republic "occurred." Of a sudden, Russians in the Old World do not want to get to the New World. Moreover, Russians in the New World are now eager—thousands of them—to return to Russia.

And then, at last, comes our war! And with it not a gathering in of aliens from Europe but instead the tremendous business of pouring out of our factories and fields, and of pouring across our ocean borders, we hope, of tens of thousands, even hundreds of thousands of the able-bodied men in this country!

Of course we hope that every one of them will return. Nevertheless there is no reason why we should blink at the indisputable fact that already in Europe more than ten million men have been killed or been permanently disabled. Some investigators estimate nearly twenty million.

At once we think of the millions of widows and orphans. If the European governments consider these as liabilities it is probable that some of those governments will be glad to get rid of them.

"Perhaps," some American employers conjecture, "we can get alien women and orphans to come to help us, in spite of the literacy test."

But, to begin with, it may be inquired:

"Will not the war countries, robbed of their men, cherish children as never before?

"And will women be liabilities?"

WHEN all the guns that bluster have ceased to brag and millions more men are in their graves, when poverty is riding the world and every little deed of productive handiwork is more precious to the European governments than ever before, is it to be doubted that women will in some countries be forced to take the place of men and in others continue to do so? It would be strange, in fact, if great economic power were denied them.

Thus cometh another new thing under the sun!

For, just as surely as any class is given great economic power invariably it gains great political power. Likely, I think, women will be one of the new elements of world power—perhaps *the* new element—that once and for all will make an end of war. The strangest paradox in all history is, truly, that the Great War, with all its dire destruction of husbands and sons and brothers, answered the prayer of women—not in its means, of course, but in its ends. Years back Olive Shreiner wrote: "We women claim all labor for our province."

The Great War came, it may be said, to exact a place for women in every province of labor that there is. There are in Germany more than four million women enrolled in the benefit societies and taking the place, for the most part, of men who are in their graves or are crippled irreparably. England has more than three and a half millions. France has, it is thought, half as many. If it is said that industry in some of the war countries—notably England—was overmanned before the war, it may be answered that the surplus of men, plus many more, has, in numbers at least, been destroyed. And if it is still insisted, from one reason or another, that women are not to stay in the mechanical departments of industry, where they have been the least welcome in years gone by, then it may be answered that there is a deeper, more precise reason than any heretofore given why they shall invade even mechanical departments—a reason that has been quite as fully demonstrated here in American munition plants as anywhere else in the whole world.

HERE, in a word, women have shown past any doubt in the minds of those who have had charge of them, that, in the hum of pulleys and the sounds of lathes and in all mechanical work consistent with their strength, and that includes very much of mechanical work because cranes are used very extensively, they are more efficient than men—a great deal more efficient!

There is not room here for demonstration, in figures, of this conclusion, yet, in a canvass of many munition plants, hardly a dissenting vote to it has been found. It is believed, when generally known, that this revelation will be the most important thing in American industry in many a day.

The Kaiser, it seems, has put militarism out of the running by starting a war that has actually established the industrial dominance of women on this earth!

A corollary of the Kaiser's enterprize is that a great many reactionaries—employers and others—are saying that he has put "a rack and a wrench to the world and twisted a lot of things out of joint."

There are elements in the present situation, certainly, that are new to things beneath the sun. Women have got by war a chance they have never had.

Labor has got unprecedented power. And it will likely retain this power because of the shortage of able-bodied men. It may be well for us all to ponder what these premises mean.

And it may truly be not altogether out of point to suggest that the historian, writing twenty or thirty years from now, may look back on these days of change and write:

"Spring, 1917, found the United States in the midst of an industrial and social revolution. Even in the third year of the Great Affliction—about a decade short of a millennium—the elements of the Great Change by Americans had hardly been discerned at all."

DIGGING THEIR BIT

BY R. V. INGERSOLL

COMMISSIONER OF PARKS OF BROOKLYN

DOES YOUR BACKYARD GARDEN LOOK LIKE THIS?

THE LATEST BROOKLYN PLAYGROUND-GARDEN

SCHOOL children cannot all be Boy Scouts—fortunately, perhaps! But the public schools can offer universal military training—productive, educational, wise and practically critic-proof, training that fits equally well into the educational scheme of city or country districts. Both of them, in fact, have already adopted it to a considerable extent, tho they have not usually labeled it military training. Playground gardening, planting vacant lots, school children's plots are some of the names more often applied—but call it what you will, the value of garden training for boys and girls has been proved and its wartime importance can hardly be overestimated.

In the spring of 1914 the Department of Parks in Brooklyn began a concerted effort to convert McCarren Park, a barren and dreary waste of ground, into an attractive center of outdoor recreation for the crowded industrial section in which it is located. This general effort included such diverse changes as a better system of lighting, improved police conditions, planting of several hundred trees, opening of children's playgrounds, baseball fields and tennis courts. The new Children's Gardens, however, proved to be the point of most vital and picturesque interest.

Beginnings were made with 120 individual garden plots. These were supervised by two very capable women, thoroly trained in horticulture, and gifted with sympathetic understanding of children. Each plot was assigned to a child from some neighboring school, care being taken to get children of from ten to twelve years, the age most responsive for activities of this sort. During the second season the number of individual plots at McCarren Park was increased to four hundred and twenty and a new garden of three hundred plots was laid out in another densely populated district. This was followed the third year by a garden of one hundred plots in a still different part of the city, making about 800 plots in all. As one child has charge of a plot for three months and another child has it for the succeeding three months, a total of 1600 children each season have an intensive and extended gardening experience. In addition, more than fifty thousand children visit the gardens in classes from the public schools for observations and instructions in nature study.

WHEN the gardens open, each boy or girl is given a tag representing individual proprietorship of a plot. Each plot, to be sure, is only four feet by eight. This size, however, has proved to be satisfactory since every part of the plot can be easily reached from the narrow surrounding paths, and still enough crops can be grown to insure zest for the harvest. The young gardener begins by spading the soil and getting it into proper condition. Then comes the planting, when such vegetables as lettuce, onions, radishes, string beans, carrots and corn are planted under careful instructions. The child soon learns the importance of giving his crop systematic daily attention and becomes familiar with the processes of fertilizing, cultivating, watering, weeding and protection from insect enemies. So genuine is the interest taken that it has not been found necessary to prescribe any definite hours of attendance.

In addition to the individual plots, each garden is provided with a number of community observation plots where such exotic plants as hemp, flax, cotton, tobacco, peanuts and sugar cane are cared for by coöperative effort. There is also group responsibility for a border of flowers and for a large central flower bed. But it is in the common care of the paths—to keep them smooth, hard, well drained and free from stones—that helpful group action and work comradeship are most clearly developed.

A considerable catalog could be made of the rich educational values for growing children in the methods here briefly outlined. There is muscular activity in the open, combined with the fine discipline of a definite and self-chosen purpose. The joy of productive effort is almost like a new discovery. So also may be the natural relations with elders, where for once discipline is not uppermost. The girls learn incidentally something about cooking and about food values. The garden itself inspires a sense for order and beauty. Combating insect pests helps to make sanitation and the fight against disease germs more comprehensible. There is the most natural training of sense perceptions, of use of eyes and hands and of the care and use of tools. A new respect for intelligently directed labor helps to balance the bookish and clerical tendencies of the schoolroom. Patience, method, careful observation and attention are developed in many children who at their desks indoors seem listless and dull. Contact with the ground and with the influences of soil, sunlight and moisture answer in themselves a deep human instinct. After all, a child's mental and moral responsiveness is at its very hight when he is throwing himself eagerly into his chosen play. And truly these gardens are his own playground—no matter how serious he may be about bearing home his basket of vegetables at the exciting time of harvest.

If it is sought to apply these principles to the conditions in small towns or in the open country, various adaptations would readily suggest themselves. The essential elements of the children's gardens touch life at so many points that the conception has power and is bound to go forward. New recognition of the value of outdoor life gives the gardens impetus. So also does the increased interest in intensive agriculture. This feature will naturally be more emphasized when gardening has become a usual feature in the rural schools. But even in the cities this factor has some weight. It has been found in Brooklyn, for instance, that many backyard gardens have been started as an outgrowth of children's farm gardens. This fact has led to establishment in the Park Department of a number of model backyard gardens where questions are answered, instructions given and leaflets and graphic charts distributed to the public. More than six hundred backyard gardens are known to have been planted in Brooklyn during the first season in imitation of these model backyard gardens.

THE LITTLE THEATER REVOLT

BY MONTROSE J. MOSES

AUTHOR OF "THE AMERICAN DRAMATIST"

EXPERIMENTAL theaters are cropping up everywhere thruout the United States. They are a measure of the discontent of groups of people with the way in which the commercial theater is run. They are an indication of that strong desire for self-expression which communities have, and which heretofore has found an outlet in amateur theatrical clubs. They are the natural consequence of a widespread interest in drama for its own sake, encouraged by the extensive reading of plays which bring to the most isolated community the very best that is being thought and written in the theater.

People say that readers in Galesburg, Illinois, who thru their library have been able to enjoy Galsworthy, Masefield, Shaw and the Irish playwrights, and who thru their playhouse have heretofore been offered some flimsy, inferior comedy by the theatrical trust, have seen an incongruity between the supply and the demand, and have set themselvs to work to establish a theater of their own, supported by their community and assuring to the community the type of play in which it is interested. There are other communities like Galesburg; the consequence is that from Boston to Los Angeles, along a circuit as well defined as the circuit of the professional theater, Little Theaters are now a definite part of the artistic life of the country.

There has been no attempt to organize the Little Theater Movement in this country; the different centers have been content to run each on its own initiative, and to follow the tastes of the particular group that has organized it. Examine the repertories of these Little Theaters, and you will find them widely different. Now and again a play that has been tried successfully in a Little Theater in New York will be presented in the Little Theater at Detroit, and eventually be given on the strength of its success in the Little Theater at Los Angeles. But there is no exchange of ideas among these Little Theaters. By their very independence they proclaim their amateurishness and their lack of a definite reason for being. These theaters are in a state of revolution against the commercial theater, and out of the revolution there may come some definite program.

There are many types of Little Theaters. One is organized directly thru the self-conscious efforts on the part of social settlements to supply a given neighborhood with specific, well-governed entertainment. Such an organization, born in the Henry Street Settlement in New York City, is the Neighborhood Playhouse; outgrowing its strictly "club" function, it has now become well-established as one of the most distinctive communal art institutions there is in the country. To this Little Theater belongs the credit of having made generally known the artistic worth of Lord Dunsany as a dramatist. It is not only a community playhouse, but, following the idea established by Professor Baker, of Harvard, in his "Workshop 47" it is likewise a "workshop" where not only are the people in the community trained as players, but likewise where scenery and costumes are made on the premises. This idea is not original with The Neighborhood Playhouse. It is partly borrowed from Hull House, in Chicago, where the theater, under the auspices of that settlement, has an honorable history, and a most distinctive repertory of plays to its credit—plays which would do any professional repertory house credit as far as the weight of the selection is concerned. For a Little Theater, such as the Neighborhood Playhouse, to have won the distinction of impressing itself upon such a large community as New York, with its varied theatrical interest, and its confusion of Broadway standards, is something to the credit of that institution; it shows its vitality.

THERE is another type of Little Theater, professional in its character and founded on the principle that a man in the professional game wishes to run his theater in as artistic and as inexpensive a manner as possible. To keep outside the exercize of certain fire laws governing the regular theaters, these Little Theaters are usually limited in the number of their seats to two hundred and ninety-nine, and are classed as "hall," the requirements being the same as those governing moving-picture places. In New York, Mr. Charles Hopkins' Punch and Judy Theater, and Mr. Winthrop Ames's Little Theater, both of them professional, are situated in that part of the city where real estate is at its highest value. In order to pay expenses, therefore, these Little Theaters have to appeal to a class of theatergoer that can afford rates of two dollars and fifty cents. They are outside the range of communal interest, and cannot necessarily appeal to the people at large.

The third class of Little Theaters is the experimental playhouse, founded with the idea of testing new values in the theater. There are in America many young men of artistic inclination who have gone abroad to study art, and come under the influence of Gordon Craig in Florence, Reinhardt in Ber-

lin, and Stanislovsky in Moscow. These young men have received training in an art school which believes in the new symbolic stage setting, the new type of stage lighting. They have returned to America and sought, not the professional stage so much as the experimental stage, where they have gradually impressed upon the community the fact that it is unnecessary to waste the financial substance of the theater in over-decoration and slavish adherence to the now wornout methods of realism. These experimental theaters are likewise not only affording an opportunity for the public to see plays which are not given a chance on the professional stage; they are also encouraging local dramatists to write plays for special productions. Because of the Washington Square Players of New York, and their experiment in the Little Theater business, a group of playwrights has grown up around them; because of the development of the Provincetown Players, a group of dramatists has evolved from that movement; because of the interest of a certain literary group in Madison, Wisconsin, the Wisconsin Players have come into existence, and Professor Thomas H. Dickinson has brought out a volume of Wisconsin plays, representative of the work they have accomplished. Prizes are being offered for plays written by Michigan men, by residents in the Mississippi Valley, by would-be dramatists of every locality.

It is evident from this that the Little Theater Movement, despite its amateur environment, is calling forth some original work from playwrights. These Little Theaters are themselves becoming the centers for development of literary work, just as "Workshop 47," at Harvard, has sent forth from its classes playwrights for the professional stage of such worth as Percy MacKaye, Josephine Preston Peabody, and Edward Sheldon.

The university interest in drama cannot be ignored in a discussion of Little Theaters. Most of the universities are trying to establish Little Theaters as part of their collegiate plans. In the University of North Dakota, Professor Koch of the English Department has combined his efforts with those of the University Dramatic Association, and there is a Bankside Theater which produces pageants written by groups of students under the supervision of the Professor of Drama. At the Agricultural College of North Dakota, it has been realized that the isolated communities have no proper entertainment, and a Little Theater has been established for their special encouragement. Professor Arvold, who has the work in charge, is obtaining interesting results among a population seventy-five per cent of which is foreign born. The same spirit of coöperation in the theater actuates the students of Dartmouth, Oberlin and other colleges where drama is being seriously studied.

All of these theaters are more or less alike in their objects and endeavors, however independent they may be. Because the actors are amateurs and are limited financially in the expense of production, the attention of these organizations has been centered almost entirely on the one-act play of small cast, and of simple scenic possibilities. This does not necessarily mean, however, that only one-act plays can be produced in a Little Theater.

As a commercial proposition, the Little Theaters should not be considered. But as centers of special interest, Little Theaters are very significant. They can never have the wide democratic appeal the moving-picture houses have, because they cannot duplicate themselves as extensively, nor present as wide a repertory at as low a cost. Altogether the Little Theater Movement tends to be one of the most significant and revolutionary movements that has entered the theater in America. It is further strengthened by the fact that in communities where there are no Little Theaters, there are at least earnest workers in the field who are presenting plays in which they themselves are interested. Which fact should be a tocsin to the astute commercial manager, and should make him hasten to send to that community a type of drama which is not beneath its understanding. The Little Theater interest does not spring wholly from the old-time amateur theatrical spirit. It springs from a much more vital and a much more deeply-founded interest in the drama itself. It is a protest against the unthinking way in which the theater has heretofore been conducted.

Of all the groups of amateurs that have attracted widespread public attention, most interest has been centered around the Washington Square Theater in New York, the Portmanteau Theater, which can be carried in trunks from place to place, the Little Theater in Chicago, and the Neighborhood Playhouse. These organizations show the weakness and the strength of the movement. The Washington Square Players, for example, have taken themselves so seriously as to sever themselves from their revolutionary *raison d'être*. They have challenged professionalism and remained amateurs. The salvation of all Little Theaters will rest in their being content to remain amateurs and, thru the excellencies of their performance, to challenge the professional theater. Thru them the professional manager will come to realize how profoundly does the theater-going public want a better class of play.

Two types of Little Theaters. The Prairie Playhouse at Galesburg, Illinois, expresses the people's protest. The New York Punch and Judy is a Little Theater, but not a true community playhouse

KEEPING DOWN FOOD COSTS

BY HARRY C. DOUGLAS

FORMER EDITOR OF THE "SYDNEY TIMES"

STATE control of food and necessities need not be the delicate and difficult problem that friends of the old, happy-go-lucky, *laissez-faire* school would have the public believe. Many apologists for unrestricted individualism postulate that our whole social order would totter upon its foundations if a few callous speculators in food and fuel, with all the instincts of ravenous wolves eyeing a defenseless flock of sheep, were to have their unnatural greed curbed in the interests of the greater public at large. It may be argued that the wolves are well able to look after their own predatory hides in any case; it may be asserted that the only safe procedure is to legislate *against,* and not *for,* them; leaving aside such theories, there remains the timorously advanced suggestion that perhaps any general adoption of national—or state—control of the necessities of life savors too much of the Utopian, the socialistic, the impractical. To this there is one certain answer: "It has been done. It is being done now—and it works."

Most European nations have put food and other commodities under government control: their action was dictated by a set of abnormal circumstances. But Australia has tackled the same problem under conditions very nearly approximating those in the United States. When the war broke out, a group of Australian speculators got very busy indeed. They thought they saw a splendid opportunity to send the prices of food and necessities skyrocketing to unheard-of hights. So they started in to corner supplies, firm in the belief that if they could not "hold up" their own people, at least England would be glad to pay their extortionate prices. Their case looked a pretty sound one—to them. There did not seem to be a flaw in it. But they had overlooked one thing—the labor government. The labor government had not overlooked anything, not even the food speculators. The labor government had had a very wary weather eye focused upon the speculators from the beginning. And so the cards were stacked against the food gamblers, the long-suffering wheat pool men, who only found out when it was too late.

At that the speculators had worked with great efficiency and despatch. They had lost no time. As soon as the dogs of war were unleashed, up soared the price of wheat—thirty cents a bushel. Soon the vicious circle was completed. The flour manufacturers boosted the price of their product. The master bakers played ducks and drakes with the public's bread supply. The grocers, faithfully tagging along behind the bigger men, joined in the orgie of price boosting. The situation was much as it was in New York last fall and early winter, when the cost of fuel, the cost of milk, the cost of groceries—in fact, the cost of everything people *had* to have — began the upward climb that ended by thorcly arousing the public to the need for protective, prohibitive legislation.

Less than a month after the price-boosting sharks got busy, the labor government of New South Wales got a little busier. It planned, drew up, passed and put on the statute books its reply. And that reply was a law authorizing the appointment by the Governor of the State of a Necessary Commodities Control Commission, in which was vested practically unlimited powers to fix the maximum prices to be charged for nearly everything except limousines, steam yachts and Turkish carpets. "Necessary commodities" was given a wide interpretation, the term being held to include all fuel, gas—whether supplied to householders or manufacturers—all articles of food and drink, and the ingredients used in making such articles, and, finally, any article which, after investigation, the commission might persuade the government to add to the list. A daily bulletin fixed the maximum prices for necessities within the act.

It was recognized that some speculators, bolder or more defiant than the rank and file, might go ahead and charge their own prices despite the fixed dead lines; that others might retaliate by withholding the supplies they had accumulated. The labor government provided against these contingencies by ordering a penalty for such evasions of the strict letter of the law. Any offenders faced a fine of almost $500 for each offense, a year in jail—or both. The commission was empowered to enter forcibly any premises of suspected persons.

The scheme worked like a charm. The following prices ruled the day before the first price-fixing governmental bulletin was issued: wheat, $1.26 per bushel; flour, $56.01 per ton; bread, on the point of being boosted from seven to nine cents for a 2-pound loaf. After the bulletin was issued the prices were: wheat, $1 per bushel; flour, $46.37 per ton; bread, ordered to remain at seven cents.

In New South Wales, after the appointment of the commission, butter fluctuated in price between 35 and 40 cents a pound. In the neighboring State of Victoria—which is the only state in Australia that has not a labor legislature, and which had no food control commission — butter was around 60 cents a pound.

The New South Wales Government went even further in its determination to enforce obedience from recalcitrant speculators. A group of the biggest operators in the state had 400,000 bushels of wheat stored on the waterfront ready for instant shipment to London. The Governor issued an order in which the speculators were named, and which gave the state power to seize the whole consignment. Directly after this drastic action the wheat speculators threw up the sponge: some 3,000,000 bushels of wheat, held for huge profits, were put on the market at the legally fixed price of one dollar a bushel. That broke the back of price-boosting. No one wanted to "sit in" such a losing game. To cap the climax, the government entered upon a scheme of state bakeries.

Practical socialism has gone a long way indeed in New South Wales. The state owns and operates a fleet of trawlers, which bring plentiful supplies of fish into Sydney some three times a week. Furthermore, the state owns and operates a chain of fish stores in which are marketed the catches of the government trawlers. Prices charged, of course, are just enough to cover operating expenses. An inexhaustible quantity of wholesome, palatable food is thus assured the people at all times of the year. Drouths on the sheep and cattle "stations" need worry the general public only in a general way. The troubles of butchers are their own affair. "We'll make every day Friday if we have to," one man said to me. So well is the scheme working out that the minister responsible for it recently informed the government that a further $500,000 would have to be spent to buy more trawlers.

A unique innovation—even for Australia—was the establishment lately in New South Wales of a Fair Rents Court, to which all tenants who believe they are being mulcted by grasping landlords may take their tales of wo. At the opening of the court, D. R. Hall, State Attorney-General, said:

"The experiment which begins today will be watched with the keenest interest, not alone in this state, but thruout Australia, and, indeed, the older countries of the world. Students of social problems, not less than rack-rented tenants, will interest themselves in the history of this court."

In the very first case tried in the court it was laid down by the presiding judge that a return of six per cent upon his investment was all that the landlord had a right to expect.

Railways, street car and telephone systems, and other public utilities are publicly owned. The number of private franchises for public services in Australia is an ever diminishing quantity. The state of Queensland has gone into the brewing and hotel business; at least, it probably has by now — the scheme was well on its way to realization when I left Australia a few months ago. The public do not get service at remarkably cheap rates — not because municipal and state ownership has proved a failure, but because the cost of labor is so high. There is no doubt, however, that the public are served more cheaply by their own government than by the old private companies.

New York City

PEBBLES

"I've learned," said the aged egg, "that ten years make one decayed."—*Chaparral.*

Eggs, according to a market report, have dropt at Smithfield. One of those lady porters evidently.—*London Opinion.*

Owing to the raw material being required for war purposes, there is a famine in gramophone needles. Another proof that this war is upsetting all records.—*Passing Show.*

Lawyer (to witness at a booze trial)—Did you take cognizance of the man who sold him the liquor?

Witness—I took the same as the rest.—*Awgwan.*

Broadway Pecan—England will soon be a republic if she changes her money to dollars and cents.

Fifth Avenue Butter Nut—How's that?

Broadway Pecan—Have to give up her sovereigns.—*The Lamb.*

An Irishman out of work applied to the boss of a repair shop in Detroit. When the Celt had stated his qualifications for a "job" the superintendent began quizzing him a bit. Starting quite at random, he asked:

"Do you know anything about carpentry?"

"Sure."

"Do you know how to make a Venetian blind?"

"Sure, I'd poke me chisel in his eye."—*New York World.*

He was Scotch and naturally he hated spending money. Therefore, when a friend in the South sent him an unstamped letter, he was much annoyed at having to pay two-pence postage.

He was still more annoyed, on opening the letter, to find nothing in it save a single sheet, saying: "I am well.—George."

In return he procured a large, flat stone, packed in a wooden box, with many wrappings, and despatched it C. O. D.

When his friend had paid over 5 shillings charges he sought for an explanation, and found it in a letter at the top of the package.

"Dear George: When I heard that you were well, this great load rolled off my mind."—*New York Globe.*

The son of the well-to-do family had recently joined up as a private, and was spending his Christmas leave at home.

Returning from a walk, his mother espied a figure in the kitchen with the housemaid.

"Clarence," she called to her son, "Mary's got someone in the kitchen. She knows perfectly well that I don't allow followers. I wish you'd go and tell the man to leave the house at once."

Clarence duly departed to the kitchen, but returned in about half a minute.

"Sorry, mother, but I can't turn him out."

"Can't turn him out? Why on earth not?"

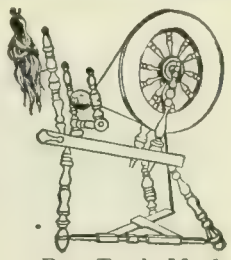
"He's my sergeant!"—*Saturday Night.*

SONGS OF THE ECONOMIC WAR

A SPINACH CAVALIER

A spinach cavalier stood in his overalls,
And played such a sweet obligato;
He sang of the wheat, the bean, and the beet,
The rutabaga, and the tomato.

Chorus



Say, darling, say, when I am mowing hay,
Sometimes you may think of me, dear.
Sunshine and rain are good for the grain
Remember what I say, and be true, dear.

PLANTING TONIGHT

Many are the backs that are weary tonight,
From using the spade and the hoe;
Many are the men who are straining their sight
Watching for the stuff to grow.
Planting tonight, planting tonight, planting in the old back yard.

—*F. P. A. in the New York Tribune.*

Specials *in* White *and* Colored Dress Cottons

Reg. Trade Mark

During May and until lots are sold, several thousand yards of desirable summer materials both in white and colors will be offered at the following reduced prices:

At 15c yard Irish Dimities, White grounds with floral printings in various colors.

At 18c yard Printed Cotton Voiles in Dots, Stripes, Figures and all-over designs.

At 25c yard Woven and printed Voiles, Batiste, fancy Skirtings, Japanese Crepes and Madras and Percale Shirtings.

At 50c yard Imported woven Batiste, printed Crepe de Chine, Silk Stripe Voiles, woven and printed effects on fine Voiles and novelty fabrics for Sport Skirts, etc.

At 75c yard Printed and woven Imported Voiles showing a fine range of Dots, Stripes, Checks and Floral Designs; also a fine range of woven fabrics for Sport Skirts in Striped and Checked effects.

At 95c and $1.35 yard Smart Fabrics for Sport Skirts, Checks, Stripes, Plaids, in light or dark effects, 36 to 40 inches wide.

White Fabrics

At 35c yard Novelty weaves in Voiles and Crepes, Stripes, Checks, and plain effects.

At 50c yard Fabrics suitable for separate Skirts, such as Gabardines, fancy corded Piques, Repps, Basket Weaves and Imported Piques, also fine Voiles and Crepes in several desirable patterns.

Samples of any of these lines except bordered materials mailed upon request.

James McCutcheon & Co.

Fifth Avenue, 34th and 33d Sts., New York

A WAR GARDEN CONTEST

Three prizes of One Hundred Dollars, Fifty Dollars and Twenty-Five Dollars, respectively, are offered for the story of your war garden this year. Write us for a record chart and full particulars of the contest.

And by the way, if you are having difficulties with that garden of yours, remember that the Countryside War Garden Bureau answers questions—of any sort and as many as you like.

THE COUNTRYSIDE WAR GARDEN BUREAU

119 WEST FORTIETH STREET NEW YORK

A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

THE popular demand for a lyrical outlet for our pent-up patriotism has again called attention to our lack of a perfectly satisfactory national song. The "Star-Spangled Banner" is a splendid band tune, but when a crowd of people try to sing it they are apt to drop out at various points along the line like stragglers on a long hike, some on the uphill and some on the downhill slopes. Altho it has a London tavern tune, the words are characteristically American in their flamboyant patriotism and in beginning with "O say."

But we should, as the preachers always say, omit the third stanza. I never could see that the third stanza of a hymn was any worse than the others, altho whenever I was warned against it by the minister I have read it with care to see what heresy or other objectionable matter it contained. But in this case the third stanza is manifestly improper in the present war and might well be dispensed with permanently:

And where is the band who so vauntingly swore
That the havoc of war and the battle's confusion
A home and a country should leave us no more?
Their blood has washed out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight, or the gloom of the grave.

These lines deal with an invasion of American soil and so are not applicable to the present circumstances when we propose to carry the war into the enemy's country. Besides to refer to our gallant British allies by such words as "the hireling and slave" and "their foul footsteps' pollution" is, as we would say, "not very nice" and, as they would say, "rather nasty." Then, too, it is always a bother to mind pronouncing "confusion" as tho it were "Confucian" so as to prepare it for riming with "pollution" two lines to come.

"John Brown's Body" is, as Kipling said, one of the best marching songs in the world and now that it is rid of the sectional and scurrilous words at first attached to it in the Civil War it has become truly "The Battle Hymn of the Republic," in which everybody can join heartily except, perhaps, some of our non-Christian fellow citizens.

"Marching Thru Georgia" is another magnificent marching tune that needs to be rescued in like manner from its suggestions of loot and fratricidal strife to make it palatable to our people as a whole. Sousa and other composers have added to our patriotic music but suitable words are still lacking. I don't understand why it should be easier to get good airs than good verses. We have, for instance, two admirable light patriotic tunes, "Yankee Doodle" and "Dixie," but the words of both are nonsensical. It is as true today as was said a hundred years ago that

Yankee Doodle is the tune
Americans delight in.
'Twill do to whistle, sing or play,
And just the thing for fighting.

But even the antiquarians are not sure what the "macaroni" means and they are altogether nonplussed by the "Doodle."

Lincoln shocked the White House band shortly after Appomatox by asking them to play "Dixie," but in reply to the remonstrants he explained that "since we have captured the Confederacy we own all their pretty tunes." Lincoln has proved a true prophet. "Dixie" has become a national air and thanks to the efforts of the Southern claque in every audience it is now greeted with more enthusiasm than any other tune.

"America" is not national enough to suit our present temper. There used to be something inspiring in the thought that the three great branches of the Teutonic race, Americans, British and Germans, were singing their patriotic sentiment to the same tune tho in different words, but such an international concert is now out of the question. It would be decidedly annoying to be caught nowadays, as sometimes we used to be, rising and taking off our hats at "Heil dir im Siegeskranz" on the supposition that the band was playing "America." We don't dislike so much "Die Wacht am Rhein." It is "Die Wacht am Somme" that we object to. If the Germans would only go back to their side of the Rhine and stay there all the world would breathe easier.

Do you remember that amusing incident at the international banquet of the St. Louis Exposition when the band struck at playing "Die Wacht am Rhein?" All of the foreign representatives were there and the air of the banquet hall was thick with international comity. As each of the distinguished guests arose his national anthem was played, "Boje Tsaria Khrani" for the Russian, "Marseillaise" for the French, "Himno de Riego" for the Spanish, "Kimi Ga Yo" for the Japanese, etc. But when the German delegate got up to respond to his toast, not a sound was heard, not a funeral note. The toastmaster signaled frantically to the band master but could not attract his attention, so the diners hemmed and hummed and hawed their way thru "Die Wacht am Rhein" on various keys and to these maimed rites the representative of Germany had to respond. The program committee then recognized that they had made a mistake in getting the Garde Republicaine Band of Paris to supply the music for the occasion.

But most of the national anthems are born of war and so contain reminiscences of old feuds offensive to somebody or distasteful to the sentiment of later generations. The English national hymn originally read:

Oh Lord our God, arise
Scatter his enemies
And make them fall.
Confound their politics
Frustrate their popish tricks
On Thee our hopes we fix
God save us all.

But after the emancipation of the Catholics "popish" was changed to "knavish." Even this language was felt to be too violent in the halcyon days before the war—"confound" is perilously near profanity—so it came to be customary to omit this stanza—it was of course the fatal third—or to substitute some milder version. Now, however, it is proposed to restore the stanza with "hellish" or "Hunnish" in place of "knavish." In the "Khaki Song Book" these verses are given:

Where'er her flag unfurled
Protects the conquered world
Britain is King.
Shout the great anthem we
Where'er our exile be,
Echo from sea to sea
God save the King.

. . . . .

God bless our colonies
Brethren across the seas
Our kith and kin.
Loyal as well as free
May they united be
Just as one family
God save the King.

This version will probably not last and does not deserve to. The reference to "the conquered world" is as capable of misinterpretation—internal or external—as is "Deutschland über Alles." But worse is the reference to the proud and self-reliant dominions as "Colonies across the sea" and their loyal but homeloving inhabitants as "exiled." The Canadians in their version have a much better conception of the relation of the parts to the whole:

Our loved Dominion bless,
With peace and happiness
From shore to shore.
And let our Empire be,
United, loyal, free,
True to herself and Thee
For evermore!

It is this sort of a song and not the "Little England" version quoted before that will be found to fit the British Empire as it will be reconstituted by the war.

As for me my favorite patriotic song is the one my father used to sing to me when I was a little boy: "The Sword of Bunker Hill." But, alas, this is so far forgotten that I cannot even find a record of it for my phonograph.

* * *

As a new instance of the prophetic power of poets I may call attention to Tennyson, who, it seems, did not confine his verse to the Crimean War. His invitation

Come into the garden, Maud . . .
To the valleys of Paradise.

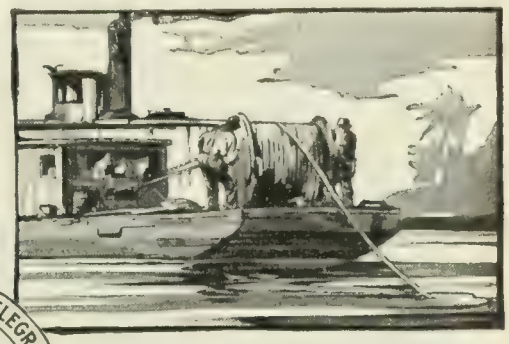
has just been accepted and General Maude has entered the Garden of Eden at the head of the British troops.

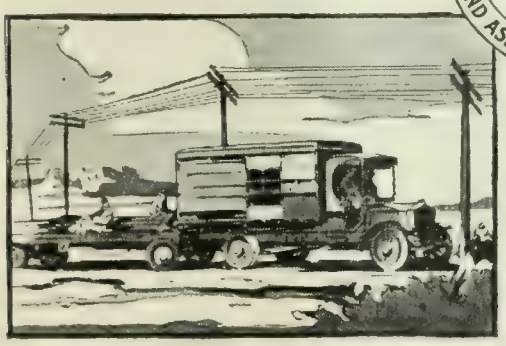
The New Books

A NEW GOLDEN FLEECE

There are two methods of writing history. One is the careful, matter-of-fact method usually adopted by the trained historian; the other is marked by a conscious effort to give to an otherwise dry account of material progress the air of romance. Professor Scherer in *Cotton as a World Power* has adopted the second method. His book is an interesting story. True, there is nothing startlingly new in the presentation. The sources of the author's information and his conclusions have been known to students of economic history for a number of years. Still, the book may be accepted as a distinct contribution because it presents the matter in a popular way. The man who would never think of reading a carefully compiled history of cotton will find this book entertaining and instructive.

Cotton as a World Power, by James A. B. Scherer. F. A. Stokes Company. $2.





IN THE FLOWERY KINGDOM

The Wanderer on a Thousand Hills, by Edith Wherry, is an intensely interesting story of contemporary life in China, showing how the normal and beautiful impulses of womanhood may be thwarted by the hideous severities of ancient conventions and superstitions. Tung Mei, the chubby baby of the village schoolmaster, Tung Mei, the "wild" child playing in the fields of the village of "Benevolence and Virtue" with feet unbound, was richly endowed by nature. Tung Mei, the young nurse of the missionary's baby, the bride of the kind Jung Kuang, the distracted little widow, bereft of her child by her husband's cruel parents who hate her, wins and holds our sympathies. We almost forgive her for running away with the little child of the missionary and bringing him up to be a Chinese lad without knowledge of his real parents. Well analyzed is the strange forcing of this boy's life into channels alien to his race and temperament. The book has dramatic quality and atmosphere.

The Wanderer on a Thousand Hills, by Edith Wherry. John Lane Company. $1.40

HUMAN BEINGS

The Physical Basis of Society, by Carl Kelsey, of the University of Pennsylvania, is to be recommended to those lacking scientific training who wish to understand the science of man and the laws governing human progress. For many years the author has opened his university courses in sociology by briefly sketching the physical background of life, the relation of the organism to the environment, the question of heredity, and the general idea of evolution as applied to human beings and to the

AMERICAN TELEPHONE & TELEGRAPH CO. — LOCAL AND LONG DISTANCE TELEPHONE — BELL SYSTEM AND ASSOCIATED COMPANIES

Meeting the Universal Need

In the high passes of the mountains, accessible only to the daring pioneer and the sure-footed burro, there are telephone linemen stringing wires.

Across bays or rivers a flat-bottomed boat is used to unreel the message-bearing cables and lay them beneath the water.

Over the sand-blown, treeless desert a truck train plows its way with telephone material and supplies.

Through dense forests linemen are felling trees and cutting a swath for lines of wire-laden poles.

Vast telephone extensions are progressing simultaneously in the waste places as well as in the thickly populated communities.

These betterments are ceaseless and they are voluntary, requiring the expenditure of almost superhuman imagination, energy and large capital.

In the Bell organization, besides the army of manual toilers, there is an army of experts, including almost the entire gamut of human labors. These men, scientific and practical, are constantly inventing means for supplying the numberless new demands of the telephone using public.

Nujol for Constipation

The Athlete's First Principle *Is* To Keep His System Clean

He doesn't allow food to ferment in his intestines. He doesn't give his body a chance to absorb poisons.

He knows—and your doctor will tell *you*—that anything from a headache to the most serious illness may result from such absorption.

Nujol removes poisons from the system and gives the tissues of the body a chance to build up and resist disease.

Nujol is not habit-forming. Nujol does not gripe. It relieves you of straining, does not weaken nor upset the stomach, is absolutely pure and harmless, and is delightful to take.

It is especially fine for young mothers, as it is not absorbed into the system, and therefore in no way affects the child.

Nujol is the only remedy for constipation we manufacture; the genuine is sold only in pint bottles, bearing Nujol trade-mark. All bottles are filled at our absolutely modern and sanitary Nujol plant.

The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol, and its reputation is behind the product.

Nujol is absolutely distinctive and individual. There is no other product on the market like it.

Write today to Dept. 12 on coupon and margin below for instructive booklet on Nujol and its uses.

development of social theory. This material he has here gathered into book form, so making a work that widely read would do much toward bridging the gap between the older generation and the new.

We live in an age of rapid transition and few there are who can make the mental readjustment necessary to an understanding of the modern tendencies of our intellectual life. Here is a presentation of the best thought of the times on the fundamental problems of human happiness and welfare by one who has a broad, sympathetic understanding of the many, complex factors involved. It is a lucid, dispassionate survey of achievements, difficulties and tendencies that leaves to the reader the precious privilege of forming his own conclusions.

One could open the book at random and find quotable passages. Here is an extract from the chapter on "The Nature of Progress":

> Because man's progress is conditioned on his intellectual growth, it by no means follows that his chief occupation is thinking. Far from it. There is nothing the average society dislikes more. Man's effort to satisfy his emotional desire for an easy and comfortable existence results in the astonishing paradox that he opposes the only method thru which better adaptation might come. . . . Let anyone suggest that his philosophy of life rests on unsound bases, that social institutions need radical overhauling, that present programs are not conducive to human welfare, that other races are surpassing his in the struggle, and he is on the defensive at once, ready to use any brick or cudgel on the offender, or even daub him with mud. The last thing that occurs to him is to admit that the criticism may be honest and investigate it to see what merit it contains.

The Physical Basis of Society, by Carl Kelsey. D. Appleton & Co. $2.

SOLDIERS OF FRANCE

Lieutenant René Nicolas writes in *The Campaign Diary of a French Officer* an absorbingly interesting war book with all the distinction of French authorship. Thus, while the scenes he depicts flash from his pages as if one actually witnessed them, there is always present, even in the most terrible moments, that resilience of French character which has enabled the nation, as a whole, to perform an unending series of heroic actions. Thru it all, too, one senses the fine democratic spirit of the French army, which, with duty and discipline willingly shouldered by all, makes of the French military organization so admirable a model. We have confirmation of this from every American "glad and proud" to serve under the French colors.

Flying for France, by James R. McConnell, contains an element of infinitely greater value than mere "thrilling experiences," which his publishers set such emphatic store upon. In this little book the reader cannot escape the splendid spirit animating these young Americans who have offered their services to France—that strength of morale which they themselves assert has swept into them, the eager pride with which they strive to do their duty, their loyalty to their comrades and the cause which in their deepest consciousness

they believe to be just. It is this note of a spiritual awakening which lifts Mr. McConnell's book out of the class of the adventure narrative.

The Campaign Diary of a French Officer, by René Nicolas. Houghton, Mifflin Company. $1.25. *Flying for France*, by J. R. McConnell. Doubleday, Page & Co. $1.

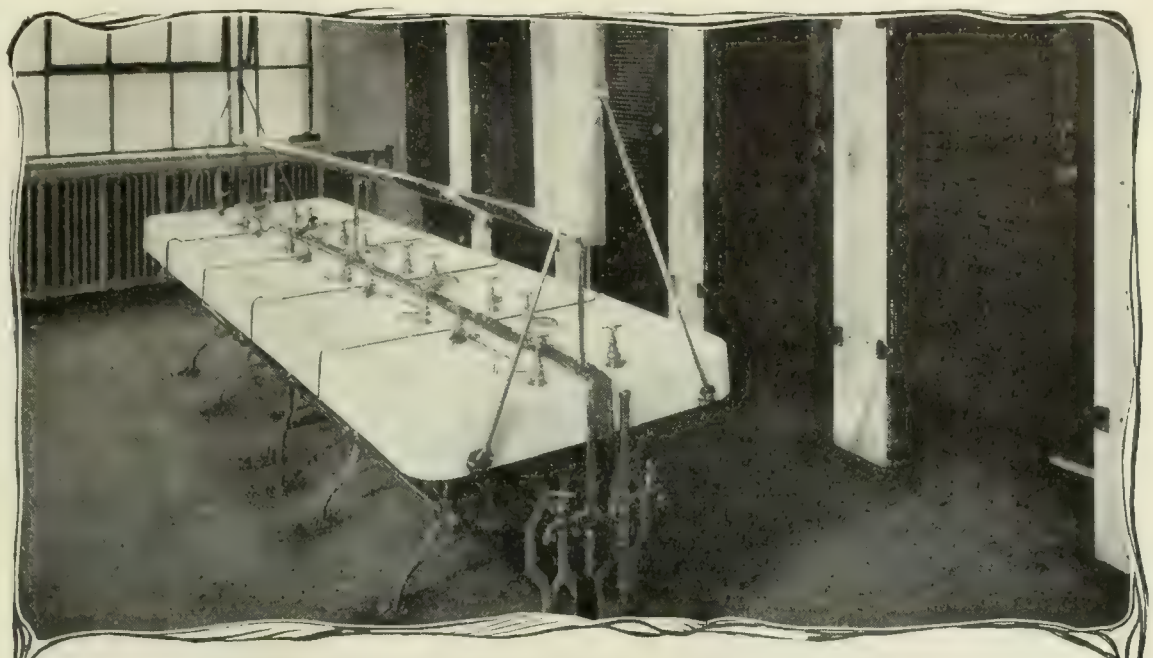
PUBLIC OWNERSHIP A FAILURE?

In *Government Telephones* Prof. James Mavor of the University of Toronto gives a history and critical examination of the experience of Manitoba, Canada, with the public ownership and operation of the telephone system of the Province. The early development of the service was promoted by the Bell Company, beginning about thirty-five years ago. The government purchase was made in 1908 and Prof. Mavor contends that his thorough examination of the Government's work shows indubitably that the public ownership has been a practical failure. He declares "the management has been ineconomical, the enterprize has been handicapped by political intrigue," and "the obligations of the public have been enormously increased without adequate compensatory advantages." Strangely enough, the author holds that these defects cannot be eradicated. They are necessary accompaniments of government ownership! A surprizing induction without confirmation.

Government Telephones, by James Mavor. Moffatt, Yard & Co. $1.

THOUGHT AND MOTION

In Margaret Floy Washburn's contribution to the Vassar Semi-Centennial Publications, *Movement and Mental Imagery*, are brought together the results of hundreds of experiments and observations on the thesis that the direct reaction to stimulation is movement; sensation (as a state of consciousness) and other "mental" processes being secondary effects of movements or of tendencies to movement. To the layman this thesis becomes intelligible when he reflects upon the fact that he cannot "think" of the spoken word *bubble* with his mouth wide open; or upon the changing facial expression of a person reading a dramatic tale to himself; or upon the strains and stresses of his own muscles when he recalls an incident that had aroused his anger. There is practical application of these theories in methods of teaching and in discovering the mental attitudes most favorable to the efficient conduct of our everyday affairs.



Movement and Mental Imagery, by M. F. Washburn. Houghton, Mifflin Company. $1.75.

THE GREAT WAR

Hardly more than a magazine article, Paul D. Cravath's little book, *Great Britain's Part*, makes clear methods of organization and the way work is done behind the British lines. (D. Appleton & Co., $1.)

The Boy's Life of Lord Kitchener, by Harold F. B. Wheeler, is a straightforward narrative of the stirring events of "K of K's" distinguished career, and can be read with equal interest by grown-ups. There are many characteristic anecdotes which show Lord Kitchener to have been a real soldier. (T. Y. Crowell Company, $1.50.)

From Dartmouth to the Dardanelles is the stirring narrative of a boy of fifteen who joined the British navy at the out-

Installation of "Standard" Fixtures—Standard Welding Co., Cleveland, Ohio

Point With Pride to Your Wash Room, Too

WHEN you speak of modern, sanitary factory conditions, remember that there is no one place in a factory plant where such conditions are so emphasized and show to such great advantage as in the wash rooms. Consider the illustrations above and below. Where cleanliness and wholesomeness such as this prevail, production increases, costs decrease and extra profit results.

Let us send you our interesting book, "Factory Sanitation," to bring before you the important points about factory plumbing equipment. Then let one of our service men go into the matter with you definitely to help you decide on the particular equipment exactly suited to your needs.

"Standard" Fixtures for Factory Efficiency

Likewise the complete, up-to-date line for Bath, Kitchen and Laundry is "Standard". Talk to your plumber about these goods. Look for the Green and Gold label.

TOWNSEND'S TRIPLEX

The Greatest Grass-Cutter on Earth

Cuts a Swath 86 Inches Wide

The Public is warned not to purchase Mowers infringing the Townsend Patent No. 1,209,519, Dec. 19, 1916.

Floats Over the Uneven Ground as a Ship Rides the Waves

One mower may be climbing a knoll, the second skimming a level and the third paring a hollow

Drawn by one horse and operated by one man, the TRIPLEX will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost.

Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horse-drawn mowers with three horses and three men.

Does not smash the grass to earth and plaster it in the mud in springtime, neither does it crush the life out of the grass between hot rollers and hard, hot ground in summer as does the motor mower.

Write for catalogue illustrating all types of Townsend Lawn Mowers.

S. P. TOWNSEND & CO.

14 Central Avenue
ORANGE NEW JERSEY

break of war, until his ship was sunk off the Dardanelles. The book shows the fine, manly spirit of a young sailor, who tries to do his duty, learns by mistakes, and is ever ready to praise his comrades. (E. P. Dutton & Co., 60 cents.)

Herbert Bayard Swope's *Inside the German Empire* gives the situation in Germany up to the end of 1916. There is an ably drawn characteristic portrait of General von Ludendorff, Germany's military "Man of Mystery," and some light thrown on General von Mackensen, who has never permitted press correspondents with his armies. (The Century Company, $2.)

In *The Deportation of Women and Girls from Lille* we have the letters of those who suffered, with the official protests and the German replies. In the letters it is more than once stated that German officers and soldiers refused to carry out the deportation order, and were confined for disobedience within the fortress of Lille. (G. H. Doran Company, 50 cents.)

In a handy little volume, *The British Empire at War*, Urban H. Broughton appeals chiefly to his many friends in America. While these personal friends will read it with interest, for others possibly his chapter on Finance will be found of timely value as containing an up to date reckoning of how Great Britain stands in this respect. (202 Caxton House, Westminster, London.)

If there is nothing very new in *To Verdun from the Somme*, by Harry E. Brittain, it is a well written description of scenes along the French front, with characteristic sketches thrown in here and there which make both interesting and instructive reading. On the whole, it is entirely worthy of the complimentary foreword by James M. Beck. (John Lane Company, $1.)

In *With the French Flying Corps*, Caroll D. Winslow emphasizes the rigorous training necessary for a war pilot. What are generally regarded as trick air stunts he insists must be mastered for a war pilot's safety. He notes many of the perils, with some of his own experiences, and has much to say of the rapid development of the science of aero-dynamics. (Charles Scribner's Sons, $1.25.)

The Adventures of the U-202, by Captain Baron Peckelsheim, presents us with a "peculiar" sea-faring psychology. It crops out in the bombastic manner of our daredevil hero and his stage-strutting crew. Compare this stuff with the modest, straightforward narrative of a real sailor such as Captain König of the "Deutschland!" The book does not bear a single German official endorsement. (The Century Company, $1.)

STORIES SHORT AND LONG

In her novel, *Undertow*, Kathleen Norris skilfully describes the influences that cause many married couples to live beyond their means. The desire to appear to advantage in a respected social group can be responsible for much unhappiness. This book is a lantern of warning set on a rock pile! (Doubleday, Page & Co., $1.25.)

Daybreak is the last book of Martin Nexo's epic of labor, "Pelle the Conqueror." It is the story of a labor leader but, beyond that, it is the story of labor. Artistically and socially it is interesting even tho one may disagree with the author's theories. The four books ought to be read consecutively. (Henry Holt & Co., $1.50.)

The Spring Song, by Forrest Reid, is a story of the summer vacation of a family of interesting English children. One of them, a sensitive imaginative lad, is unfortunately influenced by a friendship with an organist who has been insane and tortures the child with ghost stories and morbid mental suggestion. A book for adults. (Houghton, Mifflin Company, $1.40.)

The short stories in *More Tales by Polish Authors*, translated by Else C. M. Benecke and Marie Busch, grip from the first to the last page by their earnestness and the

power of their different authors to portray characters quite out of the ordinary. The style is exceptionally free from the abruptness so common in Slavic translations. (Longmans, Green & Co., $1.50.)

In *The White People*, Mrs. Burnett enters for her a new field, that of the Scottish second sight. It is a beautifully wrought piece of work, something more than pretty and amusing. (Harper and Brothers, $1.20.)

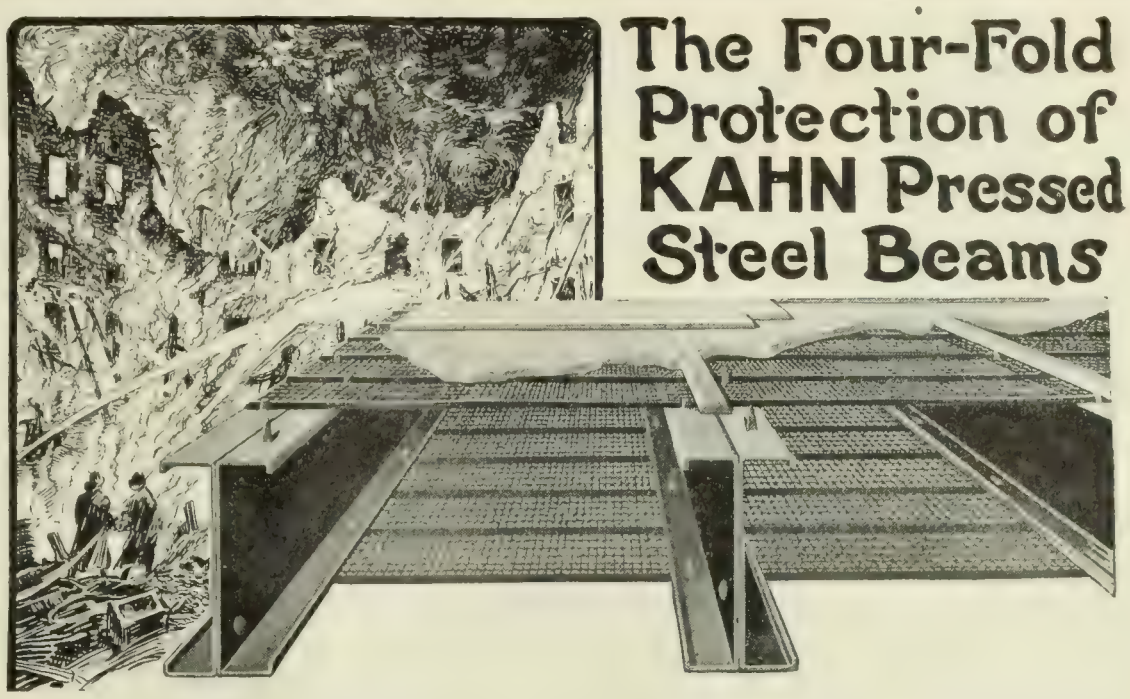
Herbert Jenkins' *Bindle* is the story of Bindle, the furniture mover, a good fellow, what the English call "a card," who is married to a lugubriously pious wife. The humor of the book is slap-stick comedy and sometimes it is too obviously planned, but parts of it are entertaining. (F. A. Stokes Company, $1.35.)

BIBLE STUDY

For students of the International Sunday School Lessons comes the *Pocket Lesson Commentary*, by E. W. Thornton. This gives much data and many suggestions, covering the entire year's lessons, in vest pocket notebook compass. (Cincinnati: The Standard Publishing Company, 25 cents.)

The four gospels interwoven to form a consecutive biography is the aim of H. T. Sell in the *Twentieth Century Story of the Christ*. For those who do not object to the up to date phraseology of the "Twentieth Century New Testament," which is the text used, this harmony will be a welcome aid. (F. H. Revell Company, 60 cents.)

Another harmony, this not including St. John, is *The Ministry of Jesus*, arranged by A. S. Ward in a continuous account. The revised version is the text used. There are marginal references to the differences in the records. This is a most useful and satisfactory work, and a pleasant bit of book-making. (Boston: Pilgrim Press, $1.)



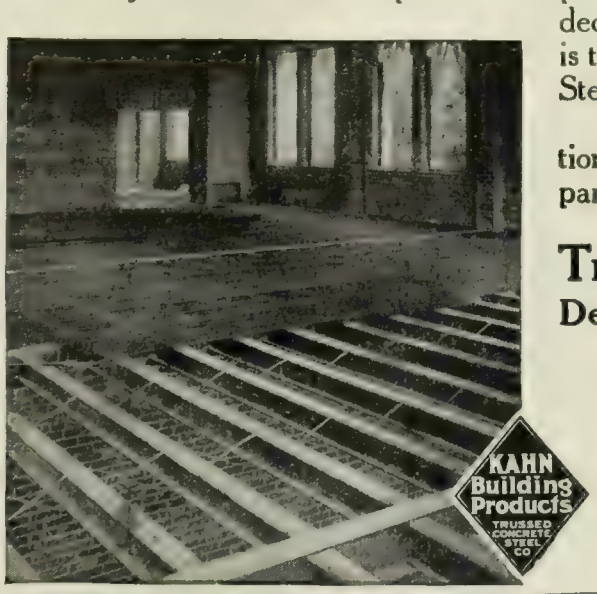
The Gospel of John, by Prof. Charles R. Erdman, of Princeton Theological Seminary, is an exposition giving the usual traditional materials arranged with special reference to the witness of the gospel to the person of Christ and to the struggle of faith and unbelief. The volume is helpful and homiletical, but not stimulating. (Philadelphia: Westminster Press, 60 cents.)

Using the Bible in Public Address, by Ozora S. Davis, will be of practical value to leaders and teachers in helping them to acquire, organize and present Biblical truth, adapted to brief addresses at prayer meetings, Y. M. C. A. gatherings, boys' and girls' clubs, shop meetings and such gatherings as require short, practical talks on religious themes. (The Association Press, 75 cents.)

Those using the International Sunday School lessons will be especially interested in a valuable series of studies of the *Gospel of St. John*. These are prepared by Dr. Goodspeed and embody the results of recent scholarship. The course here issued in weekly leaflets is appearing also in the current *Biblical World*. (American Institute of Sacred Literature, University of Chicago, 50 cents.)

Delightful and full of suggestions are the short talks by Dr. Charles Reynolds Brown in *The Master's Way*. These form a series of studies in the synoptic narratives. The aim is not to present a life of Jesus, but to interpret the more significant actions and utterances of the Master in their bearing upon present-day needs and experiences. (Boston: The Pilgrim Press, $1.75.)

The Gospel of Jesus, critically reconstructed from the earliest sources by Clayton R. Bowen, is a splendid addition to the helps for studying the content of primitive Christianity. The author works on the basis of the two source theory of the synoptics. His reconstruction is the outcome of a careful study of the many intricate problems involved. This should be in the hands of every New Testament teacher. (Boston: Beacon Press, $1.)



The Four-Fold Protection of KAHN Pressed Steel Beams

Protection from **fire!** From **vermin!** From **decay!** From **plaster cracking!** For these four reasons alone, it pays to use KAHN PRESSED STEEL BEAMS and STUDS.

KAHN PRESSED STEEL BEAMS are quickly set in place, requiring no forms, centering or special equipment. Light in weight, easily handled. Each beam reaches the building site complete, cut to length, and ready for placing. HY-RIB metal lath for the concrete and plaster is easily attached by merely bending down the prongs in the steel members.

In stores, apartment houses, schools, hospitals, hotels, factories—in all buildings, large and small, Kahn Pressed Steel assures permanent construction for floors and partitions—economical in cost and simple to erect. No breeding place for vermin. No decay with constant expense for repairs. No danger from fire—no ruined decorations from plaster cracking. This is the fourfold protection of Kahn Pressed Steel.

Before building, write for our suggestions and catalog—no obligation on your part.

Trussed Concrete Steel Co.

Germs of Longevity

They're Neither Plant Animal—But Alive!

Used in Bulgaria, the Caucasus, and Arabia to ferment the snappy milk beverages known as Koumis, Matzoon, etc., long celebrated for their healthful and nutritive properties. Metchnikoff attributed the remarkable longevity of these peoples to the use of this beverage. These natural cultures are treasured in families and handed on from generation to generation. An ounce ferments two quarts daily. May be used over and over again—they grow with use. Write for wonderful free booklet.

MR. PURINTON'S EFFICIENCY QUESTION BOX

421. Mrs. B. W. R., Maine. "Is a woman of 45 too old to begin a new career? My children are nearly grown, my household duties less, the years to come do not beckon as they should. I have always longed to be a musician, lecturer, writer or reform leader. Is it too late for an independent life work?"

No. A strong enough longing makes the words "too late" look foolish. Many of the world's greatest deeds were performed by men and women past fifty. The most famous inventors, philosophers, bankers, scientists, merchants of today are "old" men—and the youngest in the place! Women! Jane Addams, Ella Flagg Young, Anna Howard Shaw, Mrs. Harriman, Mrs. Sage, hundreds more, have accomplished their best work after your age, forty-five.

Suggestions. Focus on writing or speaking—musical technique is too hard to learn at forty-five. Get books of Cornaro, Bennett, Fletcher, on art of keeping young. Study your new profession by mail courses. Join women's clubs, for larger outlook on life. Do prison, hospital, charity or welfare work, and deepen your sympathies. Let your husband guide, but not repress you. Take mazagines that specialize in your field. Cultivate persistence—your progress may be slow. Read the lives of great women.

---

422. Mrs. H. L. C., California. "Kindly tell me where to procure the following labor-saving devices, mentioned in one of your efficiency articles: (a) The electric washing machine, ironing machine, dish-washer; (b) the sanitary window ventilator; (c) the safety clothes line; (d) the meat perforator."

Always inquire first of your local dealers—encourage home trade and solve your own problem at the same time. If your city stores (electrical supply and household furnishing) do not keep the articles desired, consult the following:

(a) Western Electric Company, Chicago; Ohio Electric Works, Cleveland; H. L. Barker, Binghamton, New York; The Maytag Company, Newton, Iowa.

(b) Perfect Window Ventilator Company, Wood street, Pittsburgh; Continental Company, Detroit; Window Ventilator Company of America, North Dearborn street, Chicago.

(c) Silver Lake Company, Newtonville, Massachusetts.

(d) Meat Cutlery Company, South Dearborn street, Chicago.

---

423. Dr. S. A. I., New York. "I would thank you to give me the names of a few modern books that teach the science of optimism."

Every man has to teach himself to be an optimist. There are books, however, to give you a fine start; among them "Health and Happiness," by Bishop Samuel Fallows; "Power, Peace and Plenty," by Orison Swett Marden; "Just Be Glad," by Christian D. Larson; "Culture of Courage," by Frank Channing Haddock; "In Tune with the Infinite," by Ralph Waldo Trine; and my own "How to Be Happy," recently published in a new collection of efficiency monographs.

A basic truth of psychology is that every man is helped most by the teacher he trusts most. We believe you would specially enjoy the optimistic writings of other physicians—Drs. Dubois, Schofield, Walton, Saleeby. For all these books write Efficiency Publishing Company, Woolworth Building, New York.

---

424. Mr. E. P. P., Indiana. "I am contemplating taking a course of Commercial Illustrating by correspondence. I would like to know if you recommend the I. C. S. at Scranton, Penna., for such a course."

The I. C. S., being a pioneer in mail teaching, has a fine reputation, well deserved. You would probably make no mistake in studying any course of the I. C. S. in line with your true vocation.

But we cannot guarantee any course, book, product or institution, for the individual reader,

ANNOUNCING THE EXPANSION OF

The Independent
HARPER'S WEEKLY

Passenger Car Service

THE INDEPENDENT Corporation announces that it has enlarged the Department of Motor Progress to meet even more completely than before the demand for full and accurate information on the subject of Passenger Cars, Accessories and Motoring Problems.

Ask the Director of this service anything you want to know about cars and their economical operation. He has his finger on the industry. He knows which are the new—and useful—accessories. Also he can guard you against useless, wasteful expenditures. Perhaps your car is costing too much to run. Tell the Director of our Passenger Car Service the facts and he will most likely be able to find the leak. He will tell you how to apply the remedy, what tools to use, what materials to buy and where to get them.

The only thing the Passenger Car Service will not do for you is to draw comparisons between cars of different makes. The Director will give you full information regarding any of them, but he cannot compare them for you.

A PASSENGER CAR CHECK LIST

has been prepared which will be supplied to any reader of The Independent who asks for it. It will serve at once as a guide to motor car buying and maintenance, and as a reminder of questions to ask.

Send for your Check List today. Fill it out carefully and mail it to our Passenger Car Service. You will receive a thorough report on any questions you may ask. Write

What 25c WILL BRING You FROM THE Nation's Capital

The little matter of **25c** in stamps or coin will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 34th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only **25c** to show that you might like such a paper, and we will send it on probation **13** weeks. The 25c does not repay us, but we are glad to invest in New Friends. Address **The Pathfinder, Box 80, Washington, D. C.**

YOUR TOWN IN WAR

What is your community doing to carry into effect the proclamation of President Wilson urging the enlistment of all Americans in a great Service Army?

The Countryside wants to hear just what concrete work—organization, drill, relief, co-operative gardening, food conservation—is being done today in your suburb or village by the people as a community.

Five Dollars will be paid on acceptance for every letter on this subject we consider good enough to publish.

Be terse, accurate, and direct, and don't take over five hundred words to tell your story. Photographs help.

Address

The Editor of THE COUNTRYSIDE.

as we have often stated. We urge upon you, moreover, to obtain all descriptive literature from other schools that offer similar courses; and not to join any till you have compared all. If you don't know where to find other courses in commercial art, apply for information to Efficiency Publishing Company, Woolworth Building, New York.

425. Mr. L. H. O., Argentine Republic. "Is there such a thing as a dictionary of words of contrary meanings? If so, please give me the name and address of bookseller?"

One of the most popular books of antonyms to fill your need is James C. Fernald's "English Synonyms, Antonyms and Prepositions" (price $1.62 by mail), to be had from Efficiency Publishing Company, Woolworth Building, New York.

426. Miss S. H., Pennsylvania. "Please tell me (a) if Eugene Christian's "Little Lessons in Correct Eating" are reliable; and (b) your opinion of *Good Health Magazine*, and the books of the Battle Creek System, especially "Colon Hygiene"—do you know of any better books on health subjects?"

(a) We are told that Mr. Christian has had the largest experience of any food specialist in teaching diet by correspondence. This fact alone proves exceptional merit—the greatest is usually the best. However, we do not entirely agree with any single school of diet. The founders of any school or system are nearly always a little prejudiced, unconsciously and unintentionally; —the health seeker must compare many systems, and find, or make, one that fits him. Read the "Little Lessons," but in applying them, follow your own judgment and instinct.

(b) We do not know of a better book on the particular subject than "Colon Hygiene." Other good publications are by Dr. A. B. Jameson, Dr. Charles A. Tyrrell, Bernarr Macfadden. Particulars from Efficiency Publishing Company. The Battle Creek books are well worth studying, and probably 80 per cent true. But don't become a devotee, don't swap your backbone for a book.

427. Mr. N. R. W., Kansas. "I am a young man of twenty, college sophomore in liberal arts course, expect to be civil engineer. (a) Should I leave the college and begin at once engineering studies? (b) If I complete course here, could I not find vacation work in engineering somewhere?"

(a) Why not finish your course in some university having a good school of engineering, and combine classical and technical studies? Better take your degree, unless financially compelled to leave college; but don't spend all your time on purely cultural studies. You can learn the rudiments of civil engineering by home reading, if necessary, but only as a last resort.

(b) Probably—at salary nothing, or next to nothing. Go over back Question Box files, for answers along this line—several have appeared since your letter came; or write Efficiency Publishing Company, Woolworth Building, New York, for list of publications and institutions of possible advantage.

We would urge you, and all inquirers, to follow the Question Box answers regularly, as your problems may often be partially met in replies to other readers. And preserve back files for possible use later.

428. Mr. A. A. R., Minnesota. "Your recent Question Box answer about the need for a new educational system just hits me too. Why don't you outline a plan for the system you have mentioned?"

Because the time is not ripe. A common psychological blunder is to announce what you are going to do before you are able to do it. The time to share a promise with the public is when you have made it a performance. A large amount of preliminary work is necessary to the execution of our plan.

Meanwhile, the article on The American Boy in last December 18 Independent may stimulate thought. How many schools in the United States prepare a boy to meet the twenty-five points in the test chart we gave? Examine the different charts in my book "Efficient Living," ask the same question, and you begin to realize how far we must go to arrive at efficiency in education.

"Schools of Tomorrow," by John and Evelyn Dewey (price $1.50), sold by Efficiency Publishing Company, will give you a good idea of what is being done in educational reform.

The Market Place

THE MARKET FOR STOCKS

The week opened, on the last day of April, with a dull and narrow stock market, and only 321,000 shares were sold on the New York Exchange, the smallest number in more than two months. Restraint was due to uncertainty in the minds of investors and traders concerning the coming new taxes, the great issue of bonds and war conditions in Europe. Reports of several railroad companies for March showed comparative increases of gross revenue, with decreases of net, owing mainly to the additional cost of the eight-hour law. Unexpected reports that Mexico was inclined to stand with the United States against Germany raised the price of Mexican Petroleum shares by 4 points, and motor stocks were strong, but as a rule the day's gains were fractional. More than one-fifth of the business was done in Steel shares, with an advance of ⅞. In a broader market on Tuesday, the 1st, the price tendency was downward. Statements made at Washington by Lord Percy and others about the submarine menace were depressing, and railroad shares declined when it became known that the companies had been asked by the Interstate Commerce Commission to say whether they were willing to limit their dividends during the war. An advance of 2 points for International Mercantile Marine appeared to have been caused by a prevailing belief that our Government's use of the seized German ships might prevent the commandeering of similar American vessels. A large majority of the price changes were small; 99,000 Steel shares were sold, with a net gain of only ⅛.

Losses were larger on the 2d, apparently on account of official comments and predictions relating to submarine warfare and some anxiety about Russia. The downward movement continued on the 3d, when greater activity was shown and 848,000 shares changed hands. Net reductions for railroads and war order company stocks were from 1 to 3 points. Steel shares (238,000 sold) were lower by 1¼. Again the depression was due to pessimistic opinions about the war, the work to be done in it by the United States, the submarine danger, and the effect of coming heavy taxes. On this day the offering of $2,000,000,000 bonds of the great Liberty loan drew a very large number of applications or sub-

The title of Mr. H. G. Wells' new book is God, The Invisible King

Mr. Britling Saw It Through because he discovered God!

Mr. Britling said:

"Religion is the first thing and the last thing, and until a man has found God and been found by God he begins at no beginning, he works to no end."

Mr. H. G. Wells' New Book

God, The Invisible King

is the full religion of "Mr. Britling," the religion that has sprung up out of the ruins of the devastated countries of Europe and is now glowing in the hearts and minds of all Americans, giving us untold strength for heroism and courage for sacrifice.

Mr. Wells Says:

"The time draws near when mankind will awake...and then there will be no nationality in all the world but humanity, and no king, no emperor, nor leader, but the one God of mankind."

America is fighting for this God!

God, The Invisible King

HELENA MONTANA

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

scriptions from all parts of the country, and it could be seen that success was assured. The books will be closed on June 15 and the bonds will be ready for delivery two weeks later. This favorable response to the Government's invitation seemed to have no weight in the stock market. Prices of railroad shares may have been affected by the address of President Daniel Willard, of the Baltimore & Ohio Railroad Company, at the conference of Governors in Washington, concerning new plans for railroad service. By reducing the number of passenger trains it is expected that 4000 of the 14,000 passenger locomotives will be released for freight work. Preference will be given to coal, iron and agricultural implements, and the filling of orders for new domestic equipment will be deferred in order that our manufacturers may promptly satisfy the wants of Russia and France.

WHEAT AT HIGH PRICES

After passing the two-dollar mark, which was reached on April 4, the price of wheat has advanced by leaps and bounds. Two weeks later there were sales in the Chicago market at $2.42, and on the 3d the price rose to $2.80. Considerable quantities have been sold for immediate delivery at $3.04. When Canada removed her import duty of 10 cents a bushel, two or three weeks ago, wheat figures in Chicago sharply declined. As our own duty automatically disappeared, the door was open, and shipments of Canadian wheat to our northwestern mills and markets were expected. But Canada's surplus is small, like our own, and nearly all of it is controlled by the British Government, and the price at Chicago soon resumed its upward march. There is a similar movement in the Canadian market. At Winnipeg the price additions were 33 cents on the 2d, and 30 more on the 3d, when for a time the prevailing rate was $3.05.

According to the estimates of crop experts in the West, the fields in the winter wheat states where the plants were killed amount to 9,900,000 acres, or nearly 25 per cent of the land in which seed was placed. Recent improvement of the plants that survived, caused by favorable weather, may raise the Government's estimate of output from 430,000,000 to 480,000,000 bushels. Unfortunately, the desired and greatly needed increase of spring wheat acreage has not been made. There is a gain of 7 per cent in Minnesota, but the two Dakotas show a reduction, which in South Dakota is reported to be 17 per cent. Farmers there are said to have been restrained by shortage of labor and the high cost of seed and farm machinery. There is danger that the entire crop will be no larger than last year's, and that the quantity harvested will be only enough to supply the home demand.

The following dividends are announced:

Pacific Gas and Electric Company, quarterly, first preferred and original preferred, $1.50 per share, payable May 15.

Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable June 1.

Hernia Need Not Keep You From Your Favorite Sport

DOES your rupture bar you from the exercise which you used to enjoy when physically sound?

There is a way by which you can enjoy the sports now denied you. It will be found in the **Brooks Rupture Appliance.** Many a ruptured person, with this aid, is following practically all of the pursuits of an entirely well individual.

Because the **Brooks Rupture Appliance** is made to the individual measure of the wearer, it fits perfectly. Because it fits perfectly it gives complete support to the injured portions, permitting one to enjoy any exercise not too violent. Because of its soft pneumatic cushion, it adheres to the flesh and slipping is impossible.

Ordered by War Department

The **Brooks Rupture Appliance** has been ordered for the past nine years by the United States Department of War. The Surgeon-General in referring to the Appliance states that the Examining Surgeons have "certified in each case that the Appliance was satisfactory." Hundreds of **Brooks Rupture Appliances** have been sold to the War Department, but never has one been returned to us as unsatisfactory.

It will be very easy for you to obtain one of these appliances on *free trial* to test its worth. If you are not entirely satisfied with it your money will be cheerfully refunded. And the price you will find to be remarkably low. Remember, we are a sanitarium, not a factory.

Use the coupon. Use it now.

W. E. UNDERWOOD

INSURANCE AND THE WAR

The entrance of the United States into war with a foreign power affects insurance contracts of all kinds. The hazards of war are risks not contemplated nor accepted by insurance companies up to the time we became a belligerent. The premium rates of none of them included those hazards. As a result, a new set of conditions is set up which must be met by supplementary agreements, involving the payment in most cases of additional premiums and, in some instances, even of the cancellation of the policy.

As all the companies in the various branches have not as yet agreed to take concerted action, I would advise all policyholders to keep in close touch with the companies, thru the agents and brokers of the latter, for the purpose of ascertaining exactly what the position of each insurer is, in order that compliance therewith may be made and, as far as possible, preserve the integrity of their policies as contracts of indemnity.

By way of illustrating my meaning on this point, let us consider the provision to be found in all standard form fire insurance policies exempting insurers from losses incurred as the result of public disturbances. I quote from the New York form:

"This company shall not be liable for loss caused directly or indirectly by invasion, insurrection, riot, civil war or commotion, or military or usurped power, or by order of any civil authority."

At the time this is written, a fire insurance company is without authority to accept the hazards enumerated in the exemption recited. They may, as the result of recent legislation, insure against losses due to explosions and bombardment, and I understand that an effort is being made to give them the privilege of accepting the others. But until this is done, it is plain in the language of the contract that conflagrations due to war waged upon us or in our own defense are not covered.

We are apparently not in danger of attack by enemy land forces, but our coast cities may become the prey of predatory visits from submersible craft. New York has recently enacted a law empowering the fire insurance companies to grant indemnities against the hazards of bombardment, and in Massachusetts it has been legal for some years. But, as previously indicated, this is supplementary to the ordinary protection afforded by the regular fire insurance policy. Persons who think they should be assured against bombardments, or losses directly arising from

Let STONE-TEX Renew Your Masonry Walls

Renew the beauty of stucco, concrete or brick buildings! Obtain softened, uniform tones rainproof, dampproof a lustingly beautiful finish by applying TRUS-CON STONE-TEX.

A liquid cement coating, applied with a brush. Devised solely for masonry surfaces. Unlike paints, cannot chip, flake or peel off. Fills all pores and hair cracks, making the wall hard as flint and sealed against moisture. Suitable for new or old walls. Furnished in many pleasing colors, Stone-Tex is one of the famous Trus Con Waterproofing and Dampproofing products — sufficient assurance of quality.

If your brick, stucco, concrete or stone building is disfigured or damp and unsanitary, use Stone-Tex. Write for full information, telling your needs.

The Trus-Con Laboratories
124 Trus-Con Bldg.
Detroit, Mich.
We specialize in unusual paint requirements. Write for advice.

WANTED
1000 Book-Lovers

With paper soaring, with every other material increasing greatly in cost—the price of fine books is becoming prohibitive. The only remedy is the Ben Franklin plan of buying—eliminating all middlemen's profits.

This pioneer group of co-operative book-lovers—now grown to such a size that it purchases entire Remainders of Editions, Publishers' Overstocks, etc.—offers its members a rare opportunity to secure finest books in sets, de luxe single volumes and standard fiction at a mere fraction of publishers' prices. To the first thousand book-lovers who qualify for membership it offers

Life-membership, without fees or dues

and with full privileges—including the bulletins of rare book bargains issued to other members. Specimen Bulletins and full explanation mailed on request. *Act now*—applications for membership filled in order of receipt.

Every book brand-new. **Best recent novels and juveniles included.** (Special Bulletin.) No detective or second hand books offered. Tell us your book desires—we meet them. We send no agents. Note these prices:

$32.00 Tolstoy, 12 vol., de Luxe, illustrated	$13.50
$19.75 Turgenieff, 7 vol., de Luxe edition	$6.75
$50.00 De Foe, 16 vol., de Luxe	$12.95
$45.00 Shakespeare, 20 vol., photogravures	$9.75
$51.00 De Maupassant, 17 vol., de Luxe	$8.80
$3.00 Poland as She is Today, illustrated	$1.70
$6.00 Scott, finest Highland edition, per vol., only	$1.25
$2 50 The Spell of Flanders, color cuts and maps	$1 45
$2.50 Raphael Book, 54 wonderful illustrations	$1.20

Our new catalog lists hundreds of other book bargains—choice sets of Stevenson, Hugo, Kipling, Bret Harte, Poe; also single volumes, juveniles, gift volumes, etc. **Explains how you may examine books in your own home before purchasing. Today's best bargains may be gone next week.**

Kennedy School of Missions
Secretary, E. W. CAPEN

Through these associated schools Hartford offers ample training, both scholarly and practical, for the Christian ministry; meets the present demand for trained lay workers in church, Sunday-school and social service; and gives special missionary preparation for the foreign field. Each of these schools has its independent faculty and its own institutional life, but together they form one interdenominational institution with the unity of a common aim and spirit.

such attacks, will have to equip themselves with policies for that specific purpose.

There is one feature in connection with the purchase of explosion and bombardment insurance on which I think I am warranted in cautioning my readers. It is an emergency service which such companies as undertake it will provide their customers. I presume that those which do undertake it have a reasonable expectation of making the venture profitable. In truth, as matters now look, there seems to be small chance of loss. And yet before the war is over we may become the victims of a number of nasty operations. The companies are without any experience on this line of business and they must necessarily make what I shall call guess rates. How many companies will go in for it, I have no idea; but I am afraid that, as it seems to be a pretty safe gamble, their number include some which are not overburdened with net surplus, inspired by the hope of big profits reaped in a short campaign. I would therefore advise the selection of only the strongest companies from which to buy insurance against explosions and bombardments.

So far as I am able to determine, none of the companies issuing accident and health policies will on any terms grant their insured permission to undertake any service connected with either the military or naval branch of the Government. As all of them point out, their contracts are not designed to cover such hazards, having been based exclusively on the habits and pursuits of civil life. To have made the rates adequate in time of peace, in an effort to build up sufficient reserves to stand the strain of war—an event that might never come—would have put the price so high as to make it prohibitive. As one company observes on that point: "It follows, necessarily, that the companies, not having been paid for such insurance, cannot furnish it."

If paid for it now, can they furnish it to any one going into the war? It seems not. Men now holding policies who enlist in the army or navy, members of the National Guard and Militia upon being mustered into active service, at the front or in training camps, will have abandoned the occupations under which their premiums were calculated for others classed in the manual as "uninsurable." The companies will return to them a pro rata portion of their premiums and cancel the contracts. In most companies travel across either the Atlantic or Pacific oceans are hazards not now undertaken.

A number of states have in each community a semi-military organization of citizens generally known as Home Guards. A final decision in respect to policyholders performing this class of service has not been arrived at. I am informed by some managers that they are desirous of aiding this movement to the fullest extent practicable with safety to the financial interests in their charge, and that while the members of the organizations continue to pursue their usual daily avocations, spending

but a small fraction of their time in guard service, the full coverage granted by their policies will be continued. But if the service is extended, involving exposure to hazards exceeding those common to civil life, it may become necessary to readjust the status of the policyholders to the classification of police. If they become organized on a military basis and are used to quell riots or otherwise perform duties incident to soldiers, they then become, as previously stated, "uninsurable."

Citizen civilians—non-combatants—killed or injured by bombardments, explosions, attacks from the air, land or water, or as the result of invasion by enemy forces; or those injured in consequence of insurrections or riots in which they are not voluntarily participants, will be fully covered by their policies.

IT now remains for me to discuss the life insurance side of this matter.

Most if not all American life policies are incontestable after being in force one year. The usual phraseology runs: "This policy shall be incontestable after one year from the date of its issue, except for non-payment of premiums." Some of them contain a war clause to the effect that military and naval service in time of war is a risk not assumed by the company or covered by the policy during the first year (some companies make it the first two years), and that if the insured shall engage in such service within the time specified the policy will become void, any claim under it to be limited to the amount of premium paid on it.

We easily conclude from this that the vast majority of all the life insurance policies in force are now incontestable, and that the holders of all which have been fully two years in force are free to enter the military or the naval service.

New business in all companies will be subject to restrictions in this respect. An effort has been made by a few companies to secure uniformity in the matter of extra premium and clause phraseology, but it has failed and each company is now promulgating its own rule on the subject.

The amount of insurance permitted to those intending to enter the service varies with different companies—running from $2000, the lowest yet noted, to $5000, the highest. The amount of extra premium charged also differs, ranging from $25 per $1000 to $100 per $1000.

As already stated, while there is no uniformity of action by the companies in this matter, the announcement of any one company is informative and I will therefore briefly paraphrase that made by the Metropolitan Life:

Policies issued on residents of the United States prior to date of announcement (April 16) are free from restrictions as to military or naval service in, for, or on behalf of the United States. The following clause now goes into all policies:

If the insured within five years of the date of this contract shall engage in military or naval service in time of war, this contract will remain in full force and effect, except as to the provision hereinafter contained with respect to the total and permanent disability benefits provided the insured within thirty-one days from the date of engaging in such service shall notify the company thereof and shall pay such extra premium as the company may determine; the pro rata of such extra premium for the remainder of the current contract year to be paid within thirty-one days after notice of the amount thereof shall have been mailed by the company to the last known address of the insured; and succeeding extra premiums during the continuance of such service to be paid at the time that the premiums under the contract shall be payable.

If the insured shall fail to comply with the provisions of the preceding paragraph as to notice and payment of extra premiums and shall die while in such service or, within six months from termination thereof as the direct or indirect result of such service the liability of the company under this contract shall be limited to the reserve theretofore accumulated on such contract, based on the American experience table of mortality with 3½ per cent interest.

Any total and permanent disability provision contained in this policy shall become inoperative in the event of such service within five years, but shall be restored after discharge from such service on evidence of good health satisfactory to the company.

To the company's regular incontestable clause these words will be added—"except for violation of the 'Restrictions as to Military or Naval Service,'" meaning the clause preceding.

For the present, the extra premium will be $25 per $1000. Amount of insurance will be limited to $2000 on members of the National Guard, Militia, Naval Reserve, or men contemplating enlistment in any branch of the service, premiums payable annually, together with extra premium.

As it is impossible to lay down a hard and fast rule for the guidance of policyholders in over two hundred companies, each of which is handling the matter in its own way, I would advise every insured person who either intends to perform military or naval service, or who expects that he may eventually be compelled as the result of a conscription law to respond to the call, first to read all his policies carefully for the purpose of getting a complete understanding of his rights under them, and to correspond freely with their home offices and clear up every doubtful point.

It is particularly important that this procedure should be followed carefully by every man who may become a part of the military or naval forces assigned to duty outside the continental limits of the United States.

I know that a great majority of the companies will in a spirit of patriotism do everything possible in their relations with their policyholders to help the country's cause and lighten the burdens of policyholders, and I have faith enough to believe that they will all do this.

But we must remember that their responsibilities are now heavily increased and that they will be held to a strict accountability for the safety of the vast funds, aggregating billions, held by them in trust for the relief of future orphans and widows.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Your Current Events Club has asked you to prepare a speech in which you will give reasons for or against sending United States troops to France in accordance with General Joffre's suggestions. Present the speech.
2. One of your friends says that the German U-boats are doing slight harm to Great Britain and will soon be defeated; another friend says they are doing great harm and will soon be victorious. Present what you think a reasonable view of the situation, basing your remarks upon facts.
3. Your uncle, who is employed by a bank in Brazil, writes a spirited letter concerning recent events in South America. Reproduce the letter.
4. One of your relatives, who owns a small farm, visits you and says: "Well, how is the war going to affect us farmers?" Give your answer.
5. Your mother says: "I can't understand where all the money is coming from to pay for this war." Tell your mother all you can concerning war finance.
6. You hear a boy say: "America hasn't done a thing in the war!" Give him a proper answer based on facts.

Editorial Articles.

1. Explain the title, "Peace in War Time." Apply the thought to some event in which you have been concerned.
2. One of your acquaintances says: "I have conscientious scruples against war, and I should not be drafted." Try to bring him to a realization of his duty.
3. You hear a man say: "The United States ought to settle the Nicaragua Case." What is the Nicaragua Case?

Right Makes Might. By Samuel Gompers.

1. A reader says: "This article shows that Samuel Gompers is patriotic." Show in what way the reader is right.

M-E-N. By Donald Wilhelm.

1. Make a list of the principal thoughts presented in this article. Show how each thought has been interestingly or emphatically presented. Write a paragraph in which you praise the good characteristics of Mr. Wilhelm's writing.
2. Write a somewhat similar article concerning S-T-U-D-E-N-T-S.

Digging Their Bit. By R. V. Ingersoll.

1. The principal of your school has asked you to speak in the school assembly on "What School Children Can Do for the Country." Give a short address suitable for the occasion.

Keeping Down Food Cost. By Harry C. Douglas.

1. Your mother says: "Isn't there any way to keep down the cost of food?" Tell her what has been done in other lands.

The Fiske Torpedo-Plane. By Park Benjamin.

1. You have said: "The Fiske Torpedo-Plane might end the war." Try to prove your statement.

SECTION II. GRAMMAR.

1. Select any section of "The Story of the Week." Give the syntax of the first five nouns, the first five verbs or verbals, the first five adjectives, and the first five adverbs.

SECTION III. LITERATURE.

The New Books.

1. Explain the following literary terms: clear methods of organization; straightforward narrative; characteristic anecdotes; stirring narrative; characteristic portrait; timely value; complimentary foreword; bombastic manner; marginal reference; homiletical.
2. Your father has offered you as a birthday present any one of the books mentioned in "The New Books." Which book will you select? Present reasons that will make your father feel pleased by your choice.

The Little Theater Revolt. By Montrose J. Moses.

1. What is an "experimental theater"? How does it differ from other theaters? What is the purpose of such a theater?
2. In what ways are experimental theaters likely to aid in the better development of the American drama?

A Number of Things. By Edwin J. Slosson.

1. Is the writer justified in his criticism of the third stanza of the "Star-Spangled Banner"? What suggestion does the writer make concerning "Marching Thru Georgia," "Yankee Doodle" and "Dixie"? What thoughts should be exprest in a national song?
2. Write in a series of short paragraphs words that, when put into suitable verse, would make a good national song.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Army or Navy?—"The Business in Hand," "The Fiske Torpedo-Plane," "Joffre Wants an American Army," "The Toll of the U-Boats," "British Admiralty Criticized."

1. Are you in favor of immediately sending an army into France? State as fully as you can the reasons for or against the plan.
2. "It is true that military operations can constitute only a small part of the tremendous task," etc. Does this paragraph lead you to modify your opinion?
3. Examine a map of the region bordering on the English Channel, the North Sea and the Baltic. Where are the chief English and German bases of attack and defense?
4. What is the task imposed by this war on our navy? What are the chances of success?

II. The Isthmian Canal—"The Nicaragua Case."

1. Review the history of the relation of the United States to the Isthmian Canal question from 1850 to 1901. From 1901 to 1916.
2. What is the Colombian Case referred to in this editorial? The Nicaragua Case?
3. Study the last paragraph in the editorial. What do you think of the suggestion?

III. Changing Conditions in Germany—"No May Day Strikes."

1. Make a study of one or more of the following in Germany under conditions previous to 1914: (a) the privileges and powers of the German Emperor; (b) the powers and limitations of the Bundesrath and the Reichstag; (c) the chief political parties in the Reichstag and the program of each; (d) the powers and limitations of the chief ministers of state; (e) suffrage and the obligation of every citizen to service.
2. Discuss the changes which seem to be taking place in one or more of these institutions.

IV. Organizing Our Food Supply—"Keeping Down Food Costs," "Digging Their Bit," "Nationalizing Agriculture."

1. "State control of food and necessities need not be the delicate and difficult problem," etc. Write out, in as much detail as possible, the plan which you think should be put into effect now.
2. "Practical socialism has gone a long way indeed in New South Wales." Why is the scheme adopted in the colony described as practical socialism?
3. What are the advantages of the scheme of school gardening described in the second article? Has your community done anything along this line?
4. Compare the proposed Congressional legislation for the regulation of food supply with the measures which have been adopted in Australia.

V. The Labor Element in Industrial Efficiency—"Right Makes Might."

1. Explain the sentence: "For tools are the basic agencies of our civilization."
2. "Eight hours is long enough for anybody to work." Prove this assertion.
3. "It has also been established . . . that good working conditions . . . are essential to maximum output." What are these good working conditions? Show how they contribute to maximum output.
4. Is there any evidence of a desire in your state to violate the principles laid down in this article?

VI. The New Industrial Revolution—"M-e-n."

1. Compare the condition of the labor market at the present time with the condition in 1914. How do you account for the condition then and now?
2. Comment on this quotation: "The farm hand has gone to the factory and my crops have gone to the dogs."
3. "I should say that our tremendously high prices are due to five causes," etc. Discuss one or more of the five.
4. "Such a condition has not confronted Europe since the beginning of the Industrial Revolution," etc. Compare the present economic situation with that which existed at the end of the eighteenth century.
5. What effect is the present situation having on the economic position of women? Is the effect likely to prove a permanent one?
6. "Spring, 1917, found the United States in the midst of an industrial revolution." This sentence sums up the entire article. Make it the topic sentence of your summary of the article.

THE NEW PLAYS

More tragic than the original novel, yet with all its charm preserved thru the sympathetic interpretation of an excellent cast, *Peter Ibbetson* is an artistic and satisfying performance. (Republic Theater.)

In *The Highwayman* Reginald De Koven attempts to come back. But altho all the old musicianship remains the opera is many miles behind "Robin Hood," whether in tunefulness, plot or comicality. (Forty-fourth Street Theater.)

Clare Kummer is the lucky author of two theatrical best-sellers this season: "Good Gracious, Annabelle" and *A Successful Calamity*, clever in plot and lines. But the best reason for seeing it is William Gillette. (Booth Theater.)

The *Washington Square Players* love experiments, perhaps because their experiments usually succeed. "In the teeth of all the schools" they have revived Ibsen's *Ghosts;* José Reuben's interpretation of the son more than justifies their venture. (Comedy Theater.)

REMARKABLE REMARKS

SARAH BERNHARDT—Ibsen horrifies me.

H. W. GOSSARD—I introduced front lacing.

DAVID LLOYD GEORGE—The tide has now turned.

AMBASSADOR GERARD—I do not believe the Germans will rise.

CHARLIE CHAPLIN—There is nothing so funny as upset dignity.

TOM P. MORGAN—The Eskimo sport eats his candle at both ends.

EMPEROR CHARLES—I know what it means to die in the trenches.

IRVING BACHELLER—Germany is ruled by a group of Harry Thaws.

MARY PICKFORD—You would be amazed if you could see the hundreds of letters that come to me.

ROBERT GOLDSMITH—The present task now is to make statesmen out of pacifists and pacifists out of statesmen.

CONGRESSMAN LONDON—I would give my life for a conference of all socialists to bring about universal peace.

GOVERNOR WHITMAN—There are too many roof gardens and too few vegetable gardens in the city of New York.

SENATOR BORAH—It is better to lose a battle than to lose the benefits that flow from the vigilant, independent press.

MARGARET DELAND—It is as much an effort to keep your spirit from growing fat as to keep your body from growing fat.

EUGENE V. DEBS—I'd rather be lined up against the wall and shot down as a traitor to Wall Street than fight, a traitor to myself.

LUKE MCLUKE—What has become of the old-time vaudeville comedians who clubbed each other over the head with bladders.

DR. HAHN, leader, Reichstag Conservatives—There is only one way to deal with our Anglo-Saxon enemies and that is to be as brutal as they.

T. WELLS BREX—The first complete sentence I wrote on my typewriter ran as follows: f $ Gaar % L * P. & zglarg ot: J @ zodipl = and ync werpsey tum.

LAURA JEAN LIBBY—Those who have dodged love so far should resolve this coming year that it is wisest and best to surrender to Cupid's will without demurring further.

WHAT TO READ ABOUT SEA WARFARE

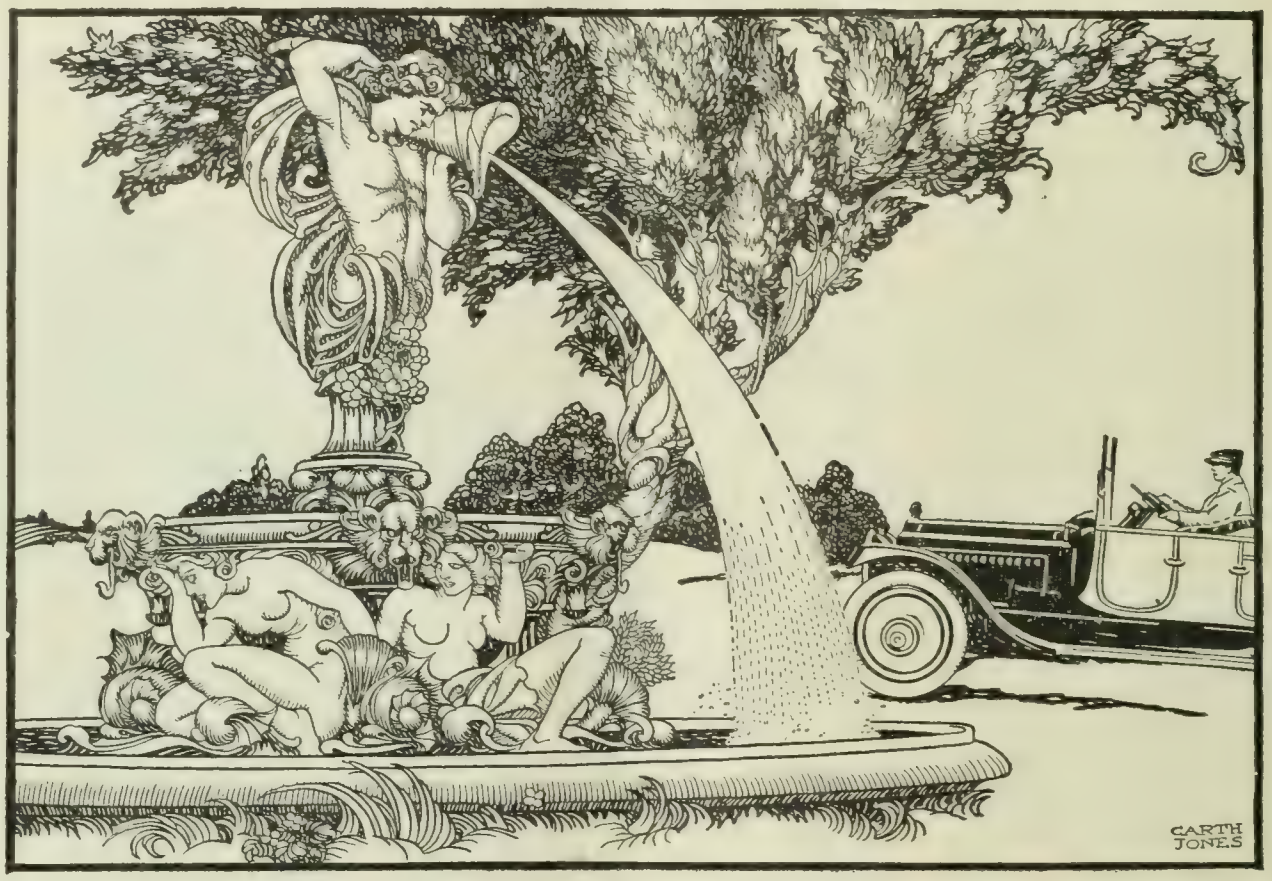
Probably the most stirring stories of the war as fought on sea are those that may not yet be told, the adventures of the British mine sweepers, the net layers, the submarine chasers. But meanwhile we find ourselves not very sure as to the work cut out for our own navy and what it needs for its task.

Sea Warfare, by Rudyard Kipling. (Doubleday, Page & Co., Garden City, New York, $1.25.) Kipling, almost the only writer who has been out with the British fleet, has brought back to us vivid sketches of day by day life in the navy, and poems that have something of his old fire.

Open Boats, by Alfred Noyes. (F. A. Stokes, New York, 50 cents.) The horror of submarine warfare is nowhere made more real than in these terse records, drawn from Admiralty reports and from the accounts by survivors.

Naval Handbook as Bearing on National Defense and the European War, by T. D. Parker. (Newbegin, San Francisco, $1.) Here are answers to the many questions as to types of battleships, guns, ammunition, main points of international law, and relative strength of navies.

Our Navy and the Next War, by R. W. Neeser. (Scribner, New York, $1.) A broadly informing book, convincing by reason of its calm and grave facing of the situation which the writer foresaw in 1915, and which now is upon us.



Fundamentals of Naval Service, by Commander Yates Stirling. (J. B. Lippincott. Philadelphia, $1.) A comprehensive up-to-date handbook on the navy as a profession, the navy department organization, our present fleet, and the present methods of warfare.

Submarines, Mines and Torpedoes in Time of War, by C. W. Domville-Fife. (G. H. Doran, New York, 50 cents.) Tells how the undersea craft and weapons work, and also the changes brought about by these new methods of warfare.

Interest of America in Sea Power Present and Future, by A. T. Mahan. (Little, Brown, Boston, $2.) Admiral Mahan, the authority the world over on naval affairs and their relation to national development, has here set forth the part our navy must play in our future foreign relations.

PAMPHLETS. *German Sea Power*, 5 cents. *Sea Power and the War*, 8 cents. (Oxford Press, New York.) *Enlistments, Instruction, Pay and Advancements in the United States Navy.* (Navy War College, Washington, D. C.)

ARTICLES. *Independent*, October 5, 1914, to November 8, 1915, April and May, 1917 (Eighteen articles on various phases of the war on sea by Park Benjamin). *Outlook*, February 28, 1917 (British and German Blockades). April 18, 1917 (Mobilizing the Merchant Marine). *Century*, April, 1917 (Can We Defend the Panama Canal). *Contemporary Review*, November, 1916 (Sea Power and Civilization). *Review of Reviews*, March, 1917 (Our Repudiation of the Blockade). *Sunset Magazine*, December, 1916 (Give Us This Day Our Daily Ship). *North American Review*, March, 1917 (Evolution of Commercial Blockade). *Nation*, March 15, 1917 (Germany's Submarine Measures and the British Blockade). *Forum*, April, 1917 (Strategic Value of Newfoundland).

Flowing! Always men have delighted in the beauty of smooth motion

Why do we build fountains?

Because they give us the two-fold joy of form and motion. More than most things, their rhythmic charm satisfies the sense of the perfect.

Added to the steady, flowing power of the epoch-making Twin-six engine, the best of the art-craftsmanship of the modern world has been called to contribute to body design and finish—that the Packard motor carriage may have beauty two-fold.

Matching the magic of its fleet unfailing power with the visible grace of fine proportions and quiet luxury of appointments.

Your individual needs are served, further, by choice of twenty distinctive body styles.

PAYING FOR THE WAR

OUR participation in the Great War will cost us, if it lasts till July 1, 1918, during the next fiscal year, three billion eight hundred million dollars. This is the estimate of the Ways and Means Committee of the House. Two billion dollars of this is to be provided by the great Liberty Loan. The rest is to be raised by new taxation. This means that during the next year the American people will pay more new taxes than the whole normal receipts of the Government for that period. It means that the United States Government will receive during that time, to be spent on its usual activities and on the prosecution of the war, $33 for every man, woman and child in its population. This seems enormous and it is; but the British people are contributing $60 per capita for the same purposes. The task of "making the world safe for democracy" is a costly one. Those who would call the tune must pay the piper.

The War Revenue bill prepared by the Ways and Means Committee goes boldly at the giant problem. It proposes to raise a half billion dollars by increases in the income tax, two hundred millions by increases in customs duties, one hundred and fifty millions by higher taxes on liquor, one hundred and seventy-five millions by taxes on transportation, thirty-three millions by stamp taxes, and other great sums by taxes on luxuries like tobacco, automobiles, phonographs, jewelry, motion picture films, sporting goods, perfumes and cosmetics, theater tickets, soft drinks, pleasure boats, chewing gum. It doubles the rate of taxation of excess profits, increases the rate of letter postage and the postal rates on newspapers and magazines.

In broad outline it is a wise and sound bill. It takes no necessaries of life in common use by those to whom the cost of living is an ever present menace. Its income tax proposals follow the admirable principle that those best able to bear the financial burden should be drafted to pay the bills of this crusade for democracy just as those best able to make the ultimate sacrifice are drafted to fight the battles. But drastic as the increases in the income tax schedules seem to us, they are modest in comparison with the British scale. There an income of more than $50,000 pays a tax of 42½ per cent; under the present bill the rate from $60,000 on is only 11 per cent, and even above $500,000 it is only 33 per cent.

If the war goes on and on the rates will surely rise again and yet again; but the more courageously we can foresee and discount the future from the beginning the more effective will be our participation in the war.

There is another leaf from the book of British experience that our legislators might well have studied and applied. The present bill, like the existing law in relation to excess profits, makes no distinction between war profits and normal profits. Certain industries are making vast profits just because the world is at war, and the things they produce are indispensable to the waging of modern war. It would be good business, sound economics and even-handed justice for the nation to take a substantial part of these war profits to pay the bills of war. England has done it with entire success—the war profits tax yielded $700,000,000 during the last year—and with gratifyingly little inconvenience to industry and business. The failure of the framers of the War Revenue bill to profit by this British experience is deplorable. But there is yet time; the bill should not be permitted to become a law without a heavy tax on war profits. The substitution of this tax for the proposed increase of the present excess profits tax would do much to meet the criticisms of that provision of the bill advanced by men who see in it disaster for their businesses. No one could reasonably object to a tax on the unusual profits arising from war conditions; an arbitrary tax on all profits above 8 per cent cannot be so easily justified.

GLORIOUS FRANCE

THIS is the word that has sprung to every American lip, in these days of tumultuous welcome to Joffre and Viviani.

American affection for France is instinctive and spontaneous. American admiration for France is sympathetic. Our historical reasons for gratitude to France are cogent, and are known to all, but that does not account for our feeling. It is our nature to feel ardently toward the people and civilization of France without seeking for reasons. Only a few Americans, perhaps, could give for our enthusiasm critical reasons of that clear intellectual quality which distinguishes French thinking. For the few, however, the psychological reasons are not far to seek and are quite as important as the historical ones. It is partly a matter of taste; it is very much a matter of sentiment, but more than all it is a profound regard for those qualities of character which have shone resplendent in this war.

We like generosity, and France has always been generous. It was a chivalrous generosity that France extended to us in our Revolutionary struggle. It was a splendid intellectual generosity that characterized de Toqueville's account of American political institutions; an intellectual generosity that for more than a century and a half has marked French thinking, French science, French art and criticism, as it marked the achievements of the Greek. We admire that simplicity of manhood the substance of which is courage; and from the days of the religious wars until now French courage has been superb. Most of all, we admire that generosity of the soul which can make supreme sacrifices, and say nothing about them, in times that call for

Underwood & Underwood

RED CROSS AND RECONSTRUCTION

President Wilson has appointed Mr. Henry P. Davison, vice-president of J. P. Morgan & Co., as chairman of the new Red Cross War Council. Its first work is to be relief and reconstruction in the districts of Northern France left devastated by the German retreat

the instant surrender of everything that men hold dear for a cause that is felt to be infinitely higher than the individual life, or even than the collective life of a generation. France has made this surrender on a scale which, as we see it today, seems to be without a parallel in history.

There is something too, very subtle but very substantial, in our liking for that adaptability which enables a people to be light-hearted and gay or grim and relentless, as occasion demands. For two and a half years the French men of the armies have shown the world that they know how to die; and French women have shown that they know how to take up the burdens of work and of sorrow; yet only a few years ago we were saying that the French, beyond all people in the world, knew how to live, simply, beautifully, and gladly. Will the day come when again they shall show by fine example how to live? There is no more heartfelt wish of the American people at this moment than this, that the French people shall survive their ordeal, to perpetuate thru long generations the stock, the mind, the civilization which are France.

France has loved *"La gloire."* A generation ago, deceived by the glitter and superficiality and militarism of the empire, we thought that "glory" meant to France these things only or chiefly. We know better now. Glory to France means living in and for and by the supreme things: courage, generosity, sacrifice, beauty, intellect, liberty, manhood and womanhood, civilization. France is glorious. *Vive la France!*

A GREEK REPUBLIC?

THE fashion of doffing crowns set by Nicholas of Russia promises to spread in royal circles this summer. The head that seems to lie uneasiest is that of Constantine of Greece. Whether he will be permitted to place upon the head of his son George the crown that is getting too heavy for himself or whether Greece, which first demonstrated the possibility of republicanism twenty-five hundred years ago, will return to this state, may be decided within the next few weeks.

The deciding factor is apparently the United States. The exiled Greeks of the United States, France and Egypt, the inhabitants of the Ægean Isles and northern provinces, even a considerable proportion of the people of Greece proper are republican by preference and have appealed to us for support in their efforts to overthrow the King. This is said to be one of the questions on which Mr. Balfour is to sound Washington, and he ought not to be left in any doubt as to American opinion on this issue. It is the pride of our history that the American people have always favored and often assisted republican movements in every part of the world. We helped the Greeks in their struggle against Turkish tyranny, and we sympathized with them when the great monarchies of Europe imposed a German king upon the freed people.

The present King of Greece, also of alien blood and married to the sister of the German emperor, has forfeited all right to the throne. He has violated the constitution and acted as an absolute monarch. He has delivered Greek forts, troops and munitions into the hands of the Germans and Bulgars and has kept the Allied forces at Salonica immobile for fear of being struck in the back if they went forward. A large part of his subjects are in armed opposition to him.

Why then has this tyrannical monarch and enemy of the Entente been allowed to retain his throne when the Entente forces occupy and control his kingdom? The answer is so strange as to be almost inconceivable. It is that Constantine has been kept upon his throne by the Entente Powers themselves, for they have hitherto preferred to have Greece remain a monarchy, tho an enemy, than to become a republic and an ally.

This has long been suspected but only within the last few weeks has the evidence been made public. Ex-premier Venizelos, who is heading the revolutionary movement in Macedonia and is now asking recognition from the United States, recently gave out an interview, published in *The New Europe* of March 29, 1917, in which he said in reply to the question why he did not give his movement an antidynastical character: "The answer is very simple. It was because the Entente had been good enough to promise me their indispensable aid under the express stipulation that the movement should *not* be antidynastic."

Venizelos then goes on to show how every effort he made to attack the royalists was checked by the Anglo-French authorities. He counted on carrying two-thirds of Greece, but the Allied troops shut him out of the districts he wanted to reach and forced him to evacute positions he already held. "It is due to their action that a reign of terror was instituted against all Venizelists, who were massacred and hunted like wild beasts by the royalist hordes at whose mercy they found themselves."

But why should the Entente Powers have intervened to protect a King who was their dangerous enemy from a just punishment by his own people? There is only one conceivable explanation; that is, they feared lest the movement headed by Venizelos, tho he disclaimed that intention, would result in the overthrow of the monarchy in Greece and so endanger monarchies thruout the world. The Powers in control of Greece were France, England, Russia and Italy. Now we may be sure that France and England were not primarily interested in the maintenance of Greek royalty, for France is a republic and the English throne would not be imperilled by the fall of Constantine. But the rulers of Russia and Italy were deeply concerned, for there was a strong and growing republican movement in both these countries. So we may safely assume that it was the influence of the Russian and perhaps also the Italian court that shielded the King of the Hellenes.

Now the situation has suddenly changed. The Czar is a prisoner in his own palace and the influence of Russia will be thrown upon the republican side. The United States will have something to say about it. At least Chancellor of the Exchequer Bonar Law in reply to the question whether the United States was being consulted in regard to Greece said to the Commons on April 19:

> Up to the present the United States have not taken any part in the discussion, but I have no doubt that as soon as arrangements are completed they will be consulted in every matter in which their interests are concerned.

It should be made plain to the delegation at Washington that our interests are concerned in every republican movement and especially in one where men from America have taken so active a part. As the matter stands the foreign powers most concerned with Greece are three republics, France, Russia and United States, and two monarchies, England and Italy, instead of three monarchies and one republic as formerly. But the British cabinet has for a year past been subjected to sharp criticism in Parliament for its protection of the Greek King and it has been much embarrassed to defend itself without betraying, what probably was the truth, that this policy was not its own but imposed upon it by the Czar. Now this difficulty is out of the way King Constantine will have to depend solely upon his brother-in-law for protection.

No one attempts now to defend in its totality the tortuous policy of the Allies in the Balkans. It has brought ruin upon Serbia, Montenegro, Rumania, Albania and Greece. The Dardanelles expedition was an acknowledged failure and the Salonica expedition was ineffective. King Constantine, whatever his motive, was undeniably wise in keeping out of the three unfortunate campaigns into which the Entente Allies tried to draw him. But now matters have come to a crisis, for Greece is starving under a blockade from both parties. The British have seized the Greek ships and the Germans are sinking them. Zaimis, the pro-Ally premier, is again in power. King Constantine must take sides or abdicate.

POPCORN AS A BREAKFAST FOOD

THE package cereal is one of the greatest of American inventions. It has revolutionized the food habits of the nation and bids fair to sweep round the world. It is cleanly, convenient and wholesome and it permits the housewife to cater to the diverse, diverted and diverting tastes of her family. Many a household can rival the famous Spratts

Lycurgus votes for Father's Oats:
Proggine appeals to May;
The Junior John subsists upon
Uneeda Bayla Hay.

Corrected Wheat for little Pete:
Flaked Pine for Dot; while Bub
The infant Spratt is waxing fat
On Battle Creek Near-Grub.

But the pioneer of American cereals, popcorn, has been overshadowed by its later and more aggressive rivals for it is modest and fails to advertize. It masquerades under no curiosity-compelling name and bears no pretty girl on its carton. Yet there is nothing more toothsome, delightsome and wholesome than a dish of freshly popped corn—and nothing half so cheap. Its fluffy and fantastic flakes are crisp yet crunchable and their starch has been made soluble by the pressure of superheated steam. The process has been ingeniously extended to other unpopable cereals and we now have puffed rice and wheat shot out of a cannon. But the popcorn kernel is its own autoclave and any kitchen can prepare it. Fireplace or stove, coals or gas, wire cage or iron spider, can be used and ten minutes will suffice to put it fresh and hot upon the breakfast table. It can be sugared or salted; it can be savored with syrup or butter; it can be mingled with berries or served with meat. It can take the place of potatoes, rice, macaroni or toast in their various uses. In any shape it is a dish fit for a—for an American citizen. A few rods of popcorn grown in the back yard will make the household independent of the package factory and the corner grocery. Let the sound of the popper be heard in the land.

THE SECRECY OF THE SEA

ONE of the strangest contrasts in this war is that between our relatively detailed knowledge of the war on the land and our dense ignorance of the war at sea. We can guess within a wide margin of error the number of army corps the British have in France or at Salonika, but we do not know at all how many battleships there may now be in the British Navy or whether the German submarines are to be numbered by units, tens or hundreds. We know who won the Battle of the Marne; we do not know who won the Battle of Jutland. With a string and a few pins and the morning paper we can plot on the battlefields of Europe every advance or retreat of the contending armies, but we cannot trace the progress of the German submarine blockade except from the meager statements of loss of tonnage which the governments concerned choose to make public. This is as if all we could learn of the war on land was the number of soldiers reported dead or missing, with no word as to whether the losses occurred on the Rhine or on the Tiber.

This is not a question of censorship. All governments conceal all facts on land or sea which they do not wish to have published. But while it is perfectly possible to conceal for a few days the loss of a few miles of trenches, any great retreat or serious defeat would sooner or later be known to the public in spite of anything the censor might try to do to hide it. The movements of great armies are known not only to the millions of soldiers involved, but to thousands of civilians caught within the war zone; trains carrying the wounded and the prisoners to the rear pass thru the densest centers of population; rumors fly from mouth to mouth without the aid of the newspapers. If the Germans should take Paris, and the military chiefs of all the armies now fighting in France determine to keep the fact secret from the rest of the world, how long would this be possible? But the sea is its own censor. The greatest naval battle in all history might occur at any time and be known to the civilian public as "heavy firing heard off the coast." The "Deutschland" may at the present moment be a prize in some French or British port, it may be safe at home in a German harbor, it may have been sunk by a destroyer or caught in a steel net, or it may have stayed under water too long and met with some fatal accident to its machinery. Kitchener set forth on the open sea like his famous fellow-countryman King Arthur, and, like King Arthur, all we know of his later history is that he never came back. From the lost island of Atlantis to the last ship posted "missing" at Lloyds, the sea has kept its secrets. What has happened on land will come to light after the war. Much that has happened at sea will never come to light till the Day of Judgment when, we are told, "there shall be no more sea." War on land leaves its hideous traces until men hide them below the ground. The air rejects the relics of combat and hurls them to the earth. But the sea buries its dead and leaves no monument to mark the spot where ships have met in battle, even should forty successive wars be fought over one small tract of ocean.

SWEAR OFF PLATINUM

FOR the first time now we have a body of scientific experts taking an inventory of our natural resources and one of the first and most serious shortages they have discovered is that of platinum. This is more precious than gold because it is more useful, but unfortunately for the country it has become more fashionable because it was more precious. The chief sources of supply are Russia and Brazil and it is now hard to get enough at any price to supply the chemical laboratories where it is indispensable. The high explosives to fill the shells and the fertilizers for our fields are dependent upon sulphuric and nitric acids and these in turn are dependent upon the supply of platinum.

Consequently the American Chemical Society and the National Academy of Science have issued an appeal to the women of the United States to discourage the use of platinum for jewelry or photography. The Daughters of the American Revolution have pledged themselves "to refuse to purchase or accept as gifts for the duration of the war, jewelry or other articles made in whole or in part of platinum."

Visitors to Leipzig will remember the magnificent painting of the women of Germany tearing the bracelets from their arms and the rings from their fingers and ears to throw them into the melting pot to raise money for the army fighting against Napoleon. It is not yet necessary for the women of America to make such sacrifices, tho we believe they will prove as patriotic as the German women and contribute their platinum to the national welfare if this should be needed. But all they are asked to do now is nothing, that is, they are merely requested not to take for their personal adornment the metal needed by their country.

IT TAKES TWO TO MAKE A QUARREL

THE United States Government insists that it is at war with Germany. The German Government insists that it is not at war with the United States.

But Germany goes on sinking our ships and killing our people while we are not doing a thing to Germany.

This anomalous state of affairs cannot last long. Either we must convince Germany that we are warlike or Germany must convince us that she is peaceable.

THE STORY OF THE WEEK

German Peace Terms

The open and acrimonious discussion of possible terms of peace in the German press reveals the wide divergence of opinion as well as a general desire for the war to come to an end. The Socialists, with the tacit encouragement of the Chancellor, are conducting an energetic propaganda for peace upon the basis of the *status quo ante bellum* without sacrifice of territory or the payment of indemnity by any belligerent. It is argued by the Socialists that only by such a public demonstration of the futility of war can a permanent peace be secured, for so long as a nation can gain either land or money by waging war it will be impossible to prevent its recurrence.

This idea of peace without annexation or indemnity has been adopted by the Socialists of Russia altho Kerenski, the Socialist Minister of Justice, formulates it as "no forcible annexations and no punitive indemnities." This would permit of the transfer of territory in accordance with the wishes of the inhabitants as, for instance, the restoration of Alsace-Lorraine to France, and of the payment of compensation for damages caused by military operations as, for instance, Germany offered at the beginning of the war to Belgium.

The new Austro-Hungarian Government has publicly exprest a willingness to conclude a peace with Russia at any time on these terms. This may well suit Austria-Hungary, for her armies do not hold as much Russian territory outside of Poland as the Russians hold of Austrian territory. A separate peace with Russia would be better for Austria-Hungary than a general peace on the same terms, for she might then compensate herself by holding on to the Serbian and Rumanian territory she now occupies. The hint from Count Czernin that Austria-Hungary would consent to a general peace without annexation or indemnity called forth a storm of criticism from the Prussian and conservative press, which accuses Austria-Hungary with starting the war from which she is now trying to back out. But the suggestion had met with influential support in other quarters and an article in the Bavarian *Staats-Zeitung*, accredited to Count von Hertling, the Bavarian Premier and head of the Committee on Foreign Affairs in the Federal Council, urges that Germany is willing to relinquish all claims for indemnities and evacuate occupied territory if the Allies will do the same and allow Germany equal commercial privileges thruout the world.

But such suggestions of moderation in peace terms have aroused the fury of the Pan-German party, which demands the annexation of territory on both fronts. They insist that Courland and the other Russian provinces now must be retained as a protection against renewed Russian aggression and that on the other side Belgium must never be allowed to come again under the control of France and England. They also demand the acquisition of a port on the English Channel for strategic purposes and the holding of the coal and iron fields of France as necessary for the industrial future of Germany.

Bert Thomas in Passing Show (London)

WRITER'S CRAMP

Between these extremes there are all gradations of opinion. Some favor a plan for the partition of Belgium into its original elements by the creation of a Kingdom of Flanders under German protection to include the Teutonic part of the population, leaving the Walloons to gravitate toward France. So far, however, the efforts of the German Government to secure the good will of the Flemish by supporting their nationalistic aspirations has met with little encouragement.

THE GREAT WAR

May 7—British Admiralty reports loss of sixty-two vessels in past week. A German aeroplane bombards London.

May 8—Germans regain Fresnoy. Strikes in British munition works.

May 9—British daily expenditure now $37,250,000. Italian Embassy reports sinking of thirteen Austrian submarines.

May 10—German and British light naval forces encounter in North Sea. Joffre and Viviani received in New York.

May 11—Germans and Bulgars attacking on Salonica front. Balfour received in New York.

May 12—Australians take Bullecourt, Wotan line. German submarine base at Zeebrugge bombarded by British warships and aeroplanes.

May 13—General Korniloff resigns Petrograd command because of popular interference with military discipline.

Chancellor von Bethmann-Hollweg still refuses to commit himself on the question, altho both parties are storming at him for not making a declaration in their favor. It is supposed that he will, if possible, postpone a decision between the policy of conquest and that of renunciation until he sees how the Hindenburg line holds and how the U-boats succeed.

Sinn Fein

That the republican movement in Ireland is not crushed out but on the contrary is stronger than ever is shown by the election of Joseph McGuinness for the southern division of Longford County. His majority was only 37 out of a total of some 3000 votes cast, but the fact that he is a Sinn Feiner and now in Lewes prison for three years for taking part in the Dublin rebellion of a year ago, while his opponent was a Nationalist, is significant of the growing distrust of parliamentary methods. In North Roscommon, last February, the Sinn Feiners elected Count Plunkett by a majority of 627.

On Easter Monday, the anniversary of the rising in Dublin, the military authority took precautions to prevent another outbreak by prohibiting all public meetings and street gatherings, but this did not altogether prevent disorderly manifestations. The Sinn Fein flag of orange, green and white was hoisted over the ruined headquarters of the rebels and posters appeared on the walls in various places proclaiming that "The Irish Republic Still Lives." In Dublin the police and military were repeatedly stoned by the mob. So we learn now from the English papers received, but no hint of the Easter trouble came to America at the time.

The distrust of the Irish people for their representatives in Parliament may prevent the settlement of the Home Rule controversy which was confidently predicted last month. Premier Lloyd George declared in his Guildhall speech of April 27:

> We must convert Ireland from a suspicious, surly, dangerous neighbor to a cheerful, loyal comrade. Settlement of the Irish question is essential for the peace of the world and essential to a speedy victory in the war. I appeal to the patriotism of all men to sink everything for the one purpose of getting this question out of the way.

The compromise proposed was similar to that which was agreed upon by both parties last July, but afterward altered by the Ulsterites in the Cabinet, that is, to allow county option. Under this privilege four of the six Ulster counties, namely Down, Antrim, Armagh and Londonderry, would vote to stay out of Irish government, at least for the present, while Tyrone and Fermanagh would be doubtful.

A new factor in the problem is the necessity of considering American opinion. The Boston Clan-na-Gael urged

Congress to insist upon the immediate independence of Ireland. Members of Congress to the number of 140 have sent a message to Premier Lloyd George in favor of Home Rule.

But such interference with British affairs is hotly resented by the Unionists.

Activities of the British Commission

While M. Viviani and Marshal Joffre were touring the middle west and enjoying the hospitality of Philadelphia and New York, the British commissioners remained in Washington to confer with President Wilson and his advisers about the possible methods of handling the submarine menace, the utilization of the American loan to the Allies and other matters of similar importance. While in Washington, Mr. Balfour spoke before the Senate, drawing a parallel between the German contempt for the military power of Great Britain in 1914 and their similar blunder in underestimating the military power of the United States today. He asserted his firm belief that the German submarine campaign could not determine the issue of the war. On May 11, the British commissioners left for New York to join the French emissaries.

It is apparent that the activities of all the Allies are to be coördinated by a series of conferences. Several members of the Italian war commission, under the leadership of Enrico Arlotta, Minister of Maritime and Railroad Transportation in the Italian cabinet, are already in this country, and other envoys, including Guglielmo Marconi, inventor of wireless telegraphy, and Prince Eugene, nephew of King Victor Emmanuel, are shortly expected. The personnel of the American commission to Russia has been officially announced. Elihu Root is chairman. Among the members of the chosen delegation are Charles R. Crane of Chicago, John R. Mott, general secretary of the International Committee of the Young Men's Christian Association, Cyrus McCormick, president of the International Harvester Company, Charles Edward Russell, the Socialist leader, Major-General Scott, Chief of Staff of the army, Rear Admiral James Glennon, Samuel Bertron, a New York Banker, and James Duncan, vice-president of the American Federation of Labor.

Roosevelt May Get His Army

In spite of the fact that the conference report to the Senate and the House of Representatives recommended that the draft bill be brought to a final vote without any provision for a volunteer army, the House of Representatives approved by 215 votes to 178 the Senate plan authorizing the President to raise and maintain by voluntary enlistment four infantry divisions. Altho the provision for a volunteer army raised from men over twenty-five years of age makes no mention of whom the President should appoint to lead the force, the only man in the country who has enrolled a large force of pledged volunteers is ex-President Roosevelt and his claim to go with the volunteer army in some military capacity can hardly be overlooked. The debate in the House was political rather than military in character and was concerned chiefly with the personal merits of Theodore Roosevelt. Many representatives, Democrats as well as Republicans, urged in his favor that he was not only a veteran campaigner but an ideal representative of the American people on a European battlefield. His opponents, who were found in both parties, urged that Roosevelt was a politician rather than a general and that no individual should be permitted special honor or privilege in connection with the war. The Roosevelt volunteers already number more than 180,000, including an exceptionally large proportion of well-to-do business and professional men, and the organizers of the force claim that it will be ready within a few weeks for service wherever needed.

The conference on the army bill made the age limit of those subject to the selective draft twenty-one to thirty years inclusive. This was a compromise between the Senate proposal of twenty-one to twenty-seven years and the wish of the House for a maximum age limit of forty. The prohibition amendment forbidding the sale of liquor in military encampments was retained in the conference report. Senator Fall's proposal for a small volunteer cavalry force was struck out of the bill, as was also the provision for the large volunteer infantry army which was later reinserted by the vote of the House. The monthly pay of private soldiers was increased by sums varying from five to ten dollars according to the present pay.

Senate Kills Censorship

After a debate which has been carried on intermittently for weeks in both Houses of Congress the Senate voted to strike from the Espionage bill all reference to the press censorship. Various attempts which were made to modify the strict provisions of the censorship clause in its original form did not satisfy the opposition who contended that Congress could not constitutionally abridge the freedom of the press. On May 12 the Senate voted by a majority of one to drop the objectionable clause from the bill altogether in spite of the evident desire of President Wilson and his advisers that it be retained. Altho the influence of the administration was exerted to secure the Espionage bill in its entirety the vote did not at all follow party lines. Fifteen Democrats and twenty-four Republicans voted to eliminate the censorship, and eleven Republicans joined with twenty-seven Democrats to sustain it.

The most remarkable amendment to the Espionage bill approved by the Senate makes it unlawful for a period extending from the first of September to the end of the war "to use or employ, directly or indirectly any cereal, grain, sugar or syrup in the production of intoxicating liquor in any form or of any kind," with certain exceptions as to wines and alcohol for industrial, medicinal and sacramental purposes. This amendment, fathered by Senator Cummins of Iowa, practically makes prohibition the law of the land for the duration of the war under the guise of food conservation.

"THE HERO OF THE MARNE"

Americans may not be able to pronounce "Joffre," but they are finding plenty of other ways to honor the man and the country of most appeal to popular admiration here. This mass of flag-waving humanity in Philadelphia is typical of the celebrations that greeted the French Commissioners thruout the country

Fresnoy Lost

The first setback the British have received since they started their push was the loss of Fresnoy. This village lies eight miles northeast of Arras and was taken by the Canadians on May 3. But the Germans still held the ground to the north and south of it, and five days later launched a ferocious attack against this dangerous salient. Two fresh divisions of Bavarians, some 20,000 men, were concentrated on a narrow front and after a heavy bombardment with the gas shells as well as explosives the English troops stationed here were expelled from the village and the adjacent wood. But the Canadians to the north and the Australians to the south of Fresnoy held firm, so the ground lost was slight.

But this reverse coming just at the end of the first month of their campaign was not sufficient to detract from the just pride which the British feel in their achievement. Chancellor Bonar Law, in summing up the results of the month's work, said that the British had taken 20,000 prisoners, 257 guns and 227 trench mortars and had advanced a distance of from two to five miles on a twenty-mile front as compared with the advance of three and a half miles on a six-mile front in the Somme offensive of last year. There were, he said, double the number of German divisions now arrayed against the British and of these half have had to be withdrawn because of their losses. On the other hand the British losses were from 50 to 75 per cent fewer than those in the battle of the Somme.

The French offensive was started on April 16, a week later than the British, but they have taken 30,000 unwounded prisoners. The total German strength in France is supposed to be 157 divisions and of these 35 divisions have been exhausted and withdrawn. A division normally consists of 20,000 men, but now is reckoned at less than 10,000. That the losses in the aerial service have been severe is admitted on both sides, tho each claims that the enemy has suffered most. The Berlin report for April states that the French and British have lost 362 aeroplanes and 29 captive balloons, while the German loss was 74 aeroplanes and 10 balloons.

U-Boat Warfare

There are many rumors that a remedy for the U-boat raids has been discovered, but so far the figures do not show any material abatement of the danger. In fact, the British Admiralty report for the week ending May 6 a higher number of vessels lost than ever before, namely 62. But apparently the tonnage was less, for only 24, instead of 38 as reported last week, were of over 1600 tons. Besides these there were 22 ships under that tonnage and 34 fishing smacks. These figures, as usual, include some losses of the week before not previously reported.

But whether this means that the U-boats are slackening their activity or that there are fewer vessels at sea to sink cannot be told. We do know, however, that the latter is true in some measure, for the report of arrivals and departures from British ports shows a diminution for the week of over ten per cent. The United States and the other belligerents are still more reticent on the subject of U-boat depredations than Great Britain. We know, however, that the neutrals Holland, Spain, Norway, Sweden, Greece and Denmark are suffering severely, especially in their fishing fleets. The Greek steamer "Parthenon," valued with her cargo at $4,000,000, was sunk by a German submarine on April 30. The London *Chronicle* of May 10 says that "about two weeks ago a large steamer was sunk and seventy lives were lost, some of them people of note. No news has been published of the disaster." The Paris correspondent of the New York *Tribune* cables:

> Germany has today about two hundred new, long radius cruising submarines in addition to smaller types and those she had before February 1. She is building faster than she is losing. The rate is approximately three to one.
>
> The losses to shipping from submarine warfare average from 8 to 10 per cent a month. Twelve months more, and there will be no shipping left worth mentioning.
>
> Of three armed merchant ships that meet submarines two get by.
>
> This means that the German submarines are the masters of the seas today.
>
> So it remains for America to meet these conditions, to organize her production, to organize overseas transport, to solve the submarine problem and to bring victory. And she has three months only in which to work.

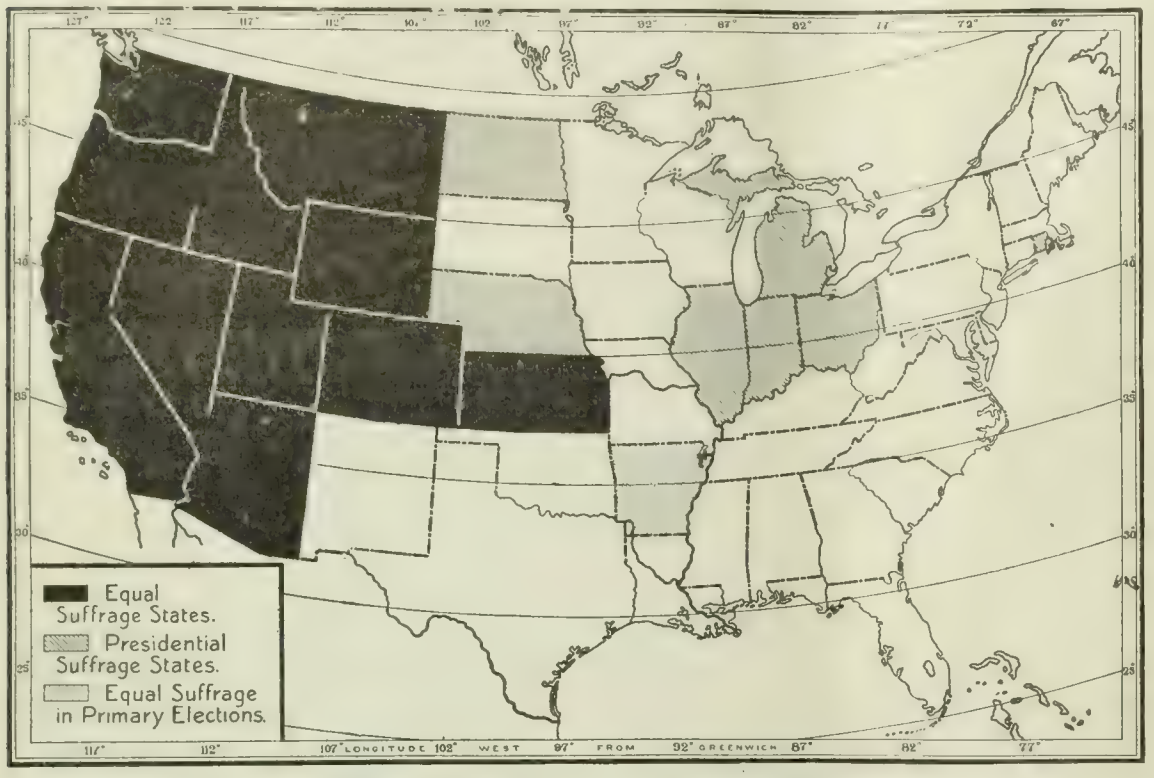
In the Reichstag Dr. Pfleger, naval reporter for the budget committee, states that

> The reports in the enemy press about the number of U-boats lost are false. Our losses are small beyond expectation. Three months war experience is of more value than three years peace experience. The U-boat crews are equal to all demands. We expected an average monthly U-boat booty of about 600,000 tons; actually the result for three months totals 2,800,000 tons. This is 55 per cent above our expectations. Altogether, in three months, 1325 ships have been sunk.

Russian Peace Terms

The chief point of conflict between the Provisional Government and the more radical element represented by the Council of Workmen's and Soldiers' Deputies is over the terms of peace. The Provisional Government is anxious to maintain so far as possible the obligations of the old régime toward the Entente Allies lest it should lose their confidence and coöperation. The Socialists of the Council are trying to arrange with their comrades of the enemy countries an immediate peace without annexations, expropriations or contributions on either side.

To allay the anxiety exprest in England and France lest Russia should weaken or withdraw and so throw the whole burden of defense upon them, Professor Milukov, the Foreign Minister, sent on May 1 with the approval of all his colleagues including the Socialist members a note reaffirming the obligations of the old pact between Russia and the Allies. In this it was explained that the Provisional Government was in entire agreement with the ideas recently exprest by the statesmen of the Allied countries and especially President Wilson.



These principles were exprest lucidly also in the words of the President of our ally the great overseas republic. The Russian Government under the old régime certainly was not prepared to appreciate and share these ideas as to the liberating character of the war, the establishment of a stable basis for pacific coöperation of nations, the freedom of opprest peoples, etc.,

A CHAMPION AIRMAN

Captain Georges Guyemer of the French Aviation Corps probably holds the world record for successful air fighting thirty-seven German aeroplanes brought down or captured. The charred gun-parts in his hand and beside him are trophies of Captain Guyemer's latest victory

WHERE DOES YOUR STATE STAND?

Now that woman suffrage has got a foothold in the East, the last anti stronghold is beginning to show signs of surrender. The complexion of the whole suffrage map is changing rapidly these days. Can you name the states which belong in each suffrage group now?

but emancipated Russia can now use language which will be understood by modern democracies and hasten to add her voice to that of her Allies.

The declaration of the Provisional Government, being imbued with the new spirit of free democracy, naturally cannot afford the least pretext for assumption that the demolition of the old structure has entailed any slackening on the part of Russia in the common struggle of all the Allies. On the contrary, the nation's determination to bring the world war to a decisive victory has been accentuated, owing to the sense of responsibility which is shared by all in general and each one of us in particular.

This spirit has become still more active by the fact that it is concentrated on the immediate task, which touches everybody so closely, of driving back the enemy who invaded our territory. It is understood, and the annexed document so expressly states, that the Provisional Government in safeguarding the right acquired for our country will maintain a strict regard for its engagements with the Allies of Russia.

Firmly convinced of the victorious issue of the present war and in perfect agreement with our Allies, the provisional Government is likewise confident that the problems which were created by this war will be solved by the creation on a firm basis of a lasting peace, and that inspired by identical sentiments the Allied democracies will find means of establishing the guarantees and penalties necessary to prevent any recourse to sanguinary war in the future.

But the Workmen's and Soldiers' Council took alarm at this and demanded the deposition of Dr. Milukov on the ground that he had no right to commit the nation to the secret agreements of the Czar's government and that his statement conflicted with their desire for peace without conquests or indemnities. For a time it seemed as tho the Provisional Government would be overthrown, but finally the Council was persuaded to continue its support, altho the motion to that effect was carried by the narrow margin of 35 votes out of 2500. The Provisional Government explained that by the words "decisive victory" they did not mean forcible annexation and that by "penalties and guarantees" they did not mean indemnities but such essentials to a durable peace as the reduction of armaments and establishment of international tribunals.

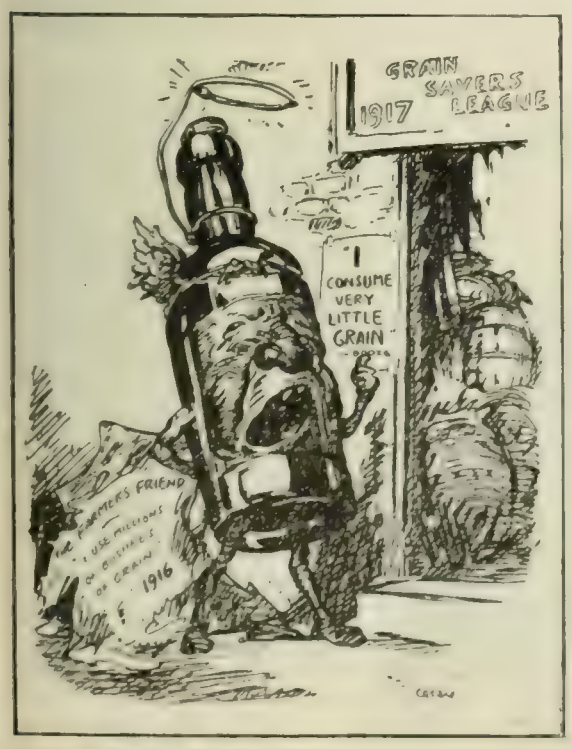
Defeat of Australian Labor Party

The Parliamentary election on May 5 was of more than local significance, for it involved some of the vital issues of the war and the constitution of the British empire. Its immediate result is that Premier Hughes will remain in power with the support of the new coalition party, the National, which he has organized to "win the war." Mr. Hughes is a skilful politician and it was largely due to his eloquence and strategic ability that the Labor party rose to power in the Commonwealth. Last year he suddenly left Australia on some mysterious mission to England, and while there made impassioned appeals to the people of the home country to allow Australia and the other dominions a share in the control of British foreign policy. He came back with the conviction that in order to win the war Australia must adopt conscription for service over-sea.

But the Labor party repudiated Hughes and he was forced to submit the question to popular vote. The official Labor leagues were strongly opposed to compulsory service except for home defense, and as these leagues control the selection of candidates at an election they have immense influence over members who rely entirely upon their Parliamentary salaries for a livelihood. In spite of their commands, however, a few Labor members rallied to Mr. Hughes and went on the stump strongly advocating conscription. These men were at once expelled from the party by the leagues, altho opportunity was given them to come back once more into the fold. This, however, Mr. Hughes utterly declined to do. Instead he formed a new Ministry out of his twenty-five followers. Of these fourteen were in the Representatives, the other eleven were Senators. In fact, in the Lower House there were more Ministers than followers.

Obviously Mr. Hughes could only hope to carry on with the help either of the Official Labor Party or with the assistance of the Liberals. When the House met, in December, there was a full front bench of Ministers and four or five men sitting behind them on the Speaker's right. On his left the benches were crowded with Liberals and Laborites. There were 34 of the former and 26 of the latter. It was speedily clear that the Liberals intended to keep Mr. Hughes in office, altho it was asserted that no understanding whatever existed between the party led by Mr. Cook and that led by Mr. Hughes. So long as they did this the Prime Minister had a majority of 24 in the Representatives. The solitary Independent supporting him and the Speaker—a Laborite—not voting. In the Senate, however, the official Labor members outnumbered Hughesites (11) and Liberals (5) by two and immediately used their predominance in the Upper Chamber to control the Lower, refusing to pass the Supply Bill until amended to grant Supply for a period of two months only, thus compelling the early reassembling of Parliament.

But Mr. Hughes refused to accept his defeat as final. He set to work to form a new party out of the Liberals who supported him and the Laborites who followed him out of the Labor party, and this party has now secured the balance of power. According to the first returns the Nationalists, or Hughes coalition, will have 15 seats in the House of Representatives to 35 held by the Liberals and 25 by the Laborites. The Senate will be composed of 13 Laborites, 13 Nationalists and 10 Liberals. The Liberals will support Premier Hughes on all imperial questions.



The fight in both elections was exceedingly bitter, the Liberals and Nationalists insisting upon the necessity of upholding the empire in its hour of peril, while on the other side secession, independence and even republicanism were openly talked of by the extremists. The opposition to an increased participation of Australia in the war is largely due to dissatisfaction with the London government, which it is felt is sacrificing Australian interests in the Pacific to the Japanese and using up the youth of Australia in European and dynastic quarrels with which the dominions have little concern and no voice. The Dardanelles expedition, in which the losses fell largely upon the Australians, was admittedly ill advised and mismanaged, and Irish Home Rule, which is favored by all the dominions, is still blocked by the party in power. As the course of the war tends to transfer the control of affairs from the liberal to the conservative elements in Great Britain the colonies are growing less in sympathy with the home government. But the last election shows that the majority of the Australians are loyal to the empire and determined

to make any sacrifices necessary to secure victory. Now that Hughes is securely in power he can take his seat at the Imperial Conference in London at which Australia has so far not been represented.

French Mission Visits New York

After visiting on May 6 the two great civic centers of Missouri, St. Louis and Kansas City, the French war commissioners went to Springfield, Illinois, to pay tribute to the memory of Lincoln. On their return to the Atlantic seaboard the train bearing the French emissaries narrowly escaped a wreck. Near Arcola, Illinois, the engine tender jumped the track and derailed several cars. No one was seriously injured and the secret service men pronounced the occurrence an accident. But it was several hours before the train could proceed and the time schedule of the party was deranged. Altho the commissioners were unable to stay as long as they had hoped in Philadelphia, M. Viviani spoke twice, at a municipal luncheon given by leading business men of the city and at Independence Hall. General Joffre was given a Marshal's baton made from a piece of one of the rafters of Independence Hall.

New York spent several days in elaborate preparation for its distinguished visitors and a program was prepared to keep them engaged during every moment of their stay. On May 9 the French commissioners arrived at New York and were formally received by Mayor Mitchel at the City Hall. Probably a million people gathered in the streets to catch a glimpse of M. Viviani and Marshal Joffre as they rode thru the city. The following day the French war commission "did" the city with great thoroness. From Central Park, where Marshal Joffre received a golden miniature replica of the Statue of Liberty, the commissioners went to Brooklyn to attend the unveiling of a memorial tablet to Lafayette; thence to luncheon with the Merchants' Association; thence to Columbia University, where the honorary degree of Doctor of Laws was conferred upon M. Viviani, Marshal Joffre, Baron Cunliffe of the Bank of England, and, in his absence, Arthur Balfour, chief of the British commission; thence to a memorial visit to the tomb of General Grant; thence to a reception of French-Americans at the city library, and finally to a testimonial meeting at the Metropolitan Opera House. Speaking at the Merchants' Association luncheon M. Viviani made the important statement that under no circumstances would France make peace while Alsace-Lorraine remained German. In view of M. Viviani's official position the cession of these provinces may be regarded as a definite part of the peace terms of the Allies.

Cesare in New York Evening Post

CIRCUMSTANCES ALTER CASES

Revenue Bill Before Congress

Chairman Kitchin of the Ways and Means Committee of the House of Representatives reported the emergency war revenue bill on May 9. The general character of the measure conformed very closely to the popular estimate of what it would contain while its terms were still under discussion by the committee. The new war taxes are expected to turn into the treasury by July 1, 1918, the sum of $1,810,420,000; an amount nearly equal to the two billion dollar bond issue for the expenses of the war, not including the loan to our allies. This means that the burden of the coming year will be equally divided between the generation that fights the Great War and its successors. The ordinary receipts expected under existing tax laws would be approximately $1,500,000,000. Therefore the total receipts from the old taxes and the new will probably amount to more than $3,300,000,000, or about thirty-three dollars per capita. Heavy as the burden is, the total per capita exaction is only a little more than half what the average Englishman now pays to his Government.

Of the many taxes authorized by the war revenue bill the income tax is by far the largest item. The increased schedules for the next year will bring in over half a billion dollars and there is also a retroactive tax of thirty-three and one-third per cent which will be collected on all income taxes imposed by the revenue laws of 1916. This will yield $108,000,000 additional revenue. Inheritance taxes are increased by one-third. Corporation incomes will pay a four per cent tax and excess profits fourteen per cent. The rates on whisky and wines are doubled and heavy increases imposed on rectified spirits and fermented liquors. Taxes are placed on cigars, cigarets and all other forms of manufactured tobacco; on amusement and theater tickets and on railroad tickets; on soft drinks, syrups, proprietary medicines, perfumes, cosmetics, chewing gum, playing cards, jewelry, musical instruments, phonograph records, motion picture films, sporting goods, pleasure boats, automobiles, motorcycles and rubber tires; on freight and express bills, telegraph and telephone messages, advertising, insurance, electric lights, gas, domestic power plants, and on legal documents. Rates for first and second class mail matter are increased by about one-half and the zone system of postage rates applied to newspapers and periodicals. The most striking feature of the bill, as presented to a Democratic Congress, is the great change in import duties. All articles imported from foreign countries into the United States which are now dutiable by law, will pay ten cent ad valorem in addition to existing duties, and those which now pay nothing will be subject to a ten per cent ad valorem duty. This abolishes the free list of the Underwood-Simmons tariff law.

Of course the details of this revolutionary war budget are unwelcome to the majority of both parties and both houses. But, while a hot fight is inevitable on many of the details of the bill, notably the increased excess profits tax and the new postal rates, the measure as a whole cannot be defeated or even greatly delayed, as Congress is already subject to much criticism for not pressing to an early passage all necessary war legislation. The friends of the bill

Press Illustrating

ALL PACKED UP—AND NO PLACE TO GO

The rush of recruits at the Newport Naval Training Station is taxing its facilities far beyond their capacity and speeding up the training courses all that is practicable. There are seven thousand men and boys there now, learning to be seamen, firemen, hospital workers, bakers, radio operators, signal men and so on. Here is a young seaman, just graduated and looking for a job

candidly admit its defects and urge in its defense the impossibility of drawing up any bill raising the needed war revenue which would not bear heavily and even unjustly on some sections of the community. As Mr. Kitchin, who had the measure in charge, put the matter: "I am going to shut my eyes and vote for it."

Engineers Go First The first American troops to carry the flag to Europe, not including volunteers in the French or British service, will be nine new regiments of army engineers to be recruited from men with railroad experience. The War Department promises to send the engineers to France "at the earliest possible moment," altho no details are given out as to the exact time of their departure or the route they will take. While the new engineer regiments will carry the usual arms and equipment of engineer troops in the regular army, their chief function will not be entrenchment work but the construction and repair of railroad lines between the line of battle and the bases of supplies.

The expedition will have a total strength of eleven or twelve thousand men including every branch of railroad workers necessary to build or operate lines. Engineers and operators of lines who offer themselves will be selected in such a manner as not to cripple the operating forces of any company and so force our own railroads to curtail their necessary services.

What Crops May We Expect The Department of Agriculture has estimated the winter wheat crop as 366,000,000 bushels, the smallest since 1904. There will be no estimate of spring wheat yield until July, but unless it is unusually large the total for the whole year will not exceed 616,000,000 bushels which is only a little more than the normal annual consumption in the United States alone. The wheat export to the European Allies depends, therefore, entirely upon the reduction of consumption in the United States. Fortunately much of the acreage which would have been turned into wheat is now being used for corn, oats and potatoes and it is possible that these crops may break all previous records.

Mr. Hoover has requested Congress to grant more extended powers to the Department of Agriculture to cope with the food crisis. It is reported that Mr. Hoover may be selected as the head of an international joint food control committee to direct the distribution of all foodstuffs produced in the United States and Canada.

Solving Our Transportation Problems The general railroad board of the Council of National Defense has issued directions to the railroads to give shipments of coal and iron preference over all other shipments. To prevent traffic congestion, coal and ore cars when unloaded must be sent back without delay. Mr. Daniel Willard announces that the general railroad board is endeavoring to eliminate duplication of passenger trains in order to increase the number of cars available for freight shipments. To enable freight trains to increase the number of their trips the railroad board has decided to reduce the time allowed to shippers for loading or unloading cars.

The Interstate Commerce Commission is hearing testimony of railroad executives and experts of the eastern and western states as to the advisability of permitting a general and permanent increase of 15 per cent over existing freight rates. The president of the New York Central declared that even if the desired increase were granted the additional revenue would be less than the increased cost of labor and materials during the last few months. Profits, it was urged, were necessary in order to enable the railroad companies to continue building to meet the growing amount of traffic. The president of the Erie asserted that he had received no complaints from shippers that rates now in effect were too high, but many that facilities for transporting freight were inadequate. Statistics presented on behalf of forty-six carriers in the west show that the proposed advance in rates would come to $20,000,000 less than the increased operating costs on those roads.

Making a Merchant Marine President Wilson is urging upon Congress an appropriation of $500,000,000 to construct a merchant fleet of steel and of wooden ships to break the submarine blockade. Later necessities may double this expenditure, and a billion dollars will, it is estimated, build within two years a fleet of aggregate tonnage of five or six millions. To carry this program into effect all the steel mills in the country, except those already engaged on nationally important work, will be called upon to take part in the necessary construction. The Government will cancel any private contracts that may interfere with this program and, when necessary, pay damages to persons whose contracts have been canceled. Existing English contracts would be taken over by this Government. The cost of the plan, if it is carried into effect, will probably be met by a bond issue.

Since no part of the new merchant fleet will be ready to carry freight before October, by which time the success or failure of the German submarine campaign may already be determined, the Government has met the immediate emergency by commandeering and repairing the German ships now in American harbors. The House and the Senate have both approved putting the warbound German merchant ships into transatlantic trade and some of them will be ready for use within a few days. Passenger accommodations are being removed from the big German liners to give the greatest possible cargo capacity. Chairman William Denning, of the shipping board, has purchased on behalf of the Government seven ships of the Austro-American line with a total tonnage of over fifty-two thousand. The American owners of the ships who had purchased them from the Austrian company in April, sold them to the Federal Government without profit. The cost of the seven ships was $6,778,006.

PEAS! BEANS! CORN! EVERY SCOUT TO FEED A SOLDIER!

If the Boy Scouts of America should make good the slogan of their great spring drive something like three hundred thousand soldiers would be fed. The two-scout team above, hard at work with a plow made by the boys themselves, is a fine sample of their earnestness, anyhow

IN THE SERVICE ARMY

"WE MUST ALL SPEAK, ACT AND SERVE TOGETHER"

The Jitney Tractor Enters the War Henry Ford has waived the patent rights on his tractor in order to permit the British Government to utilize the tractors in harvesting the crops of England and France. Mr. Ford hopes to have nearly 30,000 of these machines at work in the United States before the first of August. The tractor can do a wide

EVERY FORD TO FEED A SOLDIER

range of agricultural work and may be run by alcohol, gasoline or kerosene.

An Army for Food Conservation The National Housewives' League has started on the ambitious task of enrolling a million housewives in a common effort to economize on food consumption. The chief work of the "Housewives' Army for National Defense," as the new organization is called, will be the dissemination of information as to food costs and relative values thru the distribution of bulletins and thru public lectures by food experts.

Swords and Plowshares The Adjutant General has sent to all the departmental army commanders instructions from the Secretary of War directing that every available piece of ground on military reservations be cultivated. In spite of the labor shortage and the absence of troops from their posts, it is hoped that this policy may result in greatly increasing the supply of standard food products for the army.

Nevada First Fills Its Quota The states are now interested in the friendly competition for filling up their respective quotas of recruits for the regular army. Nevada was the first state to achieve full enlistment; by April 26 it had 173 volunteers, or eleven more than the required number. At that time no other state had much more than half filled its quota and only a quarter of the states had recruited as much as one-fifth of the number assigned. On the whole, the western

GOOD WORK, NEVADA!

states came much nearer to doing their share than the states of the Atlantic seaboard, and this in spite of the fact that most of the opposition to our participation in the Great War came from places west of the center of population. Illinois and Missouri made a better relative showing than New York or any part of New England.

Radicals Formulate War Program Several prominent leaders of the progressive wing of the Republican party and of those National Progressives who coöperated with the Republicans last fall have issued a statement of their views on the best war policies. They declare for universal military service, fixed prices for foodstuffs, guarantees that labor laws suspended during the war shall be restored after the conclusion of peace, a graduated income tax and a supertax upon war profits, restriction of borrowing, woman suffrage, and national guarantees against unemployment of

BULL MOOSE AND G. O. P. AGREE ON WAR

labor after the war by providing opportunities for the utilization of surplus labor. Among the signers of the declaration are Senators Johnson and Poindexter, Gifford Pinchot, William Allen White and Raymond Robins.

Quakers in Wartime A statement issued by Secretary Woodward from the central office of the Five Years Meeting of Friends in America defines the position of the church towards the present crisis. While in no degree relaxing their disapproval of war, the Quakers are anxious to be of the greatest possible service to the country. The national organization has urged all the young men of the church to undertake hospital service, relief work, agriculture or some useful branch of industry. Similar good service has been done by the Quakers in the belligerent countries of Europe.

Unhyphenated Japanese At San Francisco a large mass meeting of Japanese residents of the Pacific Coast states pledged their support to the American Government and promised to work in any capacity in which their services might prove useful. In Hawaii the Japanese are planning to raise a division of troops from the fifteen thousand Japanese reservists in the islands. This is the answer of the Japanese of America to the Zimmermann plot.

Tramps Must Dodge Maryland Governor Harrington of Maryland has announced that in the military census which is now being taken in the state the name of every

DIG!

idler will be filed and he will be ordered to start work at once. Those who fail to do so voluntarily will be conscripted for farm work at the house of correction.

Do Your Tax-Paying Early An unnamed American, whose fortune is believed to be in excess of sixty-four million dollars, has paid his income tax six weeks before the legal date. As the amount paid to the Government is said to be in excess of half a million dollars the taxpayer loses and the Government gains six weeks' interest, amounting to at least $3750. The Chicago, Burlington & Quincy Railroad has also forwarded to the Government the amount of its income tax, placed at $700,000, in advance of the requirement of the law.

Jack and the Beanstalk The leaders and organizers of the Boy Scouts of America are urging every member of the organization to start culvation of a vegetable patch to increase the agricultural resources of the nation. They advise the Scouts to concentrate their attention for the present on corn, beans, peas and potatoes. The slogan of the new movement is "every scout to feed a soldier."

Meat Packers Mobilize Five representatives of the meat packing industry have consulted with Secretary of Agriculture Houston on the regulation of the meat supply dur-

WHAT'S TO BECOME OF THE MIDDLEMAN?

ing the war. They urged that Congress pass legislation giving the Council of National Defense the power to supervise the distribution of foodstuffs and to fix maximum and minimum prices. It is estimated that proper regulation of the distribution of the meat supply will effect economies amounting to a hundred million dollars a year.

OUR DIMINISHING HERDS

BY J. OGDEN ARMOUR

PRESIDENT OF ARMOUR AND COMPANY, PACKERS

THE United States is confronted by one of the most serious problems a nation has ever faced and I hope that realization of that fact will come before we have had to suffer as has Europe.

Experience, you know, is cheap or expensive, depending on whether you use the other fellow's or insist on getting some for yourself. We have the experience of Europe before us and it behooves us to profit therefrom.

In my opinion, the most serious question before the country today has to do with producing and conserving food for next winter and with laying the foundations for a food supply for the next few years to come. Not only a hundred million Americans, but many millions of Europeans are looking to us for bread and meat to hold their bodies and souls together.

If we fail, terrible suffering stares America and Europe in the face. But we must not fail.

Here is the situation. Three years of war, such as the world had never seen, have wiped out the surplus food supply in Europe and three years of abnormal export demand, coupled with short crops and diminishing herds of live stock, have reduced stocks in this country until we no longer have a surplus. A normal crop this summer would hardly feed our own people and would fall far short of feeding our own and helping to feed Europe's.

Nothing but unusually large crops of every variety and the most careful distribution and use of them, will take us thru the winter months without widespread suffering.

The cry for larger crops is being echoed from coast to coast and I am hopeful that it will meet a hearty response such as only the farmers of America can make. Too little emphasis is being placed, however, on the need for conserving the supplies we now have.

This is especially true as regards live stock. At this time when great pains

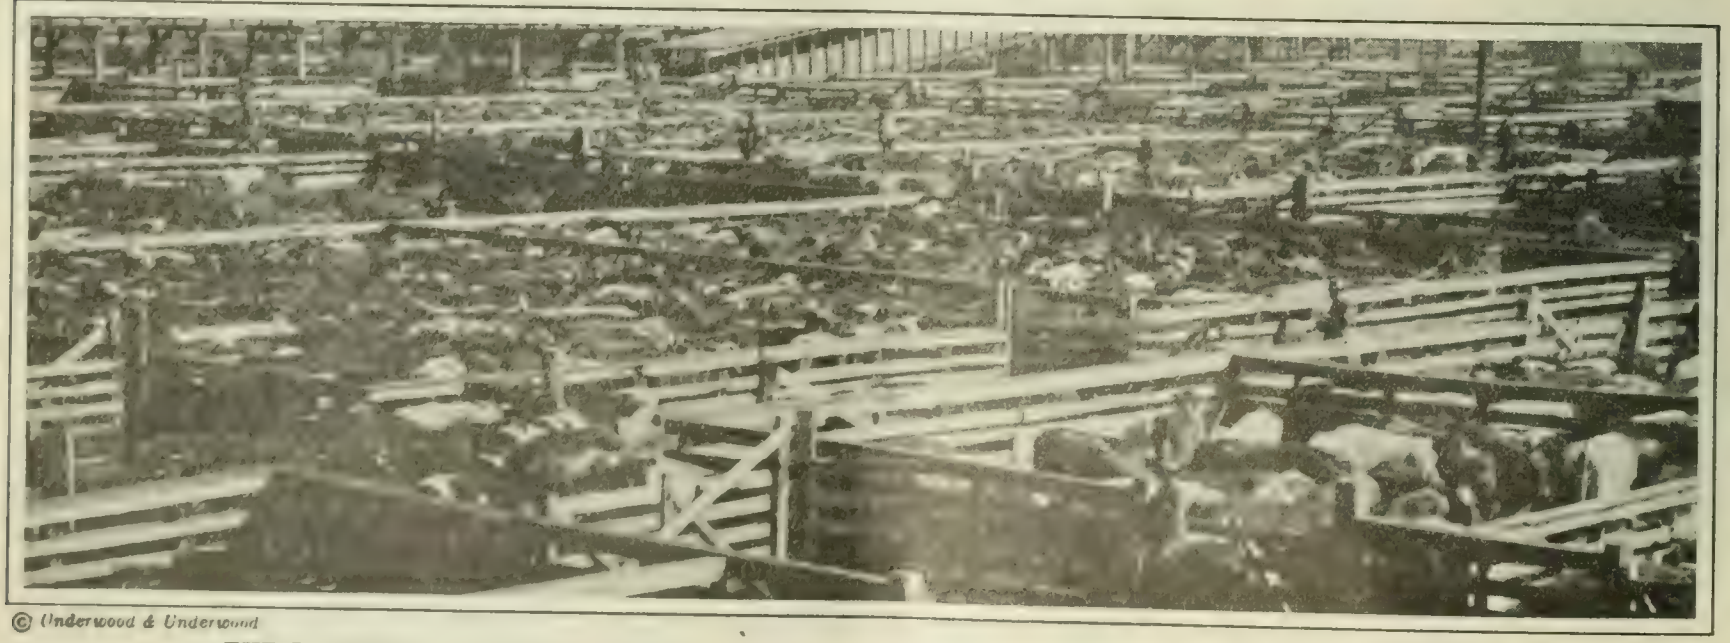
© International Film

MR. ARMOUR

should be taken to safeguard our meat supply, the reverse is what is being done. Instead of working diligently to produce more and better meat animals, the tendency is to take advantage of the high prices and slaughter everything that can be sold to the packer.

To reduce our herds is bad enough but to slaughter breeding stock is little short of suicidal. Yet we are doing both those things here in America and absolutely ignoring the result of such a course as exemplified in Europe.

Nearly every country there permitted the live stock herds to be greatly depleted during the early months of the war. Prices were high and forage was scarce and expensive, and before the authorities awakened to the danger, the meat supply was so greatly diminished that meat cards and various kinds of food restrictions have been in vogue ever since. They learned by bitter experience that depletion of the live stock herds is disastrous.



Of course this phase of the situation is one for the producers to solve, but there is, nevertheless, a most important phase of the food situation that is up to every individual in the land. That is the conservation of food itself.

Conservation does not mean self denial; it means using that which is necessary and using it all. In other words it is not necessary for you to go hungry; but it is necessary, or soon will be, that you eat no more than you actually need and that you permit no waste.

I saw by the papers recently that the Daughters of the American Revolution, assembled in national convention, dispensed with the banquet which was generally looked upon as a feature of the meeting. Experts estimated that the cancellation of the banquet saved $3000 worth of food that would have been eaten or otherwise disposed of at the banquet. And the ladies did not go hungry either.

Here is a way in which every individual in the country can do his bit toward the prosecution of the war. Eat what you need, but don't waste any food. Few of us but what eat more than is necessary. Many of us are in the habit of setting expensive tables and seeing a large part of that which is brought in go off the table as uneaten scraps or in such shape that it is past the stage where it can be conserved. The man or woman who wastes food thru the serving of too sumptuous meals is an offender against his country in its hour of extremity.

People of means should set an ex-

THERE WERE 30,000 CATTLE IN THIS ARIZONA ROUND-UP LAST YEAR

ample worthy of emulation thruout the land. They should do those very things in the way of conserving food that the nation as a whole is asked to do. We are not starving at our house, but Mrs. Armour has adopted measures that prevent any waste of food. If the menu includes rice, we dispense with potatoes and save for later use just the amount of potatoes that would ordinarily have been on the table. If we don't use the potatoes, some one else can.

I note that numerous well known women have announced their intention of conserving the food supply in their own homes. That is the place for all of us to start. Food conservation, like charity, should begin at home.

But we must not put the matter up entirely to the women. The men of the land must back up the women and encourage them to make their moves toward conservation more efficacious. If the men think more about their bodily needs and less about the cravings of their appetites, it will be easier for their wives to plan meals that will not waste food.

Besides conserving food, the men who have estates can set the nation a good example by becoming producers of food. I happen to possess a rather large country place at Lake Forest, Illinois, and I have given directions that all of it which is not permanently improved, be cultivated this year.

Besides eating less, and wasting less than in former years, it behooves us all to produce food if it be in our power. There are several kinds of slackers in addition to the one who dodges wearing a uniform and going to the trenches. The people of this land who waste food or who have opportunity to produce food and fail to utilize it are also slackers.

Let there be no slackers of any kind among us; let us all do our bit to render the nation competent to meet the crisis that confronts it. Produce food if you can; and in any event make an earnest and continued endeavor to conserve it.

Chicago

THE WHEEL OF SILENCE

BY C. L. EDHOLM

HERE is a boon to the nervous man, the individual who is wakened from his sleep by the shrill screech of the trolley wheel as it takes a curve, the worker whose thoughts are scattered by the creaking, slamming and banging of the Elevated outside his office window, the passenger who hates to ride on a street car and cannot rest in a Pullman.

For the wheel of silence has been invented and given a year's test. It has been demonstrated that a noiseless street car is a possibility and that a sleeping car berth need not be a place from whence sleep is banished.

The inventor has already done a good turn to every man who has carried in his vest pocket one of the little stamp books with waxed paper leaves, for the silent wheel was perfected by Edwin C. Madden, who as Third Assistant Postmaster General devised the non-adhesive stamp booklet, an invention that has made a couple of million dollars profit for Uncle Sam. Mr. Madden got his railroad experience earlier as engine driver on the Detroit, Grand Haven & Milwaukee Railroad.

For more than a year a street car in Portland, Maine, has been running upon eight experimental wheels of the Madden type, and the inhabitants of that city refer to Number 404 as the "Ghost Car" because it glides by without making a noise like a boiler factory. It has been demonstrated in the

INSIDE INFORMATION

course of this extensive test that the new wheel is not only a nerve-saver for the public, but a money-saver for the railroad.

Here is what the new wheel means to railroad men: First, longer service for each wheel. It is estimated that the Madden wheel is good for 300,000 miles, while the present standard wheel is ready for the scrap pile after running only half as far. Second, longer service for the rails, frogs and switches, for it is evident that if a cushioned wheel eases its own jar, it will reduce to a corresponding degree the pound and wear on the rails. Third, longer service for the rolling stock: every time a car hits a rail joint or uneven place on the rail it sends a shock thru the springs and the frame, while the Madden wheel reduces this wear and tear to a minimum. Fourth, ease of replacement: when the tire is worn out, it can be removed easily and a new one slipped on over the central portion, which receives no wear. This applies to the rubber cushion which forms the essential detail of the patent, as it can be renewed with ease. It is supposed to have a life of four years. Finally, the elimination of noise and jar will benefit railroad operator and public alike, for the greater comfort given to the passenger, the more he will care to travel.

The silent wheel installed on the car gives no clue to its construction, but when the cases which protect it from dirt and side strain are unbolted, it is seen to be of unique design. As the photograph shows, it really consists of a wheel within a wheel with a cushion of springy rubber between the inner and outer sections. There are three recesses which are devised to prevent any creeping, either backward or forward, while side strain is cared for by the cases that at the same time protect it from injury, dirt and grease. The effect of the rubber cushion is to lessen the jar and to deaden the sound that is produced by either pounding of the tires or by scraping of the flanges on the rails.

DRAW THE SWORD, O REPUBLIC!

BY EDGAR LEE MASTERS

AUTHOR OF "SPOON RIVER ANTHOLOGY"

By the blue sky of a clear vision,
And by the white light of a great illumination,
And by the blood-red of brother-hood,
Draw the sword, O Republic!
Draw the sword!

For the light which is England,
And the resurrection which is Russia,
And the sorrow which is France,
And for peoples everywhere
Crying in bondage,
And in poverty!

You have been a leaven in the earth, O Republic!
And a watch-fire on the hill-top scattering sparks;
And an eagle clanging his wings on a cloud-wrapped promontory:
Now the leaven must be stirred,
And the brands themselves carried and touched
To the jungles and the black-forests.
Now the eaglets are grown, they are calling,
They are crying to each other from the peaks—
They are flapping their passionate wings in the sun-light,
Eager for battle!

As a strong man nurses his youth
To the day of trial;
But as a strong man nurses it no more
On the day of trial,
But exults and cries: For Victory, O Strength!
And for the glory of my City, O treasured youth!
You shall neither save your youth,
Nor hoard your strength
Beyond this hour, O Republic!

For you have sworn
By the passion of the Gaul,
And the strength of the Teuton,
And the will of the Saxon
And the hunger of the Poor,
That the white man shall lie down by the black man,
And by the yellow man,
And all men shall be one spirit, as they are one flesh,
Thru Wisdom, Liberty and Democracy.
And forasmuch as the earth cannot hold
Aught beside them,
You have dedicated the earth, O Republic,
To Wisdom, Liberty and Democracy!

By the Power that drives the soul to Freedom,
And by the Power that makes us love our fellows,
And by the Power that comforts us in death,
Dying for great races to come—
Draw the sword, O Republic!
Draw the sword!

"NO ANNEXATIONS, NO INDEMNITIES"

BY WILLIAM ENGLISH WALLING

On the cloudy question of the internal condition of Russia few Americans are so competent to speak as Mr. Walling, for he has for the last ten years been in close touch with the leaders of the revolutionary party now in power. His personal observations and study of Russian social problems have been given to the world in the volume "Russia's Message" and numerous articles in the press. Mr. Walling is best known for his books on socialism, "Socialism as It Is," "Socialists and the War," etc., but in the present crisis he has joined with other prominent Socialists in repudiating the anti-war and pro-German attitude of the official leaders of the Socialist party in this country. — THE EDITOR

THE "Provisional Government" of Russia has not given us any precise peace terms. The power behind the provisional government has. And what are these terms? They are embodied in the formula adopted by the Socialists of Germany and Austria in 1915: "no annexations and no indemnities." The phrase has reached us in several recent reports of the action of the Council of Workmen and Soldiers' Delegates; its use in a direct answer to an enquiry cabled by Socialist Congressman London to that body leaves no room for doubt.

When the Austrian Government declared a few days ago that there was no difference between its aims thruout the war and those of the new Russian government, the world was naturally puzzled. It is not probable that the Austrian statement referred to the position of the real power behind the government of Russia? For it has long been clear that Austria would be amply satisfied if she is allowed to continue to rule over the same Slavic, Roumanian and Italian populations that were under her coercion before the war.

It is true that the *Russkia Volia,* an influential Socialist newspaper of Petrograd, says that the formula means only that there must be no "forcible" annexation, and one of the reports says that the resolution of the Workmen and Soldiers' Council was aimed only against "financial" indemnities. If these interpretations are correct, the formula means something entirely different from what appears; indeed, its meaning is reversed. But the new principle has been cabled to us repeatedly in a precise form that allows no such interpretations—"no annexations, no indemnities."

Moreover, two may always play at the game of interpretation. The phrase originated in Germany, where it was and is still the program of *both* Socialist factions, the only difference being that one faction thinks this end is to be attained only thru further war while the other believes it will be attained by immediate peace. All the pro-German Socialist Parties in the world realize that the German Socialists have succeeded in getting the real power that controls Russia to adopt their peace formula. All are thus vastly encouraged in their feverish efforts to secure an immediate peace on this basis, while the armies of Germany are still unconquered. And these Socialist Parties—even tho they have scarcely disguised the fact that they have been under German influence ever since the first day of the war—are not to be despised as a factor in world politics.

In Denmark a notorious pro-German, Stauning, is one of the leading members of the Ministry, and his Party has cast a third of the votes of that country. In Holland the pro-German wing of the Party now dominates, and here again the Party represents a third of the electorate. The Swiss Party is overwhelmingly pro-German. The American Party has adopted every important plank of the German propagandists, and its convention a few days ago in St. Louis voted by more than 20 to 1 a denunciation of the United States that would be accepted by the pro-war Socialists of Berlin without the change of a comma.

And now we must add the Argentine Socialists who control Buenos Ayres, as well as the Brazilian Federation of Labor, which even threatens a general strike. Moreover, the Italian Party, by the simple process of continuously expelling all members who believe that the German government must be defeated, has preserved itself as an immaculate pro-German organization.

NOR is this all. Where the organization has not been captured as a whole, powerful minorities are at work—as in Sweden, where the Socialists are almost in a majority, Norway, and even France. Recent Party Congresses in France have shown that more than forty-five per cent of the French Socialists (including an actual majority of those of Socialistic Paris!) are ready to leave peace terms to an international Socialist congress—tho well aware of the pro-German make-up of such a body, and the certainty that the "no annexation, no indemnity" policy would be adopted.

Bethmann-Hollweg has not yet adopted the "no annexation, no indemnity" program. But there is every prospect that he will soon be compelled to do so—if, indeed, the German Socialist peace mission to Russia was not evidence that he has already adopted it. I do not refer to the prospect of crushing defeats for Germany or Austria in the field of battle at an early date. I refer rather to the domestic situation in both countries due in part to the chances of ultimate defeat, in part to the food shortage, and in part to the effect of the Russian revolution. It will be necessary to yield to the oncoming storm of the peoples' wrath either by extremely radical political changes or by adopting their peace program. Now political reform yields neither bread nor peace and leads simply to further political reform. That way lies revolution.

ON the other hand the popular or Socialist ideas of peace are by no means far from those of the more moderate wing of the ruling class. The people want peace at once—but they do not dream that their Government is to have the worst of it. On the contrary, a great Central European state is to be established on the basis of the *status quo ante.* Possibly the Germans are not to dominate in law, but they are to dominate in fact over Austro-Hungarians and Slavs, Bulgarians and Turks. The relative position of Germany and her allies in the world, far from suffering, is to gain. German prestige is to be increased by liquidating past victories before it is diminished by future defeats. Germany's relative economic position is to be assured (even the recent "revolutionary" gathering in Buda-Pesth repeated this formula) in spite of the military threats by which some of her positions were won and sustained.

Why should not Bethmann-Hollweg accept this program? From the first day of the war there has been an almost unbroken coöperation between the Chancellor and Scheidemann, chief of the majority Socialists—sometimes the one leading, sometimes the other. Scheidemann is leading now—no doubt with the Chancellor's connivance, as when Scheidemann was permitted to lead the peace agitation which (so it was made to seem) resulted in the great German peace move of last December.

Is it not probable that Scheidemann is being used for the same purpose today? At any rate, have the Kaiser and the wiser junkers any reason to delay further the acceptance of his program?

THE practical conclusion is that we must be prepared for another peace agitation, based on the extremely plausible and highly popular cry of "no annexation and no indemnity"—almost an ideal solution of the war for a nation which has not been invaded, has risked only a part of her ships at sea, and is in a position practically to annex the territories of her allies.

The time to begin to combat this "no annexation, no indemnity" propaganda is now. I reached that conclusion as soon as the first report of its adoption by the Council of Workmen and Soldiers reached this country from Russia. And now the latest reliable report from Germany substantiates the view that the new propaganda has already been decided upon by the Kaiser's advisers. Cyril Brown, a newspaper correspondent who left Germany only a few days ago, cabled as follows to the *Sunday World:*

"This common-sense policy appears likely to be followed by Germany, which, moreover, has discovered that it holds an apparent trump in the form of its Socialists. They will undoubtedly be given a perfectly free hand to spin delicate peace tendrils over Scandinavia to their Russian comrades, with the official strategy of a peace offensive against Russia left in the first line to Austria-Hungary, the Imperial Government confining itself to complete agreement with its ally in all things Russian, and for the rest keeping well in the political background and making heroic efforts to squelch any tactlessness on the part of its annexationists.

"While I promised not to quote him, I gathered that Zimmermann, too, sees the peace dove speeding apace toward the longed-for goal and likely to round into the home stretch by late summer, with a vision of the revolutionary Russian and the Social Democratic German eagles soon fraternizing to the tune of a no-annexation leit-motif."

And now, finally, come Berlin and Copenhagen despatches to complete the chain of evidence. A special congress of the German majority Socialists reaffirms the demand for peace "without annexation and without indemnity," and the Copenhagen despatch adds that the resolutions were framed with the definite intent to encourage the Russian Council of Workmen and Soldiers' Deputies, citations from the Council's peace appeal being inserted textually in the German resolution.

I hope, therefore, that American editors and public men will lose no time in exposing the dangers of this "no annexation, no indemnity" agitation. There is no difficulty in showing that its success would mean the defeat of the cause of democracy and permanent peace.

It is by far the most serious danger that threatens us, now that the menace of a German victory has passed.

Greenwich, Connecticut

TO THE SOCIALISTS OF RUSSIA

We who write and sign this document, some of us Socialists, some of us non-Socialists, are all life-long friends of Russian Freedom. Some of us have been to Russia and given physical help to Russian revolutionary efforts. Others of us have given aid and support to Russian revolutionists in America. All of us have given with voice and pen what assistance we could to the Russian people, struggling against black and cruel despotism. We have seen with joy the ending of these struggles in one of the greatest victories ever won for freedom. It is our single-hearted desire that the outcome of this war may be a similar enfranchisement for all mankind. It is to that end that we now venture to make an appeal, reading the news that representatives of that wing of the German Social Democracy which has supported the German Government are now in negotiation with Russian Socialists, seeking a separate peace.

Now we realize that it is a painful thing to urge any nation to enter a war, or to refuse an appeal to end one. We have faced that problem in our own lives. For nearly three years we have seen our country forced closer and closer to the brink of war. Some of us have resisted to the last moment; but we have been forced over —we now recognize and admit that no freedom can exist in the world for any people while the ruling caste of Germany is permitted to control the energies of a mighty empire, and use it for aggressive and brutal warfare upon mankind.

There is a proverb in English that the devil knows how to quote scripture for his purposes; and so it seems to us, when men who voted war-credits while knowing of the invasion of Belgium, men who have supported a government which has sunk passenger-liners, bombarded defenseless cities, and led whole populations into slavery—when such men come quoting the formulæ of brotherhood and internationalism, seeking to escape the consequences of their deeds, we say that such men are not Socialists, but betrayers; we say that the true voice of German Social Democracy comes not from them, but came from Karl Liebknecht and Rosa Luxemburg, now in their prison cells. And we call upon you in the name of that vision of the future to which we all look forward, to resist the lure of the deputized spokesmen of egotistic Nationalism, and say to them that they should return to their own land and do what the people of Russia have done—take charge of their own national life, and confront the world as free men, not as the slaves and dupes of Autocracy.

With the people of Germany neither we nor any Socialist have a quarrel. We call upon Socialists everywhere, however, to aid in the overthrow of the autocratic Hohenzollern government, which we are persuaded seeks to dominate the world. Knowing conditions in our own country, we can say that our Administration would not desire, nor would our public sentiment permit, that war should be continued in order to humiliate and crush the German people, or to deprive them of territories justly possest. Let the Social Democrats of Germany and Austria demand and obtain universal, equal and secret suffrage, freedom of speech and of the press, and control of military forces and of the war-making power by the Reichstag; they will then find their peace-proposals meeting with a far different reception from the democracy of America—and, we venture to say, from the democracies of England and France as well.

For ourselves, we desire and agitate for a peace that may be permanent, because it is just; a peace which will restore Belgium and Serbia, which will open the Dardanelles under international guarantee, and which will leave the people of Alsace-Lorraine, Poland and Armenia and their expatriated exiles free to determine their own destinies. The governmental Social Democrats of Germany and Austria may say that they desire such a peace today; and we need not doubt it; but in view of their recent performances their desire counts for nothing—any more than did their desire to preserve peace in August, 1914. Let them become their own rulers, and thus obtain the power to make their pledges count, instead of making promises that they are impotent to perform; let them show their zeal for democracy by overthrowing in their own countries the world's last important despots—that should be the answer which the Socialists of the world must give to the Socialists of Germany and Austria.

PROHIBITION'S PROGRESS

BY WILLIAM JENNINGS BRYAN

This article by America's leading advocate of prohibition concludes The Independent's series of four important viewpoints on prohibition. In the issue of March 5 Rollin O. Everhardt, editor of "The American Issue," the official organ of the Anti-Saloon League, discust "Prohibition: When and Why." Charles B. Alexander presented his plan for a national prohibition commission in The Independent of March 19, and Rev. Wallace M. Short explained "Why I Am Not a Prohibitionist" in the April 21st issue, in which The Independent also stated its own position definitely favoring prohibition.—THE EDITOR.

PROHIBITION has made more than a Sabbath day's journey forward every day since the November election. The adoption of a constitutional amendment in Michigan, Nebraska, South Dakota and Montana, together with the advance recorded in several other states where the liquor laws were made more stringent—these all combine to give to the movement a decided impetus. Among the causes responsible for the growth of the temperance sentiment, three stand out as of special importance.

First, the decision of the Supreme Court sustaining the Webb-Kenyon law vindicated the contention of those who supported it and completely overthrew the arguments relied upon by the opposition. It will be remembered that the leading opponents of the law relied upon its unconstitutionality, the dignified and respectable argument usually resorted to when a legislator is ashamed to give the real reason for his opposition. Nearly all the senators and members who spoke against the bill when it was up for passage thundered their protest against the passage of an "unconstitutional law." It was vetoed on that ground by one of the most eminent jurists who has ever occupied the White House, and he was supported in his position by the written opinion of a learned attorney general. But when the law came before the nation's highest tribunal, behold! the court by a vote of seven to two sustained the constitutionality of the law and virtually declared that the saloon has no constitutional rights. It was black Monday for the liquor traffic.

The mortification which this decision has brought to the "constitutional lawyers" (who live in wet cities) suggests a rule which it is safe for legislators to follow, namely: *never vote against a good measure on the ground that it is unconstitutional.* The courts, and the courts alone, have authority to decide constitutional questions. If the constitutionality argument is allowed to defeat a pending measure, its validity can never be definitely determined because it can never reach the only forum in which its constitutionality can be decided. A legislator cannot err, therefore, in voting for an unconstitutional measure, because the court will prevent its going into force. A legislator can, however, not only err, but bring humiliation upon himself by voting against a constitutional measure.

ENCOURAGED by the sustaining of the Webb-Kenyon law, a number of states have passed what is known as the "bone-dry" law, entirely excluding the importation of liquor from without the state. These laws are unmistakable evidence that the tide against the saloon is still rising, because in most cases they were passed in states that have already closed the saloon.

In this connection reference may properly be made to the amendment, added to the postoffice appropriation bill just before Congress adjourned, by which the Government coöperates with the states in enforcing prohibition against importation. That amendment denies to interstate commerce the right to carry prohibited liquor into the states which have themselves taken such action.

The new statute also comes to the aid of the states which prohibit the advertising of intoxicating liquor, it being made unlawful to use the mails for carrying into a state any advertisement prohibited by the state.

THE second cause which has operated in favor of prohibition is to be found in the constitutional amendments which have been submitted during the last three months. Wyoming led in this, altho her Legislature had not received specific instruction in the subject. In Utah both parties declared in favor of submission, and the Legislature not only put the amendment before the public, but closed the saloons by a very drastic statute, following the example of Idaho and Iowa, where statutory prohibition preceded constitutional prohibition. Minnesota has joined the states aspiring to prohibition by submitting a constitutional amendment and is now considering statutory prohibition. In Ohio the amendment has again been submitted by petition and will be voted on this fall.

The most signal, not to say unexpected, victory has been won in Indiana—one of the states in which the liquor interests had succeeded in temporarily turning back the temperance tide. Some eight years ago Indiana went from county option back to township option, but the seeming retreat on the part of the state only increased the wrath of the citizens. This year the rebound has not only resulted in the calling of a constitutional convention, which is expected to include the prohibition amendment in the constitution, but it has resulted in a very strong prohibition statute and in enfranchising women in so far as it can be done by statute.

In one state only, Texas, have the liquor forces been able to make a successful resistance and there only because it requires two-thirds of both houses to submit a constitutional amendment. The Democrats at the state primary declared in favor of submission and a considerable majority in both houses favor prohibition. At this writing it is still hoped that the people may be given an opportunity to pass upon the amendment. The strenuous fight which is being made against submission would seem to indicate that the advocates of the saloon realize the hopelessness of their case if the people once secure an opportunity to vote on the question.

THE third cause for encouragement is the passage by Congress of the bill making the District of Columbia dry. More than two-thirds of the Senate membership went on record as favoring prohibition in the District of Columbia and the vote in the House was almost exactly two to one. It received the President's signature. This is a triumph, a great triumph, the importance of which can hardly be overestimated.

If there is any force in the doctrine that the people shall rule, then it logically follows that the saloon is from now on an outlaw, a fugitive from justice. A majority of the people live in dry territory and the majority of the people's representatives in the Senate and the House faithfully reflect the views of their constituents in opposing the saloon. The accurst thing exists only because the constitution, by its ultra-conservative provisions, restrains the majority from immediate and decided action.

The progressive sentiment of the country is not only handicapped by having to secure the control of the Senate, House and Executive before it can carry out its program, but, to secure a change in the constitution, it must control two-thirds of both houses and three-fourths of the states. The advocates of prohibition have at last practically overcome the first obstacle and it is quite certain that a national amendment prohibiting the manufacture and sale of intoxicating beverages will be submitted by the Congress elected last fall. As national prohibition is stronger than state prohibition—enforcement being easier in the larger unit—there is great probability that the amendment will be ratified by the necessary three-fourths vote of the states.

ALL in all, it has been a great year for the workers in behalf of temperance; Bacchus and Barley Corn are on the run, and neither is steady on his legs. Alcohol is still above ground, but it is, so to speak, a disembodied spirit. With the white flag of prohibition waving over the nation's capitol, just below the Stars and Stripes, the new emancipation is at hand.

Miami, Florida

SOMETHING TO SELL

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

EVERY grown, sane, healthy person has something to sell. A person who imagines he has no need of the science of salesmanship has one great vital lesson to learn.

Your market value is likely to be the measure of your character. Because, in establishing a high market price for your work, you are compelled to raise the standards of your personal life. Hence, we regard salesmanship as a moral force, primarily.

When a man is very young and romantic, he despises money. (I do not believe that a lady ever despises money, however young and romantic she may be; therefore I address myself in this article to gentlemen, and particularly to those who are gentlemen in preference to being men.)

Nobody is matured who has not made or done something valuable, then sold it profitably. I do not like the "upper crust" of society because it is composed of undertone humanity. Culture without commerce is as raw as cake dough without a kitchen stove. And the person who despises commerce should be fed exclusively on raw cake until he views in its proper light the fundamentality of kitchen performance.

EVERYBODY in this country ought to study salesmanship, and apply the knowledge to his or her own career. Many unsolved problems, many unsuspected needs, many unavailing heartaches, would be relieved by the power of self-salesmanship. I have read hundreds of letters containing queries or difficulties proposed for our solution wherein the supreme lack of the writer is shown to be ignorance of the science of selling—and ignorance of this ignorance! Most good people are poor, not because they are good but because they are stupid. Professional men—doctors, teachers and preachers—make an average of less than $20 a week; whereas, for equally good work in a business that employs the principles of modern salesmanship, they could earn $40 to $100 a week. The genius proverbially starves—while the man who can sell the product of the genius piles up wealth to a sickening degree. It is not the salesman who needs salesmanship most—it is the uncommercialized man or woman who has never learned to apply market values and market methods to the finer output of an unselfish life.

We will mention a few cases, out of hundreds of similar ones from our personal correspondence, to show why everybody ought to learn how to sell what he or she has to sell, or should have to sell.

Here is the case of a young writer. She hopes for money and fame as a modern poet. She sends a sample of her wares, for inspection. What do we find, regarding her poem? It is really a sermon in disguise—good philosophy, wretched poetry. The riming is too obvious—the author merely hunted the alphabet for words that jingle nicely together, instead of hunting her own heart for images and ideas that harmonize with raptures of human feeling. Many of the words are not poetic—they belong in a scientific or theological treatise. And the verse's poor feet do not move as poetic feet should—some are afflicted with infantile paralysis, others with St. Vitus' dance. Now the lady moans that magazine editors are unfeeling brutes, and the lot of a poet is martyrdom, alas! How, she begs, may she dispose of her melodies? First she will have to dispose of her mind, and get a new one; the sort of mind she has belongs in a kindergarten for defective children. Would this lady wrap a stale loaf of rye bread in pink ribbons and peppermint hearts —then ask a butcher to buy it for his customers? Why does she follow as crazy a procedure in putting her poem up for sale? If she would study the poetry market half as eagerly as she does her own childish temperament, and if she would work as long and hard at her job as a washerwoman does, she might compose verses good enough to sell.

Here is the case of a young fellow out of work. He has tramped the streets for days, begging strange employers to give him a job. All in vain. Why? Because it is a fine art to sell your services, and this man bungles the business. He looks very seedy and very scared. He whines. He shambles. He mumbles of "hard luck." He can't hold your eye. He can't talk speedily, clearly, to the point. He fails to introduce himself properly. He asks for a job as a beggar asks for a crust. He is the embodiment of failure. And he foredooms himself to the disappointment that he rashly blames on the employers, who refuse him only as they would refuse a purchase of food in a battered, soiled container. A jobless man is always a poor salesman.

Here is the case of a college student forced by poverty to earn his way thru school. He is bright, clean, healthy, strong, ambitious. The fact that he wants to work, and isn't afraid of soiling his hands or losing prestige, puts a premium right away on his character. One of him is worth a dozen of the morally sickly snobs who buy cigarets and loud apparel on the foolish-money of their dad. But the college officials don't know how to teach the art of personal productiveness. They beam benignantly on football games, fraternity "rushes," faculty receptions, and other infantile amusements; but when a real man wants to work instead of fooling, the professors cannot tell him how to market his spare time.

Here is the case of a retired minister. He is too old to be a pastor—but just old enough to be a counsellor. His brain is clearer, his knowledge riper, his faith stronger and his heart younger than when he stood, fifteen hours a day, on the firing-line of duty. But no church wants him; he lacks now the firm step and imposing presence of a popular preacher. He could not save money on his paltry salary. What can he do! His plight is that of the retired physician, teacher, or other professional man, whom physical age alone debars from usefulness. Why should not the experience of these men be worth good money to the community? There are kinds of public service that men past seventy could render most efficiently. But the salesmanship is lacking. So the economic waste goes on, and the wise old men half starve.

Here is the case of a middle-aged wife, in the so-called leisure class. Her children are grown, her time is vacant, her heart is empty, her mind is void. She gropes blindly for an occupation. She joins many clubs, she goes in for New Thought or Cosmic Philosophy, she flutters from charity to charity, she takes up all the novel notions in her "set." But she is not satisfied. What this woman needs is to make herself a producing member of society, to have a work all her own, put herself in it, grow as the work grows, find content in creativity—and the self-respect that comes only with selling for a good price a real masterpiece!

YOU have something to sell. What is it? Unless you are trained in the science of personal salesmanship, the chances are that the most valuable product of your life is not more than 60 per cent as good as it might be, and not more than 30 per cent as profitable. Wc insert here a definition. *Personal salesmanship is the art of making your finest product or service the best in its own field, then selling it regularly to the most possible customers for the largest reasonable price.* Everybody can make or do something that many people want made or done. Your first move, in arriving at your market value, is to find what that something is. There are two basic methods—objective and subjective.

1. *Objective.* What do people want most? Food, clothing, shelter, money, work, pleasure, travel, opportunity, education, position, and the public utilities (such as transportation, light, heat) incidental to the satisfaction of these primary needs of humanity. How many young folks, choosing a career, stop to think of the size, profit and permanence of the market for their life work? Pardon a bit of autobiography. When I left college, there were a dozen things I wanted to be—a doctor, a teacher, a preacher, a musician, a poet, an artist, an editor, an advertising manager, a scientist, a manufacturer,

a reformer, and a philanthropist. The vocational problem was rather complex. I didn't go off and ask my subliminal self "What would you like to do, and what would be easiest, O Temperamental Aspect of Me?" No, decidedly not. I spoke thus with myself: "You poor ignorant, lazy chump; your job right now is to puncture the inflated college notions you would fly to Elysium on, hit earth good and hard, festoon yourself with clean soil, and dig for about twenty years in the field where you grow the *largest crop of service for humanity.*" So I chose efficiency work—the one field of universal outlook and uplift. The demand is now many times greater than we can supply, with more than 300,000 people regular users of our productions. All because I have made life the answer to the question: "What do people want most?"

2. *Subjective.* What can you do best? This problem is even more vital than the preceding query. Solve them both, blend the solutions, and you have a guaranteed recipe for success both financial and spiritual, on condition that you *add the science of salesmanship.*

I will now take a few letters from our correspondence files, and briefly answer them. Each inquirer begs to know just how to sell a personal product.

Here is a farmer, with crops to sell. He should consider the following aids: Bulletins and other agricultural publications of U. S. Department of Agriculture; subscription to three or more farm papers, with regular reading of advertising section as well as editorial; catalogs of leading manufacturers of farming tools and facilities; coöperation with state and county agricultural agents; consultation with reliable advertising agencies in cities nearby; close touch with developments of agricultural extension work of the state university; affiliation with boys' crop-raising clubs and girls' canning clubs; investigation of new parcel post opportunities for selling farm produce by mail; study of current magazines for advertisements of farmers doing a mail business, and comparison of their literature; employment of regular advertising methods, such as newspapers, street-car cards, posters, hand-bills, mailing lists, attractive signs on the farm where every passer-by will surely notice them.

HERE is a teacher with knowledge to sell. He wants a better position, but has no idea how to get it. He should try some of these plans: Public lectures by himself on popular phases of his work, under auspices of a civic or scientific organization; publicity campaign to increase enrolment in his classes; preparation of articles for educational journals; publication of a book or series of books to fill a general need in the classroom; attendance on meetings of educators prominent in state and nation, with a service rendered by him at each meeting; membership in foremost educational associations; original experiment, research or investigation, with results of acknowledged value to his pupils or fellow-teachers; comparison of other school catalogs, with suggestions for improving the conduct of his own classes; modern helpfulness on social service lines, to make the school building a social center, and the neighbors all friends of the school; aid of advertising expert in writing letters, gaining interviews, and otherwise making connections looking to a higher position.

Here is a stenographer, with service to sell. She wants more pay, and swift promotion. Let her follow such lines of approach as these: Purchase of books on cutting stenographic costs, improving office management, writing business letters, advertising and selling products of the firm, developing a business woman; careful study of these books, and ways found to increase output, decrease outgo, lessen burdens of employer; subscription to a leading office magazine or trade journal, with regular study in spare time; enrollment with a correspondence school teaching personal efficiency or business administration; help of the Plan and Purchase Department of The Independent for providing better office facilities; new ideas from our Independent articles,

(*Continued on page 338*)

PERSONAL PRODUCTION TEST

BY WHICH ANY READER HAVING A PRODUCT OR A SERVICE TO SELL MAY INCREASE THE VALUE AND REWARD THRU BETTER SALESMANSHIP

DIRECTIONS. First read Mr. Purinton's article "Something to Sell." Then grade yourself on these questions. Where answer is Yes, write 4 in space opposite. Where answer is No, leave space blank. Where answer is indeterminate, write numeral under 4 that you deem honest. If you have queries or problems, you are invited to consult Mr. Purinton by letter, Independent Efficiency Service, 119 West Fortieth Street, New York. Watch Efficiency Question Box for answer.

1. Do you regard salesmanship a science, a duty, a pleasure and a habit? ....
2. Have you judged your market value by a set of impartial, scientific standards? ....
3. Are you informed on the highest earnings in your business or profession? ....
4. Do you know why *your* income is less than it should be? ....
5. Have you set out to double your earnings in the next two years? ....
6. Has Mr. Purinton's definition of "personal salesmanship" revealed a lack or defect in your method?.... .....
7. Does what you can do best coincide with what people want most? ....
8. Is your work organized to include an expert sales department? ....
9. Have you read at least four modern books on practical salesmanship? ....
10. Are you, or is your sales manager, a graduate of a good school of salesmanship? ....
11. Have you analyzed your product or service by engineering tests of standardization? ....
12. Do you know every stage, part, function and possibility of what you are selling? ....
13. Would you stake your personal reputation on your professional work? ....
14. Is it your business to promote the business of your customer? ....
15. Do you make every criticism or complaint a definite spur to progress? ....
16. Can you regard all competition as instruction, with yourself the student? ....
17. Did you ever compile a list of great feats of salesmanship? ....
18. Have you put down forty reasons why the big department stores are successful? ....
19. Will what you are selling be needed more ten years from now than it is today? ....
20. Are you making a special study of how to extend your market? ....
21. Do you know that all costs of production and distribution are the minimum standard? ....
22. Have you asked yourself all the questions in next to last paragraph of Mr. Purinton's article?..... .....
23. Did you read Mr. Purinton's earlier article, "The Efficient Salesman," in The Independent? ....
24. Have you harmonized the ideal and the commercial, in your thought, work and life? ....
25. Does every sale carry a service with it? ....

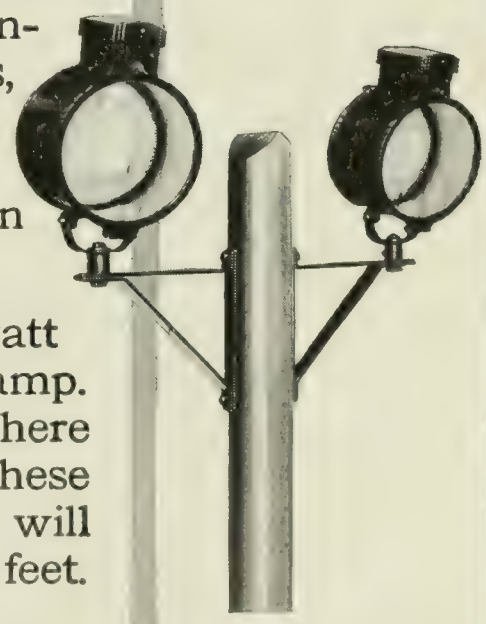
Western Electric Davis Flood Lamps

For Night Drilling

For Industrial Plants



For Inside Use or for Mounting on House Tops.

These lamps furnish ideal illumination for night drilling, for illumination of industrial plants, docks, athletic fields, playgrounds, public buildings, beaches, pageants, etc. They are easily installed, are waterproof, and can be connected to any lighting circuit.

The light is furnished by a 1000-watt Western Electric Sunbeam Mazda Lamp. It is pure white and so diffused that there is neither glare nor shadow. One of these lamps placed 60 feet above ground will illuminate an area of 100,000 square feet.

Write to our nearest house for Booklet No. 521-BJ, giving complete details.

Bracket Type for Mounting on Poles.

EQUIPMENT FOR EVERY ELECTRICAL NEED

NATIONAL EFFICIENCY

CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

THE National Institute of Efficiency is planning a series of authoritative handbooks of the war in continuation of the Monographs of Efficiency. The first is being written by Mr. Henry Woodhouse, Governor of the Aero Club of America and a member of the Board of Governors of the Institute. It deals with "The Eyes of Our Army and Navy." Others of the series are "Efficiency and Naval Defense," by Rear Admiral Bradley A. Fiske; "Efficiency and National Defense," by Major General Leonard Wood, and a monograph by Mr. E. St. Elmo Lewis dealing with business organization in the war.

* * *

Minnesota is doing her bit. Before official agencies were erected, the Civic and Commerce Association, thru the Committee on Northwest Development, assumed the task of spreading broadcast information about conditions in the northwest and about the problems which it would be likely to face. Because of the discouraging reports about the wheat crops and because of the fact that seeding has already started in some parts of the northwest, it was immediately recognized that the first problem to be attacked was that of increased acreage of spring wheat. Accordingly, franking privilege was secured from the Government for sending out information; 7000 posters were printed and distributed to the post offices, farmers' clubs, banks, commercial clubs and creameries in the state; letters were sent to over 50,000 individual farmers; letters were sent to each commercial club in the state; news stories on the crop conditions were provided for all newspapers and farm journals in the state; and letters were sent to 1300 salesmen traveling out of Minneapolis, asking them for their cooperation.

Later a committee consisting of representatives of all state organizations was appointed by the Government. This committee was organized with seven sub-committees under the following heads; crops, live stock, labor, publicity, markets, home economy, credits and finance. It then devolved upon the Committee on Northwest Development to assist this State Committee in correlating work which other agencies in the state were already doing with that of the State Committee. The Federal Reserve Bank has done very efficient work in organizing certain local sections for increased production and has carried out a wide campaign of publicity.

The association has organized a Civilian Auxiliary and has assisted in various ways to stimulate recruiting for the navy and army, and expects to devote its entire resources and staff to military, industrial and agricultural mobilization along various lines suggested by the Government. Moreover, Minnesota banks, in connection with the Federal Reserve Bank, are purchasing seed wheat, seed corn, barley and seed potatoes, and not only sending them out for distribution to farmers, but also offering suitable financial aid. The railways are heartily cooperating and are sending these seed supplies out into the country in freight cars attached to passenger trains.

* * *

Beginning May 6 the Government is issuing a daily newspaper giving the news and announcement of all departments relating to war preparations. The publication, known as "The Official Bulletin," is issued under the direction of the Committee on Public Information, and is mailed to all newspapers, commercial organizations, or others requesting it. Postmasters have been directed to post it daily in their offices. A weekly bulletin also is planned to weekly newspapers. Edward S. Rochester, former editor of a Washington newspaper, is editor of "The Official Bulletin."

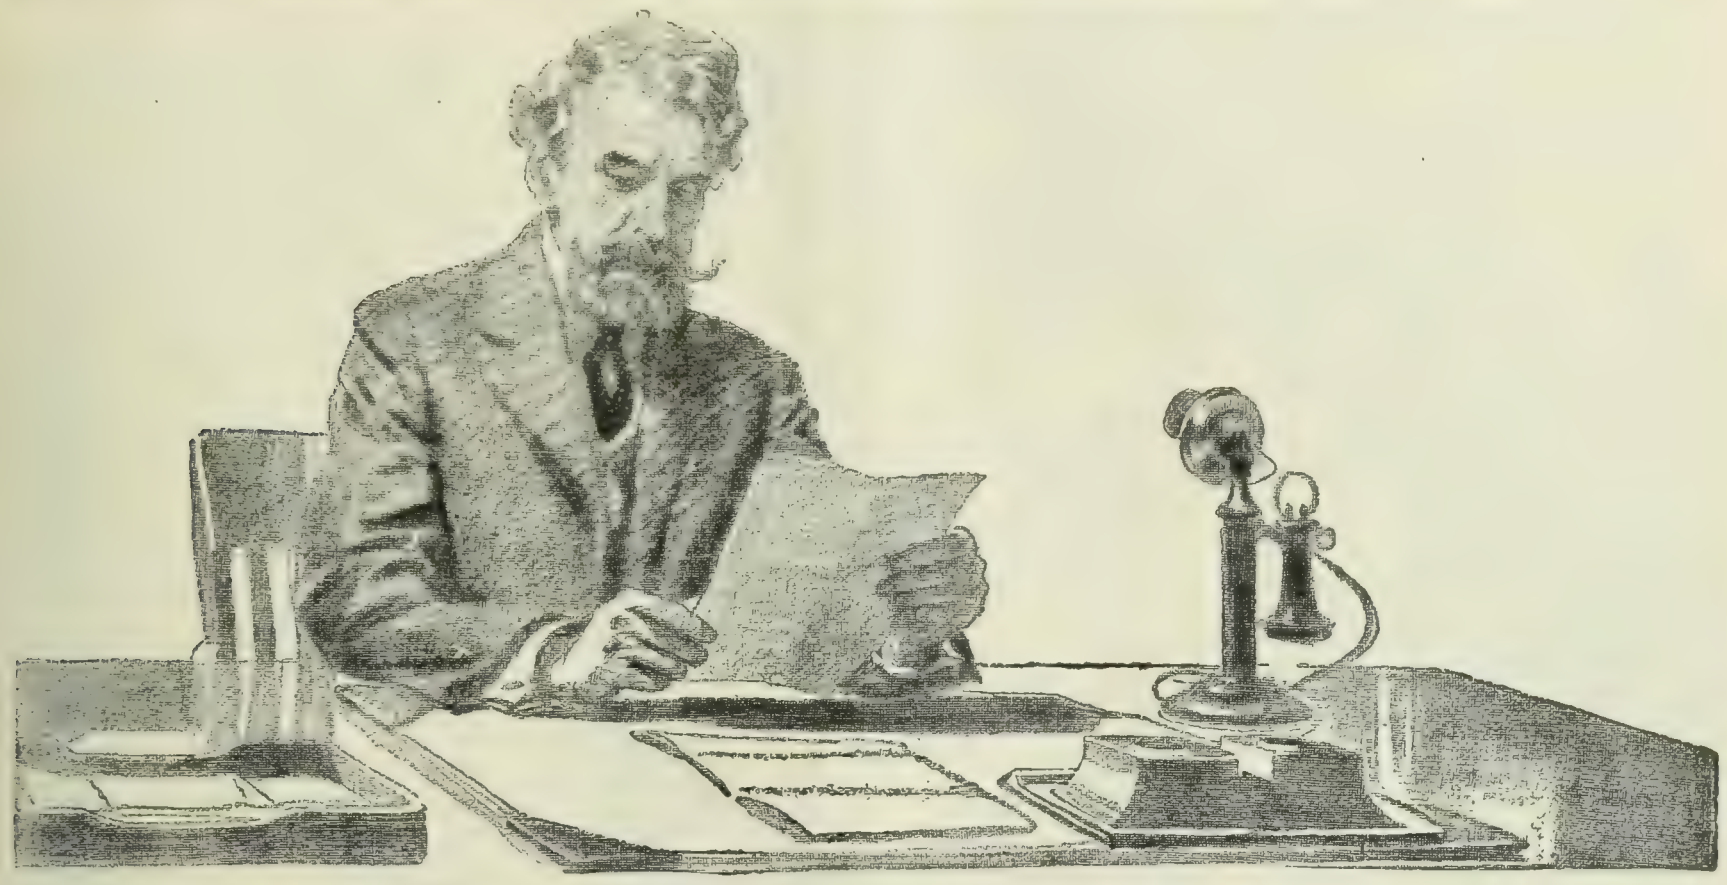
* * *

To meet the case of women who wish to take a full share in the preparedness movement but who are handicapped by lack of special training, Teachers' College at Columbia University has organized a valuable series of courses. One course in "administration" covers the planning of the family budget on a war basis; another deals with "emergency cooking and army ration instruction" and there are two courses in hygiene, from the point of view of neighborhood sanitation and first aid. In every case the fees charged are such as will merely cover the actual cost of material used. The beneficial effect of the training given at Teachers' College will not be confined to one state, for almost every section of the country is represented at the college and the plan is to gradually establish similar courses in schools and colleges in every state. In this an intensive "campaign" commences at the college on May 21 to train leaders of groups.

* * *

"There is much cheer in the way people, alike in the town and on the farm, are awake to the necessity of greatly increased food products this year," writes Archer Wall Douglas, of St. Louis, chairman of the Committee on Statistics and Standards of the Chamber of Commerce of the United States in a report just issued. "Not only are gardens being cultivated everywhere and vacant lots being used, but lawns, parks, railroad rights of way and flower gardens are devoted to the raising of all manner of vegetables. Of even greater moment is the story of an acreage of corn, oats and potatoes that will break all previous records."

* * *



Mr. Perley Morse, of New York, a corporate member of the National Institute of Efficiency, has been appointed secretary of an important campaign for organizing the activities of men's clubs thruout the country on a war basis. Five hundred thousand members of 3700 clubs will be reached by this movement, whose objects include increasing the food supply by an extension of home gardening and coöperation with the military authorities and the Council of National Defense for the purpose of home defense and the mobilization of the country's war resources. Mr. Morse has made an extensive study of civilian war work in Canada, and his plans will be based on the methods of work that have proved most effective in the Dominion.

* * *

Arising out of Mr. Purinton's advocacy in The Independent of a War Efficiency Library in every community, the following paragraph appears in the Newark *Daily Advocate* as evidence of the way to take up an idea efficiently: "One of our readers sends us an extract from The Independent's efficiency department and endorses the idea by saying that he will contribute $2 to start a fund for a war library. There is no doubt that the purchase of an assortment of patriotic books for the Newark Library would be a splendid thing. As a rule an appeal without a personal 'follow up' never gets anywhere, but if our friend will go out among his friends and start the fund, *The Advocate* will gladly contribute and do its part in making the effort a success."

* * *

A noteworthy activity at Columbia is the publication by the Intelligence and Publicity Bureau of a "Directory of Service," this being the ninth of a series named "Columbia War Papers." Practical help is given in the directory to people anxious to learn how their services can best be used by the nation, and even the position of children of school age is discussed. "The consensus of opinion seems to indicate that children of school age can best aid by continuing their education, tho they can profitably spend their summer in industrial occupations. . . . Boys between the ages of fifteen and nineteen can find employment on farms this summer; 2,000,000 are wanted. Various organizations are at present enlisting boys who wish to help in this way." Copies of the pamphlet may be obtained at cost from the University.

Wins 7 fortunes-each in a different business

A millionaire in seven different businesses!
This is the remarkable record of Hon. William A. Clark, who began life as a poor country boy.

He has made huge fortunes in seven distinct fields—mining, finance, sugar, coffee, manufacturing, cattle-raising and railroading.

What enabled Senator Clark to master seven complex businesses?

Most men struggle a life-time and only half succeed in one of them. Yet Senator Clark had no magic formula for success. The reason he succeeded so wonderfully was this: *He knew business fundamentals.* And he knew business fundamentals because he *studied* them.

He went to school again

All his life Senator Clark had been a student. His friends called him "the man who wants to know."

But the turning point in his career was when at thirty he suddenly left his business in the West and came East to go to college. At thirty Senator Clark saw that if he wanted to be a really big figure in the world's affairs he must have something more than his courage, energy and natural shrewdness. That was an understanding of the science of business.

It was his knowledge of the big principles underlying all business that made Senator Clark rich and powerful.

All successful men must master the principles of business. Once they have mastered them, they go forward rapidly. Men who have not mastered them remain halfway successes, the rut-runners of business.

You too, must study as Senator Clark did, if you are to go forward, if you are to avoid the rut.

But today you do not have to travel across the Continent to gain a knowledge of business fundamentals. You can study the principles on which Senator Clark built his fortune in your own home in your spare time.

The knowledge that carries men thru

It is this broad grasp of the fundamentals of business that the Alexander Hamilton Institute is now giving to more than 50,000 business men.

The Institute collects, classifies and transmits to you thru the Modern Business Course and Service the best thought and practice in modern business. It gives you a thoro and sound training in the fundamental principles underlying all departments of business—it gives you a knowledge that can otherwise be obtained *only* by many years of experience—if at all.

Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Institute. This Council consists of Frank A. Vanderlip, President of the National City Bank of New York; Judge Elbert H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce, and Jeremiah W. Jenks, the statistician and economist.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young men in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; George M. Verity, President of the American Rolling Mills; W. H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co., and scores of others equally prominent.

"Forging Ahead in Business"

A careful reading of the 135-page book, "Forging Ahead in Business," which we will send you free, will repay you many times over. Every man with either a business or a career to guide to bigger, surer success, should read this book. Simply fill out and send the coupon below.

Uni-Lectric Light and Power for Every Summer Home

The Uni-Lectric brings to the summer home electric current for both light and power. At a very nominal cost you can have *all the lights you need*—you can operate the various electrical conveniences and you can have 24 hours' continuous service *every day* if you wish.

Big Capacity

Because of its generous capacity for *power* and *heat* as well as light, the Uni-Lectric makes the ideal outfit for summer homes. Its capacity is sufficient for 50 lights at one time. You can operate an *electric water supply system*, electric heaters, electric irons, vacuum cleaners, electric fans, percolators, *toaster stoves, fireless cookers,* and *larger electric stoves* with capacity for breakfasts, suppers and ordinary dinners. Your large kitchen range need only be used for one meal per day.

Then without one cent of extra expense you can charge the six-volt storage batteries of your car or motor boat while using current for other purposes.

No Belts—No Batteries—110 Volt

Our patented, high speed, rotary sleeve valve engine drives the generator with such smoothness that all necessity for storage batteries is done away with and the renewal of batteries and battery up-keep cost is permanently eliminated. Moreover, with the Uni-Lectric the summer home owner is never bothered with the troublesome job of draining off and refilling batteries every fall and spring.

The Uni-Lectric generates standard 110 volt current the same as city lighting plants. Uses the same standard lamp bulbs and electrical devices used in your city home and obtainable in any electrical supply store.

Easy to Care for—Easy to Operate

The Uni-Lectric is built in one compact unit with the engine and generator direct connected. Extremely simple in construction; only 24 inches wide, 25 inches long and 42 inches high. Can be placed in *any* convenient location, no foundation required. The Uni-Lectric requires only the care and attention that you would give any machine from which you expect *many years* of service. Wiring may be so arranged that engine can be stopped by switch located in bedroom.

Because storage batteries are unnecessary with the Uni-Lectric, we guarantee the *entire outfit.* It has proven its efficiency and economy by actual service in the hands of users.

such as "A Day at the Office," and "The Job Higher Up."

These are but a few concrete hints for three classes of readers out of hundreds. But they illustrate a fundamental principle we may state thus: *Every good workman has to learn to be his own selling agent.* And the more conscientious or altruistic you are by nature, the more scientifically, resolutely and habitually you must focus thought and energy on the selling side. How? We offer a number of suggestions. They apply not only to business men, but also to bankers, doctors, teachers, preachers, writers, reformers, musicians, mechanics, lawyers, inventors, statesman, housewives, factory girls, and messenger boys.

First, analyze your product. See if it is *worth* selling. Apply all the known tests for similar work, and establish a guaranteed system for repeating such tests in advance of any output. You must build reputation on standardization. If you don't know how to standardize your product, secure outline of specifications from trade journals, technical books, engineers' reports, correspondence courses.

Learn every stage and process of manufacture. Be able to answer any question about your merchandise, from the raw material to the wrapper. Get a good-natured friend to ask you all manner of questions—then go and find the answers. Be prepared to meet objections and refusals, particularly the "selling talk" of rival concerns, by a complete array of unanswerable facts. Don't argue about your product. Show proven facts—or keep still.

Welcome hostile criticism; the worse it is, the better for you. Make every critic a business-builder for you, by having the reason for complaint swiftly changed to a reason for satisfaction, thereby rendering future complaints impossible. Never leave a customer dissatisfied—lose money on him first.

Believe utterly in the superiority of your product, in the ability and integrity of the producer, in the vitality and necessity of the service. Let your merchandise be only the object to hang human faith and friendliness upon. Eliminate the barter idea—substitute the benefit idea.

Study the needs, difficulties, problems, of your customer. Be able to offer a solution, or suggestion. Make it your business to promote his business. Organize a service department, to clinch every sale with permanent satisfaction. Remember that your best salesman is a customer who got more than he bargained for.

Realize that there is now a science of salesmanship, as complete, rigid and minute as the science of mathematics or chemistry. You wouldn't fool with chemicals without a knowledge of the science of handling chemicals; don't fool with sales unprepared—you will be inviting an explosion of friendship and finance. Read several books on the new salesmanship, and study by mail a

UNION PACIFIC

WHEN the "marriage in the mountains" of the Pacific and the Atlantic was solemnized in 1869, a nation rejoiced.

On that memorable day the last spike—a golden one—was driven, uniting the two sections which spanned the Continent. New York and California met.

All over the country the telegraph recorded the tap—tap—tap of the sledges as they drove the spike. It was a national holiday of thanksgiving.

For the Union Pacific was a federal project—designed by wise men to bind the Union together.

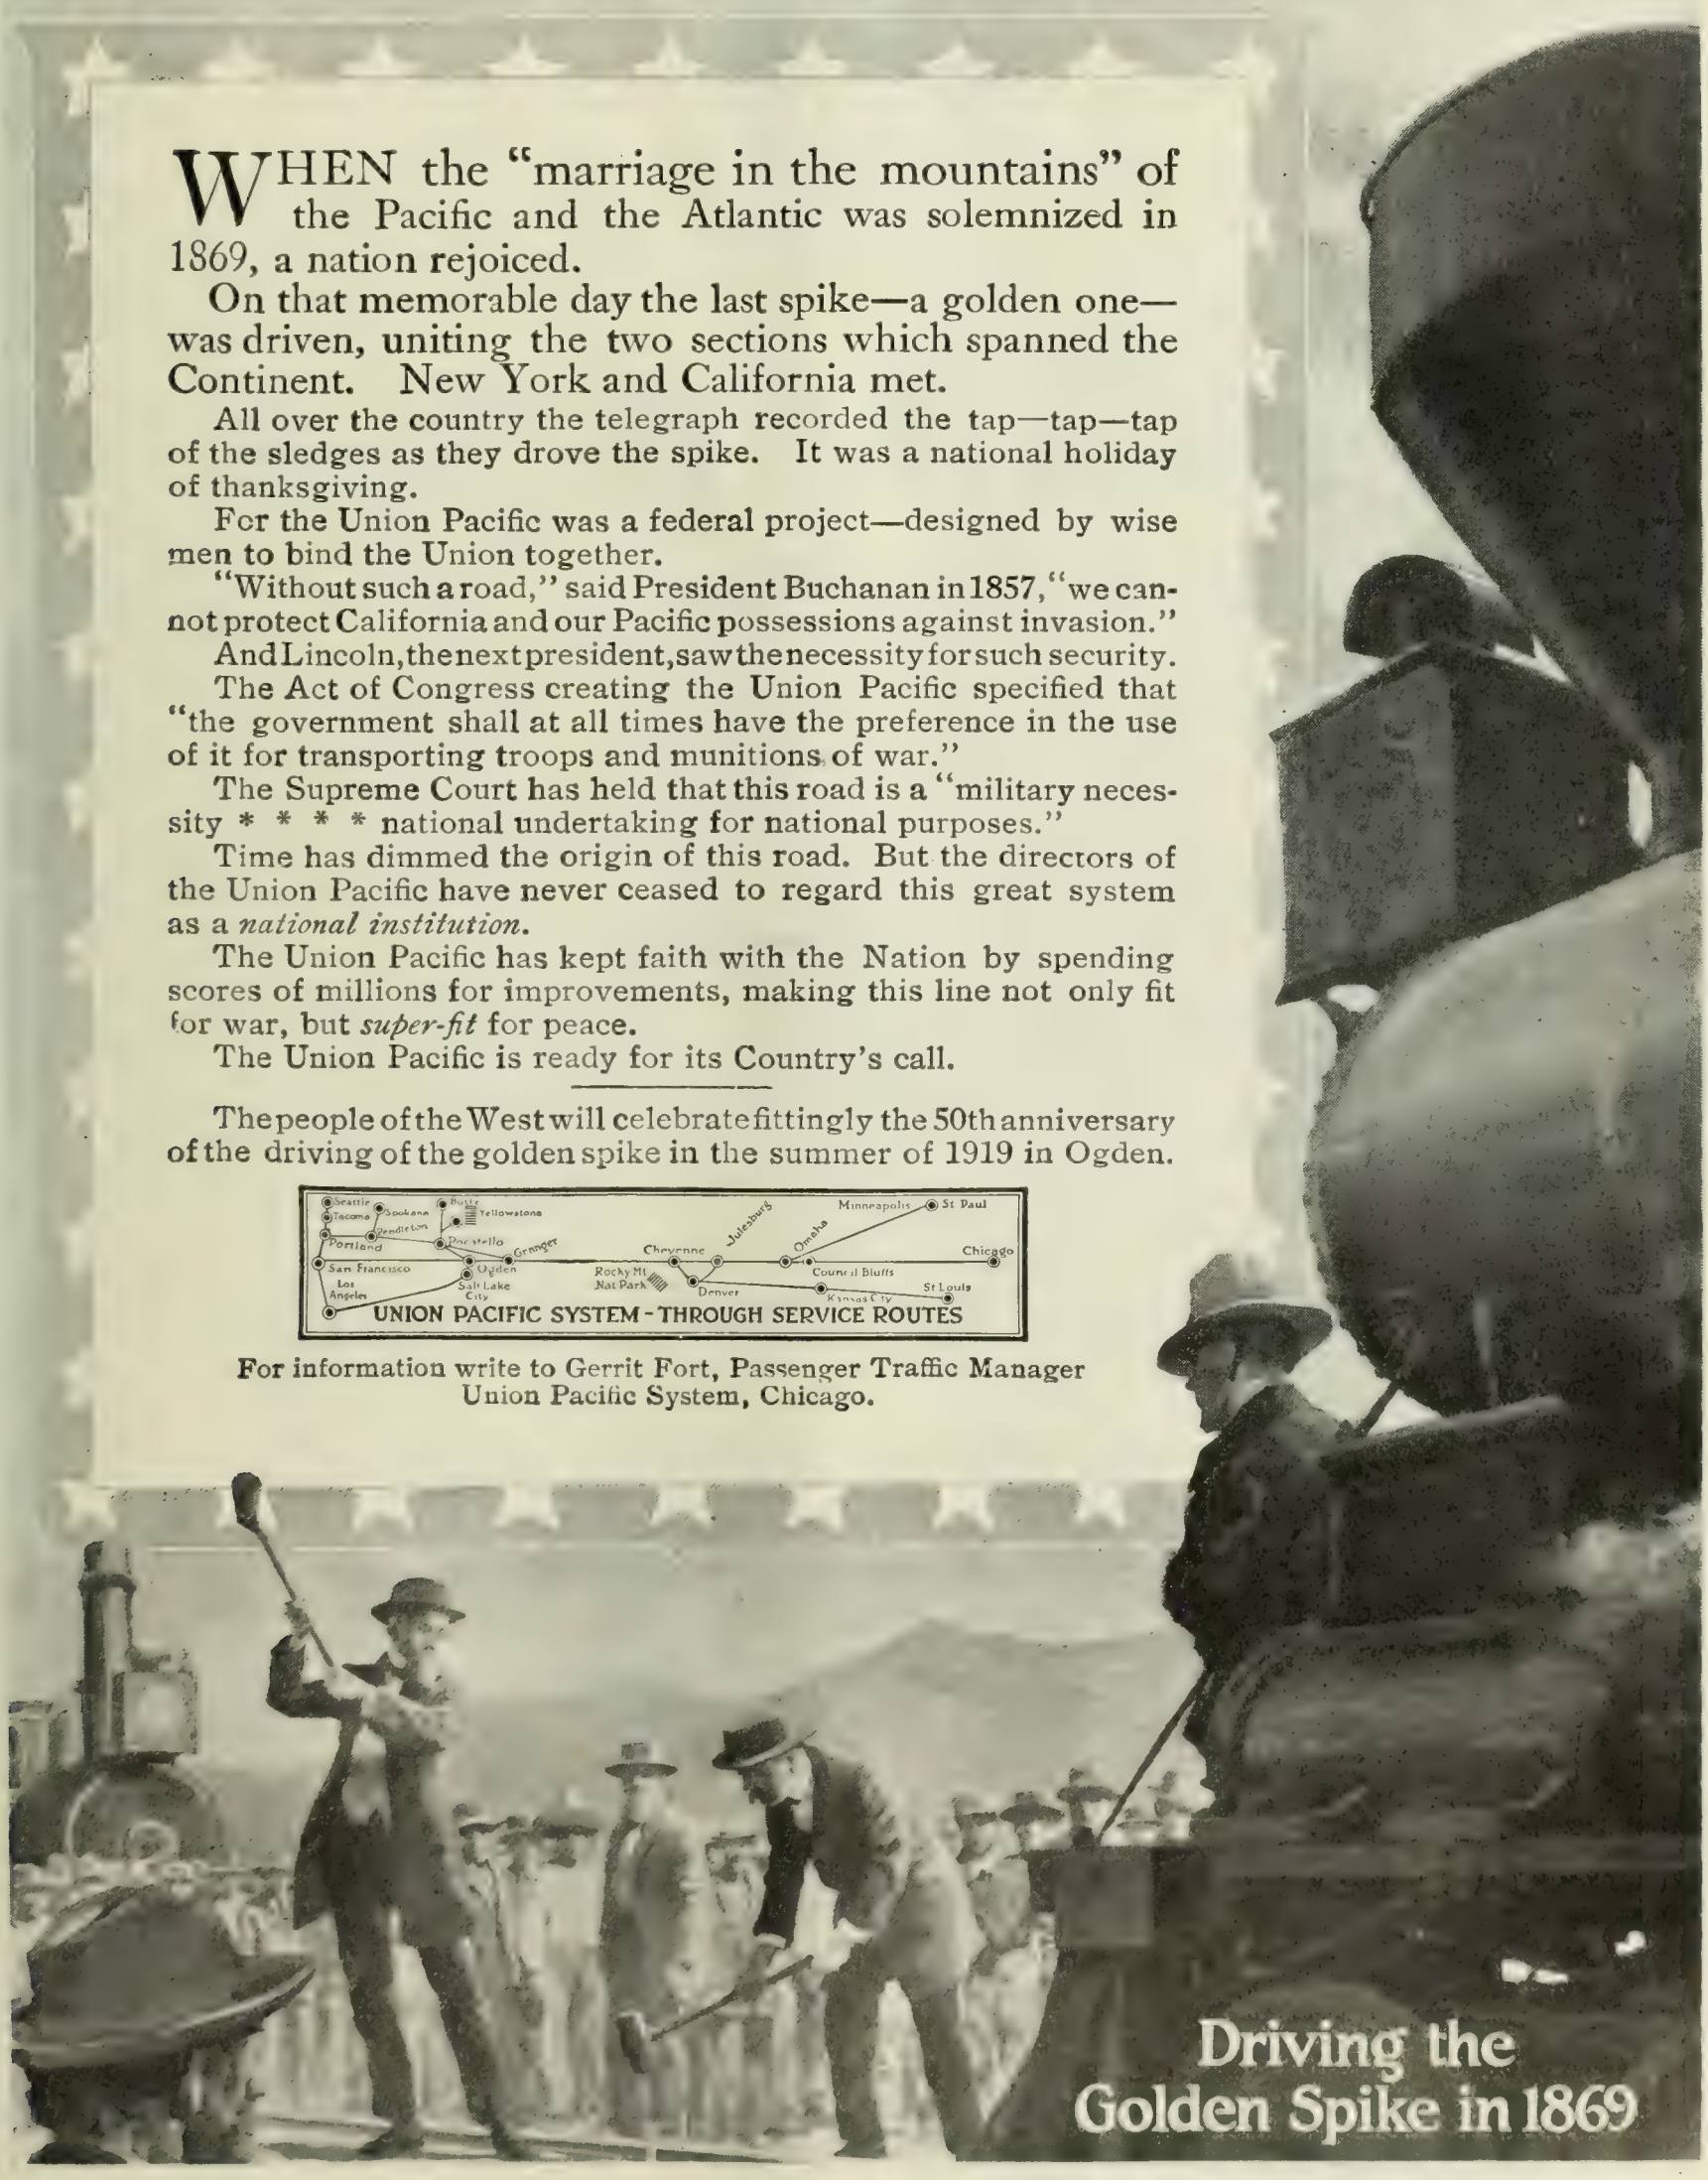
"Without such a road," said President Buchanan in 1857, "we cannot protect California and our Pacific possessions against invasion."

And Lincoln, the next president, saw the necessity for such security.

The Act of Congress creating the Union Pacific specified that "the government shall at all times have the preference in the use of it for transporting troops and munitions of war."

The Supreme Court has held that this road is a "military necessity * * * * national undertaking for national purposes."

Time has dimmed the origin of this road. But the directors of the Union Pacific have never ceased to regard this great system as a *national institution.*



The Union Pacific has kept faith with the Nation by spending scores of millions for improvements, making this line not only fit for war, but *super-fit* for peace.

The Union Pacific is ready for its Country's call.

The people of the West will celebrate fittingly the 50th anniversary of the driving of the golden spike in the summer of 1919 in Ogden.

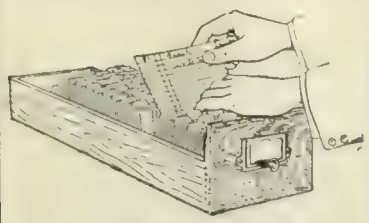
modern course from a school of national importance; watch current bulletins from the leading salesmanship clubs, and take a professional journal: if you can't do these things personally, arrange for one or more of your associates to be thus informed.

Regard all competitors as teachers. There isn't one of them from whom you could not learn something. Each, in some way, probably excels you. Find how, then put a stop to your inferiority.

Compile a catalog of great feats of salesmanship, from the lives of famous merchants, inventors, manufacturers, railway pioneers, commercial chemists, bank founders, empire builders. Make a thoro study of these biographical proofs that you can sell *your* product in a big market for a big price.

Extend your market. Don't make or do something necessarily confined to a small group of customers. Plan to reach out for a world-trade. The conviction that hundreds of thousands of people need your work, and the intention to place it before them, will help mightily to keep your vision clear, your aim firm, your hand true, your heart brave.

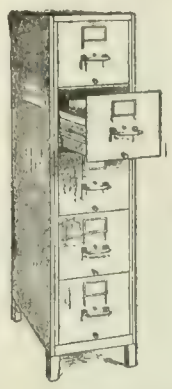


Watch the trend of the times and modify your output accordingly. Ten years ago, the motion picture business was no business at all, and the saloon business was a money-maker. Now, the movies are everywhere, and in a third of the United States the saloons are nowhere. Ten years from now, what will the demand for your work be? Plan your production with an eye to the future. Don't peddle candles in the age of electric light.

Learn advertising. You must tell the public what you are doing, tell it frankly and boldly, tell it kindly and thoughtfully, tell it clearly and convincingly, tell it earnestly and often. A good publicity man is your first lieutenant for a winning sales campaign. At least on this one point Billy Sunday and Charlie Chaplin agree—and on this one point, both are right.

Line up all your forces on the selling side. Articulate the ideal and the commercial. Don't let your man with ideas and your man with dollars pull apart, as they generally do. Make your theoretical man see that he can't start his business building without funds; make your material man see that he can't complete his building without ideas and principles.

Take a trip to the headquarters of a big merchant, like Wanamaker of New York, Filene of Boston, Marshall Field of Chicago. Spend a week finding out why he succeeded. Prepare a list of at least forty reasons to explain his national reputation—and the contrasting failure of the average petty storekeeper. Then apply these lessons to your own work, your own future.

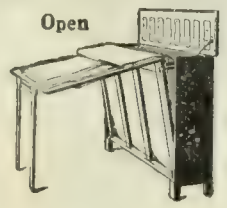


Make your whole proposition defend itself under a battery-fire of questions, before you let the public assail it. How many people want your product—would pay and can pay your price for it? How is the demand now being filled? Are you able to undersell competition and yet earn a fair profit? Can the

Card Systems and Cabinets

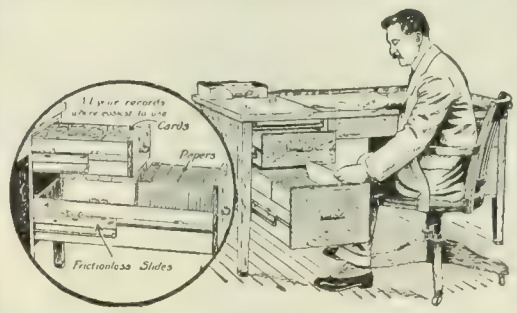
Complete efficiency systems for every business or profession. Card cabinets of wood and steel, all sizes. Write today for new system catalog. Mail coupon below.

"Fire-Wall" Steel Cabinets



The only filing cabinets with double steel walls lined with asbestos and having dead-air chambers between; automatic safety latches hold drawers shut; *"frictionless"* drawer slides.

"Five-S" Steel Shelving



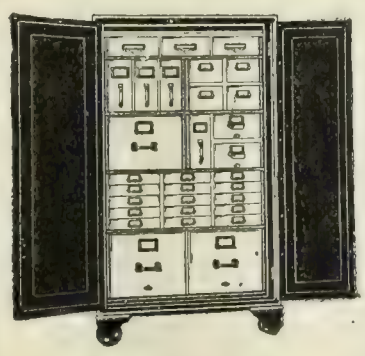
(1) *System*, (2) *Storage*, (3) *Sectional*, (4) *Steel*, (5) *Shelving*. For offices, stores, etc. The *only* shelving that *systematizes* stock. Prevents loss; cuts down depreciation.

For Blue Prints—
Mammoth Vertical File

Keeps up to one thousand big blue prints, drawings, etc., flat, clean, indexed and protected. Closed, it takes only 4 sq. ft. Open, a drawing table. Patented. Steel or wood.

"Y and E" Efficiency DESK

Models and complete special *systems* are offered for every business and professional man. Used as a desk and called a desk, but is really a kind of filing cabinet. Saves the cost of a high-grade filing cabinet; saves your time and helps you to do better work. Check the coupon below.



Everlasting Index Tabs

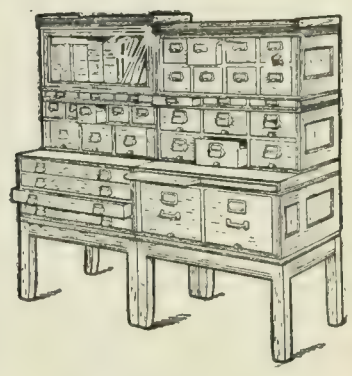
A flexible indexing device for books, ledgers, card and vertical filing systems, etc. Used as price tags. Changeable labels; cellu'oid windows; bulldog grip.

Movable Indicators

Used in ledgers, follow-up systems, etc., to indicate accounts overdue, dates, sub-indexes, etc.

Record Safe

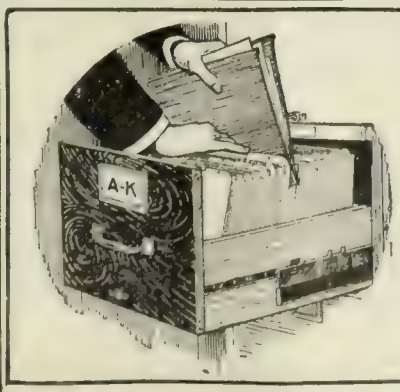
The most rigid office filing safe made. *Interlocking flange* in door and walls. Superb finish throughout. Commercial grade, with extra-big dead-air chambers and asbestos between the walls.



Get This Book Showing

HOW TO FILE

Modern Filing—a textbook on office system. Fully illustrates and explains all efficient filing systems in common use—direct name, alphabetic, numeric, follow-up, check filing, indexing, card ledgers, stock records, document, etc.



Published by the world's leading manufacturers of office systems and written out of their rich and practical experience in service work with every line of business.

Get a copy—for yourself, your file clerk, your office library. Money refunded on return of book in ten days if not satisfactory. Check coupon and mail with $1.00 (Canada $1.50).

Sectional Cabinets

Upright, horizontal and half-width sections for every kind of filing. *"Frictionless"* drawer slides. Steel, oak or mahogany.

"Direct-Name" Vertical Filing System

The principle of this famous system is *"find alphabetically; refile numerically."* Numbered guides divide the file into alphabetical divisions. Behind each guide are "Direct-Name" Folders, each bearing the number of the guide behind which it is filed; so you just match the numbers when filing. If a number 52 folder ever gets behind guide number 4, it sticks out like a quarter in a handful of dimes. The miscellaneous folders become guides when you transfer, thus cutting down expenses. Economical, speedy, efficient. Write for descriptive literature.

"Y and E"
Rochester, N. Y.

We offer efficiency Cabinets for use with all Systems and efficiency Systems for use with all Cabinets. You are using *some* of the 4000 "Y and E" products. Judge them *all* by these. Then you will use more of them. Check and mail coupon today.

How Big a Man Are You in the Mail?

Examine Your Own Letterhead

CONSTRUCTION BOND

WHEN a sheet of paper is all of you a man can see or feel—just how do you impress him? Do your letters crackle with importance and subtly suggest the substantial standing of your firm?

Mark this: Today's conditions in the paper industry emphasize your opportunity to make your business stationery outstandingly impressive. Many firms have stooped to shoddy paper—to "save" a tenth of a cent per letter. Many once good papers have been shorn of quality to find a market.

But Construction Bond, with its honestly maintained quality, today gives you multiplied advantage—it now meets so little real quality competition in the mail.

Make a note now to improve your business stationery. Write us for latest letterhead suggestions and the names of the stationers in your locality who carry Construction Bond in stock and produce fine stationery upon it.

Look for this watermark in the stationery of firms of recognized importance. You will find it frequently.

- Unrivaled Location and Scenery.

Booklet, Miss G. W. ALLEN, 117 W. 12th St., New York

market be enlarged at slight cost? Have you had enough repeat orders to be sure of automatic selling after you gain your initial customers? Why and how is your product superior to all others? Can the supremacy be maintained by inherent features that rivals could not steal or copy? Is every patentable feature protected by law? Do you know the weakest department of your organization, and are you working most to build this up? Have you capital enough to swing you over the starvation period? If you had to raise capital suddenly, where and how would you get it? How far will cash sales be possible, how much loss from credit must be figured? Has each worker both a heart and purse interest in making the enterprize successful? Are all the officials experts, each at the top of his field? Have you competent counselors, preferably as directors? Can you show many valuable endorsements from prominent individuals and institutions? Are you sure that there is no incurable weakness or defect, somewhere in your proposition? Would you give your life to make your work a tremendous power?

Salesmanship is not the transfer of a bill of goods. It is the right focus of a man's physical, mental and normal powers on the production and distribution of the best thing he can offer to the world. A good salesman has to be a good citizen—and a good citizen has to be a good salesman.

COUNTING THE CONVERTS

It is at this point that your missionary, so violently put to usury, begins to count. He begins to deal in statistics. There is this in common between the man at the outpost and the man at the station, they run to statistics. They seem to you who grew up with them, perhaps, who went to college with them, who knew their training and equipment, who saw them off on the steamer, who knew their destination on the map—they seem to you to have been somewhat lost. As if in place of your man or woman, you have nothing at all familiar, or at best you have statistics.

That is because in statistics are embodied his adventure. When that white man who is plucked off the deck of a steamer by the hand of Africa is a missionary, he is launched upon adventures, spiritual adventures, too big for him. . . . From his youth up he has heard that the Word is life, and now he is to hear that Word thunder in strange tongues, and to find it dynamic to the point of violence. He holds the doctrine of the new birth, and he is to witness this amazing fact multitudinously reproducing itself. . . . This white man who has been praying that the Lord's Kingdom may come is to find himself beat upon and bruised by the violence of the coming of the Kingdom, deafened by the shouting and the tumult, hunted by innumerable feet in every path, and plucked at by the outstretched hands of Ethiopia. This white man has been caught in the cosmic whirl of the coming of the Kingdom of God, and his only mode of expression, his only cry out of his wonder and his terror and his new knowledge of the presence and power of God is—statistics. No more than that. A little thin crying of statistics, a kind of wireless coming out of the forest, in the night, across the line of sand and the line of surf and the sea to the gilt side of the world where the sun still shines, a little thin crying of a code word—statistics.—*Jean Kenyon MacKenzie, in "An African Trail."*

INSURANCE

Conducted by
W. E. Underwood

PITTSBURGH LIFE AND TRUST IN TROUBLE

As the result of another deal in high finance, the Pittsburgh Life and Trust Company is in the hands of a receiver. The institution named seems to have been acquired by the use of money in its own treasury. The existence of the deal was discovered only when Superintendent of Insurance Jesse S. Phillips of New York read in a newspaper of the sale to an obscure citizen of New York City, a process-server by occupation, of a piece of the company's real estate worth several million dollars. An investigation of the company was begun by the insurance departments of New York and Pennsylvania.

It develops that the persons who acquired the stock control arranged the scheme with the assistance of a number of their friends, who loaned themselves in the capacity of dummy directors, offering $80 a share for a majority of the company's stock, the par value of which is $50. An arrangement was made with a trust company of New York for a loan of $120,000; another with the parties holding the controlling interest in the stock of the Pittsburgh Life and Trust for the resignation of the then directors on payment by the buyers of 10 per cent of the purchase price. This arrangement was successfully carried thru, and the dummy directors were put in charge. The new board thereupon authorized the sale for $3,900,000 of the Washington Life building at Broadway and Liberty street, to the impecunious process-server, and to accept a mortgage from him for $3,000,000.

By way of procuring cash, certain high class securities owned by the company approximating nearly $2,000,000, were sold, and a large part of this money was used in acquiring the Dare Lumber Company and the East Lake Lumber Company of North Carolina. The manipulators then issued Dare Lumber Company bonds for $6,000,000, which were delivered to the Pittsburgh Life and Trust at face value.

As nearly as I can make out from the statements read, the old stockholders who sold out have received 40 per cent of their money, the sum of which (the 40 per cent) amounts to about $425,000. It also appears that the amount of actual cash raised by the manipulators was about $2,000,000.

On December 31, 1916, the assets of the Pittsburgh Life and Trust were $24,001,571.30; its policy reserve liabilities, $21,687,887; total liabilities, $22,391,605.21; capital and surplus (the capital is $1,000,000), $1,609,966.09.

Concrete Roads are used widely in Connecticut, like this one leading out of South Norwalk. Built in 1914 under the direction of G. A. Sherron, Engineer.

How Concrete Roads Save Gasoline

EVERY motorist has observed how his car accelerates when he goes from an unimproved road to a stretch of concrete; but he may not realize how large a saving of power and gasoline that acceleration represents. If he were to travel over a hard even surface habitually instead of over the average country road, his gasoline bill would be greatly reduced. A motorist in Mississippi has figured out that concrete roads in his community save him $30 per year in the gasoline consumed by a single car.

Reduce All Items of Operating Cost

Concrete roads lessen all other items of operating expense. The strain on tires is immeasurably reduced. On the hard, gritty surface they can grip better and do not skid. There are no loose stones to bruise the fabric.

The car rides smoothly without lunging and plunging over mud holes and ruts. The chassis lasts much longer and keeps in better repair. The engine has a smooth, even pull.

The frame, springs and transmission suffer none of the racking due to rough roads. The car depreciates much more slowly and costs less for repairs and renewals.

Any permanent road is a boon to motoring, but concrete is particularly desirable from the standpoint of easy traction, of safe, comfortable riding, and of road visibility after dark.

Concrete also has the solidity and strength which endure under heavy traffic and make it so universally used in the most important engineering works.

Alternate stretches of improved roads and mud holes do not get the motorist anywhere. He needs a continuous highway just as a locomotive needs a continuous track. Systems of concrete highways are the efficient and economical plan.

This Association can give you some interesting figures to show how light is the annual tax levy to pay off a good roads bond issue. Our Bulletin No. 136 has some interesting facts about concrete roads. We will be glad to send it to you.

CONCRETE FOR PERMANENCE

For you who take pride in your home
Alice Burrell Irvine has written this book

SEND for "Shade Craft and Harmonious Decoration." Compare your home with the beautiful interiors described in this book. See how—by the right color schemes—proper groupings—harmonious arrangement and appropriate furniture, rugs, pictures—you can make your home more attractive.

In "Shade Craft and Harmonious Decoration" Mrs. Irvine tells how to choose wall coverings and draperies that will brighten a dark room and subdue one too glaring—how to take a bit of inexpensive tapestry and do wonders with it in adding a smart touch to a chair or a table-square—how to avoid discords in your melody of color.

Your windows—and how to dress them

Your windows are the essential part of your decorative plan. You want shades made of fine muslin, heavy, flexible, opaque, closely woven—of a color to harmonize with your furnishings and of a quality that will look crisp and fresh from the outside. You want shades that will not fade, crack, tear, wrinkle or ravel at the sides. You want shades that hang straight and smooth—beautiful, durable, fine-textured cloth shades on rollers that really roll. And this is what you get when you ask for

Stewart Hartshorn
SHADE TRADE MARK **ROLLER**
With OSWEGO and
CHOUAGUEN SHADE CLOTH

You have known Hartshorn Shade Rollers all your life as the standard. And now the Stewart Hartshorn Company controls the large factories in which we make Oswego Opaques, Tints and Chouaguen Shade Cloth, so that a superior shade of fitting quality can be supplied with the world-known Hartshorn Roller.

Make sure that you get Oswego or Chouaguen (Shoo-a-gen) Shades on Hartshorn Rollers—the kind that will add beauty to your window. Tell your dealer this is what you want. He has them or will get them for you. Oswego and Chouaguen Shade Cloth come in a wide variety of rich, mellow colorings and you can easily find one that will harmonize with your rooms.

Send the coupon today. If you have any special decorative problems write to Mrs. Irvine and she will give you helpful advice and suggestions.

Which Will It Be?

A job inside dealing with things and machines

SALESMEN EARN
$2,000 — $5,000 — $10,000 — A YEAR

A profit producing position outside dealing with people

Inside workers are a part of a non-business producing machine—their earning capacity is limited. Men who can sell—who have the power to persuade people to purchase their products, always command big incomes. They are the direct producers of profits—the life blood of any concern. It is the trained Salesmen who brings in the orders—whose services thousands of concerns today are seeking—and to whom they are willing to pay large commissions and salaries.

BE A SALESMAN—EARN WHILE YOU LEARN

Our Home Study Courses in Scientific Salesmanship gives you the necessary training. It tells you how to prepare a "Selling Talk"—how to approach the prospect—how to manage the interview—how and when to close. It is the one system of practical training that links ability to opportunity and fits you to **earn while you learn.** Employers everywhere recognize the value of N. S. T. A. training. Our Employment Bureau has constantly on file more requests for salesmen than we can possibly fill.

Write today for Free book "A Knight of the Grip" and list of hundreds of good openings offering opportunities to earn Big Pay while you learn. Address nearest office. Dept. 6195

NATIONAL SALESMEN'S TRAINING ASSOCIATION, Chicago, New York, San Francisco

Judging the matter on the narratives in the newspapers, the capital seems to be impaired, unless a considerable portion of the funds converted and diverted, as indicated, can be recovered.

Until a complete statement of the case can be made on the basis of a rigid examination by the two insurance departments, policyholders should not be precipitate in abandoning their policies. Their main security, the reserve fund, if impaired at all, is but slightly affected; and I incline to the opinion that the insurance departments, thru the courts, have a good case against the old stockholders and directors.

Without creating any uneasiness in the minds of those who are carrying life insurance in stock companies of mature age and established character, the raid which has recently been made on the funds of the Pittsburgh Life and Trust Company makes it my duty to emphasize the inherent danger to policyholders which is a part of stock control. In considering this matter, I feel that the faithful service rendered by a small number of the oldest stock companies calls for some discrimination in their favor; but in doing so, I may not attempt to conceal the power which all of them possess, especially when they have passed into the keeping of the successors of their present owners, members of future generations. We are witnesses to how the successors of the organizers (in 1867) of the Union Central Life, enriched themselves between 1908 and 1916, by raising that company's capital stock from $100,000 to $2,000,000, by using a part of its accumulated surplus funds.

The Pittsburgh Life and Trust deal illustrates graphically another phase of the defenseless position in which policyholders may be placed. That company is fifteen years old; its financial condition has been constantly satisfactory; it has been repeatedly examined by the insurance departments; and the local capitalists behind it and in its directorate are men of repute. And yet a couple of adventurers were able, without money, to secretly capture control of its stock and in less than a month divert a sufficient amount of its funds to put it in the hands of a receiver and imperil the interests of its policyholders. Arranging for a loan of $120,000 with a trust company, on the security of the stock they were about to buy, the manipulators went to Pittsburgh and had handed over to them a life insurance company with sound assets of $24,000,000. And this, simply by paying to the holders of a majority block of the stock a paltry ten per cent of its purchase price.

Zanesfield, Ohio.—I do not think $3000 life insurance is too great as a provision for a dependent wife, but as the premium on that amount would for the next few years, plus your other expenses, be a strain on your small income, I would advise you to take a convertible Term policy in some old and well established company of character for as large a sum as you can afford. This form permits you to carry the protection you need at a low rate for five, eight or ten years, after which time you must exchange it for one of the permanent forms. Consult the agent of a good company.

PEBBLES

"What an extraordinary long cigaret-holder, Mr. Smyth!"

"Yes, the doctor ordered me to keep away from cigarets."—*Sydney Bulletin.*

"Have you heard from your son lately, Mrs. Smale?"

"Yes, I had a letter from 'im the other day, Mr. Clibbit; 'e be still in the basement in France."—*Tatler.*

'17—What made you so bow-legged?

'20—Father was charter member of the Prevention of Disease Association.

'17—Well?

'20—He used to swat flies on my head. —*Cornell Widow.*

"Do you think that the automobile will displace the horse?" asked the conversational young woman.

"It will," answered the nervous young man, as he gazed down the road, "if it ever hits him."—*Passing Show.*

The Girl—Ai suppose this wah is the most feahful struggle the world has evah seen?

The Man—Oh, I don't know. I once saw two Jew burglars trying to take money from a Scotchman!—*Sydney Bulletin.*

The wild man from Borneo swallowed himself
But yet he seemed pleased and not pained
He seemed neither fluttered nor flurried nor fussed
In fact he was quite self contained.
—*Cornell Widow.*

Mabel—If I died and went to Heaven could I take my dolls with me?

Mother—I'm afraid not, darling.

Mabel—Not even my little Kewpie?

Mother—No, not even little Kewpie.

Mabel—Well, if I go to Hell can I take the golliwog?—*Sydney Bulletin.*

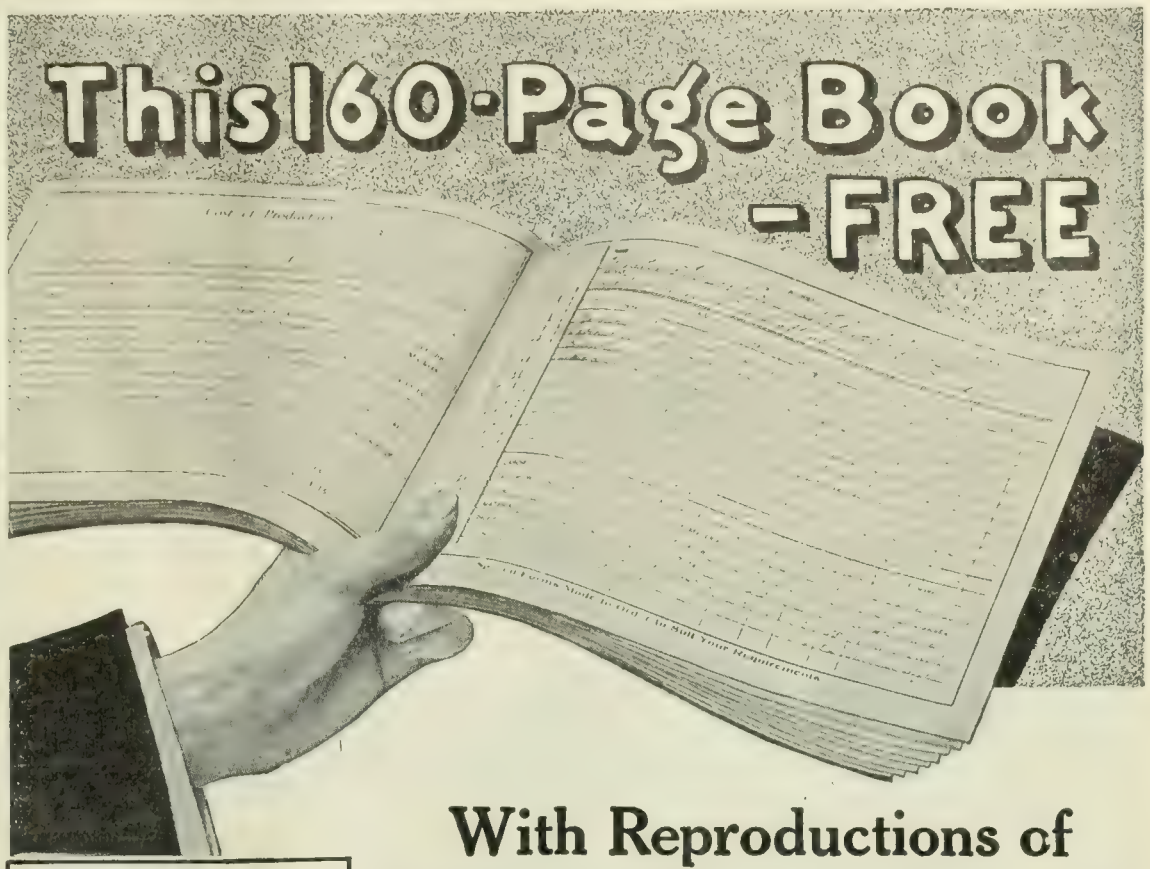
A stout, elderly woman stopped a clerk in a Cincinnati book department and demanded in a voice with a strong German accent, a book suitable for a bridal couple and costing not more than 25 cents.

The clerk selected Henry Van Dyke's "The Pathway to Peace" and suggested that it would be the proper book for the bridal couple.

The customer took one look at the title, threw up her hands and exclaimed: "Ach. Gott, NO!"—*Publishers' Weekly.*

A Washington man tells of a dinner at a hotel in that city at which were a number of gentlemen interested in various reforms. About the most conspicuous of these was a man who talked loudly against both vivisection and the eating of meat. He afforded great interest to a certain obscure physician.

Toward the end of the dinner the latter leaned forward and said to the man first mentioned.



"Pardon me, but am I not to understand that you are both an anti-vivisectionist and a vegetarian?"

"Your understanding is correct."

"Then," continued the doctor, "you will probably be greatly shocked to learn that you have just eaten a live caterpillar with your lettuce salad."—*New York Globe.*

Come out, come out, my Spartan dear!
Come out and seek the sun.
My chilblains wake with throb and ache,
The merry spring's begun.
Come out and face the icy gale
That shakes the leafless tree.
Come out, come out, courageous love,
Come out and dare the spring with me.

Put on your stoutest macintosh.
Put on goloshes, too,
For it's been snowing all the night.
To make things nice for you.
Come out and slide on slushy lanes
Cold as the Arctic sea,
For jocund spring's set in at last,
Come out and catch a cold with me.
—*Manchester Guardian.*

MOTOR TRUCK EFFICIENCY

CONDUCTED BY JOHN CHAPMAN HILDER

SAVE TIME, FOOD AND MONEY WITH COMMERCIAL TRUCKS

THE word *commercial* in the title above is used advisedly. It should be read literally, for it is intended to be a distinctly qualifying adjective. Our Government has recently published specifications covering the structural details which must be embodied in vehicles manufactured for military uses and these requirements draw quite a sharp line between the trucks destined for war work proper and those being turned out for industrial and business use.

It is already well known that arrangements have been made by the authorities whereby the Quartermaster's department will be able to buy all the new equipment it may need. We may consider the purely military aspect of the truck and what it will do as a *fait complet*. That problem has been settled. And, thanks to the early mobilization of our manufacturers, coupled with business-like research work on the part of the Government, it has been settled satisfactorily.

There now remains the task of promoting the use of commercial motor trucks in such a way as to increase our industrial and agricultural efficiency, which, as I understand it, involves not a curtailment of trade or of expenditures, but rather an extension of trade and a shrewder disbursement of money, with a view to making every dollar count.

IT is of paramount importance that the United States, as a nation, eliminate waste in all its varied and flourishing forms. Four items chargeable to our waste account are: time, money, food and potentially profitable land.

Do you waste time? Yes, unquestionably, if you use horses for your hauling or delivery. In ninety-eight cases out of a hundred a motor vehicle, be it ever so humble, will do at least twice the work of a horse-wagon in half the time.

Do you waste money? Yes, assuredly, if you use horses for your hauling or delivery. Horses and wagons require double the housing room needed for motor trucks and double the attention. These are but two factors. I can tell you of others.

Do you waste food? Again yes, if you use horses commercially. A horse eats eight times its weight in food every year. Mr. Edison says the horse is the poorest motor ever built. When idle it eats just as much as it does when working.

By the same token, if you use horses for farming, you help to waste potentially profitable land. It has been proved that ground cultivated with tractors and trucks brings forth more crops and better crops than similar ground cultivated with horses.

Just as an example of the superiority of trucks over horses, I could mention the experience of a Boston firm, one of whose five-ton trucks, working from seven in the morning to six at night, with half an hour for luncheon, delivered ninety tons of building material and covered a distance of eighty-five miles. A report on this firm's hauling equipment says that tho horses are still maintained for nearby work, as they die they are not replaced, the company being committed to power delivery. The number of horse-drawn teams that would be required to handle the volume possible to the three trucks would make a most serious congestion in their loading yard. Each truck retires three teams. Trucks are now caring for an increased volume of business without the need of hiring extra teams, a detail of the business that used to cause much annoyance.

You will be helping in the war by motorizing your delivery equipment, because you will be eliminating waste.

PERHAPS you do not know that motor trucks are every bit as useful on farms as in other businesses. The first people to discover their value in this respect were owners of large estates. They have found after installing trucks that their farm hands have time for work that formerly could not be done, that fewer work horses are necessary, that there is a consequent reduction in the cost of feed, stabling and grooming, and that barn space is released for other purposes.

On farms trucks can be used for hauling and dumping fertilizer, sand, cement, stone, wood, live stock, building materials, hay and all kinds of produce from cabbages to milk. Equipt with special detachable tractor wheels, trucks may also be used for pulling plows, harrows and other cultivating machinery. Equipt with winches, they are useful for clearing land, loading or unloading heavy material and for performing countless other duties where motor power is required. Like tractors, they may be worked both day and night

Buy trucks and tractors for your businesses and your farms. Persuade your neighbors to do likewise. Remember the 125,000,000 acres of land whose annual yield now goes to feed horses and mules, when it should be made to help feed human beings.

ONE factor which seems to deter people from purchasing motor equipment and which should be taken into consideration at this time is the matter of first cost. Many business men and farmers hesitate to make the necessary outlay because of other obligations and for various good reasons best known to themselves.

It is important, however, not to allow the uncertainty of present conditions to deter you from placing your order now. Nothing will hurt the country more and be more conducive to a general panic than a cessation of buying caused by the desire to hoard money in the bank. Motor trucks are not luxuries, but necessities. They should be considered as investments rather than as expenditures, for they earn their cost many times over in savings and new business.

Local bankers thruout the country are beginning to realize this and to regard trucks as a sound basis for credit. Many of them have come to the point where they are willing to lend money to enable their customers to buy trucks, taking notes bearing the current interest rate and sometimes securing them by chattel mortgages on the vehicles.

It is not, I believe, generally known that, quite irrespective of their local banks, any responsible persons or firms can buy practically any make of truck on time payments. As a matter of fact, however, there exist a number of strong banking institutions whose business it is to finance the sale of commercial vehicles on divided payment plans.

When you reflect that about ninety-eight per cent of the world's business is transacted not with money, but with credit, it seems quite logical and proper that motor equipment should be purchasable on a credit basis.

If you wish to buy a truck, but would prefer to extend the payments over a period of time, without jeopardizing your local credit facilities, write to me and I will put you in touch with responsible firms who specialize in motor finance.

It is far better to buy a truck "on time" than never to buy one at all.

Ask the Director of this Service anything you want to know concerning commercial trucks, accessories or their makers. While The Independent cannot undertake to give an opinion as to the relative merits of various makes of trucks or accessories, it is ready to give impartial information on any product. —Address Motor Efficiency Service, The Independent, New York.

THE MAN ON THE TRUCK

I am employed as a chauffeur by a large downtown meat market and I have found that your articles are of as much help to the driver as you have intended them to be to the owner of the commercial truck. In order that I may place our delivery service on an efficient a basis as possible will you kindly send me your Check List, mentioned in your issue of April 21?

FEDERAL MOTOR TRUCK COMPANY

FEDERAL
MOTOR TRUCKS

DETROIT MICHIGAN

Mr. M. L. Pulcher

Mr. W. L. Hughson,
Van Ness and Geary Sts.,
San Francisco, California.

Dear Hughson:

Everything comes to him who waits. You've been looking forward to the complete FEDERAL line. Now it's ready - FEDERAL quality in every needed capacity.

We are going to make announcement of all five models in May -- One ton, One and a Half Ton, Two, Three and a Half, and Five Ton models.

The photo prints I enclose will give you a good idea of the jobs themselves, I think they're corkers. How do they look to you?

Remember -- these are not "new" models in the sense of being revolutionary departures from past FEDERALS. All the stamina and reliability of the good old FEDERAL has gone into these trucks -

- in addition, they have everything that motor truck experience has taught us right down to May 1, 1917.

This line of FEDERAL trucks is, in essence, the outgrowth of seven years spent in studying the haulage needs of Business.

It is literally true that we go to Business, study its needs, and build trucks accordingly. We do not depend upon a staff of theoretical engineers looking for new ideas inside the four walls of the drafting room. That's the secret of FEDERAL success.

Features? Every point of FEDERAL construction is a "feature" in the sense that it was designed solely with haulage service in mind.

The engine is a truck engine exclusively -- "full of pep". How important this is can be realized only after the truck has been in actual use for some time.

The buyer also gets four speeds forward and one reverse in all but the One Ton. This means greater flexibility of operation - and lower gasoline consumption.

Another big feature of the FEDERAL family is the FEDERAL system of forced

FEDERAL MOTOR TRUCK COMPANY

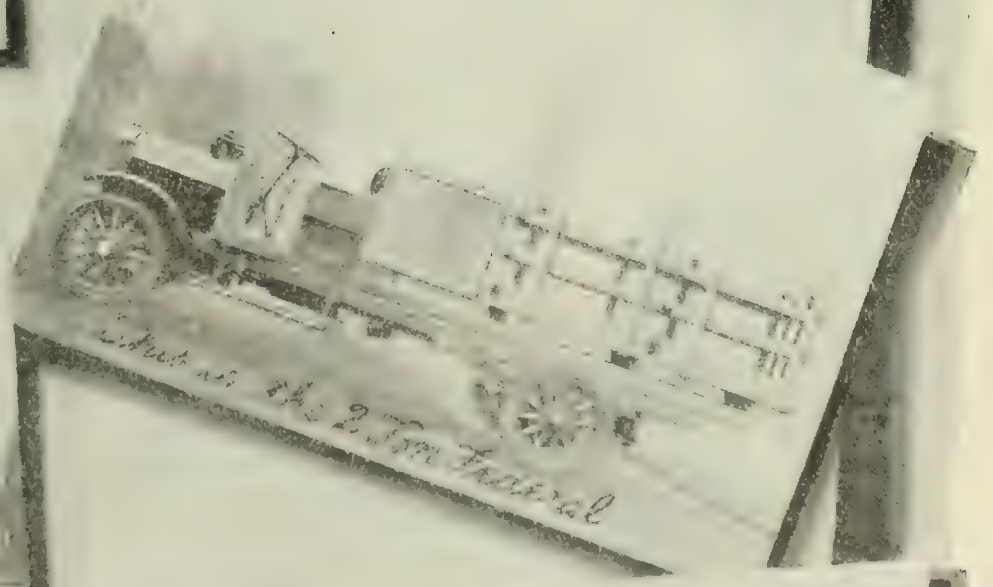
CONCERNING OUR LETTER OF May 1, 1917

SHEET NO. 2

lubrication. Oil is distributed by pump pressure to every point requiring oiling, - the supply being automatically increased as heavy duty or more speed make necessary - and so on.

I can't hope to cover all the points here, of course. You have them all in the "Blue Print Book". We are sending quite a number of these in response to mail inquiries. Do not fail to get a supply for distribution direct.

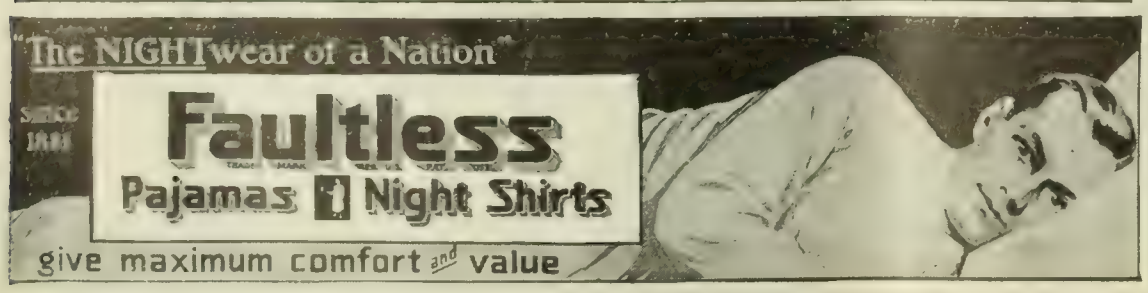
Now then, Bill, here's hoping for the best year yet! I know that this FEDERAL family is going to prove well worthy of its name and that the long list of FEDERAL users to whose complete satisfaction we owe prosperity, present and future will be a steadily growing one.



Yours with best wishes,

W. L. Ruschus

Vice President
FEDERAL MOTOR TRUCK COMPANY



You Know at Least Ten People

who would be very glad to receive a copy of The Independent with your compliments. If you will send their names and addresses by an earlymail, we shall send the copies promptly.

THE INDEPENDENT 119 West 40th Street, New York

THE NEW BOOKS

KIPLING IN MANY MOODS

A Diversity of Creatures, by Rudyard Kipling, is well described by its title. The book is a collection of all the important short stories which Kipling has written in the last half dozen years and gleans from a wide field. Many characters from previous short story collections reappear in these pages; we recognize again with pleasure such old acquaintances as the Aerial Board of Control (prominent in "With the Night Mail"), Stalky, "Beetle," Mr. King the Latin teacher, Laughton O. Zigler the American inventor, Pyecroft, Penfentenyou, and many another. Kipling has never yet been able to create an interesting character and keep him inside the covers of a single book.

Only two of the stories deal directly with the Great War, "Swept and Garnished" and "Mary Postgate"; both well constructed and artistic tales but far too grimly tragic to be in the least enjoyable. Other stories, however, including some that were written many months before the war, lie in the shadow of impending conflict. "The Honours of War" deals with the hazing of a young officer who was too fond of quoting Clausewitz, the great German authority on tactics; "The Edge of the Evening" (1913) tells of the capture of two German spies who were taking a bird's-eye view of England from an aeroplane; "The Horse Marines" relates a comic incident in the course of army maneuvers, and "The Vortex" recounts the discomfiture of an enthusiast for Imperial Federation. "At present," says one of the characters in "The Edge of the Evening," "you British are settin' in kimonos on dynamite kegs." Kipling is truly a prophet; tho we can hardly call him a statesman if he really believes, as he appears to do, that the sort of classical education described in the military school story "Regulus" is better training for the future officer than a study of Clausewitz's works on strategy.

Three stories stand out from the book sufficiently to assure them a place in the anthologies of the future. "As Easy as A B C" is a strange tale of the future, worthy of the imagination of H. G. Wells. The world has become a happy abode of supermen where everyone does what is right in his own eyes, subject only to the supreme authority of the Aerial Board of Control. A few atavistic degenerates who try to bring back the evil days of democracy and the tyranny of the majority so anger the people that they are only rescued from lynching by the air fleet of the

Aerial Board against whose sway they had protested. "In the Same Boat" is a creepy story of nightmare, reminding the reader of "The End of the Passage." "The Village That Voted the Earth Was Flat" is a magnificent broad canvas of comedy on which is depicted the revenge of a party of motorists upon the magistrate who fined them for speeding. It is doubtful if Kipling has ever written anything more amusing than this story.

Short poems are sandwiched in among the stories. They prove that the hand of the master craftsman has not lost its cunning, but technical skill is not genius. As magazine verse they will more than pass muster, but not one of them is caught up into the heavens by that blast of elemental energy which made some of his earlier verse immortal.

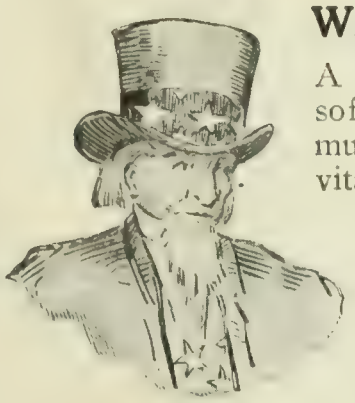
A Diversity of Creatures. by Rudyard Kipling. Doubleday, Page & Co. $1.50.

COLLECTOR AND EDITOR

Three Midnight Stories, including the tale of the halo-painter, by Alexander Wilson Drake, sometime art director of the Century Company, constitute the bulk of an ideal commemorative volume, wherein the taste and the versatility of the author, artist, art collector and connoisseur, are revealed in a much higher sense than could possibly be accomplished by mere panegyric. There is reference to the extraordinarily various and valuable Drake collections, to his band-boxes, his brasses, his rings, his bird-cages, his bottles, and prints.

Tributes from Albert Bigelow Paine, Clarence Clough Buel, William Fayal Clarke and Robert Underwood Johnson, all close associates, are included. The beautiful reproductions of portraits and other illustrations complete a memorial volume of uncommon quality.

Three Midnight Stories. by A. W. Drake. The Century Company. $5.



A WORLD TREATY

Bernard Shaw is usually brilliant and he is usually bitter. He is unusually brilliant and unusually bitter in his introduction to the Fabian Society's essay to solve the momentous question of *International Government.*

A generation ago this would have seemed chimerical, as in their turn so many of the good things of the world once seemed. Individual liberty, universal suffrage, freedom of religion, individual right of property, freedom in religious belief—all once were dreams. Progress is now toward the suppression of war and the Fabian Society, in common with our own League to Enforce Peace, has the attention of the world of thinking and governing men.

It is, says Mr. Shaw, the "vocation of the Fabian Society to chart all the channels into which the ship of state is being irresistibly driven by Social Evolution." But we quite easily gather that he thinks the ship's pilots too inattentive to the charts issued by the Fabians. He may be right. The ship's pilots are practical men, as a rule, and the very name of the society has what the chessmen call a weak open-

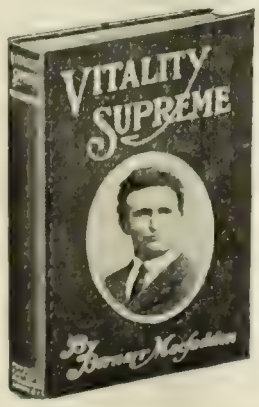
ARE YOU PREPARED?

WAR IS UPON US.

A cry has been raised for men—real men, not soft muscled weaklings. Strong, virile, hard muscles and firm, healthy tissues are allied with vitality, endurance and manhood.

Are you soft? Muscles flabby? Breathe like a wind-broken horse after running a block?

Then why don't you wake up—do something?



Now that the Conscription Bill has been passed by Congress you don't know when you will be called upon to defend the lives of those you love—Wife, Mother, Sister or helpless Kiddies. Could you make good in this crisis or would you crumple up like a mere shell? A bluff is no longer good. You will have to deliver or suffer the consequences.

Don't forget that your heart will have some real "rush work" to do. Every organ of your body, in fact, will be called upon for the utmost efficiency. Will they be equal to the task? If not, then you are a criminal, for you will have neglected a paramount duty. You are weak when you could just as well be hard as nails. The average office-bred American, as a man, is a mere shell. He is not even a "has been." He is often a "never was-er."

How long will your vitality maintain itself under the conditions the soldiers now in the European War Trenches have to endure—oftentimes waist deep in water, fighting for their lives. That is the question *you* have to face. Are you going to face it or evade it until it is too late?

"Vitality Supreme," Bernarr Macfadden's greatest book, is written to apply to just such emergencies as this. It is a book for men who want to build up their vitality to the highest point. It outlines methods for building internal strength as well as external strength. By following the instructions given in ***"Vitality Supreme"*** you can make yourself physically fit in a remarkably short time. You can prepare yourself for the utmost physical effort you may be called upon to make. You can make yourself a *man* in every sense of the word.

We think this matter of physical preparedness is of such vital importance that we want to place a copy of Mr. Macfadden's book, *for free examination,* in the hands of every man who is interested. We don't ask you to send us any money at all. Just fill out the coupon below and mail it and the book will be sent you by return mail. Keep it for five days. If at the end of the five days you do not feel that the information and advice contained in this book are of priceless value to you, just return it and you will owe us nothing. We are confident, however, that you will not want to part with *"Vitality Supreme"* after you have had one glance inside its covers, in which case you can send us $2.00 and the book is yours. In addition we will enter your name for a year's subscription to the PHYSICAL CULTURE MAGAZINE, the foremost publication devoted to the building and conservation of health and strength.

The question before you is, are you going to be ready to do your duty when the time comes. If your answer is yes, then begin now by filling out the attached coupon and mailing it. Do it today.

Physical Culture Publishing Company
3425 Flatiron Bldg.
New York City

Physical Culture Pub. Co.

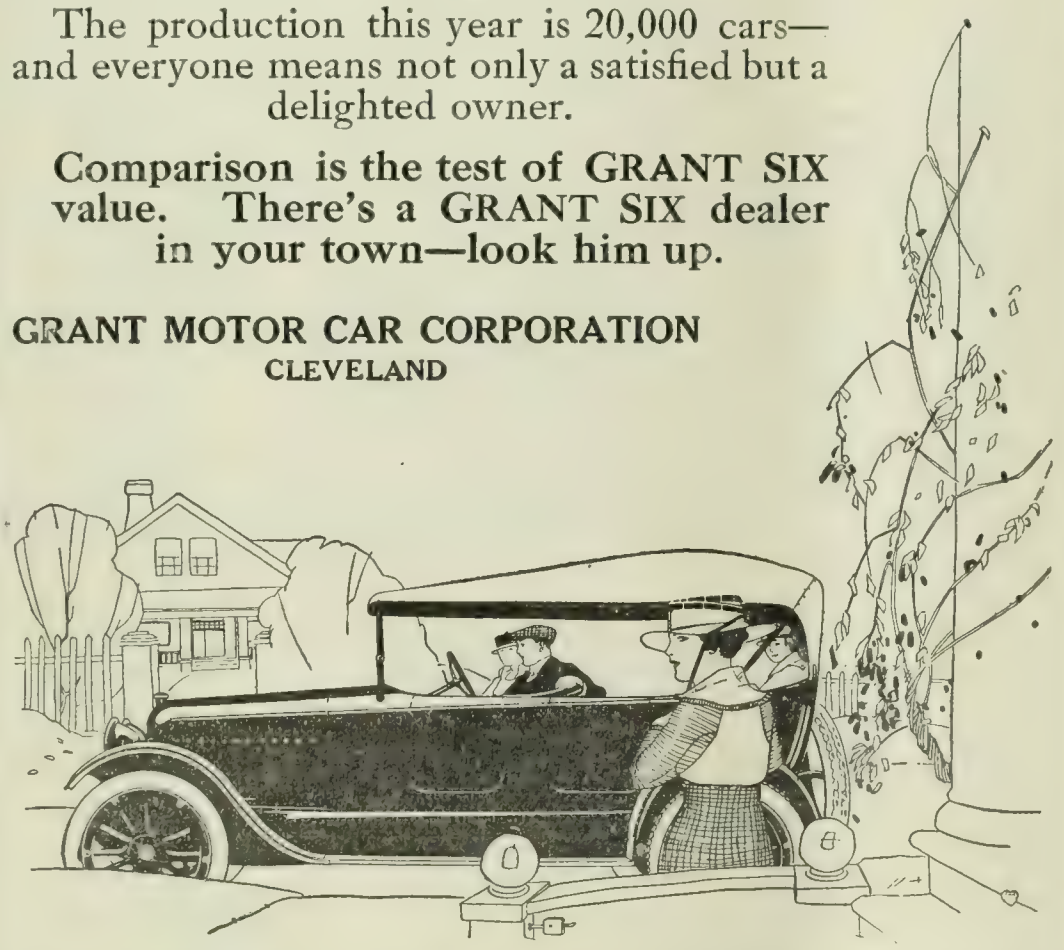
GRANT SIX $875

The Ultimate In Motor Car Economy



THE economy and efficiency of the GRANT SIX indicates a scientific relation of engine size, car weight and gear ratio. Investigation will show that the rated as well as the brake horse power of the GRANT SIX is highest among sixes selling for less than $1000, yet the average of 20 miles to a gallon of gasoline and 900 miles to a gallon of oil are facts.

The GRANT SIX is a full-sized, full-powered, complete, five-passenger car, sold at a remarkably low price because it is produced in a modern, efficient factory by men who are satisfied with a small profit per car.

The production this year is 20,000 cars—and everyone means not only a satisfied but a delighted owner.

Comparison is the test of GRANT SIX value. There's a GRANT SIX dealer in your town—look him up.

COUNTRYSIDE SHOP

119 West 40th St. New York City

ing; it suggests not earnest seekers after light, but weavers of fables.

This book, however, was prepared with great labor and skill by the research committee of the society and Mr. L. S. Woolf; issued in instalments and then scanned closely at a conference on the subject presided over by Lord Bryce. It is now published with a manifest right to be considered in any effort to minimize the possibility of war. Part I treats of the causes of war and the effort to avoid it by means of international law, treaties, arbitrations, congresses and tribunals. Part II takes up the subject of *International Government* and finds it spreading thru common interests and the adoption of similar laws and by the acceptance of common standards and growth of cosmopolitanism and by the internationalizing of commerce and labor. This leads toward the softening of national boundaries and a reconciliation of internationalism and patriotism which the world hopes may be reached with happiness and honor.

The crux of the volume, well led to by these illuminating preliminary chapters, is comprized in a forty-page proposed treaty calculated to include all the sovereignties of the world and providing for an international council and court, defining justiciable issues and providing for enforcement of court decrees by fines, embargoes, isolation, denial of international comity and by blockade by mixt fleet of warships, thus not abolishing force, but using it to compel the mandates of the world.

International Government, by L. S. Woolf and a Committee of the Fabian Society. Introduction by Bernard Shaw. Brentano's. $2.

A CYCLOPEDIA OF THE WAR

The publishers of the *Encyclopedia Britannica* have in preparation an additional volume which is to deal solely with the Great War and the changes that develop at its settlement. It will have maps of the new boundary lines and accounts of changes in governments and in policies.

The strides in science will be described. There will be accounts of the leaders in the various countries engaged and of the great figures of the battlefields. Much of the work will be a straight history of the war, its beginnings, and the events on every front.

The publishers of the *Britannica* can command writers of tested ability and thoroness, so that here we shall have a work more dependable, more just, and of greater scope than can be the newspaper reports, or the current histories mainly drawn from these.

HOW TO DO IT

Training for a Life Insurance Agent, by W. M. Horner, deals with the lightly regarded calling in serious fashion, discussing personal aptitudes, organization and the relation of life insurance to larger economic questions. A chapter deals with women in the business and as beneficiaries. (Philadelphia: J. B. Lippincott & Co., $1.25.)

Any one who has the uphill job of *Feeding the Family* will find a staff of support in Mary Swartz Rose's clear and simple textbook of applied dietetics, minus the array of scientific phraseology which usually

daunts the lay woman. It contains many practical and economical menus. (The Macmillan Company, $2.10.)

Salesmanship, by S. R. Hoover, is a concise, business-like and suggestive discussion of how to sell goods, any sort of goods, to all sorts of people. (The Macmillan Company, 75 cents.)

Two wise and practical essays by William James, those on the Energies of Man and on the Gospel of Relaxation, are republished in a small book entitled *On Vital Reserves*. (Henry Holt & Co., 50 cents.)

There are good suggestions for the country kitchen in R. C. Scott's *Home Labor Saving Devices*, with diagrams and directions so that the boy of the house can make most of them. (J. B. Lippincott Company, $1.50.)

The Triumph of the Man Who Acts, by Edward Earle Purinton, expounds the Gosper of Efficiency—efficiency in mind, sinews and emotions, with all that the word implies of sound body and sane living. (Robert M. Macbride, $1.35.)

The advantage of the *Desk Book of Twenty-five Thousand Words*, by F. H. Vizetelly, is that it includes proper names and foreign words, has brief definitions with the pronunciation symbols at top and foot of each page. (Funk and Wagnalls Company, $1.60.)

Caroline R. Wadhams has written two houseworker's guides, *Simple Directions for the Child's Nurse* and *Simple Directions for the Chambermaid*, which are practical and will be helpful to the novice in house management. (Longmans, Green & Co., 50 cents each.)

YOUNG FOLKS' BOOKS

Only a Dog, by Bertha Whitridge Smith, is a true story of "Army," a pet of the trenches, and of his English master, a sniper who saved his life and to whom "Army" was faithful unto death. (E. P. Dutton & Co., $1.)

Edmée, by Mrs. Molesworth, is a child's story of the French Revolution. It is simply, somewhat sentimentally but very cleverly told, for it conveys a sufficiently clear picture of the period without insisting too much upon its horrors. (The Macmillan Company, $1.25.)

William H. Rideing has not succeeded in re-creating the living personality of *George Washington* from his dry historical bones. If one wishes really to interest young people in biographies of famous men, one must do this as well as offer a correct chronological statement. (The Macmillan Company, 50 cents.)

The Woodcraft League for Girls is an organization for the physical and spiritual betterment of young girls—analogous to the Boy Scouts. *The Woodcraft Manual*, by Ernest Thompson Seton, explains the League's purposes and constitution and gives instruction in botany, first aid, camp-cookery and other branches of woodcraft. (New York: The Woodcraft League, 40 cents.)

Mrs. Mabel Cook Cole has brought from the four years she spent among the wild tribes of the Philippines a collection of *Philippine Folk Tales*. The material is exceedingly valuable, reflecting as it does "the first times" out of which grew present day manners and customs. The traceable analogy between certain Philippine legends and those of Borneo, Java, Sumatra and India is particularly interesting. (Chicago: A. C. McClurg & Co., $1.25.)

The tales of the *Russian Story Book* have been chosen by Richard Wilson from the song cycles of Kiev and other early sources. In folk-lore days Russians had not lost humor. The magic heroes exercize prowess just for the joy of prowess and the stories are direct, naïve, amusing, with gay pictures in which now and then the influence of the Russian ballet is rather forced upon youth. (The Macmillan Company, $2.25.)

Eliminating Poisons That Clog Our Systems

By R. H. Sinclair

IT is now generally recognized by eminent physicians and medical scientists that a host of the most aggravating ills that afflict men and women of today are directly caused by our sedentary habits. The large intestine, or colon, is no longer able to eliminate promptly the body's waste matter in which virulent poisons are formed and absorbed by the blood.

Auto-intoxication with all its consequences is the result—headaches, backaches, dizziness, lassitude, indigestion, and their complications—neurasthenia, mental and physical exhaustion, high blood pressure, kidney and liver disorders, skin diseases, and many more serious maladies.

The sole service rendered by the colon is to receive from the digestive organs the body's waste matter and to eject it. When it fails promptly and regularly to perform its duty, procesess of putrefaction and decay proceed rapidly in its contents and poisonous toxins are formed and released into the blood by absorption through the mucous membranes.

Professor Verchow many years ago discovered in making hundreds of post mortem examinations of the colon that intestinal congestion prevailed universally, regardless of the cause of death. Other eminent physicians of today report exactly the same condition.

From these facts it can readily be seen that the colon can rightfully be regarded as the seat of nearly all ailments. It is, in fact, a very hotbed of disease, comparable to a garbage can in the home. Professor Metchnikoff, the famous director of the Pasteur Institute of Paris, regards colon poisons as the direct cause of premature death.

One of the first warnings of auto-intoxication is constipation and indigestion. Victims of chronic constipation are multiplying with remarkable rapidity. Many of us suffer from constipation without even knowing it, yet it is due to this condition known as intestinal congestion that so many of us are far below par physically and mentally most of the time.

If we were able to live outdoors and to exercise vigorously every day, our colons would be able to function properly; for exercise is the greatest and most satisfactory colon stimulant known.

To most of us this is not possible. We have neither the time nor the inclination to take vigorous exercise. Instead we dose ourselves with laxative drugs, mineral waters, and other nostrums, with the result that while we get temporary relief we not only aggravate the condition but find that repetitions of the same dose later fail to produce results.

But relief, even when obtained, is not sufficient. To maintain health and efficiency it is absolutely of paramount importance to create and maintain day in and day out freedom from intestinal poisons, and this is impossible with laxatives.

There is a new way, however, to keep the colon sweet and clean—a way which has the same effect as vigorous exercise, yet without the inconvenience or time-consuming features of exercise. And the results are even better because the treatment is localized.

The principle upon which this new method is founded is the same as that used in massage. We all know that massage has the same effect as exercise—it stimulates the nerves and strengthens the muscles. Colon massage as practiced by osteopaths has proved wonderfully effective.

This new method of massaging the colon involves the use of a device called the Kolon Motor—a mechanical masseur, the face of which is shaped to fit over the colon when placed against the abdomen. You merely put the Kolon Motor on a door or wall, lean up against it and turn the handle for a few moments. The face rotates with a scientific waving motion which immediately stimulates the colon and causes proper functioning. A couple of minutes in the morning each day is all that is required and unless your experience is different from the hundreds of other users you will feel like a new person after the very first application.

Before the Kolon Motor was offered to the public a number of well-known physicians were acquainted with its merits and used it in their practice. Without exception the results were most gratifying—in fact, every physician who has tested the Kolon Motor endorses it most highly.

Martin's Method, Incorporated. Dept. 55, 50 East Thirty-first Street, New York, has prepared a booklet called Intestinal Cleanliness, which they will be pleased to send gratis to all readers of this magazine. In this booklet the Kolon Motor is clearly illustrated and its application shown. It also contains a scientific discussion of auto-intoxication, and explains why and how the Kolon Motor produces such assured results. Letters from well-known physicians relating their experience with the Kolon Motor also form a part of the book.

There may be some who scoff at the idea of colon hygiene and its direct relation to health and efficiency, but the wiser ones will either write or send the coupon below for this free book and learn what this wonderful device is accomplishing for so many others.

Address the Company at its Home Office, No. 277 Broadway, New York City.

THE MARKET PLACE

A SMALL CROP OF WHEAT

In five weeks the price of wheat at Chicago has moved upward from $2 to $3.15 a bushel. The Government's crop report, issued on the 8th, surprized even those whose estimates of winter wheat losses had been most pessimistic. They had found 9,900,000 acres of killed plants, or nearly 25 per cent of the seeded land, but they thought that improved conditions would increase the Government's April estimate of 430,000,000 bushels. It now appears that 12,437,000 acres, or 31 per cent, were lost, and the Government can see a coming yield of only 366,000,000 bushels. More than 250,000,000 bushels of spring wheat are not expected; last year's crop was 159,000,000. As 615,000,000 bushels are required for food here and for seed, a crop of 616,000,000 will include no surplus that can be exported. We now have only enough wheat to supply our own wants and keep up the recent rate of export shipments until July 1. England, France and Italy will need 500,000,000 bushels, and have been expecting to get 250,000,000 in the United States. The prospect now is that we shall have none to sell unless the quantity ordinarily consumed by our own people is in some way greatly reduced. In the three days immediately following publication of the Government's report the price was increased by about 30 cents, and $2 a barrel was added to the price of flour. If prices continue to rise at this rate, they will soon be so high that consumption will be quite perceptibly restricted. The Government may decide to make a surplus for the Entente Allies by assuming control of the crop.

THE MARKET FOR STOCKS

The downward movement which had continued for five days on the New York Stock Exchange was checked on Monday, the 7th. It had been caused in part by sales of railroad and other shares which were held by investors who desired to use the money in buying bonds of the new national loan. On the 7th the news from Russia was more favorable, and Eastern railroad companies were supporting their application for a permanent freight rate increase of 15 per cent by forcible arguments before the Interstate Commerce Commission. They were showing that while such an increase on their lines would yield $142,000,000 this year, it would not be enough to pay the year's additional expenses, $217,000,000, due to higher wages and the advanced prices of coal, cars, oil and other sup-

Omit Bran
And Your Face Will Tell

Poor elimination is the cause of bad complexions.

It is due to fine foods with too little roughage. For instance, wheat foods without bran.

At least once daily, eat some bran. Eat it in flake form to be doubly efficient. Eat it in Pettijohn's to have it inviting.

The results of one week will convince you. Try it.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

(1570)

DIVIDENDS

GENERAL DEVELOPMENT COMPANY
61 Broadway, New York
May 7, 1917.

At a meeting of the Board of Directors of the General Development Company held this day, a dividend of Two Dollars ($2.00) per share on the capital stock of the Company was declared payable June 1, 1917, to stockholders of record at the close of business on May 15, 1917. Books will not close.

SAM A. LEWISOHN, Treasurer.

NILES-BEMENT-POND CO.
New York, May 9, 1917.

The Board of Directors of NILES-BEMENT-POND COMPANY has this day declared the regular quarterly dividend of ONE and ONE-HALF PER CENT. upon the PREFERRED STOCK of the Company, payable May 21, 1917. The transfer books will close at 3 o'clock in the afternoon of May 9, 1917, and will reopen at 10 o'clock in the forenoon of May 22, 1917.

JOHN B. CORNELL, Treasurer.

NILES-BEMENT-POND CO.
New York, May 9, 1917.

The Board of Directors of NILES-BEMENT-POND COMPANY has this day declared a dividend of THREE PER CENT. upon the COMMON STOCK of the Company, payable June 20, 1917. The transfer books will close at 3 o'clock in the afternoon of June 6, 1917, and will reopen at 10 o'clock in the forenoon of June 21, 1917.

JOHN B. CORNELL, Treasurer.

Fighting Garden Pests

This is one of the most practical handbooks of the series, as it deals with a subject about which little is known by the amateur gardener. Consequently, instructions are given in the simplest language, and no one can make a mistake if the directions are carefully followed. This handbook contains a table of insects and diseases, with methods of control, and also has a final page of spraying memorandum for personal record. The contents are as follows:

How To Fight Garden Pests

Bugs, beetles and others. Plant diseases. Spraying machinery. Essentials of equipment. Fungicides of value. Treating fruit trees. The bag worm. Tree borers. Fungus diseases. Spraying calendar. A Summer's programme. Spraying table.

Price 25 cents delivered.

The Countryside, 119 W. 40th St., New York

plies. Many were saying that on account of this statement the increase would surely be granted. A majority of the day's net gains were from ½ to 1 point. One-quarter of the business was done in Steel shares, with an addition of 1¾. But prices declined again on the 8th, and nearly all of Monday's gains were lost. Street railway and gas company shares were notably weak. It was said that military service would reduce the supply of labor for such companies and increase the cost of it. On the following day, with more activity (871,000 shares), there were greater price losses, caused by the depressing wheat crop report, by publication of the provisions of the new $1,800,000,000 war tax bill, and by the assertion that plans for an expenditure of $1,000,000,000 for ships might call for Government control of the steel output. Investors and traders found much to criticize in the tax bill, predicting an unfortunate effect on those parts relating to excess profits, retroactive payment of income taxes, and the tariff duties on raw materials which are now free.

But railroad shares were leaders in a recovery on the 10th, when the Union Pacific declared an extra dividend of ½ in addition to the regular quarterly payment of 2 per cent. Similar action was taken three months ago, and the stock now appears to be on a 10 per cent basis. The prevailing opinion was that certain objectionable parts of the tax bill would be rejected in the House, or later in the Senate. For some time to come the price movement will be affected by tax legislation and the shifting of investments to the great national loan.

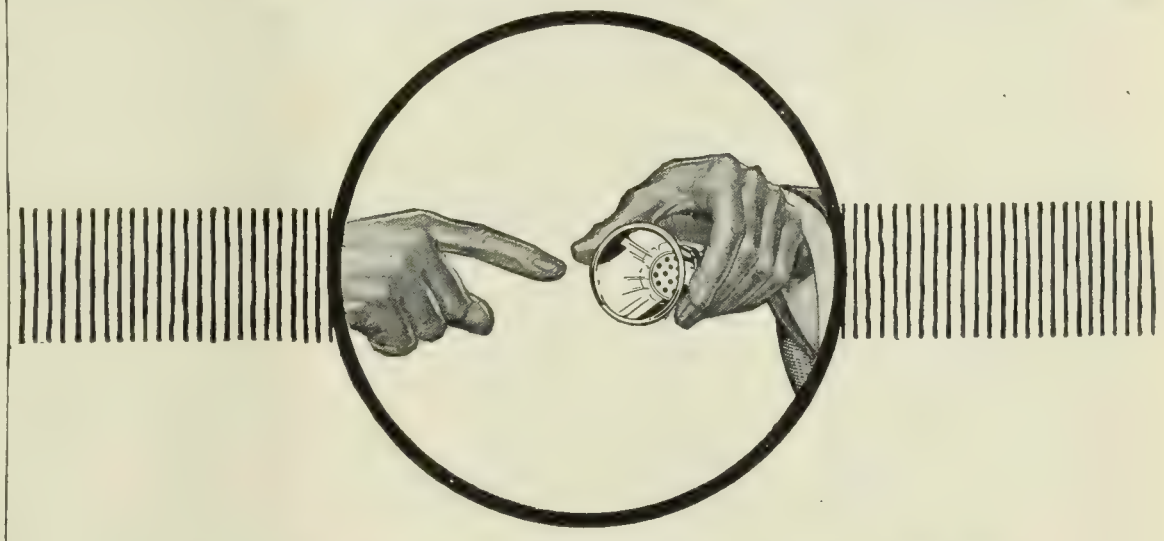
THE METAL INDUSTRIES

In its recent purchases of metals the Government has been paying only a little less than the market price. For 25,000,000 pounds of zinc the reduction was 3 per cent. The special rate of 16⅔ cents for 45,510,000 pounds of copper (the average of prices for ten years immediately preceding the war) could not be granted for 100,000,000 pounds ordered afterward, because wages in the copper industry, which are on a sliding scale and depend upon the average selling price, would have been affected and strikes might have been caused. And so twenty-five cents was paid, or about six cents less than the current price. Agreements for price concessions have been made with the producers of lead, and the brass companies offer to serve the Government without profit.

Steel mills are working at full capacity and under much pressure. Every week sees an advance of prices. The average for eight leading products has risen to $94½ a ton from $28½ at the beginning of the war. April's output of pig iron, 3,334,960 tons, was exceeded in only two months of last year. Russia is striving to place orders for 40,000 freight cars and 2000 locomotives, being in need of rolling stock for the distribution of food and the transfer of munitions from Archangel and Vladivostok to the battle front.

Let Us Help You Decide

IF you are undecided as to the appointing of an executor and trustee under will, call on or write to our officers and let them explain our facilities for handling estates.



The appointment of an executor and trustee is a very important matter and ought not be postponed. The safety and interests of your heirs require that you make a wise appointment, and prudence requires that you do it *now*.

Our booklet, "Let's Choose Executors and Talk of Wills," contains much valuable information for will makers.

HOW TO STUDY THIS NUMBER
THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. While you and a number of your friends were having a good time one of the company remarked: "We don't know that there's a war going on, do we?" You told this to your father, who said: "You were asking for a composition subject the other day. Just sit down and write a sort of story in which you tell how you and your friends will help pay for the war when the new Revenue Bill goes into effect. Give real experiences. Make your work personal. Give it the human touch." Write the composition.
2. Imagine that you were allowed to accompany the French Mission on its recent visit to New York. Write an enthusiastic letter to one of your friends concerning your experiences. Introduce as much description and character presentation as you can. Make the letter vivid and interesting.
3. In a few sentences give a clear explanation of the reasons for sending engineers to Europe before sending other troops.
4. Will Russia make a separate peace? Write a single paragraph in which you give your view of the problem.

Editorial Articles.

1. Write an apostrophe to France in which you extol her bravery and her glory. Write entirely in the second person.
2. Give a short and spirited oration in which you give reasons why the Greek King should be deposed. End the oration with a paragraph of persuasion.
3. Write a poetic and fanciful paragraph concerning the secrecy of the sea. Select your words carefully. Make your sentences rhythmical and harmonious.
4. Give a short talk on the importance of chemistry in the present war.

Our Diminishing Herds. By J. Ogden Armour.

1. The principal of your school has asked you to speak in the school assembly concerning ways and means of preserving the food supply. Make a speech that will apply definitely to the pupils of your school.

The Wheel of Silence. By C. L. Edholm.

1. Imagine that you are the inventor of the "Wheel of Silence," and that the president of a great railroad has asked you to give reasons why he should adopt your invention. Give orally such an inducement as will lead him to make a contract for your patents.

Something to Sell. By Edward Earle Purinton.

1. Give a talk to the members of your class on "How to Be a Good Salesman." Be sure to present definite examples.
2. Write a somewhat similar article on "How a High-School Pupil May Gain a Good Position."

Prohibition's Progress. By William Jennings Bryan.

1. Imagine that you are president of a young people's society that is working for prohibition. Give a short talk, suitable to be given before the society, in which you show that prohibition has moved forward very rapidly in the past year.

No Annexations, No Indemnities. By William English Walling.

1. Imagine that you are present at a meeting of people who are deeply interested in promoting government by the people in all lands. Give a short and vigorous speech on the new danger that threatens democracy.

To the Socialists in Russia.

1. Write an editorial article for your school paper, giving your earnest approval or disapproval of this message.

SECTION II. LITERATURE.

Draw the Sword, O Republic! By Edgar Lee Masters.

1. What reasons does the poem present why the Republic should draw the sword?
2. The poem contains a large number of figures of speech. Point out every figure, give its name, explain its meaning, and tell what it adds to the poem.

SECTION III. WORD STUDY.

In the Service Army.

1. Give the derivation and the meaning of every one of the following words: waived, tractors, dissemination, available, supertax, quotas, capacity, conscripted, slogan, mobilized.

SECTION IV. GRAMMAR.

Kipling in Many Moods.

1. Give the syntax of every noun in the first paragraph.
2. Give the syntax of every adverbial modifier in the second paragraph.
3. Give the subject, the predicate, and the object (if any) of every sentence in the third paragraph.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Financing the War—"Revenue Bill Before Congress," "Paying for the War."

1. Read Article I, Section 7, clause 1; Article I. Section 8, clauses 1 and 2; Amendment XVI of the Constitution.
2. What is the Ways and Means Committee of the House of Representatives? Why is there no corresponding committee in the Senate?
3. "Therefore the total receipts from the old taxes and the new," etc. What are the "old taxes" here referred to?
4. Note the various kinds of taxes included in the new Revenue Bill—income taxes, inheritance taxes, excess profits tax, etc. Which of these are distinctly war taxes; which are used in peace times as well?
5. What is your opinion of the wisdom of the increase in postal rates? The increase in the import duties?

II. France and America—"Glorious France," "French Mission Visits New York."

1. "American affection for France is instinctive and spontaneous." Upon what qualities in the French character does this affection depend?

III. Greece in Revolution—"A Greek Republic?"

1. Look up in a text book or an encyclopedia the history of the Greek Revolution of 1820-1828. What part did America play in the events in Greece a hundred years ago?
2. What has been Greece's part in the various Balkan troubles during the past fifty or sixty years; especially in the Balkan Wars of 1911-1913?
3. Explain the present situation in Greece. How is this situation to be remedied?

IV. The Socialists and the War—"No Annexation, No Indemnities," "To the Socialists of Russia."

1. Study the history of the rise and progress of socialism in Europe during the past seventy-five years.
2. What was the attitude of the chief Socialist leaders in Germany and France at the outbreak of the war? What is the present attitude of such leaders as Liebknecht, Scheidemann and Rose Luxemburg.
3. Explain the phrase "no annexations, no indemnities." What is Walling's objection to the program which the phrase involves?
4. What is the gist of the appeal "To the Socialists of Russia"? Why was this appeal sent out?

V. The Government of Australia—"Defeat of Australian Labor Party."

1. Look up in a text book or encyclopedia the history of Australia since its discovery by the English.
2. What is the present political organization of Australia. What special social and economic condition prevails in the colony?
3. What relation does the colony bear to the United Kingdom? What change does Premier Hughes desire?
4. Note the statement in the last paragraph of the news item. See whether you can gather further information upon the subjects discussed.

VI. The Food Problem—"Our Diminishing Herds," "The Market Place—A Small Crop of Wheat."

1. "In my opinion, the most serious question before the country today has to do with the producing and conserving food for next winter." What has brought about this situation?
2. "This is especially true as regards live stock." Why is the problem more serious in the case of live stock than in the case of grain?
3. Explain as clearly as you can the present condition of the wheat market. What is meant by the term May Wheat? July Wheat?
4. What remedies for the present food situation have been suggested? What remedies have been put in operation?

VII. Increasing Industrial Efficiency—"Save Time, Food and Money with Commercial Trucks."

1. Show how the motor truck has increased industrial and agricultural efficiency (a) by saving time, (b) by saving money, (c) by saving food, (d) by increasing agricultural productivity.
2. Discuss some of the other inventions which have contributed similar industrial and agricultural results.

VIII. Improving Our Business Organization—"Something to Sell."

1. "Every grown, sane, healthy person has something to sell." Analyze the activities of your community showing the various valuable products and services which its residents have on the market.
2. What is the process necessary for successfully marketing a product or a service? Explain this fully in relation to the products of a farmer; the services of a teacher.

JUST A WORD

You enjoy The Independent. The soldiers in camp are sure to like it, too. We have received a letter saying that the men of the Fifteenth Regiment need newspapers and magazines. The Independent is both, so save your read copies and send them to the Chaplain, Fifteenth Regiment, Peekskill, New York.

FIRST TO FIGHT

President Wilson's announcement on May 19th that a body of United States marines is to be sent at once to France with the expeditionary army under General Pershing proves again the slogan that the marines have been following since 1775—"First to Fight on Land or Sea." Second Lieutenant Cushing makes it the title of his interesting story of the Marine Corps in this issue. The photograph on the cover was taken by one of the marines sent down to Vera Cruz in April, 1914.

BOATING TO BATTLE

A war correspondent on the western front tells this story in the New York *Tribune* of the men who go, literally, thru fire and water to win for the Allies:

Boating to battle is one of the novelties of fighting on this part of the Western front, where the Allied and German lines are separated by miles of flooded land. Trench raids are almost unheard of here. The only thing approximating them are bombing expeditions carried out from skiffs, which are paddled skilfully under cover of darkness to the enemy's lines.

"Just at the edge of the water in front of our trench," said a Belgian officer, "we have two little nooks where our two boats lie hidden, and when darkness has come we set out on patrol. Sometimes with muffled oars, sometimes with punt poles—for in most places the water is quite shallow—we creep toward the German lines. At any moment a star shell may give you away, the bullets spurting up the water around you or whistling overhead warn you that rowing about in No Man's Sea is not always a healthy game.

"But the crowning excitement comes when you meet a German patrol boat. Once when I was out with a sergeant and two men we heard the steady splash of a punt pole in the water coming slowly toward us. We took out the safety pins from our bombs and waited until they were almost on us. And then we let fly.

"Look!"—and he rolled up the sleeve of his tunic to show a deep scar near his elbow—"I got this from a bit of one of our own bombs, so close did we let the Germans come. But not one of them could have escaped, for at least three of our bombs dropt right into the boat, and there were great bits of woodwork drifting about next day.

"The strangest part of it all is that the fellows in the trenches on both sides are afraid to fire for fear of hitting their own men. As a matter of fact, all four of us were slightly hit in the run for home, but the Boches never got home at all."

REMARKABLE REMARKS

PAUL L. BENJAMIN—Most of the babies I have met have been very bad.

LILLIAN RUSSELL—Let the clean wind blow the cobwebs from your body.

LAURA JEAN LIBBY—Why are some people single to the end of their days?

CHARLOTTE PERKINS GILMAN—We are all in love, sometimes more than once.

JOHN D. ROCKEFELLER, JR.—Our churches do not lay hold of the masses.

BILLY SUNDAY—Don't tell your Uncle Fuller that old New York is cold to God.

ORISON SWETT MARDEN—I have made quite a study of the misunderstood girl.

MINISTER KARENSKY—We have taken our sip of freedom and it has intoxicated us.

IRVIN S. COBB—Billy Sunday is, for action, the Charlie Chaplin of the pulpit.

ED. HOWE—Every time I have caught hell it has been the result of pursuing it.

DR. FRANK CRANE — Opportunity's knuckles are all skinned knocking at your door.

SECRETARY MCADOO—The bonds of the Liberty Loan are an absolutely safe investment.

CHAMP CLARK—There is precious little difference between a convict and a conscript.

DR. H. H. CHERRY—The reason people do not have time to read, is that they do not read.

HELEN KELLER—I feel the vibration of the audience thru my feet on the floor of the stage.

CRITIC W. C. BROWNELL—Ineptitude may easily be quite as genuine as significance.

JESS WILLARD—If they bring on the German army one at a time, I'll end the war myself.

DR. J. KAEMPF, President of the Reichstag—I declare that President Wilson will bite granite.

REV. J. W. HEININGER—Welfare of the right sort always follows warfare of the right sort.

DOUGLAS FAIRBANKS—Keep a smile on your face till 10 o'clock and it will stay there all day.

ORVILLE WRIGHT—Safety in the air is almost entirely a matter of maintaining a sufficient hight.

WILLIAM B. FORBUSH — About one grown up person in a hundred really enjoys reading verse.

REV. J. G. GRATZ—St. Paul, Minnesota, treats its criminals better than its school children.

LADY DUFF-GORDON—A hat to be up to the moment must be coquettishly, even tipsically inclined.

ARNOLD BENNETT—The perfect dull man will not laugh when he sees a bishop sit down on a bishop's hat.

GERTRUDE ATHERTON — The perfect woman is forty, is married and is the mother of five children.

IGNACE PADEREWSKI—There is not one Pole now living who would not give his heart's blood for the Stars and Stripes.

PROF. FRANKLIN H. GIDDINGS—Peace at any price means the surrender of civilization, liberty, responsibility and self-respect.

PREMIER LLOYD GEORGE—We have lost many ships, but German piracy brought in America—and we are perfectly satisfied with the balance.

A Journal of Civilization

FACING THE MUSIC

IT is the patriotic duty of every thrifty American to subscribe to the Liberty Loan, which will release two billions to the help of the Great Cause and at the same time be spent upon our own shores in manufacture and trade. It is a patriotic duty for every American to submit cheerfully to the heavy war taxes that are about to be put upon us.

As a country we are pretty well off.

We have work to do in a woeful war, and sacrifices to make, but in the meantime our general business continues to bound, and when the war-work is all over we shall be a busier and more prosperous country than ever, we shall have a better national backbone, and we shall enjoy the permanent fruits of new and wonderful international friendships.

As a nation we have been literally jerked into unwonted activity. We did not want to get into this thing, but now that we have got into it, it is good for us.

Every last man of us, every last woman of us, and every last child of us (except babies) is thinking about things never thought about before, doing things never done before, and experiencing a new kind of heartbeat and a new and noble passion for humanity.

We are doing our bit for the release of our brothers across the sea who wince and bleed under the lash of an enslaving and merciless autocracy.

All this is as it should be, and therefore all is well!

The downright sensible *other* thing for us to do now is to be normal in our work, normal in our play and normal in our use and investment of money.

Economy? Certainly! But no frenzied spasm of fear or hoarding.

So let us face the music in a cheerful and common-sense fashion, and then when the last note of that same music has died away we can say it was a pretty decent tune after all.

A GLEAM OF PEACE

THE military situation is as dark as ever. No one could safely venture to predict what the next three months will bring forth. It is still a fight between an elephant and a whale, but the belligerents have exchanged roles. Great Britain is now the dominant force upon the land and Germany upon the sea. How long British commerce can endure the raids of the U-boats and how long the Hindenburg line can hold out against Haig's artillery are questions that only the future can answer.

But while the issue and the end of the war are as uncertain as before and the clouds still cover the battlefield we are getting a clearer light upon the question of the terms of possible peace. The revolution of Russia, while it may have weakened the military force of the Allies, has greatly strengthened their cause, not only by making distinct the issue between liberty and despotism, but also by removing one of the chief causes of the tension among the Allies. America, with its millions of Russian refugees, could not be expected to sympathize with the extension of the Czar's domain over other alien peoples. But we do sympathize with the desire of Russia for a free passage to the open sea not merely thru the Dardanelles but also thru the Strait of Gibraltar and the Suez Canal. The possession of Constantinople was a dynastic ambition, rather than a real necessity of the Russian people, and now that they have gained control of their own government they have exprest a willingness to relinquish the claim on Constantinople provided the Dardanelles are put under some sort of international control. Some such arrangement would undoubtedly be acceptable to Turkey and would remove the objections that have been raised in the United States and Greece against the Russian annexation of Constantinople.

To the new Russian Government we are also indebted for a formula which promises not only to settle the present war, but also to serve as a basis for a durable peace. This is "Peace without punitive indemnities or forcible annexation." This seems to be the only way to deal a death-blow to war. Preachers have denounced war as wicked. Economists have proved that war is wasteful. But until it is demonstrated that war is futile, we cannot expect peace to be permanent. Norman Angell was right in thinking that this was the only fatal argument to be brought against war, but he was unable then to prove his point. War cannot be considered as necessarily unprofitable so long as new territory may be annexed and indemnities collected. If Germany had succeeded in her original plan of conquering France within the first few months, she would have been a gainer by the war. Even now, if peace were made upon the situation as shown by the map, the Kaiser might claim a successful war in spite of its terrible cost. But if Germany is compelled to evacuate the territory she has occupied and to relinquish all idea of any indemnity, it would be a signal demonstration of the futility of war and the greatest possible deterrent to aggression in the future—much more effective in this respect than to hang the Kaiser on a gallows as high as Haman's. Some of the German papers rejoice that the United States has come into the war because now they can collect a bouncing indemnity which would be impossible if they had only the bankrupt Allies to draw from. But this hope is futile because Uncle Sam will have spent his bottom

dollar before America is conquered. On the other hand, the Allies have given up all hope of ever being able to secure from Germany an indemnity sufficient to cover any considerable part of their expenses in the war, however completely they may be victorious. The more utterly Germany is crushed the less she will be able to pay. The question of indemnity has ceased to be an important factor. The war is costing about one hundred million dollars a day and either side could better afford to forego an indemnity rather than continue the war for another year even tho a victory were certain. It has been several times intimated from Berlin that Germany would be willing to pay a compensatory indemnity, but never a punitive indemnity. That is, she would compensate Belgium and France for the actual damage done to buildings and other property, but would never consent to pay the expenses of the Allies in carrying on the war.

Since the question of indemnities is no longer an impediment to peace, there remains little to keep the belligerents apart except the question of annexations: Two of the belligerents, Italy and Bulgaria, entered the war with the avowed purpose of gaining new territory. Bulgaria has obtained possession of the territory she coveted. Italy has not. Russia has renounced all idea of annexation. Turkey, of course, would be glad to make peace on the same terms. Count Czernin, Foreign Minister of Austria-Hungary, has given unofficial expression to a willingness to make peace without annexation or indemnity. The Socialists, who are numerically the largest party in Germany, are all in favor of peace upon these terms. The Premier of Bavaria has exprest his concurrence with the views of Austria-Hungary. On the other hand, the Conservatives and the Pan-Germanic League declare that Germany must annex extensive territory on both fronts or at least establish protectorates over Poland and Belgium. A more moderate group of annexationists propose the evacuation of France and the partition of Belgium, the French-speaking portion being ceded to France and Flanders being annexed by Germany. The German Chancellor refuses to commit himself, but will undoubtedly have to come over to the side of the anti-annexationists if that sentiment continues to grow as it has recently.

The chief obstacles to a peace without annexation or indemnities are Great Britain and France. The French would not readily relinquish the ambition they have cherished for nearly fifty years—the recovery of Alsace and Lorraine. The outside world generally agrees that the rape of these provinces by Germany was unrighteous and would like to see a restitution made to France. But the question of whether a majority of the inhabitants of Alsace-Lorraine would have voted for re-annexation to France was still in dispute before the war and now never can be determined. At any rate we know that more Frenchmen have lost their lives in attempting to recover Alsace-Lorraine than there were Frenchmen in these provinces at the beginning of the war, and so far as the land itself is concerned France could not afford to continue the war for a year or even six months more even tho she were absolutely certain of recovering the lost provinces. As for the Allies, they could better afford to give a farm and a fortune to every one of the inhabitants of Alsace-Lorraine who wish to emigrate rather than continue the war much longer.

The attitude of Great Britain offers more difficulty. Unlike Italy, Bulgaria, Serbia, France, Austria-Hungary and, presumably, Germany, Great Britain had no intention of annexing new territory when she entered the war. Nevertheless she has acquired more than all of the other belligerents put together and is determined to hold on to it. Nothing was said on this point by the Allies in the statement of their aims solicited by President Wilson. But shortly afterward, Mr. Long, Secretary of State for the Colonies, announced that the German possessions which had been conquered by the British Dominions would never be returned, and this statement has been confirmed in the most emphatic manner by Lord Robert Cecil in reply to a demand from the radicals in Parliament that the British Government agree with the Russian in declaring for peace without conquests. The territory acquired by Great Britain in Africa, Asia and the Pacific during the present war is almost as great in area as the United States, and the British would have to be very badly beaten before they would consent to relinquish any considerable proportion of it. They claim, and not without reason, that it would be an injury to the inhabitants of the territory which has come under the British flag if they were placed again under the oppression of German or Turkish rule.

There remains, then, the question of the Japanese conquest. Japan took Kiao-chau from the Germans under a promise to return it to China, and we may assume that she would be willing to keep to this agreement if her allies insist upon it. Doubtless also Serbia and Montenegro might be induced to forego their ambitions of expansion. Italy has already renounced her claim on the Trentino.

This, then, is how the matter stands at present in so far as the intentions of the belligerents have been made public. The opposing parties are obviously still wide apart in their hopes and ambitions. But they are evidently coming nearer together than they were a few months ago, so we can begin to measure the difference that still separates them. Altho we are in the midst of war, it is perfectly proper to discuss the terms of possible peace. Such a discussion does not imply any relinquishment of the determination to fight for victory nor any slackening in the preparation for a long and bitter war. Nobody is calling for a truce yet. In fact, it is quite likely that the fighting will continue up to the very day when the conference meets to settle the details of the terms of peace.

PAY, PAY, PAY

THE Army bill is law. The selective draft is a fact. Now for the biggest taxation bill in all our history.

It is the young manhood of *today* that is to fight the war for us. It should be the wealth of *today* that pays for the war.

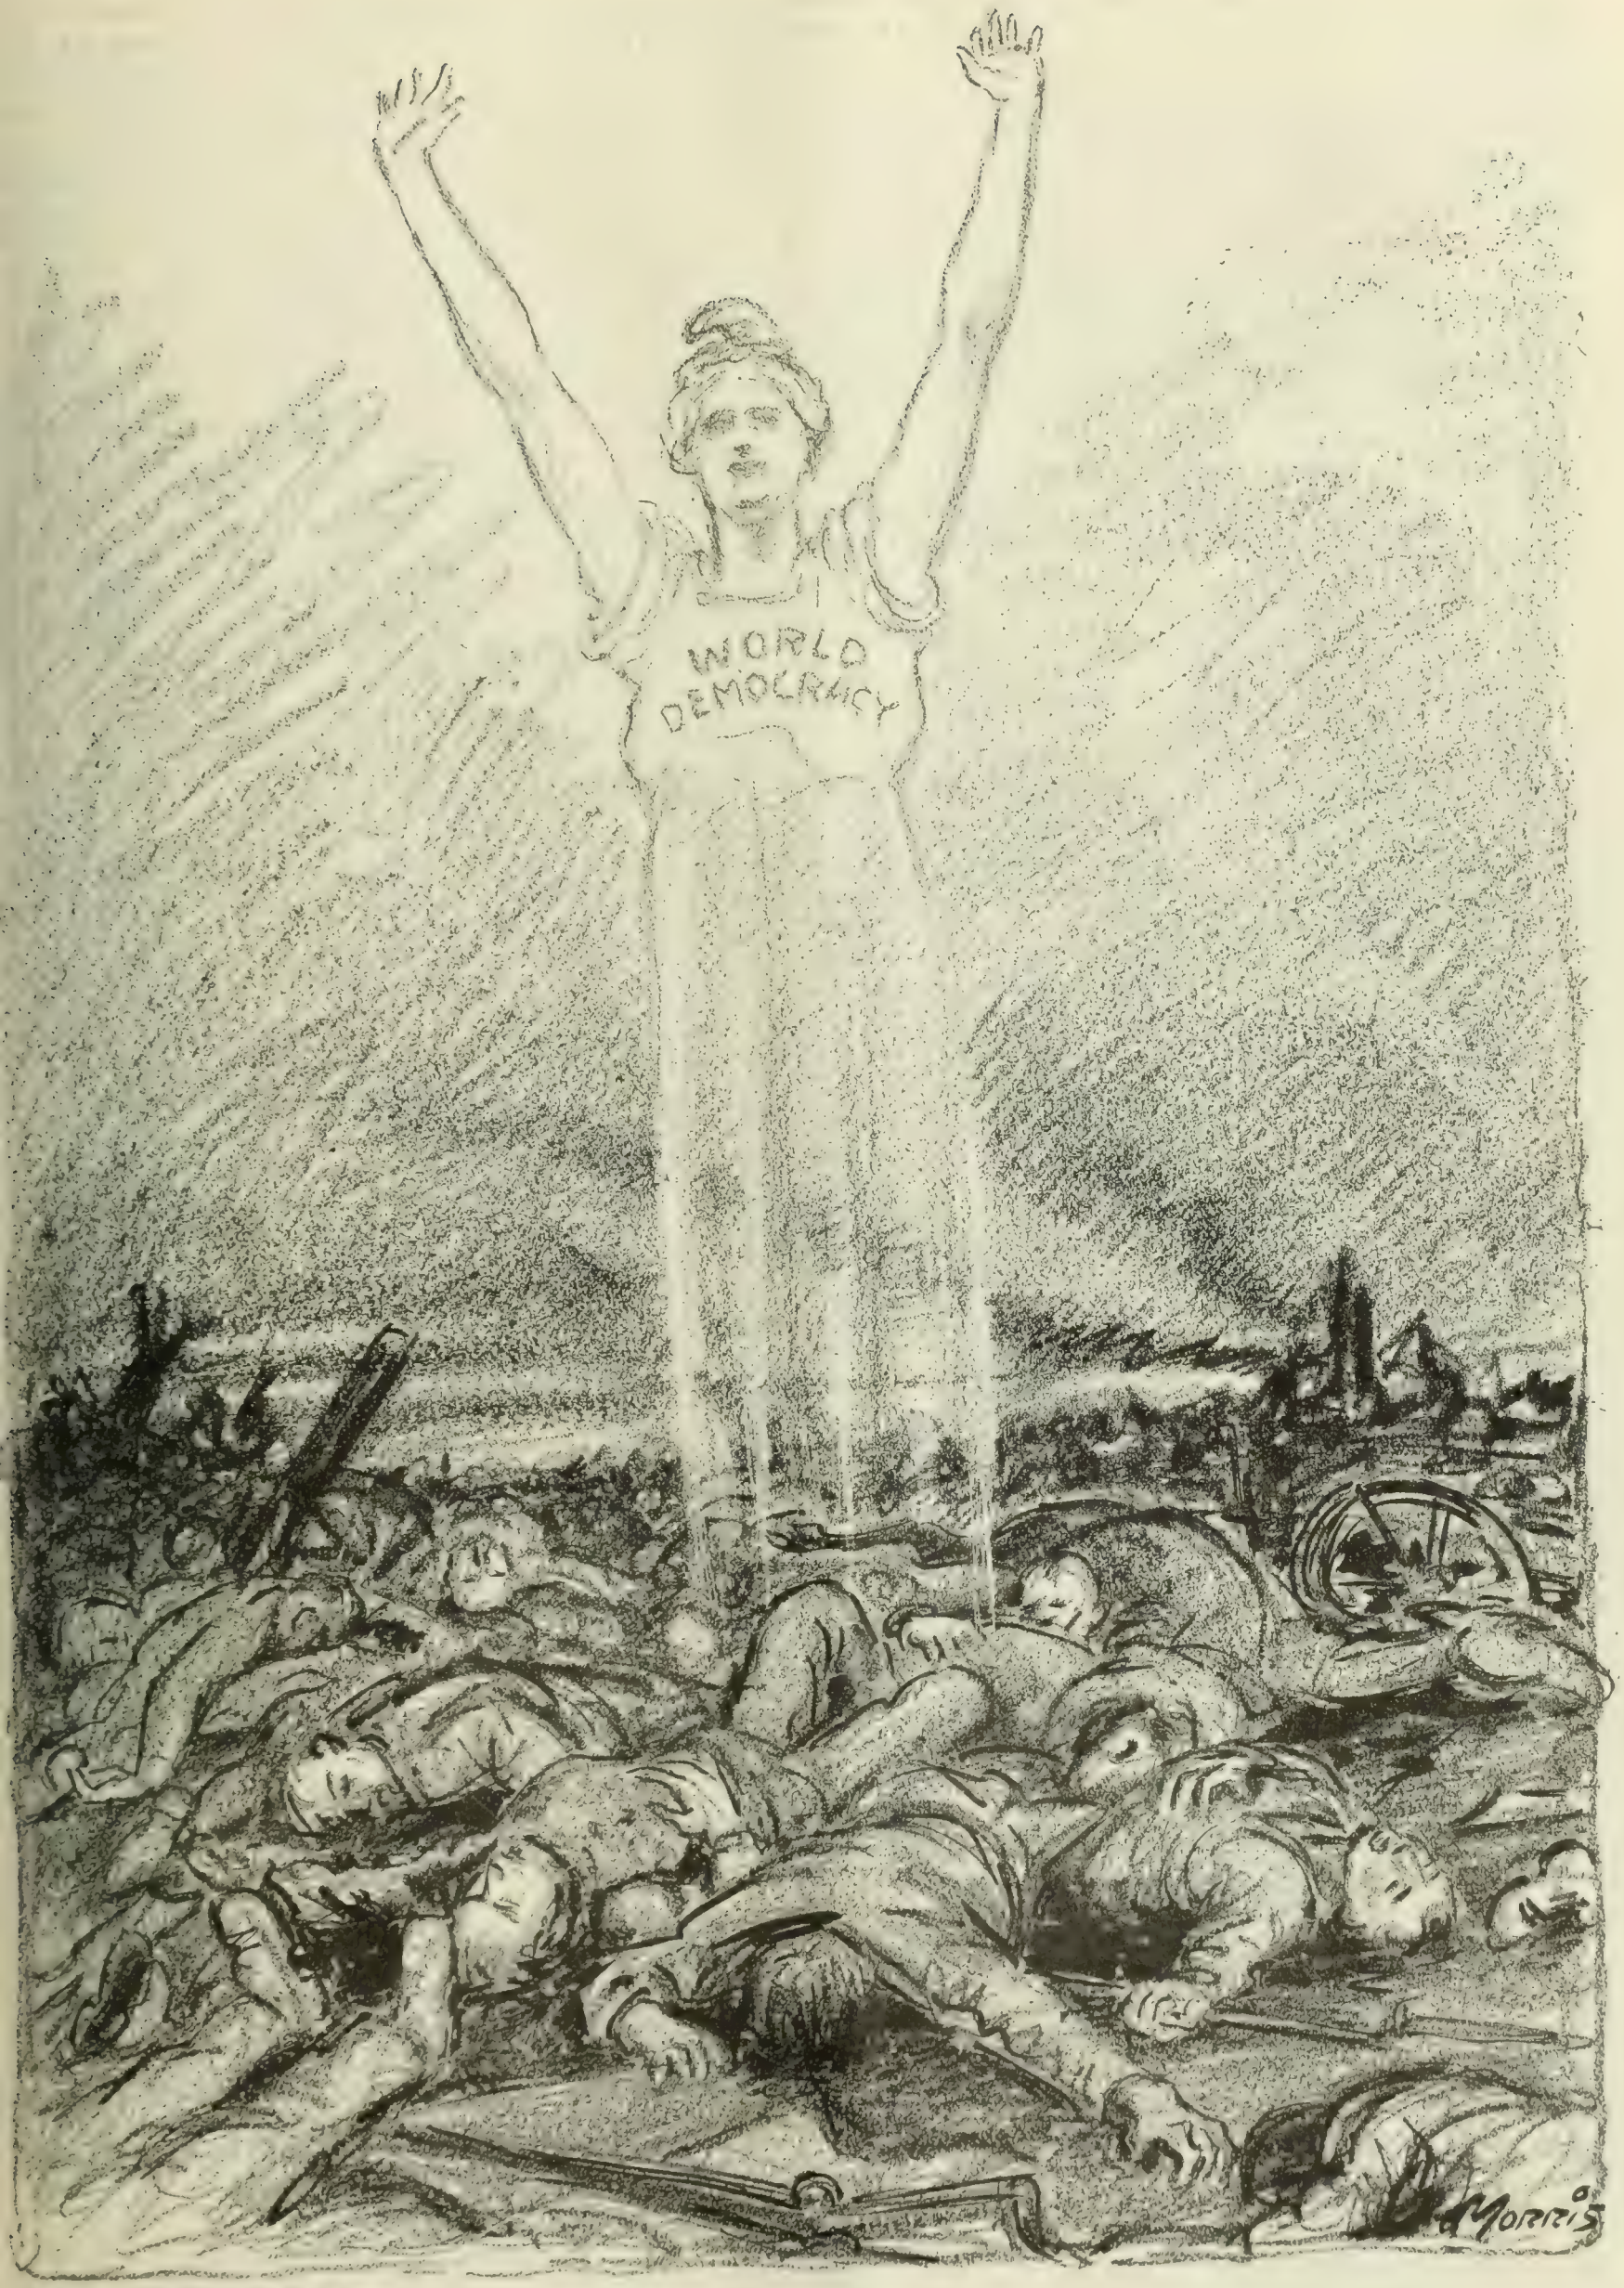
After the conscription of men, the conscription of money. Posterity will have troubles enough of its own.

WAR PROHIBITION NOW!

THE argument for prohibition is clean-cut, simple, and direct.

The drinking of alcohol never produced for any normal individual positive good—in health, efficiency, power, or happiness.

The drinking of alcohol does produce for countless individuals and for society positive evil—in disease, loss of efficiency, impairment of power, vice, crime, and unhappiness.



The best that can be said for the drinking of alcohol is that it affords pleasure, gratification, and sociability. The evils that it produces constitute too heavy a price for the community to pay for these epicurean benefits.

This is the story in time of peace. In time of war the indictment against alcoholic liquor becomes tremendously graver. In such times as now confront the world the emphasis shifts from the effect of the drinking of liquor to the effect of the making of liquor.

The cold fact is that liquor is made from food; and in this day of the world every people which is at war is suffering for lack of food. Here and now the question becomes one, not between indulgence and abstinence, between pleasure and self-denial, between personal liberty and tyranny, between virtue and vice, between health and disease—but between food and drink.

Shall the many have food, or the few have drink? That is the question.

Last year there were used in the United States in the

Drawn for the Independent by W. C. Morris

THE PHOENIX

making of distilled spirits thirty-two million bushels of corn, three million bushels of rye, four and a half million bushels of malt, made from barley, and one hundred and fifty-two million gallons of molasses. These are the official figures. A careful estimate made by prominent professors of economics in Harvard and Yale Universities shows that there were used last year in the manufacture of fermented liquors in the United States thirteen million bushels of corn, fifty-four million bushels of malt, and seventeen million bushels of barley.

If as much as one-sixth of the grand total of these foodstuffs were to be used in the manufacture of alcohol for industrial purposes, the saving in foodstuffs would be sufficient to supply the energy required of seven million men for one year.

Cutting off one-half of our production of distilled and fermented liquors would save enough foodstuff to provide eleven million loaves of bread a day.

What are we going to do about it? Are we all to suffer for lack of food in order that some of us may continue to get pleasure out of drink?

A time of national crisis like this is a time for national and individual self-sacrifice. We shall all make sacrifices, not so much because we must as because we will. The spirit of the American people is right. But the sense of the American people must be kept right also. To sacrifice bread for beer, food for whiskey, would be utter folly and wickedness.

Let us follow England's example and cut down immediately the number of pounds of foodstuffs that we permit to be made into drink.

THE IRISH QUESTION REFERRED TO IRISHMEN

LLOYD GEORGE has sprung a new proposal on the Irish question, that is to let Ireland as a whole determine what kind of a government it wants. This is in itself a recognition of the right of Home Rule, but it involves the assumption—rather startling at present—that Ireland is already sufficiently united to act as a whole on any question. Three years ago Belfast was in the control of an armed force, supplied with smuggled guns from Germany and sworn to resist the King's troops if they should attempt to enforce the laws of Parliament. One year ago Dublin was in the control of an armed force, supplied with smuggled guns from Germany, and fighting the King's troops who were trying to enforce the laws of Parliament. The Home Rule bill had thrice passed Parliament and received the King's signature in 1914, yet it has never been carried out. Lloyd George, who was active in putting it thru Parliament, now admits that it can never be put into effect over all Ireland, because of the opposition of Ulster. Sir Edward Carson, who organized the Ulster rebellion against Home Rule, is now second in power to the Premier.

Yet if the people of Ireland were called upon now to express their real preferences on the question, Home Rule would probably pass in Ulster and be rejected in the south of Ireland. For those who once would have been satisfied with a moderate measure of local self-government now demand an independent republic. The recent election to Parliament of a man who is in prison for participating in the Dublin rebellion shows how far the Home Rulers have advanced beyond Home Rule.

The Government has tried to put off the Irish question till the end of the war, but that proves to be impossible. England must win Ireland in order to win the war. Every man in England, Scotland and Wales is subject to draft, but not a man can be drawn from Ireland. On the contrary 150,000 regular troops have to be maintained in Ireland to prevent insurrection. It was the Irish in Australia who killed conscription. It is the Irish in America, and not the Germans, who are most bitter against England.

All parties appeal to American opinion and cite American precedent. The Sinn Feiners claim that they are fighting like Washington for freedom from British tyranny. The Home Rulers say their solution is the same as that successfully adopted in the federalization of the United States. The Unionists assert that in maintaining the Union by force of arms they are following the example of Lincoln, and they inquire what we would do if Minnesota should aspire to set up an independent German-speaking republic. The London *Times*, formerly the foe of Home Rule of any kind, is publishing a series of messages in favor of it from ex-President Roosevelt, ex-President Eliot of Harvard, Mayor Mitchel of New York and other prominent Americans. But while the *Times* is printing Mayor Mitchel's plea for Irish nationalism men are being imprisoned in Dublin for circulating quotations from the writings of his grandfather, who was transported to Bermuda for treason in '48.

On the other hand American interference is highly resented by those whose views it contradicts. For instance the veteran Positivist, Frederic Harrison, writes:

> As an Englishman, I wonder to see my stalwart friend Roosevelt and so many leaders of American intellect and statesmanship echoing the stale sophisms of our enemies during one of the most inveterate trials to which Britain has ever been exposed. What would Americans do if we intervened in one of their dilemmas—say, if our ex-Ministers, doctors and preachers were to summon them with a passionate appeal to raise up their 12,000,000 of colored citizens to equal human dignity, to wipe out the national stigma on the commonwealth that every man or woman born with a dark skin is born into the shame of exclusion and the life of a pariah race?

Under such circumstances Americans may well be wary of proffering their advice. As Lloyd George says, it ought not to be impossible for a convention representing all interests and parties in Ireland to draft a constitution when the four warring states of South Africa came together into a union. But the African states had merely been fighting each other for three years, not hating each other for three centuries. The obstacles to a settlement are psychological rather than political. Anybody can draft a good constitution for Ireland but nobody could get the Irish to agree to it.

FIND THE PLACE FOR HIM

THE President has decided not to accept the offer of Theodore Roosevelt to raise two or more divisions of volunteers for immediate service in France. The President gives excellent reasons for his decision; as a soldier and a good American Mr. Roosevelt has promptly accepted the decision of the Commander-in-Chief. But now that that question is settled, it would be a good thing if the Government could discover some way to utilize the "fine vigor and enthusiasm," to use the President's words, of "an ex-President who has rendered many conspicuous public services and proved his gallantry in many striking ways." Mr. Wilson is quite right in saying further that the assignment of Mr. Roosevelt to service would "politically . . . have a very fine effect and make a profound impression."

When a democracy goes to war it is unwise, indeed it is impossible, to ignore the element of popular desire and popular enthusiasm. We must not only, as the President says, make war scientifically and practically; we must dramatize the war for the effect upon the popular imagination.

In this world of ours nothing arouses enthusiasm, not even a great cause, like a commanding personality. There is a considerable number of the American people upon whom no personality has a more stimulating effect than that of Mr. Roosevelt. This great potential asset should not be ignored in the magnificent struggle for democracy which the American people are taking their part in waging.

Mr. Roosevelt is genuinely and eagerly anxious to serve. The Administration should think out some method of availing itself of his power and ability in a position commensurate with his dignity as ex-President of the United States and worthy of the outstanding services which he has rendered in the past to the American nation and the world.

THE STORY OF THE WEEK

Senate Passes Army Bill

On the 17th of May the Senate defeated the attempt to send the compulsory service bill back to conference with the House of Representatives and passed the measure. The eight who carried their dissatisfaction with the bill to the point of voting to send it back to conference were Gore of Oklahoma, Gronna of North Dakota, Hardwick of Georgia, Kirby of Arkansas, La Follette of Wisconsin, Norris of Nebraska, Stone of Missouri, and Trammel of Florida. Senator Vardaman of Mississippi was paired against the bill, and Senator Fall of New Mexico was excused from voting. The list of opponents of the measure correspond in a general way to the group that opposed the President on the armed neutrality bill and the declaration of war.

Wilson Announces Draft

As soon as the universal service bill secured the approval of the Senate, President Wilson issued a proclamation making known its terms to the nation, providing the machinery for registration, and appealing to the people to see that the mobilization of the citizen army is efficiently carried out. Registration will take place on the fifth of June between seven in the morning and seven in the evening, within the election precinct in which the person called to service has his permanent residence. Men who have not on that date reached their twenty-first birthday, or who have already attained their thirty-first, or who are enlisted in some branch of the army or navy are exempt; all others must register under penalty of imprisonment for not more than one year. The sick may register by agent and the absent by mail. Persons away from their usual residence should apply to the county clerk of the place where they may be staying for registration forms to mail to the registry board of their home precinct. The formal provisions of the law set forth in the proclamation were followed by an eloquent address to the American people urging each to do whatever duty might be assigned to him without insisting that his services be used in the way of his choice or not at all.

Pershing to Go to France

President Wilson has selected Major-General Pershing as the commander of the first division of American soldiers which will see service "somewhere in Europe." The first expeditionary army will be composed entirely of regular soldiers, a division, probably equal to 25,000 men, from the army; some ten thousand engineers and a regiment of foresters; 2600 marines, and various auxiliaries making a grand total of approximately 40,000. The second line of defense will be largely taken from the National Guard. The third army, based upon the selective draft, will not go into training before September and may not be employed in Europe till well into next spring. General Pershing at the time of his appointment was in command of the Southern Department of the army. Few men of any rank in the American army have seen as much service as General Pershing. In the Indian campaigns in the southwest, the war in Cuba, the Philippine campaigns and in the punitive expedition into Mexico he took an active and creditable part. Colonel Doyen has been selected to command the marines who are to go to Europe.

Altho Congress by the provisions of the army bill had authorized the President to call into service volunteer divisions, such as those recruited by Ex-President Roosevelt, these authorized powers will not be exercized. President Wilson stated that in his opinion such a volunteer force would interfere with the plans of the administration for recruiting an army by draft, since it would include many older men who are wanted for officers of the regular army or of the new national army.

The immediate duty of the military authorities is to recruit existing establishments to full war-time strength. The regular army can still find place for nearly a hundred thousand more volunteers, and the Senate has authorized increase in the personnel of the navy from 87,000 to 150,000 men, and of the marine corps from 17,000 to 30,000. The national guard also must bring its units to their full complement. Equipment for all these forces will be ready during the summer, and thereafter the factories making munitions and supplies for the Government will have to provide for the needs of the first 500,000 mobilized by the selective draft. An amendment to the army budget bill limits the operation of the draft to a period of four months after the present war with Germany.

American Destroyers in British Waters

It is now disclosed that a flotilla of American destroyers under the command of Rear Admiral W. S. Sims arrived at Queenstown on May 4 and has been operating against the U-boats ever since. As the long line steamed into the harbor under the Stars and Stripes they were received enthusiastically and the photographer of the British Government took motion pictures which were shown in London a few days later. After the commander of the British fleet in the harbor had greeted the Ameri-

THE GREAT WAR

May 14—Italians start offensive on the Isonzo. Twenty-six British vessels sunk in past week.

May 15—Warships, submarines and airplanes engage in Adriatic. British take Roeux.

May 16—British passenger steamer "Highland Corrie" torpedoed without warning. German Chancellor refuses to state terms of peace.

May 17—Lloyd George proposes Home Rule with separation of six Ulster counties or an Irish convention to settle the question. Germans evacuate Bullecourt.

May 18—Italians storm Monte Vodice. President Wilson signs draft bill.

May 19—Nicaragua and Honduras break with Germany. Russian Provisional Government reorganized and declares for general peace without conquests or contributions.

May 20—British gain another mile of trenches near Bullecourt. Sweden angered by the sinking of three Swedish grain ships.

can officers he asked: "When can you be ready for business?" The American commander replied: "We can start at once. We made preparations on the way over." In fact, they had already begun their service, for they had picked up and escorted safely thru the danger zone one of the largest of Atlantic liners.

Whether the American flotilla had anything to do with it or not, it is pleasant to note that the latest report of the British Admiralty gives 26 ships sunk instead of 64 for the previous week. This is less than it has been for a month. Of these 18 were over 1600 tons instead of 24 in the week before.

Hoover Gets Extended Powers

Herbert C. Hoover has accepted the post of American Commissioner of Food Administration tendered him by President Wilson. In his statement of acceptance Mr. Hoover said that in taking the position he assumed that Congress would grant the administration all necessary powers to handle the food situation in an efficient manner. He mentioned some of the policies which he desired to have understood in the administration of his new office: that he should be regarded as an administrator rather than as a "food dictator," that existing distributive agencies be utilized to their full extent, that so far as possible all important posts in the service be filled by volunteers, and that the food administration, while coöperating with the Department of Agriculture and other branches of the national Government, be responsible only to the President. Very careful division of function and responsibility has been arranged between Secretary of Agriculture Houston and Mr. Hoover. All measures directly extending the normal activities of the Department of Agriculture in reference to the conservation and production of farm crops will be administered thru that department, but the exceptional war powers over distribution, consumption, prices, foreign trade, requisition and storage which it may be necessary to exercize will be in the hands of the Commissioner of Food Administration.

Nothing like compulsory rationing is now contemplated by the Government. Mr. Hoover intends to issue instructions to consumers from time to time, but he will rely upon the good faith of individuals to see that they are observed. He and Secretary Houston both assert that there is no cause for food hoarding or excessive economy, and Mr. Hoover suggests as a consumer's motto, "Eat plenty, wisely, and without waste."

Central America and the War

The little republics of Honduras and Nicaragua have followed the example of Guatemala and severed all diplomatic relations with Germany. Costa Rica and Panama have already offered the United States the use of their ports for our navy. Salvador alone of all the Central American nations has remained strictly neutral in the war between the United States and Germany. The marked solidarity of sentiment thruout Central America and the island republics is gratifying since it shows the confidence in our friendship and disinterested motives resulting from our foreign policy, and also because it relieves us of the necessity of keeping a part of our forces on this side of the Atlantic to police the Caribbean region. Mexico, however, is still a doubtful quantity. President Carranza's remark at a banquet given recently to honor General Obregon that Mexico might against her will be drawn into the world conflict is open to two interpretations since he did not make plain to which side the neutrality of the nation might incline.

Roeux and Bullecourt

The inactivity of Russia has permitted Hindenburg to bring large numbers of troops, 600,000 it is said, from the eastern front to the western, but more than half this number must have been lost in the first month of the Anglo-French offensive. Altho the number of dead and wounded on the German side cannot be told, it is known that 49,579 Germans were taken prisoner between April 9, when the British drive began, and May 12. The arms captured include 444 heavy and field cannon, 943 machine guns and 386 trench cannon and mortars.

The strong mass attacks of the Germans have not resulted in any considerable gains during the week, but on the contrary the British have taken two more of the villages lying between Arras and the Wotan line, Roeux and Bullecourt. Roeux lies in a bend of the Scarpe River and its chemical works, quarries and cemetery had been converted into a formidable fortress by means of underground passages, concrete covers and concealed guns. For weeks this has been the scene of hot fighting, but finally the Germans were ousted from these strongholds and a few Irish soldiers coming back from the cemetery, lost their way in the dark and entered the village of Roeux by mistake. This place was not on the program for the day, but being there they proceeded to clear out the dugouts in one of which they found the officers of a British battalion which had been wiped out a few days before. A German doctor was tending the wounded and had labeled them for Berlin, but the direction had to be changed to London and the doctor had to be included.

Italians Start Offensive

It was the plan of the joint war council of the Allies to start an offensive against the Central Powers from all sides this spring, but the revolution in Russia disorganized that country so that it has so far not been able to take any part in this coöperative movement. The French and British started their offensive on the Somme earlier than they had intended in order to give Russia a chance to recover and the strong attack they launched against the Hindenburg line seems also to have had the effect of diverting from Italy the offensive which the Germans and Austrians were supposed to be preparing in the Trentino. At any rate the Italians, instead of having to defend their frontier from another attack in the west as they expected to, have themselves taken the offensive in the east.

Since last November, when the Italians took the city of Gorizia and secured a foothold on the Carso plateau, there have been no operations of importance. But on Sunday, May 13, the heavy artillery which the British have sent to Italy began planting their shells with great accuracy upon the Austrian lines on the mountains east of the Isonzo River. Then the Italian troops charged and before the week was over they had possession of two peaks, Monte Cucco and Monte Vodice, of the ridge running north of Gorizia. They are also said to have taken Duino on the Adriatic, which brings them within a dozen miles of Triest.

A Battle in Three Dimensions

A battle unique in the history of the world took place in the Strait of Otranto, between Italy and Albania on May 15. Five nations participated in it and the fighting was carried on in the air, on the sea and under water simultaneously. A squadron of Austrian and German cruisers and destroyers made a night attack upon the chain of Italian, British and French patrol vessels blocking the Strait. Fourteen British drifters and several Italian vessels were sunk, yielding 72 prisoners. British and Italian cruisers hurried to the spot and pursued the enemy all the way back to Cattaro. The British cruiser "Dartmouth" kept in contact with three enemy ships for more than two hours at high speed firing about 600 shots, but was struck by a torpedo from a U-boat and lost several men. The Italian seaplanes hovered over the enemy vessels in their flight dropping bombs.

The Russian Crisis

The Russian revolution is following the course of the French. The moderates are being successively swallowed up by the extremists. The Provisional Government as at first constituted was composed of liberals and republicans of the type of the French Girondists, but they have been displaced by the radicals of the unofficial organization known as the Council of Workmen's and Soldiers' Delegates corresponding to the Jacobin Club. The conflict arose over the question of foreign policy. In order to reassure Great Britain and France who were anxious lest Russia should back out of the war and leave Germany free to throw her forces on the western front, Dr. Milukov, the Foreign Minister, issued a statement declaring that the Provisional Government would be true to the engagements between Russia and her Allies.

This aroused the distrust of the Council, who demanded to know to what obligations the nation was thus being committed, but Milukov refused to disclose the secret treaties of Russia with France and Great Britain on the ground that this would be a breach of trust and break up the alliance. Speaking on this point in the Duma Mr. Plechanov said:

> If we publish the secret treaties we shall destroy our obligations to our Allies and shall call forth their enmity toward us. Perhaps we shall find ourselves in alliance against our present Allies.

But the Provisional Government was powerless to stand against the Council, so Milukov had to resign. The Minister of War, Alexander Guchkov, also threw up his post in despair because of the continuous interference of the socialists with military affairs. The loss of these two able men from the Government weakens the confidence of the Allies in the stability of the new régime, but it is hoped that the inclusion of the radical elements in the new coalition cabinet may give it more popular support at home. The new Foreign Minister is Michael I. Terestchenko, formerly Minister of Finance. He is one of the richest men in Russia with estates valued at $30,000,000, and he has been a leader in the mobilization of Russian industries for the war. The Socialist Minister of Justice, A. F. Kerenski, has been put in charge of the War Department to replace General Guchkov. The new cabinet includes six Socialists of various groups, five Constitutional Democrats and two Octobrists. The Octobrists are less radical than the other parties and the posts assigned to them are the State Controller and Procurator of the Holy Synod, head of the Russian Church.

While the government has been in such disorder the country has been drifting into chaos. The army is disorganized; discipline is forgotten and desertions are constant. The transportation system is failing to supply either the cities or the soldiers with coal and food. A band of anarchists took possession of the palace of the Duke of Leuchtenberg and when at the end of a week they were induced to vacate it was found that gold and silver objects of art worth more than a million dollars had disappeared. To add to the confusion the peasants holding a congress at Petrograd are demanding a voice in the government and an immediate partition of the great estates among the people. The anarchistic elements at the capital have been increased by the return of the revolutionists who had been banished to Siberia or living in exile in Switzerland.

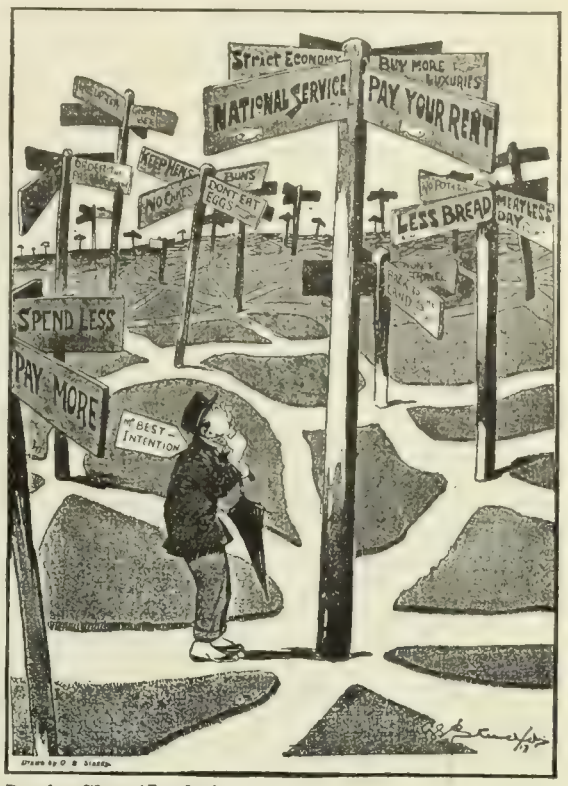
COMMANDING OUR EUROPEAN FLEET

The honor of being the first United States officer in charge of actual service in the war belongs to Rear Admiral William S. Sims, sent over to London several weeks ago to arrange with the British Admiralty for our naval cooperation. The work of our destroyer fleet in European waters is now under his command



No Annexations No Indemnities

The Council of Workmen's and Soldiers' Delegates, which is the dominant power in Russia today, has issued an appeal to the proletariat of the world to join with them in establishing a just and durable peace. To their comrades of enemy countries they say:

> The democracy of the revolution of Russia appeals to the Socialists of Austria and Germany. You cannot allow your governments to be the executioners of Russian liberty. You cannot allow your governments, taking advantage of the joy evoked in the Russian army by liberty and fraternity, to hurl their troops onto the western front, in the first place in order to crush France, and then to dash on Russia and finally crush you as well as the international proletariat in the grip of imperialism.

Their appeal to the Socialists of the Allies contains these passages:

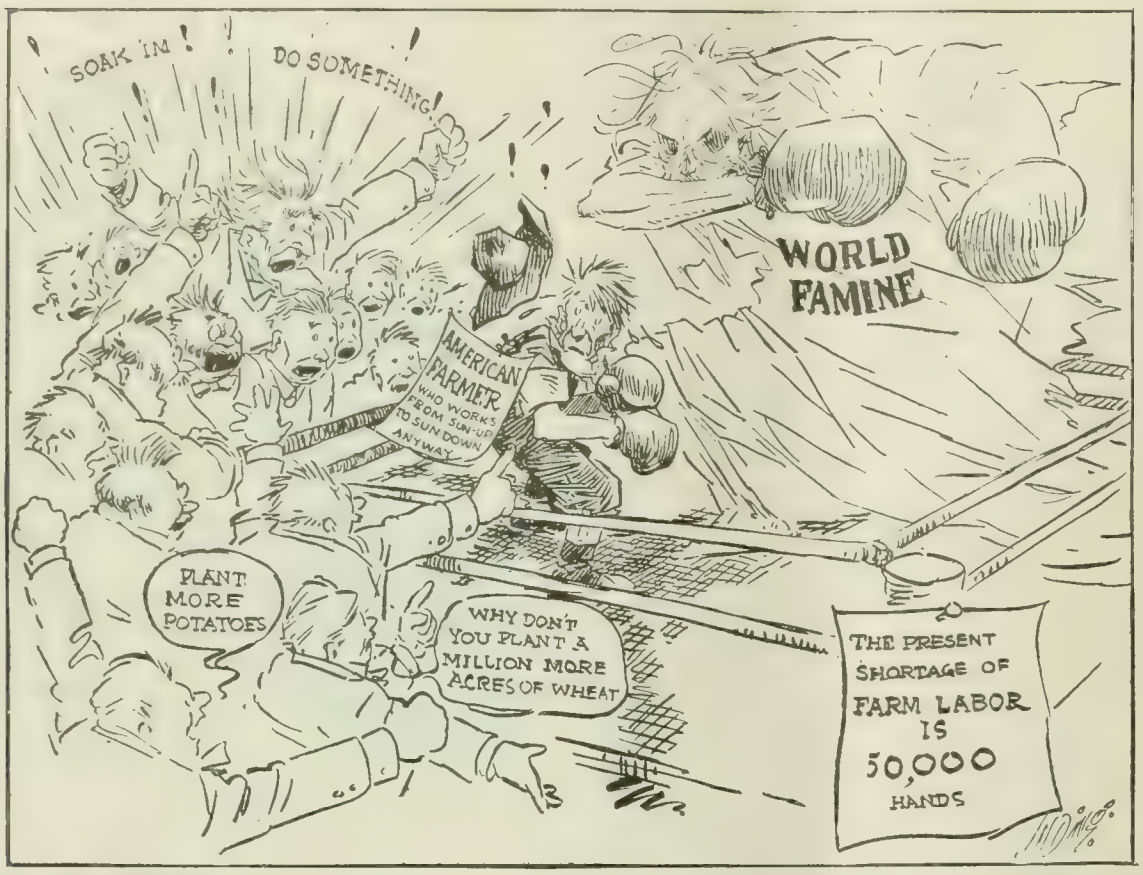
> The Russian revolutionary democracy addresses itself in the first place to you, Socialists of the Allied countries. You must not allow the voice of the Russian Provisional Government to remain isolated from the union of the Allied powers. You must force your governments to proclaim resolutely the platform of peace without annexations or indemnities and the right of the people to settle their destinies.

Passing Show (London)

THE MAZE

You will force the governments of enemy countries to renounce forever their policy of usurpation, pillage and violence, and openly to recognize their crimes, thus calling upon their heads the just anger of their peoples.

This proposal was brought up in the British Parliament by one of the Socialist members, Philip Snowdon, who called upon the British Government to make a similar renunciation of conquest and compensation. He said that the German and Italian Socialists held similar views and that if peace did not come soon the revolution would spread to the Allied countries, one of which was already threatened. We are left to guess or to wait to see which one he meant.



Lord Robert Cecil, speaking for the Foreign Office in the absence of Mr. Balfour, said that the treaties binding Russia to her allies had not yet been repudiated and so must be regarded as still binding. He described the shocking treatment of the natives in the German African colonies and said:

> If there is any measure of success in the war, I should regard with horror the idea of returning natives who have been freed from a government of that kind.
>
> While it is true that we did not take them in order to rescue the natives from German rule, but as part of the war operations, having rescued them, are we going to hand them back?

Lord Robert also condemned the idea of returning Armenia, Syria and Arabia to Turkish rule and asked if Great Britain could commit herself to a policy of non-annexation in regard to Poland, Alsace-Lorraine and Italia Irredenta. And was there to be no reparation for the injury of Belgium, Serbia and France, and for the destruction of peaceful merchant ships?

Fraternizing at the Front

One of the difficulties of conducting the war is keeping the enemies from becoming friends. At the first Christmas of the campaign it was found impossible to prevent the British and German soldiers from meeting between

Ding in New York Tribune

WHAT HE NEEDS IS NOT SO MUCH ADVICE AS HELP!

the lines and enjoying an amicable chat. Since then the feelings of mutual hatred and distrust have grown so that such a scene would be impossible between this pair of foes, but on the eastern front we find a more extensive and persistent manifestation of the same spirit of inter-army comradery. As soon as the Czar was deposed the German people realized that the Russian menace which they had so long dreaded was removed and the troops showed themselves reluctant to enter upon any further conquests of Russian territory. The Russian troops for their part regarded the revolution as putting an end to the war and set about making peace with their opponents across the trenches without waiting for negotiations between the governments. Their officers threatened to turn the artillery on the fraternizing soldiers, but the Council of Workmen's and Soldiers' Deputies prevented them from carrying out their threats. Finding it impossible to keep the troops up to the fighting pitch General Brussilov threatened to resign. Then the Council perceived the danger and issued a proclamation warning the army in the following terms against so weakening the resistance of Russia:

Soldiers and comrades at the front, we speak to you in the name of the Russian Revolutionary Democracy. The people did not wish the war which was begun by emperors and capitalists of all countries, and therefore, after the abdication of the Czar, the people considered it urgent to end the war as rapidly as possible. Do not forget, soldiers and comrades, that the regiments of William are destroying revolutionary Russia. Do not forget that the loss of free Russia would be a catastrophe, not only to us but to the working classes of the entire world.

The fraternizing which is taking place at present at the front can easily become a trap. Do not forget that revolutionary troops have only the right to fraternize with troops who are also revolutionary and who are also ready to die for peace and liberty.

The German army is not a revolutionary army if it is still blindly following William and Charles, emperors and capitalists. You are fraternizing openly, not with enemy soldiers, but with officers of the enemy general staff, disguised as common soldiers. Peace will not be obtained by separate treaties or by the fraternizing of isolated regiments and battalions. This will only lead to the loss of the Russian revolution, the safety of which does not lie in a separate peace or armistice.

War Mission Completes Tour

After leaving New York the French commission divided. Marshal Joffre, Admiral Chocheprat, M. Hovelaque and several other members of the war mission passed thru New England to receive the hospitality of Boston. President Lowell of Harvard University conferred upon Marshal Joffre the degree of Doctor of Laws. While in Boston the French emissaries appeared before a joint session of the legislature where Governor McCall extended them the welcome of Massachusetts. In the meantime, M. Viviani crossed the boundary of Canada to address the Dominion Parliament at Ottawa. Acting Premier George Foster and Sir Wilfrid Laurier, leader of the opposition, praised M. Viviani as the embodiment of the spirit of the French people, and he in turn paid a deserved tribute to the valor of the Canadian soldiers on the battlefields of France and Flanders. After this brief visit to Canada, M. Viviani went to Boston, where he was received with as much enthusiasm as his colleagues had been on the previous day. Marshal Joffre then paid a flying visit to Montreal before returning to Washington. On the return trip the French commissioners stopped at Baltimore to please the people who were eager to do them honor.

The British and French war missions shortened their tour to permit a joint conference in Washington with the Italian commission and the official representatives of the American Government. Russian commissioners were also shortly expected to be in Washington to take part in the conference.

Wilson Pledges Labor Conservation

Following a joint conference of British labor delegates with officials of the American Federation of Labor, President Wilson addressed the labor men on the domestic issues created by the war. As is well known, the necessity for an increased quantity of labor in certain industries has led to a general relaxation of the laws limiting working hours or forbidding child labor. This tendency the President deprecated in the strongest terms. "I have been very much alarmed," he said, "at the apparent inclination of the legislatures of one or two of our states to set aside even temporarily the laws which have safeguarded standards of labor and of life." He exprest confidence in the loyalty of the working men of the United States both to the nation and to its cause in the present war and he declared that it would be inexcusable to take advantage of their patriotism to enact legislation abridging their existing rights. In his speech the President defined the object of the war as the attainment of democracy. He admitted that there are many different forms of democratic government and that we were not fighting for any particular form, but he insisted that the essential safeguard of every form of democracy is the equal admission of all men and all women to the right of a voice in the government.

BLESSING THE STARS AND STRIPES IN FRANCE

At the Cathedral of St. Denys a service of consecration dedicates the colors of each new detachment of troops for the front. At this service, for the first time, the flag of the United States was included

A PIONEER IN CITY EFFICIENCY

In the person of Gaylord C. Cummin, Grand Rapids has perhaps the nearest approach in America to the type of trained municipal chief executive common abroad, who is put at the head of the city's administration not because he is a good fellow with a big following or has a pull with the "machine," but because he knows city government and has the personal capacity to administrate. About two years ago the city of Jackson, Michigan, having a population of about 30,000, had begun its experiment with the commission-manager plan, but was having its troubles; the right man was needed to vitalize the system. Very naturally they turned to the city which the new system had made famous: Dayton, Ohio. Mr. Waite, the city manager there, recommended for the Jackson position his own city engineer, who had been broken into the new way of running a city. Mr. Cummin was the man and he forthwith became the city manager of Jackson. He made good from the start, so much so that in two years' time Jackson could no longer hold him, even at a salary of $6000, which is extraordinary for a public office in a small city. Grand Rapids bid $10,000 and a bigger outlook, and he is now on the job there. He has already installed modern accounting systems, put the budget on a scientific basis, started a water-waste survey, reorganized the public welfare resources and made many other reforms. Mr. Cummin's successive promotions mark the beginning of the creation in this country of the profession of City Administrator

Loans to Our Allies Within three weeks after President Wilson had signed the act authorizing the extension of $3,000,000,000 of credit to our Allies, $670,000,000 of that sum had already been placed. Great Britain had taken $325,000,000; Belgium, $45,000,000; France, Italy and Russia, a hundred million each. The first loan to Russia, on May 16, was politically important as expressing the confidence of the administration that the present Russian Government will be sufficiently stable to weather all internal disorder and loyal enough to the common cause of the Allies to resist all pressure from Germany to withdraw from the war. In order to make certain that the Russians get full value for the money which we have loaned them, the Treasury Department will place at the disposal of the Russians expert buyers familiar with American conditions and commodity values.

Advertising Government Bonds The Treasury Department announced on May 18 that with only twenty-six days remaining in which to receive subscriptions less than half the two billion dollar Liberty Loan had been covered. The great banks and corporations have invested largely, but the small investor has not yet risen to the occasion. In the opinion of Secretary McAdoo and other officials of the Treasury Department this seeming indifference is in part due to the feeling that the loan would in any case be oversubscribed so that the modest contribution of an individual investor would not be missed, and in part to ignorance of the advantages of investment and of the method of subscribing. In order to give the loan wider publicity a huge advertising campaign has been undertaken. The Liberty Loan committee has distributed 400,000 circulars and application blanks. A Woman's Liberty Loan committee has also been organized with the special purpose of inducing the women of America to invest. June 3 has been fixed as Liberty Loan Sunday and clergymen of all denominations are urged to advocate from the pulpit the purchase of the bonds. The Western Union Telegraph Company has offered to advance to its employees one-fourth of their year's salary to invest in Government bonds, the money to be repaid in small installments. Banks and trust companies subscribing for $100,000 or more of the bond issue are privileged to make payments by credit on their books to the account of the Treasurer of the United States, the amount so credited to be withdrawn from time to time as required.

Protests Against Postal Increase One of the features of the new war taxation which attracted the unfavorable attention of many Senators and Representatives was the projected increase in postal rates and especially the extension of the zone system, now familiar in connection with the parcels post, to second class mail matter. Spokesmen for the newspapers and periodicals pointed out to the finance committee of the Senate that the effect of the zone system would be to make impossible any cheap periodical with a national circulation and that the increased rates would, in conjunction with a war slump in advertising and the increased cost of paper, wipe out of existence many valuable newspapers and magazines. If many papers should be destroyed, or even forced to limit their circulation, the increased postal rates would mean decreased revenues.

Samuel Gompers, chief of the American Federation of Labor, issued a public statement urging that every labor union should protest to Congress against the contemplated increase on the ground that it was a blow to the freedom of the press and an attempt to tax out of existence enterprizes employing thousands of workingmen in printing and allied trades. Capital joined labor in protest. The Merchants' Association of New York telegraphed to Washington its opposition to the zone system for second class mail matter, pointing out the commercial injury which would result from the destruction of periodicals or the narrowing of their area of circulation.

Cuba Active When Cuba declared war on Germany many in the United States thought that in view of the slender resources and disturbed political conditions of the republic the Allies would reap no material advantage from the action of Cuba beyond harmonious coöperation with the American fleet in the Caribbean. It was even feared that this advantage might be offset by the necessity for an American loan to enable the Cuban Government to set its house in order. But it now appears that Cuba intends to take a real as well as a nominal part in the war. Minister of the Interior Aurelio Hevia announces that a commission of military and naval officers under General José Marti will con-

IT TAKES BOATS TO BATTLE HERE

The ingenuity of the retreating Germans has made spring floods a weapon of defense along the western front. Huge areas between the lines have been inundated and in the Soissons region particularly cuttings have been made to turn the river into the trenches. An army correspondent describes the fighting under these conditions in a graphic story, published on page 357 of this issue

© *Underwood & Underwood*

THERE'S AN ITALIAN WAR MISSION HERE, TOO

The third group of allied representatives who have come to this country to discuss American coöperation in the war is headed by Enrico Arlotta, Italian Minister of Maritime and Railway Transportation. From left to right the members are: Alvise Bragadini of the Transportation Department; General Gugliemetti, Military Attaché; Minister Arlotta; Commander Vannutelli, representing the Navy; G. Pardo of the Department of Industry and Commerce; and Gaetana Pietra of the Agricultural Department

sult with the Government of the United States as to the best means of organizing and mobilizing the resources of the country for the prosecution of the war. A fleet of submarine chasers will be added to the present Cuban navy and naval vessels equipt with ordnance uniform with that of our own navy, coast defenses will be strengthened and the army will be supplied with equipment and ammunition of the type now used by the Allies on European battlefields. President Menocal has met immediate expenses by a $30,000,000 bond issue. Cuban military authorities expect to send some of their best regiments to Europe within the next few months.

The United States Government has made public a proclamation congratulating the Cuban people on their decision to stand with us against Germany in defense of international law and warning the rebels still under arms that the present is no time to carry on civil war to the detriment of the national cause. The United States threatens intervention if the insurgents continue to levy war upon the constituted authorities and devastate the resources of the country. "As the Allied Powers and the United States," so runs the warning, "must depend to a great extent upon the sugar production of Cuba, all disturbances which interfere with this production must be considered as hostile acts, and the United States Government is forced . . . to regard them as enemies and to deal with them accordingly."

American Railroads Safe

Returns issued by the Interstate Commerce Commission show a gratifying decrease in the number of accidents during 1916. In the summer quarter, when the roads handled the heaviest passenger traffic in the history of American railroading, but two passengers were killed in train accidents. Three hundred and two railroads, more than half the mileage of the nation, reported no passenger accidents for the year ending June 30, 1916.

"NO GAPS IN THE RANKS"

Significant Paragraphs from the President's Proclamation of Service

Washington, May 18, 1917.

THE power against which we are arrayed has sought to impose its will upon the world by force. To this end it has increased armament until it has changed the face of war. In the sense in which we have been wont to think of armies, there are no armies in this struggle, there are entire nations armed. Thus, the men who remain to till the soil and man the factories are no less a part of the army that is France than the men beneath the battle flags. It must be so with us. It is not an army that we must shape and train for war; it is a nation.

To this end our people must draw close in one compact front against a common foe. But this cannot be if each man pursues a private purpose. All must pursue one purpose. The nation needs all men; but it needs each man, not in the field that will most pleasure him, but in the endeavor that will best serve the common good. Thus, tho a sharpshooter pleases to operate a trip-hammer for the forging of great guns and an expert machinist desires to march with the flag, the nation is being served only when the sharpshooter marches and the machinist remains at his levers.

The whole nation must be a team, in which each man shall play the part for which he is best fitted. To this end, Congress has provided that the nation shall be organized for war by selection; that each man shall be classified for service in the place to which it shall best serve the general good to call him.

The significance of this cannot be overstated. It is a new thing in our history and a landmark in our progress. It is a new manner of accepting and vitalizing our duty to give ourselves with thoughtful devotion to the common purpose of us all. It is in no sense a conscription of the unwilling; it is, rather, selection from a nation which has volunteered in mass. It is no more a choosing of those who shall march with the colors than it is a selection of those who shall serve an equally necessary and devoted purpose in the industries that lie behind the battle line.

The day here named is the time upon which all shall present themselves for assignment to their tasks. It is for that reason destined to be remembered as one of the most conspicuous moments in our history. It is nothing less than the day upon which the manhood of the country shall step forward in one solid rank in defense of the ideals to which this nation is consecrated. It is important to those ideals no less than to the pride of this generation in manifesting its devotion to them, that there be no gaps in the ranks.

It is essential that the day be approached in thoughtful apprehension of its significance, and that we accord to it the honor and the meaning that it deserves. Our industrial need prescribes that it be not made a technical holiday, but the stern sacrifice that is before us urges that it be carried in all our hearts as a great day of patriotic devotion and obligation, when the duty shall lie upon every man, whether he is himself to be registered or not, to see to it that the name of every male person of the designated ages is written on these lists of honor.

WASHINGTON, THE FORTIETH DAY

BY DONALD WILHELM

AUTHOR OF "M - E - N"

WASHINGTON, May 16.

"IT is perfectly obvious, here in Washington, that we Americans are not instantaneous Prussians, even when we know we must fight." I made this assertion, in order to get a response, to a group at the Army and Navy Club—a group of the many Army officers one sees everywhere in uniform here.

Every one of them shook his head grimly in assent.

"Peace," observed one, at last, "is our natural state—"

A big man hit the table a wallop—a big man, born, as it happens, in Joplin, Missouri—a Captain of the Guard. "Peace," he roared, "certainly *is* our natural state, and we Americans are natural if we're darn fools!"

"He means," teased another officer—a smaller man, of mental rather than physical force—a West Pointer—"what every one now and then has to get out of his system: That democracy is a failure—"

"—I mean," countered the "big man," "that if it weren't for Yankee luck—"

"—in other words," paraphrased the "little man"—"if it weren't for Yankee luck; if Heaven didn't always look out for babies, drunken men and the U. S. A.—"

"Yep! If it weren't for that, gentlemen, the Germans might be drinking beer—imported German beer—right here at this table in the Army and Navy Club where we sit! And they'll do it yet if Congress doesn't get busy all along the line."

This bit, word-for-word from a real round-the-table conversation, is set forth here merely to illustrate two divergent classes in our democracy on this, the Fortieth Day of our own Great War.

There is one class that is made up of individuals who are well informed, first hand; of individuals who are patient, realizing the enormity of the problem before the nation; or filled with faith that democracy is, because of a kind of determinism that spreads its febrifuge steadily, bound to account for itself—of which there is more further on in this diagnosis. And there is another class that is prone, from reasons we shall see clearer, to make speeches when it knows not what else to do, to see only certain sides of our tremendous war structure; and to be critical of the President and of Congress, of the Council of National Defense and of the General Staff—of all official Washington, in short, because it cannot instantly tighten the girth of the giant Uncle Sam, change his natur' and his attitude and send him with thousand league boots over and under the seas, straight thru the Wilhelmstrasse.

"There is a gusty storm of criticism brewing," I said to a group of men at a hotel luncheon table.

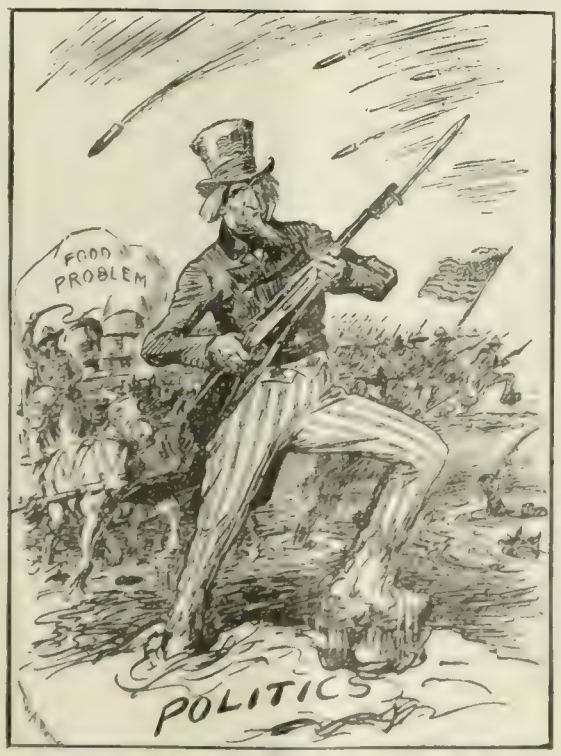
The group smiled, in unison.

"It's due here in Washington," said one of them, "in less than thirty days. But that's to be expected. It is bound to come in a democracy whenever there is any large achievement in the making. Sometimes a storm like that does a lot of good."

"We know," said another calmly, "that war, at least Sherman's definition of it, *ought to* hit this town. Wake it up, you know! Why, on the fortieth day of the Great War the battle of the Marne had been fought—"

"Now, John," interrupted the Individual of the First Class, "let's cut out the battle of the Marne!"

"Why should we?" demanded the man of Class 2.



"Because that's another matter—"

"Why is it another matter?"

"Well, in the first place every one knows that we couldn't fight a battle of the Marne—that we couldn't fight a battle a twentieth as big as that. That's one of the lessons that we Americans will think of after the war is over—that as long as there are Huns and other unvirtuous gentry abroad we've got to keep us innocents carefully guarded."

THEN, having met complete approval, this Man of the First Class continued.

"There was a time," he said, "when it was a relatively simple matter to tighten the girth of Uncle Sam, because he needed merely a provocation—a decent, sensible and upright provocation—and a rifle—and he knew how to shoot; but that time obviously has passed when naval battles are fought with fleets eighteen miles from one another; when two French boys, quitting their mitrailleuse one evening after a hard day's work, were able to count more than twelve hundred dead Germans in the fan-sweep of their one gun. There was a time, in other words, when it was relatively easy to get Uncle Sam ready for war, but now, to conscript the maximum enthusiasm, energy and enterprize on all levels high and low of a nation as big, as deep and as wide as this nation, which is just what has to be done to fit it for war, is a task with results approaching infinity."

W. A. Rogers in New York Herald

THE SPIRIT'S WILLING BUT THE MUD IS DEEP

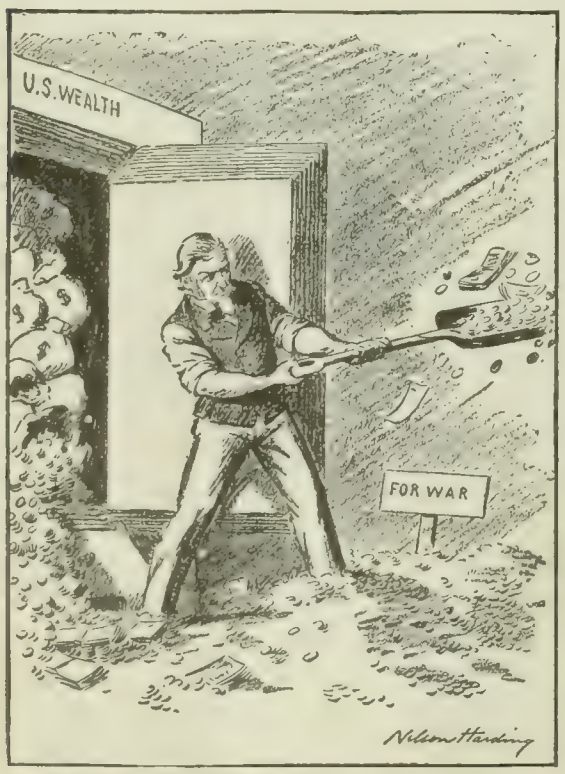
"We've got to judge by results," said a committeeman of the Council of National Defense, in the busy Munsey Building here.

"That's what I'm judging by," continued another. "I'm judging by results and we're not getting results fast enough. We haven't even got an army."

"No," said the first, "we haven't even got an army ready. But in this war, situated as we are, is that our most important function after all? We'd be doing vastly more if we could produce a cure for the submarine, and every effort is being directed to that end. We'd be doing more if we were launching ships, and after all, tho the Shipping Board hasn't got all its plans settled, General Goethels is on the job, with the coöperation of men like Judge Gary, who is ready to see that the shipyards get steel if they need it. The situation is new—this war situation. If the Germans were landing on our shores, we'd be lost. But they aren't! *They aren't!* So let's do the intelligent thing and console ourselves with things as they are. We've got the foundation work for a fine organization in Washington, tho we may have to have a Priority Board. We've got a lot done in the way of helping the Allies, tho, of course, as every one knows, Congress has slowed things things down a lot."

AN Army officer said: "The Ordinance Department of the Army has done fine work. Two days after war was declared it drafted the entire output of the Bethlehem Steel Company's plant—a plant that is making more munitions than the Krupps. We took that output for a year, by telegraph."

The Ordnance Department gave other orders also. And as this is written, tho there has been no announcement made to the public, and the public, by the way, may as well addict itself to getting along without getting many such announcements here, the munition makers of America, the most powerful "second line" of defense, perhaps, that could be recruited in the entire world, are awaiting the award of contracts by the Ordnance Department—contracts aggregating nearly a hundred million of dollars, for which on Tuesday the munition makers submitted bids.



The Navy, so report has it, was in good shape when war was declared, tho it was shorthanded and short of ammunition—deficiencies that are rapidly being supplied.

The Agricultural Department—all

the departments, in a word, have done a goodly share toward perfecting our defense and conscripting our resources.

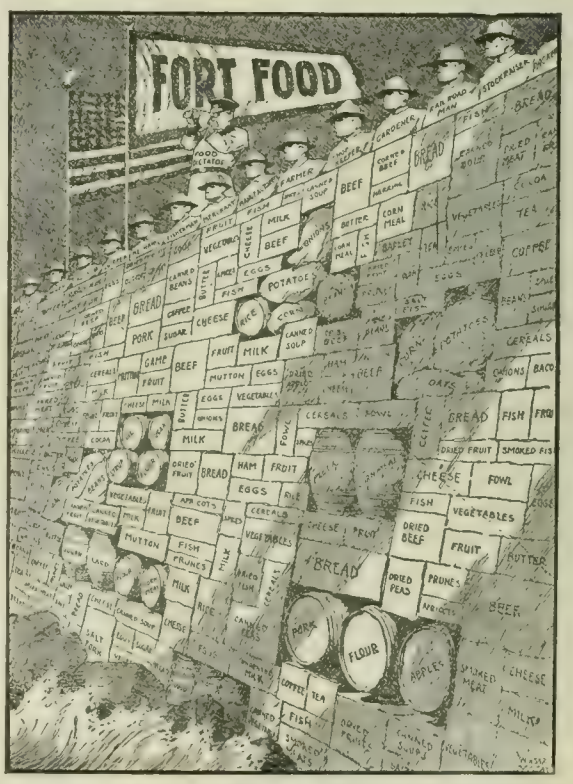
And the President, of course, has done phenomenal things—vastly more than he generally is credited with doing. He has, to select one of a hundred forgotten things, waked this country up, tho "it won't be thoroly awake," as a Navy officer said to me here, "until Uncle Sam has rolled over in bed a few mornings and read in the morning papers the casualty lists." "Wake" is a relative term these days: "asleep, less asleep, awake!" is how schoolboys should be taught to "compare" its adjective. And it is indisputable that the premise major to the defense of a democracy is the waking of it. We were psychologically all unready for war—sound asleep like Old Rip—our repose was appalling. We thought that "peace was our natural state" and we refused to change our "Natur'." Skilfully, persistently—yes, more persistently than intermittently—the President has been waking us: certainly we are no longer asleep—almost thoroly awake, in fact. And that was necessary.

FOR we have the resources; we have the men and the ability to lead them—the best men in the world. (An interesting essay indeed might be written on this: That even in war there is a determinism working for democracy—if it but awake in time! For it is a fact, in the lives of soldiers, as well as of artists and inventors, the world's best fighter is he who calls all men brother. Devotion operates more powerfully than anything else in the world. Love is a thousand times more powerful than fear. And so we may go swiftly forward to this conclusion: That individually the American soldier is the best in the world; and that, with training and physique and equipment the same, he is more than a match for any. Kitchener, himself, so it is reported from a private conversation, judging by mere military standards no doubt,

Harding in Brooklyn Daily Eagle
THIS IS THE DOLLAR WORSHIPPER

Kirby in New York World
THE SLACKER

rated the American soldier first long before the outbreak of the Great War. And other soldiers have done likewise.)



To wake the nation, then, was essential to its achievement in war. All other achievements were contingent upon that. Without doubt we are destined to sterner awakenings. We do not know and no one can foretell what is to be the outcome of the submarine war. And the Russian situation seemed to me, after I had got the force of general opinion here, so clearly hopeless; Russia seems so clearly bound for disintegration into smaller republics under the domination of Germany perhaps, or into utter anarchy, that I set out to see if the English, who are in position of course to be more fully informed than even our State Department, apprehended anything but ruin—ruin that would affect the United States and the Allies adversely, of course. I learned this: That England is holding up everything in the way of munitions bound from the United States to Russia—taking therefore no chances. This suggests that things in Russia are in a bad way. Yet the State Department, I am told, has today received reports that inform it that Russian democracy is going to find the way out of its dilemma, precarious tho that dilemma is.

Nearly everything here is waiting on Congress, if it is waiting at all. The Council of National Defense has done wonderful things—taken over the railroads, for instance, and mobilized the resources that are needed most—steel, with Judge Gary at the head of the committee in charge of it; oil, with President Bedford of the Standard Oil Company in charge, etc. But Congress has failed to get the things done that need most to be done: (1) Settle the food situation, and (2) get done with the conscription bill.

The food legislation, since the President went to Capitol Hill last night, is due out of conference quickly. And, to our pleasure be it added, Herbert Hoover, the Man of the Hour along with that imagined person who is to save civilization by thwarting the submarine, is here with an office organization ready for the tremendous task that, undoubtedly, is to be set for him by the President. It is to be Hoover, in short, who is to remove the tax on food levied by its handlers—a tax higher by far than any government would dare levy.

Congress is to be blamed for everything, of course! Yet, as Senator Lewis mused the other evening, pulling quizzically at his red whiskers, "let us be kind to Congress!" Congress, taken altogether, and considering that laws are more difficult to make than to execute, has done fairly well—has performed miracles in fact—unless we contrast its achievements in this session with the things it *didn't do* in the last session. When the hour came to declare war, it made the war resolution more forceful than the President suggested; when Secretary McAdoo demanded a war credit of seven billions, it put that most tremendous credit at his disposal very quickly. It put aside the volunteer idea, then courageously reversed itself to pass the Roosevelt resolution. It threw the censor provision out—that also was well. For a better plan, one that will achieve more in the end, goes into effect with this very article—the first to be officially viséd: Edgar Sisson, editor of the *Cosmopolitan*, is to be in charge of a visé department in the busy house that was once a mansion near the White House, where the Bureau of Public Information is doing excellent work under Chairman Creel. The law hasn't been invoked to block a writer; but more constructive forces have been set up to guide and regulate writers.

ALTOGETHER, Washington, official and citizen, is rising to its greatest occasion. Personally, to any one who has known Washington intimately over any long stretch of time, Washington is "doing mighty well!" Yet, as has been pointed out, its functions must approach infinity before it has done everything that it can do. And it is hard to measure anything by standards of infinity!

OUR MOST VITAL DEFENSE

FIRST TO FIGHT ON LAND OR SEA

BY CHARLES PHELPS CUSHING

NO body of fighting men in the western hemisphere is held in higher international esteem than Uncle Sam's soldiery of the sea, the United States Marine Corps. It is literally true that our marines are better known abroad than at home; Peking or Berlin can tell you more about them than New York or Goshen. 'Fess up! You count yourself a fairly well-informed citizen, but can you define "Marine Corps"? Can you name one-half of the duties that our marines perform? Can you so much as "tell" a marine when you see one?

Possibly you know that a marine is, as Webster defines him, "a soldier of the sea." But do you know what he does aboard ship—that besides being the policeman of our battleships and first-class armored cruisers, he mans three-inch, five-inch and seven-inch guns and can splice a rope or pull an oar with the best of our able-bodied seamen? Do you even know the definition of the word "'corps"? If you do, your advantage over the man in the street is considerable, for the word in itself signifies a large fighting force so completely equipt in all branches that it can act as an independent army. And that is what our Marine Corps is—a fully-equipt little army, representing infantry, cavalry, artillery, signal service, engineers, machine-gun men, aviators and hospital service.

The varied nature of the marine's duties is reflected in the dress uniform, his dearly-prized "blues." The trousers are the color of the infantryman's, but the stripe is red, like that on the uniform of the artillery. His coat is a dark nautical blue, but if he wears chevrons on it they are yellow, like a cavalryman's. As an example of cosmopolitanism, his cap device bears a relief map of half of the globe. An eagle with outspread wings surmounts the globe and a fouled anchor shows in the background. To "tell" a marine at a glance (whatever his uniform or his rank) look on the front of the hat or the cap for that globe. It is the distinguishing emblem of a marine the world over. Great Britain is the only other power that has, in our sense of the word, a real marine corps; and the cap device of the British marine also has a globe in the center of the design.

"BILLY BLUE, UNITED STATES MARINE"

A certain amount of the haziness that exists in the mind of the general public about the nature of the marine may arise from the fact that the word suggests "sailor." Now, undeniably, the marine is something of a seaman. Moreover, his corps is under the jurisdiction of the Secretary of the Navy. But the organization of the Corps is chiefly along military rather than naval lines, and the commander is not an admiral but a major-general. The Marine Corps is a fighting unit quite distinct from other arms of the national service, and enlists its men from its own recruiting stations, and not thru those of either the Army or the Navy.

The Marine Corps is older than either the Army or the Navy. It came into existence by an act of the Continental Congress on November 10, 1775. Then also came into existence the Marine Corps' unofficial motto: "First in everything!" If you have heard of *esprit de corps* and wonder what it is like, go to the Marines and find out. Nowhere in the world is there a band of soldiers who guard more zealously the Corps' reputation. They boast they have never lost a battle and that thruout their country's history they always have been first to fight. They were the first to plant the Stars and Stripes on foreign soil, and they are aching today to maintain their reputation by being chosen the first to land in Europe and go into action "somewhere in France." Mayhap they will have their wish, for no arm of Uncle Sam's various services is better equipt to enter the Great War on short notice or has seen more actual fighting, either on land or on sea.

Even in so-called peace times the United States Marine is nearly always in some sort of fray. Tho our nation has not declared a war for nineteen years, the Marine Corps has been in many a battle meanwhile. The gallantry of our Marines at Peking in the Boxer uprising, and at Vera Cruz, and in a hundred and one lesser clashes with revolutionists in the black republics will come to mind. The Marines are the constables of the new world; they are, in fact, a near approximation to the ideal of a World Police Force. A distinguished ex-President once defined the Corps as "the loaded end" of his Big Stick. How high our Marines stand in international esteem may be judged by the remarks of a colonel in the British Army, recently quoted in Girard's column in the Philadelphia *Public-Ledger:*

A SAMPLE KIT

There's forty pounds of indispensable luggage here: blanket, shelter tent, tent pegs, mess tins, wire cutter, bayonet, knife and fork, canteen, cup, shirts, socks, shoes, first aid box, poncho, belt, bacon tin, condiment can, and pick-mattock. Can you identify them?

THERE REALLY ARE HORSE MARINES

And there are air marines and trench marines and several other sorts of marines, too. This outpost getting down to business in Mexico includes shelter tents and cavalry and sand-bag defense, and a wig-wag station on the hill

"The best equipt, organized, and most efficient body of its size in the world is the United States Marine Corps; the second best is the Northwest Canadian Police, and the third the Pennsylvania State Constabulary."

Of the organizations just named the Marine Corps is by far the largest. The Northwest Police can muster only a few regiments; the Pennsylvania State Constabulary numbers only 332. At this writing the Marine Corps is enlisted to 21,864 and probably by the time this article sees print will be recruited to over 22,000, which is 4000 more than the present authorized strength. Congress is about to increase the Corps to 30,000, which will preserve the lawful balance of numbers —five to one—between Uncle Sam's bluejackets and his soldiers of the sea. Needless to add, the Navy recruiting is keeping proportionate pace with that of the Marine Corps.

An editorial in the Boston *Globe* the other day warmed the heart of every Marine who saw it, for it accorded the Corps another distinction to add to its long list of the things in which it has stood first:

"Our soldiers of the sea have been the first of our troops to adopt splinter-proof helmets. A new type of chilled steel head protector has been devised for the Marine Corps, and its members will be thus equipt as fast as the order can be made up. The Marine Corps is almost always first. Its officers have seen the value of the Lewis machine gun, and the Corps has this weapon ready for business when called upon. Other branches of the service can follow or not as they choose. The Marines are usually followed."

When war was declared on Germany by the United States, the Marines were the first to hang up a war poster. Its legend ran: "FIRST TO FIGHT—ON LAND OR ON SEA."

A few days later, with an eye for changing times, the poster was revised to read—"ON LAND, SEA OR IN THE AIR." The addition was made because the Corps' aviators deserved recognition along with the other branches of service. And, count on it, before long the Marine Corps will be adding another verse to its favorite song of "Billy Blue," to include the airman. Possibly the best place would be right after the stanzas which run:

You can blow about yer hero volunteer,
An' yer rough an' ready, steady infantree;
You kin sing about yer jackie an' kin cheer
Fer yer neat an' handy, dandy cavalree;
But of all the sojer men I ever knew,
An' all the sailor men I ever seen,
When there's fun or fuss or fight,
The boy to keep in sight
Is Billy Blue, United States Marine.

An' it's hi Billy, Billy Blue!
We think we've got a little job to do;
We expect to have a fight an' we want it started right,
So we puts the startin' of it up to you.

New York City

TIDE

BY MURDOCK PEMBERTON

We've met from time to time
And usually we've talked of war.
We saw war from afar
And in cold print,
Viewing it thru glasses
That had caught, and held a hue
Common with our kind
But of an out-worn color
Not much in favor these last swift years,
But sweet to us who followed dreaming gods
And feasted on the glib confectionings
Of H. G. Wells,
And other minor seers.
Tonight he said:
"And will you fight?"
And when I answered that I would
He smiled as one tired with a too long day,
"I'm going too,"
He did not say it grudgingly,
But we both knew the inner cost,
Once holding to the cause
That there were mightier things than arms.
"I've read the President's message
And now it seems to me
There's nothing left but—fight.
Somewhere these last few days I've lost the feeling
That I'm an entity:
The man who holds to personal views
In this chaotic flux
Might just as well
Walk out to breast the winter sea.
We're specks, or flecks of foam
Upon the tide.
We'd best float with the tide
To any shore it chooses now to break upon;
The moon, they say, controls the tides—
Well, let it be the moon,
I've followed stars now, long enough."

CLOGGING THE NATION'S MIND

BY JAMES W. LINN

The Ways and Means Committee of the House of Representatives, in preparing the War Revenue Bill, has proposed a zone system governing the postal rates on newspapers and magazines which would increase the postage from the present rate of one cent a pound to from two cents to six cents a pound, depending on the zone of destination. This would mean an increase of postage on the periodicals of this country estimated at an average of 320 per cent. What such an arbitrary and discriminatory increase in rates would mean to the reading public was ably set forth by Professor Linn, of Chicago University, at a special hearing on May 15 before the Committee on Finance of the United States Senate. We are glad to present Professor Linn's argument here. — THE EDITOR.

IF the proposed postal rates in the war tax bill now before Congress should be adopted, the result would be the extermination of a very large number of magazines, and as far as the rest are concerned, both a contraction in circulation and a large increase in price to the subscriber. Now I am not speaking from the slightest financial interest in the publishing business. I have no connection with it whatever. I am a teacher of English and have been for over eighteen years.

But I should like to point out the result on the nation if you increase the price and limit the circulation of newspapers and magazines.

Many of these newspapers and magazines have a definite, even what might be called a formal, educational influence—particularly the magazines. *The Outlook, The Independent, The Literary Digest, The Review of Reviews, The World's Work, The Atlantic Monthly, The New Republic, The Scientific American, The Popular Science Monthly,* to name a few only, are constantly used in our schools and colleges all over the country as text books—used in courses in literature, in composition, in history, in civics, in science. Hundreds of thousands of copies weekly or monthly are so employed. They have a recognized place in modern education.

The whole effort of that education at the present day is to *vitalize* the schools; to connect up boys and girls with affairs and to develop their vocational opportunities. The magazines are serving this effort splendidly. There is hardly a big university, in the West at any rate, and there are few small colleges, which do not employ them in class room work, and the number of high schools in which they are used runs into thousands. You say magazines of the class I have mentioned will not be eliminated? They must, however, pass on the tax; they must greatly increase their rates; the expense to the students must be much greater; and so their use will be much less and their influence will be crippled.

BUT this formal educational work, tho important, is not the most important educational service of magazines and newspapers. Their great effect is in their spread of ideas. They get people to read.

Books do not serve so well. There is such a thing as intellectual inertia, and books are not so likely to overcome it. The habit of book reading is a good habit, but for millions in this country it is a habit hard to cultivate. They will not sit down to a book; they will pick up a newspaper or a magazine. Now, is such reading, call it desultory if you please, really educational? Emphatically it is.

Of course our newspapers and our magazines print an enormous amount of what is, from your point of view and mine, poor stuff. You find such poor stuff even in so-called good magazines, and you find a fairly large number which are distinctly what we would call cheap magazines and even cheap newspapers. You find scores of serials of no very remarkable significance, hundreds of short stories, the climax of which is "he kissed her on her ruby lips," or "she rested her head upon his manly shoulder, murmuring 'yes,'" but the question is, how are you going to start people on the road to education? How are you going to start the reading habit?

Even when you have your boys and girls into the high schools, you have to be careful what you give them to read, or you will kill off any desire to read at all; and there are millions and millions of our people who don't get as far as the high schools: They are a tremendous force in the nation: And they will either read, to start, what you call poor stuff, and what is poor stuff, or they won't read at all.

When I was a boy there were not so many magazines, so I read books; but what books? Good books? Why, when I was on my good behavior I read Harry Castlemon, and the Elsie books, and Oliver Optic; and you know what they were like. When I wasn't, which was most of the time, I read nickel novels —"Three-Fingered Mike, or a Bucket of Blood." They are hard to get now; the magazines have driven them out. The point is that I established the reading habit on poor stuff; then I read better stuff; and now last night I got so far as to read the Congressional Record and understood quite a good deal of it.

If you say to the country population, "Here, we'll cut off these magazines and newspapers," they won't read at all; and you will strangle them as surely as you would strangle a baby if you said, "Here, we'll cut off your supply of milk and water, and you can either eat bread or starve." You give the baby what it can digest, and by and by it can eat bread. You let these people start the reading habit, and by and by they will get up to Shakespeare, and the Congressional Record.

I am not going to say more than a word about the tremendous amount of real information, real education, that the magazines and newspapers give. You shut off the farm journals, as these proposed rates would shut them off, and you decrease the productive power of this country by millions of dollars. You shut off the trade journals, and you decrease the manufacturing power of this country by many more millions. You shut off such a journal as *The Christian Herald,* and you shut off an agency that has raised over four million dollars for charitable and religious organizations in ten years and that in so doing has enormously increased the interest of people in giving, which is one of the things that a democracy absolutely has to learn the value of. You shut off the *Woman's Home Companion,* and you shut off an agency that in the last few years has sent out elaborate, personal, expert, individual instructions to over three hundred thousand women on the care of their children—how much do you calculate that one magazine has done to improve the health of the children of this nation? You shut off the newspapers, with their careful, scientific information about the care of the health, information that hundreds of them are dispersing daily, and you might as well go out and shoot down ten thousand doctor; you would do less actual harm.

YOU say these newspapers and magazines would not be destroyed by these proposed new laws? You know what would happen—you know that the prices to subscribers would rise, and circulation would narrow—and just who would lose out? Why, just exactly the people who must have the reading habit if this is going to be a democratic nation—the small town people, the country people. These publications are printed in big cities; the first zone, the cheapest zone, would be in and near those cities. That means you have shut off education just where it is most needed. The cities will read anyway; there are many educational opportunities in the cities; but the small towns and the rural districts depend to a large extent on newspapers and magazines. You shut out those boys and girls, those men and women, from the reading habit. You shut them out from the freest possible circulation of ideas, just at the time when that freest possible circulation is most essential. I say, as a college teacher, a man who has been in the educational profession almost a generation, that in my judgment you could hardly stab nearer the heart of the nation than by stabbing at the country circulation of newspapers and magazines; and yet that is exactly where this increase in second class postal rates, this zone system, is directing the knife.

Washington, D. C.

WHAT MUST WE DO?

BY CHARLES EDWARD JEFFERSON, D. D.

PASTOR OF THE BROADWAY TABERNACLE, NEW YORK CITY

WHAT must we do? It is a piercing question to every man who is eager to do his duty. Not what are we expected to do, or what is it possible to do, but what *must* we do, to live at peace with our conscience, and to be true to the right as it is given us to see the right; to be loyal to our country, and at the same time faithful to God? What must we do? The declaration of war on April 6 drove that question like a sword thru multitudes of hearts.

What, for instance, must a man do who believes that killing men on a battlefield is a sin? He must refuse to fight. No government has a right to command a man to do what he believes it wrong to do. We should render to Cæsar the things which belong to him, but this is not one of them. There is a line across which the civil power must not be permitted to pass. The Apostles, at the very start of their career, had to face the question whether they were to hearken to the civil rulers rather than to God speaking to them in their conscience. They settled it then and there, and they settled it right. They decided, once for all, that no matter what it cost, they would obey God rather than men. They were thrown into prison, but they did not relent. They were scourged and detested, but they did not recant. Eventually all of them but one met a martyr's death, but they died rejoicing. There are indeed things worth dying for, and one of them is the right to remain true to one's conscience. Christians are servants of Jesus Christ. He is King of Kings and Lord of Lords. Higher than the stars and stripes there floats the banner of the cross. A Christian's first allegiance is not to his nation, but to humanity; not to the civil ruler, but to God. Every century has had its martyrs—why should the twentieth century go free?

But the conscientious objectors constitute only a minority of professing Christians, and this minority need not be useless to their country in the time of its greatest need. A war is not fought solely by the men in the trenches. For every man in the trench there are five men in the rear working to make the existence of the man in the trench possible. If the conscientious objector cannot fight or make munitions, he can at least raise potatoes or engage in the work of the Red Cross.

What must a man do who believes that there can be such a thing as a righteous war, but that this one is unrighteous; that war under certain circumstances can be justified, but that our entrance into this particular war is a lamentable and awful blunder? Here we are in the realm not of conscience but of opinion. One man feels that Congress was stampeded by the capitalist press, and did not record in its vote the sentiments and wishes of the people. That is mere opinion. Other men equally intelligent and informed are convinced that Congress voiced the will of a vast majority of all Americans. One man thinks that we are in the war because Wall Street pushed us in. This is the opinion of many, but the ground for the opinion is questionable. The fact is we are in the war for no one reason. The motives of an individual are usually mixt, and the motives of a nation always are. Great Britain did not go into the war solely to rescue Belgium. Her own interests plus Belgium dragged her in. So with the United States. It was not idealism alone which pushed the United States into the war, but idealism plus commercialism plus fear.

WHAT, then, must a man do who is convinced that his country has adopted the stupidest and costliest of all possible courses? It seems to me the wisest thing is to submit. We are living under a government of the people. The constitution of our republic vests in Congress the authority to declare and wage war. Our Congress has declared by an overwhelming majority that we are at war with Germany. We live under the rule of the majority. The Majority is our Cæsar. We must render to him what belongs to him. One of the things which belongs to him is obedience in all matters which do not involve conscience. If the majority is not permitted to rule, certainly the minority can claim no right to rule, and if neither majority nor minority has a right to rule, then there can be no rule at all, and we slip back into anarchy and primeval chaos. Lincoln in his first inaugural put the truth in a nutshell: "A majority, held in restraint by constitutional checks and limitations, is the only true sovereign of a free people. Whoever rejects it does, of necessity, fly to anarchy or to despotism." Our form of government becomes possible only on the willingness of our citizens to subordinate their individual opinions to the will of the majority. All of us, at times, submit to taxes we consider unjust, and obey laws which we know are foolish, and every President goes into office with several millions of Americans convinced that the nation has committed an egregious blunder. In time of peace we graciously submit, and in time of war we ought to do the same. When the people, thru their representatives, have declared war, it is not the part of a good citizen to try to force his opinion against the opinion which the Government has decreed. When a nation votes war, it votes a colossal enterprize, not an affair of days or months, but of years. He, therefore, who after our Congress votes war, begins at once an agitation whose purpose is to reverse the policy, is only introducing confusion into the counsels of the nation, and is doing what he can to break down the sovereignty which the constitution has prescribed.

What must a pacifist do—a man who has been zealous for world organization and who has railed at the folly and wickedness of armed peace? Shall he go right on urging arbitration, and Hague courts, and leagues to enforce peace, resisting the increase of battleships and the paraphernalia of war? Certainly not. Why should he? His Government has declared war, and to carry on war the instruments of war are indispensable. A pacifist, as distinguished from a militarist, is a man who believes that war is an evil, always an evil, but occasionally the less of two evils. A militarist, on the other hand, believes that war is a good thing and that without it nations would stagnate and rot. A pacifist believes that war can be abolished and will be abolished as soon as the governments of the world have sense enough to create adequate judicial machinery for the settlement of international disputes. The militarist believes that war cannot be abolished, and that the only way to secure peace is by preparing for war. Now a pacifist can hold all of his creed and still be loyal to his nation in time of war. He need not change his conviction on a solitary point. He can be true to his country and also to his pacifist principles without either cowardice or inconsistency. He can hate war and believe in its ultimate overthrow, and at the same time recognize the fact that because of the stupid failure of governments in the past to provide for international machinery it may become necessary at times to fall back on the bloody arbitrament of the sword.

IT would seem, then, that all American citizens ought to do whatever they conscientiously can do to assist the Government in the successful prosecution of the work which our representatives in Congress assembled have decided to be necessary for the conservation of our own rights and interests, and for attaining the highest welfare of the world. We have, wisely or foolishly, drawn the sword against the mightiest military empire which has ever existed on our planet. If, as many think, Russia is down and out for the rest of the war, and if France is on her last legs, and if the submarine should prove to have an unbreakable grip on the throat of Great Britain, then we may find ourselves in the not distant future at the mercy of a military oligarchy which has shown again and again that it has no mercy. Our civil representatives have voted war. We therefore need a navy, and a big one. We need an army, and a big one. The sooner we get them the better. After the representatives of the people have voted war, it is surely no man's duty so to handicap and cripple the Government by his words or conduct as to expose the nation to cruel and immeasurable disaster.

NATIONAL EFFICIENCY
CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

WAR SERVICE BUREAU—EDWARD EARLE PURINTON, DIRECTOR

THE first note we must sound is that of grave concern without fear but with earnest entreaty for quick response by every one of our readers. The gravity of the world-crisis looms in sharper, blacker outlines, day by day. The menace grows, hour by hour. And a year, solid, of the hardest kind of work will be needed from every man, woman and child, before we can enter the war decently prepared.

Members of the Allies' Commission have told us that France and England now literally face the peril of starvation; and to guarantee their existence, as well as our own, we must double our efforts, in both economy and productivity. As I write, word comes that during the past month, for the first time, the German U-boats have reached their frightful quota of destruction—a million tonnage a month. To make this fact more ominous, the Germans themselves are better supplied with food, munitions, trained men, than at any time since the war began, according to a statement just made by Dr. John R. Mott, personal friend of President Wilson, after a special tour of the Central Empires.

That is not all. The training of an army of 2,000,000 German boys is being rushed at top speed. We can scarcely hope to put this number of seasoned American soldiers into the field under two years. Before that time, the German youths will be old enough and capable enough to meet our forces, without even calling on the bulk of the Kaiser's army! We cannot hope to win the war, at least under three years, by force of men in the field; our only chance is to help the Allies quickly, by personal supply of labor, food, money, thought, economy.

Do you know what Ambassador Gerard says about the conflict? He says that Germany has 11,350,000 troops now fighting or waiting to fight; that the German fleet has for thirty-two months been put thru a scientific process of reorganization and development, and is today larger and more formidable than ever; that one good harvest will offset the temporary food shortage, and good crops alone are sufficient to keep Germany fed; that the Kaiser always feeds his army, no matter how the common people suffer—and the army is what we have to fight; that the German people are lined up to a degree of war efficiency that we can hardly imagine.

HOW TO WIN

HOW fight, how serve, how achieve? By a *system* as broad and powerful as our sentiment is high and beautiful. We must analyze ourselves, our talents, our resources, our possibilities, with a judgment as cool and clear as tho our emotions had never been stirred. Then we must organize our daily schedule of work so as to include a regular, practical, patriotic service, whatever we can do best, performed as faithfully as we eat and sleep, until the war is won.

We are threatened most by the superficial temptation to spasmodic effort. This will be followed by disappointment, discouragement, laxness and supineness. The American temperament is that of a good sprinter—and a poor plodder. This war will go to the scientific, enthusiastic, plodders. We will conquer only as we emulate the German temperament, while avoiding the Prussian temper.

Now to the point. The work of the Independent War Service Bureau is to help each American citizen be as useful as possible to his country, his community, his family, his business and himself, during and after the war. I am reading and will answer as quickly as practicable the many fine letters from Independent readers that are now pouring in. Some of these require extensive research, because the whole war situation is new, and efficiency standards for the individual have not yet been created. Kindly be a little patient, if necessary.

READ THESE SUGGESTIONS

A few general suggestions, based on impressions from a large number of letters already received. Before writing the Bureau, kindly read over these preliminary directions, and shape your letter accordingly.

1. *Keep your balance.* Don't start to volunteer in a branch of the military service when you are now a professional or industrial expert. The conscription measure will guarantee shortly a larger number, comparatively, of trained soldiers than of trained civilians. You can probably serve best by staying where you are, and doing extra duty.

2. *Mobilize your experience.* Learn how the War Department could utilize it. Obtain a copy of the selective draft registration blank, put to yourself all the questions that would apply to civilian service, guide your efforts by the answers. Whatever you have done for a living can be made a part of your war efficiency training. Think how, ask us how.

3. *Concentrate your efforts.* Don't scatter, don't wabble. Don't make the mistakes some of our readers are already making—that of dabbling in various kinds of patriotic work, doing none regularly and thoroly, failing more or less in all, hence growing dissatisfied with all. Consider the whole field, choose a form of service, and stick to it. Confine your patriotism to a major line of work, preferably connected with your business or profession, and possibly a minor activity for some of your leisure time. You can't drive well more than two war horses.

4. *Conserve your forces.* Keep a little under your limits of time and strength, rather than pushing over them at the start. Don't wear yourself out in the first few months. The long race goes not to the man who sprints the first few laps but to the man who hastens slowly by hitting a steady, easy pace that will carry him thru. Get your long-distance patriotic stride. Thus join the Government in keeping fit and ready for a three years' war.

5. *Follow the apportionment plan.* Estimate how much time and money you can spare, every day or every week. Specify these amounts when you write us for advice; make them a fixed part of your schedule and your budget.

6. *Work to the best advantage.* Avoid waste motion, and beginners' mistakes. Whatever you do, some expert knows how to do right. Locate the expert, and try his method. Because your endeavor is philanthropic, that does not excuse it for being unscientific. And the more sentimental or subliminal your feeling may be, the more practical and unemotional your method must be.

7. *Do the nearest thing.* Study your local facilities and opportunities. Don't pine or ask for some romantic, heroic adventure while the nearby, common duty goes undone. Are you a teacher? Organize your pupils. Are you an employer? Line up your employees. Are you a clergyman? Have a patriotic census taken of your church members. Do you live on the Eastern coast, or near the Mexican border? Focus on preparations for home defense. Do you live in a factory community? Start an efficiency club or library, to help the industrial folk do more and better work for higher pay. Do you live in a farming district? Combine with your neighbors, and take instructions or employ an expert to raise your production and distribution capacity. Make home efficiency fundamental.

8. *Do the first thing first.* The need to roll bandages, or institute war relief, or pay for religious work in detention camps, is not first. These objects are worthy, but secondary in point of time. Look at the calendar before you listen to the clock. More food in our fields and less waste in our homes: these are the two big items now. Is every square foot of open ground within a mile of your house growing crops or live stock? And is every scrap of food on your table purchased wisely, cooked properly, and used completely?

9. *Work in groups wherever possible.* Make the unit of service an organization—professional, industrial, social, fraternal or philanthropic. Let your war efficiency problem bear on this—not merely relate to your own personal life. If you submit questions whose answers you can, and will, pass on to a large number of people similarly situated, you thus increase our effectiveness.

10. *Cordially invite your friends to consult the Bureau.* They need not be subscribers to The Independent.

Answers to questions of general interest will be published in The Independent, so far as space permits. Other queries will be answered by mail. There is no fee or charge of any kind. All letters should be addrest to The Independent War Service Bureau, 119 West Fortieth Street, New York.

QUESTIONS

Miss N. A., New York. "I graduate from college in June. I had planned, before the war, to take this summer a very thoro secretarial course, and be ready for efficient office work in eleven months. But this seems a long time to wait. I could take a less valuable senographic course, and be ready for work, very slightly equipt, in about seven months. Would I better take the long course; or the short one; or no course at all but simply roll bandages and render other small services?"

Take the long course, by all means. If the war is over inside a year, you will hardly be needed on the office firing line. If it is not, you will be more needed the more highly you are trained. Put in your spare time rolling bandages and helping otherwise, but don't cripple your own future by skimping on your technical education, merely for the sake of speed. The College Vocational Bureau, dealing in positions for women graduates, might suggest particular fields of patriotic service; consult the secretary of your college as to work of bureau.

Mr. T. C. A., Ohio. "I am twenty-four, engaged to be married, but otherwise with no dependents. Have had special training and experience as electrical and chemical engineer in manufacture of primary batteries. Want to enlist in the aviation service, but am under pressure to remain because my place as a technical man cannot easily be filled. Should I stay or go?"

The Government will probably answer for you, as your age is under the draft limit. But you should make your position very clear to the authorities, and not be assigned to a military corps if your value would be greater at home. If you are a keen thinker, as well as a trained worker, you could help solve electrical problems relating to the war—hence do more by staying where you are. We suggest that electrical engineers who want to serve their country ask Edward A. Deeds, member of the National Munitions Board, how best to do it. Mr. Deeds is president of the Delco Company, Dayton, Ohio.

The fact that you are engaged to be married should make some difference. You can regard your sweetheart's feelings without being a coward. Most young men confuse bravery with bravado. Be patriotic—and also protect your affianced wife all you can.

PEBBLES

Wilhelm—What? Panama coming into the war? Oh, my hat!—*Bystander.*

Second-hand pianos are fetching high prices—often more than their treble value, one suspects. *London Opinion.*

Big Dipper—That's the dog star.
Milky Way—Kiddin'?
Big Dipper—No, Cereus.—*Yale Record.*

The Air Service is said to contain many poets. Perhaps that is why they spend so much time scanning the enemy's lines.—*London Opinion.*

Lawyer—Judge I plead for the dismissal of the defendant. He's deaf.
Judge—Not granted. He'll have his hearing in the morning.—*Puck.*

The fair sex in America are eager to be permitted to serve with the Colors. So we shall expect soon to hear of a Joan of Arkansas!—*London Opinion.*

Lerret—When you meet a sucker what do you do; take him out and give him some good advice?
Yadilloh—No; I take him in.—*The Lamb.*

Lives of great crooks all remind us,
We should work with greatest care;
Lest departing leave behind us
Thumbprints on the silverware.
—*The Lamb.*

Why shouldn't Roosevelt take his 200,000 men to the Eastern Front? Fancy what a reception the Russian Bear would give to his "little brother" the Teddy!—*Passing Show.*

Conductor—Looky here, fellers, you know it's wrong to match nickels on the street cars.
Roughrider—Oh, I dunno—it's no more than fare.—*Yale Record.*

Visitor—I suppose, Willie, that you can spell all the short words?
Willie (who hears much talk about motor cars)—Yes. I can spell words of four cylinders.—*Passing Show.*

"Your money or I'll throw you off the cliff!" demanded the hold-up man in the wilderness.
The millionaire chuckled and strode on, for he realized it was only a bluff.—*Judge.*

Diner—Two poached eggs on toast, waiter!
Waiter—Yes, Sir.
Diner—And take great care that they are fresh laid.
Waiter (with every desire to oblige)—Yes, Sir, I'll have them laid on the toast, Sir.—*London Opinion.*

A graduate of the College of Liberal Arts who is teaching in a prominent New England high school sends us the following answers which were actually handed in at a recent examination designed to test the amount of general information possest by the students:

Who played the harp before Saul?
Plato.
The Queen of Sheba.
Why does an apple fall to the ground?
It gets too heavy for the tree.
The stem rots.
What was the Venus de Milo?
A constellation.
A perfect lady.
What was the Sistine Madonna?
A sewer in Paris.
The wife of the Pope.
What is an octogenarian?
The eighth generation from a negro.
An animal which bears its young in 8's.
An 8-legged animal.
One born in October.
One who feeds octopuses.
What is the motto of the United States?
Watchful waiting.
Give me liberty or give me death.
—*Bostonia.*

The Revolution In Germany

Will the people revolt?
Or
Be starved into submission?
Read

SHORT RATIONS

By Madeleine Z. Doty

A stirring picture of life today among the German people, by an alert American woman who did not take official Germany's word for things, but saw them with her own eyes.

The N. Y. *Evening Post* says:—
"One of the most concrete revelations of conditions within the German Empire that has yet appeared. The book is a graphic account of an ever-growing tragedy."

THE NEW BOOKS

DEMOCRACY AND THE NATIONS

It is certainly devoutly to be wished that the relations existing between the United States and Canada could be applied to the whole world. The spirit of these two peoples is one in democratic purpose, however, and the establishment of these relations has been of an easy natural growth compared with conditions prevailing in Europe, where the international sky has been clouded for long ages with the fostered racial hatreds of selfish, autocratic governments. Dr. Macdonald, in *Democracy and the Nations*, taking the relations of Canada with the United States for example, presents a forcible argument for both nationalism and internationalism—a worldwide comity of free peoples working together on the general principles of democratic progress, but with the rights of each small nation protected within its territorial sphere of action. The British Empire he shows to be this in fact, the term Empire being today nothing more than a traditional misnomer.

The Issue, by J. W. Headlam, is now of special value to American readers because it states clearly and concisely precisely what the aims of the Allies are in the Great War. The author does not befog the issue by wandering up sidetracks into regions of war origins, but holds directly to his main contention that the basis of peace must rest upon the democratic principle of the consent of the governed, applied to all governments. There must be no force used to bind the yoke of a foreign government upon any people historically or racially opposed to it, and wherever strongly manifested, the nationalities of all peoples must be preserved inviolate. In this he includes the German people within their rightful boundaries, but excludes from German dominion the peoples of Alsace-Lorraine, Poland, and northern Schleswig. To that extent only should there be any dismemberment of Germany, a term which Mr. Headlam insists now comprizes all the other states in a single nationalistic union sentimentally as well as politically. Toward punishment, other than the moral effect of defeat for wrongdoing, the author is opposed, asserting that only a broadly tolerant spirit in the hour of victory will assure the future peace of the world.

The first volume of *The New Europe*, a weekly review of foreign politics, October 19, 1916, to January, 1917, contains the views of contributors of international reputation mainly on the subject of the present and prospective positions of the nations of Europe. Students of the political problems waiting on peace will find the work of timely value.

Tho the position of Alsace-Lorraine as a dominating factor in the war has not been overlooked, others of more pressing attention have somewhat obscured that of the French lost provinces. Dr. David Starr Jordan in his *Alsace-Lorraine* brings very clearly to the foreground the evil results following Germany's action in striving to absorb a people against their natural affiliation. His book serves forcibly to demonstrate how deep is that loyalty to tribal instinct—according to Max Eastman—everywhere latent or aflame in our nature.

The War After the War, by Isaac F. Marcosson, is fortunately not the prophecy of another sanguinary conflict, but of a contest for trade by the thoroly awakened and organized European nations. This, the author holds, we cannot remain aloof from, since we have become a financial partner in European affairs to an enormous extent, convincing facts and figures being supplied the reader. He calculates that by August, 1917, the debt of the war nations will have reached the utterly bewildering total of $105,773,000,000. Mr. Marcosson has also an interesting chapter on Lloyd-George drawn from personal contact with the Little Welshman. So far it is the story of a champion of democracy winning out against almost insurmountable obstacles. But there remains one ominous rock in his path, Mr. Marcosson refrains from discussing. That is Ireland. Mr. Marcosson's economic conclusions conflict with some other authorities, who contend that the tremendous waste of human energy, and the reaction from war strife, will be followed by a period of cessation from any great activity. One guess is perhaps as good as another.

Democracy and the Nations, by J. A. Macdonald. G. H. Doran Company. $1.35. *The Issue*, by J. W. Headlam. Houghton Mifflin Company. $1. *The New Europe*. Constable, London. $2. *Alsace-Lorraine*, by David Starr Jordan. The Bobbs-Merrill Company, Indianapolis. $1. *The War After the War*, by I. F. Marcosson. John Lane Company. $1.25.

ITALY'S TASK

The prominence given to gigantic war operations on the East and West fronts is doubtless responsible for some lack of comprehension of the tremendous task before the Italians. This is made clear to us in *Italy in the War*, by Sydney Low. With her northern frontier delineated entirely to the advantage of a prospective Austrian enemy, Italy has been compelled to fight a very literal uphill battle, with stupendous physical odds against her. Lest, too, some of us may regard the Austrian army as weak or inefficient, the author points out that her great guns were far superior to those of any other nation, her fortified positions skilfully constructed, and her Alpine troops as good as any. But for the Russian offensives, he has no doubt Austria could easily have swept down into the plains of Lombardy. So far, this is the most informing book from the Italian side.

Italy in the War, by Sydney Low. Longmans, Green & Co. $1.75.

FOR PERMANENT PEACE

Robert Goldsmith is the author of the first book published in America on the idea of a *League to Enforce Peace* which was given to the world on June 17, 1915, in Independence Hall, Philadelphia. Like all books that break new ground, this is necessarily the first, but by no means the last word on the subject. Mr. Goldsmith has evidently done a prodigious amount of necessary and general research before putting pen to paper. The book, tho rather diffuse in thought and arrangement, is nevertheless sound in principle, comprehensive, and well written. It should do much, especially in schools and colleges, to spread the idea that the coöperation of nations and not the competition of nations will alone insure eternal peace when the war ends.

A League to Enforce Peace, by Robert Goldsmith, with a special introduction by A. Lawrence Lowell. The Macmillan Co. $1.50.

A COUNTRY LAD

The Light in the Clearing is more than a good story—it is a strong, invigorating breath from the past, full of the vigorous, manly and thoroly conscientious spirit that went into the making of the United States in the period between 1830 and 1850.

The story opens in 1831 in the country districts of northern New York, in the region and the day of hair-cloth sofas, birch brooms, butternut trousers, dried apples, milk gravy, extreme simplicity and rugged manhood. It moves gradually into state and national affairs, and we meet the stately President Van Buren and Silas

Wright, one of the noblest of our public men.

Excellent as are Mr. Bacheller's other works—"Eben Holden," "D'ri and I," and the ever-popular "Keeping Up with Lizzie"—none of them equals this story of the forties, either in artistic finish or in breadth of spirit. It is a book we would like every American girl and boy to read.

The Light in the Clearing, by Irving Bacheller. The Bobbs-Merrill Company, Indianapolis. $1.50.

FROM THE CITY TEMPLE

An Ambassador, by Joseph Fort Newton, is a volume of sermons to which attaches a special interest, not only because of their unusual power and spiritual fervor, but because of the circumstances under which they were delivered and the ecclesiastical effect of their utterance. The first eleven were preached in London City Temple last summer by Dr. Newton, who was then minister of the Liberal Christian Church of Cedar Rapids, Iowa. After they were delivered, the American preacher was called to the pastorate of the City Temple, and has finally accepted the call. The readers of these able sermons will feel that the pulpit of Binney, Parker and Campbell will be well filled by the young American divine.

An Ambassador, by Joseph Fort Newton. F. H. Revell & Co. $1.

BOTANY TODAY

Herbert W. Faulkner has written a pleasantly enthusiastic book called *The Mysteries of the Flowers*, in which he describes the anatomy and physiology of many of our most beautiful wildflowers, giving special attention to cross-fertilization and the functions of reproduction. Honey, perfume, color—the lures that attract insects—other ways of distributing pollen and the miraculous methods of scattering seeds abroad are the subjects discussed in an interesting way. Mr. Faulkner has amplified and illustrated his meanings by the use of numerous drawings. In his introduction he tells something of his study of plants as a child and of his school experience with botany, which he says "was only a naming and classifying of my sylvan friends." Botany is far more than that in the schools of today. It is no longer a memory exercize in long Latin names, but an imaginative and well-organized science founded on experiment and on such observations as Mr. Faulkner here gives us.

The Mysteries of the Flowers, by H. W. Faulkner. F. A. Stokes Company. $2.

THE GREAT WAR

A Student in Arms, by Donald Hankey, who was killed in action last October, is a collection of articles and sketches that have to do with the real problems, the real moods and emotions, the real spiritual life of the man "at the front." (E. P. Dutton & Co., $1.50.)

Tales of the Great War, by Henry Newbolt. True and stirring adventures of British privates and officers on land and sea, in air and under water. Its bias is naturally English but it is remarkably free from anti-German prejudice. (Longmans, Green & Co., $1.75.)

J. A. Hobson is utterly opposed to the proposed economic war after the war. In his book, *The New Protectionism*, he pleads for the rejection of that program as a crime against civilization as well as an economic mistake, and for the extension of the policy of "The Open Door." (G. P. Putnam's Sons, $1.)

The lay reader of *The Submarine Torpedo Boat*, by Allen Hoar, will learn of the intricacies of its mechanism, the numerous types—diving, submerging, coast and deep sea, and will be perhaps surprized to learn that our own submarines had previously traveled longer voyages than that of the "Deutschland." (D. Van Nostrand Company, $2.)

Soldier and Dramatist, the letters of Harold Chapin, a young American in the English army, has more than a timely in-

The Shameful Abuse of Our Stomachs

BY R. W. LOCKWOOD

YOU wouldn't pour cream on your grapefruit or drink lemonade and milk at the same meal and expect such a combination to increase your health and efficiency; and yet three times each day, three hundred and sixty-five days a year, the average man, woman, and child eats combinations of food almost as dangerous.

The foods that make up our daily diet are, I am convinced, the cause of 90% of all the sickness and low vitality from which most of us suffer. Authorities everywhere are beginning to realize that health, strength, and personal efficiency can be recovered or maintained only through a knowledge of proper food selection and combination.

Food is the building material of the human body and brain. What we eat today we are tomorrow. And yet we use less care in the selection of building materials for our own human structures than we would in building a shanty.

"But I do eat good, simple, nourishing food," you say. Of this I have no doubt. But one good, simple food, when combined with another equally good, simple food, will in many cases produce a chemical reaction in the stomach and literally explode.

Unfortunately for us Nature does not digest separately each food we eat at a meal. Instead, the entire meal is digested en masse. If the foods thus thrown together disagree chemically with each other, the result is a miniature revolution.

The wonder of it all is that we stand the stress as well as we do. Instead of being only 50% efficient, as most of us are, we don't deserve to be 10% efficient! Particularly is this true because of the sedentary lives we lead. Our grandfathers had a much better chance than we have because they lived out doors and were able to burn up their ill-chosen food through strenuous exercise—a luxury permitted us only in homeopathic doses.

The reason that until lately so few of us have recognized the influence of proper food selection and combination on our health and energy, is that we could see no direct connection between the foods we eat and our ills. And yet the connection is really very direct.

Of course it is perfectly clear that stomach acidity, gas, fermentation, and constipation are due to foods that "disagree." But until now our reasoning has gone no further, and in spite of the obvious connection most of us, when subject to these symptoms, instead of attacking the disorder at the source, take pills and powders, which provide only temporary relief and actually do a great deal more harm than good. For they weaken our systems and tend to produce a return of the symptom in even more violent form than before. This is true of both stomach remedies and laxatives.

Auto-intoxication, biliousness, malnutrition, obesity, heart, liver, and kidney affections,—in fact, over fifty diseases can likewise be traced to body poisons that make their innocent entrance through the mouth, and which can be removed by a change in eating habits.

Eugene Christian, the prominent Food Specialist, has proved this in hundreds of instances, including his own case.

Twenty years ago Eugene Christian was at death's door; for several years previous he had suffered all the agonies of acute stomach and intestinal troubles, until his doctors—among them some of the most noted specialists in the country—gave him up to die. As a last resort, he commenced to study the food question himself. As a result of what he learned, he succeeded in literally *eating his way back to health* without drugs or medicines of any kind, and in a remarkably short space of time.

Eugene Christian is today nearly sixty years old—or shall I say young? For he has more vitality, more ginger, more physical endurance than most youngsters in their teens. For almost fifteen years he has not had even so much as a cold.

Today Eugene Christian is teaching hundreds of other men and women how to eat their way to buoyant health and increased energy by properly combining and proportioning their every-day foods, and entirely without the use of medicine. An interesting feature of Christian's work is the fact that you can secure the foods he recommends at any store or out of any garden; and, instead of having to practise self-denial, you enjoy your meals as you never have before. No special or patented foods are required.

I have been told that a number of wealthy people who have gone to him after everything else had failed have been so happy at their complete restoration to health through his simple suggestions that they have voluntarily sent him checks for from $500 to $1000 in addition to his regular charge.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally, that he has written a series of little lessons telling exactly what to eat in order to overcome the different conditions due to wrong eating.

These lessons—there are 24 of them—contain actual menus for breakfast, luncheon, and dinner, covering all conditions of health and sickness, from infancy to old age, for all occupations, climates, and seasons. They include *corrective* menus for stomach acidity, fermentation, constipation, and the host of diseases which follow when these warnings are neglected. They also tell you how to reduce and how to gain weight.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, every point is so thoroughly covered and clearly explained. You can start eating the very things that will remove the causes of your disorder the day you receive the lessons, and it is quite possible that you will secure results from the very first meal.

If you would like to have these 24 Little Lessons in Corrective Eating, simply write The Corrective Eating Society, Inc., Dept. 45, 443 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial with the understanding that you will remit $3, the small fee asked, or return them and owe nothing in case you are not fully satisfied.

If the more than 300 pages contained in the course yield but one single suggestion that will bring greater health, you will get many times the cost of the course back in personal benefit—yet hundreds write the Society that they find vital helpfulness on every page.

Merely tear out and mail this form instead of writing a letter. It is a copy of the official blank adopted by the Society and will be honored at once.

CORRECTIVE EATING SOCIETY, Inc., Dept. 45, 443 Fourth Ave., New York City

You may mail me the 24 Lessons in Corrective Eating, for which I agree to pay $3. It is understood that I am to have the privilege of returning them within five days after their receipt and owe nothing in the event that I am not satisfied.

Keep Fit—*for* Your Country

In this world crisis it is your duty, above everything else, to keep yourself in good condition. You can't serve your country in any capacity if you allow your health to run down.

The Nujol treatment will make *you* a national asset—not a liability. Take a little Nujol upon rising and retiring and it will remove waste matters and poisons (intestinal toxins) from your system, and keep your habits regular as clock work.

Nujol is not habit forming. (The longer you take it, the less you need it.) No griping, straining, upset stomach or weakening.

Nujol is absolutely pure and harmless, and is pleasant to take. Even the infant will enjoy it, and it will do as much for him as it does for his mother.

Nujol is sold in pint bottles only, bearing Nujol trademark, never in bulk.

Nujol is absolutely distinctive and individual. There is no other product on the market like it.

BARGAIN SPECIAL

terest. They are charming letters—gay, amusing, whimsical—written to his mother, wife and little son. The series closed when he fell in the foreign land in the struggle he had made his own. (John Lane Company, $1.25.)

Stanley Washburn adds another to his excellent volumes from the Russian front. *The Russian Advance* treats of the great offensive of 1916. As usual, the author gives numerous graphic and intimate war views. He brings his account to the entry of Rumania into the conflict. (Doubleday, Page & Co., $1.25.)

In *The Provocation of France*, Jean Charlemagne Bracq takes up the relative position of France toward Germany from 1870 until the outbreak of war. This ground has been pretty thoroly covered by other writers, but the author links his accusing facts skilfully, and writes in a convincing, straightforward style. (Oxford University Press, $1.25.)

A Woman and the War. The woman being the Countess of Warwick, the comments, vigorously and well exprest, are interesting, deliberately and blithley unorthodox, violently feminine, ardently critical of existing conditions, full of suggestions for the better conduct of affairs. The book deals chiefly with social problems, women's work, drink legislation and so forth. (G. H. Doran Company, $2.)

The Growth of a Legend, by Ferdinand Van Langenhove, is a work to prove that however skillfully Germany produced evidence of Belgian atrocity committed on German soldiers, such evidence is refuted by German testimony in the hands of the Allies. Letters, newspaper extracts, and official notes, with able comment and argument, make a volume of interest to those examining the subject. (G. P. Putnam's Sons, $1.25.)

Europe Unbound, by L. March Phillips, contains an impressive revelation of what the English masses are thinking. While determined to be done with both the aristocracy and liberalism, they have no intention of supplanting either with the tyranny of an intellectual Brahmanism. If the war without does not what they seek, there will follow one within to compel the rights of human brotherhood. The book is intensely English. (Charles Scribner's Sons, $1.75.)

SCIENCE AND SUPERSTITION

My Birth, by Armenhouie T. Lamson, is an intimate account of the developmental adventures of a human fetus. It is scientific embryology written with unfortunate sentimentality. (The Macmillan Company, $1.25.)

The necessity for a new edition of *An Introduction to Astronomy*, by Forest Ray Moulton, has given the author an opportunity for entirely rewriting it. The result is an admirable textbook which gives an exceptionally attractive, non-technical presentation of the subject. (The Macmillan Company, $2.25.)

General Physics, by Franklin and MacNutt, is an unusually good elementary textbook for colleges and technical schools. Little space is given to the atomic theory. There are excellent bibliographies and an explanatory chapter on mathematics. The authors have the power of clear, concise statement. (McGraw-Hill Book Company, $2.75.)

Many a psychologist has attempted to explain the phenomenon of *Witchcraft in Salem Village*. Winfield S. Nevins, in a scholarly preface to the second edition of his book, reviews their theories, sketches briefly the political and social situation of the period, and offers his own common sensible and intelligent explanation. (Salem, Massachusetts: Salem Press Company, $2.25.)

The Great Comet of 1680, by James Howard Robinson, is not, in spite of its title, an essay in the field of astronomy, but an account of one of the landmarks in the slow progress of human enlightenment.

The coming of this heavenly visitor was greeted with superstitious apprehension and terror, as is shown by the contemporary pamphlets and sermons, altho almost as many writers denied that a wandering star was a divine warning to sinful mankind. (Northfield, Minn.: The Northfield Press.)

Biologists and physicians will give a hearty welcome to *The Control of Hunger in Health and Disease*, a summary of the work on the stomach carried out in the Hull Physiological Laboratory during the last four years. Three of the seventeen chapters deal with the nervous control of the hunger mechanism and two with hunger and appetite in disease. The author, Anton Julius Carlson, has been fortunate in having in his service a "second Alexis St. Martin," a man with a complete closure of the esophagus and a permanent gastric fistula of twenty years' standing. (University of Chicago Press, $2.)

ESSAYS IN LITERATURE

The Story of the Battle Hymn of the Republic—the inspiration from which it sprang into being, its influence and fame during the Civil War and the years following, with an historical background of the anti-slavery struggle, is told by Florence Howe Hall, daughter of the poet. (Harper and Brothers, 50 cents.)

Dr. William Morrison Patterson has written a suggestive book called *The Rhythm of Prose*, "an experimental investigation of individual difference in the sense of rhythm." A chapter on vers libre will be particularly interesting to poets, critics and students of contemporary verse. (Columbia University Press, $1.50.)

The Spirit of Modern German Literature, by Ludwig Lewisohn, makes well considered, suggestive enquiry into the much-wider-than-Germany "respect for science, love of the concrete and a sense of its significance." Many recent writers have brief, somewhat over-appreciative, but illuminating attention. Among the translations the two excellent renderings from Richard Dehmel suggest that the translator would do well to give the rest of Dehmel's lyricism to the English speaking world. (B. W. Huebsch, $1.)

Horace J. Bridges' *Our Fellow Shakespeare* emphasizes the credibility of the Stratford-on-Avon bard's authorship of the plays, and the human sides of writer and character. Cocksureness, too few examples, assuming that all educated persons are pedants, make the author antagonizing. A good book, full of bad spots. (Chicago: A. C. McClurg & Co., $1.50.)

AS THE WORLD WAS

The development of the Roman constitution and legal code as embodied in the life and work of one of the republic's greatest citizens, is the theme of an authoritative volume by Hannis Taylor: *A Commentary on the Roman Constitution and Public Life Supplemented by the Sayings of Cicero.* (Chicago: A. C. McClurg & Co., $3.50.)

Edwin Oviatt's *Beginnings of Yale* is no stereotyped local record, but a book of literary charm and lively interest. The illustrations by Theodore Diedrickson, full page and set in the text, initials and head and tail pieces, are delightful and add quaintness and character to the picturesquely written pages. (New Haven: Yale University Press, $3.)

John A. Gade sets forth in English, Carl Gustafson Klingspor's "chronicle" of the romantic career of *Charles the Twelfth of Sweden*. The story, quaintly couched, purports to be written down by a devoted friend and follower of the great leader, and catches the spirit of the times with real charm. It is most entertaining; at the same time it gives us an excellent picture of the military and social life of northern and eastern Europe two centuries ago. (Houghton, Mifflin Company, $3.)

What to Read about Americans at the Front

These are not the reports of War Correspondents, but the stories told by the women and men, one might almost say the boys, who volunteered as soldiers and relief workers. They served under foreign flags for love of a great cause and not a few of these knights errant have paid the final price of courage and devotion.

Under Three Flags, by Livingston and Steen-Hansen. (Macmillan, New York, $1.) A very real picture of war by two Johns Hopkins nurses who were living in Paris in 1914 and served in Belgium, France and Serbia.

Flying for France, by J. R. McConnell. (Doubleday, Page, Garden City, New York, $1.) A book full of the spirit of youth and devotion, by one of the American Escadrille the skill and daring of whose members have won the admiration of the French and English airmen.

War Bread, by E. E. Hunt. (Holt, New York, $2.) Experiences in Belgium by one who helped distribute the bread.

Kitchener's Mob, by J. N. Hall. (Houghton, Mifflin, Boston, $1.25.) The training of Tommy Atkins, as seen—and felt—by a young American volunteer.

Aftermath of Battle, by E. D. Toland. (Macmillan, New York, $1.) A Princeton man's daily jottings of work with the American Ambulance, written during the first six months.

Golden Lads, by G. H. and H. H. Gleason. (Century, New York, $1.30.) Belgium under the German soldier as seen by a man and woman who served in the Hector Munro ambulance corps.

Ambulance No. 10, by Lester Bushwell. (Houghton, Mifflin, Boston, $1.) Letters written during the summer of 1915, when the writer was working with the American Ambulance.

From Mons to Ypres, by Frederick Coleman. (Dodd, Mead, New York, $1.50.) This driver of a staff motor car was attached, part of his ten months' service, to General French's headquarters. He draws a fine picture of the British cavalry officer.

Friends of France. (Houghton, Mifflin, Boston, $2.) Comrades tell here stirring stories of the brave and beautiful work done by some members of the American Ambulance.

My Fourteen Months at the Front, by W. J. Robinson. (Little, Brown, Boston, $1.) The author was a member of the Fifth Dragoon Guards, then of the Army Service Corps, driver of an armored car, despatch rider, gunner in the trenches.

Adventures of a Despatch Rider, by W. H. L. Watson. (Dodd, Mead, New York, $1.25.) The more telling for their boyishness, these letters were written home during a lad's eight months' service at the front which took in the retreat from Mons.

Mademoiselle Miss. (Butterfield, Boston, 50 cents.) These letters from a nurse in a field hospital near the Marne were published without her knowledge so that we get impressions precisely as she set them down at the time.

With Serbia Into Exile, by Fortier Jones. (Century, New York, $1.60.) A young Texan worked with the Serbian relief expedition and gives us from that experience one of the most vivid books that the war has brought forth.

Our Part in the Great War, by Arthur Gleason. (Stokes, New York, $1.35.) Accounts of American soldiers and workers at the front, with excerpts from German diaries.

INSURANCE

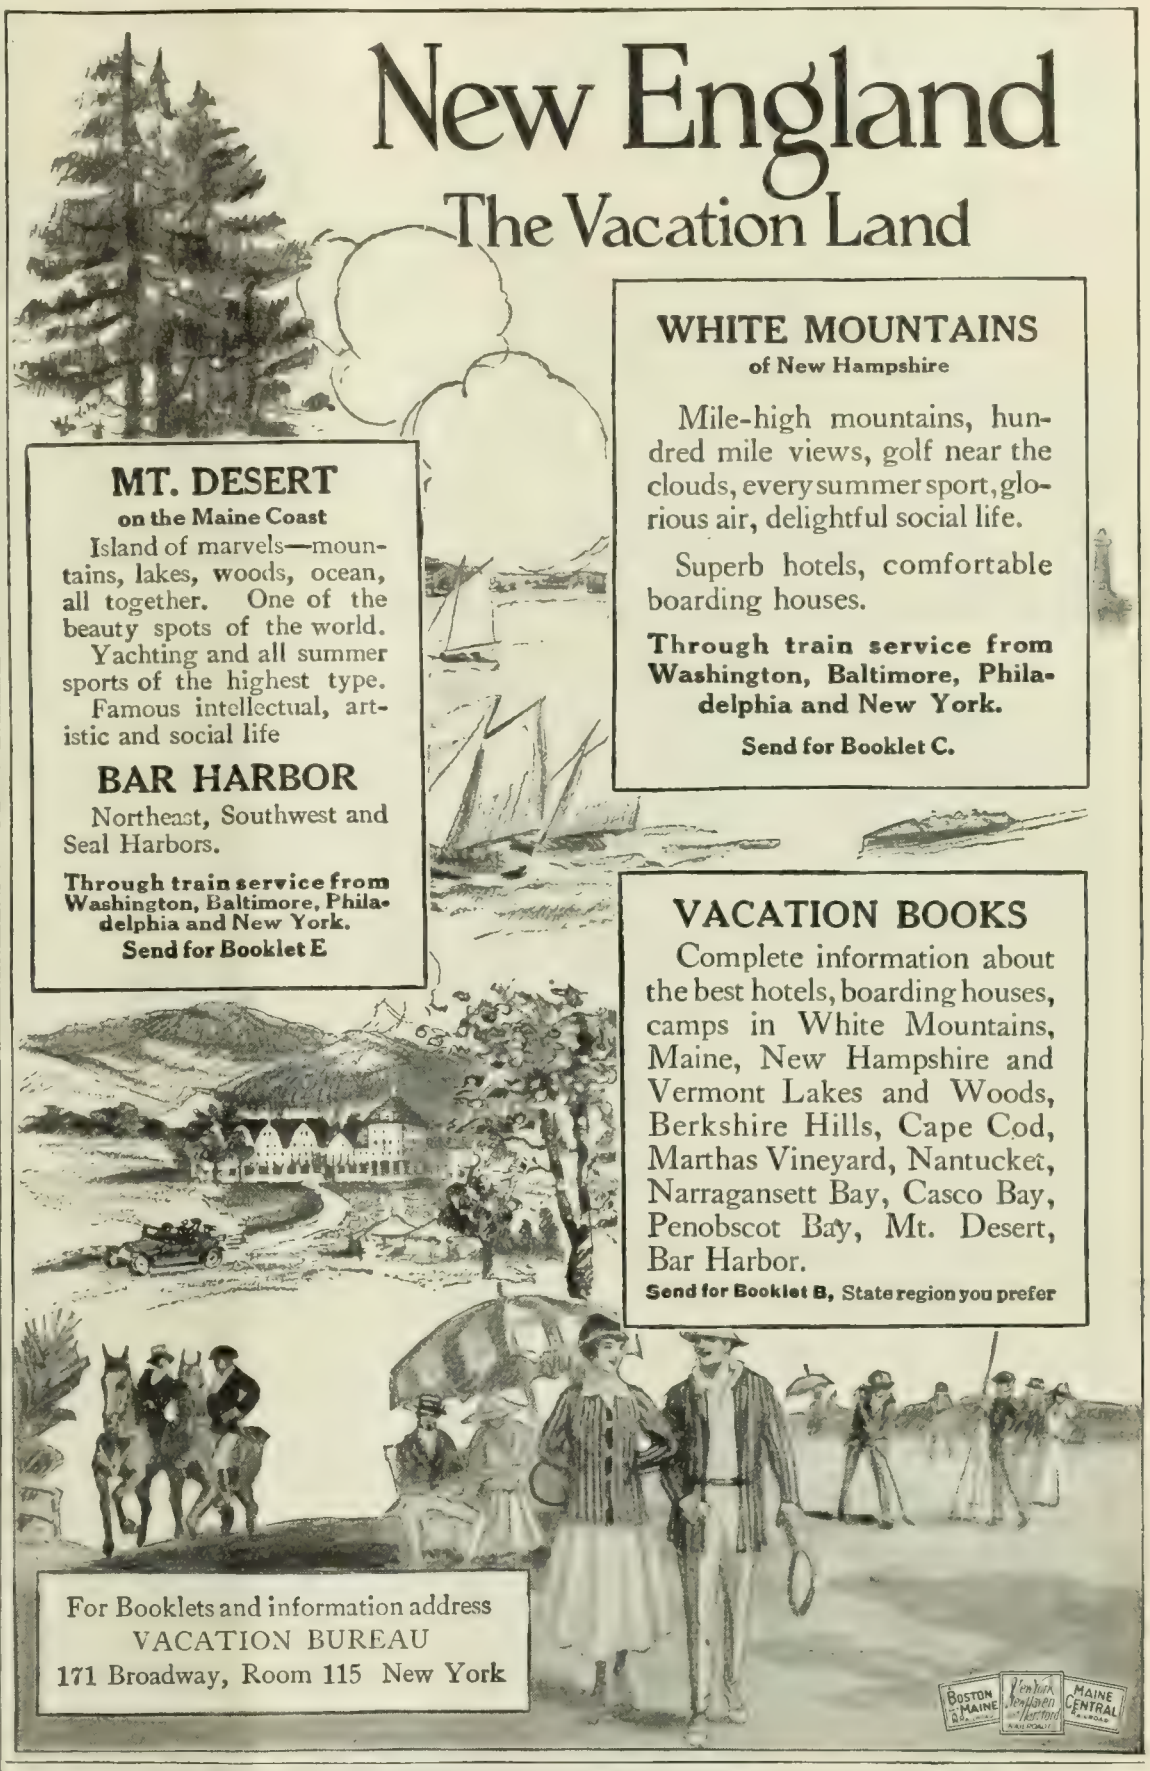
Conducted by
W. E. Underwood

"ALIEN ENEMIES"

The declaration of war against Germany presents to the consideration of policyholders and some underwriters an embarrassing problem. The underwriters concerned, most of them American citizens, are those who have been engaged for years in managing the interests of the German companies in this country.

Under a recent proclamation of the President, the terms of which I construe in an advisory sense, keeping in view the rights possest by the individual states to regulate insurance matters within their respective jurisdictions, permits, under exprest conditions, a continuance in business the United States branches of the German companies. The Insurance Department of New York, as will doubtless those of all the states, has virtually conformed with the recommendations made in the President's proclamation. Rigid rules are made for the retention of all funds.

Independent of all this, however, there are three features of the situation worthy of notice:



First, the conflicting relationships sustained by the American manager of the interests of an alien enemy; second, the duty to his country which may be violated by an American citizen in contributing financial resources to an alien enemy by buying insurance from him; third—and this may develop serious consequences—the possible risks assumed by policyholders in German fire insurance companies in the event of a conflagration.

It is true that serious conflagrations are not frequent; but as we know, two such occurred within a period of two years—Baltimore, 1904, and San Francisco, 1906—and five others involving losses running from $4,500,000 to $10,000,000 each, from 1908 to 1916.

It must be remembered that under present conditions the only security possest by policyholders in German fire insurance companies in this country is the sum of their United States branch funds. Any losses in excess of these would be, viewing the matter in its most hopeful light, very difficult to collect. This seems to be a case in which the doctrine of *caveat emptor* is indicated—the buyer must look out for himself.

L. C. H., Dandridge, Tenn.—Volunteer State Life Insurance Company of Chattanooga, began business in 1903, has a capital of $100,000 and issues mainly non-participating policies. On January 1, 1917, its assets were $2,651,340; net surplus, $232,046. It has grown steadily, claims are promptly paid, is of good average quality.

J. R. S., Callao, Va.—The Pittsburgh Life and Trust Company is an old line company calculating its reserves at 4 per cent, 3½ per cent and 3 per cent, the variation in rates being due to their adoption at different times. As you may not clearly understand this arrangement I will explain that a reserve which assumes an earning power of 3 per cent must be a larger sum than one earning 4 per cent, which was formerly a general standard rate among American life companies. In order to obviate any difficulties which might result thru a decline in the earning power of money conservative companies decided to get their reserve funds on a 3 per cent basis, and some of them to do this went first to 3½ per cent and then to 3. On January 1, last, the total admitted assets of the Pittsburgh Life and Trust were $24,001,571; its surplus, $1,636,055; its total insurance, $115,713,916. As the result of high financing, it is in the hands of a receiver.

GRANLIDEN HOTEL, Lake Sunapee, N. H. At the gateway of the White Mountains. The Ideal Tour Hotel at Lake Sunapee. Fine golf course, saddle horses, tennis, boating, canoeing, bathing; fishing for salmon, trout and bass as good, if not the best in New England. Dancing, afternoon and evening. Fine motoring, etc. Furnished cottages to rent. Accommodates 300 guests. Write for circular. Address W. W. Brown, Granliden Hotel, Lake Sunapee, N. H. Mr. Brown may be seen personally at Hotel Manhattan, 42nd Street, New York City, from May 20th to June 6th. After that date, Granliden Hotel, Lake Sunapee, N. H.
Winter season, Hotels INDIAN RIVER and ROCKLEDGE. Rockledge, Florida.

THE MARKET PLACE

COURSE OF THE STOCK MARKET

At the beginning of the week, on the 14th, the market for securities, on the New York Stock Exchange, was dull, and the price movement not sharply defined, altho a small average gain was shown at the close of the day. Investors regarded the situation in Russia with some anxiety, and Russian bonds lost 3 points. Railroad advances were fractional. Steel Corporation shares were at the head of the list, with nearly one-quarter of the day's business and a net addition of 1¼. There was dullness again on the 15th, with a downward movement. Prominent topics were the probable effect of the new taxes upon the profits of corporations, and the proposed withdrawal of men and cars from railroad service in order that they may be sent to Russia and France. Street railway shares were weak. New York companies were seeking permission to increase fares, saying that on account of the cost of labor and supplies this addition must be made if they were to keep out of bankruptcy. Russian bonds lost 4 points more and were sold at 80. About a year ago they were placed here at 94¾.

A change for the better was seen on the 16th, with a broader market, the total rising to 775,000 shares. This favorable reaction was due almost wholly to the unexpected news that our Government had loaned $100,000,000 to Russia. The effect was seen at once in the price of Russian bonds, which rose from 79¾ to 90, closing at 85. Not even the resignation of Minister Milyukoff could check the advance. Investors and traders were saying that the Government must have better reports from Petrograd than those which had come to the public. There were gains thruout the list. For industrials the additions ranged from 2 to 7 points, and railroad stocks were higher by 1 or 2. Steel Corporation was again the leader, with an advance of 4⅛ on transactions amounting to 213,950 shares, or nearly 30 per cent of the total number. On the 17th there was still greater activity and almost 1,000,000 shares changed hands. The upward movement continued, stimulated by more favorable opinions about Russia. Motor and street railway stocks were exceptions to the rule, which gave additions to nearly all the railway and war order company issues. Steel Corporation's gain of 1 point (265,500 shares) made a price which was the highest reached this year. An addition of 2 points to Crucible Steel followed the company's payment of 4 per cent on account of accumulated dividends on the preferred stock. No restraint was caused by the news from Washington that the sum to be raised by taxes must be increased from $1,800,000,000 to $2,245,000,000.

THE STEEL INDUSTRY

All the mills and furnaces in the iron and steel industry are working to the limit of their capacity, without satisfying the demand. The Corporation's unfilled orders were increased by 471,000 tons last month, making the great total of 12,183,000, and steel rails were recently sold for delivery in 1919. While the Government's plans for expending $1,000,000,000 in the construction of ships will call for a considerable quantity of steel, there was no warrant for the report that it might be necessary to assume control of all the mills and shipyards. All that our yards could do would not require more than 6

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

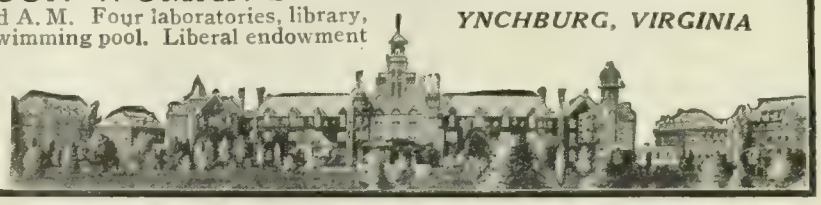
Liberty Refining Co., 432 G Wood St., Pittsburgh, Pa

per cent of the steel industry's annual output. Preference will be given to Government orders, but this will not necessitate cancellation of private contracts. The Government is urging makers of tin plate to increase their output, if possible, and has restricted the use of tin place in canning certain kinds of food. But at the same time it is proposed by the House Committee in the pending tax bill that a new duty shall be paid on tin, which is now in the free list, altho the metal is not easily obtained and the price of it is rising.

WHEAT TRADING RESTRAINED

By the action of the Board of Trade in Chicago the sharp advance of wheat prices in the market there has been checked. The price of the grain for May delivery had risen in six weeks from $2 to about $3.25 a bushel. At first the Board's directors forbade any further dealings in May wheat, ordering that $3.18 should be the price for settlement of existing contracts. Corn and oats for the same month were afterward included. Two or three days later, officers of all the grain exchanges, in conference with representatives of the Entente Allies and our own Government, decided to forbid trading in futures for any month. It does not appear that prices had so greatly advanced because the supply was "cornered" by speculators. Last year's short crop of wheat has been followed now by evidence that this year's crop will be a small one, with a persistent abnormal demand from abroad. American millers and representatives of European governments have made large purchases for future delivery. The natural result of all this has been the steady advance of price. Speculation has been discouraged in Chicago by brokers and commission firms, who demanded extraordinary margin security. At Washington there has been a movement for national control of the exchanges, and such control may be prevented by what the exchange officers have done. Owing to the new restrictions, the price of wheat for July delivery declined from $2.75 on the 12th to $2.19 on the 17th, but there was very little trading, and the price for immediate delivery remained above $3. There were reports that our Government had asked the Allies to give up their large holdings of futures.

Additional crop news is not encouraging. Seeding in the spring wheat states was delayed by unseasonable weather. For the same reason there has been delay in Europe. Canada has lost 23 per cent of her winter wheat acreage. There are no signs of the desired increase of planted area in our Northwest. Recent reports show a decrease of about 12 per cent in the two Dakotas.



METALS

The Government must have a large quantity of copper in addition to the 45,510,000 pounds which the companies recently sold to it at 16⅔ cents, or about half of the current rate. It has ordered 100,000,000 pounds and may need 200,000,000 more. But it now pays 25 cents instead of 16⅔, which was the average of prices for ten years immediately preceding the war, for the reason that a greater reduction would affect wages and probably cause strikes. Wages in the copper industry are on a sliding scale and depend upon the average selling price of the metal, which is now 31½ cents and was 37 cents not long ago. Agreements relating to price concessions have been made with the producers of lead and zinc. The brass companies will serve the Government without profit. In the steel industry every week sees an advance of prices. April's output of pig iron, 3,334,960 pounds, was exceeded in only two months of last year. Russia asks for 2000 locomotives and 40,000 freight cars, being in great need of rolling stock for the distribution of food and the transfer of munitions from Archangel and Vladivostok to the battle front. Our Government may act in combination with its European allies hereafter for the purchase of metals, but probably will not insist upon any considerable reduction of current prices.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. The Government is eager to interest small investors in the Liberty Loan. Write a circular that might interest the people of your neighborhood.
2. One of your friends has exprest disapproval of lending vast sums of money to our Allies. Show in what ways the loans will benefit both the Allies and the United States.
3. Write a public notice to be posted in railroad cars, showing at a glance that American railroads are safe.
4. You are present at a meeting of working people. Make a speech in which you show that the rights of workers will be preserved during the war, in spite of the necessities that have arisen.
5. The Congressman from your district has asked his constituents to express their opinions concerning the proposed increase in postal rates. Prepare an argument for or against the increase.
6. Write a single paragraph for the current events column of your school paper, explaining the present state of affairs in Russia.
7. Write a spirited paragraph in which you support or oppose the principle of "No indemnities, no annexations," proposed by the Russian Council.
8. Imagine that you have been invited to be present at a dinner of Cubans in this country, and that you have been asked to give a short after-dinner address. Give an address suitable for the occasion that would appeal to the interests of the Cubans.

Editorial Articles.

1. At a meeting of one of your school societies you are to give a short talk on "What the Various Countries May Gain or Lose as a Result of the Present War." Prepare the talk.
2. One of your friends has protested against prohibition as a war measure. Give an argument that will show that you have good reasons for agreeing or disagreeing with him.

Washington, the Fortieth Day. By Donald Wilhelm.

1. Show in what way the plan of this article is like the plan of some of the "Sir Roger de Coverley" papers.
2. What is the principal theme of the article? By what means has the author made this theme emphatic?
3. Write a somewhat similar article concerning preparation for final examinations.

First to Fight on Land or Sea. By Charles Phelps Cushing.

1. Show in what way the title fulfils the requirements for a good title.
2. Point out the steps by which the author awakens interest in the Marine Corps.
3. Write a somewhat similar article concerning one of your school societies or athletic teams.

What Must We Do? By Charles Edward Jefferson, D.D.

1. Express in one sentence the principal thought of this article.
2. Write, in the form of a brief, the arguments Dr. Jefferson gives in favor of his contention.

Clogging the Nation's Mind. By James W. Linn.

1. Write a composition on "How a Good Periodical Elevates a Country."
2. Write a composition on "How The Independent Aids in School Work."

SECTION II. LITERATURE.

Tide. By Murdock Pemberton.

1. Explain the following terms: glib confectionings, minor seers, entity, chaotic flux, flecks. Who is H. G. Wells?
2. Explain the last line: "I've followed stars now, long enough."
3. What is meant by the line, "The moon, they say, controls the tides"? Is the line to be taken literally or figuratively? What is its full meaning?
4. What is the serious thought that the poem presents?

SECTION III. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words: cosmopolitanism, isolation, supremacy, opprobrium, tax, radicals, prohibition, crisis, refugees, indemnities, proletariat, provisional, anarchy, bonds.
2. Use the words in sentences concerning events of the day.

SECTION IV. GRAMMAR.

1. Select the most skilfully worded advertisement in this number of The Independent.
2. Show in what way a proper use of English has aided in making the advertisement effective.
3. Give the syntax of every principal word, or group of words, in the advertisement.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Public Opinion and the War—"What Must We Do?"

1. "It is not idealism alone which pushed the United States into the war, but idealism plus commercialism plus fear." Show how each of the three is actuating the people.
2. "We live under the rule of the majority." What relation has this to the subject in hand?

II. Organizing for War—"Washington, the Fortieth Day."

1. "We are not instantaneous Prussians." What does this statement mean?
2. Compare the first days of this war with the first days during the Civil War. The Spanish-American War.
3. How far were we ready for this war? How far were we unready?
4. "We have the resources; we have the men and the ability to lead them." What do we lack?
5. "Nearly everything here is waiting on Congress," etc. What is Congress doing to help things along?

III. Raising an Army—"Senate Passes Army Bill," "First to Fight on Land or Sea," "No Gaps in the Ranks," "Wilson Announces Draft," "Pershing to Go to France."

1. Compare the present Army Bill with the bill passed by the last Congress.
2. What, according to President Wilson's proclamation, will be the procedure in raising the troops? How will the officers be recruited?
3. What steps are being taken for sending men and supplies abroad?

IV. Financing the War—"Pay, Pay, Pay," "Clogging the Nation's Mind," "Advertising Government Bonds," "Protests Against Postal Increase," "Facing the Music."

1. "It is the young manhood of *today*. It should be the wealth of *today*." What steps are now being taken to carry out this idea?
2. What is the basis for the protest against the increase of postal rates? Suggest some other method of raising revenue by means of the postal service.
3. Discuss fully the process of raising money by means of bond issues. What are the advantages of government bonds over other forms of investment?
4. "The small investor has not yet risen to the occasion." Why not?
5. List the definite aspects of patriotic duty that occur to you after reading "Facing the Music."

V. The Terms of Peace—"A Gleam of Peace," "No Indemnities, No Annexations," "The New Books—Democracy and the Nations."

1. "It is still a fight between an elephant and a whale." Explain the figure of speech.
2. How has the Russian revolution weakened the military force of the Allies? Strengthened their cause?
3. Discuss one or more of the following: (a) "Peace without punitive indemnities or forcible annexation." (b) "Germany would be willing to pay compensatory indemnities, but never punitive indemnity." (c) "Bulgaria has obtained possession of the territory she coveted." (d) "Italy has not." (e) "Russia has renounced all idea of annexation." (f) "The chief obstacles to peace . . . are Great Britain and France." (g) "There remains, then, the question of the Japanese conquest."
4. Which of the books discust in the review seems to you best worth reading?

VI. The Russian Revolution—"The Russian Crisis," "No Indemnities, No Annexations," "Fraternizing at the Front."

1. "The Russian Revolution is following the course of the French." In what way?
2. "The conflict arose over the question of foreign policy." What was the point in dispute? How has it been settled?
3. ". . . the country is drifting into chaos." Did this happen during the French Revolution? How did things work out in France then? How will they probably work out in Russia today?

VII. Industrial Efficiency—"Wilson Pledges Labor Conservation."

1. Note the quotation from President Wilson's address. (a) Is your state legislature one of those to which the President refers? (b) Do you think that the President's alarm is justified?
2. What is the attitude of the Council of National Defense toward the same subject? How does your father feel about it?

The Countryside

Service of the Hour

Just as a trained runner clears hurdles without losing his stride, so The Countryside has changed from a peace to a war program without loss of momentum.

Alert to the new war time requirements of its readers, The Countryside has made every effort to satisfy them.

The vital necessity of eliminating waste, of making every square foot produce the greatest possible yield, has accentuated the importance of Countryside Efficiency.

We must have Efficiency in the garden, in the poultry yard, in the dairy, in the preserving kitchen. We must get results. The Countryside shows how. Analyze the contents of the next two numbers.

July—War Efficiency Number

Out June 25

YOUR TOWN IN WAR—a symposium reporting the work which has been done in various communities in the way of organization for war, etc.

A WAR TIME BUDGET—the way war prices, war taxes, and the like, affect the household budget, by Stuart Chase.

FULL SPEED AHEAD IN MIDSUMMER—how to keep the garden efficient through the heat and drouth of midsummer, by F. F. Rockwell.

FROM GARDEN TO TABLE—second of the monthly pages dealing with the efficient use of home-grown foodstuff, by Anna Barrows.

THE BACKYARD BALANCE SHEET—a normal budget for the small poultry yard, with special reference to war conditions, by an instructor in Cornell.

THE MAN WITH ONE COW—first instalment of a two-part article, by E. L. D. Seymour, dealing with reasons for keeping a cow, choice, feeding, and care of one cow.

GARAGE EFFICIENCY—plans and equipment for convenience in the home garage, by John Chapman Hilder.

BETTER ROADS—WHERE?—an article on the location of good roads, by C. H. Claudy.

The Countryside War Garden Contest

Three prizes of One Hundred Dollars, Fifty Dollars, and Twenty-five Dollars, respectively, are offered for the story of your war garden this year. See the June Number, now out, for the announcement.

Solving Your Problems

There will be an expert waiting to answer any questions that may concern any phase of your own Countryside Efficiency. And The Countryside Shop is always ready to advise you in the purchase of equipment. Just address

The Countryside
SUBURBAN LIFE

119 West Fortieth Street New York City

PEBBLES

Frosh—Surveying a little?
C. E. Stude (laconically)—No, surveying a lot.—*Cornell Widow.*

The disagreement smouldering between Germany and Austria may be described as a rift in the loot.—*London Opinion.*

"I want to hire a big-calibered salesman."
"All of them are big bores."—*The Lamb.*

Time—What do the inmates think of the new asylum.
Keeper—They just rave over it.—*Jack o' Lantern.*

"Father, what kind of beasts were the rams they used so much in the Civil War?"
"They were probably the ancestors of the ewe boat of today, my boy."—*Puck.*

Fond Mother—What's the matter, Eva?
Little Eva—I've heard of "Good Friday," and "Ash Wednesday," but what on earth is "Nut Sunday."—*Yale Record.*

Musicians are to offer to sweep the streets. We hope players of treble instruments will experience no difficulties with the bass broom.—*London Opinion.*

Marion—What's your dog's name?
Helen—Ginger.
Marion—Does Ginger bite?
Helen—No; Ginger snaps.—*Yale Record.*

"You might ask Mary to get these stains off my coat with a little gasoline."
"Oh, George, I can't! Since the chauffeur jilted her the poor girl can't stand the smell of it."—*Chicago Herald.*

Officer—Is that soup ready, Jones?
Officer's Servant—No, sir, the gas stove went out, sir.
Officer—Went out! Then why don't you light it again?
Officer's Servant—'Cos it went out by the roof, sir.—*London Opinion.*

There are girls in hight ungainly,
  There are girls, thin, fat and small.
There are girls with voices mainly,
  There are some with none at all—
But the worst, the kind that drive you
  Straight to drink or suicide—
Are the muts that end their stories with—
  "My dear—I nearly *died*."
—*Yale Record.*

The tailor's sign in a little inland town was an apple, simply an apple. The people were amazed at it. They came in crowds to the tailor, asking him what on earth the meaning of the sign was.
The tailor, with a complacent smile, replied:
"If it hadn't been for an apple, where would the clothing business be today?"—*Everybody's.*

An Irishman who had walked a long distance, feeling very thirsty and seeing a milkman, asked the price of a quart of milk.
"Threepence," replied the milkman.
"Then give me a quart in pints," said Pat.
Pat, on drinking one pint, asked, "How do we stand?"
The milkman replied, "I owe ye a pint."
"And I owe you one," said Pat, "so we are quits."—*Passing Show.*

The backyard of a house in a Massachusetts town is overlooked by the windows of an orphan asylum. In this back yard stood a barrel of apples which were disappearing at a rapid rate.
The woman of the house, a widow and a knowing mother summoned her eight-year-old son to make inquiry touching the curious disappearance of the fruit.
"Yes, mother, I've eaten the apples," he confest, "but I really had to do it."
"Had to do it?"
"Yes, mother; the orphans wanted so many cores."—*Chicago Herald.*

Put New Life in Your Engine

A DOSE of Johnson's Carbon Remover—the engine laxative—will increase the power of your car—improve acceleration—stop that knocking sound—quiet your motor—save your batteries—and reduce your gasoline consumption from 12% to 25%.

JOHNSON'S CARBON REMOVER

It is a harmless liquid, to be poured into the cylinders. It softens the carbon and releases it from the metal. It then burns, powders, and is blown out through the exhaust. Five minutes' time and no labor required. You will save from $3.00 to $5.00 over any other method, without loss of time and with very much better results.

Use It Every Thousand Miles

If you will use Johnson's Guaranteed Carbon Remover every 1000 miles you can keep your motor clean and sweet, and always at its highest efficiency, and you will secure the maximum power and speed from the minimum amount of fuel.

Special Offer

If your dealer cannot supply you with Johnson's Carbon Remover use attached coupon. For a limited time we will include, gratis, a half-pint sample of Johnson's Stop-Squeak Oil—our new product. It instantly penetrates between the leaves of springs thoroughly lubricating them and giving perfect spring action.

USE THIS COUPON

S. C. JOHNSON & SON, Dept. I-6, Racine, Wis.

I enclose $1 for which please send me by prepaid express enough Johnson's Carbon Remover to thoroughly clean an ordinary motor three times. Also send half pint of Johnson's Stop-Squeak Oil free.

BOOKS AND WRITERS

Selma Lagerlof, who has won her way to fame by long years of quiet work, is not often to be found in the limelight. But she was persuaded out of her reserve once and that for a telling speech before the International Suffrage Congress.

Mr. Britling Sees It Through is a best seller, tho it is a novel only by courtesy, and hasn't any plot even if it makes up for this nobly in ideas. It is in its hundredth thousand, and has kept three presses busy for two months and five busy for another.

Bibles will have to go up in price along with less important merchandise. The skins that used to cover them now line the coats of English soldiers. The coloring for the red edges is now up about fourteen hundred per cent. and paper for Bibles has soared along with paper for novels.

The house that figured in Mildred Aldrich's *Hilltop on the Marne* is still a soldiers' refuge. At latest report there were three soldiers and seven horses recuperating there. Meanwhile her simple little book that somehow managed to be real literature, has run up the price of real estate in the village round-about.

James Norman Hall, author of *Kitchener's Mob*, one of the best accounts of soldiering the war has brought forth, came back to America after his period of service, expecting to stay. Persuaded by his publishers to return to Paris to write a book on the aviation corps, he went. But he is not writing. He is at the front again, fighting for the Allies.

The *Letters from John Wesley*, recently published, are full of trenchant sentences. To the official who demanded an inventory of his "silver plate" he writes, "I have two silver teaspoons at London and two at Bristol. That is all I have at present and I shall not buy any more while so many around me want bread."

REMARKABLE REMARKS

LILLIAN RUSSELL—Air is medicine.

GENERAL BELL—Singing men are fighting men.

WOODROW WILSON—This is no war for amateurs.

STELLA BENSON—Families are incurably conceited.

ED. HOWE—Key West, Florida, has a bad reputation.

JESS WILLARD—I'm ready when my country wants me.

HERBERT HOOVER—Eat plenty, wisely and without waste.

MARY PICKFORD—Too much study will give anybody headaches.

SARAH BERNHARDT—I hate what is called the "théâtre libre."

GIBSON BOWLES—The real food dictator of England is the German submarine.

PRESIDENT MARION LEROY BURTON—While I am open-minded, I am not empty.

GENERAL SMUTS—This is once more George Washington against George Rex.

PROF. FRANKLIN H. GIDDINGS—Peace at any price can never be an enduring peace.

SENATOR LODGE—I have never worked so hard or so much as I have since the declaration of war.

SECRETARY MCADOO—Failure to subscribe to the two billion Liberty Loan would be a confession of national impotence.

AMBASSADOR PENFIELD—In the last two years not one word has been printed in the Austrian papers favorable to the United States.

CHARLIE CHAPLIN—The principal thing you've got to do to keep an audience in good humor is to make it think that it is superior to you in intelligence.

DR. DUMBA—The entire fault for America's entry into the war lies with President Wilson, who is an obstinate Anglophile autocrat, filled with doctrinary stubbornness.

REV. RUSSELL H. CONWELL—In order that the man may be the noble creature he can be in peace or war he must have the approval, encouragement, smile and practical aid of woman.

PRIVY COUNSELLOR OSWALD FLANN—If neutrals were destroyed so that they disappeared without leaving a trace, terror would soon keep seamen and travelers away from the danger zone and thus save many lives.

REV. J. H. ODELL—Altho the ministry of the various denominations is the most perfectly organized group of labor unions on earth, a strike for higher wages has never once been mentioned in the history of the Christian Church.

Two Flags Upon Westminster Towers

April 20, 1917

By Robert Underwood Johnson

"This day is holy"—so sweet Spenser wrote,
Giving to Love the world's one bridal-song.
Ah! Could he see these flags together float
Where the gray pinnacles of England throng,
What bridal-song of nations would he sing!
How Shakespeare—thru whose pageantry of state
Trumpets of Freedom and of Justice ring—
Our "true minds' marriage" now would celebrate!
My country's poets, foes of tyranny,
For great and generous England raise your voice;
Be yours the apocalypse of Liberty—
A vision that shall call us to rejoice.
Divine the omens of the glorious years
From these free flags—if you can see for tears!

She will look for the

Gorham Name!

In making a gift of silverware to the bride in celebration of the event, the name of Gorham will make an event of the celebration, for it is a tradition of the American wedding that silverware should carry the Gorham trade-mark

and we violate no confidence in saying that the bride will look for it.

Sold by leading jewelers everywhere.

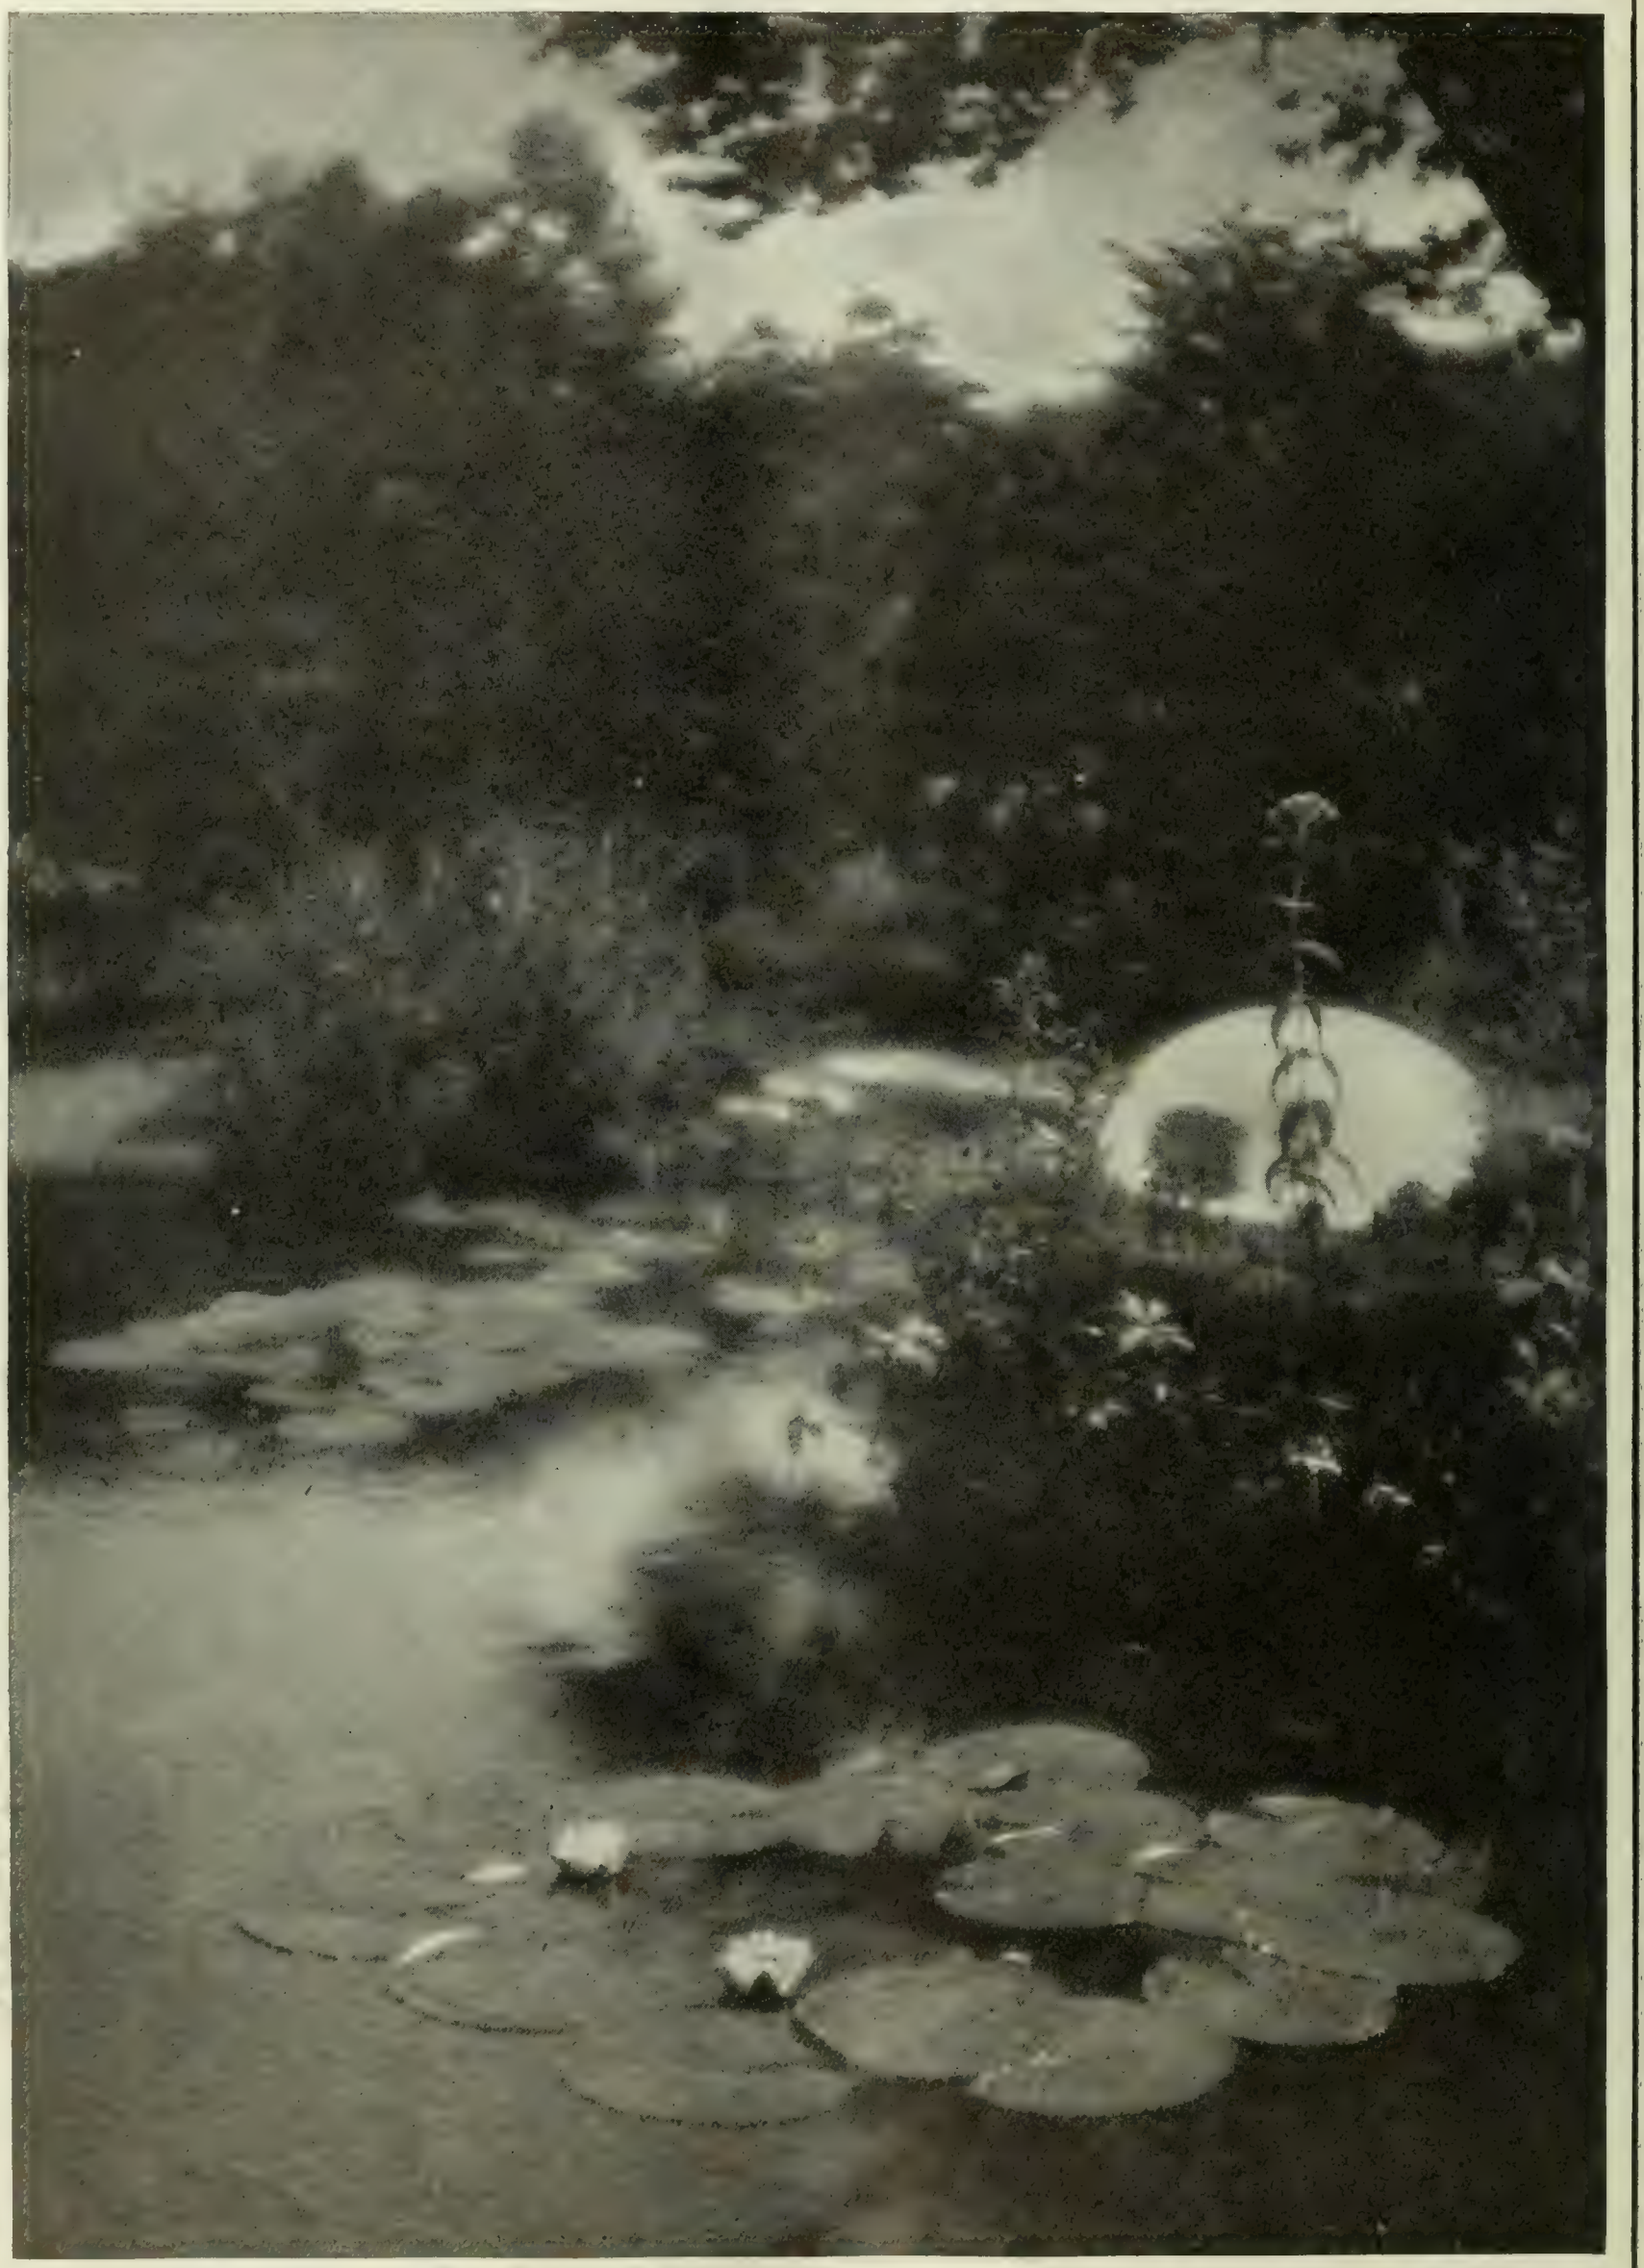
PRUSSIANISM CONQUERS THE WORLD

THE attempt of Germany to dominate the world has, we believe, been finally foiled. But that attempt has forced other nations to adopt in large measure those features of the German polity which they most abhorred. Liberty loving countries like France, England and the United States have been compelled to adopt conscription, expend vast sums for armament, impose unprecedented taxation, assume control of railroads, shipping and industries, to violate the freedom of the seas, to resort to inhuman and illegal methods of warfare such as poison gas and jets of flame, to enter the devious paths of secret diplomacy, to subordinate civil to military authority, to regulate the habits and expenditures of private citizens and to limit freedom of movement and to restrict freedom of printing, writing and speech. The people of the Allied lands have recognized the need of meeting the German menace by imitating its methods and all classes have cheerfully consented to the suspension of rights and liberties that have been won by centuries of struggle and sacrifice.

But the people have rightly insisted that the suspension of their privileges shall not be carried further and shall not be maintained longer than is absolutely necessary. That is why Congress shows such reluctance to comply with the President's desire for a censorship. That there must be some restriction on the publication of military news is admitted, but whether it is necessary to impose such stringent regulations in America as the European belligerents have adopted is not at all evident. Outgoing mails and cables are already under control on both sides of the Atlantic and the news that comes to us from Germany has passed thru the hands of three or more censors, each of whom may have cut out from it or even added to it whatever he chooses. The reader will recall many cases of such misinformation. We all remember those anxious days after the breaking off of diplomatic relations with Germany when the papers were full of alarming despatches from Europe telling of the holding of Ambassador Gerard in Berlin and the ill-treatment of Americans in Germany. At the same time the Germans were being exasperated by the same misleading messages in regard to this country, that Count von Bernstorff was not allowed to leave or communicate with his Government and the property of Germans in America had been seized. As the Berlin correspondent of the New York *Times* said when he got out of Germany:

> Berlin was absolutely without authoritative news from the United States. Nothing was coming thru but criminally false stuff, carried by a British news association, which seemed bent on doing everything in its power to accentuate the trouble between the United States and Germany, to inflame the two peoples and drive the countries into war.

As soon as a truthful dispatch could be got thru showing that the Germans in America were not being mistreated the attitude of the German Government immediately changed to one of marked friendliness and a special train was provided to carry the Embassy and other Americans to the frontier.



Since their departure we have of course no authentic channel of communication with Germany and must depend upon what the British Government chooses to tell us, and that is even less than it allows its own people to know. The December number of that staid old British monthly, *The Contemporary Review,* was not allowed to come to America because it contained an article by Dr. Dillon criticizing the conduct of the war. The London *Nation,* which as the most liberal of English weeklies has been especially welcome in America, is now deprived of the privilege of using the foreign mails. The press of England, even those journals most antagonistic to *The Nation,* have protested against its suppression and the question has been raised in Parliament. From this discussion we now know what was the sentence which roused the wrath of the War Department. The military critic of *The Nation* in discussing the retirement of the Germans on the Somme said:

> For some time our army had been relentlessly pressing the sector from which the Germans retreated, yet we find that the enemy slipt away, leaving few prisoners or material behind him.

Now this is a fact which nobody can deny, least of all the British War Department, which had given out the information. The naval expert of *Land and Water,* A. P. Pollen, admittedly one of the most competent writers on naval questions, had an article prohibited by the British censor last month. Norman Angell, author of "The Great Illusion," wrote an article for *The New Republic,* but was not allowed to send it because, as Bonar Law explained in Parliament, it contained a statement that thruout America had not been neutral but had been engaged in war with Germany. This is not a startlingly original remark.

We call attention to these abuses not for the purpose of attacking the British censorship, for that would be useless, but because if the United States goes into the censorship business it will do as badly or worse. It is greatly to the credit of the British that they are so clumsy at the job. They have not had the practice of the Germans at muzzling the press. But our press is more numerous and less tractable than that of any other country. Lloyd George is as well meaning as Woodrow Wilson and considerably more liberal in his politics. Yet with Lloyd George as Premier with unprecedented powers the British Government is, as the English papers put it, "prohibiting the export of British Liberalism," and suppressing criticizm of the administration while allowing the Tory papers to say what they please and go where they like. When the question of *The Nation* was brought up in the House of Commons the Premier loyally assumed the responsibility and defended the action of the War Department, altho he was obliged to confess that he had not known of it until he read it in the papers.

Now America is the only one of the belligerent countries run by a partizan government. The others have coalition

cabinets. We do not in the least believe that President Wilson would take a personal or partizan advantage of the unprecedented powers that he demands. But we greatly fear that these powers would be abused by his subordinates here as they have been in England and still more in France, Russia and Germany. The growing distrust of the Australians for England is in part due to their resentment at what they call "the calculated perjuries" with which they have been fed by the cables. America, now that it has entered the war, is in the same situation. As we said in our editorial of April 24, "A Plea for Contented Ignorance," the American people will henceforth know no more about the war than the other belligerents, and since they cannot help it they should make the best of it.

But because we are subjected to an external censorship is that any reason for imposing an internal censorship? No doubt there are traitors and spies among us and they will do their best to smuggle our newspapers into Germany. But such belated information is not likely to have much effect on the course of the war. We managed to get along in the Civil War without a censorship, altho there was only an imaginary line between the belligerents for two thousand miles. Now our enemy is across the ocean and encircled by watchful foes. The American press is indiscreet, but not unpatriotic. What is needed is not stricter laws and heavier penalties, but a competent corps of advisers to whom any doubtful item can be shown and who can give an authoritative opinion in advance as to whether its publication is or is not contrary to public interest. If any journal disregarded such advice it could be suppress or penalized.

CROWNS AND COURTS

THE Independent has always been a champion of unpopular causes, but for few of them have we been so much criticized as for our advocacy of republicanism. Some of our indignant critics point to the usefulness of monarchy; they say that England and Germany are in many respects better governed than the United States. Others, again, defend monarchy on the ground of its uselessness; the king, they say, is only a symbol like the flag and in no way interferes with popular self-government. Many more or less valid objections are brought against our republican propaganda: that kingship has a sentimental and historical value, that it isn't so expensive as Americans generally suppose, that such heterogeneous empires as Austria-Hungary could not be kept intact for a day without the personal tie of a ruler, that it is bad manners to lecture foreign nations on their domestic affairs, and that most of the rulers of Europe at the present time are not half bad fellows when you come to know them.

We are not such fanatical republicans that we fail to recognize the truth of many of these contentions. We are willing to admit that nearly every man now in the kingly office is patriotic in intention and means well by his people. We do not forget that the King of Belgium is a hero, that the King of Spain is a prudent and liberal statesman, and that the rulers of Montenegro and Japan could make a name for themselves as poets even if they should lose their thrones. But the mischief of it is that the personality and the legal powers of the individual ruler are not the only questions involved in the institution of kingship. Royalty is like the vermiform appendix in this respect, that, however harmless in itself, it may have to be removed because it tends to become a center of infection. The mere fact that a person is allowed to hold supreme office by hereditary right gives prestige and moral standing to an aristocracy which otherwise would be exposed to the blasts of public criticism. The King of England, for example, is himself nearly powerless and the House of Lords is a far greater obstacle to the progress of British democracy. But how long would the House of Lords exist if there were no king? Who can imagine a hereditary nobility in a modern republic?

But royalty protects not only the hereditary principle, it attracts to itself every indefensible institution in the state. Dignitaries of the established Church, wealthy landlords, chauvinistic professors and journalists, reactionary politicians and place holders, arrogant generals of the army, in short every class that hates or fears democracy, rally around the king as soldiers rally around a banner. We have heard of liberal kings, but who ever heard of a liberal court? The Russian Czar was little more than a weathercock blown this way or that by the factions of his court, yet it was in his name and only in his name that the bureaucracy dared to oppress the people. The Kaiser, egotist tho he is, has not always been as militaristic as some of his subjects. It is even rumored that the war party forced him to declare war on Russia against his will. But only the Hohenzollern prestige has made it possible for so highly civilized a people as the German to submit patiently to the insolence of Prussian nobles and the bullying of Prussian officers. Royalty is not always a sword of oppression, but by the law of its being it must be a shield for reaction.

NATIONAL EFFICIENCY

EVERY other great nation now at war has found it increasingly necessary as the conflict goes on to regulate the production, distribution, and consumption of wealth. The United States must do the same. We should not wait for the compulsion of dire necessity to force us to such a course; but we should take up the plan at once, and go forward with it diligently and briskly. Prudence, efficiency, and democracy all unite to urge us along this road. There are many lessons in this field of endeavor that we can learn not only from our allies but from our enemies; and we can better the instruction by doing quickly what they had to do slowly, because their own experience had to be their teacher.

In these three great divisions of our economic life, the national, state and municipal authorities should be devoting their best energy and intelligence to the consideration of these fundamental problems:

First—The regulation of the farms, fields, factories and mines of the country.

Second—The regulation of the means of transportation, the stock exchange, the cotton exchange, the wheat pit, and all other markets.

Third—The regulation of the consumption of food and other forms of wealth by individuals and groups.

This is the time of all times to try out the law of the greatest good for the greatest number.

IN UNION IS STRENGTH

THE one constructive idea born out of the war's universal destruction is the proposal to establish at the close of the fighting a League of Nations, by which reason may be enthroned on earth, buttressed by every available sanction; moral, economic or physical.

This idea was first given to the world at Independence Hall, Philadelphia, on June 17, 1915, when a group of 300 distinguished Americans headed by ex-President Taft put forth the four famous proposals that constitute the platform of the League to Enforce Peace.

The other day in London a group of 1200 representative men headed by Lord Bryce, including clergymen and members of the Houses of Lords and Commons, held a similar meeting to give expression to England's thought on the subject. The British group has been working on the idea about as long as the American group, but only now has it been thought expedient to conduct the propaganda openly.

The British organization, known as the League of Nations Society, is in complete agreement with the program of the American league, except that it is willing to go a

little farther in two respects than the latter has deemed it wise to go for a beginning. It proposes that the decisions of the Court of Arbitration shall be enforced and that the League shall take action against a non-member that refuses to arbitrate. The League to Enforce Peace, on the contrary, declares in its initial program that force should be used only to the extent of compelling a hearing before hostilities begin and that the league should not act against a non-member. As both the English and American groups would be perfectly willing to accept whichever program seems best when the peace conference assembles it matters little that they now have a minor difference.

Now that almost all the nations thru their responsible ministers in office have accepted the proposal to substitute coöperation for competition in international affairs hereafter and England and the United States have strong unofficial societies working for that end, it would seem well nigh certain that some international league will be established when the war is over.

"United we stand, divided we fall" is as sound a political doctrine today as it was in 1776 and 1861.

THE HUNS

LAST week a large and enthusiastic throng of the "best citizens" of Memphis, Tennessee, burned a negro at the stake after soaking him in oil and cutting off his ears.

The world must be made safe for democracy.

NO SLACKERS IN THE WAR

PROF. WILLIAM JAMES, in his remarkable essay, "The Energies of Man," says:

> A man who energizes below his normal maximum fails by just so much to profit by his chance at life and a nation filled with such men is inferior to a nation run at higher pressure.

In considering how it is possible to tap the unutilized reservoirs of human power, he refers to the stimulus of inspiring ideas:

> "Fatherland" "the Flag" "Liberty" are so many examples of energy-releasing ideas, that unlock innumerable powers which, but for the idea, would never have come into play.

That this is good psychology has been proved in every one of the belligerent countries, and we are beginning to realize it in America. Many a man who was grumbling at overwork before the war is now doing from 50 to 100 per cent more than he did before, and feels better for it. Vacations will be spent this year, as the letters on another page show, not in trying to find ways of getting out of work, but in trying to find new work to do. The old easy-going, carefree days are gone, perhaps for a generation. Our national life must be speeded up. We must economize on time as well as food. As Longfellow says:

> The hights by great men reached and kept
> Were not attained by sudden flight,
> But they, while their companions slept,
> Were toiling upward in the night.

Measure your work by what you have to do, not by the time you spend on it. What we need is not so much a daylight-saving movement as a midnight-using movement. If any man thinks his work is of so little value to the world that the world is better off with only six, seven or eight hours of it, probably he is right. So probably is the man who thinks that the world needs ten or twelve hours of his work. The overtime for which you get paid fifty per cent extra does not pay. But the overtime for which you get nothing pays several hundred per cent. It is a question of incentive, not of compensation. What a man likes to do, that he can do longest without overfatigue.

We appreciate the value of the legislation restricting the number of hours of work in the industries. Each occupation has a limit beyond which labor is not profitable. No man could be expected or required to donate his leisure time to his employer. The man who has his labor to sell has the same right to restrict the amount of it as the grocer has to weigh the sugar out to his customer. But the man who is working on his own account is not so restricted. He is free to increase his efficiency without lowering the standard of his occupation. One who is vitally interested in his work and believes in its importance cannot be shut off by a time clock. Yet the slackers of industry are more apt to be found at the top than at the bottom.

If the office closes before you are thru, take your work home with you at night. Sit up with it, sleep with it, dream about it. When your conscious mind is tired out, turn over the unfinished business to your sub-consciousness and let that solve your perplexities. Some of the greatest work of the world's history has been done down in this dark cellar of the brain. It was there that Kekulé, the great German chemist, discovered the formula for the benzene ring. It was in this way that Poincaré, the great French mathematician, worked out his most difficult problems. It was the subconscious part of his mind that supplied Stevenson with the plots of his tales. Herbert Spencer said his philosophy "grew" while he was asleep.

Look about you and you will see that the men who acquired the habit of knocking off work at four to play golf, or to sit in the grand stand for the benefit of their health have mostly knocked off their life work at forty or fifty, while the men who kept pounding away until eleven or twelve at night are doing great things at sixty or seventy. A professor could grade his students, better than thru examination, by going out on the campus and noticing how late the light burns in the dormitory windows, provided he could be sure that the current was kept on for purposes of study instead of for poker playing. Live a double life, not one of work and one of dissipation, but both of work, preferably of different kinds. Self-indulgence is suicide. Sparing yourself means wasting yourself.

He that saveth his life shall lose it.

JOHN BULL IN THE CHINA SHOP

WHEN Lord Beresford was speaking at the luncheon of the British Empire Productions Association at the Hotel Savoy in London he happened to pick up a plate and noticed by the stamp on the back that it had been "made in Germany." He called attention to it, whereupon the indignant guests smashed their plates upon the floor. The manager of the hotel explained that the dessert plates used at the luncheon were part of a lot of 10,000 purchased five or six years before, but that he had supposed that all of them had been given away to hospitals.

This opens a new field for patriotic enthusiasm. Let the British collect all the German paper currency in the United Kingdom and burn it in public bonfires. Let them sink all the German ships they have seized and spike all the German cannon they capture. Let them destroy all the German-made products that they have bought and paid for and then set to work to replace them. What a blow that would be to Germany!

THE LOGAN LAW

THE resurrection of the Logan Law by Secretary Lansing for the purpose of preventing the Socialist delegates from going to Stockholm and of prohibiting any other efforts to make peace between the warring peoples is likely to cause as much exasperation as an attempt to enforce the Connecticut Blue Laws. Of all dead legislation upon our statute books the Logan Law is the deadest, because it has never been alive. It was passed in 1799 as an act of personal and partizan spite against Thomas Jefferson, who tried—thank Heaven, successfully—to maintain peace between France and the United States. Jefferson gave a letter of introduction to Dr. George Logan, a prominent Quaker of Philadelphia, who went to France in order to remove the

misunderstanding which had caused the breaking off of relations between the American Government and the French Directory. If this breach had not been healed the American people might soon have been at war with the French, who had only a few years before come to their assistance, and we would not now have been greeting General Joffre and M. Viviani with the whole-hearted friendliness that we have recently shown.

But Secretary of State Pickering was incensed, as diplomats always are, at such unauthorized intervention, and he caused the passage of the Logan Act, which says that

> Every citizen of the United States . . . who, without the permission or authority of the Government, directly or indirectly, commences or carries on any verbal or written correspondence or intercourse with any foreign government, or any officer or agent thereof, with an intent to influence the measures or conduct of any foreign government in relation to any disputes or controversies with the United States shall be punished by a fine of not more than $5000 and by imprisonment during a term not less than six months nor more than three years.

This law has been as ineffectual as it was foolish. In the 118 years since it was passed no attempt has ever been made to enforce it, altho no one has obeyed it. Pickering himself violated it with impunity when he got out of office. Whenever any controversy has threatened a breach between the United States and a foreign power American citizens have always considered it their duty to do what they could to clear up the misunderstanding by writing or talking with their friends in the other country, whether officials or not. Since it has always been a favorite amusement of American editors to advise the crowned heads of Europe how to run their realms, we are all of us likely to wake up some morning in jail, which would be a great relief to the Government because it would solve the question of the censorship.

The power to make war and peace is vested solely in Congress and the only thing that any private individual can do is to clear up—or promote—misunderstandings with the people of other countries. However many mischief makers we we may have among us we believe that on the whole such efforts will do more good than harm. We have no sympathy with the aims of Hillquit, Lee and Berger in going to the Stockholm Conference, but we do not see how it will be possible for them to muddle things any worse than the skilled diplomats of Europe have already done. Whomever we may blame for bringing on the war, it is admitted that it was accomplished thru secret diplomacy. In Russia the people are demanding the publication of the secret treaties which bind Russia with Great Britain and France. In England the Union of Democratic Control is gaining sympathy continually. In all the belligerent countries there is a popular revolt against the secret diplomacy of the past. The more widely the possibility and terms of peace are discussed between the belligerent peoples the sooner peace will come and the more stable it will prove.

HERE'S TO GOOD OLD YALE

A COMMITTEE of Yale Alumni under the sober chairmanship of one W. H. Taft, '78, has just sent out a letter to Yale graduates asking them to answer two questions. To the first one "Should Class Reunion Funds be expended for liquor," 220 answer yes and 8213 answer no. To the second one "Should liquor be served at reunion headquarters," 593 answer yes and 7796 answer no.

Thus, if the majority rules—and we are sure it will in this case—the Yale graduates returning this June for commencement will be confined to drinking to themselves only with their eyes. As the American institutions of higher learning have never been pioneers in prohibition, this action of the Yale Alumni is one of the most encouraging signs of the times. We understand that similar movements have already been started in other universities as a direct result of the lead taken by Yale.

THE REAL FAULT OF ULTRA-PACIFISM

IT is a commonplace that the average man is right in his decisions and wrong in his reasons. That is why the laws passed by a democratic representative body, our Congress for example, are often so much wiser than the speeches made for and against them would lead one to expect. Nine-tenths of the people of the United States have a like suspicion of Prussian militarism and of non-resistant pacifism, and in this they show their common sense. But when most of us strive to justify by argument our objection to these two heresies we tend to miss the point of both. Opponents of militarism constantly harp upon the violence, lawlessness and bloodthirsty temper which it fosters. No doubt a community may be injured by an excess of these qualities, as was pagan Scandinavia or the American West before the fence and the sheriff tamed its first exuberant individualism. But such communities are rather warlike than militaristic in the proper sense of the term. Militarism implies iron discipline, which in turn implies obedience and submissiveness on the part of the governed. The leader may be arrogant and self-assertive, but the soldier must not be or the whole military machine breaks down. It is no accident that Germany, where militarism has been carried farthest, is one of the most orderly and quiet countries in the world in peace times and that the Germans have been the last of all civilized men to assert their rights against their rulers.

An equally serious mistake is made in regard to ultra-pacifism. The average patriot reproaches the conscientious objector with his cosmopolitanism, his indifference to the call of his fatherland, and accuses him of being a friend to every country but his own. But if we turn from what is said about the opponent of this war to what he himself says we find him guilty of the opposite error. In several of the allied countries there have been strong anti-war movements, each of them due to a narrowness of sympathy and a limitation of outlook. In Russia a few extreme revolutionists urge upon the republic a separate peace on the ground that the fruits of their beneficent revolution may be endangered by a continued war. Now, it is quite arguable that Russia may gain its national objects by retiring from the war on the generous terms which Germany would be glad to grant, but it is obvious that such a peace would not benefit the cause of freedom and democracy in Europe as a whole, since it would leave Germany free to devote all its attention to securing supremacy in the west. In England, and also in Australasia, the anti-war movement is largely in the hands of a few syndicalists who care nothing what occurs on the continent of Europe so long as they can entrench the position of their trade unions in their struggle with local capitalists. In Ireland there is a small, embittered faction which is willing to abet any crime of Germany if only they can embarrass England. Finally, in the United States, almost every voice that has been raised against war in Congress or in the press has reproached the Government for dragging us into a war that is "none of our business."

The real internationalists, the real cosmopolitans, perceive plainly that the world is more and more a unit and that no nation can be indifferent to a raid on liberty in whatever quarter of the globe it may occur. The true pacifists understand that their business is not to go off into a corner hugging a scrap of peace in the hope that nobody will take it away from them, but to organize all the liberal forces of the world into an armed and permanent league which will make the freedom of every people secure and war impossible. The sin of ultra-pacifism is not impractical Utopianism or lack of patriotism, it is simply selfishness. Not necessarily individual selfishness, for it is a mistake to regard as a coward the man who risks opprobrium and perhaps the penalties of the law by preaching against war, but the selfishness which cannot look beyond the boundaries of nation or class to brothers who need our help against oppression.

THE STORY OF THE WEEK

Cadorna's Advance It seems that England is to assume toward Italy the same relation that Germany assumed toward Austria-Hungary. It was not until the Germans stiffened up the Austro-Hungarian forces that they made any progress. Italy has been for two years in the war, but has pitifully little to show for her immense sacrifices and gallant endeavors. The city of Gorizia, ten miles inside the Austrian frontier, is her only considerable conquest on the Isonzo side, while on the Trentino side she narrowly escaped disaster thru a timely attack by the Russians.

But during the dormant period of last winter Italy was frequently visited by British and French political and military missions, and preparations were made for a vigorous offensive in the spring. The chief deficiency of the Italian army was in heavy artillery, without which it was impossible to dislodge the Austrians from their strong positions along the frontier. It was found not sufficient for England to supply Italy with coal and iron; she had to send the guns. It was found not sufficient to send the guns; England had also to provide the men to handle the guns and the officers to manage the men. General Nivelle from France and Sir William Robertson from England went to Italy to advise in the reorganization of the army. The British contingent in Italy is estimated by the Austrians at 250,000.

Consequently General Cadorna has now under his command a well equipt force numbering four million and provided with heavy artillery and aircraft. The Austrians on the other hand have only a tenth as many troops, according to the figures of the British authorities. Of these about 200,000 are on the eastern front along the Isonzo River, against which General Cadorna is directing his attacks.

The Italian offensive began on May 12, and at the end of twelve days had resulted in the capture of 22,400 prisoners and the gain of several mountain hights north of Gorizia as well as five or six miles of Austrian entrenchments on the Carso plateau south of that city. The Austrians admit having to give way at certain points, but claim to have inflicted heavy losses on the Italians and taken 4000 prisoners.

The Hindenburg Line Most newspaper readers, hearing of the "Hindenburg line," probably got the impression that it was a definite line of trenches, like those the Germans had deserted on the Somme, and that when the Allied troops had traversed the evacuated strip they would begin again their frontal attacks and either break thru or be repulsed. The reality turns out to be very different from this preconception and not so simple. The fighting in this area is exceedingly confused and it is hard to balance losses and gains. The British troops sometimes push their advance beyond the enemy's front trenches with unexpected ease and find a village deserted that they had expected to have to take by storm. Then again they may be taken by surprize by a counter attack from an unforeseen quarter or when their artillery has completely demolished some entrenched position the assaulting column may find it filled with fresh troops brought there by underground passages. How the Germans look at it is best shown by a quotation from the *Frankfurter Zeitung:*

> Hindenburg is conducting the defensive war according to a new method. One can —at any rate in the fighting area of the French—call this a semi-rigid method. It seems, as far as can be judged hitherto and from a distance, to consist in a combination of the experiences of the war of position with the doctrines of the war of movement. Deep systems of trenches are most carefully constructed, and the defense in the trenches is mobile. The front trenches, which are exposed to the bombardment, are most lightly manned; there is an elastic bending back; infantry attacks are received in skilfully constructed cross-positions; and powerful counter-strokes are made at the right time and in the right place. The successful result is that the loss of ground is slight, the casualties are diminished, and the attacks are defeated in an unusually brief infantry fight.

This seems to be a good description of the nature of the warfare, but the Germans must be easily pleased if they can regard as insignificant the capture of fifty thousand of their men and fifteen hundred of their guns within a month. The total losses of the Germans in this field during April and May are thought to be half a million, and the reserves that Hindenburg had accumulated for an offensive somewhere have already been consumed in this defensive.

On the other hand the French are frankly disappointed over the results of their offensive and there is a popular demand for the removal and punishment of the generals responsible for the failure to meet expectations. The military expert of the London *Times* says that the Allied armies in France "must not indulge in soaring strategy" until the arrival of reinforcements from England and America for neither the French nor the British "could afford heavy losses in a great general offensive at this moment."

THE GREAT WAR

May 21—U-boat toll for the past week is thirty British vessels. Germans attack French on Aisne.

May 22—Russian peasants seize land and burn houses. Socialists assemble at Stockholm to discuss peace terms.

May 23—American medical unit received by King George. Women workers strike in Paris.

May 24—American troops, largely Cornell students, at the front in France. British make gain on Arras front.

May 25—Sixteen German aeroplanes raid English coast towns, killing twenty-seven men, twenty-six women and twenty-three children. Lloyd George proposes to Parliament an Irish convention to settle Home Rule question.

May 26—Italian offensive on Carso nets 22,000 Austrian prisoners. Germany announces intention to sink hospital ships in Mediterranean.

May 27—Two Spanish steamers reported sunk by U-boats.

The War on Commerce In the report of the British Admiralty issued May 23 the number of vessels lost was 30, that is 4 more than the previous week, but the increase was in vessels under 1600 tons. The losses of larger vessels, 18, and of fishing craft, 3, were the same. A reduction in the number of unsuccessful attacks from 19 to 9, indicates a decrease of activity on the part of the U-boats, but whether this is due to their destruction or withdrawal remains to be seen.

The British Government feels much encouraged and the British public much relieved by the reduction of losses over last month. Premier Lloyd George said to the House of Commons:

> The successes against submarines have resulted in a distinct improvement in our food situation. We owe a very considerable debt of gratitude to the great American people for the effective assistance they have rendered and the craft they have placed at our disposal. Now that the American nation is in the war it is easier to make arrangements for the protection of our mercantile marine than it was before. The Germans' submarine warfare is destined to be the greatest miscalculation in the whole series of miscalculations of that hated empire.

The French report 3 vessels lost within the week. The neutral Scandinavian nations have suffered almost as much as the belligerents. Since the war began Denmark has lost 150 ships and 210 seamen, but Denmark is not likely to enter the war even tho Norway and Sweden do, for Germany might immediately invade the country and so obtain a fresh supply of food and munition material. Sweden, which has been more favorably disposed toward Germany than the others, has been exasperated by the sinking of three Swedish grain steamers, the "Viken," "Vesterland" and "Aspen," but the German Minister at Stockholm has apologized for the action of the submarine in this case. Four other steamers also carrying supplies from Sweden across the Gulf of Bothnia to Russia were captured by a U-boat and taken to a German port.

The losses reported by the British Admiralty do not include naval vessels, and it was not until twenty days later

Underwood & Underwood

JUST OUT OF REACH

It must have been a tantalizing bait for the Germans in the first line trenches to see month after month this view of the town they could not take. This photograph of Soissons was taken thru the peephole of a trench recently captured by the Allies

that the world learned that the British transport "Transylvania" had been torpedoed somewhere in the Mediterranean on May 4. The "Transylvania" was an Anchor Line steamship of 14,315 tons built in 1914. The first torpedo which struck her at ten in the morning did not damage the engines and the ship made a dash for land, a few miles distant, but a second torpedo blew up the machinery and the vessel sank half an hour later. The nurses were first put into the boats and the soldiers waited their turn on deck singing "Tipperary" and other popular airs. Most of the men were got safely ashore, but 413 were lost including the captain.

It is now announced that the French liner "Sontay" was torpedoed between Marseilles and Salonica on April 16 with the loss of 45 lives. A flotilla of Italian destroyers and light warships has been sent to the Mediterranean to check the depredations of the U-boats in these waters.

Brazilians Demand War

The first fervor of enthusiasm which followed the severance of diplomatic relations between Germany and Brazil was followed by a partial reaction and a formal declaration of neutrality; due in part to apprehension of the possible disloyalty of the unassimilated German element in the nation, and partly to the absence of any fresh cause of irritation with the German Government. But the news of the torpedoing of the "Tijuca" near the French coast again roused the popular indignation. The press of the nation and the statements of public men indicate that the desire for an entente with the United States is no small factor in the growing desire of Brazil to take an active part in the Great War. With the possible exceptions of Cuba and Panama, no nation in Latin America is so completely in sympathy with the policy of the United States as is Brazil. It will probably be only a matter of days before Brazil abandons its present "armed neutrality" for undisguised belligerency..

German intrigue has been active in Argentina to prevent the Allies from availing themselves of the grain resources of the nation. On May 17 the Argentine Government announced a new embargo on the exportation of wheat. Current rumor traced the embargo declaration to an offer from the German minister to the Argentine minister of agriculture to buy up a hundred thousand tons of wheat to be placed at his disposal. Since wheat cannot now be imported into Germany, such an offer would have no effect except to keep the grain supply out of the hands of the Allies. Another explantation is that Argentina has been exporting so much grain that not enough was left for the needs of her own people. If the embargo upon investigation turns out to be the result of a political rather than an economic motive, Great Britain will in retaliation refuse to export coal to Argentina and the United States may take similar action.

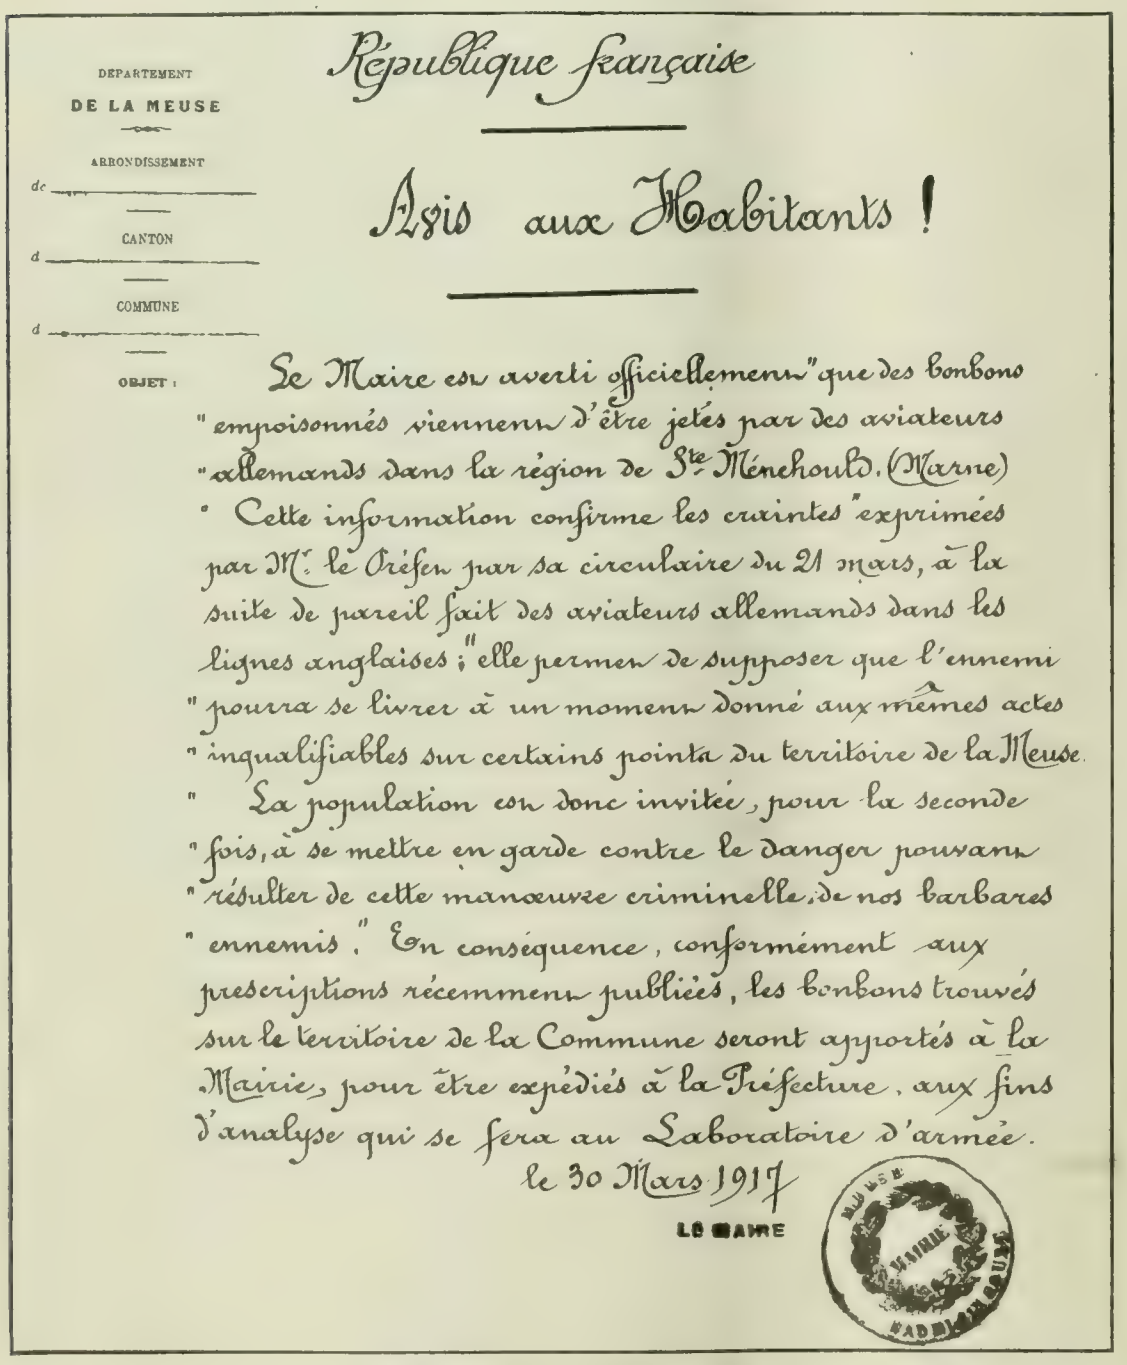
Plans for the proposed neutral conference of American nations seem to be going very badly. Argentina is interested, but Brazil is unwilling to take any action which might be construed as unfriendly to the United States. Chile appears reluctant to take part in the conference. The Central American and insular republics are virtually in the war already, and the Mexican Government still hesitates to commit itself to any definite foreign policy.

Roosevelt Disbands Army

President Wilson's refusal to exercise the authority vested in him by Congress to raise volunteer forces in addition to the army supplied by the selective draft necessarily involved the disbanding of the recruits raised by ex-President Roosevelt. In a public communication addrest to the 285,000 men who had signified their willingness to accompany him to the front, Roosevelt announced that after consultation with the men who had volunteered to raise regiments for his divison he had come to the conclusion that no purpose was served by keeping the organization in existence and that each volunteer was free to enter the regular army or the militia or return to civil life. He denied that the army he had recruited was ever intended to be "an independent command" or that he had ever insisted on commanding it in person. He refuted the argument that a volunteer army of men over drafting age would have taken away too many men who should have been distributed as officers among the raw recruits called out for compulsory service, by showing that the expeditionary force to be sent to the front under General Pershing took from the country a much larger proportion of trained officers than his own force would have done. Roosevelt exprest his pleasure, however, in the choice of his old associate, General Pershing, as the leader of the American army for service abroad.

Tornado Sweeps Illinois

The most destructive windstorm in many months struck central Illinois on May 26 and swept across the state in a path more than 120 miles long. The town of Mattoon in Coles County was the greatest sufferer. The sudden rise of the storm prevented the people of Mattoon from securing shelter and more than fifty were killed and over two hundred injured. The business section of the town was largely destroyed and many houses wrecked with a total property loss of two million dollars. Rescue work was begun at once in spite of the hailstorm which followed the passing of the tornado; the undamaged public buildings were turned into temporary hospitals and the streets policed by state militia.



The neighboring town of Charleston suffered a similar property loss from the storm, and the death list there is placed at thirty-eight. Many smaller towns and villages in various parts of Illinois were wrecked and telegraph communication was so thoroly broken down that it was days before any accurate estimate was possible of the aggregate damage in the wake of the tornado. The total number of deaths is already in excess of a hundred and forty and many of the injured cannot long survive. Wind and hail together ruined the crops over a large farming area.

House Passes Revenue Bill

The much discust revenue bill passed the House of Representatives on the twenty-third of May. Altho many details of the bill are as unpopular with the Democrats as with the Republicans, the Democrats of the House unanimously supported the final vote on the measure, thus making possible the large majority of 329 to 76. Few changes of moment were made in the bill from its form in committee, but the Senate is expected to modify it very radically. Large increases in the income tax rates on the very highest incomes were proposed by Representative Lenroot of Wisconsin and carried in spite of the opposition of Representative Kitchin, the Democratic floor leader, who had the bill in charge. On incomes in excess of a $1,000,000 a year, the supertax amounts to 45 per cent; the first experience the United States has had with the income tax on the drastic European scale.

There is no questioning the unpopularity of the revenue bill as a whole, but the need of revenue is so obvious that most of the schedules were approved without serious opposition. The bitterest contest took place over Representative Lenroot's proposal to eliminate from the bill the consumption tax on electric light and gas for lighting and heating purposes. The tax was condemned as bearing hardly upon the homes of the masses of the people, and it was freely charged that such taxes were made necessary by a "deal" between Representatives interested in sugar and tobacco to have these commodities escape lightly. Another stubborn fight centered about the projected increased postal rates on second-class mail matter. Various alternatives were proposed in place of the zone system: special postage on advertising matter, rates varying according to circulation, uniform increases in postage without reference to the zone system, and the elimination of all postal increases. Representative Mann, the Republican leader, tried unsuccessfully to restore the present postage rates on the ground that newspapers and periodicals were important factors in public education. Finally, a compromise was reached. The zone system for second-class mail matter was retained, but it was provided that it should come into effect in installments and that the rate for the farthest zone should not exceed six cents a pound. Letters will pay three cents instead of two as at present, and postcards two cents. The proposed tax on advertising was dropped from the bill.

Not only the particular taxes imposed upon the country, but also the announced policy of the Government to pay half the expenses of the first year of war by taxation is widely criticized, and an effort will be made in the Senate to eliminate whole schedules and substitute a fresh bond issue. But Secretary McAdoo of the Treasury Department advocates an increase in the war revenue bill sufficient to raise $2,245,000,000 instead of the $1,857,000,000 estimated yield from the taxes authorized by the House. In support of this request he submitted estimates to Congress placing the probable cost of the war to the United States at $16,000,000 a day. The importers who now have goods in bonded warehouses are taking advantage of the prolonged discussion over the war revenue bill to withdraw these goods in order to escape the new tariff duties to which they would be subject if the goods remained in bond after the passage of the law.

OBJET :

Avis aux Habitants !

Le Maire est averti officiellement "que des bonbons "empoisonnés viennent d'être jetés par des aviateurs "allemands dans la région de Ste Ménehould. (Marne)
" Cette information confirme les craintes "exprimées par M. le Préfet par sa circulaire du 21 mars, à la suite de pareil fait des aviateurs allemands dans les lignes anglaises ; "elle permet de supposer que l'ennemi "pourra se livrer à un moment donné aux mêmes actes "inqualifiables sur certains points du territoire de la Meuse.
" La population est donc invitée, pour la seconde "fois, à se mettre en garde contre le danger pouvant "résulter de cette manœuvre criminelle de nos barbares "ennemis." En conséquence, conformément aux prescriptions récemment publiées, les bonbons trouvés sur le territoire de la Commune seront apportés à la Mairie, pour être expédiés à la Préfecture, aux fins d'analyse qui se fera au Laboratoire d'armée.

le 30 Mars 1917

LE MAIRE

MAIRIE

THE WORST OF PRUSSIANISM

The proclamation above, in which the French Government warns non-combatants that German aviators have been dropping poisoned candies behind the lines, is a graphic example of one reason for America's entrance into the Great War. Even now the will to deeds like these seems to us almost incredible, but we cannot escape the significance of this appeal, translated below:

Vadelaincourt, March 30th, 1917.

REPUBLIC OF FRANCE—NOTICE TO THE INHABITANTS

The Mayor has been officially warned that poisoned candies have lately been dropt by German aviators in the neighborhood of Saint Menehould (Marne). This information confirms the fears exprest by the Prefect in his circular of March 21 following similar actions by German aviators behind the English lines.

It is reasonable to believe that the enemy will, at any moment, commit the same indescribable acts at certain points in the Province of Meuse.

The population is therefore warned for the second time to guard against the danger which may result from this criminal action of our barbarous enemies.

Consequently, in accordance with the instructions recently published, any candy found within the borders of the parish must be taken to the Mayor to be sent to the Prefecture, in order to have it analyzed at the Military Laboratory.

THE MAYOR.

Trying On Our Wings

The Council of National Defense has announced the creation of an Aircraft Production Board, to be headed by Howard E. Coffin. The Aircraft Board will work in constant consultation with the recently created joint army and navy board on design and specifications, and its chief function will be to bring manufacturers together to produce a maximum output of types of machines desired by the Government. Mr. Coffin believes that American factories can furnish about 3500 air machines, including both training and battle types, this year, and double this record the year following. Schools and training fields now planned will educate some six thousand aviators a year. Applicants have already begun preliminary training at several universities and technical institutions. Near Dayton, Ohio, a four-squadron aviation school has been located on a tract of twenty-five hundred acres. Captain Waring, of Panama Canal fame, will be in charge of construction work at the field. Colonel

THE NEW PRESIDENT OF THE ROCKEFELLER FOUNDATION

Dr. George Edgar Vincent, Chancellor of Chautauqua Institution and former president of the University of Minnesota, was installed last week as president of the Rockefeller Foundation, to succeed John D. Rockefeller, Jr. A recent gift of $25,000,000 from John D. Rockefeller increases the endowment of the foundation to over $125,765,000 and promises increased scope in its war work

Kirby in New York World

JOHN BULL TO IRELAND

"Madam, settle it anyway you please"

Glassford has undertaken the task of registering and standardizing the factories of the far western states for the production of aircraft. The United States will not buy aeroplanes abroad, but will increase production in this country to keep pace with our growing needs.

Shipbuilding for Uncle Sam

The improvised mercantile marine which we are building to counteract the submarine menace will be partly of wooden and partly of steel ships. At first the Shipping Board contemplated the making of a merchant fleet almost entirely of wooden ships because it was believed that they could be put into use much earlier and much cheaper than ordinary steel ships. But both Chairman Denman of the Shipping Board and General Goethals, who has charge of the work of construction, became early convinced that a steel merchant fleet was a necessity, and that if Congress voted the administration adequate power over steel plants and private shipbuilders the construction of steel ships might not take as much time as had been feared. The first contract, for eight steel vessels each of 8800 tons cargo capacity, went to the Los Angeles Shipbuilding Company. Before Congress voted new shipbuilding appropriations the Shipping Board placed contracts for the building of 286,000 tons, using the $50,000,000 appropriated in the bill which organized the Shipping Board during the last Congress. Further contracts awaited Congressional action, altho the Shipping Board was deluged with offers. One bridge company offered to construct for the Government one steel ship of five thousand tons every day thruout the year at the price of $153 a ton. Denmark, following our example, has undertaken wooden shipbuilding to counteract losses from submarine attacks.

It is probable that most of the American ships built will be used to provide Russia with munitions or to carry on trade in the Mediterranean. In spite of the incessant drain upon her shipping, Great Britain still owns enough to more than supply her own necessities and has even permitted her ships now building in American yards to be added to the numbers of the new merchant fleet which we are building.

Erie Canal for Grain Transport

The New York State barge canal has been opened for navigation from Buffalo to Albany, a route of 387 miles. The old Erie Canal, which has played such a great part in connecting the port of New York with the commerce of the central and western states before the days of the railroad, had become quite inadequate to cope with modern problems of transportation and New York State has spent at least a hundred and fifty million dollars for its improvement. The canal at present has a minimum depth of twelve feet thruout and is adequate for thousand ton steam barges. The Government has just completed a military survey of the route in order to estimate its utility for transporting grain to the Atlantic seaboard. There will be a thru service in effect by July between New York and the principal ports on the Great Lakes, and freight rates on grain shipments are expected to be from ten to fifteen per cent lower than the present railroad charges. The Shippers' Navigation Company proposes to put into commission forty-two vessels on a regular schedule.

Big Fire in Atlanta

On May 21 a disastrous fire wiped out a considerable part of Atlanta, Georgia. The fire started in a storage warehouse, burned up many small homes and then swept on into the wealthier residence section and was only checked by dynamiting several rows of buildings. Nearly a hundred blocks were swept by the flames, some five thousand persons were rendered homeless, and damage was done to the value of more than three and a half million dollars. Fire departments from several nearby towns joined the Atlanta firemen in a valiant effort to restrict the spread of the blaze, the Red Cross established temporary shelter for the homeless and several companies of soldiers gave efficient service in policing the streets and preventing looting. The gradual progress of the fire and the skill with which it was fought prevented the loss of life which might have been expected from the great extent of the conflagration.

Socialists Not to Go to Stockholm

The American Government has refused to issue passports to Socialist delegates intending to take part in the conference at the Swedish capital. The three delegates who would have represented the United States at the international Socialist peace conference are Victor L. Berger, of Milwaukee, Morris Hillquit and Algernon Lee. All three belong to the violently anti-war faction of the Socialist party and have no sympathy with the war aims of the United States or of any of the Entente Allies; and the administration fears that the sole result of their efforts might be to bring about a separate peace between Russia and the Central Powers which would set free the entire resources of Germany and Austria-Hungary for conquests in the west. Of course, the delegates themselves and other spokesmen for the party majority deny, probably with justice, any intent to bring about a partial peace or a general peace on a German basis, but all of the Allied governments agree that peace negotiations entered into by unauthorized persons at the present stage of the war could only be detrimental to their interests. Secretary Lansing reminded the Socialist representatives that the Logan Act of 1799, which is still in force, forbade any citizen to carry on "any verbal or written correspondence or intercourse with any foreign government or any officer or agent thereof with an intent to influence the measures or conduct of any foreign government . . . in relation to any disputes or controversies with the United States."

Balfour Bids Us Farewell

On the twenty-fourth of May the British war mission left Washington for Canada. Before leaving the United States, Mr. Balfour, as chief of the mission, delivered an eloquent speech to a gathering of journalists at the National Press Club, expressing the pleasure which the British emissaries had experienced in the warmth of the reception given them by the American people in all parts of the country. He exprest his belief that the amount of preparation for taking an effective part in the Great War accomplished within the first forty days since we declared war on Germany was remarkable, tho he admitted that the executive had been hampered by the inevitable delay in putting war measures thru Congress.

THE MARINES "COME ACROSS"

In the first United States forces to actually carry out our newly adopted war motto the Marines are given the chance they have fairly earned. Twenty-six thousand of them, under Colonel Doyen, are to go overseas as part of the expeditionary army led by General Pershing

The French mission arrived at Brest on the midnight of May 22 after an uneventful trip across the Atlantic. So quietly had the French commissioners left Washington a week earlier, and so carefully guarded by the press was the secret of their departure that the general public had hardly become aware that they were not still in conference in Washington when the news came of their safe arrival in France.

The Italian war commission, headed by the Prince of Udine, a cousin of the King of Italy, arrived in Washington just before the departure of the British commission. The chief purpose of the Italian mission is believed to be political; to emphasize the solidarity of the war aims of the Italian and American democracies. Problems of transportation will also be considered, and especially the importation of raw materials from the United States for Italian factories. Italy is said to be in less need of foodstuffs than the other western Allies, but the need for coal, iron, lumber, cotton and chemicals is considerable. Similar commercial and industrial problems will be discussed by the Russian mission which has also arrived in Washington during the week.

DISCOVERING AN OLD IDEA

A French ship putting out its enclosing net, a defense against torpedo attack that was tried out and rejected over forty years ago

The Irish Constitutional Convention

Lloyd George's enthusiasm and tact seem likely to achieve another triumph in the settlement of difficult political problems. At the time when everybody seemed to have become discouraged over any peaceable outcome of the Home Rule controversy and when party feeling and intolerance were at their hight he comes forward with a novel proposal which has, to say the least, met with more favor from both sides than any previous plan. To win the war, he said, England must first win Ireland, and with that end in view he has offered to refer the whole question to Ireland for settlement.

In a letter to John Redmond, leader of the Nationalist party in Parliament, dated May 16, he submitted alternative proposals. One was to put into effect at once the Home Rule act substantially as it was passed by Parliament in 1914 but excluding from its scope for five years the six Ulster counties that are most averse to any degree of separation from Great Britain. The second proposal was that a convention, composed exclusively of Irishmen and including representatives of all parties, creeds, classes and interests, be called to draft a constitution for self-government.

Mr. Redmond naturally rejected the proposal for the partition of Ireland, but exprest a willingness on behalf of his party to participate in such a convention. The Ulsterites are recalcitrant as ever, but it is believed that they cannot refuse to enter the convention. Sir Edward Carson, leader of the Ulster party and organizer of the armed force which, when the war broke out, was prepared to resist the imposition of Home Rule, is now in the inner council of the Government and the right hand man of Premier Lloyd George, his former opponent, so it must be assumed that he is not altogether averse to the plan. The Unionists of the south and west of Ireland are opposed to the segregation of Protestant Ulster, for that would leave them in hopeless minority in Catholic Ireland. The most obstinate opposition will come from the Sinn Fein party, which is now set upon an independent Irish republic, and will listen to no compromise.

It is Lloyd George's intention that the convention should not be composed exclusively or even mostly of politicians, but that it should include representatives of the churches and colleges, of trade unions and capitalists, office holders and revolutionists. The sessions will be held behind closed doors as was done in case of the conventions that framed the constitutions of the United States, South Africa and Canada. Since it would be difficult to find an Irishman of prominence sufficiently aloof from the controversy to preside over the convention it is suggested that the Boer leader, General Smuts, who took an active part in forming the Union of South Africa, may be made president.

Woman Suffrage in Britain

The change in the national spirit induced by the war has swept away the conservative opposition to the enfranchisement of women which was formerly dominant in Great Britain. A bill providing for the extension of the parliamentary franchise to six million women was past in the House of Commons on its second reading by the astonishing majority of 329 to 40. The vote for members of parliament is restricted to such women as already have the right to vote in local elections, to the wives of such voters and to university graduates. Women voters must be at least thirty years old. The reason why this high age limit is imposed is because the war has killed off so many of the young men that the women, who previously outnumbered the men in England, would be in a considerable majority. It is expected that this and other limitations of woman suffrage will be removed before many years.

French Peace Terms

The announcement of the new Russian Government that it can no longer support the Allies in their present war program, but is willing to have a general peace without annexations or indemnities has caused consternation among the other Allies and they are trying to bring their peace terms into at least nominal conformity with the Russian policy. Last week Lord Robert Cecil declared that Great Britain agreed with Russia on this point, but that it would be wrong to return the German African colonies because of the cruel treatment of the natives by the Germans or to suffer Turkey to oppress the Armenians.

This week Premier Ribot, speaking for France, said to Parliament:

> We are following the development of the Russian revolution with the utmost care and sympathy. The eminent and courageous statesmen of Russia were surrounded for a time by influences which made their action difficult, but the men of intelligence who have now taken in hand the Russian Government have made declarations which give us complete satisfaction. They say they wish a strong Government, and they desire above all to establish in the army that severe discipline which is an indispensable condition of the existence of the Russian nation.

But Premier Ribot says that what the Russian Government really means by its peace formula of "no annexations, no indemnities" is in substance "no conquests and no covetousness" and explains that this cannot apply to the "restoration" to France of the provinces of Alsace and Lorraine which Germany tore from France.

In regard to the other point the French Premier said that an indemnity was due for ravages to the invaded provinces:

> This indemnity is a contribution which is inflicted as a fine for wrong done. It is a requirement which both law and equity demand.

TO COMMAND OUR ARMY OVERSEAS

The first expeditionary force of United States troops, soon to leave for Europe, will be under Major General John J. Pershing, recently in command of the Southern Department. General Pershing began his military career as a cavalry officer in 1886; he has seen service in the Indian campaigns in the Southwest, in the Cuban war, in the Philippine campaigns and in the recent punitive expedition into Mexico

STOLEN GOODS

THE OBSERVATIONS OF A COMMON-SENSE PATRIOT

BY E. L. THORNDIKE

ARE YOU GRAFTING?

A MAN in my cousin's office asked for an afternoon off to buy his uniform. He could have bought it Saturday, but he goes to the movies every Saturday. A neighbor's daughter told her mother that she couldn't help with the housework because she had to go to a first aid class. Two of the offce boys are nearly useless now because they are talking about going into the navy half of the time and thinking about it all the time. This man and girl and the boys think they are giving help to their country. They don't realize that what they give is only what they steal. The mother and the employers are doing all the giving.

I wish somebody would print something to show folks like them that what they are doing is simply theft and turns Uncle Sam into a receiver of stolen goods. Print something so that they will understand that cheating your employers won't profit your country—that if you slack on your job to serve the nation, you are like Deacon Spint, who used to take an ounce out of every pound of sugar he sold Saturday and use the proceeds for the contribution box Sunday. We'll never win this war by grafting.

THE LADIES' AID?

Last night my wife and I had a little argument. I think there is a point in it. So here it is. S means "She said," and I means "I said."

S. John, I wish I could do something in the war.

I. Well, you're here on the job with a good supper and no complaints. That's more than some——

S. But Mrs. Terwilliger is giving all her time to the Relief Dolls Bazaar and——

I. And some of my time, too. She took nine good minutes to tell me to make her a toy warship to raffle. Would you do any good calling up Ike Reynolds and slushing, "Dear Mister Reynolds, you are just the one man to help us. We want hundreds of cigars made absolutely like a submarine, with a cute lighter as a periscope to sell at our fair. You will give us five hundred, won't you?"

S. I think I could get people to do things, if I tried, not just in her way, perhaps, but——

I. I'm not asking if you could do it. I'm asking if you could do any good by it. Sitting in a row of women dressing dolls five hours a week with a rebate of 90 per cent for conversation.

S. I suppose it is rather wasteful; but it's the spirit of it—the sacrifice. Mrs. Terwilliger said she had to pay $30 to get a nurse to free her for the work.

I. Some sacrifice, all right. A sound girl who could be priming shells at Dover sacrificed to wheel that fat Terwilliger kid.

S. I do think she ought to take care of her own child, with only one, but anyhow she's giving up that much of her money, and——

I. Whose money? That money belongs by right to her granddaddy. He earned it in the soap business. She never earned thirty dollars in her life.

S. Let's not talk about her any more. I'm asking you what I can do.

I. How should I know? All I know is you won't find it out on the avenue or in the parlor. It's the women in nurseries, kitchens, offices and shops that win wars.

READING THE WAR NEWS

The trolley this morning stopped about twelve seconds while the conductor and motorman read the *Herald's* bulletin. We wasted about six more for the elevator boy to finish a piece he was reading. My stenographer's glance lingered on the war news for about eight seconds after I was ready. I went out into the big room and I said politely, "Who has a morning paper he can let me have?" Each of the six clerks reached for the sheet he had just put under the ledger or in the drawer and then looked sheepish as he saw the point. "Thank you all," I said, "let us now have two minutes heart to heart. Reading the war news is all right at breakfast, or coming down in the trolley, or even, maybe, for ten minutes out of the time you take pay for. But there's a limit. What you lads spend extra for newspapers," says I, "will feed a Russian soldier; and if you'll put the time you spend reading them on the work of this ship-yard, I'll feed six more. You boys put me in mind of Dave Laster, who got so interested in reading about the preparations for his wedding that he neglected to go to it. This war is your wedding, and your part is to usher the supplies for building ships. Go to it. We won't win any war by reading about it."

SETTING AN EXAMPLE

Having put in overtime till midnight and a strenuous morning and finding myself peevish with the office staff, safety first told me to relax and get in tune with common sense again. So I strolled up town to Joe Willard's grocery to have a chat. I was sitting on a stool in the corner by the door where the cracker barrel used to be and enjoying a peaceful dry smoke when Mrs. Quincy North's car drew up in front, and Henry, a new clerk, went out to take her order. "Stop, look and listen," says Joe, "and you'll probably learn how to improve the grocery business." At first we couldn't make out much, but Mrs. Quincy North has a pulpit voice and soon she was going strong.

"Why should I pay ten cents a pound for whole-wheat flour when it is cheaper to manufacture than white flour?"

"We have to pay more for it, madam, and also—"

"It is shameful that one who is trying to set an example of economy to the working women of this city should be forced to pay these excessive profits to the middleman. I shall have the matter investigated," says she. "For this time you may send up five pounds. Send it at once."

"I am sorry, madam," says Henry, "but our second delivery is already out. Could your chauffeur take it now?"

"My car is not a delivery wagon, young man. Find a boy at once. The cook must have that flour before twelve o'clock. Colonel Aspinwall lunches with me, and the military arm must see that we are setting an example in food economy."

The boy Henry was wavering under this heavy barrage fire and Joe sauntered out. "Pardon me, Mrs. North," he says, "could you advise me on some matters concerning the mobilization of the retail stores? Just for five minutes in the office." And he led her in, eyeing me to follow, locked the door and broke loose as follows:

"A boy will not take time to deliver that flour. Wartime is valuable. This store won't waste it on whims. Take your trade away if you like. Take all the hill trade away. I'm sick of peddling alligator pears and artichokes these days. You set an example of economy to the working women! Economy! A loaf of bread on your table costs about five dollars, ten cents for flour and four-ninety for frills. If the middleman had overhead costs like your housekeeping has, you'd pay a dollar apiece for toothpicks. Go home and give the colonel a square meal to cheer him up. Then can your cook. One woman waited on by five servants can't help win this war if she should eat nothing but sawdust."

A GALLON OF OIL

Being up in New York to pay off a loan it was my privilege to sit in with some of the 14 and 16-inch guns in business at a dinner. They got talking about economy and the war. A lawyer whom we'll call Judge (I won't use their real names for reasons that will appear) said, "I go down town and back in the subway now. That's three hours' time of a chauffeur and car every day." "I've let one of my two secretaries go and put in two hours extra covering his job," said a banker we'll call Naumburg. "My private car is in cold storage," said a railroad man. "A compartment does me in these times." After some more about yachts, servants and such, they asked me. "Down our way," I said, "we don't have so much to economize on, but we are trying to cut off some fringes. We plowed up the golf course except a hundred-foot fairway. At the club we've sent the door-opener and the shoe-shiner to the powder works."

"That is admirable," said the Judge, "and what does the Chief do by way of

thrift?" turning to the biggest howitzer of them all.

"Almost nothing," said the Chief, "and before I apologize for it let me ask you a question. Do you think your plan for the C. R. V. was quite up to your standard?"

"No," said the Judge, "it wasn't. I suppose it's the excitement. I'd have an idea half in shape and then something would work out of joint."

"Maybe the subway shook it out," says the Chief, and looked across at Naumburg. "Naumburg, you haven't sent me that list I asked for. You never held me up like that before."

"I'm sorry, Chief. I ought to have looked after that myself, but I was crowded and I suppose my secretary—"

"The Council of Defense could have paid that second secretary's salary for a year rather than wait a day for that list," said the Chief, and then it was my turn. "You men don't get quite the rest out of golf that you used to, do you?"

"Naturally," said I, "being dubs at the game, we get nervous looking at that straight and narrow body of green grass entirely surrounded by potatoes; and we get sore weeding in the fertile soil and cultivating it with niblicks, but that makes all the more economy," says I, thinking I had a point, "for we don't play half as much."

As soon as the words were out I saw that the point was turned the other way and went on before he could catch me. "No, I'll give in. A dozen golf balls and a spoiled afternoon is a high price for a few potatoes. Whatever playing down these alleys is, it's not rest. But I'll stand for firing the door-man."

"So will I," says the Chief, "but probably not for shining your own shoes. The way I see it is 'millions for efficiency but not a penny for display.' A man is a criminal in these days to use material goods or labor to show off, but a man is a fool to cut the quality of his work. Each of us is a sort of intellectual or executive engine that must be kept in perfect running order for this war. If the engine really needs a good game of golf, or a quiet ride down town, or for that matter, a private car, in ordinary times, it needs it all the more now. The most wasteful thing in the whole world is mental friction.

"We'll never win this war by burning out a 110,000 horse-power engine to save a gallon of oil."

New York City

THE BREAKING OUT OF THE FLAGS

BY AMY LOWELL

It is April,
And the snow lingers on the dark sides of evergreens;
The grass is brown and soggy
With only a faint, occasional overwash of green.
But under the leafless branches
The white bells of snowdrops are nodding and shaking
Above their green sheaths.
Snow, fir-trees, snowdrops—stem and flower—
Nature offers us only white and green
At this so early springtime.
But man gives more!

Man has unfurled a Nation's flags
Above the city streets;
He has flung a striped and starry symbol of bright colors
Down every curving way.
Blossoms of War,
Blossoms of Suffering,
Strange beautiful flowers of the New Year:
Flags!

Over door-lintels and cornices,
Above peaked gables and flat mansard-roofs
Flutter the flags.
The avenues are arcaded with them,
The narrow alleys are pleached with stripes and stars.
For War is declared,
And the people gird themselves
Silently—sternly—
Only the flags make arabesques in the sunshine,
Twining the red of blood and the silver of achievement
Into a gay, waving pattern
Over the awful, unflinching Destiny
Of War.

The flags ripple and jar
To the tramp of marching men,
To the rumble of caissons over cobblestones.
From seaboard to seaboard
And beyond, across the green waves of the sea,
They flap and fly.
Men plant potatoes and click typewriters
In the shadow of them,
And khaki-clad soldiers
Lift their eyes to the garish red and blue
And turn back to their khaki tasks
Refreshed.

America,
The clock strikes.
The spring is upon us,
The seed of our forefathers
Quickens again in the soil,
And these flags are the small, early flowers
Of the solstice of our Hope!

Thru suffering to Peace!
Thru sacrifice to Security!
Red stripes,
Turn us not from our purpose,
Lead us up as by a ladder
To the deep blue quiet
Wherein are shining
The silver stars.

Soldiers, sailors, clerks, and office boys,
Men, and Women—but not children,
No! Not children!
Let these march
With their paper caps and toy rifles
And feel only the panoply of War—
But the others,
Welded and forged,
Seared, melted, broken,
Molded without flaw,
Slowly, faithfully pursuing a Purpose,
A Purpose of Peace,

Even into the very flame of Death.
Over the city,
Over all the cities,
Flutter flags.
Flags of spring,
Flags of burgeoning,
Flags of fulfilment.

MANY INVENTIONS

BY PARK BENJAMIN

AUTHOR OF "THE EARLY HISTORY OF ELECTRICITY"

ABOUT a month ago, it was asserted that the German submarines had sunk 400,000 tons of ships in a week, and a total of over a million and a half tons in thirty days. Also that the British food situation had become so serious as to excite grave apprehension of national disaster unless before next fall the inventive genius of this country should find a way of destroying the blockading U-boats or of protecting vessels menaced by them. As it now appears that the statistics were much exaggerated, and that the food supply of Great Britain will hold out until harvest time, the somewhat hysterical outburst of suggestions which has been filling the newspapers and flooding the numerous "Boards" in Washington with hundreds of letters daily, is, naturally becoming abated. The need for a solution of the problem none the less continues, for none as yet has been authoritatively and definitely announced. The following is intended to help forward the desired result.

Invention cannot be achieved by any process of self-pumping, therefore any public assertion by anybody that he is "going to invent" may be at once discredited, and laid aside. Even a hen waits to lay the egg before she cackles. Equally any claim by anybody that he has invented something which he omits to explain is also negligible, and to be charged to a simple desire for personal notoriety. People who, for a commendable reason really wish to keep secret what they have done do not say anything about it at all. No extra credibility is imparted to announcements which merely restate the problem, or express gratifying convictions that it should or would be solved, because coming from persons holding official positions, or otherwise more or less prominently before the public. Nor is a yearning to do something, however eminent, the same thing as doing it.

The two main questions are, (1) how can ships be protected from torpedo attack?—since the torpedo is at present the submarine's weapon—and, (2) how can submerged submarines be destroyed? The time qualification to the first question ("at present") is necessary because it is becoming increasingly evident that as the submarine develops to greater size and driving power, her ramming capacity must be reckoned with. Ramming, once regarded as a highly formidable mode of attack, vanished before the practical impossibility of ships getting near enough together for contact, prior to mutual destruction by their high powered guns now effective at 18,000 yards. But a ram which is under water, and so cannot be seen and fired at, and which can deliver a blow hard enough to smash in the unarmored bottom of a super-dreadnaught and with greater ease the thin hull of a food carrier, is quite independent of the exhaustion of a limited supply of highly expensive torpedoes. As the Germans are reported to be building submarines of 2400 tons, and submersible cruisers of 5000 tons, the destructive force of impact of such craft is not difficult to imagine.

The problem of protection is very much the older one of the two issues before noted. It has been under close study for some forty years—if not longer. If the multitudinous lay suggestions recently offered have any feature in common it is their steady resurrection of expedients long since tried out and abandoned. In any line of invention the new mind, of course, sees the most obvious things first, and under such stress as the present rushes to publish them in complete oblivion of the fact that other minds in the past may naturally under like conditions have reached the same conclusions.

OF the old modes of protecting hulls the following are the most common. Shields, supported outside of the vessel to intercept or prematurely explode the torpedo. Water currents artificially produced around the ship and intended to deflect the torpedo. Armor, especially on the ship's bottom, heavy enough to resist the torpedo explosion. Filling or covering the hull more or less with material which will deaden the shock. One inventor wants to cover the outside of a battleship with "soft mattresses" from which he insists the torpedo will bounce. The United States paid a lot of money during the Civil War to discover that even solid shot would not "bounce" from India rubber armor. Or casing the hull with some material which if partly blown away will not open holes into the vessel, or which will swell up and close the hole, or which is so buoyant that even if a large part of it be torn out the remainder will still keep the ship afloat. Construction of the hull in many cellular divisions, or with strong longitudinal bulkheads, or more recently, with compartments kept filled with compressed air which, in case of rupture, operates after the fashion of the diving bell to keep out the water.

There are many other schemes, but the foregoing will be sufficiently typical, especially as each of them is the subject of many modifications. The shields vary from huge floats made of cork or the like and as big as the ship herself, and towed on each side of her from laterally extended booms, to the simple encompassing net similarly supported. There are stationary shields of thin plate metal and of layers of metal and cotton, or wood; curved shields intended to lift the torpedo out of water (supposing it to run upon them) or reversely shaped to make it dive to the bottom, shields suspended in the air and caused to drop into place by some mechanism, usually electric, which the torpedo is expected to set in operation by pushing something or breaking a circuit wire before it gets to the ship. Nothing of this kind has come into use except the simple wire netting. This largely cuts down the speed of the vessel, is apt if broken to become entangled in the screws and is easily penetrated by the high-speed modern torpedo. It is sometimes retained as a guard for the ship while at anchor, or when moving slowly in smooth water. The weight of naval opinion however is against it.

Currents produced in the water around the ship by extraneous propellers, or pumped by the engines are apparently futile. The gyroscopic control of the torpedo tends to counteract any outside deflecting force and keep it in a straight path, and its speed and weight have a like tendency. Bottom armor reduces the speed of the ship, greatly adds to the cost, and may be counteracted by increasing the amount of explosive in the torpedo. Large balks of timber, cotton bales, and the like reduce the cargo space in a food-ship—or take up indispensable room in a warship where every cubic foot counts and is necessarily utilized, while besides if torn away in part the result may be to change the ship's flotation lines not only to reduce her speed, but in some circumstances to upset her. Cornstalk pith and other substances which expand when wet have been used to close shot or shell holes, but one could hardly fill a freight vessel with them and expect her to carry much of anything else. As has been said most of the proposed plans are ancient. A New York newspaper recently published a large picture of a ship in full headway on a rough sea carrying an enclosing net (forty odd years old) and having a forked mine catcher at her bows—a plan used by Admiral Farragut on launches preceding his ships in the Civil War. The only possible novelty was shooting at the mine after the fork had picked it up with the excellent chance of thereby exploding the mine and so blowing off the bow of the vessel.

THE internal construction of ships is something of which the layman is peculiarly ignorant and therefore had better let alone. Any modification involves mathematics of a recondite order incident to redisposition of weights, and all that nice interadjustment of parts which render the architectural engineering of a building simplicity itself beside that of a ship. The elements of a marine structure made to be cradled in the water cannot be changed around or have other elements injected into them quite as easily as the partitions in a house. It does not follow that some happy conception in naval construction may not occur to the man whose marine knowledge does

not soar beyond a catboat, but it might be wiser to tell it to a naval architect before patriotically offering it to the Navy Department, the "Boards" and the newspapers.

The electrical and magnetic suggestions are legion and belong in a class by themselves. Some of them are the ultra refinements of shore going electrical experts not conversant with things of the sea, such as currents, tides, big waves and the like, or as often happens are entirely too delicate for practical use. There are others of which the favorites are electro magnets stuck on the outside of the ship in all sorts of places and supposed like the magnetic mountain which pulled the nails out of Sindbad the Sailor's vessel to drag the torpedo in some unknown manner away from its victim. Others propose to magnetize the whole hull or the end of the torpedo and in that way to cause the latter somehow to deviate, but the most imminent possibility in this plan seems to be the assurance that the torpedo will reach its mark. It is not at all improbable that electrical means will contribute effectively to the ultimate solution of the question, but if the inventor who wants to use ship or torpedo attracting magnets will consult the electrical expert who wants to invent by the aid of milli-voltmeters, polyphase current and the twisting of x and y from one side to the other of algebraic formulae, a mutual cancellation of wasted efforts will ensue which cannot fail to be beneficial to both parties.

Shields supported at a distance from the ship so as to prevent the torpedo explosion taking place directly against the hull—besides greatly reducing the speed and maneuvering qualities—will not protect from injury unless the distance be very much greater than can practically be afforded. It is not necessary to make a hole in a ship in order to cause very serious injury. The explosion of a modern torpedo even as far off as 25 feet will rack the vessel, open her seams thus causing her to leak, and throw her machinery so far out of gear as to cut down her speed and make her an easy victim for the next torpedo fired from her assailant. If she is a warship in a squadron the other vessels composing it will abandon her to her fate—as the wounded "Blücher" was left in the North Sea action. Where there is a certain danger zone to be traversed cutting down speed is a very serious matter, because the shorter time the ship is exposed to attack the less her peril therefrom.

THE various ways of destroying submerged submarines, or of locating them so as to enable them to be found and then destroyed as described in a former article, must now be presumed insufficient, in view of the fact that we are building some 3,000 wooden food carriers to defy the U-boat blockade in the hope of enough of them getting through to prevent a dangerous shortage. Possibly if one's heart and lungs are sound one might exhaust a pursuing bear by running away from him: but it might be better to have a rifle. At all events, the scheme adopted is pretty persuasive proof that we have not got the necessary weapon, and as was said in the beginning, prophecies and speculations cannot take the place of that possession. There are, however, some promising leads — not achievements be it observed—but ideas which seem to be worthy of further development.

For example, a submarine below the surface is now blind. She cannot see another submarine or any obstruction, such as a mine, in her path. It is probable that if a way could be found to enable a submarine to illuminate the water ahead of her for, say, even 100 feet, and sufficiently to recognize an object in silhouette without any exact definition, then she might be able to sink that object if a submarine either by torpedo or by an underwater gun, or if a mine to steer clear of it. A submarine with this vision would be to other submarines without it as a man with full sight and ample weapons to a room full of blind men unarmed, and a mine field protecting warships might prove no effective barrier to her getting within torpedo range of them. The solution is difficult, if it can be done at all.

Again, if the whereabouts of a submerged submarine is known, her capture or destruction is not at all unlikely. Because the submarine is driven while under water, by an electric motor, a sound is produced, somewhat resembling that of a revolving electric fan. Practically that sound is characteristic. If a way could be found whereby thru a telephone transmitter (thing you talk into) or microphone, that sound could be reproduced at a receiving station on ship or shore, then it may be possible not only to locate the submarine but to recognize her speed and direction of movement.

Another way—a submarine may be regarded as simply a moving body of steel. Such a moving body traveling across an electric circuit will affect the current therein, and the disturbance may be shown by well known indicating instruments. The result again being a recognition of position, speed and direction. Could such a circuit, or a plurality of circuits, be established in harbor mouths or other points important to be protected?—or, and still more difficult—can a ship at sea establish temporarily such a circuit in her own vicinity which will warn her of the presence or approach of a submarine?

New York City

WHY I AM A POET

BY ONE OF THE UNSUCCESSFUL

I AM a poet. Many people do not believe it. But I know it. And I hope to be able, even yet, to convince a few of the skeptics. My best reason for believing that I really am a poet is the fact that, in spite of everything, I still do believe it! For I am not what is called a "successful poet." Other poets still treat me with tepid kindness. I have never been petted by women's clubs. I am not invited to read in churches. And nobody seems to think that I "ought to be encouraged."

To be sure, my work has appeared in many strange places, in magazines for women and magazines for children, in journals for the advancement of trade and journals for the advancement of art, in flamboyant, revolutionary periodicals designed for the purpose of pulling down the present social structure, and in periodicals for the purpose of uplifting humanity whether it wants to be uplifted or not. I have had the pleasure of seeing my poems in several of the "poetry magazines" and in a number of "highbrow reviews." Moreover, the sporting magazines and physical culture magazines have sometimes been kind and a few popular magazines and newspapers have not scorned me. To put it briefly, my poems —not the same poems—have made happy journeys both to *The Masses* and *The Sunday School Times!* I have no doubt that the thousands of young lovers, lonely teachers, represt preachers, earnest club women and idle dowagers who are trying in vain to "break into print" would consider me successful if they knew my history. I am no longer in the class with the thousands who cannot place their work. Perhaps I may even claim to be one of the two or three hundred best poets in the United States without seeming to vaunt myself or be puffed up!

Moreover, my writings have gone far afield. They have been reprinted on blotters for use in hotel bedrooms and on advertising postal cards sent out by the Chamber of Commerce of a western town and on calendars designed for the English-speaking public of China! I have received letters from notables who praised my work extravagantly and, what is better, I have received letters from simple, kindly people who have enjoyed it and wished to thank me. The critics mixt praise and blame generously in discussing my first book. I was elected to membership in the Poetry Society and my homespun biography was wrought into the tapestry of "Who's Who in America." But in spite of all this I know that I am not

really a successful poet. I still find it difficult to secure book publication for any new collections of my verse. I make very little money in royalties on work previously done. I thank Heaven whenever I have time for the fact that I am not compelled to buy potatoes with what money I get from magazines for my verse! And—now this is really important—the four genteel parlor-table magazines will have none of me! I used to suppose that this was because my work was not yet good enough. That was when I was young. And I resolved to make it so good that the genteel editors of those serenely decorative periodicals would come to me with benign smiles and crisp checks and ask for my work. I am still doing all a human being can do to make my work better, but not to win their favor. When I am quite sane and in the New Year's spirit I resolve never to send them anything more over my own signature. For I have begun to believe that the reason for their rejection of my work is to be found in the fact that there is a vast gulf fixt between my temperament and theirs. I say theirs, advisedly, for, in so far as magazines can reveal it, they seem to me to have one temperament in common. It is polite and staid, delicate, refined—sometimes even pretty. And when I do anything at all good it is likely to be rough and human and rather vigorous. Perhaps I shall never be found on the parlor table. I do not know. But I know that one cannot be what is technically called a "successful poet" without being a contributor to these polite and pleasant pages.

BUT not only do I know that I am an unsuccessful poet. My friends know it. They ask me why I will go on writing poetry that brings me no substantial rewards of any kind, neither money, nor fame, nor the condescending kindness of women's clubs, nor the respectful friendship or enmity of successful poets, nor homage in the parlors of the plump and well-nourished capitalist. "Why not do something that counts?" say my friends. And they suggest prison-reform, keeping boarders, kindergartening, current topics classes, secretarial work for really successful writers, a place on a university faculty, chicken-raising, landscape-gardening or selling encyclopedias. These things are practical and count, they tell me. They say that if I would really use my brains (poetry, of course, is not real intellectual labor!) I would soon be able to drive my own car and wear sable and play bridge. (How happy that would make me! I hate machinery and fur and cards!) In short, they show me that they have still a little faith in my brains but think that I do not know how to use them advantageously.

To tell the exact truth I have sometimes agreed with my friends. I have sometimes gone to bed thoroly disheartened, telling myself that I had better get a position in a real estate office the next day and try myself out at selling land. And I remember one dark night when the inward angel was very sulky, when I went downstairs in the dark with an armful of all the notebooks I owned, the years' accumulation of manuscript, and I was looking for the stove . . . I wanted to burn them all up. . . . I would burn them and then I would never write again—never, never, never. . . . But I could not find the matches. I had to look for them a long time. When I found them I had decided that the whole performance was utterly melodramatic and absurd. My sense of humor came to the rescue and I went back to bed. I would never write another poem, tho. I would really and finally give up the big dream of trying to create beauty in words. Nobody wanted it anyway. . . . The next day I wrote another poem. . . .

SINCE that time I have not deceived myself. Poetry is mine and I am poetry's for life. And when my friends ask me why I am a poet the only true answer is that I am a poet because I cannot help being one. Before I could form English letters with my hands my mind spoke in worded rhythms. I made many a little verse about things that pleased me before I could read or write well. Here is a stanza written in my childhood which shows the literary influence of the poetry I had read, altho it was inspired by a lovely meadow lying fallow near a brook, where, unbeknownst to my mother, I used to take off my shoes and stockings and "go in wading."

Violet wild, I know thee well,
For thy shadow falls on the mossy dell
Where soft winds kiss each pretty blue petal
And speak to my heart while the dew doth settle.

I wish some one had told me then, what I had to learn for myself many years later, that literary language is never so good for poetry as is the language of the finest and simplest human speech.

During adolescence poetry was my consolation for all the problems crowding and cruelly pressing in upon a very sensitive mind and heart, and my defiance of all the weakness and cowardice I discovered, and my faith in that which was beautiful and true. Sometimes my hot anger against a world that I did not like would make me caustic and bitter in my verse—entertainingly so, I think, if I had ever shared these early efforts. Then a fit of repentance for my harsh comment on life would make me responsible for ethical and sentimal effusions that were far from artistic. During my youth I wrote and wrote and wrote in an effort to make my soul vocal. I made epigrams and tirades and eloquent rhapsodies. And I practised the use of many literary forms, the sonnet, the sestina, the rondeau, the villanelle and others, with all a poet's love of rhythm for its own sake.

When I went to college I was surprized and delighted to discover that the professors thought very well of my work. Then the editors, to whom I sent my poems in fear and trembling, began to say kind things about them and to send me checks. Since then I have kept to the habit of making poems in dark or clear weather, in times of stress and in times of joy. It is only a bad habit, my friends tell me, of which I can break myself if I try. But I think that I shall never outgrow it. And since that is the case, I sometimes try to justify myself. (They say that criminals are always trying to prove to themselves that their crimes were necessary and right!) Here is my justification.

To each his own beauty. To me poetry is the most beautiful thing ever created by the mind of man. The stark wilderness, the steep hills, the valleys mantled with grain, the bending sky, the curving rivers, the insistent sea are all transcendantly beautiful, to be sure, but they were not made by the mind of man. And poetry can suggest them all. The bodies of men and women and children may be transcendantly beautiful. But they were not made by the mind of man, and poetry, like every other art can suggest all the rhythms of the body in action. Poetry can suggest or describe great machines and stern buildings, all the beauty of material forms in which man's mind has exprest itself. And because poetry is in words that can be translated from age to age it may live, perhaps, when all the purely material manifestations of man's intellect described in it have crumbled or changed. Poetry is the only art which we can carry about with us in our minds without money or without price, the only art with which we may pleasure ourselves without any instrument, simply by living thru mentally the picture or the song whose words we have memorized. Musicians, of course, can do this with music. But most people who want to do it can do it with a poem. The greatest poem in the world can be mine without paying a cent for it if I learn it at the library and carry it round in my mind for the rest of my life. In poetry we find our own moods echoed, clarified, emphasized, sublimated. But, more than that, we can find in it moods and experiences that we have never known. All the mad depths and dizzy hights of life poetry can plumb, poetry can reach. Poetry is the sharing of life.

SINCE I believe this can I admit that "it does not count" and is not practical? Perhaps when we are wiser, we folk living on this earth, we shall begin to believe that nothing is more practical than beauty. How can I agree with my friends and give it up? Is it not worth while to spend my life endeavoring to make the thing which is to me most beautiful, even if I must be "unsuccessful" to the very end? If I achieve nothing more I may be able to light a little flame of imagination that will leap into warm activity, that will grow until it blazes upon the world in glory that I have never known, that will lick the walls of a sordid tower of Dulness or Ugliness until it is consumed, leaving an open space above the ashes, thru which mankind may perceive a new vision of loveliness.

New York City

VACATION IN WARTIME

How Independent Readers Are Answering the Call to Service

WE are accustomed to call upon our readers for the leading feature of our annual Vacation Number and for many years past they have filled our pages with delightful reminiscences of delightful times, with tales of travel abroad and sports at home, of adventures in mountain and forest, and of day dreams in a hammock.

But now duty has displaced pleasure and the American people are asking not "what shall we do with ourselves?" but "what can we do for our country?" So the letters we got are very different tho quite as interesting. In fact, we surmise that the writers will get as much real recreation out of their experiences of this summer as in the days when they spent their labor in pursuit of pleasure. Most of them, it seems, are studying strategic methods for outmaneuvering that enemy of all mankind, General H. C. of L. This is a service in which the whole family can enlist, from the youngster old enough to kill potato bugs to the man who runs a reaper. Evidently the backyards of the United States are going to be utilized for other purposes than croquet and clothes-drying. Agriculture is to be both more extensive and more intensive than ever before. The army in jeans will rival the army in khaki. Some will be planting peanuts or picking berries; some will be raising pigs, poultry or potatoes. A South Dakota lady is writing sonnets for the New York papers and donating the checks to the Red Cross. An Idaho high school boy is herding cattle in the mountains and keeping the sheep off of the range. The Federation of Colored Women's Clubs

of Tennessee is carrying on a "garden campaign." "Daddy, Mother and Mary Elizabeth, six months old," are canning cherries and apples on a hillside farm in Pennsylvania. An Iowa lady writes: "I am going to dedicate my porch and yard, at least once a week so the mothers can safely leave their babies and little ones and attend and become interested in the patriotic movements." A Methodist minister in Connecticut devotes his summer to telling the people by trolley that "Trained local leadership and directed local loyalty are essential to local welfare and to a republic." A seventeen-year-old boarding school girl from Tennessee is going to take out a claim of Government land in the Ozark Mountains and can the apples, berries and peaches that grow wild in that region. But we should let our correspondents speak for themselves.

A Southern professor of sociology will have no vacation, but he proposes to put in his spare time in the cultivation of the larger patriotism.

Aside from the larger task of making an honest living, which is the most practical and patriotic service one can render, I have it in mind to use leisure moments for a few definite ends. I owe it to my country and to myself to know the words of our national songs, especially "The Star Spangled Banner," and if I have not mastered them before the summer will not pass, I trust, without my knowing them. Again, I must know the words of "La Marseillaise"—in French, of course. I must become immersed in the French language and literature, and must give some attention to Italian. Then it is not decent to be ignorant of the soul-life of our great ally, the country of the future, Russia; and I propose to read some of the works of the Russian masters in translation, and to learn more about the Russian language, the study of which I have already begun. We owe it to our allies to know their soul—their history, their language, their literature. Some day, perhaps before long, such knowledge may serve a good purpose.

JOHN C. GRANBERY.
Southwestern University,
Georgetown, Texas

If anybody in the wide and weary world deserves a vacation it is the pioneer woman of the prairie—but nobody is less likely to get one.

A vacation? How nice that would be! How I wish I might have one—just once—before I die. I am getting old now, and my family of eight children are growing up and out from under my feet, leaving me tired and weary and worn; and I do wish—just once—I might have a vacation, to see how it would feel.

Sometimes I am fairly haunted and tantalized with a vision—ever unrealized and unfulfilled: a vision that has to do with long, hot summer months; that some day, sometime somewhere, I may go out on a screened-in, vine-covered porch; lie down at full length in a comfortable hammock; close my weary eyes in peace, fold my tired, *empty* hands, and rest—and rest—and rest—and *rest!*

Not on my own porch—no. The vision says it shall be far away from home, husband and children, neighbors and friends, ever-lasting and never-ending company, church, club, society, town, community. O yes, I love them all, but I just would *like* a vacation. Is it incomprehensible to you of the East that a tired mother should not have a period of relaxation and recreation? Well, perhaps, *now* that the babies are older, I *might* get away for a week or two, but, you see, two weeks does not spell vacation to one who has pioneered out on the Dakota frontier for over thirty years.

By the time one had worked harder preparing for the trip, and then returned to disorder and accumulated work I think I would prefer to go without the two weeks' change. Yes, I think I would want at least six months, or a year—that might pay, after the thirty years of waiting, six blest months of surcease from work—domestic, religious, social, civic. No sewing, mending, darning, patching; no cooking, baking, boiling, brewing; no company for weeks, no entertaining or being entertained; no committees, church work, clubs, boards, societies; no husband and his wants; no children and their wants; no friends and neighbors and their requirements; and last but not least, no

phone to answer, for seven long wonderful months.

Am I little, and mean, and narrow, and selfish? No,—just plain tired.

Do I expect to have a vacation this summer? No, I do not. Do I want to desert home and loved ones? Ah, no, for I love them dearly.

Am I writing a complaint? No, not at all, but I *would* like a vacation time, a *real* one—just once—to see how it would feel.

But—if by the merest chance (not expected) some other tired mothers might read this, may they be comforted in the thought of the great and weary multitude who must "stay by the stuff." And other tired mothers, who *will* go out for change and rest, go into it with zest and enthusiasm and appreciation, realizing a little more keenly your greater privileges of time and opportunity—your own good fortune in having a happy little vacation time.

ANIN YELRAF.
North Dakota.

From Ottawa University comes a call to thought which all of us should heed whatever else we may do.

I expect to dedicate the vacation of 1917 to an effort at right thinking. There is more muddled thought in the world today than at any other period of human history. And from all present indications the shortage in mental pabulum assumes a far more threatening aspect than depleted food supplies.

It is well to have abundant grain; it is well to have a strong army now, and it is well that all our industrial resources be speedily mobilized, and that every individual who claims to be a citizen or even a man or woman make a worthy contribution to our country's cause. But we need even more to muster our mental resources and do some of the straightest thinking that our poor heads ever knew. For the welfare of the world is bound up in the thoughts of individuals everywhere and our thinking must be as inclusive as the globe or it will be valueless.

I expect to need the entire three months of the summer to get my mental forces of raw recruits in anything like marching order, and it will require resolute training.

I do not desire even a corporal's job, but I should like to hear of an army of at least 50,000,000 men and women in this country who seriously wish to think as they have never thought before—about war, about world relations, about a workable religion. And the good thing about this is that they will not have to go anywhere or cease any patriotic service to which they have pledged themselves.

Incidentally, I shall stay at home myself, which I have not done a single summer for the past ten years, live economically, and cultivate a backyard garden in all available space. Let us all dig and think. We may thereby not only shorten this war but perhaps prevent another one.

CHARLES V. STANSELL.
Ottawa University,
Ottawa, Kansas

If everyone would live on the cost of a pound of beans a day the food problem would be solved even for the beleaguered belligerents.

I can outshoot, outwalk and outstay many a young man who will be mustered into our fighting force but I am deemed too old for enlistment. I must therefore find some other way for doing my bit.

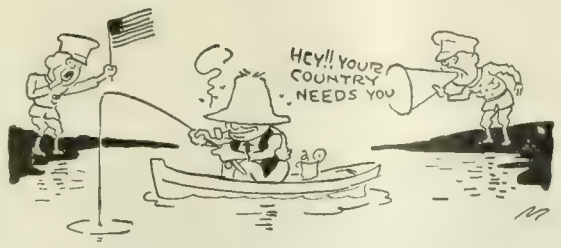
For years I have worked for myself and my employer—drat the tyrant!—has granted me no vacations. This year, however I am going to steal one by getting up an hour earlier each working morning. Thus from May 1 to September 1 I shall gain 106 hours of vacation time—nearly two weeks, counting ten hours as a working day.

In the past year the cost of food daily consumed by me has averaged less than the present retail price of a pound of beans, and my condition, physical and

mental, has been greatly improved by the reduced and simplified diet.

So, if in these four months I produce 365 pounds of beans or their equivalent in food that can be dried or otherwise preserved for use in the unproductive months I shall have provided all that I need to eat in the coming year, thus releasing that much to the general supply for feeding our fighters and those of the Allies.

The five dollars you are going to send me will buy seed for my garden.



WILLIS BROOKS HAWKINS.
Brooklyn, N. Y.

The last person to be cured of the vacation habit will be the fisherman. There is said to be very good fishing on the Aisne and the Rhine.

Mahomet, a certain semitic gentleman who was imbued with a wealth of religious and ethical ideas which were, to say the least, ultra modern for his day and country, is accredited with this epigram: "If you have two loaves of bread, sell one and buy hyacinths to feed your soul."

In spite of war, business, et cetera, do not neglect "to feed your soul." Take your vacation this year, as in years past, and when you go, go fishing.

No panacea possesses quite the curative powers for one afflicted with a case of the ego or its attendant ills as to pass a few days in whipping a trout stream or casting or still-fishing upon a lake in the earnest endeavor to bring home a few of that genus familiarly referred to as the "finny tribe."

The fisherman forgets the worries and cares of the business world, he ceases to review the causes of the war, he cares not for the "mistaken" policies of the national administration, he refuses to allow even the overdue installment on the phonograph to disturb his mental equilibrium. Indeed, he feels that the little old world is a brighter and cheerier place in which to live. That life itself is really worth the living.

CARL C. MEIXNER.
Minneapolis, Minnesota

The cannon slays his thousands, but the mosquito his ten thousand. One of the worst of our national wastes is waste land, and to reclaim it—or claim it—is to make a permanent addition to the country.

Instead of planning to indulge in the usual "good times" this summer, a friend and myself have arranged to spend the coming vacation in a new and most novel way—namely reclaiming unproductive land.

We two have, up to the present time, already "landed" two good jobs. The first embodies the reclamation of about eight acres, which for years have been absolutely of no profit to the owner because of the fact that they are completely surrounded by a wide ditch of stagnant water—which water also serves as a place of germination for hordes of flies and like insects, which later prove to be a great menace to health. Therefore, in conducting this water off thru a long ditch that we must dig so as to connect it with a brook, we will not only be restoring the land but will also be destroying this breeding place of a veritable plague—"killing two birds with a single stone."

Our second undertaking is by far the more difficult proposition. At a certain point near this city the Miami River has recently cut a new bed for itself, thus leaving attached to a farmer's original land a few additional acres. But this land, which was heretofore the shallow bed of the river, is covered with a countless number of stones, boulders, logs and similar debris. Our work is to clear away this rubbish and make the land fit for cultivation.

JAMES J. MCFARLAND.
Cincinnati, Ohio

The American farmer when asked by an English tourist what he did with so many berries said: "We eat what we can and what we can't eat we can," which the returned traveler repeated to his countrymen as a sample American joke in the following fashion: "The eat what they can and what they can't eat they tin." This will be, more than ever, the motto of Americans next summer, with the proviso—since there is a shortage of that what they can't tin they will dry. Good luck to the six can-fire girls:

Two years ago while at Lake George I met five other girls who were spending their vacations at that resort, and we found one another so companionable that we decided if possible to spend future vacations together. This year, however, everything is different, entirely different; our country needs each and every one of us, and whether we be rich or poor we can all of us do something to help. We are all of us employed and have two weeks' vacation, but to go away this summer as in former years, to spend our two weeks canoeing, or frolicing on the beach or hiking over the country, while men are possibly fighting, or at any rate preparing to fight that the nation may be saved to us and for us, is indeed the hight of selfishness. Now how could we help? Our first thought was Red Cross work, but there are so many shut-ins and those lacking our health who could engage in that work, that we wished something more strenous. One of our girls is of German descent, and she it was who gave us the answer. Why not form a canning club and put up food to be sent to the soldiers or used by our own poor people during the time when perchance there may be a scarcity. We have worked out practically all of the details of our plan. Up in New York state we know of a farm house which has a detached building formerly used for cooking. This we have rented for the first two weeks in July and have arranged to have a gas stove installed. A farmer has agreed to sell us vegetables and fruit for canning, but we must haul them. To do this one of the girls is learning to run an automobile in the Y. M. C. A., and the rest of us are as busy as can be reading up books on canning, learning about soups and gas stoves, and arranging for containers for our product. It would seem that we are harking back to the

days of the settlers when work was pleasure and the character of the nation was formed. We six girls are sure that at the end of our two weeks we shall have gained in health through our occupation and change of air, and the keenly intense patriotic feeling that we are doing our bit.

EILEEN WEBSTER.
New York City

This New York University student enters the munition works with the proper spirit and will send a blessing out with every shell:

As for me, a little, undersized, spectacled college chap of eighteen, physically unfit to join our officers training corps, inexperienced in farm work, yet still willing to be of service to my country, I shall undertake the field of usefulness I feel myself most capable of fulfilling. That work is in the munition factory. I have gained experience during the summer months last year, and immediately at the close of our university on June 5 I shall seek to enter the employ of a plant doing work for our Government or our Allies. And I fervently pray that every shell that I aid in putting out may be, not a death-knell to those enslaved, unappreciated and loyal German subjects, but a thorn in the side of the Prussian autocracy and Hohenzollern militarism. May every bit of shrapnel aid in restoring an everlasting freedom, by abolishing forever every emblem of autocratic dominance, every sign of tyrannical oppression, every trace of "King by Grace of God" theory, and in its stead establish a universal peace, giving liberty, democracy and prosperity forever to all the nations of the world.

IRVING WEINSTEIN.
New York University

"The Man with the Hoe" has inspired a painter and a poet. It seems that "The Woman with the Hoe" is

likely to serve as a similar stimulant to artistic endeavor.

I'm going to take vacation—yes.
Mountain or shore? Oh, no!
I'll wear the simplest kind of dress
And wield my rake and hoe.
My fancy mounts on eager wing
To see the fruits of gardening.

I love the brown of Mother Earth,
And there I'll plant my seed,
That kindly Nature brings to birth,
And then I'll fight the weed,
And bugs and worms, an evil crew,
A menace like the boats called U.

And so right now and months to come
My rake and hoe I'll wield,
As tho the bugle and the drum
Called to the martial field,
Where valor urges men of grit,
For woman hoeing does her "bit."

E. K. R.

Warren, Massachusetts

Many are volunteering for farm service, but few have their plan of campaign so thoroly thought out as this Oklahoma woman:

My vacation months will be spent on our suburban two-and-a-half acre tract. The beginning of the fun is already here. It appeared when I planted in our half acre garden twice the amount of potatoes, peas, beets, string beans, tomatoes and corn. Each of the four years I have lived here I have canned in my wash boiler all the vegetables that my family uses during the winter. This year I shall can more in quantity and kind. I shall add to the usual beans, born, and peas, baby beets, baby carrots, asparagus and spinach. So that, as far as my family and I are concerned the Eastern canneries may send all of their employees to enlist as soldiers or nurses. In this way I add to my husband's income, have wholesome food for the family, spare the family doctor for an army hospital, and the canneries—whose employees do not enlist—may send all their products to the Allies.

The packing houses in our city give away the little pigs and lambs born in their stock yards. We plan to get four pigs and a lamb there about June 1. These will be fed skimmed milk. The pigs, in addition, will get the kohl-rabi, beets, New Zealand spinach and summer squash from the extra planting of the garden. This will be their feed until time to fatten them with corn in the fall. The lambs will have the grass of the unoccupied tracts about our place. I know how to make sausage, headcheese, liverwurst and cure bacon and hams. Enough of these products will be sold to pay for the corn; the rest at no cost will feed the family until next year.

I plan nothing, so far, about canning fruit. I see clearly that sugar and I are going to grow to be better strangers. But the vegetables and meat need only salt, and water, and steam and work. Some of this is going to be fun, and a good deal of it isn't. But it will be a satisfaction to know that I shall be in touch with the women workers of France and of England when I use my hoe and peeling knife this summer.

E. M. J.

Oklahoma City

The recruiting officer, obediently following the table of specifications prescribed by the War Department, makes some queer selections and still queerer rejections. Napoleon and Caesar would of course not be eligible for enlistment

in the American army, nor would Roosevelt and Funston. One would think that a man that can ride and shoot like our Wyoming friend would

make a good soldier, but altho he is rejected he will not be leading the leisure life:

Twice a week I will ride a twenty-five mile line on a bunch of cattle to keep them on their own range. I will have 100 tons of hay to cut and stack and fifty acres of grain to harvest; between times I have two miles of fence to build, also two cow sheds, and calves to brand. I will do this alone, with the exception of what help a ten-year-old boy can give me. I can't get a hired man for love or money. I weigh 130 pounds. I can't pass the physical examination for the army, altho I can ride or drive any horse or any combination of horses. I have also qualified as an expert riffleman, but Uncle Sam thinks soldiering is too strenuous for me. So I will spend my vacation being a cow puncher, farmer, carpenter, blacksmith and anything else that happens my way. I anticipate a very pleasant vacation.

L. R. FRISBEE.

Ewing, Wyoming

The pastor of the Bayview Congregational Church preaches a good sermon between his "firstly" and "lastly" on the ancient text *laborare est orare.* Zoroaster recommended the digging of irrigation ditches to his disciples as a pious exercize equal to prayer and sacrifice, but this kind of devotion does not seem to have become popular among religious people anywhere.

I am a preacher and have been holding down a pulpit in this thriving city the past nine years, with only a half dozen Sundays off, as I now recall, during that period. Instead of going camping or attending Chautauqua I propose to do manual labor on a Government irrigation project in the mountains a hundred miles eastward the next few months. I shall take the family, rent a three-room shack from Uncle Sam and then labor in his behalf.

"Firstly," this will satisfy my conscience along patriotic lines, for I am ineligible as a soldier and am no earthly good as a farmer. Helping construct this reservoir will be making possible greater crops later on.

"Secondly," it will be a complete change from the present routine from a city of three hundred thousand to a small settlement fourteen miles from a railroad.

"Thirdly," it will give my patient congregation a chance to hear several different voices during my absence. They have earned that right.

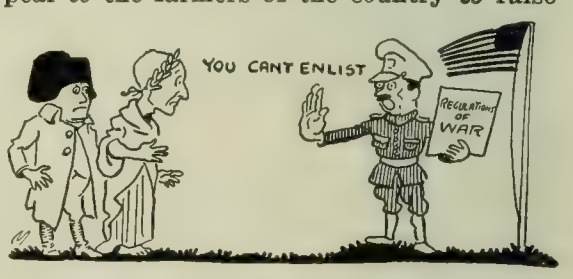
"Lastly," this will help solve some present financial difficulties. "Supplies" are available, at nominal figures, for the church; and as concerns the family we shall be where spending opportunities are at their minimum. I commend this system to fellow ministers.

In conclusion I may say that one of the happiest days of the vacation will be the one which brings a V from The Independent for this letter, for which, in advance, please accept cordial thanks!

T. ROBERT ELWELL.

Seattle, Washington

One of the most remarkable things that Gulliver found in his voyage to Brobdingnag was a man who thought "that whoever could make two ears of corn, or two blades of grass, to grow upon a spot of ground where only one grew before, would deserve better of mankind, and do more essential service to his country, than the whole race of politicians put together."



If that is true what shall we say of a man who has made 250,000 bushels of potatoes grow where only 20,000 grew before?

Aroostook County, Maine, is said to be the greatest white potato raising county in any state of the Union.

For the want of proper agricultural leadership, hundreds of thousands of Maine grown potatoes are shipped into the Southern states each year to feed people who should raise their own potatoes "and then some." The South pays an average of more than 35 cents a bushel freight on these potatoes, or about what it would cost per bushel to raise them, not to mention the price paid for the potatoes.

There is a small, obscure mountain county in northwestern North Carolina without railroad facilities and practically unknown beyond its immediate neighbors. It has an altitude of 3000 feet and is known as Alleghany County. Last year I offered $50 to the Alleghany farmer who would raise the greatest quantity of marketable potatoes on one measured acre; $25 for the half acre and $12.50 for the quarter. The first prize winner raised 468 bushels on an acre; second, 256 bushels on a half acre; third, 125 bushels on a quarter acre. I will not describe the ideal conditions of climate and soil that made possible this prolific yield.

When the Government made its first appeal to the farmers of the country to raise

the largest possible quantities of foodstuff I started a potato campaign in Alleghany County, offering to provide the seed and fertilizer for every farmer who would agree to raise not less than one acre of white potatoes, my compensation to be one half the crop. A considerable number of farmers made the compact while many more decided to trail along on their "own hook."

Alleghany County never raised more than 20,000 bushels of white potatoes in any one year. I estimate her crop will be not less than 250,000 bushels this year.

C. B. PENNEY.

Elkin, North Carolina

If all young people are as patriotic as the students of the Jamestown High School there is no reason to despair of the country.

Your question led me to wonder how the 300 boys and girls that I meet each school day intend to answer the call to service. Accordingly I asked my students to answer in one or two sentences the following question: "What do you intend to do for your country this summer?"

Fifty-five students expect to work on farms, seventy-four will care for home gardens, twenty-seven girls will knit scarfs, mittens, socks, etc., for the soldiers, eleven girls will aid the Red Cross Society, five girls will join first-aid classes, eight boys and twenty girls are willing to do anything that they can for their country, a few have no definite plans, and three of the older boys have enlisted in the Naval Coast Reserve.

Surely, if the spirit exprest in these answers is typical of the spirit of the youth of our land, America has a powerful ally in her boys and girls.

GEORGE A. PERSELL.

Jamestown, New York

VACATION HIGHTS TO DREAM OF

No one has ever scaled Baltoro, its peak is guarded by lakes and deeply crevassed glaciers. So perhaps it doesn't matter whether you stand at its foot or in Worcester, Massachusetts—you can dream equally well of the climb "up along the hostile mountains, where the hair-poised snow-slides shiver." The photograph on the next page illustrates it even better

If it weren't for the war and the high cost of living and an everyday job and your family (plus any of the other insurmountable difficulties that may fit your case) you'd probably set out at once to achieve this super-vacation in the Indian Himalaya. However, the Himalayas aren't exactly open to tourists this year, so here's the next best thing! The photograph on the preceding page and this telephoto of Broad Peak at sunset we taken by Vittorio Sella during an exploration of the Karakor Himalaya. The glacier on Broad Peak is darkened by the shad of K², the second highest mountain in the world. Broad Peak over 27,000 feet high; none of the adventuring mountaineers w have tried to climb it have even come near succeeding, for the

ecipices are practically impassable and there are frequent ava-nches. Above the glacier the peak rises sheer for over 8000 feet; ere is picturesque evidence of its hight here in the wisp of ud caught on the mountain's top. If you like to combine Kipling th your day dreams this photograph will probably find you oting "The Explorer"—

March by march I puzzled thru 'em, turning flanks and dodging shoulders,
Hurried on in hope of water, headed back for lack of grass,
Till I camped above the tree-line—drifted snow and naked boulders—
Felt free air astir to windward—knew I'd stumbled on the Pass.

PASSENGER CAR SERVICE

CONDUCTED BY JOHN CHAPMAN HILDER

ACCESSORIES—AND THOUGHTS ON ECONOMY

THERE are two kinds of motor car accessories: useful and futile. On this page are illustrated seven useful ones. I shall be glad to tell you where they may be obtained.

If you have ever run short of cooling water in hilly country and been obliged to use your cupped hands or your hat for a container you will appreciate the value of the folding rubber bucket. The spout makes it particularly convenient for filling the radiator, an undertaking usually attended by much spilt water when attempted with an ordinary bucket.

One of the worst features of extended touring is the necessity of reaching towns or villages at night. By the use of the double tent shown below this necessity is obviated. The whole thing folds up in small space and may be carried on the running board. The outfit includes not only tents but also comfortable beds.

Should the double tent be too large for your requirements, you need not repine. There is a smaller size—smaller, but not too small for comfort. Together with its bed it rolls up when not in use. To prepare it for occupancy takes less time than to adjust a one-man top.

When in the course of motor events it becomes necessary for you to grind your valves, a valve spring compressor is indispensable. Here is a simple device which compresses the springs and holds them comprest. This last feature is also convenient when you wish to test for valve noises.

The principal cause for rapid deterioration of tires is under-inflation. Pressure should be maintained on the basis of twenty pounds per inch of width. Four-inch tires, for instance, should be pumped up to eighty pounds, 4½-inch tires to ninety pounds, and so on. You will have no excuse for under-inflating your tires if you secure the pump illustrated. It is operated by your foot and has high and rapid compressing power. There are also many engine-driven pumps to be had at prices ranging from $8 to $15.

The first thing to do when it rains is to put on tire chains. If you find it difficult to draw the ends together, the tool resembling a pair of pliers will help you.

It is important when driving over country roads to wear goggles. They should be light and ventilated and not easily blown off. The pair below answers the description.

Lamp bulbs are apt to break as a result of jars and jolts. Also, in time, they burn out. In case your light should fail, it is wise to carry a spare set of bulbs. To avoid breaking the spare set carry them in a specially made bulb case.

SPARE the oil and spoil the car. Always buy the best oil you can get, no matter what it may cost. It will be less expensive than a new set of cylinders or bearings.

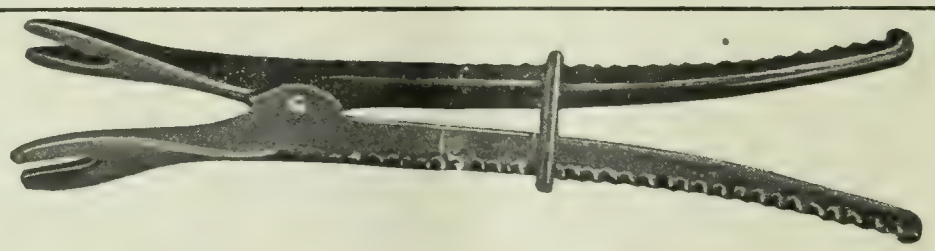
The condition of your spark plugs will usually tell you whether or not your valves need grinding.

Merely because the storage battery is tucked away where you can't see it don't imagine it can get along without attention. Like flowers, storage batteries have to be watered.

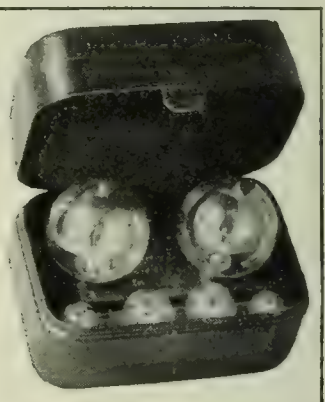
The way of the speeder leads direct to the repair shop. Pick your roads whenever you can, and slow down over the rough spots.

Watch the good drivers and you will notice that they do not always try to take every hill on high.

Keep the garage floor clean. Oil rots tires.

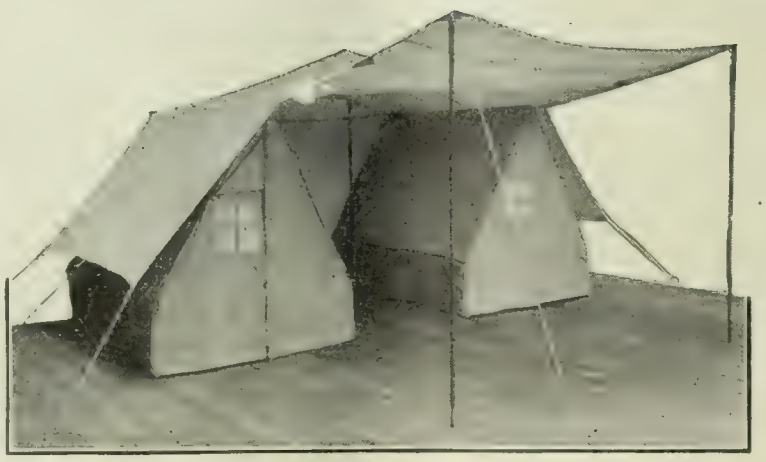


Wear goggles and carry an eye wash with you.

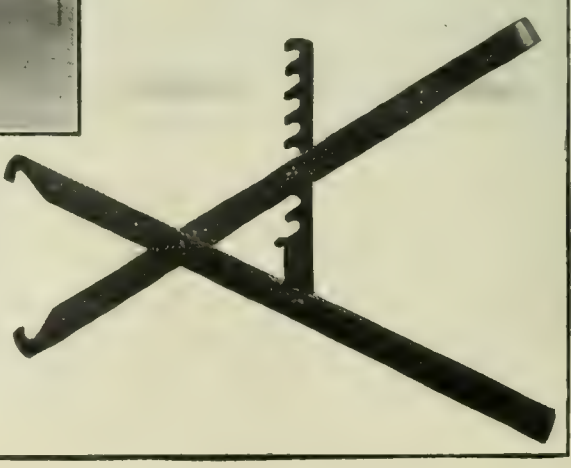


Regard noises as danger signals.

To increase tire mileage, keep your tires properly inflated. Stop when you get a puncture. Start and stop your car gently. Keep your brakes properly adjusted. Keep your wheels in alignment. Lubricate your springs frequently. Coast slowly around corners. Take every possible precaution against skidding. Shun car tracks, ruts and curbs, and give your tires plenty of attention.



A collapsible bucket holding two gallons costs $1.25. The value lifter above costs 50 cents. The double tent, which folds into small space, contains two beds. Below is a good foot pump at $4.50



You should carry spare bulbs. A case costs 90 cents. Comfortable, cool goggles for $2.50. A tool to help put on tire chains, 50 cents

NATIONAL EFFICIENCY
CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

THE INDEPENDENT WAR LIBRARY

The National Institute of Efficiency and The Independent are receiving from all parts of the country inquiries for details as to authoritative reading on aspects of the war that are of general interest. The following list of books, so selected as to leave a little leeway for choice, constitutes, it is believed, a War Library that is as comprehensive as possible within the limits of an expenditure of $100. It has been prepared with a view to the requirements of the average American citizen at this time. The War Service Bureau of the National Institute of Efficiency and The Independent will gladly answer questions relating to personal service in the national cause. They should be addrest to the office of the Institute of Efficiency, 119 West Fortieth Street, New York City.

What the War Is About

Why We Are at War. (Harper, New York, 50 cents.) The President's messages to Congress and to the American people since January, 1917.

The Issue, by J. W. Headlam. (Houghton, Mifflin, Boston, $1.) A statement of the German aims as drawn from publications of German organizations.

The New Map of Europe, by H. A. Gibbons. (Century, New York, $2.) A study of the two Balkan wars and the resulting conditions which led to the Great War.

The War of Democracy. (Doubleday, Page, Garden City, New York, $2.) Papers on various phases of the war by the leading English statesmen.

Modern Germany, in Relation to the Great War, by various German writers. (Kennerley, New York, $2.) An excellent setting forth of the German side.

Diplomatic Backgrounds of the War, by Charles Seymour. (Yale University Press, New Haven, Connecticut, $2.) The story of the series of diplomatic crises that have threatened the peace of Europe time after time since 1870.

Belgium Neutral and Loyal, by Emile Waxweiler. (Putnam, New York, $1.25.) Just what Belgium did in August, 1914.

I Accuse, by a German. (Doran, New York, $1.50.) The arraignment of Germany that may not be read in Germany.

Germany and the Next War, by F. von Bernhardi. (Longmans, Green, New York, 75 cents.) The book which expresses completely the Prussian point of view.

Germany and England, by J. A. Cramb. (Dutton, New York, $1.) The extreme English reply to Bernhardi. Introduction by the late Joseph H. Choate.

Politics, by H. A. von Treitschke. (Macmillan, New York, 2 volumes, $7.) Introduction by Mr. Balfour. These essays are most enlightening as to the views of national and governmental might and right taken by the German Government.

Obstacles to Peace, by S. S. McClure. (Houghton, Mifflin, Boston, $2.) Immensely interesting accounts of German opinion and of the Anglo-German treaty ready for signature June, 1914, that was to secure peace to Europe.

How the War Has Been Waged

History and Encyclopedia of the War. (Brentano, New York, 25 cents each.) The weekly history published by the *London Times*. Each number on a special topic.

New York Times Current History. (New York Times Company, 25 cents each.) Issued monthly. Articles cover every phase of the war.

Field Notes from the Russian Front, Russian Campaign April to August, 1915. (Scribner, New York, $1.50 and $2.) *Russian Advance.* (Doubleday, Page, Garden City, New York, $1.25.) Stanley Washburn's story of the Russian army to September, 1916.

The Campaign of 1914 in France and Belgium, by G. H. Perris. (Holt, New York, $1.50.) A study made vivid by personal touches and anecdotes.

Elements of the Great War, by H. Belloc. (Hearst's International Library, New York, 2 vols., $1.50 each.) A military history of the early battles of the French front.

Gallipoli, by John Masefield. (Macmillan, New York, $1.25.) A great account of a tragic disaster.

Greece in Her True Light, by E. Venizelos. (Sakellarios and Xarthaky, 56 West Thirtieth Street, New York, $2.) Venizelos' letters and addresses since the outbreak of war to the people of Greece and to King Constantine.

Report of the Committee on German Outrages, James Bryce, editor. (Macmillan, New York, 50 cents.) Facts not rumor.

Blackest Page of Modern History, by H. A. Gibbons (Putnam, New York, 75 cents.) The story of Armenia the martyr nation.

With Serbia Into Exile, by Fortier Jones. (Century, New York, $1.50.) The story of "the army that cannot die," by one of the American Relief Corps.

Eleftherios Venizelos, by C. Kerofilas. (Dutton, New York, $1.25.) The life of the liberal leader of Greece.

Italy and the War, by Sidney Low. (Longmans, Green, New York, $1.75.) An excellent account of why Italy entered the war and of her share in the struggle.

The Diplomacy of the Great War, by Arthur Bullard. (Macmillan, New York, $1.50.) Reviews European diplomacy for the past forty years and discusses that between neutral and belligerents since the war began, especially the position of the United States.

Military Service

The Plattsburg Manual, by O. O. Ellis and A. B. Garey (Century, New York, $2.) Practical for even the beginner in army drill.

What a Soldier Should Know, by Bolles, Jones and Upham. (Doubleday, Page, Garden City, New York, $1.) New edition, brought up to present conditions, of the excellent "Soldier's Catechism."

Military and Naval America, by H. S. Kerrick. (Doubleday, Page, Garden City, New York, $2.) Describes and explains all the branches of the service.

Life at the United States Naval Academy, by Ralph Earle. (Putnam, New York, $2.) Describes the entrance requirements, the course and the training at Annapolis.

An Officer's Notes, by R. M. Parker. (G. N. Harvey, 109 Lafayette Street, New York, $2.) The textbook of the Reserve Officer's Training Corps.

Military Unpreparedness of the United States, by F. L. Huidekoper. (Macmillan, New York, $4.) The true story of our military affairs from Colonial times.

Arms and the Boy, by L. R. Gignilliat. (Bobbs-Merrill, Indianapolis, $1.50.) The head of Culver Academy discusses military training, methods and effects.

The Engineer in War, by P. S. Bond. (McGraw-Hill, New York, $1.50.) An interesting and informing study of the work of the engineer in mobilization and in carrying on the war in field and factory.

The Military Obligations of Citizenship, by Leonard Wood. (Princeton University Press, 75 cents.) The problem clearly stated in four addresses to schools.

The Freeman and the Soldier, by R. B. Perry. (Scribner, New York, $1.40.) Wise and strong essays on the reconciliation of liberty and discipline.

Right and Duty, by F. A. Kuenzli. (Stechert, New York, $1.) Sets forth Switzerland "prepared and at peace" as a model for the United States.

Forearmed, by Capt. G. R. Fortescue. (Winston, Philadelphia, $1.) Describes the German, French, English, Swiss and Australian army systems.

Fundamentals of Naval Service, by Yates Stirling. (Lippincott, Philadelphia, $1.) A comprehensive, up to date handbook.

Aircraft of Today, by A. A. Turner. (Lippincott, Philadelphia, $1.50.)

Submarines — Their Mechanism and Operation, by F. A. Talbot. (Lippincott, Philadelphia, $1.25.) A book for the general reader.

Civilian Service

Mobilizing America, by Arthur Bullard. (Macmillan, New York, $1.) Advice by one who has for two years studied the methods of France and England.

America and the New Epoch, by C. P. Steinmetz. (Harper, New York, $1.) A study of our lack of coördination in business, and a warning of the disaster this threatens.

Industrial Preparedness, by C. E. Knoeppel. (*Engineering Magazine*, New York, $1.) A constructive study of our lack of industrial organization.

Better Meals for Less Money, by M. Green. (Holt, New York, $1.25.) A sensible and simple aid in the solution of the problem of food economy.

Feeding the Family, by M. S. Rose. (Macmillan, New York, $2.10.) A scientific, but not technically phrased study of the science of nutrition and dieteties.

Garden Making, by L. H. Bailey. (Macmillan, New York, $1.50.) Scientific, practical, clear and very inclusive.

American National Red Cross Textbook on First Aid and Relief Columns, by C. Lynch. (Blakiston, Philadelphia, $1.)

How to Pass United States Government Wireless License Examinations, by E. E. Bucher. (Marconi Pub. Co., New York, 50 cents.)

The Way of the Red Cross, by Vivian and Williams. (Doran, New York, $1.) Tells just how the Red Cross does its work at the front.

Britain's Civilian Volunteers, by Thekla Bowser. (Moffat, Yard, New York, $1.50.) The inspiring story of how the energy and devotion of the men and women of Great Britain have been made effective instead of being frittered in wasteful effort.

International Relations

Why Men Fight, by Bertrand Russell. (Century, New York, $1.50) or *Justice in War Time.* (Open Court Pub. Co., Chicago, 50 cents.) Constructive suggestions for the abolition of warfare by an English pacifist now under ban of the Government.

Nationalism, War and Society, by E. B. Krehbiel. (Macmillan, New York, $1.50.) An essay on nationalism and civilization, and an account of the various efforts of the past and present to prevent war.

"The Greatest Story This Spring."

Ernest Poole's New Novel

HIS FAMILY

By the Author of "The Harbor"

"Great in its grasp of life, great in its masterful handling, great in the sincerity of its purpose."—*Philadelphia Ledger.*

"Verily a section of life—real and vital . . . worthy the best traditions in American fiction."—*New York Times.* *$1.50*

Other New Macmillan Books

CHANGING WINDS

St. John G. Ervine's New Novel.

"A thoughtful, absorbingly interesting novel—sure to appeal to all who like to read fiction which is mixed with brains."—*New York Times.*

"Distinctly one of the more important works of fiction of the season . . . admirably done . . . both touching and dramatic."—*The Outlook.*

"The interest is sustained from beginning to end . . . a striking psychological study."—*New York Tribune.* *$1.60*

A SCHOOLMASTER OF THE GREAT CITY

Angelo Patri's New Book

"A vivid picture of the difficult problem of actually doing in the school what we all know should be done there. Patri's exceptional experience told in such an interesting and effective way will help us all . . . an inspiration and should convince any teacher the effort is worth while."—*William Wirt of the Gary Schools.*

"A wonderfully human document . . . expressed with artistic feeling . . . I think this is one of the most remarkably fascinating books since the appearance of 'All the Children of All the People.'"—*William McAndrew, Associate Superintendent of Schools, New York City.*

$1.25

THE BANKS OF COLNE

Eden Phillpotts' New Novel

"As long as we have such novelists as Mr. Phillpotts we need have no fears for the future of English fiction."—*Boston Transcript.*

The plot and characters of Mr. Phillpotts' new novel are drawn from two intensely interesting industries of the Devonshire country, a great flower nursery, and the oyster fisheries on the coast. The story itself is full of unusual situations and shows Mr. Phillpotts' sympathetic understanding of people and the natural settings that envelop and color their lives. *$1.50*

JERRY OF THE ISLANDS

Jack London's New Dog Story

"His knowledge of and sympathy with this subject is unbounded, and his imagination plays with all its customary vigor and variety over a multitude of scenes in which men as well as the dog hero have an important part."—*Boston Transcript.*

"Written with loving sympathy and understanding."—*New York Times.*

"Jerry himself is wonderful . . . alert, affectionate, lion-hearted, a four-footed prodigy."—*Boston Herald.*

"Has in high degree the irresistible charm of Jack London's best stories . . . a worthy successor to his former works."—*N. Y. Tribune.*

$1.50

THE MACMILLAN COMPANY, Publishers, NEW YORK

War, Peace and the Future, by Ellen Key. (Putnam, New York, $1.50.) A thoughtful, broad-minded, sane consideration of nationalism and internationalism.

The Things Men Fight For, by H. H. Powers. (Macmillan, New York, $1.50.) A study of the causes of the war and a plea for an Anglo-American alliance.

Pentecost of Calamity, by Owen Wister. (Macmillan, New York, 50 cents.) An impassioned statement of American responsibility in the Great War.

Above the Battle, by Romain Rolland. (Open Court Publishing Company, Chicago, $1.) By a loyal son of France who can yet write with breadth of view and charity.

American World Policies, by W. E. Weyl. (Macmillan, New York, $2.25.) An inquiry into the economic value of colonial possessions and of our future attitude toward imperialism.

Personal Accounts

Italy, France and Britain at War, by H. G. Wells. (Macmillan, New York, $1.50.) Describes the French front, and officers, and studies the spiritual changes wrought by the war.

Flying for France, by J. R. McConnell. (Doubleday, Page, Garden City, New York, $1.) An inspiring story of work with the American Escadrille.

First Hundred Thousand, by Ian Hay. (Houghton, Mifflin, New York, $1.50.) The story of the training of a Scotch regiment, humorous and picturesque.

Golden Lads, by Arthur Gleason. (Centurn, New York, $1.30.) An account of experiences while working with the Belgian Relief.

With the German Armies in the West, by Sven Hedin. (Lane, New York, $3.50.) By a Swedish admirer. A description of the German military system in action.

An Uncensored Diary, by E. D. Bullitt. (Doubleday, Page, Garden City, New York, $1.25.) A slight, amusing, but withal enlightening account of a woman's visit last summer in Austria, Germany and Belgium.

Short Rations, by M. Z. Doty. (Century, New York, $1.50.) Shows what continuous shortage of food, tho not reaching starvation point, really means.

My Year of the Great War, by Frederick Palmer. (Dodd, Mead, New York, $1.50.) Belgium under the Germans, the British soldier in the trenches, the silent grim battle fleet of England, all figure in this fine piece of war correspondence.

The Hilltop on the Marne, by Mildred Aldrich. (Houghton, Mifflin, Boston, $1.25.) Charming letters, June to September, 1914.

Note Book of an Attaché, by E. F. Wood. (Century, New York, $1.60.) Paris before the battle of the Marne. A wonderful picture of courage and devotion.

With the French Flying Corps, by C. D. Winslow. (Scribner, New York, $1.25.) By an air man who saw the battle of Verdun from the above.

Sea Warfare, by Rudyard Kipling. (Doubleday, Page, Garden City, New York, $1.25.)

Fiction

Mr. Britling Sees It Through, by H. G. Wells (Macmillan, New York, $1.60.)

The Worn Doorstep, by M. P. Sherwood. (Little, Brown, Boston, $1.25.)

The Belfry, by May Sinclair. (Macmillan, New York, $1.35.)

The Dark Forest, by Hugh Walpole. (Doran, New York, $1.35.)

Religious Thoughts on the War

Forks of the Road, by Washington Gladden. (Macmillan, New York, 50 cents.) A consideration of the religion of the Old Testament vs. the religion of the New Testament.

Valley of Decision, by E. A. Burroughs. (Longmans, Green, New York, $1.60.) The spiritual causes, meaning and results of

the struggle. An original, forceful and beautiful treatment.

Meaning of Suffering, by Sherwood Eddy. Longmans, Green, New York, 50 cents.) A noble and thoughtful essay.

Poetry

Our Flag: in Prose and Verse, compiled by R. H. Schauffler. (Moffat, Yard, New York, $1.25.)

Poems of the Great War, compiled by J. W. Cunliffe. (Macmillan, New York, $1.50.)

Poems, by Allan Seeger. (Scribner, New York, $1.25.)

Poems, by Rupert Brooke. (Lane, New York, $2.)

Battle, and Other Poems, by W. W. Gibson. (Macmillan, New York, $1.25.)

FROM SCHOOL TO SCHOOL

Cincinnati, Ohio, successfully conducts a municipal university.

The high school girls of Vermilion, South Dukota, wear uniform dresses.

California publishes and manufactures the school books which are used in that state.

About 570 new kindergartens were opened in public schools last year.

President Wilson has exprest a desire that the teachers of children in the United States shall all be citizens of the United States.

The school children of Decatur, Illinois, recently collected 105,860 pounds of waste paper and old magazines, afterward sold for $1,014.56.

Paper has become so dear in France that no teacher assigns the writing of a certain number of "lines" as punishment. Even war has its blessings.

Four thousand six hundred and ninety-one white voters of South Carolina between the ages of 21 and 29 marked their names with a cross in 1916.

The manual training pupils of Rahway, New Jersey, have been assigned in squads of four to make the minor repairs needed in the schools of that city.

An art drama, "The Stranger," by Dr. James P. Haney, Director of Art in the New York City High Schools, has been translated into Japanese.

A "Committee for Promoting Physical Education in the Public Schools of the United States" has established its chief office in Washington, D. C.

The Colorado Fuel and Iron Company employs an oculist and a dentist to care for the eyes and the teeth of all the school children who are employed by that company.

If any one wants to see just how a book is made all he need do is to persuade the movie operator to get Doubleday, Page & Co.'s film, *Making of a Book*, and the pamphlet that goes with it.

The Director of Public Instruction in Baroda, India, has ordered the preparation of models of the poisonous snakes peculiar to India. The models are to be distributed as a means of educating the people.

French schools near the battle front have not been closed because of the war. At Rheims classes were held in the safety of the great wine cellars cut deep in the peculiar chalk formation of the region.

High school students in Schenectady, New York, who take at least one hour per week outside instruction in music, and who practise six hours a week, may, under certain conditions, gain credit thereby toward a high school diploma.

Seventeen of the high schools of Greater New York have organized volunteer companies for military drill. The Stuyvesant High School organization has been equipped with Government rifles. The Erasmus Hall Company is mounted and trains at the First Cavalry Armory.

THE CHOSEN PEOPLE

Third Printing **By SIDNEY L. NYBURG** **$1.40 net**

New York Times—"A brilliant piece of work. A story of distinction."

Boston Transcript—"A novel of exceptional quality. It brings to life a little studied aspect of our civilization."

New York Tribune—"The author has an almost uncanny gift of piercing to the marrow of human motives."

THE SNARE

By RAFAEL SABATINI

Author of "The Sea-Hawk" **$1.25 net**

Intensely interesting is this tale of love, war and adventure. The world of Lord Wellington and the scenes of his most famous campaign furnish the brilliant fabric of this intensely interesting novel. Great events and personages form the background.

The Leading War Books and Manuals

One of the Rarest War Romances in Literature—a Transcript from Real Life

THE LOVERS

By Elizabeth Robins Pennell

Frontispiece by Joseph Pennell **$1.00 net**

This exquisite love story is a transcription from real life—told in large measure "in the letters written from France by the artist-soldier to his wife, letters that are splendidly and movingly typical of the chivalry and courage which actuated those who rushed to the colors," says the BOSTON TRANSCRIPT. The artist's young wife aided Mrs. Pennell in securing the facts. How and why are a part of the wonderful story—a true story—one of the rarest war romances in literature.

WAR

By PIERRE LOTI
Translated by Marjorie Laurie
$1.25 net

The prevailing note of the book is genuine and tender sympathy with the victims of German barbarity. He describes, in simple but touching words, his encounters with wounded soldiers, Sisters of Mercy, and homeless Belgian orphans. But even under Pierre Loti's mask of artistic restraint one can recognize the wrathful and contemptuous bitterness that fills the soul of every Frenchman when he thinks of the things that have been done in the name of war.

Complete U. S. Infantry Guide

Arranged by CAPT. JAMES K. PARSONS U. S. Infantry

Profusely Illustrated, Octavo, $5.00 net

This volume for officers and non-commissioned officers of all the armies of the United States contains an actual reprint of all the material referring to Infantry contained in the 24 Government volumes which must now be studied by men training for officership and be continually referred to by the regular officer in the field. It is an absolute compendium of Infantry information.

MAJOR GENERAL LEONARD WOOD says:

"Every one of our young men who are physically fit ought to receive an adequate amount of military training, and this little handbook is one which each and every one should read."

Men Who Want to Become Officers are Reading

Fundamentals of Military Service

By CAPT. L. C. ANDREWS, U. S. C.
Who Has Trained Thousands at Plattsburg

A Number of Things

BY

EDWIN E. SLOSSON

The Germans are finding it hard to remember the food regulations, so the hotels have printed upon the paper napkins this mnemonic rime:

Montag, kocht man ohne Fett;
Dienstag, fleischlos, auch ganz nett;
Mitwoch, darfst du alles essen;
Donnerstag, das Fett vergessen;
Freitag, gibt es Fischgericht;
Schweinefleisch am Samstag nicht;
Sonntag hast du endlich Ruh;
Denn dann sind die Laden zu.

On our napkins, I suppose, the hebdomadal dietary, when we are reduced to similar straits, will take some such form as this:

Monday, use no fat for cooking
Tuesday, for no meat be looking.
Wednesday, you can fill your plate
Thursday, fats eliminate.
Friday, you should dine on fish
On Saturday, a porkless dish.
Sunday, you may rest from eating,
The market's closed, so go to meeting.

President Dartigueneuve has declared his intention of making war on Germany. If so we shall have a Hymn of Hayti on this side of the sea.

*
* *

A professor in the University of Atlantis, whose salary is incommensurate with his appetite for literature, is much given to patronizing a basement bookstore. One morning he came just as the boy was setting the ten cent bargains out on the sidewalk.

"Have you Earle's 'Philology of the English Tongue?'" he inquired.

"Boss ain't down yet." answered the boy, "but look for yourself. All the medical books are on the top shelf back there."

*
* *

There has come into my hands, no matter how, the following spring poem, written by an author no matter whom, desiring for the present to preserve his anonymity, no matter why.

SPRING, SPRANG, SPRUNG

Gold glim the glints in the gaze of the grasses
Pink palms patter the plump of the pines,
Long twine the tendrils in tenuous masses
Like to the live leaves that laugh on the vines.
Leap the live panthers all gray in the shadows
Sprinkled with hoar frost that comes with the spring
When the timid-eyed tigers emerge from the alders
And the sun in the forests commences to sing.
But list the lush grass while the snow lies a sobbing
And the dead clouds of winter hang drear in the haze
The dawn from the midnight its shadows is robbing
And even waits wan for the wide west to blaze.
Burst be the heart of the poet with rapture
At the rhythms of spring which he can't and won't capture.

It is a poem, which, it seems to me—being unbiased by any personal prejudice or predilection—to be worthy of more consideration than it is likely to receive. I presume that Dr. Law on his quiz page will call the attention of English classes to the points wherein it surpasses or at least differs from the sonnets of Shakespeare and

Milton, but I may save him trouble by mentioning some of its original features. For instance, it might be thought that the imperfect rime of the fifth and seventh lines, "shadows" and "alder," was accidental, but it is not. There's a reason, as some one has said. The reason is obviously that there is no word in the English language that rimes with "shadows." In this emergency the author might have done as a less conscientious author would have done, he might have gone back and substituted the word "sunshine." But this would sacrifice truth, for panthers, like all cats, are gray only in the shade, except, of course, when they get very old. Besides, the sacrifice would have been in vain since there is no rime for "sunshine" either. So our author has made a temporary concession to the fashion of the day and dropt into *vers libre*. But, unlike most of the *vers librists*, he recovers immediately. Our author never errs except on purpose.

The botany of the author is impressionistic. He aims to produce the feeling of spring rather than a mere description of its symptoms. Thus, in line two the pine, which is stoical and svelte and dark green, *feels* pink and plump and palm-like because for once in a year it is in a frivolous mood. The hoar-frost sprinkled panther symbolizes the stealthy approach of the heat of summer even while the snow is yet on the ground. The very subtle references to dawn and even in lines eleven and twelve simply mean the days are growing longer. The poem is in strict agreement with the almanac as well as with the meteorological reports, this being the snowiest April on record. Such fidelity to fact is rare in modern poetry and cannot be too highly commended.

*
* *

The coldest of all cold monsters is called the State. Coldly it utters its lies and from its lips this lie crawls: "I, the State, am the People." . . . False is the State altogether. With stolen teeth this Biter bites.

So spake Nietzsche, whom many who ought to know better hold responsible for the German's excessive reverence for the state. It would be hard to match this from any English author. The nearest thing to it that I can think of is Shaw's famous Fabian Tract No. 2:

The established Government has no more right to call itself the State than the smoke of London has to call itself the weather.

But even Shaw sounds tame compared with Nietzsche.

OUR FIRST WAR WITH THE GERMANS

I owe my moral character largely to the Germans. This is the way of it. Whenever I visited my grandmother in central New York State she kept me in order by frequent warnings: "Eddie, don't. If you are naughty the Hessians will get you!" And she was quite explicit as to what the Hessians would do to me if they got me, having heard from her grandmother what they did. It was the same sort of thing that you can read in the Bryce report on Belgium. At any rate, it sufficed to make me a model child—so long as I was under my grandmother's influence; when I was in Kansas the guerrillas from Missouri tended to my moral tuition.

Doubtless my grandmother's story of the Hessian atrocities had lost nothing in the century of retelling, but, as Bancroft says, many of the Hessians were induced to enlist by being assured "that in America they would have free license to plunder and indulge their passions." That some of them improved their opportunities in this respect is shown by the war diaries, which they, like their successors in Belgium, were so indiscreet as to keep.

But on the other hand, some of them were better behaved than our other enemies. When Major André, in whose honor memorials have been erected in Westminster and on the Hudson, was looting the library of Benjamin Franklin his attention was called to the more honorable conduct of the Hessian General Knyphausen, who

This is Theodore Roosevelt While He Was Learning to Live!

When Theodore Roosevelt went to Harvard in 1876 he was thin-chested, bespectacled, nervous, weighing only 90 pounds.

By scientific exercise and right living he learned to run his body machine and become the wonder of the world for efficiency, and continuous joyousness in life, with muscles like a prize-fighter's. He has "corking" times all the time because he knows how to live. YOU can have corking times, too, if you will learn how to live. You can learn to enjoy every instant so that all things will seem to be in a vivid, new light—so that the world will be joyous—so that you will get up gladly, go to your office with a song in your heart, go through your work for the day lightly, and come home in the evening untired, untaxed, ready for a pleasant evening's fun—and you will sleep like a child.

These things are in the power of almost every man who has not got some incurable illness—and very few men have that. It is nothing mysterious. It is just simply a matter of learning how to live. It is the basic idea of the Life Extension Institute to teach people how to live, that life will not only be longer, but better.

How the Life Extension Institute Came to Be

Years ago Prof. Irving Fisher of Yale was a very sick man. He saw many doctors and struggled for years with small results until he himself applied the power of an intellect which has made him so famous in the field of political economy, to the problem of his own health.

He put together the scattered ideas he had obtained from the physicians and worked out his own theory of health. In a few weeks he was a healthy man. Since then he has studiously cultivated health and working power until now he does twice the work he used to do and without fatigue.

Prof. Fisher knew that he was just one of millions struggling along under the handicap of imperfect health. His was an extreme case, but he knew the many who had headaches, who were over tired, whose luncheons spoiled the afternoon's work, who slept badly, who were irritable and hurt those they loved best without intending to. He knew, too, these terrible facts:

That with people over 40 years of age, the death rate is increasing—and that this can be prevented.

That millions are on their way to illness without knowing it—on their way to failure, lost opportunity, shortened life.

That Americans, especially, are not getting out of life what they should get.

He knew their threat to our national life and to our individual life. So he joined with a group of famous men and formed the Life Extension Institute—such men as General W. C. Gorgas, Dr. W. J. Mayo, Dr. Harvey Wiley. It was arranged that ex-President Taft should be chairman.

A tremendous amount of work is done by this famous Life Extension Institute. To get to hundreds of thousands who could better their condition, the benefit of the judgment of these eminent men through personal contact would be impossible. A new department of the Institute, the Health Study Chapter, does this work through the mails.

You are Here Invited to Join this Chapter

The instructions as to your health, your life, your work, your play, on which these hundred eminent authorities agree, have been incorporated in fifteen simple, direct, stimulating lessons. They are to be studied and cheerfully practiced at home, and members will be inspired and checked up, through examinations, by a competent staff. Each member of the chapter has the privilege of receiving this full course, is examined biweekly by mail as to his progress, and receives answers to any reasonable questions on personal hygiene. You are not asked to exercise wearily and monotonously,—or subsist on faddish foods—or give up everything you like.

How to Join the Chapter

Send the coupon below with $1.00—membership fee. Upon receipt of this a long blank will be sent you with questions regarding your physical condition. You fill this in and mail it, and it will be analyzed and returned to you with comments and hygienic suggestions. At the same time, you will be made a member of the Health Study Chapter and receive free our 48-page book, "What to Eat." You will also be given further information about the Health Course.

One dollar may mean the difference to you between health and sickness—between success and failure. Send this coupon now—while you have it at hand.

GOOD BOOKS

THE ABINGDON PRESS

KING SPORT now swings his brassie on ten thousand links and volleys his returns across the nets of a million courts. You can find him at the paddle, oar and tiller as he scuds along the countless glistening streams and lakes and bays. He lounges on the strand of the never-resting sea. His feet are seen on every mountain trail.

Now, if ever, come perfect days. Let the message of their summer skies and summer suns reach your *mind and heart*. Let books go with you to the open to interpret life from a new angle—with an outdoor breadth and a compelling sincerity. You will find among the publications of The Abingdon Press many works you need. Some are listed here.

A complete catalog on request

GIVE MY LOVE TO MARIA, *By* FLORENCE GUERTIN TUTTLE

A cleverly conceived and attractively written group of stories by the gifted author of "The Awakening of Woman." Many of these stories are actually prize winners and each is a prize in itself. Besides, the usual dry preface is as interesting as the stories themselves, being a true, fascinating account of an author's literary debut. *Price, net,* $1.00

HUGH GRAHAM, A Tale of the Pioneers

By FRANK S. TOWNSEND

A thrilling story of the life and times in the territory now covered by the Virginias and neighboring states. It is a tale of empire in the making which will be read with absorbing interest. Illustrated. *Price, net,* $1.35

BESIDE LAKE BEAUTIFUL

By BISHOP WILLIAM A. QUAYLE

An artistic presentation of the sand dunes, river meadow, lily ponds, pine forests and fishing retreats in the vicinity of the author's summer home. Quaint humor, whimsical philosophy and deep pathos are crowded together in the true Quayle style. Profusely illustrated. *Price, net,* $1.50

THE MOUNTAINS OF THE MORNING, *By* GUY FITCH PHELPS

A beautiful romance—pure, wholesome, interesting and with a gripping message. The scene is laid in our own great West-land, in the Valley of the Silver Bow, and the reader lives in the exhilarating, inspiring atmosphere of the story. The author describes nature with ease and charm, while his idealism and delineation of character are unusually fine. Illustrated. *Price, net,* $1.35

paid for everything he took from the house where he was quartered.

Perhaps it is not too much to say that we owe our independence to the Hessians, for until King George began to send foreign mercenaries there was little inclination to break with the Mother Country. In that document, to which every American listens devoutly at least once a year—or used to—the chief counts in the indictment are that

> He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, desolation and tyranny, already begun, with circumstances of cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.
>
> He has excited domestic insurrections amongst us, and has endeavored to bring on the inhabitants of our frontiers, the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes and conditions.

Europe shared the indignation of the Americans at this method of warfare. In Germany, Kant, Lessing, Herder, Schiller, Klopstock and Goethe employed their pens in protest against the sending of Germans to America. Frederick the Great wrote to Voltaire condemning the "dirty selfishness" of the Landgrave of Hesse-Cassel who "sold his subjects to the English as one sells cattle to be dragged to the shambles." He refused to allow the Hessian troops to pass thru Prussian territory and so delayed some of them that they did not reach New York for nearly a year after they had started, and this was the critical year of 1776-7. Even in England opposition was voiced with great vigor. In Parliament Lord North protested against the employment of Hessians, but Lord George Germain, who was then handling the King's business, proved by history that in every war or rebellion England used foreigners to fight her battles for her. I hear that the good old custom of Friday afternoon speaking has gone out of fashion but I'm glad it lasted thru my schooldays, for I learned a lot of history and poetry in that way. Lord Chatham's speech was one of the favorite selections at these literary exercizes and after forty years I still can hear the echo of shrill voices declaiming: "If I were an American as I am an Englishman, while a foreign troop was landed in my country I never would lay down my arms; never, never, never!"

The savages whose employment as soldiers was resented in America before and during the war were the wild Indians, "the wild Irish" and the Hessians. The wild Indians are now safely segregated on reservations and independently wealthy. The wild Irish have been sufficiently tamed to serve as policemen. The Hessians, such as were not killed or taken home, settled down and made good citizens. Washington offered fifty acres and amnesty to all who would desert the British and many took advantage of this offer. But it was long before the popular aversion to them abated. I presume that the automobile tourist in the East may still have pointed out to him "the house the Hessian lived in" with the same local pride as the scene of a celebrated murder case.

It is not generally realized that more Germans fought against us in the Revolution than Frenchmen fought for us. Some 29,000 mercenaries came from Germany and about half of them never returned. It was expensive business for all concerned. King George paid $8,850,000 to the German princes and it also cost him America. The Landgrave of Hesse-Cassel, who got $60,000 a year for the sale of his subjects, lost his realm on account of it. America was avenged by Napoleon who, as he abolished the Hesse-Cassel dynasty, declared: "This vile avarice now overthrows their house." And the turning point of the war was that famous Christmas night when Washington was crossing the Delaware amid the snow and ice and the Hessians were getting drunk near where Woodrow Wilson used to live while he was president of Princeton. Yes, we all owe much to the Hessians who were in our midst in the days of '76.

Patented U. S. and Foreign Countries

The Only Practical Traveling Case

Every traveler will welcome the *Fitall* as the first and only toilet case designed for practical use.

The adjustable spaces and adjustable self-locking straps hold just what you want to carry— your *own* brushes, shaving kit, etc., your tooth paste, shaving cream, talcum, in the original package. Has 3 water-proof pockets for extra articles. *There is no extra weight, no wasted space.* No useless fittings to make your bag heavy and take up valuable space.

Sold Two Ways

FITALL Toilet Cases are sold *two* ways. Fitted with a standard set of toilet articles, if you want them that way. Or empty for you to fill, either with the things you already have, or a new outfit from the merchant's stock.

Empty is the most popular way, because most people like to choose their own toilet articles, either for themselves or when giving a present. This is a big economy too. You needn't waste money in paying for superfluous and useless fittings.

Prices $1.00 Up

FITALL cases are made in fine flexible leathers and attractive water-proof fabrics. These include dainty cretonnes that are especially suitable *for women's* use. And special cravenetted fabrics *for men.*

Prices range from $1.00, according to what you want. There are inexpensive Fitalls and de luxe Fitalls, a style for every purpose and every purse. Special Military Kits, $2.00 and up.

Your dealer should have Fitalls in stock. If not write us direct. Descriptive Book Free.

TO

THE MAINE COAST AND THE WHITE MOUNTAINS
THOUSAND ISLANDS, MONTREAL AND QUEBEC
LAKE GEORGE AND THE ADIRONDACKS
CALIFORNIA GRAND CANYON
YELLOWSTONE NATIONAL PARK
GLACIER NATIONAL PARK

This year of all years, we Americans must make the most of both our time and our money. Yet vacations are necessary even in wartime. Nerves are strained and physical strength exhausted by unaccustomed labor, and so we have planned these practical vacation journeys. They are of varying lengths and costs; all will prove enjoyable and beyond that they will help those who hear the red gods calling to learn more of this America for which our soldiers are fighting. Details of itinerary and expense are carefully worked out to give the vacationist an opportunity to see that he is not extravagant of time or money, and thus obey the greatest wartime dictate

THE MAINE COAST AND THE WHITE MOUNTAINS

TWO WEEKS VACATION

First Day. Leave NEW YORK in the afternoon by boat or in the evening by train.

Second Day. Arrive PORTLAND in the afternoon by boat or in the morning by train. Hotels, $4 up per day. Excursion may be taken from here among the islands, to lakes nearby, and even to far away mountains.

Third Day. Spend the day in the city. Its elm-shaded avenues are a delight. Longfellow's home where he lived for many years, is open daily. Go via trolley to the Eastern promenade or famous Portland Headland light.

Fourth Day. If the day is fine, take the sail among the islands of Casco Bay, which is acknowledged by travelers to be the most attractive on the Atlantic Coast. Peaks Island, near the mainland and connected by ferry (ten cents), also has a theater and other amusements.

Fifth Day. A trip to the celebrated POLAND SPRINGS. The roads, if you go by auto, and cars may be hired at reasonable rates, are fine and the scenery attractive. Or you may go by train to Danville Junction, about one hour out, and auto stages are in waiting there to convey you to the hotel. The Maine State Building will take up a part of your time. It was brought from Chicago at the close of the fair and is used for a library and it also contains during the summer months a fine collection of paintings by noted artists.

Sixth Day. Leave PORTLAND at 9 a. m. by train for a trip up the Songo River. At Sebago Lake station connection is made for the trip, which is made by steamer. The river is but two and a half miles long, as the bird flies but you sail six miles and make twenty-seven turns before you reach the head of the river. Harrison the last landing, is reached at 1:15 p. m. The steamer then starts for the home journey and Portland is reached at 5:30 p. m.

Seventh Day. A trip by trolley to OLD ORCHARD where you will have an opportunity to indulge in a sea bath in a fine surf. This is one of the finest beaches on the Atlantic seaboard. On the return, stop at Scarboro Beach and drive to Prout's Neck, a high promontory thirty feet above the level of the ocean.

Eighth Day. Leave PORTLAND in the morning for the charming trip to BRETTON WOODS. From the hotels at Bretton Woods, where you can stay for luncheon (cost $1.25) you get a fine view of Mt. Washington, 6000 feet above sea level, the highest of the White Mountain peaks.

Ninth Day. As there are many trolley trips to points of interest, this day may be spent in visiting Cape Elizabeth, Riverton Park, Underwood Spring or Yarmouth, a quaint town on Casco Bay. Cost of these from 10 cents to 30 cents round trip.

Eleventh Day. Leave PORTLAND by train. Arrive PORTSMOUTH in about two hours. Hotels $1.50 up, European plan. A city of old-time mansions and historic interest.

Twelfth Day. Leave PORTSMOUTH by boat. Arrive ISLE OF SHOALS in about two hours. Have a shore dinner there and in the evening return to Portsmouth.

Thirteenth Day. In the morning go via trolley for a trip to YORK BEACH, passing Kittery en route.

Leave PORTSMOUTH in the afternoon. Arrive BOSTON in a couple of hours. Leave BOSTON 6 p. m. via steamer.

Fourteenth Day. Arrive NEW YORK in the morning.

Cost from New York to Portland... $8.05
Cost of berth $2.25
Approximate fare Portland to Boston $2.50
Boston to New York $4.00
Cost of entire trip $14.50

LAKE GEORGE AND THE ADIRONDACKS

FIFTEEN DAYS VACATION

First Day. Leave NEW YORK in the morning. Arrive SARATOGA SPRINGS in the afternoon. Hotels $2.50 up per day, American plan. These wonderful springs are now under the control and management of the State and this Spa is now as good as the famous European ones.

Second Day. Spend the morning in visiting the springs and in the afternoon drive along the fine roads.

Third Day. Take the trip to Saratoga Lake, going via trolley to the lake and connecting there with the steamer, which makes hourly trips to White Sulphur Springs. You will get a delicious dinner at the hotel and then you will enjoy a ramble in the pine grove surrounding it, returning to Saratoga in the late afternoon.

Fourth Day. Leave SARATOGA SPRINGS in the morning by train. Arrive LAKE GEORGE in about one hour. Hotels $2.50 up per day, American plan, or $3 up per day, European plan. This is one of the most popular as well as one of the most picturesque lakes in America. Herbert Spencer writing of it, said "Lake George is the most picturesque thing I saw in the United States."

Fifth Day. Go via trolley to Warrensburg, a pleasant village located on a plateau in the valley of the Hudson among the foothills of the Adirondacks.

Sixth Day. Leave LAKE GEORGE in the morning by boat for the trip thru the lake. Arrive BALDWIN at the foot of the lake in about three hours. There board a train, which connects with the steamer at FORT TICONDEROGA on Lake Champlain.

Leave FORT TICONDEROGA on arrival of train. On the shores of Lake Champlain are the impressive ruins of Forts Ticonderoga, Montgomery, Amherst and St. Frederic. At the extremity of historic Crown Point is a beautiful memorial lighthouse, a memorial to Champlain, the discoverer of the lake. Several hours are spent going north on the lake till PLATTSBURG, which this year will be full of interest to all Americans.

Seventh Day. Leave PLATTSBURG or BLUFF POINT by train. Arrive LAKE PLACID in about three hours. Hotels and boarding houses from $2 up, American plan. Lake Placid and Mirror Lake are separated by a narrow strip of land but a few yards in width. At the head of Lake Placid rises old Mount Whiteface, and looking toward the south the peaks of McIntyre and mighty Marcy, the highest of the range, are seen. Trails radiate in every direction.

Eighth Day. This day may be spent in climbing to the summit of Whiteface; from there the spires of Montreal are to be seen on a clear day.

Ninth Day. In the morning take the trip by steamer around Lake Placid, and in the afternoon drive thru beautiful Wilmington Notch to High Falls.

Tenth Day. Go by motor to Keene Valley, twenty miles from Lake Placid. Beautiful Cascade Lakes are passed en route and a visit can be made to the grave of John Brown, which is just off the main road. Have luncheon in the valley at one of the many good hotels to be found there. If time permits drive to Ausable Lakes at the extreme end of the valley. The road takes you thru dense forests and the lakes are the most beautiful and wildest in the Adirondacks.

Eleventh Day. Leave LAKE PLACID in the morning by train. Arrive RAQUETTE LAKE in the afternoon.

Twelfth Day. Leave RAQUETTE LAKE in the morning by steamer to BLUE MOUNTAIN LAKE. The steamer crosses Racquette Lake, dotted with beautiful islands, then winds its way thru channels up the Marion River and on thru Utawana and Eagle Lakes to Blue Mountain Lake, covering a distance of twelve miles. After luncheon leave Blue Mountain Lake and arrive Raquette Lake in the evening, cost about $2.

Thirteenth Day. Leave RAQUETTE LAKE in the morning by train. Arrive EAGLE BAY in about forty minutes. Leave EAGLE BAY by steamer, which connects with train for the trip thru the FULTON CHAIN of Lakes, four in number. Old Forge, at the foot of First Lake, is reached in time to connect with train for Fulton Chain.

Leave Fulton Chain on connecting train. Arrive Albany in the evening. Leave Albany same evening by boat.

Fourteenth Day. Arrive New York in the morning or spend the night in Albany and leave Albany in the morning by boat or train and arrive New York in the evening.

Cost of round trip ticket from New York back to New York.....$20.95
Side trip from Racquette Lake to Blue Mountain Lake and return.. $2.25

THOUSAND ISLANDS, ST. LAWRENCE, MONTREAL AND QUEBEC

TWO WEEKS VACATION

First Day. Leave NEW YORK in the morning. Arrive CLAYTON in the late afternoon. Leave CLAYTON on connecting boat. Arrive ALEXANDRIA BAY in an hour. Hotels $2.50 up per day, American plan. This resort is a good central point from which to take the many excursions among the beautiful islands, rich in natural attractions. The narrow channels, the bays and inlets and the multitude of islands make the region most picturesque. Fishing is one of the favorite pastimes and the river is celebrated for the variety and abundance of its fish. Golf is popular and there are well-kept links. Camping is also popular and the State of New York owns several islands which are open to the free use of campers.

Second Day. In the morning take the fifty-mile ramble among these beautiful islands. The steamer winds in and out among them and you will never forget the beauty of this charming trip. Cost 75 cents.

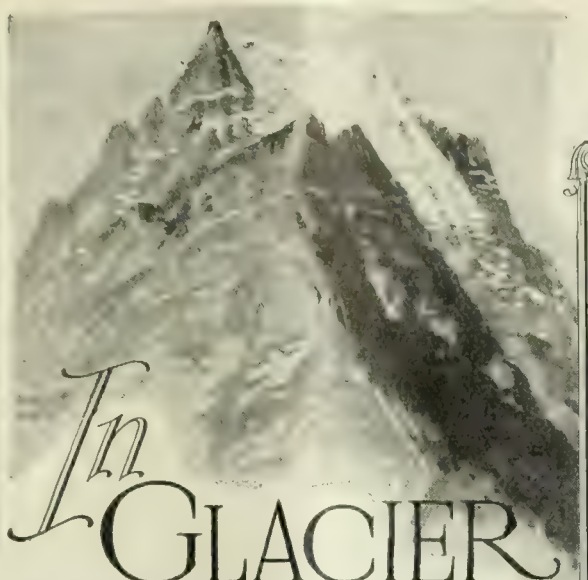
Third Day. Take a fishing trip with a good guide, who will lead you to good fishing grounds. Leave in the morning and fish till noon, then go ashore at one of the numerous spots where the state has erected fireplaces, and your guide will cook the fish you have caught.

Fourth Day. Take the trip to KINGSTON, ONT., made in one day. It is a quaint city full of historic interest.

Fifth Day. Leave ALEXANDRIA BAY in morning. Arrive MONTREAL in the late afternoon. Change at Prescott to the Rapids boat. The Long Sault Rapids extend for nine miles down the river and you pass many beautifully wooded islands. The steamer is carried by the sheer force of the current. Coteau, Cedar, Split Rock and Cascade Rapids follow and finally the Lachine, the last of the chain. The clouds of spray arising from the churning of the waters all add to the excitement. As you draw near the city of Montreal, the first thing that charms is the mountain behind the city, Mount Royal, from which one gets a magnificent outlook.

Sixth Day. In the morning take sightseeing car for a trip around the city and later the trip around the mountains. You will find many public buildings worth visiting as well as the Grey Nunnery, and the older parts of the town with their narrow streets and primitive buildings.

Seventh Day. Visit Mt. Royal Park in the morning, either driving or going via the Incline Railway. You will be fully repaid, for the view is magnificent.



Eighth Day. Leave MONTREAL in the evening by steamer.

Ninth Day. Arrive QUEBEC in the morning. This quaint town offers unlimited attractions. Drive about town in one of the quaint vehicles called a caleche. Then visit Valcartier Camp, where Canada's soldiers have been in training for the last three summers.

Tenth Day. Go via electric train to St. Anne de Beaupré. You can spend a couple of hours there visiting the famous shrine of St. Anne, for the church contains much of interest with its many chapels, its pyramids of crutches, its old paintings and relics. Visit the Scala Santa, a unique religious structure. On the return trip stop at Montmorency Falls, which are 274 feet high and take the elevator to the top. Have luncheon at the Kent House, built by General Sir Frederick Haldimand, then Governor-General of Canada in 1778.

Eleventh Day. Leave QUEBEC in the morning by boat for the trip thru the Saguenay, returning the next day. On the return, the entire Saguenay River is taken by daylight and you are then able to see Capes Trinity and Eternity, 1800 feet high, near the mouth of the river.

Thirteenth Day. Leave QUEBEC in the morning by train.

In GLACIER NATIONAL PARK

AT GLACIER NATIONAL PARK refined hotel comforts contrast with Nature's wildest, most tremendous sights.

Last year thousands more tourists than in any previous year scaled its Alpine heights—fished its tumbling streams—rode by launch on its azure lakes—motored through its pine-laden valleys. Modern hotels-in-the-forest and chalets. Tepee camps. Vacations $1 to $5 per day.

Glacier Park is on the main trans-continental line of the Great Northern Railway. Visit Glacier National Park, the Spokane Country, and the wonderful Lake Chelan Region, directly en route to the Pacific Northwest.

A camping tour 'long the shores of Lake Chelan is a big experience. Then go on to Seattle, Tacoma, Puget Sound, Portland, Astoria, Vancouver, Victoria—each with a delightful resort-country of its own—and Alaska.

The twin Palaces of the Pacific—S. S. "Great Northern" and S. S. "Northern Pacific"—three times weekly between Portland, Astoria and San Francisco. Folder on request.

City ..... State .....

An Added Reason

for visiting BOSTON is the HOTEL PURITAN—it makes the visit so delightful in every aspect. Stopping at The PURITAN is in itself a pleasurable event that will linger long and fragrantly in your memory. Many globe-trotters have been good enough to say that The PURITAN is one of the most homelike and attractive hotels at which they have ever stopped. We try to make it so. The rates, too, are just right. Write to me for hotel booklet and guide to Boston—also book of 30 Motor Trips around Boston.

H. P. COSTELLO, Manager.

Travel the Water Way

THE luxurious steamers of the D & C Lake Lines afford the most healthful and pleasurable mode of summer travel between Great Lake Points.

In dining service—featured by Great Lakes Fin Foods—and also in safety and health provisions, D & C Line steamers are unsurpassed. Wireless equipment is a feature of all steamers. All water is sterilized by ultra violet ray process.

Steamer Schedules

The Two "Giant" Steamers of the Great Lakes, "City of Detroit III" and "City of Cleveland III," operate daily between Detroit and Buffalo. Daily service also between Detroit and Cleveland, and between Toledo and Put-in-Bay. Four trips weekly between Toledo, Detroit, Mackinac Island and Lake Huron way ports.

Rail Tickets honored on D & C Line Steamers in either direction. Ask your ticket agent to route you via D & C Line.

Send 2c Stamp for illustrated pamphlet and Great Lakes Map. Address L. G. Lewis, G.P.A., No. 7 Third Street, Detroit, Michigan.

Fourteenth Day. Arrive NEW YORK.
Cost of ticket from New York to New York *$32.46*
Side trip from Quebec to Saguenay and return *$9.50*

A TRIP THRU CALIFORNIA

TWO MONTHS VACATION

There is a glamor about California, which we all feel, and an especial thrill comes over us as we pack our trunks and turn our faces westward.

There is choice of three routes going and returning.

FIRST ROUTE

First Day. Leave NEW YORK at noon Saturday by steamer.

Fifth Day. Arrive NEW ORLEANS in the morning. Having several hours here will give you an opportunity to take the various belt line cars, which will give you a good idea of the city. The St. Charles belt will take you thru the American residential section and the Esplanade belt the French residential section. Leave New Orleans in the evening.

Seventh Day. Arrive EL PASO in the evening. Hotels $1.50 up, European plan. Spend the day there. Take the trip via sight-seeing auto to Juarez, Mexico. Cost of trip, $1.

Eighth Day. Leave EL PASO in the evening.

Ninth Day. Arrive LOS ANGELES in the evening. Hotels from $1 up, European plan.

SECOND ROUTE

First Day. Leave NEW YORK in the afternoon.

Second Day. Arrive CHICAGO in the evening over Santa Fe Railroad. Leave Chicago in the evening.

Fifth Day. Arrive GRAND CANYON in the morning. Spend a couple of days here taking the various drives and the trip on horseback to the bottom of the canyon. Cost of Hermit Rim Road drive $3 per person; Canyon trip, $5.

Seventh Day. Leave GRAND CANYON in the morning.

Eighth Day. Arrive LOS ANGELES in the evening.

THIRD ROUTE

First Day. Leave NEW YORK in the morning.

Second Day. Arrive CHICAGO in the morning. Leave Chicago in the morning, Rock Island route.

Fifth Day. Arrive TUCSON in the afternoon. Hotels $1.50 up per day, European plan. The city and mission nine miles distant are both worth seeing. It is the seat of the University of Arizona, of the Carnegie Desert Botanical Laboratory and an agricultural experimental station.

Sixth Day. Leave TUCSON in the afternoon.

Seventh Day. Arrive LOS ANGELES in the morning. Hotels $1 up per day, European plan. The "City of the Angels" is one of the wonder cities owing to its phenomenal growth.

Or arrive PASADENA, seven miles distant. Hotels $1.50 up per day, European plan. This city has a picturesque location in the San Gabriel Valley at the foothills of the Sierra Madre Range.

Spend several days at either city and take the following trips: Trolley trip around the beaches, $1. Old Mission trip, $1. The trip up Mt. Lowe, from which you get a magnificent view of the surrounding country. The cars wind round the mountain to Alpine Tavern, 5000 feet high, cost $1. One day for the trip to Catalina Island, cost $2.75. One day trip to Riverside and Redlands, going by train and returning by trolley, including drive to Smiley Heights and along Magnolia Avenue in Riverside; cost $3.

Fifteenth Day. Leave LOS ANGELES in the morning. Arrive SAN DIEGO or COBO-

NADO BEACH in the afternoon. Hotels $1 up per day, European plan. Spend a day in taking one or more of the beautiful drives.

Nineteenth Day. Leave SAN DIEGO at noon. Arrive LOS ANGELES in the afternoon and connect with train for Santa Barbara. Arrive SANTA BARBARA in the evening. Hotels $3 up per day, American plan. Several restful days may be spent here in driving, riding, boating and bathing. There are also fine golf links and tennis courts.

Twenty-second Day. Leave SANTA BARBARA in the morning. Arrive PASO ROBLES HOT SPRINGS in the afternoon. Paso Robles Hot Springs Hotel, $4 up per day, American plan. Drive along the royal road to Mission San Miguel, eight miles from the springs. It is one of the oldest and most attractive of the California missions. Horseback riding over the hills and thru the valleys is one of the chief delights.

Twenty-third Day. Leave PASO ROBLES HOT SPRINGS in the afternoon. Arrive DEL MONTE in the evening. Hotel Del Monte, $4 to $6 per day, American plan. This resort is situated in a park of 125 acres, which for beauty is worth the trip across the continent. Take the famous seventeen-mile drive. You will be interested in the grove of ancient cypress. Visit Monterey, from 1770 to 1849 the capital of California.

Twenty-fifth Day. Leave DEL MONTE in the morning. Arrive SAN FRANCISCO in the early afternoon. Hotels from $1 up per day, European plan. There are many delightful short trips to nearby places. You will get a good idea of the city by taking the sight-seeing car, leaving ferry loop at 10 a. m. Cost 75 cents. A three-hour ride with stop at the Cliff House to see the beach, the Seal Rocks and Golden Gate.

Another day visit Berkeley and Oakland. This is over the Key Trolley Route and the boat leaves Ferry Building at 10 a. m. and covers sixty-eight miles. In Berkeley you see the University of California, campus and recent buildings, the Greek Theater, Campanile and new library.

Take a trip to San Jose and Lick Observatory. San Jose, the "Orchard City" of California, in the beautiful Santa Clara Valley. The Lick Observatory on Mt. Hamilton is reached by stage or automobile from San Jose. Or, if you prefer, you may make OAKLAND headquarters. Hotels $1.50 up per day, European plan. It is across the bay and it takes but twenty-five minutes by train and boat to reach San Francisco.

Thirty-third Day. Leave SAN FRANCISCO in the evening.

Thirty-fifth Day. Arrive PORTLAND in the morning. Hotels $1.50 up per day. The "City of Roses" is noted for its scenic beauty. It is located in the valley of the Willamette, protected on the west from the sea by the Coast Range Mountains, and with beautiful snow-capped Mt. Hood on the east. Trolleys run in every direction. Take one day for the trip to Mt. Hood. Leave 10 a. m. by rail to Hood River, then by automobile to Hood River Lodge, which is reached at 2 p. m. Returning leave Mt. Hood River Lodge at 3:30 p. m. Arrive in Portland 7:15 p. m.

Thirty-eighth Day. Leave PORTLAND in the morning. Arrive SEATTLE in the afternoon. Hotels $1 up per day, European plan. There is much to interest one in this city, with its fine location on a series of terraces rising from the shores of Puget Sound. You may also enjoy a trip to the U. S. Navy Yard, reached by steamer, but this year you won't be able to see much of it! Leave at 7:20 in the morning for a trip to Mt. Ranier-Tacoma. The train arrives at Ashforth at 11:45, where change is made for auto. Thence over a splendid road which winds thru Succotask Valley and penetrates the forest, along the sides of canyons and curving about the base of mighty peaks until National Park Inn is reached. Cost of trip to Inn and return, $6.50.

FIRST ROUTE

Forty-first Day. Leave SEATTLE in the evening (Great Northern Railway).

Forty-second Day. Arrive GLACIER PARK in the evening. Five days may be delight-

TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. Cost of ticket from New York back to New York, either route.....$132.70
Berth in Pullman from New York to the Coast $18.00

YELLOWSTONE NATIONAL PARK

THIRTEEN DAYS VACATION

This is the largest and oldest of our National Parks. It contains 3312 square miles and contains mountains, plateaus, rivers and valleys; cliffs of volcanic glass, unsurpassed waterfalls and wonderful geysers. The most brilliantly colored canyon in the world is here. The scenic diversity makes the trip thru the Park a never ending source of delight.

First Day. Leave NEW YORK in the morning by rail.

Second Day. Arrive CHICAGO in the morning by rail. Leave Chicago in the morning by rail, thru train.

Fourth Day. Arrive GARDINER in the early morning and leave GARDINER at 10:15 by stage. Arrive MAMMOTH HOT SPRINGS at 11:30 a. m. This is the first stopping place in the Park and the afternoon and night are spent here. Trunks are left, as only hand baggage is taken on the trip. To visit all the prominent springs—by easy trails—requires about two hours. Liberty Cap, an extinct hot spring cone, fifty-two feet high; Devil's Thumb, Devil's Kitchen and many other wonders are found here. Fort Yellowstone is located here, for

LONG ISLAND

IF you crave sight and sound of surf; if you long for hills and woodland; if you yearn for quiet and pastoral surroundings; if you desire lakes, brooks and quiet waters; if you want a vacation place that takes in every pleasure of the great outdoors

Long Island is the Place

Just across the river from New York City, it is the Summer vacation place of millions.

Send ten cents to the General Passenger Agent, Long Island R. R., Pennsylvania Station, N. Y., for book which tells the whole story.

the United States cavalry is regularly quartered in the Park during the year.

Fifth Day. Leave MAMMOTH HOT SPRINGS, 8 a. m. Arrive NORRIS at noon for lunch. On leaving the springs, the road ascends the mountain with easy grades and many graceful curves. In three miles, without scarcely perceiving it, one rises 1000 feet, passing the Hoodoos, a most amazing jumble of rocks covering an area of about one square mile. The road passes between great blocks of limestone, some fully seventy-five feet high, called Silver Gate. It then leads over one of the natural watersheds, passing Twin Lakes and the Frying Pan, to Norris, where stop is made for luncheon, after which time is given to walk about and see the many geysers and hot springs found here. Here are found Congress and Emerald pools, both beautiful, especially the latter, which is off the main road and concealed in the timber. The water is hot and the coloring most beautiful. Black Growler and Hurricane are interesting because a large quantity of steam is continually pouring out, producing a peculiar sound. The deposit around these craters is at times very black and the water smells strongly of sulfur. Leave NORRIS at 1:30 p. m. Arrive FOUNTAIN HOTEL 5:30 p. m. After leaving Norris, the road winds along the Gibbon River and Gibbon Canyon, a ride of exceptional beauty. Little puffs of steam are seen arising on all sides, and one realizes that this section abounds in hot springs.

Sixth Day. Leave FOUNTAIN HOTEL 8:30 a. m. Arrive OLD FAITHFUL INN 10:30 a. m. The two hours spent in driving to Old Faithful Inn will be all too short to see the many wonders all along the route. Geysers abound and the colors are wonderful. The rest of the day is spent at the unique Old Faithful Inn with its many surrounding charms. Possibly the most noted is Old Faithful Geyser, which gives its exhibition regularly every sixty-five minutes in plain sight of the house. One can view the eruptions at sunrise or sunset, by moonlight or sunlight, finding new beauties each time. Oblong and many other geysers are found here and the afternoon will be full of strange delights.

Seventh Day. Leave OLD FAITHFUL INN 7:30 a. m. Arrive THUMB STATION at noon. Leaving Old Faithful, the road winds along the Firehole River thru forests of tall pines to Keppler Cascade, and a mile beyond leaves the river and follows Spring Creek for some distance to Craig Pass and over the Continental Divide. At Thumb Station a stop is made for luncheon. It is pleasantly situated on the shores of Yellowstone Lake. Time is given to see more geysers and paint pots and to wander along the shore. Next the road leads around the lake and over the Mountains, passing the Natural Bridge, to the Colonial Hotel. Fishing may be indulged in or boating on the lake.

Eighth Day. Leave COLONIAL HOTEL at 8:30 a. m. Arrive GRAND CANYON HOTEL, 11:30 a. m. The road leads along the valley of the Yellowstone for seventeen miles and thru lovely hill bordered Hayden Valley, passing Mud Volcano and Gothic Grotto Spring, until finally the Great Falls is reached and the hotel is a short distance beyond. A stairway leads down to the brink of the Great Falls.

Ninth Day. Leave GRAND CANYON HOTEL in the morning. Arrive NORRIS for luncheon. The twelve mile drive between the canyon and Norris is thru pine forests, the greater part of the way. It passes over a divide at an altitude of more than 8000 feet. Leave NORRIS after luncheon. Arrive MAMMOTH HOT SPRINGS 3:15 p. m. Leave MAMMOTH HOT SPRINGS at 6:30 p. m. for GARDINER.

Ninth Day. Leave GARDINER in the evening.

Eleventh Day. Arrive CHICAGO in the evening.

Twelfth Day. Arrive NEW YORK in the evening.

Cost of berth, Chicago to Gardiner $8.50

GRAND CANYON

TWO WEEKS VACATION

First Day. Leave NEW YORK in the morning.

Second Day. Leave CHICAGO in the evening.

Fourth Day. Arrive SANTA FE in the afternoon. New Mexico is aptly called "A Land in the Sky." Its many square miles are at a higher altitude above the sea than the summit of many of our Eastern mountain peaks. Santa Fe is an old city and well worth a visit. Spend a couple of days here; you will not regret it, for there is much to be seen. Visit the Shrine of San Miguel. Inside of the old church is a bell cast in old Spain many centuries ago. Also the Garita, ten minutes' walk from the Plaza, an old Spanish fortress. Adjoining is an old Spanish cemetery. Take the Circle Drive, seven miles long, to Tesuque Divide. Spend one day visiting the Cliff Dwellings, in Pajarito Park, the most wonderful prehistoric region in this country.

Sixth Day. Leave SANTA FE in the afternoon. En route pass Santo Domingo and San Felipe Indian pueblos. Arrive ALBUQUERQUE in about four hours. Albuquerque lies at an altitude of 4935 feet and a day may be spent here most profitably. The Mexican quarter, the Old Town, is still much as it was a century or two ago.

Seventh Day. Leave ALBUQUERQUE in evening.

Eighth Day. Arrive GRAND CANYON in afternoon. This tremendous chasm in the northwest corner of Arizona has a depth of 6000 feet and a width of thirteen miles. Visit Hopi House opposite the hotel, a reproduction of the dwellings of the Hopi Indians. Here live a small band of Hopis —men and women, weaving, making pottery or hand silver ornaments. This will give you a view of the canyon from many different points. Cost, $3 per person. If you desire an exciting and fascinating journey, go on mule-back to the bottom of the canyon via Bright Angel Trail, leaving at 8:30 a. m. Cost for trip to the river, $5 each for three or more people. If fewer, $5 extra for guide.

Eleventh Day. Leave GRAND CANYON in the evening.

Fourteenth Day. Arrive CHICAGO in the morning.

Fifteenth Day. Arrive NEW YORK in the evening.

W. A. BRYAN

heart of it, make a rate of $4 and up per day, American plan. The chalets have a uniform rate of $3 per day, American plan, and the Tepee Camps charge fifty cents per bed per night. Food may be purchased at reasonable prices at chalets near by. utensils and use of range in the camps are allowed.

Fourth Day. Leave GLACIER PARK HOTEL 9 a. m., by auto. Visit Two Medicine Lake, which is reached in about one hour and a half. The road winds over several ridges and along the shores of Lower Two Medicine Lake. The Upper Lake, where stop is made, is very clear and surrounded by high mountains of wonderful shapes. Time can be delightfully spent here either on the lake or walking about viewing the grandeur of the mountains. After luncheon (cost 75 cents) at Two Medicine Chalet, visit beautiful Trick Falls, 90 feet high, which are near by.

Leave TWO MEDICINE CHALET 4:30 p. m. Arrive GLACIER PARK HOTEL 6 p. m. This is a fine trip if you have but one day in the Park and will cost you about $2.50 for the round trip.

Fifth Day. Leave GLACIER PARK HOTEL 8:15 a. m., by auto. Arrive ST. MARY'S CHALET 10:45 a. m. This is a beautiful ride of thirty-six miles over a fine road along the foothills of the mountains to St. Mary's Lake. Stop is made at Going-to-the-Sun Chalet for luncheon (cost 75 cents). The view from this chalet is one of the finest in the Park and closely resembles beautiful Lake Louise in the Canadian Rockies. It is located on a rocky ledge two hundred feet above the lake, while Going-to-the-Sun Mountain, nearly a mile high, is in front of it.

Leave GOING-TO-THE-SUN CHALET 2 p. m., by launch. Arrive ST. MARY'S CHALET 3 p. m. Leave ST. MARY'S CHALET 3:45 p. m. by auto. Arrive GLACIER PARK HOTEL 6:15 p. m. This is also a one day's trip.

Sixth Day. Leave ST. MARY'S CHALET 11 a. m., by auto. The road from here follows the shore of Lower St. Mary's Lake and all too soon you arrive Many Glacier Hotel on Lake McDermott. It is in the very heart of the Park, and presents some of the finest scenery to be found in it. From the hotel, as well as from the chalets, a wonderful panorama of mountains and glaciers is spread before you. After luncheon spend the afternoon in walking about, getting this view from different points. From the chalets you will get a good view of McDermott Falls, the outlet of the lake.

Seventh Day. Leave MANY GLACIER HOTEL or CHALETS 9 a. m. (horseback), for a trip to Iceberg Lake, which should not be missed, as it is one of the features of the Park.

Eighth Day. Leave MANY GLACIER HOTEL or CHALETS 8:30 a. m. (horseback). This is another interesting trip because of the grandeur of the scenery, terminating at Granite Park. This park is at an elevation of six thousand feet and en route you cross Swift Current Pass, the most picturesque pass in Glacier Park. Stop at Granite Park Chalet for luncheon, returning to Many Glacier Hotel at 6 p. m.

Ninth Day. Leave MANY GLACIER HOTEL 1:30 p. m., by auto. Arrive GLACIER PARK HOTEL 6:15 p. m. Spend one day here.

Cost of five days' trip, including launch and saddle horses.....$21.50
Meals and lodging extra, depending on where you stop.

Eleventh Day. Leave GLACIER PARK HOTEL in the evening.

Thirteenth Day. Arrive CHICAGO in the evening.

Fourteenth Day. Arrive NEW YORK in the evening.

Round trip rate from New York to Glacier Park $90.20
Round trip rate from Chicago to Glacier Park $48.00
Pullman berth from New York.... $14.00
Pullman berth from Chicago..... $9.00

GRANLIDEN HOTEL

4 Park St. Boston

THE NEW BOOKS

MR. WELLS DISCOVERS GOD

God the Invisible King, by H. G. Wells, marks a stage in his religious development similar to Bernard Shaw's essay on Christianity in the preface to "Androcles and the Lion." Both men revolted from orthodoxy in early youth because they were shocked at the moral character of the Deity as explained to them by their religious teachers. Both became more or less agnostics with an anti-clerical bias that has not altogether disappeared today. Both found their way to a definite faith in a God who is more intimate and personal than the abstract "Absolute" of the pantheist or the distant and impassive "Supreme Being" of the deist. Neither is yet willing to concede personal immortality to man, altho the objections of both are based rather on ethical than on scientific grounds.

In the case of Mr. Wells we can trace thru many of his books his steadily growing conviction that the existence and ethical character of God is not only the truth but so important a truth that life is meaningless without it. *God the Invisible King* is indeed little more than a systematic explanation of the passionate faith which marked the close of "Mr. Britling Sees It Through." But it is equally implicit in "Marriage," written five years ago, in which the hero outlines his creed in the broken murmurs of delirium and discovers that it is really Christianity. "Perhaps," he says, "I shall die a Christian yet. The other Christians won't like me if I do." Mr. Wells has fulfilled his own prophecy. He has become a Christian, tho possibly a heterodox one, and it remains to be seen whether as a heretic he will not encounter more criticism than he did as an open disbeliever. He is not very conciliatory it must be admitted. A sceptic, such as Renan or Matthew Arnold, may touch very gently the historic creeds which he cannot believe and the traditional ritual which he cannot share, but the man who thinks he has discovered a true kernel in Christianity which is overborne and stifled by the accretions of the centuries is apt to be as impatient with them as the Puritans were with Catholic or Anglican tradition. "By faith," says Mr. Wells, "we disbelieved and denied. By faith we said of that stuffed scarecrow of divinity, that incoherent accumulation of antique theological notions, the Nicene deity, 'This is certainly no God.' And by faith we have found God."

Mr. Wells's God is a person; a finite, creative, righteous captain of humanity in the warfare against the brute obstructiveness of nature. This God has nothing in common with the Infinite, but Mr. Wells does not deny the latter. "At the back of all known things," he tells us, "there is an impenetrable curtain; the ultimate of existence is a Veiled Being, which seems to know nothing of life or death or good or ill. Of that Being, whether it is simple or complex or divine, we know nothing; to us it is no more than the limit of understanding, the unknown beyond." This conception harks back to the "Fates" or "Norns" who were believed in pagan times

What is New Thought?

IT'S NEW HOPE, inspiration and courage.
IT'S NEW LIGHT on old health, happiness, and success problems.
IT'S NEW METHODS for developing will power, personal magnetism, mental faculties and talents.
IT'S A NEW WAY to attract love, friends and heart's desire.

ELIZABETH TOWNE
Editor of *Nautilus*

The Gist of New Thought

by Paul Ellsworth, is a practical working manual of New Thought. It explains: How to Awaken Latent Powers; The Supreme Truth on which Joyous, Successful Living is Founded; How to Remove the Fundamental Cause of Inharmony; How to be Successful in Your Work; How to Enter the Silence; The Cumulative Results of Using New Thought; How to Use Affirmations to Heal Yourself; The New Thought Way to the Realization of Desires; How to Connect with the Spiritual Supply, and many other things.

For 10 cents we will send you this booklet and a 3 mos. trial subscription to **Nautilus**, leading New Thought magazine. Elizabeth Towne and William F. Towne, Editors. Paul Ellsworth, Dr. Orison Sweet Marden, Horatio W. Dresser, Ph. D., Edward B. Warman, A. M., Lida A. Churchill, Contributors.

Send now and we will include "What I Know About New Thought," by Ella Wheeler Wilcox.

Making a Vegetable Garden

This handbook is 4¼ by 6¼ inches, bound in flexible boards with three-color imprint, and printed from new plates. It is fully illustrated and contains a full and complete planting table for vegetables.

Send twenty-five cents in stamps to

THE COUNTRYSIDE
119 West 40th Street, New York

to occupy the unknowable regions of existence far beyond the dwellings of the gods. But having once mentioned the Veiled Being, Mr. Wells leaves it severely alone and turns his attention to the God whom we can know and love, and he demonstrates very finely how alone mankind would be without this captain and comforter and how the well-meaning Atheist "has no source of strength beyond his own amiable sentiments, his conscience speaks with an unsupported voice, and no one watches while he sleeps." Surely if the faith of Mr. Wells is somewhat too narrow, if it includes too few articles of belief, it is exceptionally clear and profound in regard to what he does hold true.

God the Invisible King, by H. G. Wells. The Macmillan Company. $1.25.

THE FAIR SHARE

From the author of "The Living Wage" one has learned to expect scholarship and sincerity, and sympathy for the tribulations of ordinary folks. Dr. Ryan's new book, *Distributive Justice*, is, nevertheless, a genuine disappointment. The author has set himself the ungrateful task of demonstrating the justice of an industrial system and, at the same time, the injustice of its operation. The fundamental postulate that vitiates the whole argument is that the antiquity of a system is presumptive evidence of its inherent morality. This is precisely the argument of the slave-holder and of the reactionary everywhere.

The book is intended as a double-service instrument. On the one hand, it is to arouse those who have power of one kind or another to use this power humanely and considerately. On the other hand, it is intended to stifle the rebellious spirits who may seek, in socialism, or single-tax, or in some other revolutionary doctrine, the hope for social justice. The practical implication is virtually a pious wish; if we were all kind and just to each other, instead of being selfish and greedy and cruel, this would after all be a perfectly lovely world, and vested interests would have nothing to fear.

Distributive Justice, by J. A. Ryan. The Macmillan Company. $1.50.

BY WAY OF THE MEDIUM

The question of individual survival after death was probably never more poignant in human minds than in these terrible times. It is not Sir Oliver Lodge alone who pathetically turns to a medium or to any means that promises to reveal to him whether his gallant son be still alive, tho dead upon the battlefield. But he is a man so distinguished as a scientist, and so noted for his sincerity and good faith, that the publication of his *Raymond* has opened flood-gates of discussion on the question which is uppermost in the hearts of the bereaved.

In the published reports of his attempts to communicate with his son, Sir Oliver reaffirms his earlier conclusion that those who have died continue to exist as individuals; that they continue to be interested in the persons and fortunes of their surviving friends; and that they are able and willing, under proper conditions, to communicate with the living.

Perhaps the resultant discussion will add something to the philosophy of hope, which is desperately enough needed in these days. Belief in individual survival after death is at least traditionally an item of faith in the lives of most men. But our generation has been bred in a matter-of-fact atmosphere and will not be easily convinced by anything short of clinching evidence when a man claims to be able to communicate with the dead. The medium

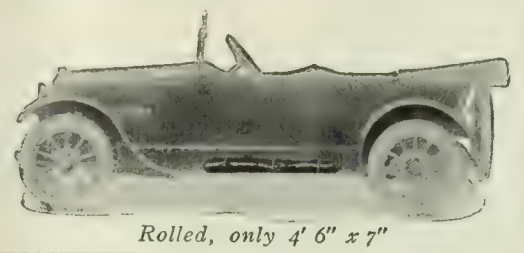
Carry Your Camp on the Running Board

Brother outdoor lover, hold up your right hand and take the oath of allegiance—sign the Declaration of Independence from the backwoods hotel "pirate" and all his clan! Solemnly swear that you will eat, sleep, loaf, and gain happiness, health, and contentment away from the corn-husk mattresses the greasy cookery, the "special (extortionate) prices for auto parties," the tips and garage hold-ups that have marred former trips.

Ready for Business

THE TENTOBED

makes you independent and indifferent to country hotel discomforts. *It will save its cost in hotel bills alone the very first trip.*



The Tentobed goes right with you on the running board compactly rolled in dust proof cover. Only 7″ in diameter by 4′ 6″ long. Weight, less than 65 pounds. You can roll your blankets and extra clothing in with tent, thus keeping tonneau clear.

Takes less than five minutes to set up or take down, as shown in sketches. No poles, stakes or ropes to lose or break.

Note flap attached to tent all around at height of bed to go under blankets, making upper part of tent mosquito and insect-proof.

Set up, the Tentobed is a full-sized double bed 6 feet 4 inches long by 4 feet 6 inches wide. Special tension regulating device takes up any stretch of material from use and absolutely prevents occupants from rolling together as in other forms of cot. Screened window at each end.

Rolled, only 4′ 6″ x 7″

roof or lawn. It assures complete privacy, comfort and protection from bad weather. Lots of them used the year 'round for this most healthful practice.

When not in use the Tentobed stows away in a closet, taking almost no space at all—hardly more than your Winter overcoat.

See the Tentobed at your sporting goods, furniture or auto supply dealers. If he can't supply you we will ship direct on receipt of price.

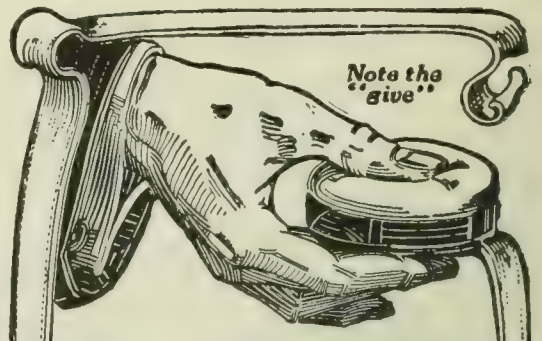
W. F. YOUNG, P.D.F., 283 Temple St., Springfield, Mass.

constitutes the worst difficulty. The whole realm of clairvoyants, telepathists and mediums is one in which scientific evidence seems to fade away in a mist of conjecture. This doubtless is the reason why the forty odd volumes of proceedings of the Psychical Research Society have made no deep impression upon men in whom is no want of eagerness to be convinced. Nor do the doubters, as a rule, disbelieve the survival of the soul after death. What they disbelieve are the alleged communications from the unseen.

The points on which Sir Oliver rests his case will appear to many as simply trivial and commonplace, such as one would wish to ignore in the interest even of a dignified remembrance of the dead. But to others they will appeal as broken messages such as those must be that reach the listener over an imperfect connection. Their value will seem to lie not in any intrinsic importance, but in the likelihood, from their reference to matters familiar to both parties, that they are actually from the unseen friend trying, in however feeble words, to make his presence known.

Raymond, by Sir Oliver Lodge. G. H. Doran Company. $2.

STABILITY OF TREATIES



On the *Breaches of Anglo-American Treaties*, a topic that has called forth warm international criticism, Major John Bigelow has made a study greatly to be commended for its research and candor. It cites documents and official correspondence very fully and skilfully arrays historical facts and characters. The Jay Treaty and Treaty of Ghent concluded peace between the two countries. Under the Treaty of Washington was held the great Geneva arbitration on the Alabama Claims. The Clayton-Bulwer Treaty dealt with the interoceanic canal question and the puzzling Mosquito Coast, and hence the Monroe Doctrine. The Hay-Pauncefote Treaty concerned the now completed Panama Canal, with which, and with the Spanish War the United States waived forever its isolation from Great World questions. After reading the author's gatherings and conclusions about the treaties named, one lays down the book feeling that he has produced a powerful argument for the World Court that seems to be rapidly coming nearer.

Breaches of Anglo-American Treaties, a Study in History and Diplomacy, by John Bigelow. Sturgis & Walton. $1.50.

V. A. D.

One of the most inspiring books brought forth by the present crisis is *Britain's Civilian Volunteers*. Some eight years ago there was started in England an organization known for short as the V. A. D. Now at the time, members of the Volunteer Aid Detachments who took seriously their training in hospital work and canteen service were looked on with mild amusement. But when August, 1914, came there was the nucleus of that tremendous body of workers on whom the Red Cross and the medical staff have depended and without whom their work could not have been done.

The V. A. D. is formed by units each consisting of Commandant, Superintendent, Quartermaster, and in the case of men's units of forty-eight helpers, in the women's of twenty, four of whom must qualify as cooks. Part of the training is such as is given in our Red Cross classes, but it goes much beyond that, and those who have trained are not scattered, well intentioned individuals, but members of an organization closely coördinated with the Red Cross, and the Army Medical Corps. Wherever need has been, in Egypt, in France, in Manchester, such units are at work. They

Rupture Need Not Mean Torture

THE testimony of thousands of cheerful wearers of the **Brooks Rupture Appliance** is that it gives relief where all other methods have failed. No one afflicted with rupture need suffer beyond the day he learns about this marvelous device.

The Brooks Rupture Appliance is inconspicuous, resting flat and smooth against the body. It is not injured by water and, unlike a truss, may be worn at night with comfort. It is cool and comfortable, because air continually circulates through its cushion.

Made to Measure and Sent on Trial

The Brooks Rupture Appliance is made to the individual measure of the wearer. None are kept in stock. In fact, we have twenty-seven different types of cushions to suit various individual needs. Since we are a sanitarium and not a factory, particular care is given to your own case.

The Brooks Rupture Appliance is endorsed by leading physicians the world over. Between six and seven thousand voluntary testimonials bear witness to the remarkable relief afforded by this device.

You can obtain the **Brooks Rupture Appliance** on free trial to test its worth. It is sold on a basis of satisfaction guaranteed or money refunded. And the price you will find to be far below that of many inferior devices.

are made up of all classes, they are trained for special service. But they are ready for any and every job that needs a worker. Some such methods will surely develop here, in making practical the immense and as yet not wholly regulated force of our National League for Woman's Service and other civilian organizations.

The book is an unadorned account of the many sorts of work done in France, Belgium and Great Britain by these volunteer workers. men and women. There is no attempt to make literature, but the pages have the intense interest that belongs to the story of great endeavor. There are plenty of striking incidents and touching descriptions, but just dull everyday jobs such as cleaning lamps, sweeping stairs, washing dishes, show here as vital parts of the great task. It is a book that leaves the reader not only eager for any sort of work so be it is surely needful, but it throws fresh light on the burdens our Allies are carrying, and deepens our sense that it is something more than a duty to bear what share we may in this service, it is the chance that comes "once to every man and nation."

Britain's Civilian Volunteers, by Thekla Bowser. Moffat, Yard & Co. $1.50.

A SINISTER VOYAGE

In *The Shadow Line* Joseph Conrad has gone back to the sea he knows so intimately, and to the sailing ship he loves. The story of the young captain who crosses the "shadow line" from youth into manhood while sailing a becalmed ship with a fever-incapacitated crew from Bankok to Singapore, has the old charm of "Typhoon" and "Youth." The thrill of the supernatural in the curse of the dead captain; the nobility of the men who do their utmost to bring the ship to port; the hot, heavy air of the tropics brooding over the quiescent ocean; the courage and manliness of the youth rising to the hight of his responsibility for the safety of his ship and crew. all these show Conrad at his best—and where shall we find better?

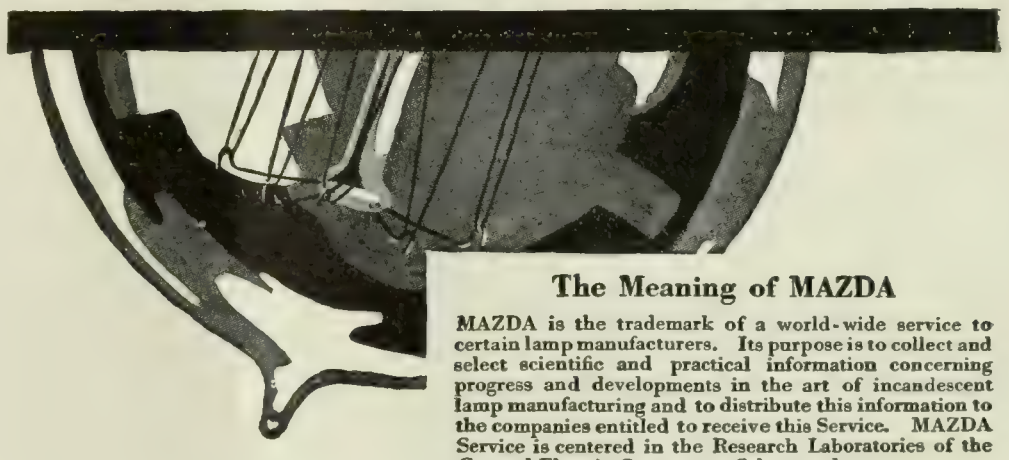
The Shadow Line, by Joseph Conrad. Doubleday, Page & Co. $1.35.

WEALTH AND WELFARE IN EUROPE

Professor Ogg's *Economic Development of Modern Europe* is a valuable survey of the origins and effects of the industrial revolution of the eighteenth and early nineteenth centuries. The influence of the changed methods of manufacture upon the increase and distribution of population, the creation and rise to power of the laboring class of the cities, the new social problems created and the legislative programs which have been devised to meet them are so fully detailed that the book might almost serve as a complete history of Europe from the early eighteenth century to the outbreak of the Great War. To be sure, it omits such political facts as are not directly related to the economic changes of the period considered, but it is at least as important that the story of the people should be known as that the story of the nations should. One of the most useful features of the work is the very full series of references for further reading at the end of each chapter.

Economic Development of Modern Europe, by Frederic Austin Ogg. The Macmillan Company. $2.50.

ARMENIA



The official documents relating to *The Treatment of Armenians in the Ottoman Empire 1915-16*, collected by Viscount Bryce and presented to the Secretary of State for Foreign Affairs in the British Government, make gruesome reading. The collection is made from a great variety of reliable sources including American con-

"Not the name of a thing, but the mark of a service"

No lamps can ever be marked MAZDA unless they embody MAZDA Service standards of excellence

4632

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

suls and missionaries, German travelers and missionaries, Danish Red Cross workers, Swiss visitors, native teachers, pastors and other religious leaders. It is a terrible mass of conclusive evidence pointing to the perpetration of the foulest crime ever committed against a defenseless people. No permanent peace ought to be considered that will leave in power the Turkish Government and its backers, who together are responsible for these horrible massacres. The recurrence of such a tragedy, even on a minor scale, ought to be made impossible by the reorganization of national and international powers.

The successful resistance by the 5000 villagers of Jibal Mousa to the bloody purpose and attempts of the Turks, and the dramatic rescue by a French squadron of these hard-prest Armenians, constitute a thrilling story of bravery and brilliant self-defense—"the single happy instance in the national tragedy of the Armenians in the Ottoman Empire."

The Treatment of Armenians in the Ottoman Empire 1915-16. Preface by Viscount Bryce. G. H. Doran Company. $1.

AMID THE HILLS OF WALES

Mary Webb's novel of Welsh peasant life, *The Golden Arrow*, is worth reading. The author is at once a realist, a romanticist and an idealist in telling this story of love and pain. Because she is deeply moved by the folk spirit she makes us feel not merely the emotions of individuals, but also this as a pervading force molding character and action. Deborah Arden, the heroine, is a woman of strong racial type, capable of one great love; the antithesis of her sister-in-law, "rapacious of the small change of sex." Deborah loves an impulsive egoist. She gives herself to him without reserve and goes to live with him without legal marriage. Because their life together has begun in the wrong way they have much to suffer before they learn the wise ways of life. The best of the book is in the passages that give a profound insight into mankind and womankind, especially womankind, and glimpses of the gold in the human ore; in the fragrant poetry of John Arden's conversation and the bit of folklore about the Flockmaster. The book is redolent of the good odor of the earth which clings to all sincere stories of peasant life.

The Golden Arrow, by Mary Webb. E. P. Dutton & Co. $1.50.

NEUTRALITY AND THE GREAT DANE

Georg Brandes, the eminent Danish critic, has collected in *The World at War* a mass of lectures, essays and public letters dealing with the Great War. The book may be roughly divided into three parts: a number of articles written between 1881 and 1914 predicting the approach of a European conflict, now republished with the apparent intention of establishing the author's authority as a true prophet; a very interesting and impassioned series of protests against the persecutions of the Jews in Poland; and defenses of the author's neutral position against M. Clemenceau, Mr. William Archer and other spokesmen of the Entente Allies who could not understand his indifference to the issue of the war.

Mr. Brandes comes as near being a complete neutral as anyone in Europe. As an individualist he cordially detests German militarism and autocracy and as a patriotic Dane he still feels resentment over Bismarck's seizure of Schleswig and Holstein, but he is kept neutral partly from distrust of the statesmen of France and England and even more from a strong aversion to Russia. Before the recent revolution the

French and British liberals who upheld their countries' cause tended to ignore Russia except as a convenient "steam roller" to crush the Germans with, but to Mr. Brandes, Russia was the incarnation of everything dangerous to western liberty and culture. That he did not at all anticipate the sudden revolution which converted the most reactionary of empires into the most radical of republics proves that even such prophets as Mr. Brandes are sometimes caught napping.

The World at War, by Georg Brandes. The Macmillan Company. $1.50.

NEIGHBORS

The Soul of the Russian is a gathering of pleasant, leisurely, yet informing essays by Margery and Alan Lethbridge, who know and love Russia, and describe with much charm of manner some of its loveable, humorous and puzzling features. (Lane, $1.25.)

China Inside Out, by Rev. George A. Miller, contains sketches of what he saw and heard in traveling on foot thru many portions of China. Many drawings made from photographs assist in making more vivid the written impressions of this traveling evangelist. (The Abingdon Press, $1.)

Serbia, by Helen Leah Reed, is a short historical sketch of this little known land, useful, for all its slightness, for the information it gives and the sense of personality it manages to convey. It is good also to have that old scholar, John Bowring, brought into service once more. (Boston: Serbian Distress Fund, $1.)

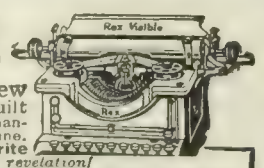
The Popular Aspects of Oriental Religions, by L. O. Hartman, contains sympathetic sketches of the religious life and aspirations of the Koreans, Chinese, Burmese, Indians, Japanese, and some other Eastern peoples, written from the standpoint of the Christian traveler and teacher. Numerous well chosen illustrations add to the interest of the narrative. (The Abingdon Press, $1.35.)

David M. Steele's book, *Going Abroad Overland*, is unique among such volumes as have yet appeared of American travel articles. Each chapter describes a scene or city, the whole illustrated by many photogravures. Readers are shown that they can really travel, can see and know and feel places and people foreign to their previous experience—all without leaving North America. (G. P. Putnam's Sons, $1.50.)

BEYOND SIGHT

Prof. Rufus M. Jones writes in a most sympathetic way of *The Inner Life*, seeking in the words of Jesus, the Psalmist, and Paul some sure indications of permanent values and possessions in that invisible kingdom within the soul. (The Macmillan Company, $1.)

In *A Vision of the Future*, Richard Marvin Chapman has described an absurdly logical and strait-laced Utopia of the future. In spite of the fact that he has a few sensible ideas, he is a doctrinaire forgetful of the imaginative and emotional variations which will surely save mankind from the fate he prescribes. (Cosmopolitan Press, $1.)



That the majority of the influential leaders in American intellectual life do not believe in personal immortality, is the principal theme of Professor Leuba's *Belief in God and Immortality*. The book is exceedingly interesting, but far from convincing, when one realizes that the conclusions are based merely upon questionaires sent to interested persons of the college world. (Boston: Sherman, French & Co., $2.)

Margaret Prescott Montague's little experience-essay, *Twenty Minutes of Reality*, republished from *The Atlantic Monthly*, derives its value from what, we think, is the commonness of the visitations of such illuminated and illuminating moments as are here very faithfully recorded. Idealistically sound, and heartening at the same time, in these days of war this big little message is most timely. (E. P. Dutton & Co., 75 cents.)

MARKET PLACE TALKS

BY LUIGI CRISCUOLO

HAVE YOU ENLISTED YOUR DOLLARS?

"THERE is not a single selfish element, so far as I can see, in the cause we are fighting for. We are fighting for what we believe and wish to be the rights of mankind and for the future peace of the world. We must realize to the full how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice it involves.

"This is the time for America to correct her unpardonable fault of wastefulness and extravagance. Let every man and every woman assume the duty of careful, provident use and expenditure as a public duty, as a dictate of patriotism which no one can now expect ever to be excused or forgiven for ignoring. . . .

"The supreme test of the nation has come. We must all speak, act and serve together."—Extracts from President Wilson's War Proclamation.

This is to be a real heart-to-heart talk about a most serious business—that of enlisting your *dollars* in response to your country's call. It makes no difference whether you are a $50,000 man or a clerk receiving $12 a week. You can do your bit whether you take a $50 bond or a $50,000 one just as effectively as the man who enlists as a soldier.

Fifty dollars will outfit a soldier or sailor while $500 will maintain one for a full year. Your money will earn 3½ per cent interest for you but it will also buy food, clothing, equipment, ammunition, arms and transportation. The effectiveness of our financial campaign may bring the war to a speedy end in favor of the Allies and ourselves. Nobody likes war and the sooner it ends the better.

Everybody cannot go to war; many of us will remain so that the wheels of industry can continue to revolve, so as to supply food, clothing, munitions or money to the armies. Those who are risking their lives in the cause we have espoused should feel that they have the unqualified support of the whole nation. There is no time to waste. Any man earning a small wage can arrange to own a $50 bond even if he has to pay for it at the rate of a few dollars a week. The Government requires the bond to be paid for by August 30, but many banks are making arrangements to carry bonds for small purchasers at the interest rate they bear.

There is no excuse for anyone who is employed not to own a bond of some denomination. The Government is back of the bond and there is no wealthier sounder government today. The bonds are absolutely better than cash as they bear interest. They are also convertible into any subsequent issue bearing a higher rate of interest should such issue be made before the war ends. The bonds are free from all Federal, state or local taxation excepting only estate or inheritance taxes.

Employers of labor are in a particularly good position to render a national service by urging their employees to subscribe to the loan for cash, or by arranging for payments in instalments extending over a period of a year. This plan will promote their interests and those of their employees, as it will make both participate in the task of financing our Government's part in the war. Employers can make arrangements to withhold a certain portion of salaries each month until the amount of bonds subscribed for is paid. It will be found that banks are only too willing to coöperate in any way.

We have been called a nation of spenders; can we become a nation of savers? Remember that the necessity for France to pay the enormous indemnity to Germany after the Franco-Prussian War made the French people work overtime to raise the funds. Incidentally, it made the French people renowned for their thrift. Every Frenchman knows bonds. It is estimated that out of France's population of under 46,000,000, over 5,000,000 own its war bonds, while less than 300,000 of our people own bonds. Think of the disparity!

The Liberty Loan selling campaign is reaching many people who have never seen a bond and do not know what it represents. All of the banks, investment firms and bond salesmen have enlisted their services gratis, for no commissions can be paid. By the time the subscription books close, June 15, there should be not one adult that can be reached who does not know of the Liberty Loan. This movement should be an absolutely unequaled means for promoting thrift, and once we get that habit we are sure to retain it after the present emergency is past.

It is to be repeated: *there is no better security in the world.* In normal times British Consols and French Rentes have been the standard securities of the world, known in every market. They have had rises and declines along with wars and revolutions, but they will be with us as premier investments in normal times. Wise investors have in the past taken advantage of times like these and placed all of their idle funds into standard Government bonds. Do you see your opportunity in the Liberty Loan?

Your dollars cannot be neutral. The United States is at war and all differences of opinion, however warranted, must be waived. This is now *our* fight as well as that of the Allies. If we do not do our utmost to win, it is certain that we will

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

not win and a victorious Germany might mean a humiliated America some time in the future. I am not an alarmist, but the situation requires immediate attention. The point is: "Will you help your country by investing in the Liberty Loan or are you helping Germany by keeping your money in your pocket." You should decide at once.

UNITED STATES GOVERNMENT LIBERTY LOAN OF 1917

Details, as announced by the Secretary of the Treasury, are as follows:

$2,000,000,000 3½ per cent bonds, interest payable June and December 15.

Conversion Privilege

If, before the termination of the war, bonds are issued bearing a higher rate of interest, the holders of the bonds now to be issued may convert them into bonds bearing such higher rate such bonds to be identical as to maturity of principal and interest and terms of redemption with these bonds, but otherwise substantially identical with the bonds of the new issue.

Tax Exemptions

Both principal and interest exempt from all Federal, state or local taxes, except estate or inheritance taxes.

Principal Payable

In thirty years—June 15, 1947. Redeemable after fifteen years at par and accrued interest, at option of the United States Government.

Denominations

Coupon Bonds: $50, $100, $500, $1000, Registered Bonds: $100, $500, $1000, $5000, $10,000, $50,000, $100,000.

Subscriptions

At par and interest will be received until June 15, 1917, unless subscription books are closed earlier.

Subscriptions Payable

In full on allotment, except in amounts over $10,000 upon which two weeks' notice of intention to pay in full is required, or in instalments as follows: 2 per cent on application; 18 per cent on June 28; 20 per cent on July 30; 30 per cent on August 15; 30 per cent on August 30, 1917.

Delivery

About July 1, 1917, or on completion of payments.

Subscriptions will be received at any bank, or trust company, or at the Treasury Department in Washington. Descriptive circular and blank may be obtained from any bank, newspaper office, post office, private bank, investment dealer, or will be sent to any address by the Investment Editor.

PEBBLES

As a Scottish soldier said the other day, the French are "getting a bit of their Aisne back!"—*Passing Show.*

Germany laughs at our navy but the nine dreadnaughts of that $7,000,000,000 loan may have a sobering effect.—*Philadelphia North American.*

A Baltimore business man was sitting at his desk when a colored man, who sometimes waits upon him in a certain cafe, entered the office.

In response to the business man's query what he could do for him, the darky replied:

"I've got a chance to change my position, suh. You kin say a good word fo' me, suh, can't you? Tell 'em I'm honest an' such."

"Of course," said the business man, "you're a good waiter, Tom, but I don't know anything specially about your honesty."

"Well, suh tell 'em yo' thinks I'm honest. Dat'll be enough."

So the business man promised he would.

"Thank yo', suh, thank yo'" said Tom, with a deep bow. "When yo' come over tomorrow, sit at my table an' I'll give yo' a short check."—*The Lamb.*

Diversified July Investments

for the investor seeking safety and 6% under war-time conditions

THE diversified first mortgage serial bond issues described below, each one safeguarded under the ***Straus Plan,*** deserve your attention and investigation at this particular time. They are first mortgage securities, based on real estate, always least to be affected in war-time or any other period of tension.

NEW YORK CITY—$1,100,000 first 6's, secured by land, building, and equipment of corporation supplying an absolute necessity to many of the city's largest banks and buildings.

CHICAGO—$800,000 first 6's, secured by new eleven story hotel and land, overlooking Lake Michigan, in the fashionable Hyde Park district.

MILWAUKEE—$375,000 first 6's, secured by building and land with income guaranteed beyond term of loan, of two and one-half times interest charges.

PHILADELPHIA—$1,200,000 first 6's, secured by new thirteen story building and land in one of the city's best districts. Legal for trust funds in Pennsylvania.

These issues and many others, secured by properties located in the largest and most prosperous cities in the United States, netting 5½—6%, are described in our July Investment List. Write for it, together with our booklet, "Acid Tests of Investments in War Time".

W. E. Underwood

WHERE DOES THE BLAME LIE?

There comes to me from one of our readers in North Carolina an inquiry the answer to which may be of service to many others requiring similar information. My correspondent writes:

Apropos of the Pittsburgh Life and Trust muddle, I should like to ask you how far, in your opinion, the Insurance Commissioner or Insurance Department of Pennsylvania is to be blamed for this mess; also, whether the same sort of thing could be carried thru (or "put over") by the officers or investment board of a mutual company. Others say that the Pennsylvania Insurance Department is incompetent, and that all Pennsylvania insurance companies will "bear watching." Isn't this unfair to the Provident Life and Trust and the Penn Mutual, both of Philadelphia?

Obviously it is both unfair and unwarranted to the companies named and to numerous others. In replying to this communication I said:

I do not think that in this instance the Insurance Department of Pennsylvania is censurable. The Pittsburgh Life and Trust deal was worked under cover. None of the parties to it seems to have sought the advice or approval of either the Insurance Department of Pennsylvania or of New York; and I am of the opinion that we have a right to expect that those who were then in control of the company—the stockholders who sold out—would have consulted both departments before consenting to a sale to people such as the purchasers turn out to be.

In my judgment mutual life insurance companies are in danger of no such deals. The directors and officers of those companies have nothing to sell; that is to say, they own nothing in the companies they serve that they can deliver. I do not assert that a mutual company cannot be robbed on the inside by its servants; but it cannot be successfully handed over to a band of outside mercenaries. The stockholders of a company own it; they can transfer its control to any other set of persons who will buy their stock, and in doing that they will be acting in a legitimate manner. That they are morally responsible to other interests in the company for turning it over to a gang of operators, is certain; that they can be made to stand any losses incurred by the other interests, would be a matter for the courts to determine.

While I have a solid conviction that the Insurance Department of Pennsylvania is too much entangled with the political machine in that state to render the efficient service of which every good department of its kind should be capable, the fact that it was unable to prevent the deal in Pittsburgh Life and Trust stock is not an evidence of its inefficiency. By the same rule, there is no warrant for reflection on the two life insurance companies you name. As it happens, one of them is a mutual and the other is a stock company. They are both very old, their reputations are without blemish, the breath of scandal has never blown upon either. During the entire lives of both, men of sterling probity, character and ability have been in control of them. My confidence and respect for the men composing both managements, a faith founded on knowledge and observation of their past conduct in the trusts they hold, is such that I feel certain, with or without the supervision of insurance departments, they would, and will, properly administer and loyally protect the interests in their keeping.

Let Us Help You Decide

IF you are undecided as to the appointing of an executor and trustee under will, call on or write to our officers and let them explain our facilities for handling estates.

The appointment of an executor and trustee is a very important matter and ought not be postponed. The safety and interests of your heirs require that you make a wise appointment, and prudence requires that you do it *now*.

Our booklet, "Let's Choose Executors and Talk of Wills," contains much valuable information for will makers.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

DIVIDEND

MERGENTHALER LINOTYPE CO.
New York, May 15, 1917.

A regular quarterly dividend of 2½ per cent. on the capital stock of Mergenthaler Linotype Company will be paid on June 30, 1917, to the stockholders of record as they appear at the close of business on June 2, 1917. The transfer books will not be closed.

FRED'K J. WARBURTON, Treasurer.

AMERICAN TELEPHONE AND TELEGRAPH CO.

THIRTY-YEAR FIVE PER CENT. COLLATERAL TRUST GOLD BONDS

Coupons from these bonds, payable by their terms on June 1, 1917, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street. G. D. MILNE, Treasurer.

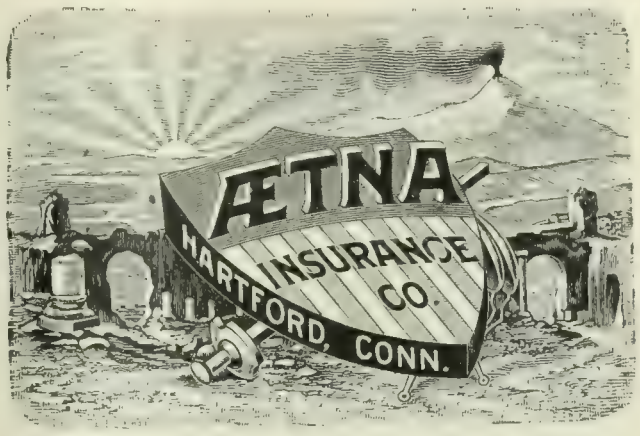
Insurance departments are bulwarks of protection to policyholders; adequate rates and ample reserves are essential; proper surpluses are prudential; but character in the men composing the managements is indispensable. Without honest and able men, the best company is but an empty shell, the crushing of which awaits the first ruthless fist that grasps it.

In conclusion: the exploitation of stock life insurance companies is not a new thing; and I cannot now recall an instance in which an old line mutual life insurance company became the victim of operators who, corrupting the management in charge, secured control of its funds for their own purposes.

WAR TAXATION OF LIFE INSURANCE

Among the taxes which the Congress is debating for war revenue purposes is one item of particular interest to the holders of life insurance policies. Under this proposition the companies would be called upon to pay, in addition to the income tax and the excess-profits tax, both of which are to be doubled, a further sum of 8 cents on each $100 of new insurance issued. Note the discrimination, due, of course, to the fact that the tribute is levied in the form of a stamp affixt to the policy. Insurance already in force would not be required to meet this expense.

Another discriminatory feature of the proposal consists in the exemption of all fraternal benefit societies and orders, purely local coöperative companies and associations and employees relief associations or, to quote the language of the bill, any organization "conducted solely by the members thereof for the exclusive benefit of its members." Old line mutual life insurance is conducted by its members for their exclusive benefit, but it is to be taxed, as usual.



The amount of new insurance written by old line companies now aggregates about $3,250,000,000 a year. In number of thousands of dollars this is 3,250,000 objects of taxation, at the rate of 80 cents each, and would amount, in revenue income to the Government, to the sum of $2,600,000. Compared with the huge sum which the Government must raise, it is small. The aid it affords is insignificant, particularly when laid side by side with the injustice it will inflict. How? Consider this: the mortality cost is the principal burden a life company must carry. The old line companies have in force something approximating $25,000,000,000 of insurance liability. Of this vast sum it is estimated that about $3,000,000,000 is outstanding on males between twenty-one and thirty-one, persons subject to conscription. The experience of the Canadian companies indicates a heavy mortality on men who are now serving in Europe. Their rate of extra premium, commencing at $50 per $1000, has risen to $300 per $1000. The experience of the Metropolitan Life of New York, on its Canadian soldiers, to a recent date, runs between fifteen and twenty times normal mortality. American companies are now faced with an abnormal mortality on $3,000,000,000 of insurance, and it looks like decidedly poor legislation that will load them up with additional taxation of a burdensome character.

Beyond all these considerations, I ask again, as I have a number of times: Why should life insurance, a system of loss distribution, be taxed at all?

O. O. S., Marine, Illinois.—I know of no provision or expedient that will save the policyholders in the assessment department of the Bankers' Life Company of Des Moines against the payment of constantly increasing cost until it finally reaches that stage which you describe as "out of sight." Holding to that belief, I think it advisable that those who can afford it, should take the old line policy offered by that company or get one in some other company writing insurance on a scientific basis.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Imagine that you are the editor of a paper published by a steamship company for circulation among the officers and men of its fleet. Write an account of the present U-boat war in such a way that it will be helpful in maintaining the spirit of the men in the fleet.
2. At a meeting of a literary society to which you belong various members have been chosen to represent the nations now at war. You are to speak in behalf of France. Present the French peace terms in such a way that they will appear just and necessary.
3. Write a public bulletin designed to interest young men in the proposed aviation training schools.
4. Some of your friends think that the United States should have granted passports to the Socialist delegates. Present arguments that will show that the Government acted wisely.
5. Write short news items concerning woman suffrage in Britain, the present state of shipbuilding in the United States, the recent fire in Atlanta, and the use of the Erie Canal for grain transport.

Editorial Articles.

1. Give a short oral explanation of what is meant by the expression, "Prussianism conquers the world."
2. Read "Crowns and Courts" and then prepare a short, emphatic speech on "The Danger of Kingship."
3. From "The Real Fault of Ultra-Pacifism" prepare a speech on "The Real Pacifist and His Duty."
4. Adapt the thought of "No Slackers in the War" to the performance of school work. Present it as an editorial article for your school paper.

Stolen Goods, by E. L. Thorndike.

1. What thought does Professor Thorndike present in this article? What is your own opinion concerning the subject?
2. By what means did the author make the article interesting and emphatic?

Many Inventions. By Park Benjamin.

1. In this article the author discusses a number of different inventions. Show how he has arranged the details so that the article has unity, coherence and development.

Wartime Vacations.

1. In what ways do the various letters printed in this article differ from the letters you write? Make a list of the good characteristics of letter-writing, as shown here.
2. Write an interesting letter concerning what you yourself intend to do in order to be of service.

SECTION II. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words prominent in the news of the week: transport, suffrage, constitutional, convention, revenue, commerce, adequate, indemnity, parliament, enfranchisement, commission, regiment, aviation, expeditionary, draft.

SECTION III. GRAMMAR.

1. Select any one of the letters in "Wartime Vacations." Point out any grammatical errors that you may find, or suggest any improvement in construction.
2. Give the syntax of every word in the letter you select.

SECTION IV. LITERATURE.

The Breaking Out of the Flags. By Amy Lowell.

1. Give the meaning of every one of the following words: doorlintels, cornices, mansard-roofs, arcaded, pleached, gird, arabesques, caissons, garish, solstice, panoply, burgeoning.
2. Point out passages of suggestive description; passages that are figurative and symbolic; passages that are realistic; passages that show tenderness; passages that appeal because of their strength of thought.
3. What is the chief thought of the poem?
4. What are some of the reasons why this poem is so remarkably beautiful and appealing?
5. In what ways does it illustrate the best characteristics of vers libre?

A War Library. The New Books.

1. Make a list of all the types of books named in this number of The Independent. Give a definition of every type. Tell what books you have read that might be classed under the various types.

A Number of Things. By Edwin E. Slosson.

1. Read "Spring, Sprang, Sprung." Can you tell why Dr. Slosson presented the poem on this page? What is the proper name for a poem of this type? In what ways is this poem an unusually excellent example of the type?

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Public Opinion and the War—"Prussianism Conquers the World," "The Real Fault of Ultra-Pacifism," "The Logan Law," "Socialists Not to Go to Stockholm."

1. Explain the significance of the title of the leading editorial.
2. How do you justify the limitation of the liberty of the people discussed in this editorial?
3. "It is no accident that Germany . . . is one of the most orderly and quiet countries in the world," etc. Explain the paradox.
4. According to the second editorial, what is the basis for the anti-war movement in the Allied countries and in the United States? Have you any other explanation to offer?
5. Is the State Department justified in refusing passports to the Socialists who desire to attend the Stockholm Conference? Is the refusal wise?

II. Financing the War—"Have You Enlisted Your Dollars?" "House Passes Revenue Bill."

1. Upon what grounds did the President accuse America of "unpardonable wastefulness and extravagance"?
2. "It is estimated that out of France's population . . . over 5,000,000 own its war bonds," etc. How do you account for the disparity?
3. Why are the bonds of the Liberty Loan a good investment?
4. What are the chief provisions of the proposed Revenue Bill? Discuss the various criticisms of the law.

III. Doing Our Bit—"No Slackers in the War," "Wartime Vacations," "Stolen Goods."

1. "Vacations will be spent . . . trying to find new work to do." Discuss some of the ways in which this will be done as described in the article "Wartime Vacations." What do you propose to do?
2. "The slackers of industry are more apt to be found at the top than at the bottom." What does this mean?
3. Why does Professor Thorndike call his article "Stolen Goods"?
4. Pick out the significant sentence in each of the letters in this article.

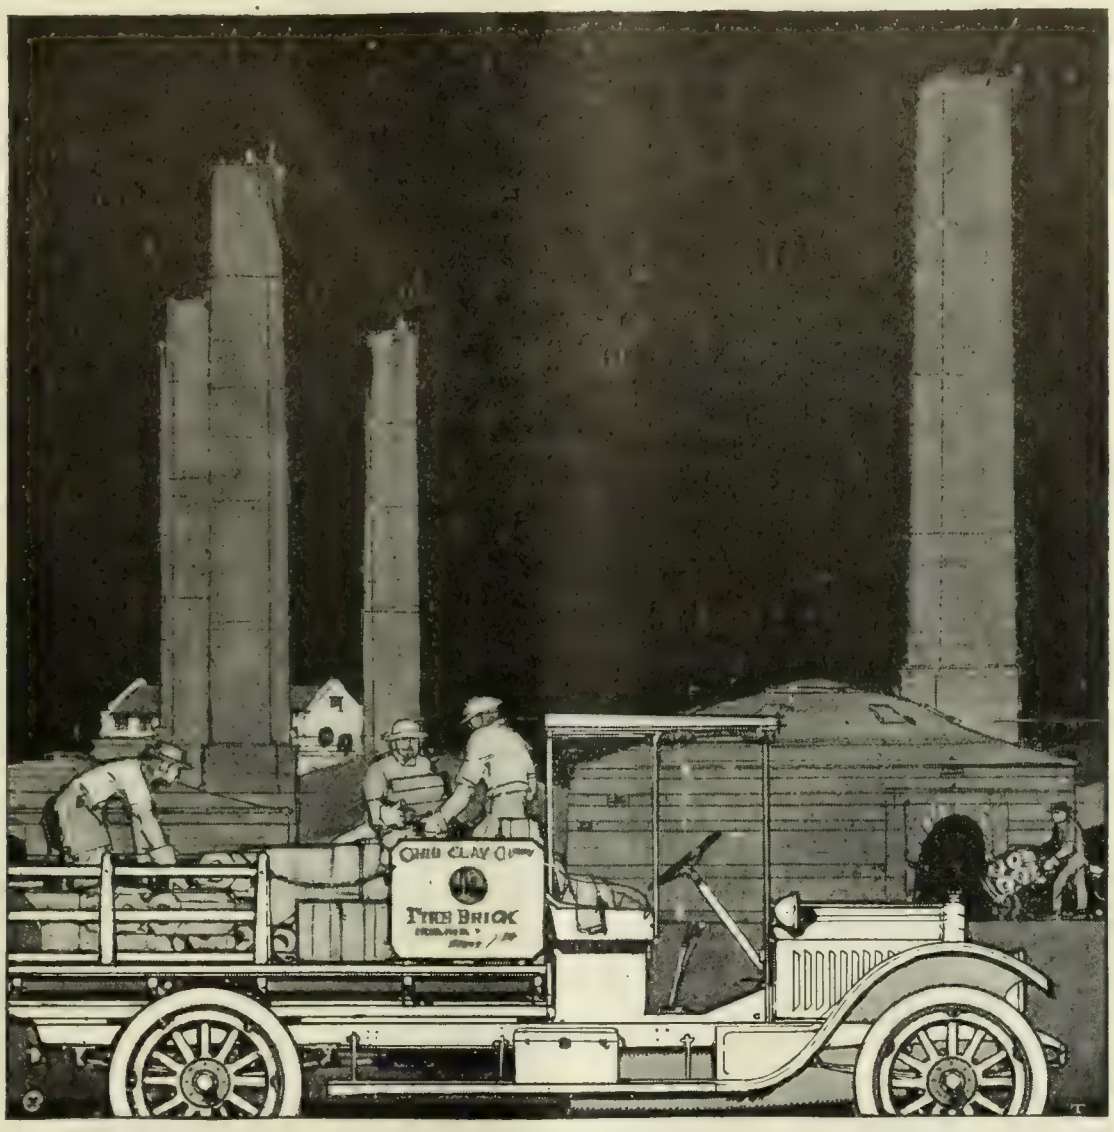
IV. Monarchy or Democracy?—"Crowns and Courts."

1. "They say that England and Germany are in many respects better governed than the United States." Is this due to the fact that these countries are monarchies?
2. ". . . kingship has a sentimental and historical value." What evidence would an Englishman offer to prove that this is true?

V. Electoral Reforms in Great Britain—"Woman's Suffrage in Britain."

1. Review the history of electoral reform in Great Britain during the past hundred years.
2. Give a brief account of the woman's suffrage movement in England previous to the beginning of the war. What has caused the change in sentiment in Parliament?
3. Discuss the provisions of the proposed Act of Parliament as to (a) woman's suffrage, (b) the abolition of plural voting, (c) the redistribution of seats in the H. of C., (d) the establishment of proportional representation.

VI. Home Rule for Ireland—"The Irish Constitutional Convention."



1. Summarize the history of the Irish Home Rule agitation down to 1914.
2. What are the provisions of the Home Rule Act of 1914?
3. Explain the split in Ireland represented by (a) the Ulster party, (b) the Redmond party, (c) the Unionists of the South and West of Ireland, (d) the Sinn Fein.

VII. Transportation Problems in the United States—"Erie Canal for Grain Transportation."

1. Summarize the history of early canal building in the United States. What effect did the building of railroads have upon the use of these canals?
2. Compare the canal mileage in this country with that in Holland and in Belgium. Why is the mileage in those countries so much larger comparatively than in this country?
3. Is there a place for canal transportation as well as for railroad transportation in this country?

VIII. The International Carrying Trade—"The War on Commerce," "Shipbuilding for Uncle Sam."

1. Look up in the "Statesman's Year Book" or some similar manual. the statistics of tonnage owned by England, Germany, France, Holland, the United States and the Scandinavian countries in 1914.
2. How has the war affected the carrying trade of each of these countries?
3. Discuss the measures taken by the United States during the past two years for developing a merchant marine. What will be the probable effect after the war is over?

ROLL CALL

Of White Truck Fleets In Actual Service

THERE are 1695 White Truck Fleets now in service. These fleets comprise a total of 17,471 White Trucks, purchased in repeat orders over a period of years. No single truck owners are included in these figures.

These fleets have grown gradually to their present size and their growth accelerates rapidly from year to year. This is evidence that the longer White Trucks are in service, the more are owners convinced of their superior strength, durability and economy.

The 1917 Roll Call of White Truck Fleets will be sent to any address upon request. This Roll Call gives a complete list of owners showing their annual purchases of White Trucks since 1910.

THE WHITE COMPANY

CLEVELAND

Chandler Price Must Advance $200 June 30

The price of the Chandler Six becomes $1595 on the first day of July. The present model, identically the same car, will be continued after that date. UNTIL THAT DATE THE PRICE REMAINS $1395.

It has always been a basic part of Chandler policy to keep the Chandler price low

We have kept it low. Men considered the original Chandler price of $1785 established four years ago an impossible price. Later when the Chandler Company reduced that price to $1595 the trade thought we were courting disaster. Further reductions came as a positive shock to the industry. Meanwhile the Chandler business grew to front-rank proportions.

The Chandler car was never cheapened, but, rather, improved and refined from season to season until the whole motor car purchasing public has come to recognize that the Chandler car is a car of surpassing values.

We have sold the Chandler for hundreds of dollars less than cars of similar quality

Now, however, the Chandler price must be advanced.

It must be materially advanced to cover greatly increased costs which have arisen this Spring by reason of unprecedented conditions in the material supply and labor markets and in problems of transportation.

This is a condition which we cannot control. It is a condition which we must meet.

At $1595 the Chandler car will still be under-priced. By test of any conceivable comparison this statement is a provable fact.

Now you can buy this great Six at $1395 f. o. b. Cleveland.

While the $1395 price holds, the demand will continue to greatly exceed our production, and we cannot guarantee deliveries

FIVE PLEASING TYPES OF BODY

Seven-Passenger Touring Car, $1395 *Four-Passenger Roadster, $1395*

Seven-Passenger Convertible Sedan (Fisher Built), $2095 *Four-Passenger Convertible Coupe (Fisher Built), $1995*

Limousine, $2695

All prices F. O. B. Cleveland

WHAT ECONOMY MEANS

If we are to win this war it will be necessary for us to make sacrifices, to practise self-denials, to endure hardships of which we never dreamed. . . . If millions of our young men are prepared to give up their lives for the nation, is it too much to ask the rest of us to give up for a time our comforts and our pleasures? . . . It is a duty to refrain from every form of extravagance. The man who is planning to buy this summer a new touring car which he does not really need may be reminded that the price of that car would place an ambulance in the field—and every ambulance means the saving of many lives. A French or Belgian child can be kept from cold and hunger for ten cents a day. The price of a theater ticket would take care of a kiddie for three weeks; the price of a bottle of champagne for two months.

From "Brothers in Arms," by Alexander Powell.

REMARKABLE REMARKS

CHARLIE CHAPLIN—Making fun is a serious business.

MAXIMILIAN HARDEN—All twaddle—this starvation talk.

GENERAL VON DITNURTH—They call us barbarians. What of it?

PROF. A. H. SAYCE—Schiller is a milk and water Longfellow.

LILLIAN RUSSELL—Thin hair is always accompanied by weak eyes.

M. PAUL SABATIER—No Frenchman can now utter the word "peace."

REAR-ADMIRAL LUCE—The truth is that war is an ordinance of God.

SARAH BERNHARDT—The stage was made to moralize the masses.

DAVID LLOYD GEORGE—The fight must be to the finish—to a knockout.

HERR WITTING, head of the Deutsche Bank—God, how we hate England!

FRANK A. VANDERLIP—The war must be fought on the savings of the future.

ORVILLE WRIGHT—We shall have no aeroplanes as large as the "Lusitania."

W. H. TAFT—We will have to send from one to three million men across the sea.

MAURICE BARRES—How beautiful will she be after victory, this regenerated France.

RUDYARD KIPLING—I cannot see what is proposed by the German idea unless it is to march with parade step across a series of Hells philosophically constructed.

PROF. HARNACK—What startling political, judicial and ethical metamorphoses President Wilson has passed thru, changing his convictions as often as his trousers.

REV. JOSEPH H. ODELL—Unless there is a change soon none but the mentally inefficient and the socially ambitious man will ever consider the ministry as a profession.

DR. MICHAEL SINGER—I wish I could impress all my American fellow-citizens with the dangers of Anglo-Saxon individualism and with the blessings of German collectivism.

CAMILLE FLAMMARION—The unity of the human species has never been proven.

ED. HOWE—I sometimes doubt if commercial clubs are as forceful as is generally believed.

PROFESSOR HARNS—Blush for shame if your desire for luxury tempts you to eat pies and pastry.

PROF. EDWARD KREHBIEL—God is declared to be on the side of the nation. This is extending conscription to heaven.

BAHA 'O'LLAH—Let not a man glory in this that he loves his country; let him rather glory in this that he loves his kind.

PAUL LEROY-BEAULIEU—Either France will become a great African state, or she will be, in a century or two, a second-rate power.

GEORGE BERNARD SHAW—Non-German Europe is not going to spend the remainder of the duration of this planet sitting on Germany's head.

CHAPLAIN P. T. EDROP—No mother need have any fear that her son in the National Guard will be surrounded by influences that will spoil her boy.

PROFESSOR BRANDL, President of German Shakespeare Society—The spirit of Shakespeare makes his admirers patriotic and heroic—even against Albion.

AMBASSADOR GERARD — The German Reichstag is nothing but a debating society in which none but a member of the government may introduce a bill.

DR. R. A. MUTTKOWSKI—The Emperor Penguin of the antarctic, which has not even a nest, lays a single egg that must not touch cold ice, and is hatched out on the parent's feet.

LORD LOREBURN—An "attrition" victory will mean such a destruction of the male youth of Europe as will break the thin crust of civilization which has been built up since the Dark Ages.

HEAVYWEIGHT CHAMPION CARPENTIER—If there is a regiment of American boxers to fight along side of us, old warty Hindenburg will have all the more reason for calling for seconds and wet towels.

ISRAEL ZANGWILL—If any man can read the description of the "hundreds of men wounded, lying on contested ground and screaming all thru the night" and not burn to end the war instantly by any honorable means, he must be a devil or a munitions manufacturer.

MAXIMILIAN HARDEN—Do you think that old Herr Balfour the most distinguished fighter in British politics, Viviani, Marshal Joffre and Deputy Tardieu, the foreign minister of the future, risked the difficult voyage across the Atlantic only in order to stroke President Wilson's cheeks?

BILLY SUNDAY—If you can't do without booze start a booze joint in your own home. Let your wife pay $1 for a quart of whiskey, and you pay her back $5 by having her sell it to you a drink at a time. In ten years she will have enough money to bury you, to build a house and marry a regular fellow and forget that you ever lived.

BOATING SONG OF THE YO-EH

O light we glide thru forest green,
By misty shore and gaunt ravine.
And whether we tarry or drift along
The clouds and the birds around us throng,
And mirrored mountains' nodding brows
Follow the wake of our flying prows.

Now song returns from rock to rock;
Now soundless glades our silence mock.
Sunbeam and shadow elves at play
Beckon our wandering wills to stray.
Ah furl your sails! ah furl your sails!
The last wind down the valley fails.

L. Cranmer-Byng in "A Feast of Lanterns"

THE WORKERS OF THE WORLD

The monotony of the day's work, the tiresome routine of an employment that never rises above the level of a fixed plan or pattern, is lightened and brightened by nourishing foods that keep the mind alert and the muscles strong and elastic.

Shredded Wheat

supplies the necessary strength-giving nutriment in a form that does not overtax the digestion. The effort of the body to digest heavy foods leaves little energy for the daily tasks. Every particle of Shredded Wheat Biscuit is digested and converted into healthy tissue. It is ready-cooked and ready-to-serve—the whole wheat grain steam-cooked, shredded and baked into crisp little brown loaves. Two Shredded Wheat Biscuits with hot milk make a nourishing meal at a cost of four or five cents. Delicious with berries, sliced bananas, stewed prunes, or other fruits.

Made only by

The Shredded Wheat Company, Niagara Falls, N. Y.

The Independent

A Journal of Civilization

STEEL SHIPS AND WOODEN

GERMANY relies upon the ruthless submarine to win the war. The United States and its Allies must meet the submarine menace with ships, more ships and still more ships. For the United States must feed, munition and supply its Allies, or it will fail in its lofty purpose of making the world safe for democracy.

It is unfortunate that the Shipping Board and the General Manager of the Federal Shipbuilding Corporation, who are jointly charged with the giant task of building ships faster than Germany can sink them, should fall out over methods. For controversies are parlous wasters of time, and time is of the essence of the matter. We must outwit the submarine quickly or it may be too late to outwit it at all.

General Goethals believes in steel ships. He would have every energy and resource that America possesses turned to the making of ships of steel. He promises to turn out three million tons of steel ships in eighteen months—and the builder of the Panama Canal is thoroly accustomed to keeping his word.

This is splendid—but is it enough? Eighteen months is a long time—and German frightfulness will not wait. If we can get ships sooner than that by any means whatever, nothing should be permitted to stand in the way.

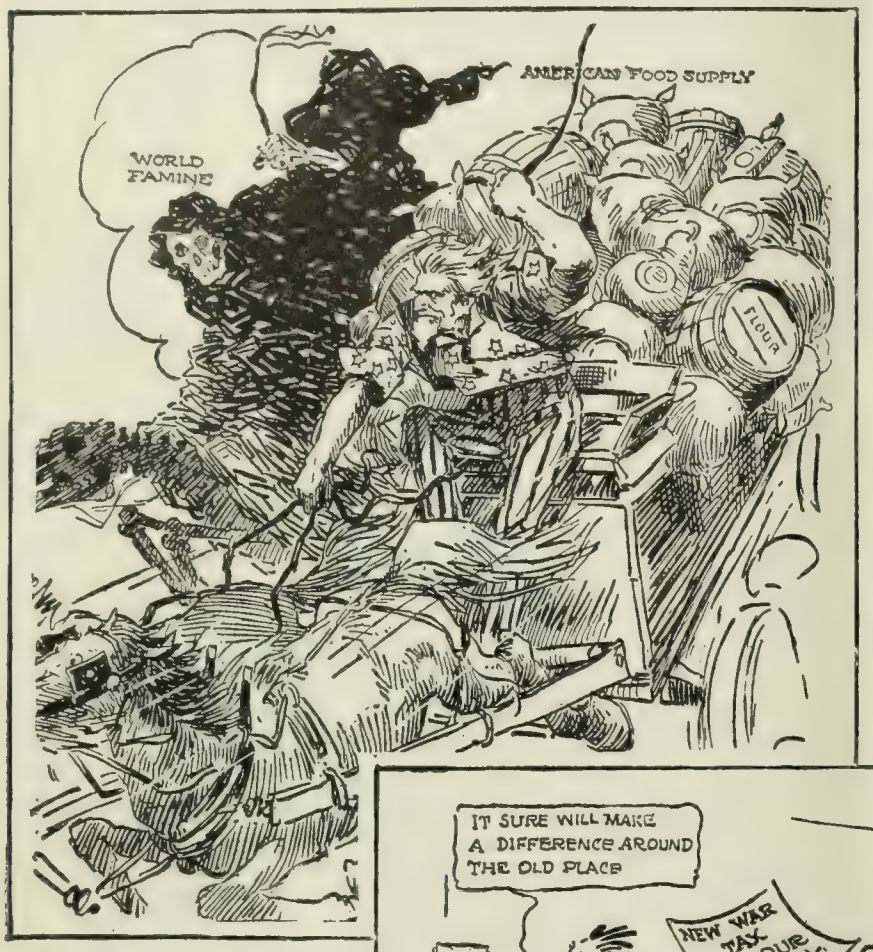
The Shipping Board believes that we can. It wants to build, not only steel ships, but ships of wood as well. Something like two months ago it adopted plans for building a great fleet of small wooden ships; the plans combined the advantages of standardization, rapidity of construction, the use of carpenter labor in connection with that of skilled ship builders, and the utilization of a much larger percentage of the existing stock of seasoned lumber than could be used for ships of ordinary design built in the old fashioned way. The ships thus planned would have possessed the double advantages of large freight carrying capacity and low visibility. The ships could have been turned out with remarkable rapidity; thru their use the United States could have begun to meet the submarine menace with gratifying promptness.

This plan has been set aside in favor of one which might have made a handsomer ship and possibly one of somewhat greater usefulness in the long run; but it would have involved very much slower building and the use of only a small selected part of the existing stock of lumber. Now General Goethals will have none of the wooden ships at all; he puts all his money on steel.

For a permanent merchant marine the general is doubtless right. But it is an emergency merchant marine that we must create. We must defeat the submarine *now;* the addition to the American merchant marine of "a great and permanent fleet," which General Goethals set forth before the American Iron and Steel Institute as an argument for steel ships, should be a purely secondary consideration. If we do not win this war, no merchant marine after the war will be of much use to us. The time to defend democracy is now. The way to defend democracy against the frightful attacks of Prussian autocratic ruthlessness is with every energy that America can command, every device that Yankee ingenuity can invent.

There can be no question that both the members of the Shipping Board and General Goethals are of the utmost single mindedness in their determination that Germany shall be defeated. It is not necessarily a bad thing that their points of view on the solution of the ship problem should be divergent, for in the multitude of counselors there is safety. But the judgment of neither should be permitted to stand in the way of *any* plan that will add a single ship during the coming critical months to the fleet that is the American answer to the German submarine defiance.

General Goethals has exprest the picturesque belief that all boards are long, narrow and wooden. This is as nearly true as any statement as picturesque as that is likely to be. But even a despised board may have one other characteristic. It may sometimes be right.



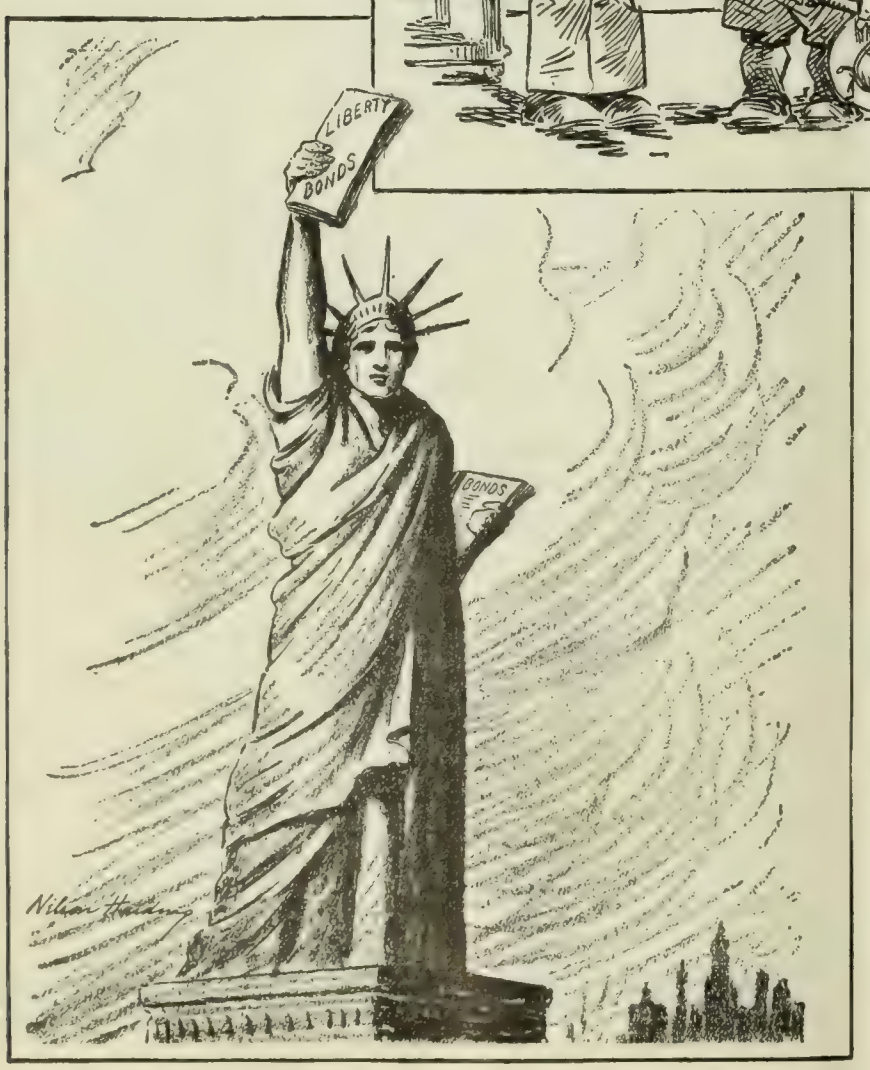
When the general manager of the Federal Shipbuilding Corporation demands steel ships and the Federal Shipping Board demands steel ships *and* wooden ships, it is not the individual that is right nor the board that is long and narrow.

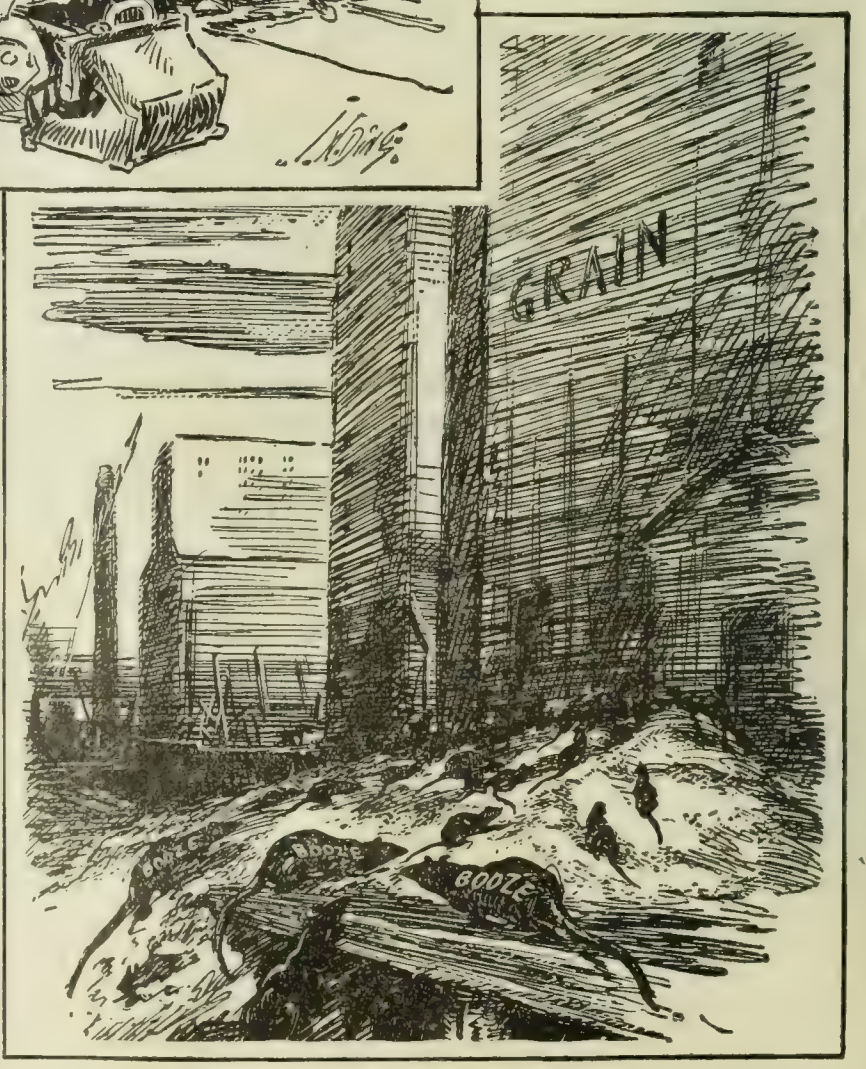
RUSSIA'S TEMPTATION

THE conflict between the Provisional Government of Russia and the more radical Workmen and Soldiers Council arose chiefly over the question of the treaties which bound Russia to her allies. The Minister of Foreign Affairs in the Provisional Government, Dr. Milukov, insisted that these constituted permanent engagements of the country regardless of the change of government and that it would be dishonorable to repudiate or to reveal them. But the Socialists of the Council recognized no obligation to carry out the promises made by the old régime. They wished to start with a clean slate and demanded that the secret treaties be repudiated or published, and that Russia work for world peace on the basis of "no indemnities and no annexations." Obviously the Russian Government could not make public the treaties without fatally offending the Allied Powers, for it would disclose their diplomatic history for years back and their future plans for the conquest of the Central Powers. So a compromise was arranged. Milukov resigned, six Socialists from the Council were taken into the Cabinet and the Government as thus reconstituted undertook to

CARTOON COMMENT

COME ACROSS!





Here are five civilian answers to our new war cry, Come across! *— United States for "Do your bit." Food production of course comes first, Ding of the* New York Tribune *calls it "The Most Critical Race in Our History." Ding is also responsible for the next two forceful appeals to American patriotism:*

Putting the submarine problem "Up to Father" and (center) "A Proud But Touching Parting" with our profits. "Liberty in Bonds" is Nelson Harding's slogan in the Brooklyn Daily Eagle, *and in the last cartoon Cesare of the* New York Evening *Post* presents a striking *argument for bread vs. beer*

negotiate new treaties without publishing the old ones. What the old treaties are and what it was in them that the Socialists objected to can only be surmised, but it is easy to see why their threatened publication caused anxiety in every European chancellery. They form doubtless the basis of the Entente Alliance out of which grew the coalition against Germany and they must cover such delicate questions as the partition of Persia between Great Britain and Russia (August 31, 1907), the loans made by France to Russia shortly before the war for the construction of military railroads leading to the German frontier, the conditions and extent of the aid which France and Russia were to render to one another in case of a war with Germany, the agreement of the Allies at the Paris Conference of 1915 as to the restriction of German commerce after the war, the conditions under which Russia was to get Constantinople, the plans for the partition of Austria-Hungary and Turkey, and for the reorganization of the Balkans. All these secrets, tho they may contain nothing discreditable to any of the parties concerned, would be exceedingly embarrassing to all if they were revealed to the world at this juncture.

The Workmen and Soldiers Council in a recent pronunciamento says: "By the strength of our organized pressure we will compel the Allies to give a definite repudiation of all aims of conquest in the war." Whether they have such power is doubtful in view of the statements of Sir Robert Cecil and Premier Ribot that England and France will never allow Germany to regain her colonies or to retain Alsace-Lorraine. But evidently Russia now holds the whip hand and can exert a strong influence upon her allies by threatening to repudiate the treaties of alliance and make a separate peace with Germany. This would release for service elsewhere not only the million soldiers that Germany has had upon the Russian front but also the million and a half of prisoners now held in Russia as well as the Austro-Hungarian, Bulgarian and Turkish troops now employed against Russia and Rumania. This would more than double the effective strength of Germany on the French front, where she is now holding the Hindenburg line with some two million troops. Greece would either be conquered or coerced into joining the Germans and Italy could hardly hold her own or even withstand an invasion. The Mediterranean and the Baltic would be practically under German control and it might prove hard to prevent Sweden from entering the war against the Allies. All of the forces of the four Central Powers, now scattered from Riga to Bagdad, could then be thrown against the single line in the west between Ypres and Verdun, where, as Joffre says, more men are desperately wanted for defense.

But, what is more serious, the withdrawal of Russia would relieve Germany of starvation and supply her with the petroleum, leather, glycerine, copper, platinum and other materials she now so sorely needs. With the vast grain fields of Russia at her back Germany could snap her fingers at the British fleet. The money received from such products would relieve Russia from her financial distress and besides Austria and Germany are promising her immense sums for internal development while insinuating that America and the Allies will provide money only to be spent on munitions.

Russia is so situated that she could make peace with impunity. However incensed the Allies might be at Russia's violation of the compact not to make a separate peace they could not get at her from any direction except the Pacific without first overrunning Germany or Austria-Hungary and this would be more difficult than ever. They could threaten to cut off commercial and financial relations, but, on the other hand, Russia might retaliate by repudiating the enormous loans which she has obtained from France and Great Britain.

This, then, is the bribe offered to Russia if she will betray her friends: peace, restoration of her territory, an open market, financial relief and friendship with her only powerful neighbors. If on the contrary she spurns the bribe she is threatened with an invasion that may reach to Odessa or Petrograd, whenever Austria or Germany can spare troops for the purpose. The decision lies in the hands of men inexperienced in diplomacy, absorbed in the task of establishing a socialistic republic, little concerned with foreign affairs and feeling slight responsibility for the continuity of national obligation. If under such temptation they keep faith with the Allies they will show such heroism and loyalty as are rarely found in the history of international relations and will have earned the eternal gratitude of the world for saving it from the appalling calamity of a German victory.

Are you doing something to help your country fight the good fight for civilization and humanity and the rights of man?

Have you subscribed to the Liberty Loan?

Will you do it today?

WHAT IS PATRIOTISM?

A READER of The Independent has asked us for a definition of patriotism. No light task was set for us, for it is just the commonest ideas, the most universal sentiments, which are hardest to explain in set terms. If one is asked to give the distinctive characteristics of Byzantine architecture or explain how Belgium came to be a neutralized state, or tell what is meant by Mendelism, a dozen standard works of reference in every library contain the answer to the question. Not so with terms such as "religion," "civilization," "patriotism." These are too much a part of life to be readily isolated from it and examined apart; they are too easily understood to be easily explained. Yet in courtesy to our correspondent and perhaps to make clear to ourselves our own thoughts on the question, we must make the attempt.

Patriotism, of course, means love of country. But there are many kinds of love. To be a patriot implies more than pride in a nation's greatness or a liking for its institutions and habits of life. If that were all, the patriot would have toward his own land the same detached appreciation that the tourist has toward the place of his summer sojourn. He would cheerfully turn his back upon his country if misfortune should make it poor or weak or give it evil rulers. The patriot's love must be of a more responsible and unselfish sort; he must serve as well as admire. A few months ago the Russian liberal would have seen so little to respect in the institutions of his native country that he would have abandoned Russia to her fate and transferred his sympathies to some happier land, unless he were a patriot. As a Russian patriot, the liberal would work and pray unceasingly for the freedom of his country no matter how far from Russia he might be. In a word the patriot is not he who says: "This nation is worthy, therefore I will love it," but he who says, "I love this nation and I shall do all in my power to make it worthy of the love I bear it."

It is not enough, however, to sacrifice one's personal interests to the welfare of the nation. The patriot must realize that the nation, too, has its duties, and that it is the deepest treason to exalt the immediate self-interest of the nation above the permanent ideals which are the nation's soul. The true patriot must say with the true lover, "I could not love thee, dear, so much, loved I not honor more." They were not German patriots who flattered the self-esteem of the Kaiser, who taught contempt of foreign nations, who tempted the Fatherland with the lure of easy conquest, who urged that the interests of the state demanded the violation of the nation's pledged word and the

disregard of all the traditions and conventions which humanity has evolved to soften the asperities of war. Germany has been disgraced and brought to ruin because her rulers preferred the courtiers who told pleasant lies to patriots who told disagreeable truths. Of course there is a just medium between the pride which is blind to what the foreigner can teach us and the self-contempt which paralyzes hope, but powerful and prosperous nations are more in danger of the former fault. The patriotic citizen should combine the insight which can discover all the imperfections of the nation, the constancy which can love it notwithstanding, and the determination which can achieve reform. Patriotism is the perfect identification of personal interest with the national welfare and personal honor with the national conscience.

THE NEW FREEDOM

THE U-boat has started a great reform in England. Lord Devonport, the British Food Controller, has prohibited the manufacture of starch for laundry use. All the potatoes and corn that the United Kingdom can raise are now needed internally to stiffen up the resistance to the Germans, and none can be spared for external purposes.

Thus Mars revokes the dictates of La Mode and strikes off the shackles that civilized man had not the courage to discard. It is the very virtue of cloth that it should be soft and pliable; to convert it into a rattling, crackling amyliferous fabric resembling tinplate is to make it contradict itself. To bind the neck, most mobile of bodily articulations, in a band as of iron with sawteeth inside, to sheathe the wrists in stiff cylinders, to board up the breast with a flat, hard, smooth surface as tho it were to serve as a screen for motion pictures; these are contrary to both art and nature, and no one has ever attempted to justify them to the rational mind or to the esthetic sense.

But comfort has always been subservient to fashion and conformity has overridden convenience. When there was a queen who wore her linen too long, the loyal ladies of her court used yellow starch. But this propensity to imitation gives us hope that America may share the benefit of England's enforced fashion. London has set the form for gentlemen the world over. Our Tories turned up their trousers whenever it rained in London, and since it usually rained in London, it became the custom here to have trousers made with permanent cuffs. Let us once more imitate England and swear off starch for the war. By so doing we would show our sympathy for our Anglican Ally and add to the store of carbohydrates to be sent oversea. There are few cases of self-sacrifice that would cost us less and pay us better than this.

VARIETIES OF MILITARISM

LIKE "pacifism," the varieties of which were discussed in The Independent of March 19, "militarism" is a word which conceals a very wide range of attitude and belief. Of course we can all see that when the word is applied to the reluctant participation of a peace-loving nation in a war that cannot well be avoided, or when it is used as a synonym for universal military service (as practised for instance by that arrogant and oppressive autocracy Switzerland!), it is a mere term of abuse and not a true counter of human thought. But even when we use "militarism" correctly as meaning the frame of mind which sees in war not a temporary evil incident to the present anarchic state of international relations, but a normal and necessary part of the rhythm of human existence, we include within the term more than one type of person.

First, we have the Primitive Militarist. He it is who would hate to see war disappear because personally he enjoys fighting. A world in which personal combat had disappeared would be to him a nightmare. This type includes the "bad man" of the frontier, the small boy who greets each new acquaintance with the friendly salutation, "I can lick you!", and the painted Indian on the warpath. But the highly artificial conditions of modern warfare give the Primitive Militarist little scope, and the discipline of the army irks him, so that if civilization can devise bloodless channels for his belligerency there is hope of converting him to pacifism.

Secondly, the Romantic Militarist. The root instinct which makes him love war is the same joy of combat that animates the Primitive Militarist, but he has refined the form and embodiment of this instinct into an elaborated game of war. Medieval chivalry was the perfect expression of romantic militarism. It is very attractive; in certain moods we are all of this mind. Who cares, in reading Shakespeare's magnificent drama of "Henry V," that Agincourt was really won by soldiers who fought in an unjust quarrel? It is enough that they were outnumbered and fought with skill and valor. Who cares, when drunk with the rollicking music of "Bonnie Dundee," that the hero of the song was a cruel oppressor conspiring to restore the misgovernment of the justly exiled Stuarts? To the Romantic Militarist, as to Nietzsche, "a good war justifies any cause." But it must be a *good* war; he cannot endure a calculated, coldblooded war, and any departure from the rules of civilized warfare appears to him as bad sportsmanship. The Romantic Militarist cares little for victory or defeat, so that the war is bravely fought, and he is quite willing to obey the Biblical injunction to love his enemy if that enemy will wage war in his own generous spirit.

Professional Militarism is still a third type. The soldier, and especially the army officer, tends to regard war not as play but as business. He thinks war normal and necessary because war is his trade and not because he likes it; he is steeped in a constant atmosphere of military preparation just as a lawyer or detective is familiar with crime and a doctor finds illness an everyday matter. The normal army man is kindly and courteous personally and no jingo in politics, but he often tends to overvalue the very relative virtues of obedience and discipline, and he has not the critical attitude of the civilian toward national policy or the civilian's hope to abolish war by substituting legal methods in international controversy.

Political Militarism is best represented by such men as Bismarck and Frederick the Great. Such men care nothing for the romance of war and may even detest the necessity of fighting. But they regard war as an indispensable, if unpleasant, means to national greatness or dynastic ambition, and therefore never hesitate to provoke war when it will suit their purposes. Since the Political Militarist covets the fruits of war and not the war itself, he will use every method of ruthlessness to finish the struggle as soon as possible and he will disregard all military codes or rules of war which hamper his freedom of action.

Last, worst, and least common is Doctrinaire Militarism. The Doctrinaire Militarist, more frequently a sedentary literary man than a warrior or statesman, is the one who evolves a theory that war is not a necessary evil but a positive benefit to humanity, that it saves nations from decadence, or promotes the survival of the fittest, or assures the ascendancy of the superior type of civilization (usually that of his own people). There are not many Doctrinaire Militarists in the world, but as most of them are armed with the pen that is mightier than the sword, their power for mischief extends as far as the gullibility of their audience. Other kinds of militarists will use the theories of the doctrinaire to counteract pacifist propaganda or to justify their own warlike policies to themselves, and therefore we find his cant abounding in every country, most of all in Germany. A little actual experience in the front trenches will usually cure the Doctrinaire Militarist of his illusions about war, and perhaps convert him into the Doctrinaire Pacifist.

THE STORY OF THE WEEK

Austrian Peace Move

For the first time in the new reign and the first time since the war began the Austrian Parliament has been convened. By this act the Emperor Charles has virtually declared his independence of Berlin, for the Germans of his own empire as well as of Germany were strongly opposed to the reëstablishment of parliamentary government and to the measures it is likely to bring forth. The policies of the new emperor so far as they have been disclosed are the expansion of the franchise in Austria and Hungary, the recognition of the rights of minor nationalities, and the conclusion of a peace without conquest. All three of these are contrary to German interests, for they would overthrow German dominance in the Austrian Empire and interfere with the proposed formation of a Central Europe combination under German control. These policies are positively tho vaguely exprest in the Emperor's first address to the Reichsrat. In reference to peace with Russia and her allies he said:

> The future life of the peoples should, in our view, remain free from animosity and thirst for revenge, and for generations there should be no need to employ what may be called the last resource of the state. . . .
>
> The great neighboring people to the east, to whom old friendship united us, is gradually becoming conscious of its true aims and tasks, and it lately appears to approach this standpoint and seek from an obscure impulse a direction of policy which will save the treasures of the future before they have been devoured by a senseless war policy. We hope that in the interest of humanity this process of internal reformation will manifest itself extremely in a strong development of will and that such enlightenment of the public mind will also extend to the other enemy countries.
>
> While our group of powers is fighting with irresistible force for honor and existence, it is and remains toward every one who honestly abandons the intention to threaten us readily prepared to cease hostilities, and whoever wishes to reopen better and more human relations will certainly find our side ready in a conciliatory spirit. In the meantime, however, our fighting spirit will not relax; our sword will not become blunt.

The passage referring to franchise reform and local autonomy reads as follows:

> I am convinced that a happy development of our constitutional life after the unfruitfulness of the past years and after the exceptional political conditions of war time—apart from the solution of the Galician question, for which my illustrious predecessor has already indicated the way—is not possible without expanding the Constitution and the administrative foundations of the whole of our public life, both in the state and in the separate kingdoms and countries, especially in Bohemia.

This indicates that Emperor Charles is prepared to grant to Bohemia and other Slav states the powers of local self-government which Emperor Francis Joseph extended to Galicia in the last year of his life. In this way he hopes to counteract the effect of the Allies' reply to Wilson's request for their terms of peace in which they stated that they were fighting for the liberation of the Czechs and Slovaks of Bohemia. But in an independent or autonomous Bohemia the Germans, who number about a third of the population, would be in the unenviable situation of a minority race. The German newspapers of Bohemia are so pronounced in their objections to this policy, that they have been suppressed by the Austrian Government.

THE GREAT WAR

May 28—Twenty-one British vessels sunk during past week. Russian soldiers demand munitions and peace without annexations or indemnities.

May 29—Count Andrassy becomes Hungarian Premier. Brazilian Chamber of Deputies revokes declaration of neutrality.

May 30—Italians gain on the Carso. Germans attack hills east of Reims.

May 31—Austrian Parliament convened for first time during the war. Eleven Chinese provinces revolt in favor of war.

June 1—British airmen bombard Zeebrugge and Ostend.

June 2—Lord Devonport resigns as Food Controller. Root Commission arrives in Russia.

June 3—Kronstadt declares independence of Government. British Socialists urge peace without annexations.

International Film Service

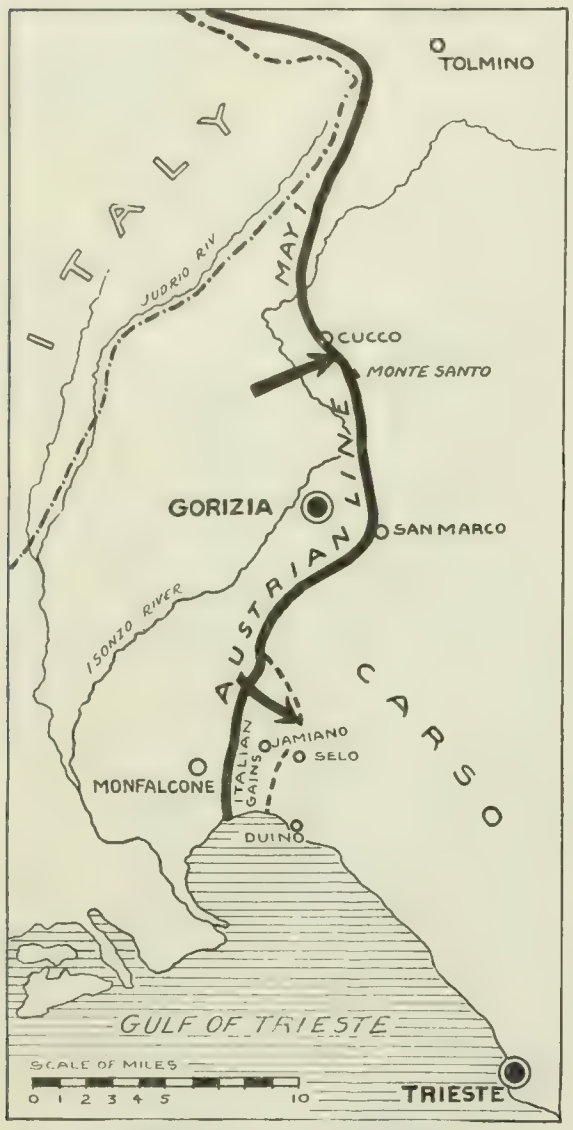
PRESIDENT WILSON'S SPEECH IN THE TRENCHES

Allied aviators now are bombarding the German lines with translations of President Wilson's proclamation of war, for it may be that the German people themselves will want to take a hand in making the world safe for democracy if they can ever know the truths that underlie this war

Hungarian Peace Move

In his other capacity of King of Hungary, Charles is evidently determined to carry out a similar policy of peace and democracy. Count Tisza has resigned his position at the head of the Hungarian Government because he could not agree with the King as to the desirability of extending the franchise to all male citizens. This would mean the abolition of Magyar supremacy, for the Magyars are really in a minority in Hungary. Count Tisza is a conservative and a pronounced pro-German, but his successor as Hungarian Premier, Count Andrassy, is a liberal and an admirer of English and American institutions. Even Count Tisza was heartily condemned in the German press and the Reichstag because he approved of President Wilson's proposal of "peace without victory," but Count Andrassy is likely to be still better disposed toward peace.

In fact, we see the curious situation that in both Austria and Hungary the Cabinets agree with the Socialists, who are scarcely represented in parliament, in favoring what is called in Europe "the Wilson-Kerenski peace terms" of no annexations and no indemnities.



The radical members of the Hungarian parliament who opposed the late Premier, Count Tisza, and will form part of the support of the new Premier, Count Andrassy, are working for an immediate peace on the basis of no annexations and for a League to Enforce Peace, in the following terms:

> In place of the groups of powers which now exist and are the cause of endless international difficulties, all the civilized nations of the world should unite in one international organization from which a common jury should be created having the power to settle disputes arising among the nations.

Principles such as these have been endorsed by large and enthusiastic meetings in Vienna, Budapest and various other places in Austria-Hungary, and emphasized by strikes and street processions. Resolutions embodying them will be introduced into the Austrian and Hungarian parliaments.

The Italian Drive

General Cadorna has struck another heavy blow at the Austrian front. He began his offensive movement on May 14 by assaulting the hills north and east of Gorizia, but shifted the point of attack to the south and has made his greatest advance near the sea in the direction of Trieste. Here the Austrians were solidly established on the Carso hills north of the seaport of Duino, but they had apparently relied too much upon the natural strength of their position and were taken by surprize. Their rock-hewn redoubts and tunnels proved to be traps, for the troops they sheltered were sometimes captured and sometimes buried alive by

THE CARSO BATTLEFIELD

The Italian drive is directed over the barren, rocky plateau of the Carso that blocks the way to Trieste. General Cadorna is gaining the edge of the plateau between Duino on the sea and Jamiano on the hights a thousand feet above. The arrows indicate the Italian attacks

the smashing in of the exit. Altogether the Italians took 24,000 prisoners in the first fortnight of their offensive. The total Austrian losses are estimated at 85,000. The Italian advance was so rapid that the Austrians were not able to retire their guns and so lost thirty-six of them, including 42-centimeter howitzers. In some cases the artillerymen were found fastened to their guns by steel chains to prevent desertion.

In order to check the Italian drive the Austrians have been obliged to draw troops from the Trentino and the Russian front, and to utilize their new levies. Some of these raw soldiers were rushed directly from the train into battle and were killed or captured before they had fired a shot or laid off their marching kits. The wholesale surrenders may be explained in part by the fact that the troops placed here were largely Rumanians, who would prefer to fight against Austria-Hungary rather than for her.

The Austrians for their part claim that their lines on the Carso remain essentially unbroken and that they have taken 14,000 Italian prisoners.

Confusion in Russia

So far as can be judged from the cablegrams the internal condition of Russia is growing worse from week to week. Peasant riots in the country and workingmen strikes in the city, royalist revolts and German conspiracies, desertions from the army and fraternizations with the enemy, an empty treasury and a shortage of food, are some of the difficulties that the new Government has to contend with.

The one strong man of the Provisional Government seems to be the Socialist War Minister Kerenski. He is visiting the armies at the front and making speeches to the soldiers urging them to hold their lines against the Germans. At the same time he is trying to put a stop to desertion by the arrest of deserters in Petrograd. For this use of "the iron hand" he has been denounced in meetings of the deserting soldiers and has narrowly escaped assassination. His order of the day on the rights of soldiers introduces a more democratic régime than has ever been thought possible. All members of the army from general to private are declared equal. Salutes are optional, not obligatory. No soldier can be punished without trial except during war operations. Free liberty of political and religious opinion is guaranteed. Soldiers need not wear uniform when off duty.

The monks of Russia have demanded the vote and will enter the national service at the front in the department of sanitation.

The American Railroad Commission headed by John F. Stevens, former chief engineer of the Panama Canal, has arrived at Vladivostock on its way to Petrograd. The Root commission of diplomatic and military envoys is also reported to have safely reached "a Russian port." Arthur Henderson, the Labor member of the British War Council and Cabinet, is in Petrograd on a Government mission.

Goethals Gets Building Powers

The Senate approved, on June 2, the report of the joint conference committee on the war deficiency bill. The big war budget, carrying authorization for the expenditure of nearly three and a half billion dollars, finally passed the Senate without a contest, but its passage was delayed for several days by the uncertainty in respect to the shipbuilding situation. As the bill contained among other items an appropriation of $750,000,000 for shipping, Congress desired to ascertain into whose control the extensive powers granted in the measure for the rapid construction of ships would be entrusted. The Senate had previously attempted to limit the delegation of supreme power over shipbuilding to General Goethals, but the House insisted upon leaving the matter to the discretion of the President. The Senate accepted the wording of the bill desired by the House, but only upon the assurance of the administration that General Goethals would have a free hand in planning shipbuilding, and that the functions of the Shipping Board would be confined to operating the ships after they are built.

Now that a satisfactory division of powers between the general manager of the Emergency Fleet Corporation and the chairman of the Shipping Board has been arranged, contracts are being rapidly given out for the supply of necessary materials. The steel manufacturers have promised to turn out three million tons of steel ships within eighteen months. General Goethals much prefers steel construction, because the present state of American industry is better adapted to the speedy and economical building and equipment of steel ships than to reviving our old-time commercial servant the wooden ship. But, while building in steel will hereafter be the chief task of the Emergency Fleet Corporation, many wooden vessels will also be constructed. One hundred wooden ships will be built with lumber furnished by southern mills which have already made their bargain with the Government. Secretary Redfield of the Department of Commerce has notified Congress that on the first of May there were under construction in American shipyards 537 steel vessels, aggregating more than two million tons, and 167 wooden ships with a total tonnage about one-tenth as great. The figures are nearly double those of a year ago.

Progress of Food Legislation

The first of the administration food conservation measures passed the Senate on June 2. It had already passed the House of Representatives, but so many amendments were added that the final form of the bill must be settled in conference. The measure provides for a survey of the food resources of the nation, for the Federal supervision of agriculture and such measures of aid to the farmer as the sale of seeds by the Government, and for the punishment of persons hoarding foodstuffs or manipulating the market with intent to limit the food supply or to exact extortionate prices. The President is authorized to prohibit dealing in futures on the grain exchange should such a step in his judgment become necessary. Exchanges disregarding this request may be closed by proclamation.

Neither in the House nor in the Senate was a record vote taken, but many Representatives attacked the projected survey as a waste of the people's money and a means of multiplying posts for office seekers. The traditional American hostility to the expert crept out in the course of debate. Secretary Houston, of the Department of Agriculture, and the new food administrator, Herbert C. Hoover, were roundly denounced as "dictators." Senator Reed declared that there was not a farmer who did not know more about the practical details of running his farm than the Secretary of Agriculture could tell him, and that the sole function of experts was to aid but not to control the producers. A more constructive suggestion was offered by Miss Jeanette Rankin, of Montana, who spoke in favor of including as many women as possible in the work of the food survey. Miss Rankin's speech, the first address of any length which she has made in Congress, was received with general approval by her colleagues in the House.

The Crisis in France There are no changes to be recorded on the map of France during the past week. Artillery firing has of course kept up all along the line and there is increased activity in the air on both sides, but no military movements of importance are reported except the futile efforts of the Württemberg and Thuringian regiments to recapture the hills recently taken by the French in the Champagne, twelve miles east of Reims. The visit of the Kaiser to the front is thought to presage an offensive by the Germans, for in his speeches to the troops he said that "a decision is near at hand" and exhorted them to greater exertions to attain a final victory. The British, he declared, were their chief enemy, for the French were fighting for the noble motive of freeing their country, but the British solely to increase their own power.

The struggle, indeed, seems to be nearing a crisis, for the French, the British and the Germans all three have larger armies in this field than ever before and, with the exception of the British, larger than they will ever be able to raise again in the present war. France has admittedly come to the end of her human resources, for all the able bodied men in the country are enrolled in the service, altho 250,000 are necessarily employed in the munition works. According to an official statement of André Tardieu, the head of the French Commission in America, the French armies now comprize between 2,700,000 and 3,000,000 men, which is 800,000 more than fought the Germans in the battle of the Marne.

The British have perhaps about the same number of soldiers in France, but they have still three or four millions of fit civilians to be drawn upon before they reach the same stage of exhaustion as the French.

Chancellor of Exchequer Bonar Law in his parliamentary address May 5 congratulated the House of Commons on the achievements of the first twenty-four days of the Arras offensive in France which, he said, had gained four times the territory with casualties fewer by 50 to 75 per cent than in the British offensive on the Somme last year. But this favorable view was not confirmed by later experience, for during the month of May the British gained little territory while their losses were 114,118 of whom 27,390 were killed, 79,480 wounded and 7,248 missing. This is only ten per cent less than in the second month of the battle of the Somme instead of 50 to 75 per cent less.

The French, it is to be feared, have suffered still more, for their offensive did not achieve even the moderate success of the British. The German casualties are likewise unknown, but according to the estimates of General Pétain's staff, the Germans must have lost 250,000 men on the French and British fronts during the first two months of the spring operations. If the French estimates are correct the Germans have about three million men in arms, of whom two million are on the western front. It seems then that the combined French and British forces in France outnumber the Germans by about three to one. This numerical superiority, however, does not seem sufficient, and it is not expected that the Allies will be able to force the Germans back until the arrival of large American armies next year.

Shipping Losses The number of British ships of more than 1600 tons sunk during the week ending May 27 was 18, which is the same as for the two preceding weeks and about half what it was in April. Besides these only one smaller ship and two fishing vessels were lost, which is considerably less than before. From this it may be inferred that the depredations of the U-boats are decreasing instead of increasing, as it was feared they would with calmer weather and longer days.

But we cannot say in how far this represents a real improvement in the situation because no information is given out as to the size of the vessels sunk. The British Admiralty has been sharply criticized in Parliament because of its inadequate and misleading reports, but it refuses to alter its policy of secrecy lest it should aid the enemy. But in reply to such criticism Lord Curzon endeavored to reassure Parliament and the public by stating that the shipping of the United Kingdom was not much less than before the war, and that it was still about half of the total shipping of the world. In June, 1914, the United Kingdom had 3900 merchant vessels of over 1600 tons with an aggregate gross tonnage of 16,900,000, and at the end of March, 1917, the number was 3500 and the tonnage 16,000,000.

It would appear from this that the losses to British shipping of this class was about four per cent for the month of April and two per cent for the month of May. But only about half of the British shipping is available for bringing food and other essential supplies to the British Isles. Most of the rest of it has been commandeered for naval and military purposes, and the losses

WILL THEY HOLD OUT, FATHER?

Louis Raemaekers, of *De Telegraaf*, Amsterdam, probably stands today as the foremost of war cartoonists, since he adds to the skill and force of his drawing a sincerity of expression that shirks neither the horror nor the necessity of this war

Underwood & Underwood

OUR FIRST COLONIAL CONTINGENT

Most of San Juan, Porto Rico, turned out to cheer the Porto Rican regiment just sent to the Panama Canal Zone for guard duty

among these vessels are not reported. An indiscreet deputy in the French Parliament made the statement that merchant ships aggregating 5,400,000 tons had been sunk since the beginning of 1915, and that 2,200,000 tons had been lost since the beginning of 1917. The further discussion of the question was carried on behind closed doors, but when the public session was resumed, Admiral Lecaze, Minister of Marine, admitted that the losses of the first four months of the present year may amount to 2,500,000 tons. This tends to confirm the German claims as to the accomplishments of the U-boats, tho there is no indication that England is being brought to starvation as they anticipated she would by this time.

Obviously, the problem cannot be solved without the missing factor, the losses of the U-boats, but the British Admiralty refuses to disclose this except to the American Government. It is, however, hinted that the closer watch kept near the German ports has resulted in the capture of many U-boats, going or coming. New contrivances are said to be successfully employed in catching them, and the American destroyers in the Atlantic and the Japanese destroyers in the Mediterranean are giving valuable aid.

Three American sailing vessels are reported sunk by gunfire from German submarines; the four masted ship "Dirigo" of Plymouth, and the schooners "Frances M." and "Barbara" off the coast of Spain.

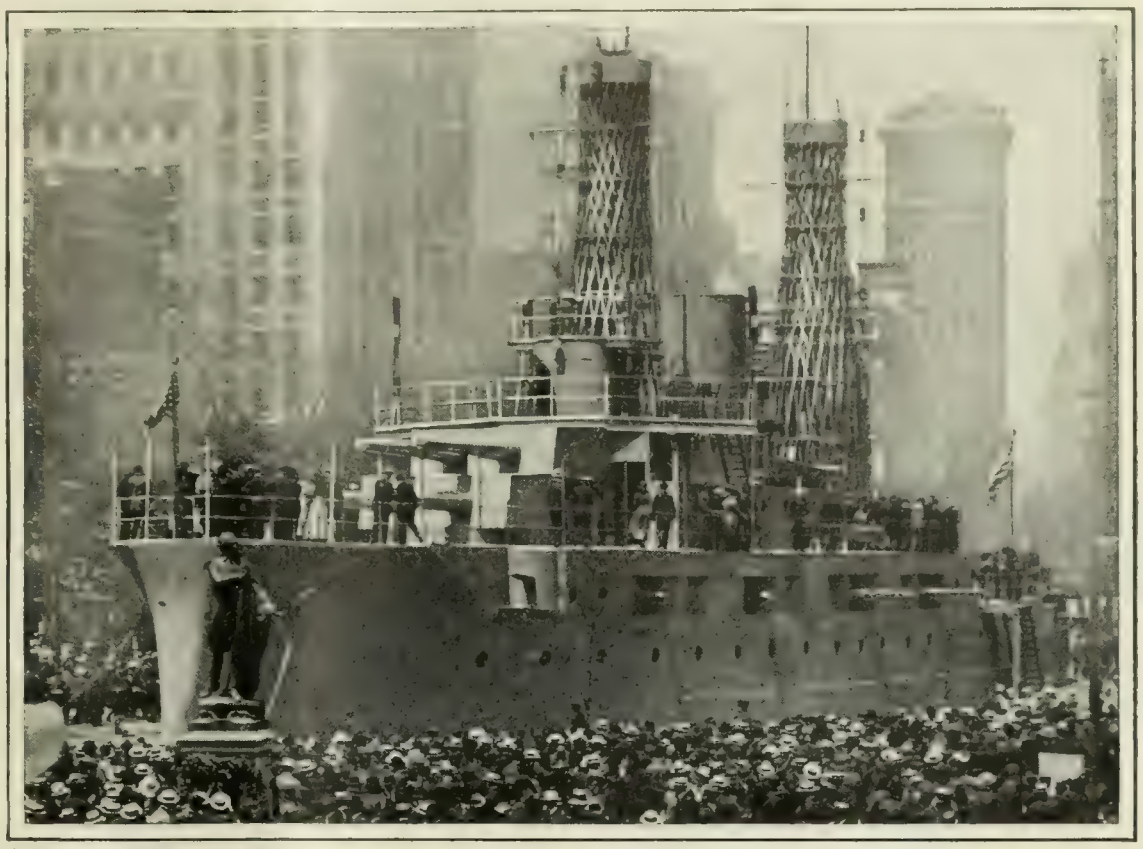
Prince of Udine Addresses Senate

The Italian mission to Washington has received as kindly a welcome as either the French or the British emissaries found during their visit to the capital. On May 31, the Prince of Udine who represents the diplomatic side of the Italian war mission, spoke before the Senate after he had been introduced to that body by Vice-President Marshall. After the customary acknowledgment of his courteous reception, the Prince pointed out that while the peril of Germany's predatory absolutism had brought together in a common effort nations that in times past had been rivals and enemies, the relations between the United States and Italy had never been other than friendly. He pointed out how great was the menace to both democracies from the German aggression, praised President Wilson's war message and declared that Italy's fundamental reasons for entering the war were as altruistic and disinterested as those of the United States. He exprest the opinion that for each of the Allies the problem of shipping was the greatest problem of the war.

The Italian emissaries have been in constant conference with American officials since they first reached Washington. The particular problem confronting the Italians was, they informed the United States Government, the importation of adequate supplies of coal and iron from this country and the safeguarding of the routes of trade from submarine raids. Guglielmo Marconi, the inventor of commercial wireless telegraphy, discussed with American scientists methods of checkmating the submarine. Enrico Arletta, minister of transportation, had charge of negotiations for railroad materials, and financial representatives on the commission interested themselves in the proposed new $100,000,000 loan to Italy and in supervising the expenditure of money already borrowed here. Unlike the French and the British missions, the Italians promised to include in their itinerary several southern cities before visiting Chicago and New York. In the cordial invitation which he sent to the members of the commission, Mayor Mitchel, of New York, pointed out that in coming to New York City they would find the largest number of Italians in any city in the world.

Professor Bakhmetieff is on his way to America at the head of a special war commission of forty. Among the delegation are financiers, railroad experts and military men with ample power from the Russian Government to make arrangements with this country for the details of the aid which we may be able to extend to Russia. When interviewed in Japan, Ambassador Bakhmetieff exprest his confidence in the ability of the Russian Government to handle the internal situation and carry on a vigorous war against Germany. He was especially pleased to see good order prevalent thruout Siberia when he passed thru that part of the country. A private financial commission, representing the National Bank of Commerce, has left New York for Russia.

Authorities Crush Anti-Conscription Movement



During the week immediately preceding the military registration day, June 5, the more extreme pacifists attempted to carry on an anti-conscription propaganda. In no country has compulsory military service been established among a people unaccustomed to it without a great deal of friction, and the present instance is no exception to the rule. In fact, so dangerous did the Federal authorities consider the anti-draft agitation that they departed from their usual policy of tolerating pacifist propaganda. Attorney General Gregory issued a public letter instructing Federal attorneys and marshals to arrest and prosecute to the full extent of the law everyone evading the registration requirements or encouraging others to do so. All persons speaking, writing or organizing in opposition to compulsory registration were regarded not merely as agitators exceeding the legal limits to freedom of speech but as conspirators attempting to resist the enforcement of a Federal statute.

Opposition to the draft took many forms. In several instances appeal was made to the courts on the plea that conscription was contrary to the constitutional prohibition of "slavery or involuntary servitude." Of course this ingenious interpretation of the thirteenth amendment was nowhere taken seriously by the men of law. A few young men crost the Mexican border or emigrated to Cuba with the avowed intention of escaping military service. Some also went to Alaska, where registration day will be held later than in the rest of the country. The No-Conscription League, an organization in which many anarchist and syndicalist leaders are interested, has been issuing pamphlets and circulars advocating passive resistance to the draft. In some places there were rumors of forcible

opposition to the law. Secret arming and a threatened uprising were investigated in Texas and Virginia. A faction of the Socialist party appears to be involved in nearly every movement to impede the operation of the draft and, indeed, in every attempt to weaken the military efficiency of the United States. A national convention of the Jewish Federation of the Socialist party passed resolutions approving the anti-war policy of the party and advocating the expulsion from the party membership of the Socialists who supported the United States Government in its prosecution of the war.

Censorship Again Defeated

On but one important issue has Congress flatly refused to give any consideration to the desire of President Wilson for extended war powers; the question of a press censorship. When the espionage bill past the Senate on May 14 both the censorship and the prohibition amendments had been eliminated, but the administration did not accept its defeat and attempted to have the censorship provision again inserted by the joint conference committee of the House and the Senate. The conference report favored a section prohibiting the publication of "information with respect to the movement, numbers, equipment, description or disposition of any of the armed forces of the United States" if the President should consider that such publication might be useful to the enemy. All offenders against the act were entitled to trial by jury; the jury to determine not only the fact of publication but the probable usefulness of the published information to the enemy. Discussion, comment, and criticism on the acts and policies of the Government were specifically exempted from the operation of the censorship section.

"LAUNCHING" THE U. S. S. "RECRUIT"

It doesn't look like a fake—this big land battleship in the midst of New York skyscrapers—and in one sense it isn't, for its purpose is to win by appeal rather than attack, since it constitutes the central feature of a widespread advertising drive to gain recruits for the navy. The rigging of the ship is complete in every detail and inside there are offices, lecture room and gymnasium

Paul Thompson

THE FIRST CONGRESSMAN IN KHAKI

For several years Representative Augustus P. Gardner of Massachusetts has said all that a man can say, even in Congress, to urge military preparedness upon this country. And now that the chance has come for deeds as well as words, Colonel Gardner has reported for active service at Charleston, South Carolina, headquarters of the Department of the Southeast

In spite of these modifications of the censorship, which were introduced to reassure Senators and Representatives who feared undue curtailment of the freedom of the press, Congress was no more disposed than before to grant the requested powers to the administration. The Republican caucus in the House of Representatives determined to defeat the censorship if possible and in this they were supported by numerous deserters from the administration majority. On May 31 the House sent back the espionage bill to the conference committee with instructions to eliminate the objectionable censorship provision. As the Senate had already recorded its disapproval of a similar section when it passed the espionage bill, the action of the House meant final victory for the advocates of an unrestricted press.

Our $6,000,000,000 Trade

The Department of Commerce announces that the total value of exports from the United States during the year ending April 30, 1917, was approximately $6,060,000,000. This is a 50 per cent increase over the export trade for the same period a year ago, and more than double the normal export values of peace times. For the month of April exports were about $530,000,000, which is much above the average monthly value, but not equal to the high-water mark of last January. Imports into the United States during April were $254,000,000, and for the whole year two and a half billions. This excess of exports over imports, altho imports also were greater than usual, resulted in a trade balance for the year of more than three and one-half billions in favor of the United States. The net importation of gold into the country for ten months amounted to $666,000,000, a figure which bears eloquent testimony to the direction of the currents of trade.

Shifts of Fortune in Mexico

The smoldering civil war in Mexico has blazed into fresh activity with the international crisis confronting the country, but it is as yet too early to say whether the Carranza government has been helped or injured by the reaction of foreign upon internal politics. At present the Mexican Government seems to incline to the cause of the Entente Allies. It is reported that the Mexican minister to Germany has conveyed a formal protest from his Government against the submarine war on neutral commerce. General Obregon protested at a public dinner given in his honor against intervention in the Great War, but he based his plea entirely on the inability of Mexico to render any real service to its allies.

Both loyalists and rebels claim successes during the last few days. Two thousand followers of the bandit Zapata, for the most part half civilized Indians of the state of Oaxaca, have offered to surrender to the Government. As a counterbalance to this advantage for Carranza comes the news that the town of Ojinaga, on the Mexican border, has been taken by a cavalry force connected with Villa's army. Refugees fled to safety on the American side of the frontier when the town was occupied.

Numerous intangible rumors of German conspiracy in Mexico and Central America continue to reach the press. Secret wireless stations were discovered by the authorities in Costa Rica

WHEN THE BLUE DEVIL FINDS ITS MARK

A frequently reported, but seldom photographed occurrence of the Great War. The vessel just torpedoed is sinking by the bow, its propeller already high out of the water. The last lifeboat is filled and pulling away, tho men are still sliding down the ropes. The splash at the left of the photograph shows where one has just hit the water

and a revolutionary movement against the present pro-Ally administration is suspected. The Costa Rican Congress has granted the Government full powers to maintain the national policy, "which is adherence in every way to the side of the United States and the Entente Allies."

Storms Ravage Southern States For several days the states of the Mississippi Valley suffered from a series of tornadoes, each with its tale of dead and injured persons and widespread destruction of property. The first storm took place in Kansas on Friday, May 25. On Saturday a most destructive tornado wrecked several towns in central Illinois, and on the same day another storm passed from northern Illinois into Indiana. Sunday evening another tornado arose in Illinois, crost the Ohio into Kentucky and followed the course of the Mississippi southward as far as Alabama. Sunday's whirlwind, altho not perhaps more severe than the big storm that had passed thru central Illinois on the previous day, covered a much wider area than any of the previous storms. Kentucky, which was visited by the first fury of the storm, suffered most from its effects. Seventy persons were killed and over three hundred others seriously injured. Nearly all the damage done in Kentucky was confined to a few western counties, especially Fulton and Carlisle. The town of Hickman became a center of relief work for the surrounding districts. A large relief fund was immediately started, an ambulance company of the Kentucky militia was mobilized and many bodies were brought into town for burial. The property loss in Kentucky amounts to millions of dollars. Buildings were wrecked, live stock killed, telegraph communication destroyed and growing crops literally uprooted from the ground by the acre. The loss in Tennessee and Arkansas was similar in character to the destruction in Kentucky and but little less in extent. Forty-six were killed and more than two hundred injured in Alabama, but the storm died down not far from the city of Birmingham. Recent estimates place the number killed in eight states during the three stormy days at 295 and the number of injured at nearly eighteen hundred.

Another storm raged thru the southwest on the first of June, passing thru parts of Kansas, Oklahoma, Missouri, Texas and Kentucky. Coalgate, Oklahoma, and Coffeyville, Kansas, were almost completely wrecked by the tornado. More than twenty persons were killed and hundreds injured.

Enemy Trading Bill Introduced Representative Adamson, chairman of the House commerce committee, has introduced the administration's measure forbidding trade with the enemy during war time. The bill is modeled after the British act. Its main provision makes it unlawful for any person within the jurisdiction of the United States to have any commercial intercourse, directly or indirectly, except by special license of the Secretary of Commerce with a subject of an enemy country or of any country allied with the enemy. Violation of this clause is punishable by a maximum penalty of ten years' imprisonment and a ten thousand dollar fine. The bill also proposes the appointment of a public custodian to take over and administer the property of aliens prevented from handling their own affairs by war conditions. It authorizes the Federal Trade Commission to grant American citizens a license to use patents held by an alien enemy, conditioned on certain payments to the public custodian of alien property. This provision would make available many German inventions in the field of chemistry now restricted by existing patent rights.

Seminoles Get Florida Land The Seminole Indians, a tribe still surviving in Florida, have at last been assigned a reservation by the legislature of the state. For many years the Seminoles have been without any definite assignment of land and the sympathies of many philanthropic persons in Florida and elsewhere were actively enlisted in an effort to remedy this unfortunate situation. By the action of the Florida legislature, approved by the Governor and favored by the Federal Government, the Seminoles have been granted a home of approximately 100,000 acres at the extreme end of the state, not far from the Ten Thousand Islands. The Government will now establish industrial schools and assist the Indians in agriculture, the raising of livestock and other avenues to self support.

Presbyterians May Reunite The long schism between the northern and southern branches of Presbyterian Church in the United States, a schism due to purely historical causes which have no relation to the doctrines or organization of the church of today, bids fair to come to an end. The General Assembly of the Presbyterian Church in the United States (the designation of the southern branch of the denomination) decided on May 24 by a vote of 142 to 40 to appoint a committee on church union which would confer with the northern Presbyterians and arrange a reunion. Many topics of current interest were considered by the General Assembly; perhaps the most remarkable incident of the conference being the passage by a large majority of a resolution in favor of woman suffrage.

WASTE NOT, WANT NOT

AN INTERVIEW WITH THE UNITED STATES FOOD ADMINISTRATOR

BY DONALD WILHELM

HERBERT C. HOOVER turned the key, opened the door to his suite of rooms, peeled off his coat, and said:

"Now for the underlying causes first: Obviously there are many underlying causes—abnormal demand due to reduction of producing power in Europe, the isolation of Russia from the world's food markets, the destruction of foodstuffs by submarines, the inflation of currency, competition among our Allies on short markets, etc."

I caught my breath. He got out his dress suit—he was dressing for dinner—laid it on the bed. I had just noted that there was absolutely nothing personal in the simple room save, on the chiffonier, the picture of a young boy in a silver frame—his boy, I judged—when he plunged ahead:

"Now for results. One result is that our normal economic machine for the regulation of prices is broken down. The price of wheat, for instance, in normal times is regulated as if it were water in a great number of vessels, side by side, connected by pipes at the bottom. Let us say there is one in Odessa, one in Moscow, one in Berlin, Budapest, Paris, Liverpool, Buenos Ayres and Chicago. Thru their connections a common level is maintained and thru the totality of their areas the shocks of irregular demand and supply and of speculation are much absorbed. Now this normal condition is altogether altered. All the vessels are disconnected and our vessel stands alone so that it is subject to more violent agitation by these storms than would otherwise be the case.

"Next"—this while he moved about with his quick, surprizing directness—"one result of the lack of the normal stabilizing of prices is that our distributing chain is bound to defend itself by maintaining a wider margin of prices at each link and thus the difference between the price to the producer and the price to the ultimate consumer is wider than ever before. If we can inject into this situation some method of stabilizing prices we will have at the first step to some extent moderated the prices to the consumer without having damaged the producer. The distributing machine is one of the most intense organizations and requires the utmost care that we do not disrupt its vast functions, and the only method that I know of out of the whole European experience today is close coöperation with the distributing trades themselves and their support in eliminating worse evils which have grown up."

He paused, began putting his shirt studs into place, swiftly, quite like one who had never had a "man," then went on:

"The isolation of our western Allies from their normal markets of Russia, Bulgaria and Rumania, and the long haul from Australia and India, the consequent embargo from Argentina, the reduction of man-power in the Allied countries and the damage to their winter wheat, all accumulate to make the load of the United States larger during the coming year than ever before. From the present prospects, with our own harvest and that of Canada, North America should be able to supply from our 1917 harvest, without any effort toward economy, something like 60 per cent of Allied requirements. If, on the other hand, we economize with every effort possible we may be able to raise this proportion up to 80 per cent. This will be a loaf of hardship for many, but should enable the Allies to maintain public tranquillity and constancy in the war, and, as I have said often enough before, every ounce that we can add to the bread supply is a contribution to their strength."

Then—still with his pervading directness and vigor: "So we have two great problems.

"The first problem is to increase the exports to our Allies.

Press Illustrating

MR. HOOVER

"The second problem is to administer these in such a manner as to protect our own consuming public as to prices."

He paused. I caught a glance of his face when he was off guard, when he was looking up from fastening his shoes.

I have never seen a man face more boyish. His skin was glowing with the vigor of dressing à la fire department. His eyes were bright and eager with the ardor of his subject—'way back in the depths of them I thought I discerned a big-boy kindliness of spirit, something that suggests an unrequited appetite for fun, for simple boy fun, combined with a deep and abiding love of simple wholesome things.

And then, I thought, there came the apprehension of a titanic task ahead—a task that I myself, with a notebook in my hand, was suggestive of, along with the need of haste.

He straightened up, continued at the business of dressing with swiftness astounding in a man of his bodily strength. Indeed, he plied military brushes with an alacrity that would have baffled Mr. Roosevelt!

Directness is his predominating character—that and the determination that is written all over his square, very well established chin.

I had telephoned. His voice came back low and resonant: "Every hour taken, unless you want to go over the situation with me as I dress for dinner."

An hour later he had come from an inner room of his office suite in the New Willard. He shook hands while reading a telegram. He gave a few directions while scribbling an answer. He settled a question with an assistant while his secretary sought his bedroom key. Then we stepped down the red carpet of the long hall together. He moved along quietly, head bowed, uttering not a word.

"What I am interested in," I said at last, "is just how this tremendous food situation appears to you, an engineer with peculiar experience abroad."

And then we came to his door and he began, as we have seen, to hit the nail squarely on the head.

He went on now, while adjusting his collar and tie:

"There are several broad national issues which must be given great consideration, to none of which do I wish to pledge the Administration in any way. They require investigation and advice. If we can mobilize and systematize the efforts of every woman who conducts a household in America we will have in our aid 90 per cent of the managers of the food consumption. There is no question of rigid and regulated rationing of American people on European lines. We have reached no emergency of this character and our problem will be to advise the people to eat plenty, but to eat wisely and with-

out waste. In effecting the last two principles there are four principal directions in which the householder can assist. The first is the principle of the clean plate and the elimination of household waste. The second is the reduction of unnecessary eating. The third is the substitution of products of local origin for those further afield and the substitution of commodities which we cannot advantageously export to our Allies. The fourth is in the nature of instructions in dietetics and in the preservation of summer foodstuffs for winter use."

He went on, swiftly, directly, summarizing aspects of the problem in hand. He pointed out that the whole keynote of the success of the administration is volunteer effort—the volunteer organization of the necessary links in the distribution chain, in order to eliminate as far as possible all unnecessary handling, speculation and attempts to control the flow of foodstuffs; the volunteer control, thru skilled bodies, of our exports to our Allies and neutrals in such a manner as to prevent competition with our own people as to the prices, and in order to retain in this country a sufficiency of foodstuffs to last thruout the year.

"We need," he concluded just as we turned to leave, "the volunteer assistance of all women, as I have suggested." And then his voice ran on, swiftly, directly, as he turned the key in the door and we went down the hall:

"I look on this volunteer effort as one of more importance than its immediate purpose because it should enable us to demonstrate that democracy is a sufficiency unto itself even in time of strife, and that it can preserve even in war the basis of individual initiative which is the foundation of democracy itself. If our faith is right that democracy is founded on individual initiative and this belief is worth fighting for, we have also to demonstrate that this initiative does not necessarily have to be eclipsed in war. The contention that war can only be fought by Prussianizing the people, is, I believe, fundamentally wrong, for if it is a proper contention it is a simple statement that democracy cannot defend itself, and if it is unable to defend itself we had better abandon it as a political faith."

Washington, D. C.

WHO'S HOOVER?

BY MONTROSE J. MOSES

AUTHOR OF 'THE AMERICAN DRAMATIST."

HOOVER has always been known; but never until now, after his experiences in Belgium, has he been widely known. Those of his associates who speak of him, and who have been thrown with him from early years, declare that he has always shown a genius for organizing; has always possest a quick eye for sizing up a complicated situation, and making it easier. To the popular mind today he is generally regarded as "Hoover of Belgium"; to the specialist he is known as an engineer of skill, and as the translator, with the assistance of his wife, of a learned work, "De Re Metallica," written in 1550 by Georgius Agricola, the first mining engineer. Known to the business world as an "expert promoter," and among his confrères on the Belgian Relief Commission as a "Rescue Specialist," Hoover, the much-talked-about man-of-the-hour, is the most modest, silent individual to be found anywhere.

"Bert" Hoover, as he was called in college, was born forty-three years ago in Iowa, with Dutch blood in his veins; bred in a peace-loving Quaker household; and reared on a farm. At an early age, he displayed his indomitable will, determined against the wishes of his family to go to a non-denominational college, and worked to save money for that end. Legend has it that when he entered Leland Stanford he established a laundry in order to pay his way, not being deft enough to wait on table!

He began college the year Stanford University started, and was in the first class—that of 1895—to graduate. There were over four hundred fellow students and these were organized by Hoover into a system of college activities which holds good today.

Leaving the School of Mines, Hoover began his career with a mining corporation in Nevada. From there started his world march by way of New South Wales and the desert, where he was associated with a college chum. He then went to China. By that time he had married Miss Lou Henry of Monterey, known at Stanford as "Geology Major of '96." The Boxer rebellion put a stop to all engineering enterprizes, and the Hoovers followed the armies of the Allies to Peking. It was after the trouble had abated that Mr. Hoover gained concessions from the Chinese Government of the North, and began his professional progress once more as a promoter. Coal grants had been given him by China in recognition of his aid in reconstructing the railroads. Then fortune accumulated, and territorially it may now be said that Hoover has interests the world over, from California to Burma, from Mexico to China, from Australia to Russia.

HOOVER was living in London, serving in his various capacities, as a well-known engineer and as president and trustee of various institutions, when the Great War fell upon a startled world. Then followed Belgium's invasion; the frightful days of Louvain, Liège, Dinant, Ypres, Mons, and the threatened fall of Paris. Americans clamored to come home and the United States Government advanced money for their return. Ambassador Walter Page sought Hoover. "You are the man to handle the problem," he said. This was Hoover's entrance into the present conflict. He marshaled all the nervous details that surround an hysterical crowd. He met the advancing hordes of Belgian refugees. And upon his shoulders fell naturally the arduous task of planning with Ambassador Brand Whitlock the gigantic task of financing the food problem of a starving nation.

Hoover is a man who has friends. "The best thing he does," claims one of them, "is to take a run-down property, below the line of dividends, and make it pay." "He has the quality of inspiring those who work with him an implicit confidence and a stedfast devotion," says another. Lord Robert Cecil, English Minister of Blockade, declared publicly that, apart from the genius of organization shown in the Belgian Relief, the great work of Hoover and his associates is seen in the confidence they "inspired in the allied governments."

He has fed the Belgian nation and all of northeastern France; he has clothed them, too. He has gone into Courts and faced officials with an energy which defies diplomacy. For starvation waits on no red tape. His name is a household word abroad. And he has been able to accomplish his ends, not because he has had enough money—the fact is he needs much more now than he has had at any time before—but because he has gripped the situation thru vision of a spiritual kind, coupled with firm control of circumstance.

When Hoover speaks in public he always talks from the shoulder. He did not, from any sense of patriotism, fail to give strong utterance to his disappointment over America's contribution in the past to the Belgian Fund. On the other hand he has never been an alarmist; has never wished to usurp power. Even now when the term Food Dictator is coupled with his name, he repeatedly declares that he is not a dictator, but an administrator—a far different thing—at a crisis when the food situation the world over requires regulation so that no one of the allied nations need starve.

Feeding about twelve millions of destitute people; handling millions of dollars every month, without any questioning as to distribution; working with business swiftness, but with a human feeling for the task which proclaims him the idealist he is, the American public has before it in the person of Herbert C. Hoover an example of the business man in the finest exercize of his power.

Now Uncle Sam is sewing shirts for soldiers, and his shops surpass the speed of Sister Sue;
For here are uniforms cut out by forties, stitched, pressed and shipped all day and all night, too

A SONG OF SUMMER

BY CHARLES KEELER

Bees, bees, humming bees,
Buzzing o'er the clover leas,
Humming with the summer breeze,
Fuzzy, black and golden bees,
With not a soul to mind them!

Bells, bells, flower bells,
Nodding 'mid the wooded dells,
Weeping where the brooklet wells,
Blue and gold and dappled bells,
And ah, the maid to find them!

Eyes, eyes, laughing eyes,
Love's supremest spirit prize,
When their witching motion lies
Captive to another's eyes,
Skilled to catch and bind them!

LABOR AND CAPITAL FOR DEMOCRACY

BY THEODORE MARBURG

FORMER MINISTER TO BELGIUM

DEMOCRACIES need more than enlightened leadership and general self-denial in respect of ordinary rights and privileges to win such a war as this. They need positive coöperation of the most wholehearted kind with the Government on the part of the mass of the people, and especially on the part of organized labor.

It was with a view to securing such coöperation and at the same time preventing a sacrifice of present standards that labor leaders, prominent capitalists and leaders of thought were called to meet in Washington on May 15 and 16 under the presidency of Mr. Samuel Gompers as head of the Committee on Labor of the Council of National Defense.

Our country has been familiarized with the sight of capital and labor meeting in joint conference by the activities of the National Civic Federation for some years past and it was this background which made possible such a gathering as the Washington conference. Owing to the presence of foreign labor leaders and members of foreign governments which have gone thru the awful experience of the present war, the conference was most illuminating. Out of bitter trials had come wise and ripe plans for dealing with labor and these plans were laid with the greatest clearness before the convention by men who were a credit to their country and to the labor world. In all the speeches was manifest a burning love of justice, true perception of the great issues of this world war, and a determination to put down the evil forces which precipitated the disaster.

THE dominant figure of the conference was Mr. James H. Thomas, member of the English Parliament and general secretary of the National Union of Railway Men. He not only gave the history of how the various difficulties facing the English Government in connection with labor problems generally were met, but at the same time showed an exceptional rightness of feeling, both as to the aspirations of labor and as to the war. It was principally Mr. Thomas' illuminating address and his concise and informed and understanding replies to inquiries that enabled the committee to work out the following principles, which it hopes to see applied by Government action and by labor agreements to the situation we are facing today:

No strikes; no wage reductions; no men allowed to work excessive hours; no child labor; no women laborers to be introduced into a trade when men can be had even from other localities; no drinking among workers in "war work." At the end of the war men should be given their old jobs at wages they were enjoying when they left. The Government and employers should cooperate to pension employees injured in war. There should be a fund to take care of dependents of soldiers, pay rent, doctors' bills, school fees, etc., in addition to Government separation allowances.

ARBITRATION boards should be established to settle all labor differences. The pay of women during war should be the same as that of men, and women should give up their places to the men at the end of the war.

The large armies to be raised should, at the end of the war, also be demobilized slowly so that there may be no forced unemployment. The railroads should give free transportation to all men working on "war work" so that if a man's services be more valuable to the Government in one place than in another he can go there without expense to himself. The salaries of men who are thus moved to other localities should be increased so as to meet the extra expense of living apart from families.

The spirit of service displayed at the meeting was by no means confined to the labor leaders. It was shared completely by the employers of labor present, who, with unmistakable earnestness, offered to do their utmost to meet the demands of the hour. The scene was calculated to stir men's hearts and, above all, to make for real fellowship and universal brotherhood.

On the whole, the conclusions reached at the meeting are wise and just. But there is another principle which the present situation offers a chance to introduce and the operation of which is likely to prove so beneficial to labor and capital and the public as to survive as a permanent policy after the war. It is the principle that there are certain services which touch so intimately the public interest that (1) strikes in them should never take place; and that (2) as compensation for surrendering the right to strike, men engaged in these services should enjoy advantages superior to those enjoyed by labor as a whole. Such services are well known. They embrace railroads, street railways, the gas and electric light services, and coal mines. With the surrender of the privilege of striking, and the compensation therefor, namely, higher wages, shorter hours, and wherever possible, superior conditions of labor, including security of tenure, there naturally goes a third essential, namely (3) a liberal public attitude toward the public-service corporations which would permit them to earn enough money to meet the extra expense incident to such a policy. This is made possible in the case of street railways and the gas and electric light services by the fact that they are non-competitive industries. For example, the gas company located in one city does not compete with the gas company located in another city, and so forth. And to make possible the application of this policy to railroads the power to fix rates at present lodged in the Interstate Commerce Commission and in the various state commissions need only be exercized with that end in view.

THIS plan, it will be observed, embraces a threefold concession, namely, concession on the part of labor, concession on the part of capital, and concession on the part of the public. If tied together, one being made the condition of the other in the order named, the plan should be practicable and prove to be a valuable gain all round.

Baltimore, Maryland

THE FIRST TEN THOUSAND

BY HERBERT REED

This article is the first of a series to be written for The Independent by Mr. Reed—better known to followers of sport as "Right Wing." Just now Mr. Reed is at Plattsburg watching developments at the largest center for our army officers in the making. Later he will visit the other training camps thruout the country to describe for Independent readers the various phases of our biggest war task.—THE EDITOR.

WHATEVER may be in the minds of the five thousand or so student officers undergoing, many for the first time, some for the second, the intensified training under way at Plattsburg Barracks that is designed at some no distant date to produce "The First Ten Thousand" who are to organize, instruct, and finally lead the shadowy millions of Americans who thru the selective draft will be called to serve their country, there is in the minds of their experienced instructors one basic idea, and that is that we are at war. Not that we are preparing for war, but that we are *at* war. It is a sweeping change in attitude from the old training camp days when we were preparing for war perhaps. The change is evident in little things, but above all in the great fundamental determination to wipe out at one stroke in the personality and previous attainments of the candidate everything but the man himself. The military life of every man who reported at the bleak barracks on the shores of Lake Champlain after the preliminary weeding out process in his home territory, which in this case comprizes New York and New England, began the moment he reported for duty. His future lay thereafter in his own hands. In the mass I believe that has been understood by the candidates for commissions. And that understanding in the mass cannot help but grow until it so dominates the place that the exception will be obliterated.

That is the way "atmosphere" is made in any great assemblage of men afield whether in the great games of peace or the greatest of all games now in its third year on the raw fields of Europe. And in such an atmosphere the man who hugs his individuality cannot breathe. And yet, from Lieutenant Colonel Paul Wolf down there is not a regular army instructor at Plattsburg who does not realize that this is but half the problem. How to crush out of the candidate everything but the priceless kernel of his character, and so nourish that character that it will develop leadership of an order never before demanded in such a branch of human activity in this country—that is the problem in its final form. Will it be solved? I believe so, basing my judgment on even the little I have seen so far, and convinced as I am that these molders of men have always before them the vision of those shadowy drafted millions which are in the last analysis the nation. They are determined that these millions shall not be thrown away—indeed, that they shall have every chance for their lives compatible with victory.

I want that fact to sink home in the breasts of the mass of men of all orders who will be called to the colors, for I have been on the ground where the problem is being worked out, and I have been among hundreds of men who will be called, and I know their fears based on the experiences of the old volunteer system with its rank favoritism.

Fortunately for the purpose of this chronicle I reached Plattsburg on the day when the first thousands of student officers, after a week of shaking together, had been set free for rest and recreation. From little talks here and there, with men I had known, with men I was seeing for the first time, with pairs, with groups; from a study of their faces and of their bearing I gained an indelible impression of seriousness. There were exceptions, of course, but in the main I found a realization of the task in hand among men of all classes, of all sort of previous attainments and experience, from the youngest to the oldest. There is as I write vividly before me the face of the young man just out of college, superb in his youth, ardent in his aspirations, who said: "I want my ticket for France." Hardly less vivid is the tense attitude of the gray-haired man of forty who had fought the workaday world for the sort of life he meant to live and had lived till now; who had thrown away the fruits of that fight to fight for the world that he had found so good. These two stand side by side in the ranks, the older as proud as the younger of the new equality.

On the surface these things do not appear. One has to dig deeply. But they are everlastingly there and they are that "atmosphere" of which I spoke. The process of stifling those who were not and never could be of that atmosphere began early, and, as I write is still going on. You cannot serve Cæsar and the ideal which is ours at the same time. And those who prefer Cæsar are being sent back. One man wanted a few days off to attend to his business. He had forgotten that he was now about his country's business. He received an honorable discharge on the spot, and even that was a concession. There were here and there cases of overanxiety which will wear off, of sheer exuberance which will also wear off to a large extent without adversely affecting the morale of the men. Despite discomforts due to the sudden, the tremendous, and in some ways unexpected growth of the post, it has so far been a happy encampment. Much has been said of the grinding work, but there is nothing in the schedule that need wear down men who are physically fit for it, and the intensive mental training is well within the powers of the type of man who has been sent on by the examining boards. And I have never seen any course of study, even of the non-military order, better worked out to shift swiftly from theory to practise, and from practise to theory. The mind is rested as the body swings into action, and the body relaxes as the mind takes up the burden. Tact, quantities of it, goes with the instruction every minute of every hour, and so far as such a quality may be passed on, it is being passed on here. Men are being taught not merely how to act, but to teach others how to act.

American Press

MR. REED REVIEWING A PLATTSBURG SQUAD

I know not what better to call it than a famous football man once called it,

Paul Thompson

COACHING THE COACHES
A Plattsburg class learning the theory of military tactics

"Coaching the coaches." It is that with this addition, that the new coach must be also a personal leader.

Just a word more about the real democracy of this quota of officers-to-be. There are in the ranks day by day men who by virtue of previous instruction, preparation and examination, much of it undergone at considerable personal sacrifice, had already attained rank, some as high as major, in the Officers' Reserve Corps. They wear the insignia and draw the pay of their rank, yet they are privates, and they must fight in competition with the veriest newcomer for the right to retain that rank or even a lower one in the New Army. The men at their side do not even salute them. And yet I have not heard one of them grumble. Surely no harder test of character could be set. Here are men who had done their work, received their rank, and with their friends rejoiced in it. And now they know that their work is never done, rejoice in that fact, and want only their chance to lead those shadowy millions, with perhaps their "ticket to France." And yet they will not complain should fate decree their retention at home for the further development of the inexhaustible man power of their country.

There have been obstacles, and serious ones, to a quick getting under way, to the processes of even development. They included a shortage of food, a shortage of blankets, this a serious drawback in a country where nights are often bitterly cold at this time of year. No, there has not been enough to eat for men doing the work of these men. The fault is whose? I do not know; but this I do know, that it does not lie at this end of the line. Thus for some days the men have been stoking up on pie and cake and milk supplementary to the mess. They have been good-natured about it, for they have realized the size of the task here in taking care of more than twice the number of men who had been anticipated, and who have appeared suddenly and in batches of varying and in some cases not predetermined size. Here is the comment of one of the men, and it is typical of the corps:

"It has been pretty tough at times, but it will work out all right."

In other respects it will be tougher later, but *it will work out all right*, for that is the spirit of wartime Plattsburg.

Now, as every one knows, there are in the ranks men of great family names and great family fortunes. Their presence is "news" to photographer and reporter, and there is no doubt that the appearance of their pictures and "specials" about them in the newspapers has stimulated interest in this difficult undertaking thruout the land. In their own behalf, be it said, they have craved none of this publicity. In another day the continued following of their movements as individuals might be of absorbing interest, but this is a serious business, and I venture to predict that in the future there will be less and less of individual news from this post, and more and more interesting "group" news. And this group news is new indeed with the American people. So it would be as well for the reader to say good-by to the great names here in the ranks until such time as they thrust up out of those ranks thru their toil and their brains and the great good thing that is deep within them. Today they are as drab and dull and all but indistinguishable against the brownish background of the parade ground as the shoemaker's son.

How far can this thing go in the brief time allotted? No man can tell, but this I know, that the beginning has been good and that the promise is great.

There is the "atmosphere," there is the democracy, and there is that vision of the shadowy millions who must not be cheated of their right, to back the promise. We know that only the test of fire will temper your true officer, but what man can do in preparation for the moment of the sailing of the great troopships, I feel will be done. How it is done, step by step, it will be my happy duty to tell in the course of these articles, by the aid of impressions, of concrete facts and of figures.

Plattsburg, New York

ENLISTED

By Pendleton King

Company No. 6, New York Division, Plattsburg

The misty road we tread
Does not, they say, wind on forever,
But comes somewhere immeasurably far ahead
Down to a river
Where stands a terrifying figure clad in gray.
For years I knew
That I should come upon him unaware one day
Yet scarce believed it true.

Tonight I saw
That shape distinct within the mist ahead;
And felt not awe
But strange exalted joy instead!
I go to War
Into his very presence with less dread—
Because he seems more simple and more clear.
I may be dead
This time next year.

MY NORTH COUNTRY COUNTY

BY IRVING BACHELLER

AUTHOR OF "THE LIGHT IN THE CLEARING"

I AM often surprized at the increasing number of things I don't know, but the county of my birth is not one of them. There are things you can't help knowing.

Long since when I began to suspect that the pen was mightier than the hoe, they used to say of me up there: "That boy is a good feller—he's an almighty good feller, but he ain't good for anything else."

They were sometimes wrong. They leaned strongly toward the hoe, but the more I have seen of other counties the better I like my own, the more clearly I discern the singular spirit of its people—their simplicity, their pure democracy, their independence, their conservative, pristine Americanism. There is no part of the United States I know so resolutely American. Their leisure is loneliness, health the gift of God and not of the physician, politics both a duty and an inheritance. The county has its fools and knaves. It is also a stronghold of the jerk-water poet. The spavined Pegasus and the gold-brick trotter are on its roads. But a horse jockey is better than a railroad jockey and as to our poets one might jerk worse things than water.

The whiskers of the north are vanishing like its forests, but the yield to the acre of the human countenance is still large. They are deep rooted in the conservative spirit of the north. I confess to an hereditary longing for whiskers. I once started a set under my chin, but they no sooner got straightened out and going strong than they met insurmountable obstacles. I had to choose between peace and whiskers and I let them go. I am no pacifist either. I believe in the sassyfist.

The casual observer judges St. Lawrence County people by their political complexion, which is rather dark. But we must go deeper than that if we are to know them. Dig down beneath their differences in politics or religion and you find precisely the same flint rock of character that came of the ancient elemental fires. There's a high percentage of gold in it and the gold standard prevails in its scheme of moral values. In the land of my birth there is neither fiat respectability nor fiat beauty. You wouldn't find a manufactured complexion or a Fifth avenue dialect or a single peroxide tress between Plattsburg and Carthage.

There men are still created free and equal. There the only uncommon person is the one that hasn't common sense. There the lap of luxury is a Ford car, and its accessories are a Sears Roebuck suit, an Ingersoll watch and a coon-skin overcoat. There the only necessity is education and the only pride is scholarship. There, no matter what his dress and manners and pretensions may be, a man is as good as his heart and no better.

One has to grab hold of his Americanism and hang on to it with both hands these days. It is breaking down in sundry places, but not there. How hard it is to keep the virtues of thrift, democracy and unpretension! My friends, the ills of the world come of pretension and particularly the pretension of any set of men that they have an inherited right to think themselves better than others. Now that infinite pretension has dragged the Almighty into an alliance with the unspeakable Turk and the unthinkable Prussian in an effort to force itself upon races largely disemboweled, this stronghold of unpretension ought to look good to us.

The pneumatic, rubber brain that has to be inflated with hot air every few minutes and which, by and by, becomes a cousin of the Lord and kindly takes Him into partnership in the butcher business, is funnier in St. Lawrence County than anywhere else. St. Lawrence County enjoys the unique distinction of being further from Germany than any other spot on the globe.

There no boy is thought to be a man until he is well loaded with power and then deprived of all conceit of it.

WHEN and how came this spirit of my native hills and valleys? Largely, I think, from one special source. The most of it came in the summer of 1819 with Silas Wright, then a young man. He settled in Canton. He opened a law office. His aim was to keep men out of contention in the courts.

"Now," said he, one day, when he was locking in his office two neighbors who had quarreled over a line, "when you have agreed on a verdict I will let you out. I don't believe in getting twelve men for a job that two can do better."

IRVING BACHELLER

He bought a small farm. He worked in the fields and on the road. He watched with the sick. He served the community in sundry petit offices from Pathmaster to Captain of Riflemen. Everybody sought his advice in the most common affairs. When elected to the State Senate by a vote in his own town of 199 to 1, a citizen said:

"I wonder who that dum scoundrel was who voted ag'in Sile Wright."

"I guess he done it himself," said another.

Appointed chairman of the Canal Committee in the Senate when the ring was pushing for extravagant appropriations he began to emerge into public view. Next he rose to leadership in Congress and when William L. Marcy resigned his seat in the United States Senate to be Governor, Mr. Wright was elected to it.

"I am too poor and young and inexperienced for a place so exalted," that in short was his remark when he heard of the plan to seat him with the giants of his time, Webster, Clay, Benton, Calhoun and Rives. In this high company he rose to be the most trusted advocate of the rights of the average citizen and the most commanding personality in the land, returning often to his humble home, meanwhile, to till the farm or push the wheelbarrow before him on sundry errands in the village.

So high was his character that it used to be said of him that he was as able as any man under Heaven and as honest as any man in it. So beloved was he that a great newspaper said of him soon after his death: "If he had any enemies, and who has not, they knew better than to invite their own destruction by attacking him."

So unselfish was he that he declined to be nominated for President because if he had accepted the honor he would have seemed to be disloyal to a friend and to his own convictions.

So polite was he that he fought with matchless power the great battle of the people and came out of it without having made an enemy.

So modest was he that he would never accept a public compliment from his admiring fellow citizens.

So great was he that some of the most discerning have said that our country has produced only two others who rank with our own great hero and those are Washington and Lincoln.

Last and greatest of his honors he entered the imaginations of the young in the North Country. If I thought my task too hard or too mean for my hands I was told that Silas Wright used to do it. If I were inclined to pride or selfishness or conceit or despair I was reminded of the example of the great commoner. His soul is still in the homes and courts and schools of the North.

Riverside, Connecticut

NATIONAL EFFICIENCY
CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

IN THE SERVICE ARMY

Free Eggs for Hatching A poultryman's meeting at Harrisburg, Pennsylvania, has responded to the appeal of the authorities for an increased meat supply by supplying 375,000 eggs to persons not now raising poultry who will agree to hatch them. The distribution of these hatching eggs, valued at $25,000, will be made thru a "war commission of poultry."

Making a Present of a University The entire plant of Indiana University, consisting of several large buildings and hundreds of acres of land, has been offered to the Federal Government for war purposes. President Bryan suggested to the authorities that the campus could be used as a training camp and the gymnasium as an armory. At present the gymnasium is the headquarters of a battalion of 450 students undergoing military training. Over three hundred women students attend the Red Cross classes of the university.

The Useful Sex Takes to Railroading General Manager Elisha Lee, of the Pennsylvania Railroad, has directed the general superintendents on the Pennsylvania lines east of Pittsburgh to report what positions may be filled by women. The intention is not to displace men now employed by the railroad, but to engage and train a reserve army of women to take the place of the men called out for military service for the duration of the war. Some of the positions open to women, in addition to clerical work, are elevator operator, parcels clerk, telegrapher, signaler, train dispatcher, ticket seller and various jobs in the machine shops.

Steel Plant for the Nation's Use Charles M. Schwab has offered to Secretary Daniels of the Navy the use of the Bethlehem Steel Company's plant for any need of the Government during the war. Factories in every part of the country are being placed at the disposal of the nation.

Red Men on the War Path Senator Penrose, of Pennsylvania, and Representative Kahn, of California, have introduced measures into Congress providing for the enlistment of ten or more Indian regiments to be known as the "North American Indian Cavalry." Recruiting officers, under this plan, would be sent to every reservation to stimulate enlistments. Indians volunteering would be given full rights of American citizenship without forfeiting their rights to tribal funds. Of course, the facilities for cavalry on the European battle-grounds are very limited, but Indian cavalry would be the ideal force for a campaign in Mexico or for patrolling the Mexican border.

Farmers Take to Uniforms Governor Harrington, of Maryland, has officially endorsed the project of a farm army in which several hundred men have been enrolled. The army when fully recruited will number several thousand, will be uniformed, and each unit will be commanded by a lieutenant. The units will be sent from section to section for several weeks' work at a time under state supervision.

Carpenters Start a Coöperative Farm Twenty-five carpenters in Houston, Texas, have inaugurated a back to the land movement. They intend to purchase 3000 acres with funds borrowed from the Federal Farm Land Bank, move there with their families, pool their resources and share equally in the profits of the enterprize.

Stones for Bread A bulletin of the United States Department of Agriculture points out the present shortage of potash and other commercial fertilizer and urges farmers to apply lime to all lands that are now low in yield or lying fallow because too "sour" to grow crops. Ground limestone may be had in most parts of the country for something over a dollar a ton, and where it is not available burnt lime or the lump lime used by builders may be used instead. "An investment in limestone," says the bulletin, "often pays a dividend of a hundred per cent or more the first year, if care is taken at the same time to maintain the organic content of the soil."

Mobilizing the American Boy Arrangements are now being made for drafting into farm work this summer 2,000,000 boys over sixteen and under the minimum age for military service. Only those will be taken who are physically fit for agricultural work and are not engaged in other kinds of work. Some of the boys not needed on the farms will be given a chance in the shipbuilding yards or some other needed industry. The service will be voluntary and no boy will be taken without consent of his parent or guardian. The Department of Labor has general oversight of the plan.

Protecting the Wood Pile The projected wooden merchant fleet has rendered doubly important the safeguarding of the lumber supply, since to the normal risks of fire is added the possibility of deliberate destruction by the enemies of the country. Following a fire which destroyed a sawmill of the Kirby Planing Mill Company in Georgia, the Georgia-Florida Sawmill Association has advised all its members to place a heavy guard about their property. Threats have been made to destroy any sawmill in the section known to be manufacturing lumber for Government use.

Tobacco in Disfavor The Connecticut committee on food supply has issued an appeal to the tobacco planters of the state urging them to devote as much of their land as possible to the production of foodstuffs. A general restriction in tobacco consumption would make available thousands of productive acres to feed the nation and its Allies. Rice and Indian corn may be grown on the tobacco plantations of the South and the Connecticut River valley, now so largely given over to the tobacco plant, is capable of producing potatoes, oats, onions and some varieties of corn. There is also an agitation on foot to reserve what tobacco is produced for the soldiers at the front, as it is rather a necessity than a luxury, so almost any soldier will tell you, in prolonged trench warfare.

Badges for Rejected Volunteers In order that men who have volunteered for naval service, but have been unable to pass the physical examination may not incur the reproach of being "slackers," the naval authorities have arranged to give such volunteers a special button to wear as evidence of their willingness to join the navy. With the button goes a letter commending the patriotism of the volunteer and warning him not to let anyone else use his button as a means of escaping service. The marine corps follows a similar policy, and has issued cards to rejected volunteers certifying the fact of their attempt to enlist.

Have You Tried Dandelions? One aspect of agricultural preparedness is the more general use of foodstuffs hitherto frequently scorned or neglected. Many "weeds" may be used as acceptable substitutes for purchased greens. Dandelions boiled with one-eighth teaspoonful of cooking soda will keep their color and garnish a dish very well. And every New England housewife knows that they make the best "greens" in the world, cooked in the same way as spinach, with a hard-boiled egg on top, if you like. Uncooked young dandelions may be used as salad. Other wild plants available as potherbs are curly dock, pigweed, chickweed, mustard shoots, young horseradish leaves, marsh marigold, poke sprouts, pepper cress, purslane and some varieties of cactus leaves and stalks.

Even an Exposition May Be Useful The Navy Department has accepted the buildings and grounds of the San Diego Exposition to be used as a great naval training station. Arrangements for housing 10,000 recruits will be made at once.

The Dogs of War The Blue Cross fund, which cares for animals wounded in the war, has been asked by the French Minister of War to attach a special service for wounded war dogs. The first hospital for these dogs has just been opened in Paris, and Americans who are interested are invited to contribute.

Bishop of Erie Enlists at Sixty Bishop Rogers Israel, of the Episcopal Diocese of Erie, has obtained leave of absence from his ecclesiastical duties to accompany a Red Cross unit which will soon be sent to the French front. Altho he is about sixty years of age his services have been accepted by the authorities.

Lending Land to Uncle Sam Mr. Hillhouse, a citizen of Georgia, has tendered to the United States 10,000 acres of land in Worth County to be used for food crops or for any other purpose which the Government may deem best for the prosecution of the war. The Department of Agriculture will have the disposal of the land.

What to Read about Ireland

Ireland is a strange compound of the tragic and the humorous, of the heroic and the sordid. In the view of most of us she is more sinned against than sinning, but wherever the blame lies, Ireland is a perennial problem, and, in the present situation, one of the gravest moment.

Ireland's Vital Hour, by A. Lynch. (Winston, Philadelphia, $2.50.) A broad-minded discussion of the whole Irish situation by an Irish M. P., with chapters on the recent industrial, educational and literary development.

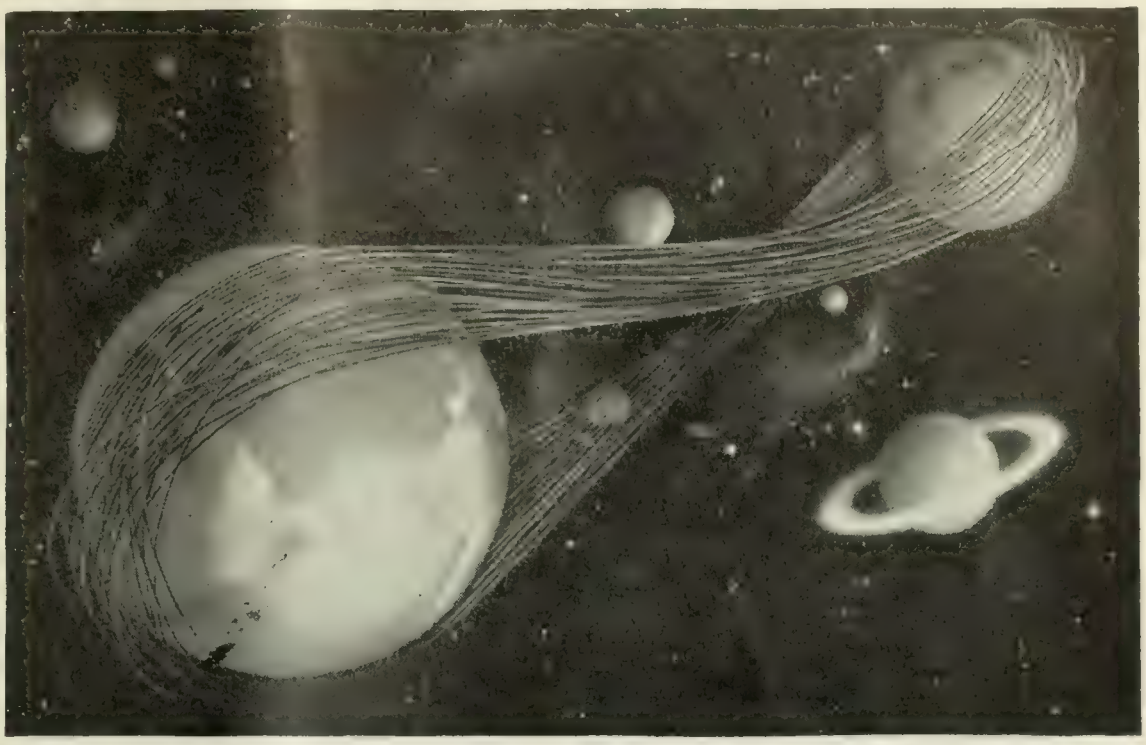
Insurrection in Dublin, by James Stephens. (Macmillan, New York, $1.25.) A vivid yet curiously quiet description, by a passionately interested eyewitness, of the doings of Easter week, 1916.

Irish Orators, by C. G. Bowers. (Bobbs, Merrill, Indianapolis, $1.50.) The story of Ireland's struggle for freedom during the last 150 years, told in sketches of her leaders, Grattan, Curran, Emmett, O'Connell, Parnell, and others.

Crimes of England, by G. K. Chesterton. (John Lane, New York, $1.) The chapter devoted to Ireland gives an Englishman's frank views on the wrongs of that country.

Poems of the Irish Revolutionary Brotherhood. (Small, Maynard, Boston, 60 cents.) Verses of tragic interest because by the leaders, MacDonagh, Pearse, Plunkett, and Casement, who paid with life for the uprising of 1916.

Ireland's Literary Reminiscences, by E. A. Boyd. (John Lane, New York, $2.) A comprehensive and dependable account of the Irish literary movements in the last thirty years.



The Celt and the World, by Shane Leslie. (Scribner, New York, $1.25.) An analysis, sympathetic, ironic, thoughtful, of the Celtic character and the relation of the Irish to the Teuton and to the Anglo-Saxon.

The National Being, by A. E. (Macmillan, New York, $1.25.) A study of the task before Ireland of re-creating itself under Home Rule. A suggestive and splendid vision of industrial energy and justice and a plan of universal service for the state.

The Sinn Fein Movement, by F. P. Jones. (Kenedy, New York, $2.) An account of the economic efforts which are a large part of the Sinn Fein movement, and the story, necessarily bitter, of the Rebellion.

The Celtic Dawn, by Lloyd R. Morris. (Macmillan, New York, $1.50.) A most interesting and enlightening review of the Irish renaissance in literature, in industry, in education, and the relation of these movements to the political thought.

ARTICLES. *Independent*, August 21, 1916 (Let the Irish Work It Out), January 29, 1917 (Conscription in Ireland), May 26, 1917 (Irish Question Referred to Irish Men). *Century*, Nov., 1916 (Story of the Irish Rebellion), January, 1917 (Ireland's Grievance). *Nation*, January 25, 1917 (Ulster—an Exposition Based on Both Sides), March 15, 1917 (Nationalist Ireland). *Nineteenth Century*, April, 1917 (The Irish Maze, three articles). *Atlantic*, August, 1916 (Sir Roger Casement and Sinn Fein), December, 1916 (Ireland 1916—and Beyond). *North American*, July, 1916 (Irish Insurrection), May, 1917 (Irish Impediment).

Twenty Million Miles of Telephone Wire

The telephone wire in use in the Bell System is long enough to run from the earth to the moon and back again forty times.

The Bell System has about twice as much telephone wire as all Europe.

More than 500,000 new telephones are being added to the Bell System yearly—almost as many as the total number of telephones in England.

In twelve months the Bell System adds enough telephones to duplicate the entire telephone systems of France, Italy and Switzerland combined.

In proportion to population the extension of the Bell System in the United States is equal in two years to the total telephone progress of Europe since the telephone was invented—a period of about forty years.

The Bell System fills the telephone needs of the American people with a thoroughness and a spirit of public service which are without parallel the world over.

THE NEW BOOKS

IN THE WAY OF PEACE

Samuel S. McClure has written a war book which, in certain aspects, is one of the most deeply impressive works we have had on this greatest human drama. Mr. McClure entitles his volume *Obstacles to Peace.* Well may the reader pause in overwhelming feeling when he learns that the author actually saw the draft of a treaty of peace and amity between Great Britain and Germany waiting but its ratification by the contracting statesmen a few days before the assassination of the Austrian Crown Prince. By the terms of this treaty, which are given, Germany was to be granted that territorial "Place in the Sun" which her commerce and industry needed for expansion, and a guarantee of safety in relation to her insecure strategic frontiers. To this end had Sir Edward Grey and Dr. von Bethmann-Hollweg labored; but at the supreme crisis, seemingly because neither party could act in frank accord owing to their "entangling alliances," all civilization was plunged into the dread abyss. By this pitiful light at last we comprehend the period of "Gethsemane" thru which Sir Edward Grey passed, and the protestations of Von Bethmann-Hollweg that all his efforts to prevent war had come to naught. With German militarism in the saddle, followed that riot of war glory degenerating into a loosing of every form of mad human passion, which stands as the main obstacle to peace. Mr. McClure ably treats several contributory phases of his subject, from the vantage ground of personal investigation, in both camps having been granted exceptional facilities. His chapter, The Lesson to Our Own Country is replete with warning thru drawing a parallel in the position of Mexico as duplicating that of Turkey. Finally, his Heroic Voices sounds the most solemn of all notes as we go down into the gulf of war. This is no thrilling baseball game on a big scale, but, as it were, a vast throbbing of the collective human soul in immeasurable anguish yet rising to a spiritual victory over the powers of darkness.

For more than two years past one ever present question has been the internal condition of Germany. Optimists who forecast that she would have been starved or out of munition before this have suffered disillusion. Those who predicted her military man power wastage at the point of near exhaustion have witnessed fresh legions cast into the conflict to upset their calculations. We are now indebted to D. Thomas Curtin for a careful and illuminating review of the present German situation from personal observation. From his *Land of Deepening Shadow* we gather the mass of the people are utterly weary of war, but not yet ready to clamor for an unvictorious peace. In fact, the bulk of the German people are still too firmly held in the grip of the bureaucratic and military powers to voice more than a grumble at the scarcity of food and their personal losses. Besides, being drilled to believe what they are told, they seem unable to doubt the accuracy of their Government controlled sources of information. Such

apparently run a riot of fantasy from tremendous victories over the enemy, to the latest extra of reaping a rich war indemnity from the United States. Mr. Curtin expresses little Christian—or pagan—charity toward the German spy system and propaganda work, and punctures the "film lie" of the destruction of Allenburg Church by the Russians as an offset to that of Rheims Cathedral. He further charges the Germans with the meanest forms of cruelty toward their prisoners. He managed to get into Alsace-Lorraine and visit Strassburg, and his picture of the condition of the unfortunate people of the French lost provinces leaves little unimagined by way of ruthless oppression.

After reading *Hurrah and Hallelujah*, by Dr. J. P. Bang, one is convinced that to the German professor must go the first prize for the twisting and turning of high sounding verbiage to prove that the German is the chosen of the Almighty, and the rest of us miserable, more or less wilful sinners. The volume contains mainly extracts from German war poems, sermons and lectures; all shouting the invincible alliance between "Our German God," the Kaiser, and the Reichstag, hatred of the enemy, and a wonderful argument for unity with the Turk as superior to outside so-called Christians. The cymbal clash and drum beat are fine, especially when the "German knights" of old again take the warpath after the entirely unimprest and unrepentant Mr. Thomas Atkins.

Obstacles to Peace, by S. S. McClure. Houghton Mifflin Company. $2. *Land of the Deepening Shadow*, by D. T. Curtin. G. H. Doran Company. $1.50. *Hurrah and Hallelujah*, by J. P. Bang. G. H. Doran Company. $1.

AMERICAN TYPES

An Alabaster Box, by Mary E. Wilkins-Freeman and Florence Morse Kingsley, is an admirable story of the life of a village made weak by resentment and gossip, even to the point of poverty and death, and then healed and made prosperous by love and unselfishness. The little town could not forgive and forget the banker who had misused the people's savings until, after he had been eighteen years in prison, his daughter went back to make reparation for the wrongs he had done. What she suffered and how she finally won the neighbors are the things the book tells. Two love stories add to the real interest we feel in very real fictional personalities. A healthy American story.

Very well done are the short stories of Rupert Hughes's *In a Little Town*. These stories are human, true to life and to the characters and localities described and full of kindly humor and pathos. The best is "Pop," the story of an American father, whose family, wearing the purple and fine linen, feasting sumptuously every day, has come to believe that "Pop" is too shabby, too behind the times, to be good for anything but the useful service of paying bills. They keep him supplied with these by means of trips and festivities in which he has no share and, finally, cap the climax by leaving "Pop" out of the "family photograph."

A perfectly good girl is the heroine of *Lydia of the Pines*, by Honoré Willsie. To be sure she is not so good as the always too glad Polyanna, for Lydia has a few redeeming faults. She is a very real person, capable of deep affection, of clear, steady thinking, of practical action. Her sense of responsibility makes her, even as a child, a power for good in the lives of the men and boys she knows and her triumphs over poverty, her sweetness maintained, in spite of the burdens life brings her all too soon, win our affection and respect.

Aurora the Magnificent, by Gertrude Hall, is a warm, mellow, interesting love story. Aurora is that rare thing in popular

Nujol the Internal Cleanser

Keep Fit—*for* Your Country

In this world crisis it is your duty, above everything else, to keep yourself in good condition. You can't serve your country in any capacity if you allow your health to run down.

The Nujol treatment will make *you* a national asset—not a liability. Take a little Nujol upon rising and retiring and it will remove waste matters and poisons (intestinal toxins) from your system, and keep your habits regular as clock work.

Nujol is not habit forming. (The longer you take it, the less you need it.) No griping, straining, upset stomach or weakening.

Nujol is absolutely pure and harmless, and is pleasant to take. Even the infant will enjoy it, and it will do as much for him as it does for his mother.

Nujol is sold in pint bottles only, bearing Nujol trademark, never in bulk.

Nujol is absolutely distinctive and individual. There is no other product on the market like it.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

SAVE Time & Postage

Save Time and Postage!

Saves *two-thirds* time. Detaches, moistens, affixes and records stamps by a single, quick operation of plunger. Stops waste by keeping stamps locked in one place, protected against loss, spoilage, misuse and theft.

The Independent 119 West Fortieth St., New York

fiction, an individual, a new personality who becomes the friend of the reader. When we have read the book we have met Aurora. We have seen her in the art galleries of Florence making faces at the old masters, and we have seen her on the streets patting the heads of dirty little urchins and giving large presents to beggars. We have enjoyed her cake walk at the charity bazar and her lapses into slang and her frank, unconventional, warm-hearted behavior toward all mankind. And, best of all, we have been refreshed by her freshness and verve, by her directness of character, her patient maternal kindness to the lover whom she nurses thru a severe illness.

An Alabaster Box, by M. E. Wilkins-Freeman and F. M. Kingsley. Harper & Brothers. $1.50. *In a Little Town*, by Rupert Hughes. Harper & Brothers. $1.35. *Lydia of the Pines*, by Honoré Willsie. F. A. Stokes Company. $1.40. *Aurora the Magnificent*, by Gertrude Hall. The Century Company. $1.40.

AT THE FRONT

While the word "deserter" on a war book cover is at once likely to rouse suspicion in a military reader, *A German Deserter's War Experience* is narrated with such accuracy of detail that one is bound to set this prejudice aside. In the light which the author throws upon the German military organization from within, surely nothing which has been said concerning the ruthlessness of its system is an exaggeration. He accuses his officers of both deliberate cruelty and cowardice giving instances in the advance on the Marne, and flight from it, to sustain his charges. This part of his book is an astounding revelation. He asserts on several occasions the men refused to obey orders to shoot wounded enemy soldiers and helpless civilians, and were more tortured than punished for such insubordination. In retaliation for the latter several German officers were shot by their own men. While his company lost thrice its original strength during the fourteen months of war he served, he states it lost not a single officer. At the end of that period all of the officers were photographed wearing the Iron Cross, First Class, for having so magnificently defended the Fatherland—in France and Belgium.

The Battle of the Somme, by Philip Gibbs, is the lengthy record by an eyewitness of what we have come to speak of as the Great Push. Tho the author did not take physical part in it, he was near enough to describe with throbbing pulse the splendid morale of the British, Canadian, and Anzac citizen soldiers as they went Over the Top. If things are witnessed which he confesses he cannot set down in cold ink, he is able to throw a gleam of hilarious joy into his otherwise awesome pages at the coming of the Tanks. These weird, toad-like monsters, climbing over trenches, in and out of shell craters, shoving over house walls, and "eating up" tree trunks, appear to have shaken the British soldier with roars of laughter—a merriment which found absolutely no response in the ranks of the enemy.

The Story of Ypres, by Capt. Hugh B. C. Pollard, is a little volume which tells simply one of the great stories of the war, wherein all arms of the British service fought to their lasting renown. The author divides his narrative into two main periods, separated by the first and second great German bombardments. While the first partly destroyed the historic Flemish city of cloth weavers, the second completed its ruin. The author graphically describes the flight of the population on both occasions, the latter being a terribly lurid picture, its horror increased by the then new German device of gas fumes. It was on this

occasion the Canadians held their ground with unsurpassed valor and saved Ypres.

In the decade before the war it was subject of wonder to many English people what kind of fellow countrymen their gloomy psychological novelists were depicting. What had become of that cheery, happy-go-lucky humor in good or bad circumstances—especially the latter—of which Dickens stands master interpreter? *With a B.-P. Scout in Gallipoli*, by E. Y. Priestman, we find our old friend. Here is the Englishman doing his bit amid the full horror of war with a jest on his lips, sending home cheer up messages, and with a confident smile facing whatever the next hour may bring. In this respect, when it comes to the trenches, all hang together, and being there to do the job set about it in what seems the best way, without a parade of war glory or any particular hatred of the enemy. The author is among the many who "died worthily."

A German Deserter's War Experience. B. W. Huebsch. $1. *Battles of the Somme*, by Philip Gibbs. G. H. Doran Company. $2. *The Story of Ypres*, by Hugh B. C. Pollard. Robert M. McBride. 25 cents. *With a B.-P. Scout in Gallipoli*, by E. Y. Priestman. E. P. Dutton & Co. $1.75.

A MONTH AS A ROOKIE

The actual life of the Rookie has been written only in a fragmentary way until now a member of the Tenth Regiment, which fought the Great Chazy Campaign about Plattsburg last fall, has given us in *At Plattsburg* a pretty complete idea of what the Rookie did and said and suffered and thought and learned. His month in camp and on hike was a great experience and stimulated manhood and patriotism, else why should he greet the flag more reverently and why should his heart be in his throat when he heard the bugle call the last retreat. This is a good account of Plattsburg life.

At Plattsburg, by Allen French. Charles Scribner's Sons. $1.35.

TRUE STORIES

No biography which describes its hero only after recounting his death will serve to awaken the interest of American boys in great Americans. The life of *John Paul Jones* is not easily stripped of romance, but Lewis Frank Tooker, by means of his coldly concise narrative, has almost done so. (The Macmillan Company, 50 cents.)

A new illustrated edition of the famous *Life of Nelson*, by Robert Southey, contains an explanatory and supplemental introduction by Sir Henry Newbolt, the naval historian and enthusiast. (Houghton, Mifflin Company, $2.)

The Girl, by Katherine Keith, is an autobiographical narrative of the childhood, adolescence and young womanhood of a very temperamental American girl, written with a curious detachment and objectivity rare in personal revelations. (Henry Holt & Co., $1.35.)

For a most simple and direct account of typical New England home life seventy-five years ago, when religion was recognized as the main business of living, read *A Daughter of the Puritans*, the story, to her marriage, of Caroline A. S. Creevey. (G. P. Putnam Sons, $1.50.)

The Making of an American, by Jacob A. Riis. A new edition, with a preface by Theodore Roosevelt, of the story of the rise of a young and practically penniless immigrant to a position of an honored and influential citizenship—his struggles, his victories and his love story. (The Macmillan Company, $2.25.)

Benjamin Franklin, Printer, by John Clyde Oswald, has one advantage over Paul Elmer More's survey of the towering personality, in the Riverside Biographical Series. Mr. Oswald is a printer, who writes

SCHOOLS AND COLLEGES

Sea Pines

School of Personality for Girls

HAPPY home life with personal attention and care. Students inspired by wholesome and beautiful ideals of efficient womanhood. War Gardening Equipment

Have you everything you need—tools, clothes, seeds?
You can get first hand information about garden equipment of all kinds, from big things to little things. Simply address the Manager of

THE COUNTRYSIDE SHOP
119 West Fortieth Street New York

of a printer. He concentrates and specializes upon this side of the many sided Franklin, giving sidelights upon his work as a publisher, writer and advertiser. (Doubleday, Page & Co., $2.)

FROM THE NOVELISTS

The Rustler of Wind River in the story of the same name by G. W. Ogden, was a man who would not allow the Western cattle barons to dispossess him of his homestead. This meant war. But "the rustler" was an ideal hero and won his ideal heroine after a series of ideal skirmishes. (A. C. McClurg & Co., Chicago, $1.30.)

Starr of the Desert, by B. M. Bower, is a thrilling tale of life on our Mexican border, where Starr, a secret service man, discovers a serious plot against the Government and arrests an American highbrow and other revolutionary ringleaders. (Little, Brown & Co., Boston, $1.35.)

Ordeal by Fire, by Marcel Berger, is a story of a man, affluent, well-educated, pleasure-loving, cynical, selfish, with atrophied emotions. War makes him human, teaches him fair-play, modesty, bravery, compassion. The book gives a realistic account of the details of life at the front in France. (G. P. Putnam's Sons, $1.50.)

The Human Drift, by Jack London. Odds and ends, such as are published after a popular writer dies. Personal glimpses of London, of the California ranch, of Ecuador, of the high seas. More or less true stories of traits-in-humanity caught by this someways keen observer. Two one-act plays end the volume, but the title essay beginning it is, tho illogical enough, its most careful, most stimulating piece of writing. (The Macmillan Company, $1.25.)

PULPIT AND PEW

Frank Otis Erb presents an inclusive and thoro-going survey of the rise and *Development of the Young People's Movement* in the churches of America. The work shows painstaking and accurate research, but lacks imagination and picturesqueness. It reads more like a volume of statistics than a history of this thrilling development. (University of Chicago Press, $1.)

From the standpoint of the Episcopal Church, Edward S. Drown discusses *The Apostles' Creed Today* in the latest volume of the series entitled "Church Principles for Lay People." The author summarizes Dr. McGiffert's theory of the origin of the creed; and then seeks to reinterpret its clauses in terms of modern thought. (The Macmillan Company, $1.)

Religion of a Newspaper Man consists of some sixty religio-philosophical editorials from the pen of DeWitt McMurray, which appeared in the Sunday issues of a couple of well known Texas newspapers. They cover a wide range of religious topics from belief in God and immortality to the evils of prejudice, passion and an evil tongue. The style is lucid, vigorous and well adorned with apt quotations. (F. H. Revell & Co., $1.50.)

The Social Teachings of the Jewish Prophets, by President Bizzell, covers the whole history of Hebrew prophetism from Moses and Samuel to Joel and Jonah. The political and social circumstances under which the great prophets, like Amos, Hosea and Isaiah, lived and taught were so similar to our own that any conscientious and skilled interpretation of their social messages must be of living interest today. (Boston: Sherman, French & Co., $1.25.)

The Grand Adventure and Other Sermons, by Dr. Robert Law, is well worth the publishing for the two sermons on The Law of Non-Resistance and Politics According to Christ. The whole volume is full of that quiet, courageous religious philosophy exprest in terse, restrained language, which convinces the mind and assures the heart. The volume is dedicated to the three soldier sons and their comrades in two battalions of the Canadian Expeditionary Force. (G. H. Doran Company, $1.25.)

MAKING UP AMERICA'S MIND

BY LOUIS J. ALBER

GENERAL MANAGER OF THE COIT-ALBER CHAUTAUQUA

FOR the successful prosecution of the war, our National Government is rapidly and effectively mobilizing the industrial, economic and man-power resources of America. But largely to agencies outside of the Government has been left the important task of mobilizing America's mind—a most stupendous undertaking, were it not that democracy has evolved a piece of public-opinion making machinery unique in the world's history.

Germany has been so effective in waging war, especially in its early stages, largely because the mind of Germany was made up even before war was declared. The German system left nothing to chance; even the minds of the citizens had been cared for by governmental agencies and she presented a solidarity of purpose never before equaled. Most of the radical Socialists were whole-heartedly for the war and for the Fatherland.

It took England over a year to get its mind made up—to arrive at any semblance of united thinking and mass conviction, and England is a small country where all the people can be reached quickly. It is possible in England for nearly every family to read the same paper every morning.

To be of value to our Allies our diversified and polyglot citizens must be united almost to a man, whole-heartedly and unreservedly, behind the Government and its policies not later that next fall. An America of one mind regarding the war is invincible. The attitude of mind of Americans will mean a swift and terrible, or a weak and halting America.

The East and the residents of the big cities say the press will do this work. The press is doing and will continue to do its share, suffering under fearful handicaps.

Americans whose minds are not made up as to whether it was necessary for America to go into this war and those who have believed from the beginning and still believe that this is solely a European war in which we are not concerned, have little faith in the newspapers, believing that they conducted a strenuous campaign "to get us into war." The shameful and un-American treatment the newspapers gave to the senators that defeated the so-called Armed Neutrality Bill was not calculated to inspire confidence in the fairness of the press among thoughtful people. All liberty-loving people who believe in the fundamentals on which our Government is built were shocked at the outburst of jungle hate that disgraced the front page of nearly every newspaper in America; the sheet calling itself "the world's greatest newspaper" proving the vilest. It was a spectacle to make every genuine patriot weep and in that foul display of brutal hate the press lost half of its influence upon the minds of millions of level-headed, law-abiding Americans.

Ninety per cent of the people reach a conviction readily in the mass, slowly if left to themselves as individuals. Newspapers are not read in the mass. Type is cold at best. John Jones says to his neighbor, "I read yesterday that President Wilson declared that we must make democracy safe in the world." Jones shows no conviction and in a few days he'll probably forget what he read, while his neighbor is only mildly interested. But let John Jones say to that neighbor, "Yesterday I heard President Wilson say 'We must make democracy safe in the world,'" and you'll note the enthusiasm in the voice and the flash of the eye that denotes conviction. Jones will never forget what he *heard* and his neighbor will be convinced, too.

So long as human nature is as it is today, the written word cannot supplant the spoken word. After physical hunger, the strongest and most universal hunger in the world is *the hunger for information imparted by word of mouth.* And right here lies Chautauqua's duty and opportunity. Every Chautauqua gathering this summer will be a patriotic rally, and the services of the Chautauqua platforms have been placed unreservedly at the call of the Government. There is no more effective way of reaching the people and effecting a solidarity of opinion than is thus offered.

IN Chautauqua audiences this summer will be gathered five or six million representative Americans, the warp and woof of the body politic, the people of whom Ida M. Tarbell says in her article in the May issue of the *Atlantic Monthly*, "A Little Look at the People": "They stick by the thing in hand; and this is the vital quality of a great people. They work. Life is a stiff thing for most of them, but few of them shirk it. More and more I come to feel that you could count on these people for any effort or sacrifice that they believed necessary." . . . "Besides the continuous vaudeville, the agitations and hysteria to which the East has treated us in the last two and a half years, this dignity, this immediate action, this willingness to see it thru, gave one a solemn sense of the power and trustworthiness of this people."

What these men and women think about the war is all important. To help them to think right is the task of the Chautaqua. Every energy will be devoted to sounding a high patriotic note. Conservation of resources will be preached. Practical advice on conserving food will be given. Red Cross work will be furthered. Every tent will be a recruiting ground for genuine Americanism. And the doubts and fears of millions of people will be melted by the power and heat of the spoken word and this conviction left: "America *is* in this war to make democracy safe and we will do our share."

And Chautauqua can do this because it suffers from none of the handicaps that hinder the press. It is and has been the freest platform in America. It has never tried to "put anything over on the people." It has never had an ax to grind—has never bowed to selfish interests. It is the greatest genuinely democratic piece of machinery for forming public opinion in the world. And it will not break down or shirk its task, as so many democratic institutions have done in the stress of war.

It is only natural to expect Chautauqua, that has labored for forty years for greater democracy in America, will in this international crisis do its duty in supporting the national program "to make democracy safe in the world."

Cleveland, Ohio

Don't Take a Trip With a Corn

DON'T handicap yourself in a business way or socially with a painful corn. There's no need to keep your mind on your corn.

Blue-jay—the easy way—brings instant relief from pain. And your corns are gone in 48 hours. That is, the average corn. Some very stubborn cases require a second or third treatment.

Millions upon millions of corns have been removed the Blue-jay way. Millions of families keep a supply on hand, and they never have corns. You, too, can be freed now and forever.

Paring corns brings only temporary relief. And harsh liquids are dangerous. Blue-jay is the scientific way.

INSURANCE

A Department of Review and Service
Conducted by W. E. Underwood

MOBILIZING THE FIRE INSURANCE BUSINESS FOR WAR

LAST March, anticipating war with Germany, the fire insurance companies of the United States offered their services to the Government. I do not mean that each particular company did this, nor that every one of them was represented in the offering, because all are not members of the National Board of Fire Underwriters, the organization making it. But the 133 companies composing that body include not only the oldest and strongest in the country but they transact, perhaps, as much as 90 per cent of the whole business. The National Board is not a rating organization; it exercizes no legislative functions whatever either as to rates or general practises. If I were asked to concisely define its objects, I should say that it was an organized effort, on the part of those who know how to do it, to conserve the burnable property of the nation and reduce the cost of fire insurance protection. I know that this is not the popular idea of the fire insurance business; but that does not deter me from affirming a fact as to which the public are mistaken.

In describing the offering made to the Government for this war by the National Board of Fire Underwriters, I shall draw lightly from a rich fund of information on the subject contained in the annual address of the organization's president, Mr. R. M. Bissell, president of the Hartford Fire Insurance Company, at its meeting last month. He tells us that the opportunity for patriotic service finds the fire insurance organizations ready, willing and competent to perform it—"a service for which both variety and usefulness will bear favorable comparison with that proffered or performed by any other industry or occupation."

The National Board has been in existence for fifty-one years. During more than one-half of that time it has been engaged in making surveys and inspections of the physical hazards of the country, in accumulating and classifying these records and in working out engineering plans. It possesses a mine of information respecting these facts, water supplies, fire-fighting organizations and materials which, welded into a compact mass, is of immense value to the several departments of the Government charged with preparing the nation for war. In this connection Mr. Bissell says:

"This development is an entirely logical one, for during the past generation the thought of public service has been directing a larger and larger part of our activities. National public service upon this new and extended scale is therefore merely the natural fruition of a spirit prominent in the affairs of the National Board."

On March 21 the Board adopted a resolution placing its facilities and services at the disposal of the Government. It may be of vital importance to the Government, ran the preamble that the latter have at its command facilities for safeguarding the fire hazards involved in cities, towns and villages, public buildings, hospitals, warehouses, and similar institutions, as well as detailed knowledge of local water supply systems, structural conditions and fire-fighting equipments. This is the sort of information the Board has been gathering, to the minutest detail, in its efforts to locate defects and have them eliminated. It exprest its readiness to undertake the organization and direction of fire prevention requirements for the national defense and to furnish the Government the vast amount of information possest by the fire insurance companies concerning industrial and other establishments to be used for supplying and equipping the armed forces of the country. The acceptance by the Government was prompt and cordial, and the Board is now in active coöperation with the Council of National Defense.

The Board went right to work; an extra office force was organized and special files were purchased. The service involves the handling of a mass of details, but as this is inherent in all branches of insurance, there was no delay in supplying the Government with plans for protecting city water supplies, warehouses and docks; with lists of factories suitable for the production of articles needed by the Government. "We have perfected a system of advisory committees in different parts of the country for organizing and supervising the thousands of traveling inspectors, surveyors, engineers and appraisers employed by our various companies and organizations," said Mr. Bissell, "so that they may carry out any investigations and secure any information which the several departments of the Government or of the Council of National Defense may request."

THE Governors of all grain-producing states and those of states in which are located the great terminal elevators have been offered the services of a small army of inspectors in a campaign to reduce the annual destruction of grain and other foodstuffs. A like work is to be undertaken in the Southern states to conserve the cotton supply. Coöperating with the state councils of defense, a place is to be instituted to conserve other food repositories, such as potato warehouses, coal mines, fertilizer factories, saw mills and other factories, especially those the products of which are necessary for war supplies. It is also designed, after conferring with manufacturers' associations, to effect a serious and practicable effort on their part to reduce the fire waste in every class of industrial properties of which the Board may be unable to offer prompt reinspections. All this work will be supplemented by conferences, addresses delivered before the owners and superintendents of factories, and by printed advisory suggestions and placards designed to secure the coöperation of employees.

Property owners will be appealed to thru their sense of patriotic obligation. "The ordinary arguments of penalties and credits in rates have often failed to produce the safeguards, and improvements, the care, cleanliness, and constant supervisory attention which make for safety," observes Mr. Bissell. Continuing, he says:

"Now, at a time of national need and emergency with the support and compelling influence of governors, state fire marshals, and state councils of defense and calling to our aid also the desire to serve our common country, which in the heart of every true American now seeks outlet and expression, may we not hope to be a powerful factor in a new movement to lessen the scandalously great fire waste of this country, a movement which shall bring results of notable value to the Nation? The cost of the war will be stupendous. Is there any way in which we, the fire insurance companies of America, can better help to make its burden lighter?"

Experience is the only guide, and particularly so in insurance. My readers, therefore, will not regard it as an imposition on their good nature if, in support of the claim that the companies, thru the National Board, have been working to reduce the fire waste, I cite from Mr. Bissell's address the results of the business transacted by the membership in 1916, and for the ten years ending with that year. The business last year was not a fortunate one as these figures will show:

The total premiums received amounted to $424,272,461. Against that we have $210,008,119 of losses paid; $159,036,413 for expenses, and $65,940,008 for outstanding undischarged liabilities, a total of $434,984,540 and a loss, as compared with premium income, of $10,272,461, or 2.46 per cent.

The ten-year experience, while not encouraging, was better. The total premiums handled in that period aggregated $3,102,080,749; the paid losses were $1,616,003,632; the expenses, $1,214,399,933; and the increased liabilities for which funds must be held, $219,790,843; a total of $3,050,194,408 and a profit of $51,886,341, or 1.67 per cent.

When we consider the vast amount of money handled—more than three billions—in a period covering ten years of time, and compare it with the profit yielded, we must conclude that the results are disproportioned to the efforts made. Getting down to easily understood figures, they are $1.67 for each $100.

The fire insurance companies are not run by impractical men; therefore, they are not dreaming of a time when their labors will result in making this a fireproof country. But, for their own profit, as well as the benefit of the commonwealth, they are trying to make it a slow-burning country.

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subject to the editor of the Insurance Department.

THE MARKET PLACE

THE FOOD CAMPAIGN

Our crops of grain, wheat excepted, will be the largest ever harvested, and estimates of the yield of wheat are more favorable than they were a short time ago. It will be recalled that the Government's report promised only 366,000,000 bushels of winter wheat, and that farmers were urged to increase the spring wheat acreage in order that the entire crop might be equal to last year's, 640,000,000 bushels, which was only a little more than enough for home consumption and seed. Last year's spring wheat crop was only 159,000,000. It is now expected in the West that the forthcoming Government report will raise the winter wheat estimate to at least 400,000,000 bushels. In some of the spring wheat states the acreage has been reduced; in others there is an increase, and probably there is, on the whole, a gain of 10 per cent. Several Western crop experts think there will be enough spring wheat to make an entire crop of 700,000,000 bushels. It is more probable, however, that the yield will be in the neighborhood of last year's. As it is said that the Entente Allies will need at least 200,000,000 bushels from this country, our Government may decide to control the distribution and use of the quantity produced.

There will be no shortage of other kinds of grain. It is estimated that 15,000,000 acres have been or will be added to last year's 108,000,000 acres of corn, and the crop will be a great one, considerably exceeding even the 3,125,000,000 bushels produced in 1912. There is a gain of 10 per cent in the oats acreage. Large increases of the rye and barley crops are assured. Corn has been planted in part of the 12,437,000 acres where winter wheat was killed, and in land formerly used for cotton in the South, where cotton acreage has been reduced by 3 per cent. From many parts of the country come reports about planting that will largely increase the supply of vegetables. Acreage increase for potatoes is 25 per cent in the State of New York, and this is estimated by the Government to be the addition for the whole country. In that state much land heretofore used for hay has been taken for vegetables and grain. The additional acreage of beans there is 41 per cent.

It has been very difficult to get the labor required by farmers, but still there has been planting in the greatest acreage ever used. Men will be needed for intermediate cultivation and at harvest time. Plans of the national Departments of Agriculture and Labor for supplying harvest labor were announced last week. They provide for cooperation with state and county authorities, with an organization and agencies that will ascertain the labor wants of every township; also for the employment of hundreds of thousands of high school boys, retired farmers and young women. In some places farmers have been restrained by fear that overproduction would make prices low and unprofitable. A citizens' committee in one New York county has formed a corporation that guarantees to local farmers prices that will more than pay the cost of production. In many states help has been given for planting by local Government officers, railroad companies and associations of citizens. Much will be added in the near future by Federal action. Canada's supply of farm labor has been reduced by army service, but the demand appears to have been satisfied by

"A New Plan by Old Interests."

Thousands of millions of feet of lumber are DEMANDED NOW

—for barracks, for ships, for wagons and equipment, for industrial use. Add to this the normal demand and the enormous *extra* demand which will come with the close of the war and you can see that the lumber industry is in a position more favorable than for many years.

LACEY Profit-Sharing Bonds

(1st Mortgage) are based on *growing timber.* The name of Lacey has been standard in the timber field for many years. Timber values are constantly rising and now will rise faster than ever. Lacey Bonds will carry large *profits.*

Experienced investors wisely see in the present world-situation reasons for conserving their principal by SAFE as well as profitable investments. Lacey Profit-Sharing Bonds (1st Mortgage) are *ideal for this purpose* on account of their *profit feature* in addition to 6% and absolute *safety.* Convenient denominations of

$100, $500, $1,000

You are invited to read the highly interesting Booklet T-203, *which explains the exceptional conditions on which the bonds are based. We suggest prompt application.*

JAMES D. LACEY TIMBER CO.
332 South Michigan Ave., Chicago

For 37 years the name of Lacey has been synonymous with conservative success in timber investment.

thousands of high school boys, university students, workmen released by railroad companies and business men who spend vacations in the fields. The spring wheat acreage there has been increased. In both countries there have been extraordinary efforts to make a great output of foodstuffs, because so much is needed on the other side of the Atlantic, and an unprecedented harvest can now be foreseen.

AT THE STEEL MILLS

The steel mills are working under great pressure. Rapid and extraordinary growth has not given the industry capacity or power to satisfy the overwhelming demand. A statement prepared by the Iron and Steel Institute shows that the industry's output has increased from 23,513,000 tons in 1914, to 32,151,000 in 1915, and 42,772,000 in 1916. In the same time exports have been multiplied by $3\frac{3}{4}$. Last year they were 6,110,000 tons. Mill capacity is engaged for more than a year, but preference is given to Government orders, and these are larger than was expected. They may call for 200,000 tons a month, including plates for ships, structural shapes for buildings at navy yards and army camps, and steel for 7,500,000 field artillery shells and 70,000 motor trucks. The railroads need cars and are waiting for 104,000 ordered some time ago, with 2200 locomotives. An order from Russia for 10,000 cars was placed last week, but she wants 30,000 more. If they could be made promptly, ships to carry them across the Pacific could not be found. The output of pig iron is now found to be insufficient. Undoubtedly the Government will get the steel which it must have, and railroad companies will be served without unnecessary delay, but other buyers will have to wait.

THE STOCK MARKET

During the week that ended on May 26 there was great activity on the New York Stock Exchange, with rising prices. The market was a broad one. On three days the transactions exceeded a million shares, and the total for one of these, 1,563,000, was the largest since the beginning of February. More than one-quarter of the business was done in shares of the Steel Corporation, the price advancing from $123\frac{1}{8}$ to $134\frac{7}{8}$. The highest figures had been $129\frac{3}{4}$, reached in November last. Shares of all steel companies moved upward, but there were also large net gains thruout the list, those for industrials ranging from 2 to 11 points. Motor stocks, which had declined on account of coming new taxes and a belief that the general tax burden would reduce the sales of cars, were from 1 to 7 points higher at the close of the week. The causes of the advance were not clearly seen, but among them were the condition of the steel industry, improvement of the national tax bill by the Senate Committee, and a prevailing expectation that the railroad companies would be permitted to increase their freight rates. The steel mills had not been able to satisfy the demand for their products even before the war needs of the Government, for new ships and munitions were made known.

The price advance was not checked on the first day of the following week, the 28th, when 1,290,000 shares were sold. Railroad stocks showed exceptional strength, but industrials were affected by a reaction, due mainly to the taking of profits by fortunate traders. Steel shares, still leaders in activity, lost $1\frac{3}{8}$. On the 29th the market was still a very broad one, and an average of fifty representative securities showed a small increase of price at the close, but a large majority of the changes were fractional. Motor stocks began to decline again. On the 31st, after the intervening holiday, a vigorous advance was seen in the early hours, but gains were cut down by a late reaction. This was the sixth consecutive million-share day. A reported reduction of the weekly loss of British ships exerted a favorable influence, and traders were predicting an over-subscription for bonds of the $2,000,000,000 loan.

PEBBLES

Vicar (at village Red Cross concert)—Miss Jones will sing again—"I cannot tell you why!"—*London Opinion.*

Registrar—And are you the oldest of the family?

Frosh—Nope. Pa and Ma are both older than I am.—*Chaparral.*

"A man learns most who begins at the bottom," remarked the Parlor Philosopher.

"How about the fellow who is learning to swim?"—*Judge.*

If Eva Lushun, Charlie Darwin and Sir Vival raced to the corner saloon to buy Ori Gin with Specie, would Darwin?—*Pennsylvania Punch Bowl.*

The Lady—And you may say we suspect a discharged butler of the robbery.

Reporter—When was he discharged?

The Lady—Oh, we never really kept a butler; but I think it sounds quite well.—*Judge.*

The Sentry (replying to irate demand from outside)—Very sorry, sir; but my orders are not to let anyone thru the gate.

Irate One—But I *must* come in! Do you know who I am—— I'm a G.O.C.!

The Sentry—Very sorry, sir. Couldn't do it if you were a G.O.D.—*Sketch.*

"You simply cannot trust anybody. Every one seems so dishonest nowadays," declared the lady. "My maid, whom I had the utmost confidence in, left me suddenly yesterday and took with her my beautiful pearl brooch."

"That is too bad," sympathized the friend. "Which one was it?"

"That very pretty one I smuggled thru last spring."—*New York Globe.*

An elderly lady entered a shop and asked to be shown some tablecloths. The salesman brought a pile and showed them to her, but she said she had seen those elsewhere—nothing suited her.

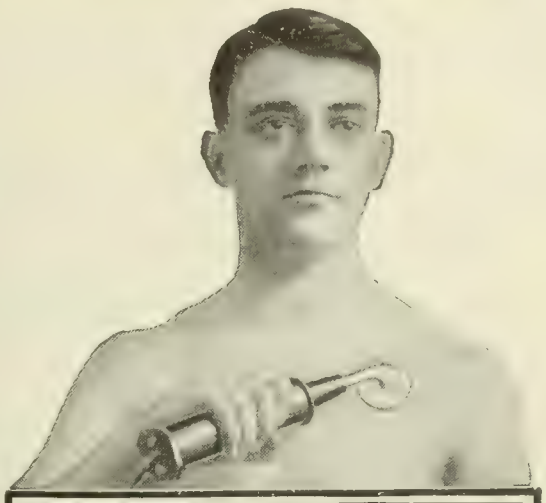
"Haven't you something new?" she asked.

The clerk then brought another pile and showed them to her.

"These are the newest pattern," he said. "You will notice that the edge runs right around the border and the center is in the middle."

"Isn't that lovely!" said the lady. "I will take half a dozen of those."—*Life.*

NATIONAL SERVICE LYRICS



(Or Square Pegs in Round Holes)

Uncle Tom's an Architect, an F.R.I.B.A.,
And his profession, I expect, is not much
catch today;
But he thought it was a rum thing
If he couldn't tackle something.
So he filled a form and sent it in on Friday.
But he's not just overjoyed with
Messrs. Smith, whom he's employed with,
For his job's to sweep the shop and keep
it tidy!

Uncle Jim's an Engineer, and rather proud
of it,
Made up his mind to volunteer ("a man
must do his bit");
But I fancy, poor old chappie,
He is far from being happy
In a Government Department full of flappers,
Where from 10 to 6 he lingers
Getting ink upon his fingers,
Writing names upon interminable wrappers!

Cousin Fred's a ne'er-do-well, his strong
point's not his brain,
He's never punctual at a meal and cannot
catch a train;
But he sent an application
With his usual hesitation
And the answer made the others gnash
their molars,
For he's got a well-paid billet,
Tho I don't know how he'll fill it,
And his title is controller of controllers!

—*Books of Today and Tomorrow.*

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Imagine that you are an editorial writer for a newspaper that is deeply interested in raising troops for the United States Army. Write an editorial article concerning the crisis in France, writing it in such a way that it will encourage enlistment.
2. You have a cousin who is serving on an American battleship. His mother is very greatly deprest by what she considers the success of the German U-boats. Write her an optimistic letter based on the reports of shipping losses.
3. Write a spirited dialog in which one person speaks in favor of censorship, and the other speaks against it.
4. Prepare a speech in which you not only review the various movements against conscription but also give reasons why all such movements are condemned by citizens who are truly patriotic.
5. Prepare a speech in which you review, in an interesting manner, the various important events of the week.

Editorial Articles.

1. Prepare a talk on "The True Patriot," to be given in the assembly of your school. Show how students in school may "serve as well as adhere."
2. Give oral definitions of the several types of militarism. Explain why the present military activity of the United States cannot be classed under any of the five principal types named in "Varieties of Militarism."
3. Write a composition of two paragraphs, the first showing the reasons that may lead Russia to make a separate peace; the second showing what the possible results of such a peace would be.
4. What is it that gives humor to the editorial article called "The New Freedom"? What are some of the legitimate purposes of humor in writing?

The First Ten Thousand. By Herbert Reed.

1. Write a very short synopsis of the article.

Labor and Capital for Democracy. By Theodore Marburg.

1. Show whether or not the author of this article maintains the principles of unity and coherence.

Waste Not, Want Not. By Donald Wilhelm.

1. Tell why you like or dislike the introduction of this article.
2. What method does Mr. Wilhelm take to present his principal thought?
3. By what means does he impress us with the character of Mr. Hoover?
4. Give a summary of the thought-content of this article.

Who's Hoover? By Montrose J. Moses.

1. Give orally a short character sketch of Mr. Hoover, commenting particularly on the reasons that have made him successful.
2. Write a paragraph on "Mr. Hoover as the Ideal Soldier of Fortune."

Making Up America's Mind. By Louis J. Alber.

1. Write a paragraph of exposition in which you explain the purpose of the coming "Chautauqua."

My North Country County. By Irving Bacheller.

1. Write a summary of the characteristics of the people who live in Mr. Bacheller's North Country County.
2. Give a talk in which you present Silas Wright as an ideal American. (Read "The Light in the Clearing" if you wish to learn more about Silas Wright.)

SECTION II. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words prominent in the news of the week: emissaries, altruistic, cordial, itinerary, tornado, ambulance, philanthropic, conscription, propaganda, anarchist, syndicalist, censor, espionage, depredations.

SECTION III. GRAMMAR.

1. Give the syntax of the subordinate clauses in the first column of the article called "Waste Not, Want Not."
2. Point out the subject, the predicate, and the object, if any, in every sentence in the first column of the same article.

SECTION IV. LITERATURE.

A Song of Summer. By Charles Keeler.

1. By what means has the poet made his song dainty and attractive?

Enlisted. By Pendleton King.

1. Point out the figurative elements in this poem. What do they add to the poem? By what spirit is the poet moved?

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Public Opinion and the War—"What Is Patriotism?" "Varieties of Militarism," "The First Ten Thousand," "Making Up America's Mind," "Authorities Crush Anti-Conscription Movement."

1. On the basis of the first editorial discuss the saying, "My Country, may she always be right; but, My Country, right or wrong!"
2. What type of militarism, in your judgment, is most prevalent in each of the European countries now at war? Which type is most prevalent in this country?
3. What is the attitude of the men at Plattsburg toward the war?
4. What is the feeling concerning the war in your own community? What influences have brought this feeling about?
5. What is your attitude toward the Government's treatment of the anti-conscription propaganda? Justify this article.

II. The President and Congress—"Censorship Again Defeated."

1. What is the normal relationship between the President and Congress? In the light of President Lincoln's administration, what changes in this relationship are likely to take place if the present war continues?
2. Discuss the various war measures which Congress has already passed and those which are still pending.
3. How do you account for the refusal of Congress to grant the President the right of censorship which he desires?

III. Progress of the War—"The Crisis in France," "Shipping Losses," "The Italian Drive."

1. Summarize the military operations in the various fields since the war began. What is the present situation (a) on the western front, (b) on the eastern front, (c) in the south and southeast, (d) on the sea? Have the sacrifices of men in each of these regions been justified?
2. Why is there a lull at present in the west, the east, the southeast?

IV. Italy and the War—"Prince Udine Addresses Senate."

1. What position did Italy occupy in European politics at the beginning of the war?
2. What were the reasons which led Italy to enter the war? Are these the reasons which Prince Udine gave in his address?
3. Why are the people of the United States in general not as much interested in Italy's needs as in those of Great Britain and France?

V. Russia and the War—"Russia's Temptation," "Confusion in Russia."

1. Review (a) Russia's international relations during the past century, (b) her internal development during the same period, (c) the specific causes which led her into this war.
2. It is said that Russia's old treaties probably cover (a) questions of the partition of Persia, (b) French loans, (c) conditions under which she is to get Constantinople, (d) plans for the partition of Austria-Hungary and Turkey, (e) the reorganization of the Balkans. Discuss the probable conditions laid down in one or more of these treaties.
3. "But evidently Russia now holds the whip hand," etc. Why is this so (a) in a military sense, (b) in an economic sense?
4. "Russia is so situated that she can make peace with impunity." With a map open before you, show why this is true?
5. Balance the conditions described in the last paragraph of "Russia's Temptation." What, in your mind, are the chances that Russia will remain faithful to the Allies?

VI. The Problem of Food—"Waste Not, Want Not," "Who's Hoover?" "The Market Place—The Food Campaign," "Progress of Food Legislation."

1. What are the causes of the food shortage as indicated in the first article? What are the results?
2. "So we have two great problems," etc. How is each of these problems to be solved?
3. How does Mr. Hoover ask us to settle the problem as far as our domestic consumption is concerned?
4. "Our crops of grain, wheat excepted, will be the largest ever harvested," etc. How is this statement proved?

VII. Industrial Reorganization and the War—"Labor and Capital for Democracy."

1. Mention three reasons why "positive coöperation . . . especially on the part of labor," is necessary if we are to win the war.
2. Prove that the principles enunciated at the top of column 2 involve almost complete industrial reorganization. Which of these principles involves the most far-reaching changes?
3. What reorganization of industry will be necessary if the principle discussed in the third column is to be carried out?

would clear her skin

"She would be a pretty girl if it wasn't for her complexion!" But the *regular* use of Resinol Soap, aided at first by a little Resinol Ointment, would probably make it clear, fresh and charming. If a poor skin is *your* handicap, begin using Resinol Soap and see how quickly it improves.

But the use of Resinol Soap is by no means confined to the improvement of poor complexions. It is a delightfully pure, cleansing and softening soap which truly merits its place among the finest toilet requisites. Yet it contains just enough of the gentle Resinol medication to *preserve* the delicate texture and color of a *healthy* skin from the inroads of wind, dust, sun and *time*.

This same purity, and soothing, healing, medication also adapt Resinol Soap to the care of the hair, and of a baby's tender, easily irritated skin.

Resinol Soap is not artificially colored, its rich brown being entirely due to Resinol medication, which *doctors prescribe* so widely in their treatment of skin and scalp affections.

Resinol Soap is sold by all druggists and most dealers in toilet goods.

JUST A WORD

On the cover of The Independent this week we publish a photograph of "The Men Who Made Militarism," described on page 497 by Carl Ackerman, an American author who has spent nearly two years of the war in Germany. "Field Marshal von Hindenburg," he says, "sees the world as a great battlefield; men as being created to fight." But "his man 'Friday'" (at the right of the photograph) is the hand to von Hindenburg's brain. "Ludendorff executes what his superior creates."

What We Are Fighting For

President Wilson's Message to Russia

In view of the approaching visit of the American delegation to Russia to express the deep friendship of the American people for the people of Russia and to discuss the best and most practical means of coöperation between the two peoples in carrying the present struggle for the freedom of all peoples to a successful consummation, it seems opportune and appropriate that I should state again, in the light of this new partnership, the objects the United States has had in mind in entering the war. Those objects have been very much beclouded during the past few weeks by mistaken and misleading statements, and the issues at stake are too momentous, too tremendous, too significant for the whole human race to permit any misinterpretations or misunderstandings, however slight, to remain uncorrected for a moment.

The war has begun to go against Germany, and in their desperate desire to escape the inevitable ultimate defeat those who are in authority in Germany are using every possible instrumentality, are making use even of the influence of groups and parties among their own subjects to whom they have never been just or fair or even tolerant, to promote a propaganda on both sides of the sea which will preserve for them their influence at home and their power abroad, to the undoing of the very men they are using.

The position of America in this war is so clearly avowed that no man can be excused for mistaking it. She seeks no material profit or aggrandizement of any kind. She is fighting for no advantage or selfish object of her own, but for the liberation of peoples everywhere from the aggressions of autocratic force. The ruling classes in Germany have begun of late to profess a like liberality and justice of purpose, but only to preserve the power they have set up to Germany and the selfish advantages which they have wrongly gained for themselves and their private projects of power all the way from Berlin to Bagdad and beyond. Government after Government has by their influence, without open conquest of its territory, been linked together in a net of intrigue directed against nothing less than the peace and liberty of the world. The meshes of that intrigue must be broken, but cannot be broken unless wrongs already done are undone; and adequate measures must be taken to prevent it from ever again being rewoven or repaired.

Of course, the Imperial German Government and those whom it is using for their own undoing are seeking to obtain pledges that the war will end in the restoration of the status quo ante. It was the status quo ante out of which this iniquitous war issued forth, the power of the Imperial German Government within the Empire and its widespread domination and influence outside of that Empire. That status must be altered in such fashion as to prevent any such hideous thing from ever happening again.

We are fighting for the liberty, the self-government, and the undictated development of all peoples, and every feature of the settlement that concludes this war must be conceived and executed for that purpose. Wrongs must first be righted, and then adequate safeguards must be created to prevent their being committed again. We ought not to consider remedies merely because they have a pleasing and sonorous sound. Practical questions can be settled only by practical means. Phrases will not accomplish the result. Effective readjustments will; and whatever readjustments are necessary must be made.

But they must follow a principle, and that principle is plain. No people must be forced under sovereignty under which it does not wish to live. No territory must change hands except for the purpose of securing those who inhabit it a fair chance of life and liberty. No indemnities must be insisted on except those that constitute payment for manifest wrongs done. No readjustments of power must be made except such as will tend to secure the future peace of the world and the future welfare and happiness of its peoples.

And then the free peoples of the world must draw together in some common covenant, some genuine and practical coöperation that will in effect combine their force to secure peace and justice in the dealings of nations with one another. The brotherhood of mankind must no longer be a fair but empty phrase; it must be given a structure of force and reality. The nations must realize their common life and effect a workable partnership to secure that life against the aggressions of autocratic and self-pleasing power.

For these things we can afford to pour out blood and treasure. For these are the things we have always profest to desire, and unless we pour out blood and treasure now and succeed, we may never be able to unite or show conquering force again in the great cause of human liberty. The day has come to conquer or submit. If the forces of autocracy can divide us they will overcome us; if we stand together, victory is certain and the liberty which victory will secure. We can afford then to be generous, but we cannot afford then or now to be weak or omit any single guarantee of justice and security.

WOODROW WILSON.

SAVE THE FRUIT CROP

We said this LAST YEAR—
We say it again

This is a year for thrift and service. We must feed not only our own people, but also millions in Europe. The frightful waste of fruit is a national reproach. Help stop this unpardonable extravagance. The fruit we waste would feed Belgium.

THE United States Government urges preserving as a home duty. Preserved fruits are energizing and nourishing. They vary your menus. They reduce the cost of your table.

America's canning and preserving industries are models for the world. Their products are pure, appetizing and wholesome. Support them.

If you preserve at home, put up more fruit than ever before. Get jars and glasses, bottles and crocks ready to save the fruit crop. Put away dried vegetables. The American housewife who practices thrift places herself in the ranks of those who serve their country.

You can show your thrift in no more convincing way than by combating the national tendency to squander this country's wonderful fruit crop. Whether you buy preserved fruits from your grocer or preserve at home you perform a service to your own family and to the Nation.

DON'T SQUANDER, DON'T HOARD

THIS war is serious business. How serious it is it will take us a long time to realize to the full. We are too far away, too protected. Our young men have not yet begun to die. The grip of privation is not yet at our vitals. Our time will come, but in the very nature of the case, it comes slowly.

We can hasten its coming if we will. Just in proportion as we hasten its coming shall we make our contribution to the glorious task of making the world safe for democracy a full measure, prest down and running over.

Governmentally we are doing very well. How well we cannot fully know from day to day, for many of the things that are being done must be kept concealed until they are complete. But individually are we doing as well as we can, as we should, as we must?

Success in modern warfare is a matter of intensive national efficiency, and, like every other war since time began, a matter of personal sacrifice. How are we meeting that aspect of the situation?

In their personal relation to the problem the people of the country seem to find themselves confronted with the horns of a puzzling dilemma. We must economize—for we must meet the demands of the increased cost of all kinds of living, we must subscribe to the Liberty Loan, we must pay increased taxes, and we must support the Red Cross and the numberless other wartime activities of mercy and relief. But at the same time we must spend normally and rationally—for we must not cripple business and menace prosperity. The chairman of the Council of National Defense has put this point well:

> We need prosperity in war time even more than in peace. Business depressions are always bad, but doubly so when we have a fight on our hands. The true method of achieving victory is to carry on the operations of the war with the minimum of disturbance of our domestic affairs.

The two things, economy and spending, are not incompatible. All that we need are reasonableness and good sense in both. Economy means the control of waste and the curbing of extravagance, not parsimony and niggardliness. No business that is worth anything to the country will be hurt by the elimination of wasteful spending on the part of its patrons. But many businesses whose operation and prosperity are of vital concern to the stability and prosperity of the entire people will be seriously harmed by hysterical and apprehensive abstention from personal spending.

In such a war as this, nothing can be normal that lies within the reach of its tentacles. But, to paraphrase the worn Irish admonition, "If you can't be normal, be as normal as you can." We must find the golden middle course between the vicious extremes. We must set up the dual motto, "Don't squander, don't hoard."

TO WIN THE WAR

IT is proposed in the United States Senate that a prohibitive war tax shall be put on grain used in the making of distilled liquors. It is a good plan, but it is not good enough. It would doubtless stop the making of whiskey during the war, and save a lot of foodstuffs for a better purpose. But it would not stop the drinking of whiskey during the war; for the distillers have more than a two years' supply of whiskey in stock. It would not stop the making of beer, with the consequent destruction of food values; nor the drinking of beer, with the consequent destruction of man values. It would do a little toward the solution of the one all-possessing problem of winning the war for humanity, but so little compared with what might be done if we but faced the question squarely.

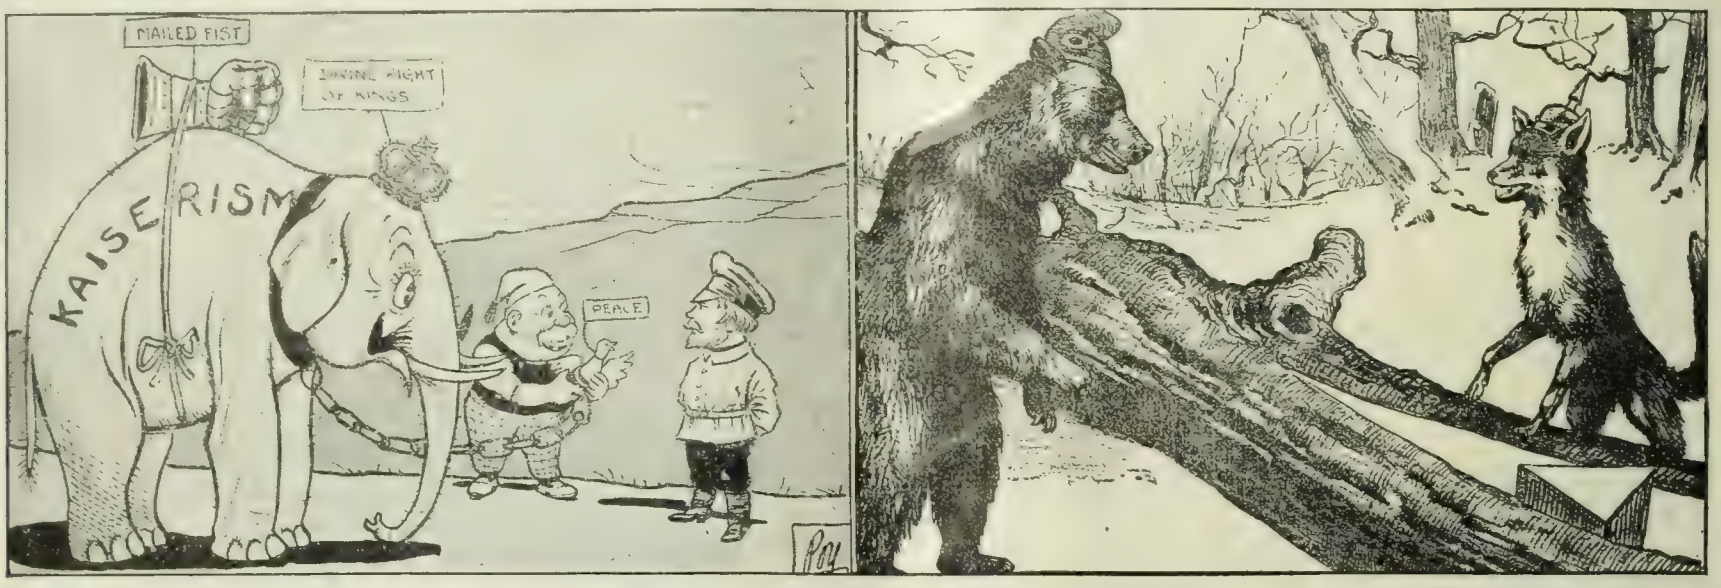
There are two compelling reasons why we should do away with the manufacture and sale of intoxicating beverages during the war.

The one is that to make beer and whiskey uses up food; and to win the war we need every pound of food we can get, not to drink but to eat.

The other is that the drinking of beer and whiskey uses up human efficiency; and to win the war we need every ounce of human efficiency that we can conserve.

What we need here and now is national prohibition. We need it for precisely the same reason that we need a Liberty Loan, war taxation, selective conscription, food control—to win the war. Just how is the best way to get it is another question. Prohibition by constitutional amendment would be a slow process. But Congress might start the process and meanwhile try something else.

The Senate Committee has suggested a good plan, if they will only carry it far enough. A prohibitive tax on the manufacture and sale of all liquors would be a good stop-gap while the States were considering the constitutional amendment. But to put the prohibitive tax on merely the manufacture of a part of the liquor and think that we have done something really to meet the situation is ostrich-like.

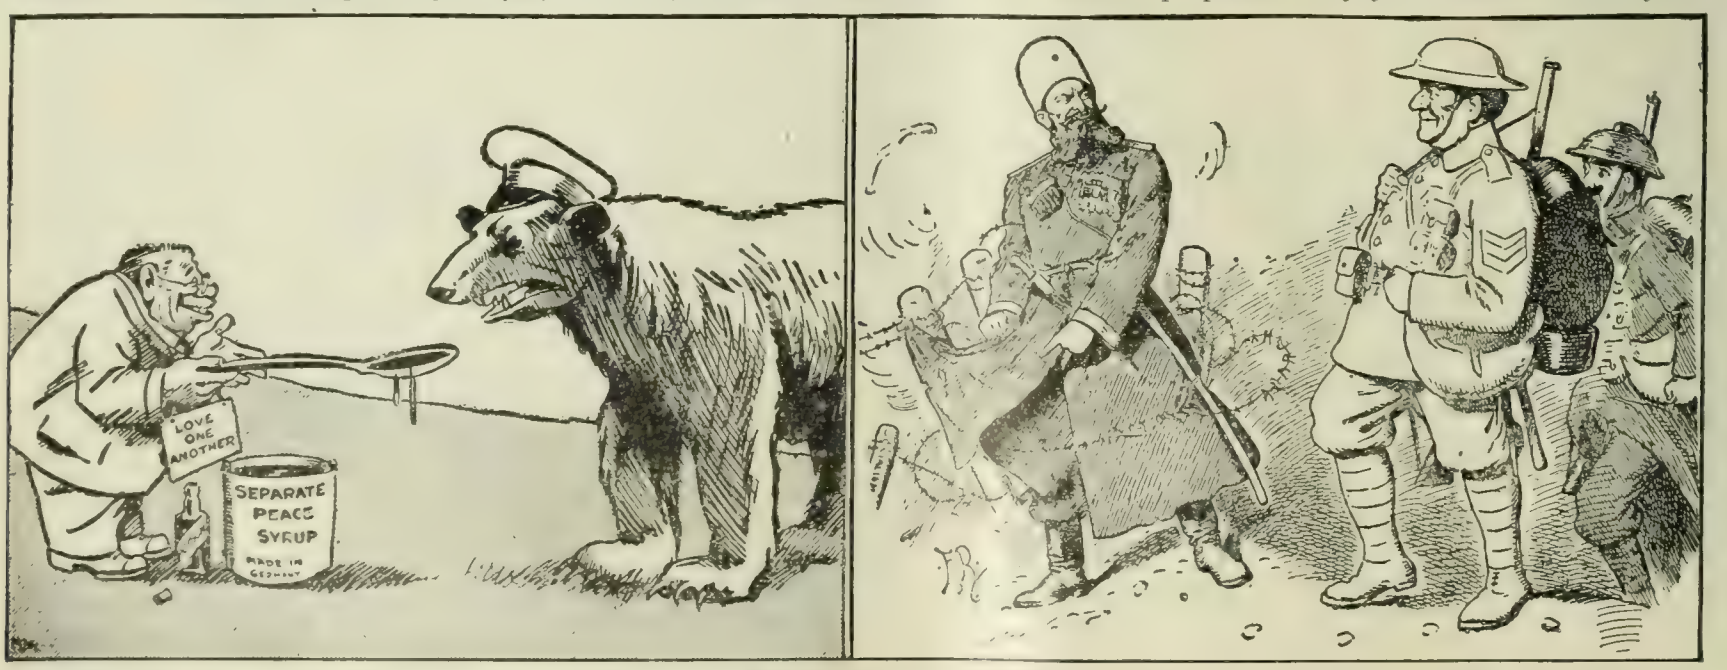


The drinking of liquor is self-indulgence. No honest minded, clear-thinking drinking man would contend anything else. The duration of this war is no time for self-indulgence.

The making of liquor destroys food values to produce stimulant values. In a time like this the destruction of a single unit of food value is economic wickedness; and as soon as we get seriously enough into the war we shall have all the stimulant we need without drink.

The Senate Committee's plan is only one of many that

CARTOON COMMENT



THE ADVENTURES OF BROTHER BRUIN

England and Holland and Switzerland and Italy all contribute their viewpoints to this European council on Russia opened by the *London Evening News* with a picture of Germany presenting the peace dove to Russia. Fritz explains that "the elephant is thrown in with the dove!" At the right is *De Amsterdammer's* view of the bear tempted by the wily fox to put his paw in the cleft oak

The *Zurich Nebelspalter* would have Russia turn the tables on Germany. "This east wind will soon upset everything." And Italian confidence in Russia is exprest by *Il 420*, Florence, in Ivan's dismissal of the Kaiser's proposals—"By your works I know you!"

"The lovely tin of syrup" hides a bottle of poison in the *Manchester Sunday Chronicle's* cartoon of German peace proposals. The *London Sunday Telegram* interprets John Bull as saying: "Ah, my dear Ivan, it takes time to get free. But you'll keep your word!"

are before Congress. One of them should be adopted and that at once. But we must beware of plausible, fine sounding plans that seem to promise much while really accomplishing little. We must not forget that when efficiency is concerned *any* drink, beer as well as whiskey, is bad. We must not forget that merely to stop the manufacture of whiskey, while there is a two years' store on hand, will solve only one part of the problem.

We must realize that it is our duty to conserve not only food values but man power. Food must be saved to eat; human efficiency must be saved to win the war.

TAXATION, SOUND AND UNSOUND

AMONG the taxes that have been proposed in the House revenue bill those on advertising, transportation, and mail matter have awakened much interest and considerable dissent. In the revision of the bill at the hands of the Senate Finance Committee certain fundamental propositions seem, fortunately, to have been accepted, namely, that the great bulk of the war revenues is to come from direct taxes on incomes and excess profits. While there is undeniably room and need for certain indirect taxes, the well-established principles of modern fiscal science lead, so far as taxes on consumption are concerned, away from the taxation of necessaries and toward the imposition of taxes few in number, but large in yield, on quasi-luxuries of wide consumption, like automobiles, tobacco, and spirituous liquors. So also stamp taxes of moderate amount are relatively defensible in a system where indirect taxes are needed.

When, however, we pass beyond this and deal with taxes on processes of commerce, the justification of excises or indirect taxes begins to diminish. The objection to a system of multifarious taxes on commodities in the hands of the producer is that these virtually constitute taxes on gross product or gross receipts which will inevitably bear with inequality upon producers in the same class and which may seriously interfere with the production, not only of the commodities themselves, but of other finished products for which these commodities serve as raw materials.

Similar, and additional, objections attach to taxes levied on the processes of commerce. A tax on advertising, if designed to reach the periodicals in which the advertising appears, is a clumsy method of imposing a burden upon them. But if, on the other hand, as is by no means unlikely, the tax is shifted to the advertiser, it becomes a tax on the consumer, whether the consumer be the advertiser himself or the patron of the business that does the advertising. Like all such taxes on the processes of business, injurious and unlooked-for consequences arising from the dislocation of the ordinary business conditions are apt to ensue.

The same objection, reinforced by others, applies to certain of the suggested taxes on mail matter and railway transportation. In so far as the tax imposed on second-class mail matter is concerned, it seriously disarranges a large and important business, that of the newspaper and periodical trade. But, in addition, it is open to the objection that it is a tax not only on business, but also on intelligence. America has always prided itself upon the fact that it has not, like the European countries, tried to make any profits out of its postal business. The diffusion of intelligence by written and printed word has always been considered a part of the education that is necessary in a democracy. The instruction derived from periodical literature, lamentably inadequate tho it may be, still remains the chief form of adult education in many parts of this country. Such a great additional increase of second-class mail rates as is contemplated in the House bill sins therefore against one of the canons of democratic taxation.

The increase in first-class mail rates is not so indefensible, altho even here it will to a much larger extent than is commonly supposed act also as a tax on the processes of business and upon the transmission of intelligence. The increase, even of the first-class mail rates, ought to be adopted only in case of urgent fiscal necessity.

The same argument, with some modifications, may be applied to the suggested tax on transportation. So far as the tax is imposed upon freight, it is a tax not alone upon the processes of business, but also ultimately upon the consumption of the community at large. In this period of rapidly rising prices and inflation, a sparing use ought to be made of such taxes. The somewhat analogous tax on passenger transportation is less illegitimate because, in some measure at least, the extent of passenger travel is susceptible of a voluntary restriction.

Taking it all in all, there would be far less need of a readjustment of economic life if there were substituted for the suggested taxes on processes of business—which will in all yield only $200,000,000 or $300,000,000—a comparatively slight increase in the rates of the war-profits tax. Such a tax would be borne with far less friction, far less discontent, and far less injury to the economic life of the community as a whole.

SEVEN MILLION MEN KILLED

ARTHUR HENDERSON of the British War Council estimates that seven million men have been killed so far in the war.

The war originated in a quarrel over Serbia. But the entire population of Serbia was only two million and a half. France came in to recover Alsace-Lorraine. But the entire population of Alsace-Lorraine was less than two million. England came in to rescue Belgium. But the entire population of Belgium was only seven million and a half. The number of able-bodied men in all the disputed territory in Europe is less than the number that have already fallen in the struggle for its possession. The total casualties of the war exceed the whole population of Great Britain and Ireland. As many young men have been crippled for life or severely wounded in Europe as there are of the same age in all the United States.

Mr. Henderson adds that "there is no immediate prospect of a cessation of hostilities." There is still the United States to draw upon.

SOMETHING SHOULD BE DONE ABOUT IT

WE must confess that we are not pleased with the news from San Salvador. We have never approved of earthquakes and we never shall—or will—no matter how common they may become. Let other journals—for reasons best known to themselves—keep silence on the subject, The Independent unhesitatingly and outspokenly condemns the San Salvador movement. We go farther and say that immediate measures ought to be taken to stop such occurrences in the future. For thousands of years humanity has suffered from similar outbreaks. Everybody deplores it. Everybody admits that it is altogether wrong. But what has been done about it? We venture to say, nothing. Precisely what should be done we do not care to discuss at present. We are perfectly willing to leave that question to expert seismologists whose business it is. But public opinion must be brought to bear upon the issue in order to secure action. Anti-earthquake societies should be formed in every hamlet in the land. These then could be brought together into state organizations, into a national federation and finally made international in the usual way. Some wealthy philanthropist will doubtless be found to endow the movement. Then speakers could be put into the field and a paper started. By such means our lazy legislatures and cowardly Congress might in time be roused to action.

Every one will have noticed that earthquakes are most likely to occur in little countries where the government is weak and percentage of illiteracy is high. Perhaps it is too

much to expect that a country as small and backward as Portugal, Martinique or San Salvador should be able to control such outbreaks, but surely the United Nations could put a stop to them. The spirit of unrest which is agitating tropical lands threatens the stability of our own institutions. America is not immune. That disgraceful affair of San Francisco in 1906 is not forgotten in spite of the efforts of the Californians to hush it up. We have been informed that similar disturbances have occurred in that state since, altho little has been said about them in the papers. It may be urged in extenuation or in explanation that Portugal was not in 1755 the enlightened republic it is now; that the population of Messina was ignorant and inclined to anarchy; that Japan formerly could not fairly be judged by the standards of western nations; that San Francisco was dominated by the trades unions, but, in our opinion, these constitute no excuse.

We frankly admit that it seems to us shameful that in this so-called twentieth century sleeping civilians should be thrown out of bed, that cities should be demolished in a moment and innocent women and children maimed and killed. Is there not some better way of relieving the strain and stress of the world? Who profits by this wholesale destruction of life and property? The window-glass makers and masons perhaps, but can their interests compare with the distress of thousands?

We repeat, it is time this unnecessary devastation be brought to an end. We, at least, have done our duty in giving this emphatic warning. If in years to come the streets of New York run red with lava and the fruitful prairies of Illinois are covered with a shroud of ashes we shall—assuming that the files of The Independent are not consumed—point with pride to this editorial and say: "We told you so."

BAGGY TROUSERS

NOW that we are becoming familiar with the unfamiliar sight of soldiers on our streets, their uniforms are likely to influence for the better our ideals of masculine attire. Formerly the civilian had no reason to envy the military man his bearskins and shakoes, his plastrons and pelisses, his loops, cords, plumes, tassels, swallow tails, and superfluous spurs, bands and buckles, for altho these adornments obviously had attractions for the fair sex, they were decidedly inconvenient and uncomfortable for the wearer. Our admiration for the valor of our ancestors is roused to amazement when we think of what rigs they had to fight in. As Kipling's sergeant says:

> The men that fought at Minden, they 'ad stocks beneath their chins,
> Six inch 'igh an' more . . .
> The men that fought at Minden, they 'ad buttons up an' down,
> Two-an'-twenty dozen of 'em told.

But somehow the soldier, by a metamorphosis as strange as any in the insect world, has sloughed off his superfluities and stands forth as a model for the man in mufti. His Norfolk jacket looks loose and comfortable and it has real pockets in which it is possible to put things without spoiling the set. He has discarded the sham vest, a garment as hypocritical as a dickey, reminding one of Gunga Din's costume, "nothin' much afore, and rather less than 'arf o' that behind."

In the matter of neckwear the soldier has something to learn from the sailor, but not in the matter of trousers. The trousers of the modern soldier are tight where they should be tight, at the bottom, and loose where they should be loose, at the top. Best of all they bag at the knees. An enormous amount of money and worry and time and energy have been wasted in trying to keep trousers from bagging at the knees and all in vain. Trousers bag at the knees because they ought to, and it is a crime against nature to try to keep them from it. Tailors have conspired to make the world believe that a man's shins were sharp as knife blades and that his calves came to an acute angle behind. But the deception did not last long. Tho the trouser were prest till it tempted the paper cutter, the true shape of the leg, which is not necessarily uncomely and nothing to be ashamed of, soon began to appear and compelled another resort to the hot iron and press board. A man dared not run; he could neither pray nor propose properly. Consequently religion began to decline and maidens who deserved a better fate went into school teaching.

But let civilians follow the example set by the soldier and cast off the tyranny of the tailor, then we shall see a better world.

A NARROW ESCAPE

THEY say that there's a special Providence watching over the United States. It sometimes seems so. Just think, if the Baltimore Convention of 1912 had had the same rule as the Republican conventions, and not required a two-thirds vote to nominate, or if the majority candidate could have got 170 more votes, Champ Clark might have been President!

THE EFFICIENCY SOCIETY

WITH this issue The Independent becomes the official organ of the Efficiency Society.

The Efficiency Society was organized in New York City in 1912 by a number of the leading men of the nation in manufacturing, commerce, finance, economics, law, engineering and journalism, for the purpose of scientific research in efficiency as applied to organized industry. The papers and discussions of the society, as presented in the large volume of its Transactions and in the *Efficiency Society Journal*, constitute a genuine cyclopedia of efficiency in all its phases. Hereafter such of this material as is of general interest will be published in The Independent. Thru its pages will be developed the broad plans of the editorial board of the Efficiency Society, of which Mr. William R. Hayward is the chairman; the preparation of the material will be carried out under the immediate direction of Dr. Lee Galloway, of New York University, a member of the Society's editorial board. The *Journal* of the Society will continue to carry the more technical papers and detailed reports of experiments. Under the new arrangement the Efficiency Society will reach a wider public, while the readers of The Independent will have the advantage of obtaining the opinions of experts on the vital problems of our national and industrial life.

This new connection for The Independent is a peculiarly appropriate one. It widens The Independent's opportunity for usefulness in a vitally important field. Before the war, efficiency meant an opportunity for personal advancement. Now it is a patriotic duty. The Independent has been doing its bit toward preparedness in the attention which it has given for the past four years to this factor of industrial and personal service. Mr. Edward Earle Purinton's articles on Personal Efficiency, together with the messages of many prominent leaders in the field of industrial efficiency and business achievement, have not only reorganized factories and offices; they have transformed human lives. When the National Institute of Efficiency was founded The Independent naturally became its official organ. Chautauqua Institution, which represents efficiency in education, also made The Independent its official magazine and a required part of the famous Chautauqua Reading Course.

The Independent stands for efficiency—personal, business, household, community, national. It aims to help people to live better, to work harder, to think more effectively, to act more decisively. As the organ of the two allies in this vital field of human progress, The National Institute of Efficiency and the Efficiency Society, it will be better prepared than ever before to promote this great cause.

THE STORY OF THE WEEK

Wiping Out the Wytschaete Salient

The wave of invasion that swept over Belgium in the fall of 1914 was halted at Ypres in a manner that seems miraculous considering that the British and Belgian forces were weak and the country was unfortified and flat. If the Germans had been able to put forth then such power as they had shown before and developed subsequently they could doubtless have pushed on to Calais and Dunkirk and so gained one side of the English Channel from which they could have bombarded the other.

The line has remained for more than two years substantially where it was drawn by the accidents of the conflict in a semicircle of two or three miles radius about the ancient town of Ypres which Tommy Atkins persists in pronouncing "Wipers." The Germans have never succeeded in taking the town, altho their shells reduced it to ruins long ago. Nor, on the other hand, have the British ever been able to dislodge the German artillery from the range of low hills from which they bombarded Ypres and the British positions on the low lands round about. One of these, Hill 60, occupied a commanding position southeast of Ypres, altho as its name implies it stands only sixty meters above the sea. In 1915 the British gained the slope of Hill 60 but could not reach the summit. From Hill 60 a low but prominent ridge extended south by the villages of Wytschaete and Messines, forming the German salient that projected between Ypres and Armentieres. This salient, which has stood like a rampart against the British advance, was wiped out in a few hours by a brilliant attack on the morning of June 7. The line now runs straight north and south behind Ypres and Armentieres instead of bulging three miles to the westward between them.

Volcanoes to Order

No British operation in the war previously has been so carefully planned and neatly executed as the capture of Wytschaete Ridge. Following the idea of the Germans in their attack on Verdun, a plaster model of the terrain was constructed the size of four tennis courts and on this the game of *Kriegspiel* was rehearsed by the participants until each knew perfectly the part he had to play. The actual movements, unlike the German attack on Verdun, proceeded according to program without misadventure or setback.

First the German lines were subjected to an intensive bombardment for seven days and nights in which the British made greater use of big guns than they ever had before. The German fortifications on Hill 60 and the ridge running south to Messines had been secretly undermined during the past year, and in the nineteen tunnels over a million pounds of high explosives had been placed. These mines were exploded simultaneously at ten minutes after three in the morning, and the crest of the hills was blown into the air with a noise so loud that Lloyd George, listening in his London home, 130 miles away, was able to hear it.

The British troops were already marching forward, and the aeroplanes were on the wing to guide the artillery which formed a curtain of fire in front of the advancing soldiers. The first trenches were taken in a few minutes, and by six o'clock in the morning the entire ridge for a distance of nine miles was in the hands of the British. Before night they had reached the base line of the salient where, as they had planned, they halted and entrenched themselves. The Germans delivered counter-attacks on the following days but without regaining the ground. Over six thousand German prisoners were taken. The British loss was 10,000.

The honor of this victory falls chiefly to the "Anzacs" and the Irish. The Australians and New Zealanders showed the same dash and daring as they had displayed at Gallipoli, and the Nationalists and Ulstermen charged side by side up Wytschaete Ridge. Major William Redmond, brother of John Redmond, the Nationalist leader, was carried to the rear, mortally wounded, in an Ulster ambulance. This brilliant achievement of the united Irish forces is likely to aid the rival parties to come to an agreement when they meet in convention within a few weeks.

THE GREAT WAR

June 4—U-boats sink eighteen British ships in past week. One American lost on the British steamer "Southland."

June 5—German destroyer "S-20" sunk off Ostend. Two American firemen killed on British steamer "Manchester Miller." British coast raided by sixteen airplanes.

June 6—Austrians claim 10,000 Italian prisoners taken on the Carso in three days. Chinese provinces favoring war are in rebellion.

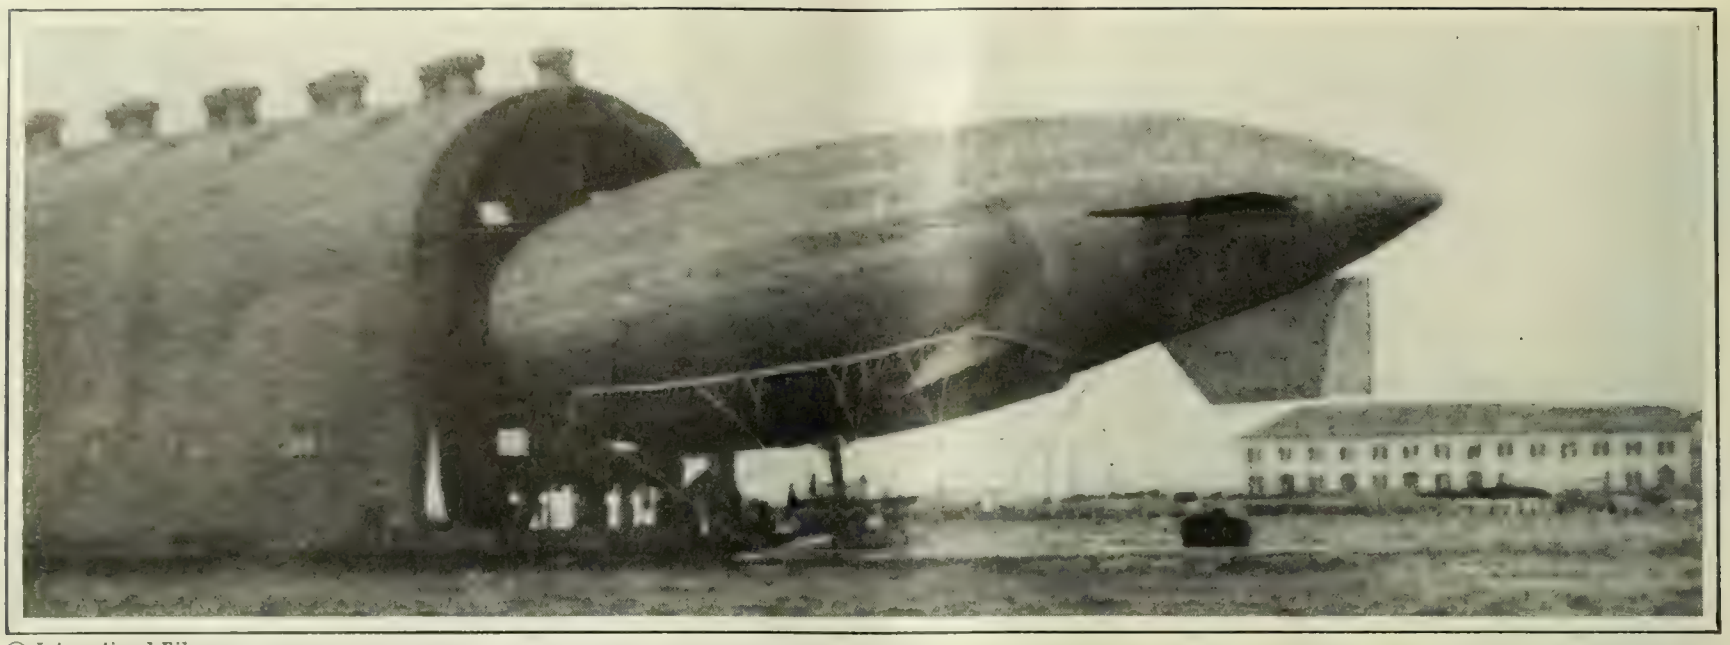
June 7—British explode mines south of Ypres and storm Wytschaete Ridge. Kronstadt republic yields to Provisional Government.

June 8—Austrian officers enter Russian lines with peace proposals. General Pershing arrives in England.

June 9—President Wilson's note to Russia published.

June 10—Seamen's Union seize and imprison Labor delegates to Petrograd Conference.

THE NEW BRITISH DRIVE



Following their offensive in France the British opened an attack upon the German lines in Belgium by exploding mines under the ridge between Wytschaete and Messines and so wiping out the German salient at this point

Rebellion in China

A serious and perplexing situation has arisen in China over the question of participation in the war. The Chinese Government promptly followed the example of the United States and broke with Germany but disagreed on the proposal to go further and declare war. The Premier favored joining the Allies but the President opposed it. The National Assembly supported the President. The President dismissed the Premier, whereupon the provinces threatened to revolt and there was talk of overthrowing the government and reëstablishing the Manchu dynasty. Eleven provinces of the republic have broken off relations with the Peking Government and six of them have declared their independence. The Governor of Mukden, Chang-hsun, has marched his army upon Peking and the southern provinces are coöperating with him. The insurgents demand the reinstatement of Premier Tuan Chi-jui, the dismissal of the National Assembly and a declaration of war against Germany. The forces behind these various movements are not easy to discover.

The Question of Russian Peace

Intense anxiety prevails over the attitude of Russia, for it is recognized that the duration of the war if not its issue depends upon whether Russia makes a separate peace, prevails upon her Allies to adopt her peace formula or continues the fight against Germany on the old terms. At present the Russian leaders are urging upon the Entente Allies what they call "the Wilson doctrine" of "peace with-

A DIRIGIBLE OF OUR OWN

The aviation post at Pensacola, Florida, has been trying out this new type of dirigible balloon for war use

out victory." Baron Rosen, formerly Ambassador to the United States, has published an article in which he declares that Russia should have responded to President Wilson's appeal for a discussion of peace terms, but at that time all the Allies were too intent upon the complete ruin of the enemy to respond.

The Congress of Peasants held in Petrograd took the same position in regard to peace as the Council of Workmen and Soldiers:

> The peasants aspire to an equitable peace without humiliating annexation or indemnity and with the right of each nation to dispose of itself. International relations and treaties should be submitted to the control of the peoples interested. Disputes should be settled by an international tribunal, and not by force.

But while various factions are working for a general peace on such terms the disposition to make a separate peace seems to be in abeyance.

Wilson States American Peace Aims

President Wilson's note to the Russian Government, which was delivered on May 26, but not made public in this country until June 9, is the most important official pronouncement of war policy which this Government has yet made. This message puts an end to the rumors that the United States had arranged with the Russian Government a peace program the cardinal principle of which was "no annexations and no indemnities," or, in other words, the restoration of conditions as they existed in 1914. On the contrary, we find President Wilson urging Russia to stand loyal to the Grand Alliance until the principle of nationalities is established thruout Europe and a permanent league to enforce world peace is organized. The full text of the note is published on page 483.

Pershing Captures London

General Pershing, field commander of our expeditionary army, arrived in England on June 8 with his official staff. During an uneventful voyage the American officers were in constant consultation with British army men. American destroyers accompanied the ship during the last stage of its journey to "a British port" and a force of a hundred American naval aviators arrived simultaneously with General Pershing's staff. A special train brought the party to London, where they were greeted with a popular enthusiasm which paralleled the reception which we gave to the British and French war missions during their tour of the United States.

Altho an elaborate program for the entertainment of the Americans had been arranged, General Pershing and his colleagues and subordinates devoted most of their time in London to conferences on problems of the war. General Pershing's staff was selected with reference to preliminary organization for the better management of the American army on its arrival. It includes experts in sanitation, camp construction, commissariat, medicine, aviation, artillery, engineering and clerical work whose duty it will be to make ready the trenches for the men and to make the men ready for the trenches. As soon as the military conferences in England had been completed, General Pershing proceeded to France.

Daniels Forbids Navy Gossip

Secretary Daniels of the Navy Department has issued an order forbidding any one in the naval service to communicate information relating to the movements of ships or military forces to any person not in the naval service. Even the families of officers, enlisted men or departmental employees are considered as "outside the naval service" and they are not allowed to share any naval secret. The reason for these drastic regulations is that, according to the statement of Mr. Daniels, valuable information has already leaked thru to the enemy in some way not known, and it is the opinion of naval officials that the only way in which such knowledge can have been obtained is from the careless gossip of persons in the secret.

When issuing the new instructions, Secretary Daniels took occasion to deny the truth of the many intangible rumors of a great naval battle in which our navy was alleged to have taken part. This story has been told in many forms, the usual version being that the combined British and American fleets made a raid on the German coast defenses, that some sixty warships were sunk and that the Atlantic coast naval yards are filled with wounded sailors. But as a matter of fact, the American navy has never been in an action and the whole story is either a popular delusion like the rumored passage of Russian troops thru Great Britain in 1914 or a falsehood deliberately set afloat to alarm the nation.

Goethals Dismisses Assistants

The controversy between wood and steel for emergency shipbuilding still continues to perplex the counsels of the administration. General Goethals, who has now complete charge of the work of shipbuilding, has dismissed F. A. Eustis and F. Huntington Clark, of the Emergency Fleet Corporation, from their positions on charges of "lack of loyalty and misstatements and misrepresentation of facts." Eustis and Clark were the original projectors of the scheme to thwart the German submarine campaign by creating a great mercantile marine of wooden vessels. When General Goethals determined to make the building of steel ships the main feature of his building program and reduce the building of wooden ships to a side issue both of the assistants protested. They alleged that General Goethals had put obstacles in the way of wooden ship builders and had failed to accept some very advantageous contracts.

In his reply to these representations, General Goethals denied that he had in any way discouraged the placing of contracts for wooden ships. He insisted on the instant resignation of his critics and appointed to their positions Admiral Rosseau, who had been associated with him in building the Panama Canal, and Samuel Fuller, a financier and promoter whose chief duty will be to ascertain the financial soundness of the firms with which the Government may do business. Friends of the wooden ship plan in Congress will probably carry the matter farther, as it is felt that the question of type of vessel is not merely a technical question of costs, but involves an issue of public policy, that is whether the chief aim of the building program should be to supply the immediate emergency or to build more slowly and substantially for the future.

Austrian Counter-Offensive The Austrians are now making a vigorous effort to regain the ground lost on the Carso by the Italian offensive that began May 12. General Barsevic reorganized the Austrian forces on the Carso front, and bringing in reinforcements from the Russian side, opened an attack with two thousand cannon upon the hills east of Gorizia and those near the Adriatic where the Italians had made inroads upon the Austrian lines. In the latter region they were successful in driving the Italians out of the positions they had taken near Jamiano. The Austrian artillery fire was terrific and continued for three days and nights while the airships and airplanes dropt bombs upon the Italian forces. The Austrians claim to have taken 10,000 prisoners in the three days, and name three regiments of about two thousand men each which surrendered unwounded in a body. Altogether the Austrians have, according to their own account, taken 27,000 prisoners, and have inflicted losses of more than 160,000 men killed and wounded since the battle of the Carso began nineteen days before.

If this report of wholesale surrenders is true, it wound tend to confirm the rumors that the Italian people were growing tired of fighting, and that there was imminent danger of a revolution like that of Russia which would put Italy out of the war. We have heard very little from Italy of late, but one alarming report has come thru, that General Cadorna was obliged to leave the Carso in the midst of the Austrian offensive in order "to suppress the anti-war propaganda" in Rome.

Air Raids on England The Germans are renewing their efforts to reach London and to destroy the military and naval bases at the mouth of the Thames. On May 23, May 25 and June 5 aerial attacks were made upon the English east coast. The most serious of these was that of the 25th when eighteen aeroplanes sailed over the Channel to the Kentish coast. Here a bunch of bombs were dropped into the middle of the chief business street of Folkstone, where a large number of shoppers had been attracted by a potato sale. The bombs exploding in the grocery store and in the street killed sixteen women, eight men and nine children and wounded forty-two other persons within three minutes. Altogether the victims of this raid number seventy-six killed and one hundred and seventy-four injured. The German aeroplanes were divided into three squadrons one following another and since they sailed at a great hight among light clouds in the bright sunshine they were hardly perceptible to the naked eye.

The British were better prepared for the raid which came ten days later. The air patrol from Dunkirk caught sight of the enemy aircraft shortly after they left Ostend and followed them all the way to the English coast and back. Out of eighteen enemy aircraft four were completely destroyed and four others believed to have been damaged. In this raid only two persons were killed and twenty-nine injured. The attack was directed upon Sheerness and the Germans claim that over 10,000 pounds of bombs were dropped upon the arsenal and dockyard here. According to the British account the losses in all these raids fell almost altogether upon the civilians and no military damage of importance was done. Nothing very definite, however, is known about the depredations of the German aircraft during the war, for the British Government does not propose to report hits for the benefit of enemy marksmen. It was not disclosed until May that in December a German aeroplane passed over London at noon and dropped a bomb near Buckingham Palace, another near the War Office in Whitehall and two more on the Marble Arch.

British Labor Peace Movement What is described as "the largest and greatest convention of labor, Socialist and democratic bodies Great Britain has held in this generation" met at Leeds on June 3 to organize a movement in England

THE GOAL OF THE ITALIAN DRIVE

During the last month Italian troops under General Cadorna have been pushing steadily forward toward Trieste, the greatest Austrian seaport city, situated at the head of the Adriatic. But the Austrian counter-offensive, just begun, seems likely to prevent an Italian capture of the city

Central News

OUR FIRST TROOPS LANDED OVERSEAS

There is striking illustration of our part as allies in this photograph of the American soldiers in training at Blackpool, England, before they go to France, who are swapping enthusiasm for experience as they chat with wounded Tommies, home on leave

like that of the soldiers and workmen in Russia to secure "an immediate democratic peace." Eleven hundred delegates were present representing over three million members of trade unions peace societies and radical organizations. The chairman, Robert Smillie, of the mine workers declared:

> We believe that if there is to be no peace until a knockout blow is delivered, the war may last forty or fifty years. A lasting peace can never be brought about by kings or by the military, but by the common people. The time has come when the people need greater civil rights. Our soldiers are inarticulate. They have no organization to call attention to their grievances or to demand better treatment of their wives and children. There should be a closer link between the civil and military population. The chief difficulty is that the soldiers are not allowed to participate. Meantime the prospect is bright for bringing the industrial and military population closer together.

He was followed by Philip Snowden, Socialist member of Parliament, who said:

> For three years we have appealed to the Government to state its peace terms and none has been forthcoming. Let us tell the Government our peace terms dealing with annexation—that all peoples, including Ireland, Egypt and India, should have the right to decide their own destiny.

The Leeds convention exchanged greetings with the Russian Workmen's and Soldiers' Council and adopted the same platform for ending the war—"peace without annexations or indemnities." The representatives of the Seamen's and Firemen's Union protested against the "no indemnities" clause because, as they said, Germany must be made to pay for "the widows and orphans of the sailor men foully murdered." No attention was paid to this protest in the convention, so the executive committee of the Union passed a resolution refusing to permit any members of the Seamen's and Firemen's Union to man any vessel conveying delegates to the Stockholm or Petrograd peace conference unless they would sign a guarantee that they would insist upon restitution being made for the loss of life and property caused by the German submarines.

Lord Northcliffe to Come to America The British Government has selected Alfred Harmsworth, Lord Northcliffe, as head of the British war mission in the United States to fill the place left vacant by the departure for England of Foreign Secretary Arthur J. Balfour. Lord Northcliffe has accepted the post assigned him and will soon be actively coöperating with the war missions of the Entente Allies and with the American and Canadian governments.

Lord Northcliffe is the greatest newspaper magnate in the British Empire and wields a political influence second to no Englishman in private life. In the chain of papers which he controls the best known is *The Times*, which has been for so many decades the leading organ of British Conservative opinion. Like Clemenceau in France he has been a wrecker and builder of cabinets; the campaign conducted by his newspapers was largely responsible for the overthrow of the Liberal ministry which was in power at the opening of the war and also of the coalition ministry under Mr. Asquith which succeeded it. But prior to his present appointment Lord Northcliffe has refused to accept any position under the present Government, which he did so much to put in office, preferring his independence as a journalist to the enforced conformity of a public official.

Enter Brazil The Brazilian Republic has followed the revocation of the declaration of neutrality in the war between Germany and the United States by the seizure of all German shipping in Brazilian ports. The newspapers of the country and many political leaders have for weeks been urging the decisive step of commandeering the German vessels, since such action would definitely align Brazil with the Entente Allies whether or not it were followed by a formal declaration of war. Forty-six merchant ships, with an aggregate tonnage of nearly two hundred and fifty thousand, including the twelve thousand ton Hamburg-Amerika liner "Blücher," came into possession of the Brazilian authorities and their German crews were interned. The steamer "Cap Vilano," the second largest of the interned merchant ships, was set afire by its crew before it could be transferred to the Brazilian flag.

After the transfer of the interned ships the German foreign secretary transmitted a protest to the Brazilian Government thru the agency of a neutral minister to Brazil. The formal protest against the seizure threatened the exaction of an indemnity "for all losses occasioned to German interests by such a measure." The Brazilian Government promptly replied, justifying the utilization of German ships according to international law as reprisal for the loss to Brazilian shipping from the activity of German submarines. The United States has entered into negotiations with Brazil with the aim of bringing the captured ships into immediate service as carriers on the translatlantic trade routes.

A squadron of the United States navy has recently been sent to Brazilian waters with the purpose of guarding the western Atlantic from the operations of German commerce raiders and submarines. The ports of Brazil will no longer be open to German ships and will prove admirable naval bases for the fleets of the Allies. Should Brazil decide to enter more actively into the war much of the work of patrolling the western Atlantic may be assumed by her own naval vessels. The Chamber of Deputies has authorized the sending of a message of congratulation to the Congress of the United States on the arrival of our squadron.

Earthquake in Salvador A volcanic eruption accompanied by earthquake shocks and fire wrecked the city of San Salvador on the evening of June 7. San Salvador, the capital of the Republic of Salvador, is a city of 59,544 inhabitants and the seat of important public buildings such as the university, the national palace, the cathedral, the national library, as well as the government botanical gardens. Most of the public buildings, business houses and private dwellings in the city were seriously damaged and the American Legation building was one of the houses destroyed. The effects of the earthquake were not confined to the capital. Nearly all the towns and villages within a thirty-mile radius of the center of the earthquake zone were left in ruins and such of their residents as escaped uninjured were forced to sleep in the open in spite of a shower of ashes from the volcano and the heavy downpour of rain which succeeded it. The volcano of San Salvador, which is within three miles of the capital, has for some time been in a state

of activity and on several previous occasions the city has suffered from earthquakes. The shock was recorded on the seismograph of Georgetown University about two thousand miles away.

The "Silver Shell" and the Submarine

The American armed merchantman "Silver Shell" had a fight with a German submarine in the Mediterranean on May 30 in which it came out ahead. The submarine appeared at a distance of 7000 yards and approached to within 2300 yards keeping up a fire with her 6-inch guns. The American naval gun crew under the command of Captain Charlton from the battleship "Arkansas" returned the fire and with the final shot apparently disabled the submarine for she disappeared with her stern raised high above the water. The fight lasted for an hour and a half during which the submarine fired thirty-five shots and the steamer twenty-five.

The "Mongolia" has figured in the dispatches more often than any other American steamship. She fired the first shot from an American gun during the war and disabled a U-boat in the English Channel on her trip over. It was on the "Mongolia" that the bursting of the brass cup of the cartridge in gun practice killed two nurses sitting on the promenade deck. On her recent return to this country the "Mongolia" when two hundred miles west of Falmouth was attacked by a German submarine which fired three torpedoes, all of which missed their aim. The "Mongolia" fired four shells at the submarine, but without hitting it. Upon the arrival of a British destroyer brought up by a wireless call from the "Mongolia" the U-boat disappeared.

The American flotilla has now joined with the British for a month in the hunt of U-boats and the protection of transatlantic steamers, and whatever part the American naval vessels may have played it is encouraging to note that the shipping losses are considerably less than they were the month before. The report of the British Admiralty for the week ending June 3 gave the loss of vessels as twenty-three which is two more than were lost the week before. But five of these are fishing boats and three are vessels under 1600 tons, so only fifteen vessels of considerable size were sunk, which is a lower record than any week since March 11. The French report for the same week gives eight vessels sunk by torpedoes and two by guns.

Canada Considers Conscription

Premier Borden of the Dominion of Canada has invited his chief political rival, Sir Wilfrid Laurier, to assist in the formation of a coalition ministry. It is believed that the purpose of the coalition proposal is to divide between the Conservative and Liberal parties the responsibility for a compulsory service law, which in the opinion of the Canadian ministry has become necessary. Altho many leaders of both parties are agreed that conscription is inevitable, the measure cannot be said to be popular with the people at large in spite of the precedents of Great Britain and of the United States, which have abandoned their traditional reliance on volunteering in view of the unprecedented demand for large armies in the present Great War. If plans for a coalition to carry conscription thru the Dominion Parliament should fail, the Borden ministry will probably seek popular support for its policy by holding a general election on the compulsory service issue. Already there have been several petty riots and demonstrations against the Government, and should the present Conservative ministry attempt to force conscription upon Canada without the support of the Liberal opposition and without consulting the electorate there may be a serious outbreak in some of the provinces.

Most of the opposition to the war policy of the Canadian Government is localized in the Province of Quebec, which is virtually an enclave of French speaking Catholics isolated among the predominantly English speaking and Protestant population of the rest of North America. At the opening of the Great War the French Canadians enlisted in fairly satisfactory numbers, but since then recruiting has become less and less successful. It is estimated that there have been only about thirty thousand French Canadian volunteers, altho there are at least two million French speaking people in the Dominion. But volunteer recruiting among the English speaking Canadians seems also to have approached an end, and many Canadian officers with experience in the European trenches desire an opportunity to instruct the large levies of American troops in the ways of modern warfare since in Canada they now have few recruits to train. The decline in volunteering in most parts of Canada may be explained by the large contingents which have already been sent to the front, but the relatively weak showing of the French Canadians demands some other explanation. In part it is due to the so-called Nationalist propaganda, which has aimed to make the French Canadians conscious of the differences between themselves and their British Canadian neighbors; a propaganda comparable to the Sinn Fein movement in Ireland, tho hitherto less violent in its methods. In part this indifference seems traceable also to a want of sympathy between the very devout Catholic peasantry of Quebec and the political and religious radicalism of contemporary France.

Navy Hospital Investigated

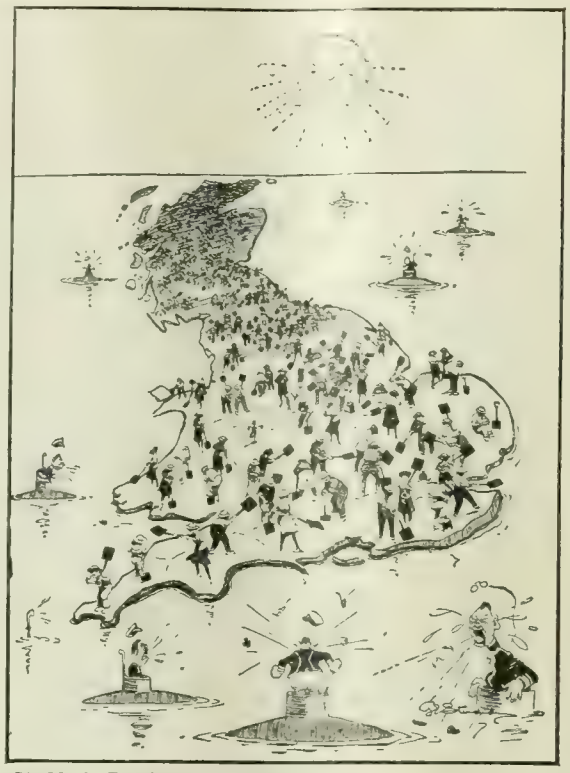
A protest signed by thirty patients of the naval hospital ship "Solace" led to an official investigation. The complainants alleged that during the month of May the hospital ship was so overcrowded that the patients failed

© *Underwood & Underwood*

AMERICAN VOLUNTEERS ARE DRILLING IN CHINA

It took only four days after war was declared for this group of United States citizens in Peking to organize for military training

© *Underwood & Underwood*



AND CHINESE VOLUNTEERS ARE READY TO DRILL IN NEW YORK

A dozen or so of the ten million men who registered on June 5 for national service. Whether or not this particular group can fight for us depends upon congressional action

to receive adequate accommodation, that no precautions were taken to prevent the spread of infectious disease, that there was a shortage of drinking water and of bedding, and that the sick were neglected and left to shift for themselves. After the matter had been brought up in Congress, Secretary Daniels of the Navy Department appointed a civilian investigating commission, consisting of Dr. William H. Welch of Johns Hopkins University, Dr. Abraham Flexner and Mr. Nathan Straus. The three investigators questioned more than a hundred men who were on board the hospital ship during the period covered by the protest and reported the results of their inquiry to the federal authorities. All charges of lack of medical attention and neglect of the needs of the patients were discovered to be wholly groundless, but it was found to be true that owing to the rapidity of enlistments in the navy the hospital ship was at one time badly overcrowded. The "Solace," with a normal capacity for thirty infectious cases, was compelled to care for a hundred and one. The congestion of cases seems now to have been relieved, and even when it was at its worst the medical personnel in charge of the floating hospital were able to cope with the difficulties of the situation.

Ten Million Men Enroll On Tuesday, June 5, every man in America between the ages of twenty-one and thirty-one who was not already a member of some branch of the military establishment of the country was required to register on the list from which the new national army will be chosen. Remembering the draft riots of the Civil War, the authorities in charge of the draft took no chances. Propagandists against the compulsory service law were arrested wherever they appeared and all places of registration were carefully guarded. But all expectations of resistance to the registration proved groundless. Tuesday passed off with less disorder than an average general election and the large number of the men who enrolled, estimated at some ten million, is proof that only a comparatively small percentage of the young men of the nation can have failed to comply with the requirements.

The only violence worth recording thruout the whole country was the refusal of some Navajo Indians in Arizona and Utes in Colorado to register and their threats to go on the warpath if any further attempt should be made to bring them within the scope of the compulsory service law. The attitude of these Indians seems to have been largely due to the belief that the act of registration was identical with the draft and that all who registered would be compelled to enter the army at once. After the nature of the registration was explained to the Indians many of them registered, but a few fled from the reservations. Very few "conscientious objectors" absented themselves from the registration, but a large number applied for exemption.

Studdy in Passing Show (London)

SPADES ARE TRUMPS!

And the English cartoonist might well have added "And now it's up to Uncle Sam to play the game!"

As soon as the registration blanks have been examined and classified and the search completed for those who failed to register, the authorities will select at random a certain number of enrolled men for military service. By individual exemptions this number will be reduced to about 625,000, the estimated number of men required for the training camps in September. Should the war last many months longer, new drafts will be made from time to time to keep the training camps filled after the first contingent has been sent to the front.

No general exemptions will be made, but each individual drafted will be examined as to his claim for exemption. Nearly half of the number selected will be excused from military service on the ground that their labor is the sole support of persons dependent on them, and thousands of others because they are more useful to the nation in their present occupations than on the field of battle. From the men who have no other ground for exemption those will also be excused who are physically unfit to endure the hardships of military life. No one will be exempted on the ground of conscientious scruples unless he is a member of a religious denomination which forbids its adherents to take part in war.

Tax Bill Revised Downward When the House of Representatives passed the war taxation bill on May 23 it left the task of revision to the Senate. The early vote reached in the House in no way implied approval of the details of the measure, but represented the opinion of the majority that improvements could be more satisfactorily made in conjunction with the other branch of Congress than by attempting to perfect the bill before obtaining the views of the Senate. The Senate Finance Committee has, therefore, had no hesitation in virtually rewriting the whole finance plan worked out by the House. Not only have the special schedules been revised but the total amount to be raised this year by taxation for the purpose of carrying on the war was reduced by several hundred million dollars before the bill was presented on the floor of the Senate. The majority of the Finance Committee are of the opinion that the attempt to raise half of the expenses of carrying on the war by taxation will inflict a serious injury on industry and thus reduce the power of the nation to sustain the burden of next year's expenses should the war outlast the current fiscal year.

The retroactive income tax, imposing an additional tax equal to one-third of the income tax due for the year 1916 met with disfavor in committee and was dropped from the bill. The sharply graduated income tax authorized by the House for the year 1917 will remain one of the chief sources of revenue in the Senate plan, but it is probable that the highest rates will be somewhat decreased. In the place of taxes on manufacturers' gross sales of articles of luxury additional stamp taxes have been substituted. The plan for applying the zone system of postal charges to second-class mail matter, which was so severely criticized when under discussion in the House, is likely to be replaced by a tax on periodical advertising. A very heavy tax was placed upon foodstuffs made into distilled liquor, with an eye to food conservation rather than revenue. Consumption taxes on gas and electricity for domestic purposes were eliminated. Instead of the projected 10 per cent tariff on imported goods generally, there will be substituted specific duties and excises on coffee, tea, cocoa and sugar.

Race Riots in St. Louis Within the last few days there have been several petty riots in St. Louis and East St. Louis between negroes and white men. The contagion of race feeling spread from the streets to the workhouse, where on June 8 a battle was fought with stones and sticks between white and colored convicts until the fire department turned a hose on the combatants. It is a little difficult to account for this sudden outburst of race antagonism, but its origin appears to be mainly economic. Many negroes from the southern states have come north during the last few months to take advantage of the unusual opportunities afforded by war stimulated industries in the manufacturing centers. Southern newspapers are complaining of a labor shortage in the rural districts and many of them are conducting a "stay in the South" propaganda to check the labor migration. On the other hand, the working men of St. Louis and other cities where the negro population has been increasing viewed the entrance of the negro into the labor market with alarm and dislike, and in such an atmosphere race feuds readily flourished.

THE PLATTSBURG PUSH

BY HERBERT REED

"The First Ten Thousand," in The Independent of June 9th, began the series of articles by "Right Wing" on the training camps where Uncle Sam is turning raw recruits into army officers. The first and foremost of these war camps of course is Plattsburg, and in this article Mr. Reed reports the progress in war work there.—THE EDITOR.

IT is inevitable in any great gathering of men afield, such as is to be found at Plattsburg Barracks, that some one unit will lift itself out of the mass and become the visible expression of the basic principle of that gathering. Almost unconsciously, so far as the members of this unit are concerned, it becomes, at least for the time being, standard. There are unmistakable outward signs, and always, underlying these, a spirit that has found its keynote in some one personality. Such was the case of the Second Company of New York's Provisional Regiment in the second week of training of the "student-officers," "cadets"—call them what you will—who are to mold and lead the New Army. Having sketched in last week an impression of these officers-to-be in the mass, I set about running down the first concrete example of the steady forward thrust that should be apparent even after a week's work under this intensive war training system if this training is to live up to its promise. I found it in this Second New York Company.

Now since it is the function of the regular army specialists assigned to this and other camps to show qualities superior to those possest by the merely average line officer—to show the ability to teach and sink that teaching home—the problem of finding the standard unit was greatly simplified. One had at first only to single out that company commander who was getting the quickest response from his men in close order, that close order which is designed to establish "subconscious submission to discipline." Such submission is found in the grasp of the value of marching cadence, the rhythmic handling of the rifle, and the ability to execute the simpler evolutions without wastage—without the straying of individuals or the wandering of squads under hesitant or bewildered leadership. Something of a task, one would say, to find these things after only a week's training. Yet they were to be found in the unit I have mentioned, under command of Captain R. L. Weeks, Eighteenth Infantry.

Here was a man who had a tight but velvety grip on his men, a grip established by voice, by carriage, by the obvious native ability to command, ripened by experience and enriched by thoro sympathy with the task and the material in hand. There is in this no reflection upon the able work of his brother officers, merely an appreciation of work patiently, firmly, easily, unostentatiously well done, with the utmost clarity of objective. Let me add that I have talked with him only twice, each time for less than a minute, and on trivial subjects. But it was patent from the instant that I came upon him and his men that he was equipt with the fundamental weapon of attack in facing any task, *the ability to make it simple*. Thus he made it possible for the men under him to pass thru a week of steady and *apparently* effortless advancement.

Such an attitude would be reflected first in the bearing of the officers under him, and second, in the performance and spirit of the rank and file. He was aided in his teaching by officers of the Reserve Corps, probably no better or worse fundamentally than their fellows in other companies, yet I found quickly, and the story of the stop-watch supports the finding, that the "echoes of the C. C." (company commander) were able to get their men formed and ready for action in most cases easily and quickly, and without any of the "bawling out" so often deemed essential by the amateur officer, and already too much in evidence in certain other units of this training camp. So the Reserve officers of this company and the company itself were stamped, and indelibly I believe, by the personality of this able commander.

Now it is a part of intensive training that by lecture (better termed here "conference") much of the military lore that is largely bookish must be taught to tired men, one of the severest tests of instructor and pupil alike, and this Second Company, in the week in which it was under my observation, stood this test well. It is well to state before going further that the Plattsburg Plan in these wartimes gives the student-officers in three months more actual physical work than is laid out for the regular army recruit in six. And between the quantity and quality of mental instruction in the two cases there is no comparison. Under the present system study is translated into action and action into study at a rate that can be handled only by men of alert minds and bodies no matter what their age. Just the other morning there was a "hike" in light marching order in the mist and rain. And as the poncho-covered officers-to-be finished the first stage of the march and sat down to rest under the dripping trees of a countryside byway, the commander expounded the simple but imperative needs of marching men. What better time or place for it? Assuredly none.

A word now about the personnel of this interesting Second Company, which may or may not continue to be the best example of Plattsburg progress. There

Press Illustrating

"THE PICTURE IS NOT A PRETTY ONE"

The British bayonet system being practised at Plattsburg. It requires "a quick closing with the antagonist, a long thrust and a short thrust, perhaps a jab to the throat or vitals, a crash of the butt on the head or face, and as a last resort a terrific downward blow with the knife edge"

are in the company boyish men and mannish boys, but practically none of the "kiddishness" that is found now and then regardless of careful selection in a gathering of this size. Most of the men have had military experience, and they range in age from the low limit to the top. The distribution has been nicely done. however, and an earnestness that is good to find pervades the organization—for it is an organization, *not* a machine—an earnestness that is not without its temper of quiet humor. In this respect again the company is a faithful reflection of its commander. These men are bent upon serious business. The attitude of the company was well exprest by one of the men with whom I was talking in the course of the "hike" the other day. The question came up as to how many of the student-officers would be commissioned at the conclusion of the training.

"Oh, I suppose about one out of four will get something on his shoulder and active work to do," he said. "But mark you this, sooner or later *all* of us will be needed."

I wish those words could be hung up as a motto on the walls of some of the homes which have sent fathers, sons and brothers to this and other training camps with the parting injunction, "Go ahead, have a good time; of course the war will be over before the camp is, and everything will be all right again." Isn't this simple Plattsburg statement a good motto for the whole nation? "Sooner or later all of us will be needed." Let it sink home.

In considering the second week's work broadly it may be said that the salient

CAPTAIN WEEKS IN "CONFERENCE"
"Much of the military lore must be taught to tired men." Mr. Reed singles out Captain R. S. Weeks, Eighteenth Infantry, as "the company commander who is getting the quickest response from his men"

feature was the constant drill in the new bayonet manual which has come to us intact from the British Army, the force among our allies that has done the heaviest execution with chill steel in hot hands. Nothing could more plainly indicate the conviction of United States Army authorities that the "shock action of infantry" is still to be the decisive factor it was in the days when it was acclaimed by such authorities as Jomini and du Teil.

With the beginning of instruction in this scientifically savage form of close combat it becomes plain to the student-officers, if, indeed, many remained in doubt, that they were here to learn how to *fight*, to learn how to teach others to fight, and to lead others into *decisive shock action*. They learned that this was no drillmasters' "convention, and that compared with the British bayonet system our old familiar bayonet *fencing* was better suited to the Vaudeville Zouaves. The present British bayonet system (and the use of the rifle butt is a formidable part of it) has been tried in action against masses of the foemen and has proved effective. There is no long distance lunging as in the old days on our armory floors, but a quick closing with the antagonist, a long thrust and a short thrust, perhaps a jab to the throat or vitals with both hands right under the bayonet hilt, a crash of the butt on the head or face, or as a last resort a terrific downward blow with the knife edge of the weapon. Even in practise it is rough, hard work, body to body, after a running, leaping approach, and even in practise a little dangerous until defensive armor is brought into use, as doubtless it will be later, having been found a great asset in the Canadian training camps. No man blest—or curst—with an imagination can go thru this exercize without a queer sensation in the neighborhood of his midriff. It is of record that one of the student-officers fainted as his imagination pictured too vividly the effect of this bayonet work on another human being, and who am I that I should blame him? The picture is not a pretty one.

Plattsburg, New York

THE DREAM FLEET

BY JULIA GRACE WALES

I dreamed a dream of an armored fleet
That sailed far over the sea.
"Oh, what is the song ye sing so sweet?
What mariners brave are ye?"
"In many a tongue
Our songs are sung;
From many a land are we."

Over the waves their voices rang:
"Sailing far,
Sailing free,
Under the beam
Of the tranquil star
We guard the dream
Of the world," they sang;
"We keep the Peace of the Sea."

"But what is the land your arms make sure
And where are the homes ye keep?
Oh, where do your children rest secure?"
"In many a clime they sleep.
Thru the midnight gloom
Do our cannon boom,
'All's well, all's well on the deep.'"

Over the waves their voices rang:
"Sailing far,
Sailing free,
Under the beam
Of the tranquil star
We guard the dream
Of the world," they sang;
"We keep the Peace of the Sea."

"But what of your havens, mariners bold,
Your treasuries, marts, and mines,
Your laws and letters and arts of old,
Your sacred fanes and shrines?"
"Our banners unfurled
Are the Flags of the World;
Full many their mystic signs."

Over the waves their voices rang:
"Sailing far,
Sailing free,
Under the beam
Of the tranquil star
We guard the dream
Of the world," they sang;
"We keep the Peace of the Sea."

THE MEN WHO MADE MILITARISM

BY CARL W. ACKERMAN

Most Americans nowadays think that they know "What's the Matter with Germany," but Mr. Ackerman is one of the few, perhaps, who really do. In his article of that title, published in The Independent of April 28th, he discust the German situation from the viewpoint of two years in Berlin and at the German front as war correspondent of the United Press Associations. Here he presents a graphic sketch of "The Men Who Made Militarism."—THE EDITOR.

FIELD Marshal Paul von Hindenburg, Chief of the German General Staff, is a dreamer. He sees the world as a great battlefield; nations as being organized to wage wars; men as being created to fight. Rivers, mountains, forests and roads mean nothing to him unless they possess strategic possibilities. Nature must be adaptable to war to fulfil its highest functions. With maps and soldiers von Hindenburg plans his gigantic military campaigns.

If it were not for General Ludendorff, First Quarter Master of the Teutonic forces, von Hindenburg's dreams would never come true. He makes rivers and mountains fortresses. Mines and factories he converts into war engines. Ludendorff executes what his superior creates.

In August, 1914, von Hindenburg was living in Hanover as a retired general. He had been out of the army for several years because he "defeated" the Kaiser in war maneuvers. Before this war no one ever heard of Ludendorff. The rise of these two men to leadership of all the armies of the Central Powers is one of the most interesting events of the past two years. Today they are the uncrowned Napoleons of Germany, Austria-Hungary, Bulgaria and Turkey. Nearly twenty million soldiers are pawns on their chessboards. These two modern warriors are like the male and female of the species. It takes both to produce German war plans. They—not the Kaiser—are the parents of Militarism.

Long before von Hindenburg became the dictator of the Kaiser's military operations he was a public idol. Some Germans called him the twentieth century "St. Paul." He drove the Czar from East Prussia. That was enough to make him a national hero and in Berlin an enormous wooden image was erected near the Reichstag at the head of Sieges Allee and in front of the Victory Column, which was built after the Franco-Prussian war. The people were asked to buy iron, silver and gold nails and drive them into this figure. When I left Berlin with Ambassador James W. Gerard, von Hindenburg's gigantic statue was almost covered with nails. It stood out against the sky like the wooden horse of Troy. It is Germany's shrine. Altho the people pray to God they look to von Hindenburg for victory.

A few years ago at the annual army maneuvers von Hindenburg was placed at the head of the "army of invasion" which was to meet the Kaiser's "army of defense" in East Prussia. The war game continued for several days. Von Hindenburg had the best of the operations, but because he was leagued against the Emperor he had to "play defeated." Afterward when the Kaiser met his antagonist he boasted about his success and von Hindenburg quietly remarked that if it had been real war he would have destroyed the Kaiser's army and marched into Berlin. This angered his imperial majesty and Paul von Hindenburg was "banished" to Hanover. The two men did not meet again for several years, but when the war broke out this retired Hanover general volunteered. General von Moltke, who was then chief of staff, telegraphed him to command the East Prussian forces against Russia and in this capacity he reëntered the army.

In due course of operations von Moltke was intrigued out of the highest command and General von Falkenhayn, a personal and intimate friend of William the Second, was appointed Generalissimo. But there was so much hatred between von Falkenhayn and von Hindenburg that the two leaders were always at odds. The former was a "military spendthrift." He consumed soldiers and war materials so fast that German leaders foresaw defeat unless there was a change in military tactics. There were, of course, many other charges against von Falkenhayn, but this was the chief military objection. He was wasteful. When von Hindenburg succeeded him "Safety First" became the war policy. Von Hindenburg's task was to make war more mechanical, more ruthless if possible, but above all, to save troops. Losses under von Falkenhayn had been so great that people were sickening under the military slaughter. Von Hindenburg, of course, was loved so much by the people that he was regarded as a saint, but what he really became was a "mechanical demon." Since he has been chief of the General Staff the war has been more ruthless, more desperate, more terrorizing and more horrible than ever—not because he uses more troops but because he uses more machines. Von Hindenburg is fighting a mechanical war with machine guns, buried artillery, glass shells and submarines.

Von Hindenburg was never popular with the Kaiser. He can't tell stories and the Emperor admires and loves only those men who can flatter and entertain him. Field Marshal von Mackensen owes his success to his ability to "jolly" his majesty. But the present chief of staff has always been popular with the Empress and the people. When von Hindenburg's headquarters were in Brest-Litowsk, a pre-war city of sixty thousand inhabitants which the retreating Czar's forces burned to the ground, the Empress sent him once a week from her Potsdam kitchen a box of delicious food. In the good old days of the war when Germans could buy anything and everything without cards they flooded von Hindenburg's offices with gifts. If the German people ever feel that they no longer have a monopoly on God I presume they will worship St. Paul von Hindenburg.

Friends of this field marshal describe him as being enormous, physically, just as his wooden image in Berlin towers above the tree tops of the Tiergarten. He seldom speaks. He sits by hours and thinks. He studies maps all the time. He sleeps little, seldom travels, writes practically no letters, does not like to be interviewed and sees very few officers. Ludendorff is pictured as an alert, active, energetic man of affairs who is always traveling, always asking questions, always commanding and always busy. He passes on all army contracts. He issues all orders. He buys all war materials. He listens to most reports and then he tells von Hindenburg what the Field Marshal wants to know. Politically Ludendorff is the German "Colonel House." Whenever a Reichstag member or a business leader wants to talk to a "high army officer" he is ushered before Ludendorff.

DURING the two years I was in Germany I never saw a portrait or photograph of von Hindenburg showing him smiling. He is pictured always as being solemn and thoughtful. He is never shown in action or on the battlefield. He is cool and quiet. He never gets excited, never jumps to conclusions. One time a group of officers were invited to dine at his headquarters when he was commanding the eastern armies. After dinner the men discust what they did when they were nervous. Some said they walked, some talked, others smoked and some curst. Then one of the guests asked von Hindenburg what he did.

"I whistle," calmly answered the host.

"Has Your Excellency whistled during the war?" questioned another.

"Never!" quietly responded von Hindenburg.

This cool self composure is one of the things which makes the militarist popular. The people know that von Hindenburg is always hopeful and always right, therefore they follow him as children follow a gang leader.

One of the reasons our allies are having such a tremendous task to break thru the western front is that von Hindenburg and Ludendorff have converted northern France and Belgium into a gigantic war machine, where troops are needed not to fight the enemy but to operate the machine. And our allies must charge this machine.

I have heard some Americans say that if some one would shoot the Kaiser the war would end. They seem to think the Emperor keeps the people fighting. They believe Wilhelm II's

overthrow would cause Germany to fall to pieces into a democracy. People who talk that way don't know that von Hindenburg and his man "Friday" are the real bosses of our enemy. Do Americans who expect a German republic ever ask themselves who would be elected president if the Kaiser were to abdicate tomorrow? The German people, if they were to vote for a successor to the Emperor would select von Hindenburg by a greater majority vote than was ever cast for a president of the United States.

We may be in this war with the firm conviction that we will not make peace with the House of Hohenzollern, but unless we make this House cover von Hindenburg, Ludendorff and their military puppets we will be waging a useless campaign.

We must fight to overthrow not one man and his family but the group of men who misdirect the destinies of the German people. It would be sacrilege for the United States and the Allies to make peace with any of the chiefs of the German military machine. In 1914, Grand Admiral von Tirpitz, General von Moltke, General von Falkenhayn and a few others were the sponsors of Teutonic Militarism. Von Hindenburg and Ludendorff are the parents of modern Ruthlessness. They are as dangerous to world peace, to democracy in Germany and thruout the world as "Der Kaiser und Gott!" And they will be dangerous until they are defeated and discredited in their own country.

New York City

THE COLLEGE IN POLITICS

BY WILLIAM T. FOSTER

PRESIDENT OF REED COLLEGE

THIS month the voters of Portland, Oregon, are expected to make intelligent decisions on the eight propositions referred to them by the legislature and on fourteen other propositions initiated by themselves or by their city commissioners. Are they prepared for this far-reaching extension of democratic government? Will they be ready to pass judgment on these questions: whether the state should issue bonds for six million dollars to construct highways, whether the state should spend four hundred thousand dollars for a new penitentiary, whether the legislative session should be extended, whether Oregon and California grant lands should be taxed, whether cities should be required to hold their elections on the same day as state elections, whether there should be a graduated rate of taxation on property of different classes, whether the port of Portland should build and operate lines of steamers, whether the repeal of any parts of the State Constitution by implication should be prevented. Many people believe that the general electorate is not qualified to vote on such subjects. Some people believe that this is especially true of states in which nearly one-half of the qualified voters are newly enfranchized women.

IF these doubts are justified concerning the fitness of voters for their new tasks under the initiative and referendum provisions, the immediate question is, what shall we do about it?

It is virtually certain that we are not going to turn backward and relieve our people of these responsibilities. The only course remaining, therefore, is to provide new opportunities of public education to cover the new needs.

This business of public education we cannot safely leave to those who have special interests to serve in connection with the proposed measures. At the general election of last November, for example, the voters of Oregon were obliged to decide whether ships with home ports in Oregon should be exempted from taxation, whether the single tax should be adopted, whether a new state normal school should be located at Pendleton, whether vaccination should be compulsory, whether the prohibitory amendment should be made bone-dry, whether the manufacture and sale of four per cent malt liquors should be permitted. Every election brings forward similar measures in which small groups of persons, with fanatical or financial interests to be served by the passage or defeat of certain measures, prosecute their campaigns night and day. Frequently the newspapers also are committed to one side or the other of these issues. Under such circumstances, it is difficult for voters to hear both sides. Where shall they turn for information which is likely to be both dependable and non-partizan? Where can they reasonably turn but to the colleges and to the universities?

This question at once calls forth the objection that colleges and universities should "keep out of politics." In no other way, it is said, can they keep out of trouble. It is even reported by the Journal of the Society for the Promotion of Training for Public Service that one great university declined to allow its school of journalism to issue a daily newspaper as its laboratory on the ground that this would oblige the university to express its judgment on current political and economic questions. A number of universities have declined even to permit public discussion upon the campus of the issues of an election, before election day.

It is doubtless true that a university can avoid all immediate difficulties by holding aloof from the dominant struggles of the day, by declining to have anything to say on political issues until they are no longer of any practical importance. But it is also true that, thru such a policy, a university renounces its most conspicuous opportunity for community service. There is no reason why a university should not carry to the people, in their times of greatest need, accurate and impartial information on both sides of important issues.

Where in the wide world can voters confidently turn for accurate and thoro and unbiased evidence, if not to men who are selected by society as experts in public affairs and provided with time and money and equipment for prosecuting their studies? Shall the state generously support its large corps of university professors and then forbid them to be useful?

NEW possibilities of public service are suggested by recent experiences of Reed College. Last fall seven members of the faculty and seventeen advanced students in government and sociology endeavored to promote good citizenship by venturing beyond the college campus to carry to voters, in every part of the city of Portland, timely, correct and interesting information on both sides of the eleven measures to be voted on.

Meetings were conducted in sixty different centers and it seems probable that, directly and indirectly, the college thus reached, in this initial experiment, at least one-fifth of the voters of the city. The meetings were held in schools, churches, libraries and club houses. The attendance ranged from nine to three hundred. At each meeting, two or three speakers, usually representing both faculty and students, presented the pertinent facts in the history of each measure and the main arguments on both sides. Open discussion followed. At each meeting efforts were made to stimulate more reading, more thinking, more discussing, and more intelligent voting.

This experience has proved that it is possible for a college to go directly to the voters in the heat of a political campaign, for the cause of good citizenship, without meeting serious difficulty. To be sure, a college is not likely to make connection with any issue, while it is alive, without meeting adverse criticism. The greater the need for the service, the greater the likelihood of opposition. But, in this experiment, the outstanding fact was the eagerness of the people to resort to a source of information which they thought they could trust. They attended sixty community meetings and would have attended sixty more had there been available time and speakers. The value to the college of such contact with the community is great.

Portland, Oregon

THE ONLY WAY

WE MUST WIN THIS WAR WITH WINGS

BY DONALD WILHELM

The recently appointed Aircraft Production Board, headed by Howard E. Coffin, has already mobilized the available resources for manufacturing aeroplanes and training aviators in this country. Only one obstacle prevents their getting out 40,000 engines and 20,000 planes by next spring, and providing aviators for them. But the obstacle is money! And until Congress grants the necessary appropriation the wings of the American eagle are tied. In this article Mr. Wilhelm presents some authoritative opinions on the immediate need of them.—THE EDITOR.

IT may be, in solemn truth, that this war will have to be won in the air. No longer can infantry advances be made on large scale without protection of curtains of fire. And curtains of fire must be controlled from the air. It may be following no more than the irresistible and terrible logic of this thought, then, if we accept the report that the Allies have at times been driven out of the air, that American eagles—American aeroplanes—must win the war; that America will have to furnish to her Allies not three or four thousand aeroplanes but perhaps tens of thousands.

Let us ponder that fact well.

Let us note that the eyes of an army are in its aeroplanes, and that the day of speculation about the worth of the bird to which America gave birth is past. Aeroplanes have been demonstrated to be more important in war than almost any of the fifty factors that have wrought the tremendous change from three or four possible combinations in war—man with club versus man without club, etc.—to the tremendous number of over twenty-five hundred. We Americans, quite unwittingly, are guilty of ingenuity that has turned warfare from a fight into a science and kept burning all these years, steadily in the ascendency, the damning fever of arms. We have done vastly more than all the rest of the world put together to complicate war and to throw the relatively kind old man-to-man fight into innocuous desuetude. An American devised the ironclad, for instance. An American devised the revolver, and another the submarine, and another the telegraph, and another the telephone, another perfected the device for taking up the recoil on the howitzer and another invented the aeroplane. And the result has been that, in the world of armament, the study of possible combinations between military factors had, before the Great War burst into flames, grown apace in all the great nations except America—a curious spectacle surely: America, the younger brother, giving the means of destruction to the older nations while sitting back with no thought of a Great Affliction on the morrow.

And now we are in the midst of the third year of the Great Affliction and there are two offspring of ours that require attention: the submarine and the aeroplane.

The submarine is our menace.

The aeroplane is our hope.

The aeroplane has grown, as it were, very rapidly to maturity. Only seven years ago, in the hangars at the first great aero meet in America, the Wright brothers—quiet men addicted forever to tinkering and adjusting their engines and planes—Glen Curtis, Claude Grahame-White, Ralph Johnstone, and others, used to sit back, smoke and make assertions about the use of aeroplanes in war. These assertions, for the most part, read like the stuff of dreams.

But these dreams have come to realization.

"Give me one air scout in preference to a battalion of cavalry," General Pershing said in Mexico. And another officer asserted: "Cavalry now belongs in the auxiliaries—the infantry and the artillery on land and the aeroplane aloft constitute the fighting forces now."

But perhaps some of us need proof of the vital part played in modern war by the aeroplane?

Let us look, then, at a description of that part—description by a brilliant English aviation officer.

Major Rees of the British Aviation Corps, who won the Order of Distinguished Merit, and also the Victoria Cross in service at the front and came wounded with the British Commission to America, said:

"The phases of aviation service that people hear about are bomb throwing and fighting Zeppelins. Those are picturesque, but by no means the most important phases.

"The first essential of aviation service is reconnaissance work. Perhaps the next essential in point of importance is artillery work.

"The machines used in checking artillery ranges are relatively slow. They have to be protected by speedy fighting machines. As soon as they rise the Germans send light and very fast attackers. These have to be fought off.

"A little further out we have our photographer machines. It is very important indeed, from time to time, to make complete series of photographs of all enemy lines. Most of this work is

© International Film

A UNITED STATES ARMY PLANE DIRECTING THE ADVANCE OF TROOPS

done by squads. The machines are sent out in groups—photographer machines with guards.

"Still further out we have reconnaissance machines—some of these are out thirty miles or more; others are close to our own lines.

"And then we have special duty machines to drop papers, for use when advances are being made and communications are cut off, etc. They work with different parties of troops—infantry or cavalry—on the grounds. If infantry run out of ammunition they signal up, and the aviator signals back to supplies. If a detachment meets a nest of machine guns, the aviator sends back word about it. This work is done very close to the ground. Much of the work, in fact, must be done close to the ground. Bombing, for instance. We know that every time we drop a bomb on a railway track it means eight hours' work for the Germans. We want to do more of this. We can't now—we can't spare the machines, for most of them are engaged in reconnaissance work, which is most necessary. Bombing is done by squadrons, and, since one is hardly ever in the air at all without anti-aircraft gunfire breaking near, the casualties are high"—the casualties among the aviators are fourth, it is said officially, in point of percentage, in the English army.

"Often," Major Rees went on, "you see machines coming back with wires streaming out behind them, or some other part just hanging to the rest, or, perhaps the engine has had a cylinder crippled. Nearly every machine is hit somewhere on every trip. If you look at the airdrome behind the lines you will find one-half the machines can fly, the other half are being repaired. If we can repair the machine in two days we do so, otherwise we send it back to the depot.

"All this goes on day by day, Sundays and all. We start at work at 2:30 in the morning and continue until after sunset. The last patrol stays up to spot the enemy flashes. In the twilight, one can see the flashes much easier.

"We send over our lines every day a thousand machines. The average time is two hours a day. A machine hardly ever continues in service fifty hours. Either it is shot up or has to have new parts or perhaps a new engine, or perhaps it had to come down because it crippled one of its wings. Engines last nominally one hundred hours, but an engine seldom lasts that long. You can consider, I think, about two months to every machine. I don't think any aviator lasts more than six months. That requires a large personnel.

ONE may see from all this the tremendous uses made of our good American eagle—the aeroplane!

And the Germans are using it!

On the European battle fronts there has been almost continuous fighting for the supremacy of the air because each side knows that to win the domination of the air is to ride the Allies down, on one hand, and on the other to rule for the nonce all Germania. France might not exist today if her aviators had been inferior. (The French honor the aviators for that. Every French patriot loves those aviators. In France those who used to do homage used to bow and whisper "My prince!" Now they bow and whisper "My aviator!") Which is only semi-official! But it was asserted officially, by one of the members of the French mission to America that if Joffre had not employed the American Eagle on the Marne "the Huns might have marched into Paris."

Says a celebrated French officer:

"The French had only a hundred machines when the Germans stabbed at Paris. The Germans had built railroads near the Belgian frontier so as to enable them to bring a large number of troops in a very short time. The French headquarters knew this. We knew that the Germans were planning to invade Belgium, but we thought that the main attack would come through Alsace, which—Heaven help us!—we shall have back again! So only three French army corps were sent to Belgium, and Joffre hurried the rest and all reserves eastward. It was the French aviators that flew with the word that tremendous masses of troops were pouring through Belgium. The aviators brought that word in time. They saved France from annihilation.

"And again at the battle of the Somme. At Verdun the aviators had been saved for the Somme. That was right. And then, for three weeks, during that great battle, the Allies, as a result, held domination in the air. The result was that our artillery fire was conducted splendidly.

"The German beast was blinded. The eyes of his artillery were out."

NOW let us Americans consider the situation! Let us ascertain whether in this article I have written mere enthusiasm of a kind that in the days of the first aero meets in America stirred imagination more than anything else! Let us note that we can without doubt send over thousands of troops, but will they arrive too late? Will they be poured down a bottomless sluice and poured and poured and poured! We can send troops, of course: but long before we can send enough troops to make perceptible changes in a battle line where millions of troops are engaged, we can send aeroplanes, squadrons of them! We can't send them tomorrow, nor the next day—our long callousness, our long and persisting refusal intelligently to take a disagreeable situation as it is and to ward off the Great Offender, has its toll now. But we can send them soon.

I went to a member of the Aircraft Board—a man high in position—one of those admirable American manufacturers who are saving the nation in this emergency. I asked him flatly how long—*how long* is the essence of everything now!—it would take his organization to get under way. "We can get under way at once," he said emphatically. "If there is one thing that we Americans stand for it is quantity! For Americans, when the designing and the engineering work is done, output is easy. And this output will be swift and sure. We can get out forty thousand engines, twenty thousand planes before next spring. Give us the money and we can get out that many by next spring and increase the output steadily, but we can't do that if we don't start till months from now. We must start *now!*"

"Then why don't you?" I demanded.

He threw out his hands. "We haven't the money," he said.

THERE is evidence that the Aircraft Board is ready for its stupendous task in the manner in which it has utilized and coördinated coöperation all along the line and in the manner in which it is providing for aviation training. Three of nine camps appropriated for are rapidly being made in readiness. And already, waiting for them to be finished, in dozens of colleges the most alert men of the land—college athletes preferably—are learning the rudiments, in special concentrated courses, of military training, of machine gun handling, astronomy (aviators must know that, for they often have to steer by the stars), of navigation, waiting for those camps to be got ready to receive them, after which camp training they will see further training abroad.

In land warfare aeroplanes are used in a thousand ways. England is providing for fifteen thousand during the coming year—evidence enough of their usefulness.

In sea warfare they are almost as important, altho used in numbers considerably smaller. The "America"—the giant seaplane that was scheduled to cross the Atlantic just when the war broke out—demonstrated some of the uses of the seaplane soon after it was set to scout work in British waters. Once it swooped down and crippled the periscope of a submarine. Twice, soon afterward, it saw, from its perch on high, submarines under water. It watched, circling about, calling its friends the water craft, till they came up and "finished the job."

Enough has been written to make clear—if any one longer doubts—the military uses of the aeroplane. It is no exaggeration to say that just as a man without a club has little chance with a man who has a club—about as little chance as a man with bow and arrow has against a man with a revolver—so it has become convincingly clear to those in close touch with the military situation abroad that an army without aeroplanes is, in no small degree, at the mercy of an army equipped with them. France has thousands of aeroplanes. England has more. We in America have hardly any. Yet, considering our infinite coast and border line, we should have most of all.

But the point isn't what we *should have*—the point is what we *must have to keep the Germans from winning the war!*

And three thousand machines are not enough! Not nearly enough.

Pictorial Press

What the soldier in the trenches sees in war—a group of pencil sketches drawn by the men who are defending France. "Patrol during the night" (at the top of the page) is an effective picture of a sentry's grim loneliness. It was drawn by George Victor Hugo, grandson of the author of "Les Miserables." In the center is the French for "Gunga Din"—E. Blanche's sketch of a soup and bread carrier in the first line trenches. The ruins of a church in France (in the lower left-hand corner) typify to A. Franquet the pity and the necessity of this war. The last sketch, "The End," is by Sereagny

THE MAN WHO KNOWS

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE first mark of greatness is a question mark. The two favorite words of the man born to get ahead are *Why* and *How*. "Why is a thing done as it is? How can it be done better?" Answer these two questions properly, habitually, and you guarantee a great future anywhere.

A job is worth not what it pays, but what it teaches. There are in America today a number of men with salaries of $50,000 or more, who held jobs not so long ago at $15 a week. How did they gain such promotion? For every dollar in money each man took from his job he took fifty or a hundred dollars' worth of knowledge. Thus each man ultimately fixed his own salary. The way to make an occupation valuable is to look on it as an education.

The call of the business world is for the man who knows. If also he is a man who thinks and who works, a thousand doors of opportunity swing wide before him; he has but to choose, to enter, to command.

There are in business education three principal studies: How to get a job, how to hold it, how to reach from it to a higher one. If every employee had learned these primary lessons of good workmanship, there would be no problem of unemployment.

I think I have found the master key to the problems of unemployment. The president of a great corporation gave it to me, and I pass it on to you. It should unlock many problems of industry also, and that of promotion in particular. For when a man makes himself so valuable that his company never would discharge him, they will promote him; he is the type of man who belongs among the directors.

I was speeding to my work in the early morning, when, upon changing cars, I observed a long line of men reaching from the doors of a big industrial plant far out into the street and back around the corner. A policeman eyed them closely. "What's the meeting, officer?" I queried. "That's no meeting," he grunted, "that's only a bunch of down-and-outs looking for a job."

"And will they get it?" I asked him. "Not on your life," he boomed—"not with that company. You have to know too blamed much to get on their payroll. Friend of mine went there for a job once. They put him thru a regular third degree, made him answer questions about himself and his trade that his mother, doctor, parson and old boss couldn't answer all together. My pal got an all-day headache just thinking about their questions. He wasn't classy enough for such a high-brow concern. These guys won't any of 'em land—you can go to the other door and watch 'em pass out."

"And what's your pal doing now?" I mused. "Driving a truck—that's all he knows," was the answer.

I did not go around to the other door—I will not see failures anywhere. But here was a great industrial concern with a real educational test for employment—and I had to see the president! I chanced to know something about the president. He came to work before his employees, he liked early risers—and it wasn't yet eight o'clock. He was mathematical to a fault, yet one of his hobbies was sociological investigation. He loved promptness and preciseness. Thinking over all these points, I sent to his office a memorandum like this:

> One hundred and fifty-six men are at your doors, looking for a job. Will they get it? If not, why not? Can you spare 3 minutes and 30 seconds for an answer? I will put your advice in a magazine article, sure to reach and likely to help several hundred thousand employees.

The messenger was back. "The president will see you." I had quickly drafted a list of questions, to economize every second—the answers of the president appear below. The great man looked me over, looked me thru, by one swift, comprehensive glance. I also looked him thru, but not over—when you have looked a man thru, looking him over is a waste of time. Having reached a mental understanding with me, the president opened up.

KNOWLEDGE EFFICIENCY TEST

BY EDWARD EARLE PURINTON

FOR DETERMINING THE PROBABILITIES OF YOUR ADVANCEMENT IN LIFE

DIRECTIONS. First read Mr. Purinton's article, "The Man Who Knows." Then grade yourself on the questions below. Where answer is Yes, write 5 in space opposite. Where answer is No, leave space blank. For partial affirmative, write numeral between 1 and 5 expressing degree of assurance. Queries and problems will be answered by Mr. Purinton so far as practicable, when address care of Independent Efficiency Service, 119 West 40th Street, New York. Answers will be mailed, or published in Efficiency Question Box, until further notice.

1. Do you know what you can do best in life, and want to do most? ....
2. Has your present job taught you at least ten valuable lessons? ....
3. Did you ever work out a successful plan for gaining promotion or salary increase? ....
4. Have you learned the scientific way of applying for a position? ....
5. Would you know how to keep your job if a better man tried to get it? ....
6. Are you training yourself to qualify for the place ahead? ....
7. Have you figured out why the biggest man in your line has gone ahead of you? ....
8. Do you belong to a national efficiency organization? ....
9. Are you studying in spare time, locally or by mail, for self-advancement? ....
10. Have you asked a higher official to point out your industrial mistakes and defects? ....
11. Does your lay-off due to illness average less than five days a year? ....
12. Are your personal druggist and doctor bills less than $10 a year? ....
13. Have you enough money in the bank to pay all your expenses six months or longer? ....
14. Do you buy regularly on the budget plan? ....
15. Have you developed a satisfactory way to increase output or reduce costs? ....
16. Can you read a man's nature and character on sight? ....
17. Have you examined an approved recent book on personal efficiency? ....
18. Does defeat make you stronger, and failure make you surer of success in the end? ....
19. Have you graded yourself on at least five of Mr. Purinton's Efficiency Test charts? ....
20. Do you more enjoy a mental or a spiritual exhilaration—such as helping somebody, or doing your work better, or fighting for a principle? ....

Copyright 1917 by Edward Earle Purinton

Add numerals for your approximate grade in efficient methods of obtaining and applying knowledge.

"We shall engage perhaps twenty per cent of the men outside. The other eighty per cent we cannot use. Of the twenty per cent engaged, probably half will leave or be discharged under six months. That is, only ten per cent of the men who apply for a job are able to get and keep it.

"What is wrong with the ninety per cent? I will tell you. They *don't know* literally hundreds of things that good workmen ought to know, but that most men will not take the time and pains to learn.

"They don't know how to work; we have to teach them. They don't know how to think; we try to teach them, but as yet have no reason to be proud of our success. They don't know what they can do best; we may have to transfer a man a half dozen times before he happens on a line of work that really interests him. They don't know what or when or how to eat; I figure that the average employee's working capacity is lowered twenty per cent by foolish meal habits. They don't know how to live in their homes, and keep well for their work; this company loses $40,000 a year from preventable illness of employees, and the employees themselves lose more than that. They don't know where to look for technical knowledge and the solution of their trade problems; our educational department has to answer for them hundreds of questions they ought to answer for themselves, or find answered in a book or magazine they should have on file. They don't know how to plan their future in this company or elsewhere; I judge that perhaps one man in fifty has clearly in mind a purpose, plan, picture, of his own life work—the other forty-nine men are drifting, empty-eyed, empty-hearted. They don't know why they are living at all, these men who come here for a job; and looking for work without feeling the joy of work is like picking roses in the dark—you get more thorns than flowers.

"LATELY we put in the newspapers two advertisements—one for laborers to take jobs at $15 a week, the other for a manager to fill a $5000 executive position. Hundreds of men have begged for the $15 job—and not one has applied for the $5000 salary. Why? Because a $5000 man must possess five thousand dollars' worth of knowledge to sell this company every year, and the men having the right kind and amount of knowledge are, so far, altogether absent.

"Our employment bureau is conducted more or less scientifically. To get a position here, a man must know certain things, and prove his knowledge at the first interview. Among other things he must know how to look an official straight in the eye; how to keep his nerve when looked at; how to tell briefly what he can do, what he has done, what he hopes to do; how to answer questions promptly, truthfully and concisely; how to be deferential without being servile; how to size up the requirements of a new job; how to dress neatly and becomingly, yet not flashily or in the so-called hight of style; how to take small pay with big chance of promotion; how to do the least thing as well as tho it were the greatest. Our test for a man is really this: Does he know how to *work for his company,* and how to *think for himself!*"

Suddenly the president was fingering his watch. I rose to meet the unconscious gesture. "And your test for me is, do I know when to go? I do. Thank you for the great lesson you have pointed out."

BUT the lesson was not yet complete—I always check up a man's opinions by his actions, and I had to learn something of the life and work of the president himself. The man who had been longest with the company—a thoughtful, kindly patriarch about seventy—furnished the data required.

"How did your president earn his position, how does he hold it?" I asked the veteran employee. "Well, sir," he replied, "the Chief won his place by knowing more about the company's business than any other man here; and he keeps it, I think, by always knowing just what to do in a crisis. Let me explain. I was here thirty years ago, when the Chief came, hardly more than a boy, and took a job at $10 a week. From the very first he had to know the why and how of everything. He borrowed technical books from libraries; talked with officials whenever he could make a chance; found an experienced man in his line too old for active work and took business lessons from the old fellow; did all sorts of unheard-of things, to master the science of his trade.

"It wasn't long before the head of the department came to consult this boy whenever a hard problem was being considered. Then one day the head of the department resigned. Before another manager could be found, a crisis developed in that branch of the business, and the whole reputation of the company was involved. The high officials were in a panic. What did that boy do but walk into the directors' meeting and tell the owners of the business how to handle the situation! Of course they made him head of the department.

"He held the position a couple of years, made a lot of improvements, earned a large salary increase, and saved a few thousand dollars. Then he did a most unusual thing. He asked for another job in a more difficult branch of the business—a job that meant lower, harder work, and the pay scarcely a fourth of what he was getting. Some of the directors called him a fool—tho now they realize he was a genius; but they transferred him as requested. Within a year he had invented a scheme for cutting costs that he sold to the company for several thousand dollars and a good royalty. Soon he had a share in the business, and a comprehensive idea of the present, past and future of each department. He was always breaking out in some new place, with some new plan for enlarging the business or reducing the expense. There was no way to keep him down—he knew so much about the work he had no competition. There never was a man who so combined a knowledge of the great principles on which the business rests, with a knowledge of the fine details by which it revolves. He promoted himself to the presidency, he paved his own way by digging thru problems, laying down principles, smoothing out difficulties, girding up men!"

The interview was over, and I did some thinking. Here was a sharp, telling contrast. The man who hunts a job fails to get it because he *doesn't know;* and the millionaire corporation president made his job, holds his job, because he *does* know. In our own work, we are all on our way toward one of these extremes. Toward which? Toward the ruin found in the gullies of ignorance—or toward the splendor found on the peaks of knowledge?

EVERY great business, trade or profession has in it some one man who knows. He is the man for all men to study. Where did he get his knowledge? Why did he get it? How does he make use of it? What could *you* achieve with such knowledge? Is there any reason why you should not know as much, think as much, do as much, earn as much, be as much, as the man above you? In your occupation, who *is* the man who knows? How far have you analyzed his method, watched his performance, traced his record, observed his life?

The greatest lever in the world is self-education. By it the world's leaders have raised themselves from weakness, poverty, obscurity to hights of power, eminence and trust. A leader is but a man who knows more than the other fellow, and uses better what he knows. The backbone of strong leadership is long learning. Would you become a world-leader? Then you must know and apply the fundamental principles of leadership, which are as follows:

1. *Know your job.* Learn exactly what you are paid to do—and not to do. Organize each class of work on a time schedule, and keep to the schedule. Find the standard output, and the maximum, for a week, a day, an hour; make your output measure up always between the standard and the maximum. Write out a list of all the mistakes apt to occur in your line of work; then take special, itemized precaution to prevent each. Analyze the merits and demerits of every tool, machine, material, supply; compare with different brands of manufacture, and with scientific standards of performance; reject faulty equipment, demand the best utensils for your work. Make a list of the new books in your profession, devote an evening or two a week to study and application of improved methods. Join a national trade association or professional society, and make friends with the leaders in your line. Locate a man who has done bigger, better things than you have; study him, the principles, aims and methods that made him;

detect, and correct, your special habits of failure.

LOOK AHEAD

2. *Know the job ahead.* Regard your present position, however lowly or exalted it may be, as a mere stepping-stone to a place of larger usefulness and power. The man who isn't getting ready for something higher *is* getting ready for something lower—as every down-and-outer fifty or sixty years old could sadly testify. A job, like a suit of boy's clothes, was made to be outgrown. If you don't feel yourself outgrowing yours, you should see a business doctor—your mind is poorly nourished, stunted, or malformed. Get a bigger job directly in view, then plan how to grow to fill it. Make yourself a silent understudy to the man higher up; watch how he does things, practise doing them, figure how to do them better; some day his resignation or promotion, or a chance offered elsewhere, will surely call you to the place you are ready to fill.

LIVE LONG

3. *Know the rules of health.* You can add ten or twenty years to your life, prevent needless worry and trouble in your family, save each year an estimated average of two weeks' pay, and increase your earning capacity thirty per cent or more. How? By learning the modern science of health, and putting illness at your minimum, energy at your maximum. Illness is either ignorance or indolence; therefore unnecessary and inexcusable, except in rare cases. Among the forms of preventable disease are colds, indigestion, constipation, grippe, headache, nervousness, many organic troubles and nearly all functional derangements, premature old age, chronic fatigue, worry, pessimism, poverty. Worry a disease? Pessimism a disease? Poverty a disease? Yes. Any condition abnormal or subnormal is a disease; and worry, pessimism, poverty, are conditions of body and mind both abnormal and subnormal. You can banish, you can prevent, almost any so-called affliction by learning to eat right, sleep right, bathe right, breathe right, dress right, work right, play right, think right. Get a few good books on health, build a stronger physique, enhance both longevity and productivity.

SAVE WISELY

4. *Know the science of finance.* Make a list of the extra things you must know or do, in order to earn a larger salary; then put your spare time and energy on the problem of increasing your bank account. Of course you *have* a bank account—if, not, start one today, with a dollar if that is all you can spare. A man who earns $10 a week and saves one dollar is making more than a man who earns $100 a week and saves nothing. Buy on the budget plan. If you have never kept account of your personal expenses, do so for at least six months; then you will know how much you waste, and one of the first signs of wisdom for any man is to know how much he wastes. Apply at the best banks near you for literature on personal finance—every bank should freely distribute this or tell patrons where to find it. Plan your investments ahead, with at least as much delight as you plan your vacations ahead. Money? Good for nothing but to make your dreams come true. Every man should be a colossal dreamer, but the greater a dreamer a man is, the more useless he is, until he has beneath him a solid money base.

HOW DO YOU RATE YOURSELF?

5. *Know human nature.* Is your customer, your dealer, your employer, your employee, a human lion, a human eagle, a human ostrich, a human fish, or a human fox? Maybe he is a human vegetable, or a human weed. And perhaps he is well nigh a superman. To please him, serve him, move him, mold him, you must find what and where he is. All good advertising, all productive salesmanship, all kindly and effective service, rests on the principles of applied psychology. The masters of trade are the knowers of men. Character analysis should be taught in every school, followed in every church, used in every sanitarium, wielded on every battlefield and in every place of business. Do you know *yourself?* Are you thoroly informed on your talents and possibilities, your faults and weaknesses, your habits and tendencies for good or ill? Have you sized up your character and career as impartially and scientifically as you would judge a race-horse before buying? To do a large and safe business with yourself, you must have a reliable rating on your own personality. The first move toward success is to become an expert in self-appraisal. No man ever failed who knew himself. The mark of a big man is that other men regard him his own best reference. To build high, dig deep; to ensure a commanding reputation, explore the depths of yourself and lay a faultless character foundation.

KEEP TRYING

6. *Know the power of ambition.* Look down the roster of the leaders of America today—the merchants, lawyers, doctors, bankers, authors, teachers, preachers. You find that a large proportion of the most influential men began life with a handicap. Some were very poor; others had to fight with disease and infirmity; others lived so far from civilization that they could not get even a high school course; others came from families despised in the community; others had to work so hard from early childhood that their bodies were spent, minds warped, hearts broken, when they reached manhood. But they all won out! The highest reward is reserved for the man with the highest resolve. When a real man meets a handicap, he breaks it up and makes a ladder out of it. A lot of hope and a lot more hustle puts any handicap far behind. What is your handicap? What holds you back? What makes you fearful, weak, discouraged, when you ought to be forging ahead? Stop cringing, start climbing. Strengthen your muscles and sharpen your wits on your difficulty—that's what difficulties are for. Be wiser and better with each failure—here is the lesson in all failure. It takes a big defeat to put a big man far ahead. Learn from defeat, smile at defeat, stand on defeat, grow by defeat, and defeat is changed into victory.

THE REWARD

7. *Know the sovereign satisfaction that crowns loyal service.* The two highest aims of a good workman are these: to do something better than it was ever done before, and to render a daily service that money cannot pay for. Whoever carries out these aims will reach the top of his profession. Work for money and you grow poor; work for merit and you grow rich. A director in the world's largest corporation of its kind—a manufacturing company able to produce $36,000 worth of goods an hour—was asked how the company had succeeded, in the face of tremendous obstacles. He answered, "The president has for twenty years done the least thing as carefully as tho it were the greatest, and the greatest thing as kindly as tho it were the least." The way out of subjection is by removing objection. Don't look for compliments—look for complaints. Measure your ambition not by its motion but by its perfection. The greatest is born of the best. It is a sign that a man is matured when his ambition changes from wanting his work the greatest to wanting it the best. You reap a royal salary by sowing a loyal service. But the real joy is in the sowing. Money palls, fame wearies, pleasure stings, youth dies, hope turns to grief; the one immortal happiness worth knowing is the sure delight in the habit of genuine, scientific service—service to your customer, your employer, your neighbor, your friend, and your enemy. The greatest ruler this country ever had was Abraham Lincoln, for he served on the largest scale. He toiled more than others, he studied more than he toiled, that he might prepare to serve his generation well. And for this he is loved supremely.

You would carve your name high on the scroll of history? Then remember: Wisdom lies in knowing how to add to the weal of the world.

FORETASTE

BY HELEN HOYT

I shut the book together,
Lay it by;
Punch down the pillow,
Turn,
Snap off the light;
With sleepy hands pull up the coverlid
And close my eyes.

I have turned off the light,
Turned off the world;
And laid aside my life and thought and motion,
And laid myself in my straight grave,
Resigned to darkness and nonentity.

Saves His Company $80,000 a year

How an ambitious man increased his value to a five million dollar corporation

THREE years ago an ambitious young man entered a company as auditor. This company manufactures more than 5,000 separate products, and is the largest in its line.

Many men would have been contented to perform nothing but the many hard duties of that job. He wasn't.

He spent his spare time equipping himself for bigger work.

He went to school again

He learned every phase of business outside his own department. In order to get a broad, sound knowledge of modern business methods, he studied the big principles that underlie all business.

His growth and increased value were recognized by the heads of the five million dollar corporation. He was soon entrusted with greater responsibilities. He put into force many new methods which increased the company's business. One plan of his, changing their branch office policy, saves the company $80,000 a year.

The secret of his rapid rise

This successful man gives a generous measure of credit for his success to the thoro grounding in business principles which he acquired by reading the Modern Business Course and Service of the Alexander Hamilton Institute. On his recommendation many of the progressive men in his company are now taking advantage of this same short cut to business knowledge.

The Modern Business Course and Service brings to them the accumulated experience of thousands of successful men, with all their errors eliminated.

The knowledge that carries men thru

The important decisions any executive must make *every day* must be backed up by a clear grasp of the why and how of the problem in hand. He must know the principles that underlie every phase of business, and he must know how to apply them practically.

It is this broad grasp of the fundamentals of business that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

50,000 men training for bigger opportunities

There is hardly a nationally known corporation in which the young men, as well as many of the higher executives, are not studying the Modern Business Course.

In the U. S. Steel Corporation, 450 men are enrolled in the Alexander Hamilton Institute; in the Standard Oil Co., 291; in the National Cash Register Co., 194; in the Pennsylvania Railroad, 100; in the General Electric Co., 300—and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Institute. This Advisory Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, Head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce; and Jeremiah W. Jenks, the statistician and economist.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young men in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; George M. Verity, President of the American Rolling Mills; W. H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Co., and scores of others equally prominent.

"Forging Ahead in Business"

A careful reading of the 135-page book, "Forging Ahead in Business," will show you how to prepare for the increasing number of business opportunities that will come during the next few years. Every man with either a business or a career to guide to bigger, surer success, should read this book. Simply fill out and send the coupon below.

Westinghouse

COMPLETE EQUIPMENT FOR CENTRAL STATIONS

W

WESTINGHOUSE ELECTRIC

An electric washing-machine, equipped with a Westinghouse Motor saves time, labor and wear-and-tear on the clothes.

A Westinghouse Electric Milk-Warmer heats the baby's milk quickly at the turn of a switch. Can be attached wherever there is a light-socket.

With a Westinghouse Automatic Electric Range the dinner is ready to serve when you come home after an all-day absence.

An electric vacuum cleaner, driven by a Westinghouse Motor, ends tiring, unsanitary, inefficient sweeping with a broom.

Westinghouse

SMALL MOTORS, FANS, ELECTRIC WARE FOR THE HOME

Your Unseen Servant

He comes at your bidding, but you do not see him.

You turn a switch or put a plug in a socket, and instantly he is at work.

He lights your lamps, cooks your meals, washes and irons your clothes, sweeps your rooms, gives you a breeze on hot summer nights, freezes your ice-cream, warms your bed, heats the baby's milk, runs your sewing-machine, polishes your silver, grinds your knives, transports you to your office and carries you up or down in the elevator.

He works for small wages and is at your service twenty-four hours a day.

But you would not have this universal servant—at an expense anyone can afford—except for the work of many engineers who have made possible the economic generation of electric current and provided the means of turning that current into light, heat and power.

When you use your Westinghouse Electric Iron or Toaster-Stove or Sew-Motor, you owe the lightening of your household tasks not alone to these appliances but to many other types of electrical apparatus in the origination and perfection of which Westinghouse engineers have played a leading part.

These include the turbo-generators in the power-house miles away, that generate the electricity, and the switchboards, meters, transformers, rectifiers, regulators and more that make possible the control, distribution and use of this great force.

And Westinghouse engineering has been accompanied at every step by complete manufacturing facilities and high manufacturing standards.

Thus Westinghouse quality is the same, whether in a great 15,000 horse-power blooming mill motor, a 75,000 kilowatt generator or little fan motors and electric irons in a million homes.

A Westinghouse Electric Iron eliminates the hot stove, saves steps and is ready any time anywhere there's a lamp-socket.

A Westinghouse Sew-Motor makes an electric machine of any ordinary sewing-machine, abolishing the toil of treadling.

EFFICIENCY SOCIETY

The ratio of achievement to effort is the true measure of efficiency

THE SPIRIT OF SCIENTIFIC MANAGEMENT

BY RICHARD A. FEISS

MANY erroneous impressions about scientific management are abroad which are gained from public prints and from propaganda spread by those who are prejudiced or have no practical acquaintance with the subject. It is from such sources that the impression has been gained in some instances that scientific management and labor are at war. This is contrary to the truth. The fact is where real scientific management has been installed that labor troubles have been reduced to a minimum because not only output but earnings are increased—a result which naturally wins the favor and support of the workers.

Many people consider that scientific management is a system or a method by which to get something done faster or cheaper. Some think that it consists of wage systems and time study work. It is not any or all of these. It is a science and a philosophy. Its purpose is not to speed up production but to harmonize the relationship between management and men. There are no Aladdin-like results. There is no secret or hidden short cut to achievement. It means more and harder work for the management. It puts everyone to work from the head of the concern down, and places the responsibility for accomplishment where it belongs. The chief reason that scientific management is not more generally adopted is because it involves the assumption of full responsibility on the part of the management.

Ordinary or traditional management is management by authority and the transmission of orders based on the old idea of military organization. Scientific management is almost the opposite in its essence and is based upon responsibility and instruction. In fact, scientific management is the management of responsibility in the first person. Starting with the man on the top, the question that everyone puts to himself in his sphere is, "What is my responsibility in the matter?" "What ought I to do," and "What have I left undone that I should have done?" This does not mean the higher the position the more unquestioned the authority, but the higher the position the greater the responsibility.

Scientific management always must begin in the mind of the manager or the man in control. He must begin by broadening his vision. Scientific management starts with his self-education and involves the progressive education of every member of the organization. With this point of view the management sets to work scientifically to determine: first, what the specific duties of every member of the organization are, and secondly, to provide the means and training essential to their accomplishment.

In the determination of specific duties, all the responsibility for planning in the fullest sense of the word must be assumed by the management. The needs of the worker and others in the performance of the work must be accurately and specifically predetermined by the management of the planning department, which, of course, is a function of the management. The management must not only give proper attention to the problems of space, light, air, and sanitation, but to all other conditions under which the work is performed, as these things materially affect the workers in the performance of their duties. Equipment must be properly placed and safeguarded and must be standardized and maintained at the highest point of efficiency. Stores must be properly organized and the handling of materials standardized.

Most organizations of the better traditional type stop at this point. No one today would be considered a business man who has not a proper inventory of materials and who does not know what kind and how much of each kind is needed and the balance of materials available. Yet how many have an inventory of their labor requirements and a balance of personnel available? Only a very few scientifically managed factories have even the knowledge of the personnel necessary to turn out a given amount of work on any of the various operations. This is more essential than an inventory and balance of materials. The time lost from these sources alone is probably equal to from twenty to fifty per cent in the average plant.

UNDER scientific management nothing can be left to chance. In the standardization of equipment and other conditions the management must hold itself responsible for the scientific investigation of all circumstances surrounding the operation so that machines, tools and other equipment can be standardized and maintained by the management at the highest definite point of efficiency. It is unfair and impossible to require any given amount of output from any worker unless he is furnished by the management with properly standardized tools and equipment. Likewise is it impossible and unfair to expect a given amount of output unless materials and stores of all kinds which are used are of a given standard of quality and furnished to the worker in proper amount and proper condition. In order that the worker is properly supplied with work it is absolutely essential that a routing system of some kind be established so that the management at all times has proper control of materials and is responsible for the even flow of work.

Without these things the management cannot possibly have the proper control of the amount and balance of labor essential and available. For this purpose it is necessary to have a personnel or labor inventory showing, on the one hand, the number (in fractions) of workers of a given standard of efficiency necessary for the performance of a given amount of work, and, on the other hand, showing the amount actually available at any given moment. This information is necessary for the intelligent routing of workers in order to meet the problem of daily fluctuations in the balance of personnel. These things under the old style of management are left to take care of themselves or are left to the workers or foremen who are absolutely unable to control them.

It is in the standardization of equipment and materials that time and motion study first makes its appearance under scientific management. It is used to assist in establishing the best means and methods and all other conditions of operation. The knowledge thus gained also forms the foundation for the specific instructions essential for the scientific training of the workers. It is not sufficient for the purpose of scientific management that an employment department for the proper selection of the workers be established, but it is even more necessary that the worker is scientifically and systematically fitted and trained for his work.

For the latter purposes our shops have established both an Employment and Service Department and an Instruction Department. The duties of the former do not consist merely of the selection of the worker, but also of that personal care and development (including discipline and discharge) which are essential to his permanent well-being and contentment. The responsibilities involved are the most important ones of management and they can no longer be delegated to irresponsible people or left to chance. This responsibility must be either directly assumed by the management or put in the hands of executives of the very highest rank who are party to the policies of the organization.

The Instruction Department, as the name implies, consists of a staff of trained instructors responsible only for the imparting of skill and efficiency to new operators and to old operators who have new work to perform. This function, as well as the others mentioned is absolutely essential, no matter in what form it appears. Altogether too much stress has been laid on time and motion study in the popular mind. It is true, as it is of most sciences and their mechanisms, that time and motion study has been used under improper conditions with harmful results. This in itself can in no way be considered as a condemnation of the whole science when properly applied. In fact we are only seeing the beginning of the application of science to industry in relation to its human as well as all other acitivities.

Under scientific management the old style bosses with their petty tyrannies disappear. As we have seen, they are replaced by a corps of teachers. These are the functional foremen each trained to give special service and special training to the worker in the performance of his various functions. The responsibility to go ahead on truth and fact in all activities of the organization becomes a distinct responsibility of the management. The employees of the organization are no longer required to do a thing because it is a command or because some one higher up has ordered it, but are taught to do so because it is right. The law of bosses is replaced by the law of truth, and while there may be democracy under the laws and decisions made by groups or representatives, there is surely no greater democracy than the rule of science and truth. "Obedience to the law is liberty."

We are today facing what is probably the most serious economic crisis that has ever confronted us. In the immediate future we shall have to compete with nations far more efficient than ever before. It is not enough now to adopt the mechanisms of scientific management. We must adopt its ideals and spirit in all our industrial activities. The time to begin is now.

(*Continued from page 500.*)

Week by week, however, especially since the foreign missions came to America, there has been growing in Washington a general conviction that the war can be won with aeroplanes. The Aero Club of America has been for years arguing eloquently for the development of our aerial resources. General Squier and the Signal Corps in Washington have done wonders toward laying out the lines that Howard Coffin, of the Council of National Defense, with the members of the committee of which he is chairman, is ready to utilize in getting together an aerial fleet. The council is given the task of mobilizing the phases of industry necessary to the building of 3000 planes the first year. It has had the coöperation of the National Advisory Committee for Aeronautics—which has been at work for over two years—and the aid of not a few technical institutions such as Massachusetts Institute of Technology and many of the facilities of Cornell. Altogether, thus, important steps toward standardization of army-navy aeroplanes have been taken. The thirty odd aeroplane manufacturers in America, who have been making machines of nearly as many models, coöperated admirably with the National Advisory Committee at the beginning and are cooperating with the council now. Moreover, the whole aeroplane industry is particularly mobile and plastic because it is new and enthusiastic. It is hard to believe, in fact, how many of the men engaged in it and how many technical men engaged primarily with other functions have given their time and efforts and funds toward working out army-navy aeroplane problems—problems of instruments such as those involved in making altimeters, drift meters, tachometers, other meters: problems of finding a substitute for the surface cloth heretofore imported from Ireland and England; problems of providing a substitute for weather-dried spruce, the ideal wood for aeroplanes—a substitute of high specific density, even a metal, that can be got ready for extensive manufacture in much less time than the year or two years required to season spruce in the open air. All technical problems, practically, have been met and solved. Even engine difficulties have been overcome nearly altogether, and the engine problem is an important one. "The needs of the army and navy," said J. F. Victory, of the Advisory Committee, in May, "are now estimated to be 3000 machines in the first year and 4000 or 5000 in the two succeeding years, on the basis of keeping 1000 machines in the air, on which basis we shall need two extra engines for every machine. Engines wear out and need overhauling constantly."

These problems all are complex, but they are now in the background and the question of supplying more than 3000 machines in the first year is coming more and more pertinently into the foreground. "Three thousand machines," said a Government official, "are not enough."

Such assertions have become more and more prevalent and have, of course, had their effect on Chairman Coffin. His point of view is, very briefly, this: "If the Government wants more machines it simply needs to supply the money and say so. We'll get them!"

And America, it is believed, is going to need them! America—so the conviction is everywhere gaining strength—must, and can, match her eagles against any brood of flying machines that there are. We don't all realize that we have got to provide ourselves with the efficient means for all possible combinations that may arise in this war; we must remember that the aeroplane enters as a common factor into more possible combinations against an enemy than any other war factor. We can produce aeroplanes almost without number; and there is need of them almost without number. It is certain that we shall need many for defense; it is certain that we shall want more and more for offense. They are—these American eagles—characteristically American "birds," fit emissaries to prompt the boche that we are on the job.

Washington

Rinex Soles

"YES, Rinex Soles *are* better than leather. They look just as well, are much more comfortable and wear decidedly longer. You'll never go back to leather soles once you wear Rinex."

Sole leather, at its best, cannot compete nor compare with Rinex as a sole material. Here is the synthetic product of the world's largest rubber manufacturer, conceived and manufactured for one specific purpose—*shoe-soles.*

Rinex requires no breaking-in. It is comfortable from the very beginning. It imparts the spring and swing of youth to all who wear Rinexed shoes. Rinex Soles enjoy many other advantages that will be apparent at a glance.

Next pair of shoes you buy, whether for yourself or any other member of the family, tell the clerk you want Rinex Soles. Next pair of shoes you have re-soled, tell the repairman the same thing.

The genuine have "RINEX SOLE" stamped in the shank. Always look for this name.

NATIONAL EFFICIENCY
CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

MOBILIZING WOMAN'S SERVICE

BY EUGÉNIE M. FRYER

SOME months ago, about the beginning of February, the National League for Woman's Service issued an emergency program, a program that gave promise of effective service in this time of national crisis. Today people are naturally interested to know, (1) how practical this program has proved? (2) Has it been necessary to modify it? (3) On what part of the program has experience shown that the emphasis should be most effectively put?

At the Washington headquarters of the League I learned that two lines of activity were at present of vital importance, and that therefore the League was concentrating especially on these two things: I. Industrial and economic preparedness; II. Agricultural preparedness.

As regards the first, industrial and economic preparedness, the Bureau of Registration and Information of the League is working in direct coöperation with the Department of Labor. This Bureau "has undertaken to assist the Federal Department of Labor in its efforts to provide factories and mills engaged upon Government orders with an adequate supply of women trained in those occupations." To this end, and by the direct authorization of the United States Department of Labor, to make this registration, this Bureau is, in the first place, mobilizing wage-earning women by means of the registration blanks issued by the Department of Labor. These blanks will give the Government a comprehensive idea of our industrial forces, and on how many women wage-earners it can depend.

The women thus mobilized can, I understand, specify the length of time they are willing to serve at a time.

THE redistribution of woman's labor without disturbing existing industries is the second phase of the Bureau's work. For example, in New York many women have been thrown out of employment by tailoring concerns whose business has been lessened because fewer suits are being ordered. In Hartford, Connecticut, there are few women, and the factories are in need of two thousand additional women. The object of the Bureau in such a connection, would be (1) to ascertain thru their supporting organizations that all the wage-earning women either had employment, or could be temporarily spared from the work they were doing for the more vital need; (2) to get those out of employment in New York to register for work in Hartford, the expense of transportation being shouldered by the Bureau. (3) The housing, care and protection of the groups of wage-earning women who are thus called away in large numbers from their home environment for emergency and temporary service. This phase of the work of course touches on the social welfare work of the League's Emergency Program. These housing problems vary in various localities. At the Philadelphia Quartermaster's Department, the Schuylkill Arsenal, women are now being largely employed in making soldiers' shirts and tent sacks. This latter work was found to be very taxing on a woman's strength, and so the Bureau thru the Emergency Aid is endeavoring to secure a house and to equip it with power sewing machines. Again, in Hartford, the Bureau thru its supporting organizations is seeing to the care and housing of the various nationalities, especially the Poles and Lithuanians, who are predominant there. Each nationality is housed separately, watched over by competent women who are giving their time, their care and their protection to these women who are doing their bit for their country in the front lines of industry.

THE question naturally arises as to whether, when you have transported workers from one place to another you can rely on their staying and sticking to the work assigned, and for which they are pledged. One is accustomed to so much fickleness, unreason and independence in workers, that one wonders how many, especially the foreign born, will intelligently respond to this national call to service. This undependable attitude is perhaps natural; for the old sense of personal loyalty to the firm, to the employer, is practically dead and out of fashion; has been swept away with that fine sense of pride in one's work that in former times made of every man an artist. In a sense, then, these industrial workers are on trial, and if they rise to meet this test, it will be the beginning of a new and a nobler era in the nation's life; for it will show an awakening as to what individual responsibility means in its relation to citizenship, and because of it there will come a unified response to national service. It will also mean a tremendous step toward the realization of true democracy; for these women, who as members of the Bureau and its supporting organizations are caring for the comfort and protection of these wage-earning women, will of necessity come into close contact with them. This near association will afford an opportunity for mutual understanding and appreciation, and must break down the false barriers of class. Class hatred will vanish when the wage-earner recognizes in the woman caring for her wants a sister, a fellow worker in the self-same cause—national service. Perhaps these volunteer workers will follow the noble example of their English sisters by volunteering as substitutes for over holidays and weekends, so that the wage-earning women may have a breathing spell, and the work still go on without interruption.

Agricultural preparedness is the second line upon which the Bureau of Registration and Information is bending its efforts. This is of fundamental importance, and underlies the success, "the very life of all plans for national defense; for to feed the military and civil population at reasonable prices is a vital necessity." To work in coöperation with the Department of Agriculture the Bureau feels is to have direct bearing on the high cost of living, and will therefore serve the nation in peace as well as war. Again, as with the mobilization of women for industrial and economic work, the Bureau in its mobilization of women for farm labor is in direct coöperation with the Department of Labor. Their plan is as follows:

1. Thru the State Farm Help Specialists and all existing agencies of the states to secure as definite information as possible as to the amount and kind of labor needed in each locality.
2. Ascertain to what extent women, by the use of existing farm machinery, without physical detriment, can do farm work now done by men.
3. Organize machinery for registering women for agricultural work and for placing competent women where there is a shortage of farm labor. This will be done in the following way:

In each state where there are indications of a shortage of farm labor, an agricultural chairman will be appointed by the Bureau of Registration and Information. If possible, a woman of practical agricultural knowledge, and preferably one who is already active in agricultural preparedness, will be chosen.

She will at once get in touch with the State Agent in Charge of Farm Help and the State Agricultural Committee. Thru them she will get information as to how much woman labor could be used in the state, for what work, where and when. She will then find out what training in agricultural work can be provided (either by the state or by private agencies), and get all information concerning existing training courses.

She will then, on the basis of this information, appoint local assistants and take registration thru the registration agencies of the bureau which have already been established thru the coöperating organizations of the bureau, or thru such other agencies as desire to coöperate. This registration should be taken on blanks (in duplicate) furnished by the bureau and one copy sent to the nearest federal employment office or agency designated thereby and the other kept by the chairman. These applications will be classified and filed according to the kind of work and experience, and kind of training desired.

FOOD is the foremost question of the hour, and is of vital interest to every citizen. Various methods have been suggested to increase the food supply, many are being carried out systematically and intelligently, such as the planting under the supervision of associations, clubs and schools, school gardens, home gardens, back yard and vacant lot gardens. Again college men and women have volunteered to do farm work, and the National Emergency Food Garden Commission expects to put one million workers who have never done such work before, into the field pledged to plant food gardens.

The giving of land for cultivation has been generously responded to, and is, with the coöperation of the farmers, the foundation upon which the Bureau has had largely to build. As summer comes on there will be need of fruit pickers and preservers of fruit and vegetables as well as tillers of the soil. Much of this can be done by teachers whose holidays extend over the summer months.

In Connecticut farm as well as factory has been emphasized and the supporting organizations there are busy marshaling their forces. In Colorado a woman of initiative and executive ability called together a "war council" to solve the local food problem. This woman has organized a whole county, dividing it into several sections, such as home economics, chicken raising, Belgian hare raising, pig raising, planting gardens. In this way there is no chance for overlapping or for overproduc-

tion. The whole works together for the common good. This is but a sample of what the women of the country are doing in the way of national service. No one can doubt that like the women of Europe they will make good. They have grasped the needs of the situation and are putting their allotted tasks over while the men in Congress wrangle and put first their own petty political schemes regardless of the nation's crisis and the nation's need.

In this connection two things must be remembered, for therein lies the source of the success of the women of England and France. (1) It is necessary to remember that one must do one's bit where one is. It is less glorious, less romantic perhaps, but it is a truer, finer patriotism, a deeper recognition of individual responsibility in its relation to national service. For example, I learned at the Washington headquarters of the League that they have been flooded with letters from teachers anxious to give up their positions in the schools to serve their country elsewhere. As a matter of fact, where could they serve it better, more truly, than in their profession as teachers? They are needed in the schools where they can exert their influence over the children, developing in them a knowledge of high ethical standards, of right thinking? These teachers have a grave responsibility in the training of these children who are the men and women of the future, and upon whose moral standards and right thinking the country's very life depends. Our weakness as a nation today is a "confusion of mind" regarding vital issues, the present national issue for instance, which is appalling. We must reveal again that strength of a sound inheritance and the virtues of a pioneer life which are ours. Where the issues of this war are concerned, there is no excuse for "confusion of mind." Our choice lies between autocracy, ruthlessness, intolerance, all that is antithetic to our traditions and our ideals, and democracy, freedom, justice, that justice, to quote William Penn, that is the only guarantee of a true and permanent peace.

(2) In doing your bit where you are, you can exercize economy in the home—making it a fine art. From this no one is exempt. This economy will include the art of doing without as well as the elimination of waste and the conservation of everything. That is something which everyone may share. The one qualification is the spirit of self-sacrifice. Common sense must supersede French heels, a quiet, serious patriotism the flag-flying, brass band variety. The whole future of the American woman is at stake and she dare not fail to reach the goal which her allied sisters have already attained. That she will not fail is evidenced by the earnest, purposeful work she is doing in the national service of her country, her zeal wisely directed either in connection with the Bureau of Registration and Information of the National League for Woman's Service, or its supporting organizations. The women enlisted in this work, keenly alive to their individual responsibility in its relation to national service, are the leaven that will definitely aid in leavening the nation's life. Sordidness, civic corruption, self-interest must be swept away both in our official political and civic life in the purifying floodtide of self-sacrifice that will reveal itself once more in all its beauty when the nation rises regenerated from the cleansing fires of a noble purpose nobly fulfilled—the giving of our all without reserve in the Cause of Righteousness which we have at last espoused.

Philadelphia

How I Sold My Property

The Story of a Successful System of Finding Cash Buyers for Real Estate

By W. E. B.

THIS is a short tale about a quick sale.

It tells of a modern method of selling property without paying big commissions to agents.

It tells how this system sold my property—quickly, and for cash—and how it can do the same for you.

It gives information of immense value to every man or woman who has real estate for sale.

Through a business deal I became the owner of a residence property in an adjoining state.

The place was so run down that it would have required five or six hundred dollars to make the house habitable.

As the property was so located that I could not live on it, and, being unoccupied, brought me no returns, I was, of course, anxious to dispose of it as quickly as possible.

Never having tried to sell any real estate, and knowing no better method to pursue, I placed the property in the hands of the leading local real estate agent.

This agent, following out the usual methods of the average small-town real estate man, put a "For Sale" sign on the property and then sat down and waited for some one to come along and inquire about it.

After several months had elapsed without any word from the agent I wrote and inquired regarding the prospects of a sale. He replied that he had been unable to do anything with the property and had come to the conclusion that it was impossible to sell it in its present run-down condition, and advised me to spend $500 in repairs.

Not having any money to spend on the place, and having lost all faith in the agent's ability to find a buyer, I decided if anything was done I would have to do it myself.

Fortunately for me, about that time, I learned of "The Simplex Plans for Selling Real Estate" that had just been brought out by a New York publishing house. These I secured, and much to my delight, I found they contained *seven definite plans* for selling just such a property as mine.

Selecting from these seven plans the one that seemed best suited to my requirements, I immediately put it into operation with the following gratifying results:

Within three days I had eighteen people interested in my property, and within two weeks I made a satisfactory sale having received three cash offers and two offers of exchange.

And my experience seems to be the same as others who have availed themselves of this system of selling. Here is what a few of them say:

"Sold my property for cash within ten days. Gladly recommend your methods."—*Wm. H. Cartland, Wakefield, Mass.*

"Your method sold my farm in a short time and for cash, too."—*Mrs. L. A. Childs, Glenwood, Minn.*

"Sold my fruit farm at a satisfactory price in a very short time. Much pleased with your method."—*E. R. Lindsey, Vancebury, Ky.*

"Sold my property for cash. Think your plan is the quickest I ever saw."—*Johnson String, Waterford, N. J.*

"Your plans sold my property when every other method failed. Found a buyer in a remarkably short time."—*Jno. O. Brown, Alexandria, Pa.*

Every reader of this publication with any real estate to sell should get the Simplex Selling Plans at once. They are complete, simple and practical, and are for the express purpose of selling homes, farms and building lots priced at $15,000 or less.

These plans are so plain and easy to follow that a child can use them.

The best evidence of the success of this system of selling real estate is the fact that it has already sold more than 5,000 properties in the 48 states.

No matter where your property is located (provided it is in the United States), you will find the Simplex Plans of invaluable aid in turning your holdings into cash.

These plans can also be used by any man who wants to go into the real estate business "on the side." No matter what business you are now in, no matter what other kind of goods you sell, no matter what kind of a salaried position you now hold, it will pay you to get and follow these plans and add $50 to $100 a month, and more, to your earnings.

Mr. J. C. Kotzum, of Curtis Bay, Maryland, says: "I sold a property yesterday by your plans for $2,500. My commission $250."

If you will write to the publishers of these plans at once, you can share in their special, reduced-price, free-examination offer.

Send no money. Just fill out and mail the coupon and a complete set of these copyrighted plans will be sent to you by parcel post with convincing evidence of what they have done for others and what they can do for you. In this way you take no risk as you may examine the plans in your own home without cost or obligation. Then if you want to keep and use them, send the publishers $5 in full payment for them. If you do not wish to keep them—if you are not convinced that you need them to find a quick cash buyer for *your* property—simply return them and you will owe the publishers nothing.

As the publishers reserve the right to withdraw this special, free-examination offer at any time, better cut out, fill in and mail the coupon right now to SIMPLEX SERVICE COMPANY, Dept. C., 1123 Broadway, New York, or, if you prefer, copy the coupon on a post card or in a letter. *Advertisement.*

SIMPLEX SERVICE COMPANY, Dept. C, 1123 Broadway, New York

You may send me, postage prepaid, a complete set of THE SIMPLEX PLANS FOR SELLING REAL ESTATE. I am to have three days in which to examine them, at the end of which time I will either return them or send you $5 in full payment for same. I agree not to show them to anyone unless I keep them.

Three Letters or Three Hundred

are all the same to a Bushnell Expansible File Pocket—it expands as the letters increase. The one satisfactory remedy for overcrowded folders!

Do Not Change Your System—Improve It

Use Bushnell's Style "C" Vertical File Pockets (Expansible) to build up the weak spots and take care of that one-tenth of your filing system bearing the brunt of bulky correspondence and frequent reference. These Pockets fit in at any point in your filing cabinets, co-operating perfectly with flat holders holding fewer papers.

Bushnell's Style "C" File Pockets

are made of pure rope material (Paperoid) outlasting fifteen to twenty of the ordinary manila folders. Try, say, fifty to take care of your heaviest divisions and make comparisons with your present equipment. Realize fully their added efficiency and their great durability. The front flap folds back, disclosing the contents, permitting quick and easy reference or the instant removal of any paper. These Pockets stand upright in the file—no "slouching," as with folders. Index always in sight, eliminating misfiling and consequent loss of time.

CUT HERE

Please send for examination and trial a free sample of BUSHNELL'S Style "C" Paperoid File Pocket, as described in June "EFFICIENCY."

THE NEW BOOKS

A SOLDIER OF THE LEGION

Our first thought on seeing the title *Letters and Diary of Allan Seeger* was of regret. Why were we not allowed to recall Allan Seeger as the poet of one glorious lyric? Why should we see that he hobbled along in prose like the rest of the reporters from the front? But we might have saved our captiousness at the publication of the little volume. We opened it reluctantly and we found what is perhaps nearer to literature than anything that has come to us from the trenches.

Allan Seeger entered the Foreign Legion and went, after two months' training, to the front. He fell in the charge of the Legion at Belloy-en-Santerre. His pages are extraordinarily vivid and human and yet curiously impersonal. There is hardly an anecdote, hardly a mention of an individual. Idiosyncrasies of character, incidents of trench life were not his interest and yet you live trench life with him, and you breathe the very spirit of the war. One thinks of the writer of these simple jottings of day to day as a sort of romantic Marcus Aurelius, a magnificent young pagan with a philosophy that held in serene grasp all that could chance of life or death. He writes in December, 1915, of the soldier on night watch:

Alone under the stars, war in its cosmic rather than its moral aspect reveals itself to him. Regarded from this more abstract plane the question of right and wrong disappears. Peoples war because strife is the law of nature and force the ultimate arbitrament among humanity no less than in the rest of the universe. He is on the side he is fighting for, not in the last analysis from ethical motives at all, but because destiny has set him in such a constellation. The sense of his responsibility is strong upon him. Playing a part in the life of nations he is taking part in the largest movement his planet allows him.

And again to his mother:

The essence of success is in rigorously obeying one's best impulses and following those paths which conscience absolutely approves, and than which imagination can conceive none more desirable. . . . Anything conceivable that I might have done had I not enlisted would have been less than what I am doing now, and anything that I may do after the war is over, if I survive, will be less too.

Sentry duty affected him intensely, and he makes the reader share the feeling of the men on *petit poste.*

As the night wears on the tension begins to tell. The senses of sight and hearing become subject to strange hallucinations. Surely some one is whispering out there in the darkness. Or else it is a low whistle, or such signals as pass between the members of a patrol. A black spot in the night takes shape and seems to move. A human form detaches itself from a tree trunk. As a shot rings out near by along the wall the sentry's hand tightens on his rifle. . . .

"More than he who looks for the morning." Never have I realized the force of this verse as in the interminable fourteen hours of these winter nights. It is heralded now by the morning star. In the last hours of darkness, amid the summer constellations just beginning to appear, the beautiful planet rises, marvelous, resplendent. Not long after the green glow of dawn mantles over the east. The landscape begins to grow visible, the black spots come out in all their innocuous detail. The little groups of men return to the central post. Here the relieving squad comes up before the stars have completely disappeared and the tired watchers are free to return to the château.

The book is full of pictures, some hor-

rible, many exquisite. His company was quartered in the cellar of a ruined château and he rescued a few precious volumes from the wrecked library.

We have cleaned this up now, and it is an altogether curious sensation to recline here in an easy-chair, reading some fine old books, and just taking the precaution not to stay in front of the glassless windows thru which the sharp-shooters can snipe at you from their posts in the thickets on the slopes of the plateau, not six hundred meters away. Sometimes our artillery opens up and then you lay down your book for a while and, looking thru a peek-hole, watch the 75's and 120's throw up fountains of dirt and débris all along the line of the enemy's trenches.

Before going to the actual front the Legion was given a rest from the trenches for a few days. How far away he is from the war!

I am sitting now under a giant pear tree on a green slope outside the town, enjoying the most beautiful landscape as it fades away grau-ally in the dying daylight. Wide lowlands stretch away—fields of richest green, cultivated acres, hamlets, groves—bounded toward the southeast by the "many-folded mountains" of Switzerland that rise, crest after crest, each one more faint, toward the far clouds pink in the sunset. The boom of the cannon can be heard, more distant now, in Alsace. Two captive balloons are up along the line of the front. An aeroplane returns toward Belfort, from a reconnaissance beyond the lines. A convoy of motor lorries raises the dust along the white road eastward. Automobiles dash back and forth. Exquisite peaceful summer evening. The green on forest and field has not begun to be browned yet, but already in the evenings the chill of autumn is beginning to be felt. Moments of peace, sweet melancholy, resignation, self-content.

Yet all the time his whole heart and mind are bound up in the cause. He has no animosity toward the Germans, no well wrought out theory of international causes and effects. His beloved France was attacked. That was enough. Wrong was abroad and there was a chance to be in the struggle against it. And yet with this pure youthful enthusiasm goes an extraordinarily clear understanding of the strength of the enemy, the weaknesses of the Allies and the length of the struggle. In December, 1915, he writes:

Meanwhile the conflagration spreads and there is not the smallest glimpse of hope of seeing it finish inside of years and years. This is a little disheartening. But as in times of peace there is nothing better than love and art, so in times of war there is nothing better than fighting and one must make the best of it, finding the recompense in feeling one's heart pulse in concert with those of the élite who are doing the most admirable thing, rather than with those of the multitude who are concerned with second-best things.

Letters and Diary of Allan Seeger. Charles Scribner's Sons. $1.25.

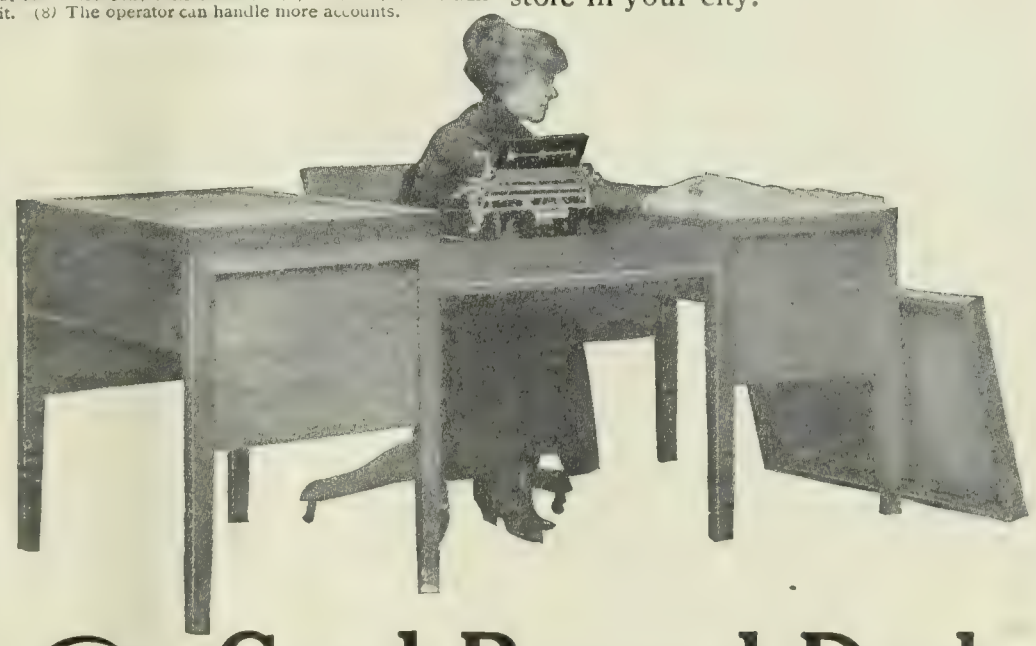
HEALTH FOR EVERYBODY

The distribution of information bearing on health receives a distinct impetus thru the publication of Dr. Lee's *Health and Disease*. With the fullest command of technical knowledge, there is combined here a simple but dignified presentation for the guidance and stimulation of the layman in matters pertaining to the health of the community and the individual. There is nothing in the nature of "every-man-his-own-physician" about this book. On the contrary, the reader of books like this will be very likely to learn when to send for the physician. The purpose is to transmit information calculated to prevent disease, and the matter of cure is left to specialists.

The relation of food, of air, excretion, exercize and of the habit-forming chemicals, including alcohol and tobacco, to health and disease are discussed in separate chapters. Infectious diseases are described chiefly from the point of view of their transmission—as food-borne diseases, contact diseases, insect-borne diseases, venereal diseases—and "air-borne" diseases. This last caption is unfortunate since the hygienists are trying very hard to convince the public that so far as known the

Put in a "Y and E" System for Machine Accounting

REG. U. S. PAT. OFF.



120 "Y and E" Trays like this, with Cards and Guides, were bought last month by a great Oil Company in one order. (1) The "Y and E" tray or desk is easier to work with. (2) A "Y and E" card is easier to handle. (3) Accounts are kept in one tray instead of three or more binders. (4) Reference is facilitated by the better indexing system. (5) One "Y and E" card tray holds as many accounts as four binders of ordinary capacity at the cost of one. (6) Tray lasts forever. (7) Anybody can handle it. (8) The operator can handle more accounts.

"Y and E" Ledger Posting Equipment is being installed by leading concerns in America because of its high efficiency and fine quality.

One "Y and E" Tray (oak or steel) holds as many accounts as three or four binders and costs less than *one* binder. It saves much of the operator's time, provides a perfect index, and saves all renewal expense, except, of course, for additional cards as needed.

"Y and E" equipment is particularly substantial and practical in construction, offering a number of exclusive features. Write today for complete information, or ask at the "Y and E" store in your city.

"Y and E" Card Record Desk

The "Y and E" Sectional Card Record Desk for machine bookkeeping or for stock records, etc., brings within reach of the operator between 8,000 and 12,000 cards, according to their size. This desk is used by hundreds of large commercial houses and is considered to be one of the best efficiency devices we offer. It eliminates all the waste of time caused by running back and forth from cabinet to desk, waiting for someone else to finish using the file, etc. Holds more cards than a cabinet of equal price and does it more efficiently.

The Desk is sectional—easily assembled and expanded. The trays are light and can be lifted out of the desk and carried into the vault or safe at night. Check coupon and mail today.

infections are not carried by the "air" but by the mouth-spray, or sneeze-spray.

The emphasis on community efforts toward health preservation, and on the systematic utilization of scientific knowledge which distinguish the book thruout, are properly brought to a climax in the chapters on sewage and refuse disposal, occupational diseases, boards of health and vital statistics. There is a good index and the book is well printed.

Health and Disease; Their Determining Factors, by Roger I. Lee. Little, Brown & Co., Boston. $1.75.

OTHER WARS

"No historian believes that history repeats itself. Yet between different ages there are frequently striking analogies and resemblances. . . . To an age like our own, caught in the grip of a world war whose issues, however incalculable, will inevitably be profound, there is much instruction to be gained from the study of a similar crisis in the destinies of humanity a century ago."

That is Charles Downer Hazen's introduction to his *French Revolution and Napoleon.* It explains why he wrote the book and why it should be read today. It is written in the clear accurate, thoroly readable manner which makes "Europe Since 1815" such an excellent textbook for history classes and such a boon to the lay reader who wants a background for his daily paper. Mr. Hazen has the faculty of being interested and at the same time leaving a surprizingly large collection of facts in his reader's mind. His *French Revolution* should really be read in conjunction with Carlyle's. It is exactly the sort of clear, logical, accurate, historical background which these brilliant, literary pictures demand. The portion of the book which deals with Napoleon is less interesting than the first section. There is too much compression of a very large subject. We have the facts of Napoleon's case all before us, but not enough of the man himself.

The French Revolution and Napoleon, by Charles Downer Hazen. Henry Holt & Co. $2.50.

ROUND-ABOUT THE PLACE

Virginia Robie's *Quest of the Quaint* will be enjoyed by the amateur collector. Its pleasant chapters deal with such small but tempting treasure trove as silhouettes, valentines, Bennington dogs, chintzes and bottles. (Boston: Little, Brown & Co., $2.)

For owners of two or three cows *The Cow and Milk Book,* by Mrs. Lionel Guest, a practical farmer experienced in English and Canadian methods, will be found as helpful as the more scientific guides, most of which have the herd owner in mind. (John Lane Company, 75 cents.)

Domestic Architecture, by L. E. Robinson, deals with the planning, construction and furnishing of the house and the arrangement of grounds, laying down general principles for the guidance of those who are building or remodelling their own homes. It is a non-technical, well-balanced treatment of its topics. (The Macmillan Company, $1.50.)

Under the A. I. C. P. of New York, W. S. Gibbs and her helpers have worked out from their experience in caring for 150 families household budgets of incomes from $300 to $1000. The women aided have kept their accounts under this system and the results in improved health and spirit are noted. A suggestive report for all engaged in social work. (The Macmillan Company, $1.)

John R. McMahon writes gaily of the family adventures in search of *Success in the Suburbs.* His optimism is merry, not patronizing, and the more convincing that he sets up a moderate standard, planting it in good practical advice. Of course, cov-

ering much ground, the book is suggestive, not a complete building and garden guide. (G. P. Putnam's Sons, $2.)

For all garden makers the sumptuous *Book of the Peony*, with its beautifully tinted plates, will have instant attraction. The hardy plant with its magnificent flowers deserves such a study. One hundred and twenty-five varieties besides the tree peonies are described with directions for culture. (J. B. Lippincott Company, Philadelphia, $6.)

THE JEWS TODAY AND YESTERDAY

The need for convenient manuals for Jewish schools is being rapidly met. Among the best of these is the historical series by Maurice H. Harris which includes *A Thousand Years of Jewish History*, *History of the Medieval Jews*, and *Modern Jewish History*. The first two volumes have just reappeared in new editions. (Bloch Publishing Company, 50 and 30 cents.)

The Jewish Teacher is an annual devoted to the needs of the distinctly Jewish educational activities in this country, efforts not toward parochial schools but toward classes supplementary to the public schools and devoted toward rescuing and developing the finer and more distinctive qualities of the Hebrew race. (The Jewish Teacher, 356 Fifth Avenue, New York, 50 cents.)

There is perhaps no better way to understand the idealism of our Jewish fellow citizens than by reading such a collection of essays as H. Sacher has gathered in *Zionism and the Future of the Jews*. Anti-Semitism, the dangers of emancipation, the university at Jerusalem, the 15,000 colonists in Palestine, are some of the topics treated. (The Macmillan Company, $1.)

Prof. Henry T. Fowler's brief survey of *The Origin and Growth of the Hebrew Religion* is one of the best hand books on the subject for college classes or other groups of advanced Bible students. It is especially to be commended for its readableness and clear presentation of the various stages thru which the Old Testament religion advanced to its final expression in Judaism. (University of Chicago Press, $1.)

The first volume of Dubnov's *History of the Jews in Russia and Poland*, now translated, takes their tragic story to 1825. Written with amazingly little bitterness, tho slightly ironic of attempts to Christianize the victims of Christians, with its lucid style and its inherent human interest, this work should have readers beyond the circle to which of course it makes its first appeal. (Jewish Publication Society, Philadelphia, $1.50.)

ALL SORTS OF SUCCESS

"How to do it" books are always slightly amusing, but in *Writing for the Magazines* J. B. Esenwein gives intelligent practical advice as to what the editor wants. (Home Correspondence School, $1.50.)

Essays of two or three pages each make up Dr. Frank Crane's new volume, *The Looking Glass*. Brisk, wholesome, direct, this spicily served advice is all the better for not taking itself too seriously, a fault common in "how to succeed" literature. (John Lane Company, $1.)

Albert W. Atwell, in *How to Get Ahead*, gives needed explanations of the comparative values of various investments, savings banks, insurance, small bonds, as well as sound and helpful advice as to personal and family habits of thrift. (Indianapolis: Bobbs-Merrill Company, $1.25.)

The latest of Orison Swett Marden's widely popular books of encouragement and sane advice is *Everybody Ahead*. It deals with all sorts of practical topics, courtesy, the opener of all doors; timidity, which closes them; enthusiasm; habit as a partner, etc. (Frank E. Morrison, $2.50.)

Motor Trucks of America should be useful to any user or possible user of commercial vehicles. In addition to photo-

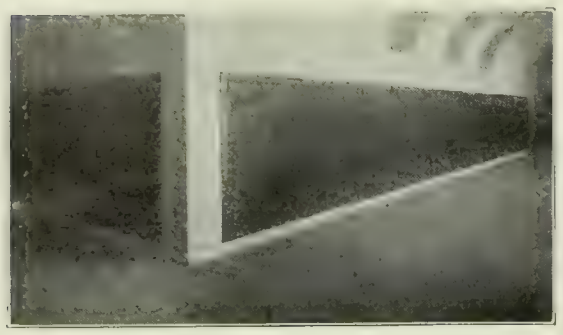
Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The schoo is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.



The Nurses' Residence, removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—$10.00, $12.00 and $15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

DURAND Steel Lockers

THE attractive appearance of Durand Steel Lockers is but a single characteristic; unusual strength and fine workmanship are of equal importance to you.

Durand Steel Lockers are fireproof, sanitary, convenient, economical and practically indestructible.

Write today for catalogue.

We are also manufacturers of steel shelving, steel bins and general steel factory equipment.

DURAND STEEL LOCKER CO.

1572 Ft. Dearborn Bk. Bldg. Chicago — 972 Vanderbilt Bldg. New York

graphs and specifications of 114 makes of trucks, it contains useful articles on truck operation, loading devices and allied topics. (B. F. Goodrich Company, Akron, Ohio.)

The answer to President Foster's question *Should Students Study?* he finds in an analysis of the records of many students from high schools, colleges and professional schools. It is a telling little review, excellent to put in the hands of careless freshmen and indifferent parents. (Harper & Brothers 50 cents.)

In *The Contemporary Short Story*, Harry T. Baker, who has been a special reader of fiction manuscripts for a large New York publishing house, gives would-be story writers something rather new in treatment, something mixing the practical with the ideal, something full of personal anecdote and opinion. (Boston: D. C. Heath, $1.25.)

SCHOLARS AND SCHOOLS

In the portion of the Cleveland Survey dealing with *Household Arts and School Lunches*, Alice C. Boughton compares the present work of the schools with what they ought to be doing. Recommendations deal with better organization and enrichment of instruction, extension of infant hygiene, and utilization of the luncheon service for educational purposes. (Russell Sage Foundation, 25 cents.)

A vivid picture of the sad and sudden awakening of a college student who "graduates" from care-free dalliance to the necessity of earning a living, is sketched by Robert W. Bolwell in *After College—What?* The little book contains a lesson for those responsible for the conduct of colleges, as well as for students themselves. (F. H. Revell & Co., 75 cents.)

The Cleveland School Survey, by Leonard P. Ayres, contains an account of the general problems and conclusions of the survey, together with summaries of the fifteen separate monograph reports. Special emphasis is laid on needs developed by changing conditions in cities and in industry, as well as the changes indicated by our studies of the capacities of children. (Russell Sage Foundation, 50 cents.)

The English teacher who finds despite her efforts that her boys and girls still prefer Blanchard and Tomlinson to Chaucer and Burke will get comfort and illumination from *The Children's Library a Dynamic Factor in Education*, by S. J. Powell. A study of its sane pages will help both teacher and librarian, and thereby, incidentally, the children. (H. W. Wilson Company, White Plains, New York, $1.75.)

Education: According to Some Modern Masters, contains epitomes of the opinions on education of eight great leaders—Emerson, Carlyle, Ruskin, Mill, Gladstone, Arnold, Newman, Goethe. President Thwing's comments on these selections, add still further to the value of this symposium for teachers, for thoughtful students of college age, and for properly concerned parents of such students. (Platt & Nourse Company, $2.)

The summary of the eight industrial studies of the Cleveland Survey, *Wage Earning and Education*, by R. R. Lutz, condenses a most comprehensive view of the vocational education situation not only for Cleveland, but for the country at large. The volume contains independent and illuminating comment. The chapter on vocational guidance is one of the sanest in the whole field. (Russell Sage Foundation, 50 cents.)

In *School Organization and Administration*, Leonard P. Ayres calls attention to some of the defects in the Cleveland school system, and recommends changes in organization and policy, some of which are already put into effect. Among these recommendations are the delegation of executive work to paid executives, the unification of control under the superintendent, free text books, the separation of the system from local politics. (The Russell Sage Foundation 25 cents.)

Religion in War Time at Chautauqua

Department of Religion under direction of Dean Shailer Mathews has extraordinary prominence and strength in Program of 1917 Assembly, June 28 to August 26

The tides of our life are all setting toward religion; and institutional religion is going out to meet life as never before in the memory of living men. Either, in these times, knows that estranged from the other it is defective. In literature, H. G. Wells and Bernard Shaw are witnesses. The churches feel new impulses within themselves and are conscious of being met with a new response. The leaders and the rank and file of industry are everywhere seizing, as a bulwark, the fundamentals if not the formularies of religion. At the fighting front, religion underlies most of what is heroic and humane amid a world of horrors.

Chautauqua, a meeting ground of all the movements of national thought and sentiment, has prepared series of conferences, of study courses, and of great popular addresses in keeping with the time.

The preachers include Harry E. Fosdick, Bishop Charles D. Williams, Bishop William Burt, William P. Merrill, J. Ross Stevenson, Washington Gladden, S. Parkes Cadman, Lynn Harold Hough, Herbert L. Willett, Shailer Mathews.

Besides the above, who in relays give daily instruction, the teaching faculty includes Luther H. Weigle, Jesse L. Hurlbut, Georgia L. Chamberlin and workers from home and foreign mission fields. Institutes and conferences are important elements, culminating in the last week of the assembly, when the Institution program gives its main emphasis to a view of the Church in action.

Independent Opinions

Now that the draft has gone into effect the question of the conscientious objector becomes as important here as it is in England. The editorial of May 12 in which we explained what we regard as the dictates of duty in the present crisis has brought us more letters than we could possibly publish. We quote first from a Congregationalist minister of Massachusetts who has departed so far from his ancestral philosophy as to reach the opposite extreme:

I was sorry indeed to read your editorial entitled "Duty and the Conscientious Objector," which goes so far beside the mark. Your intention of giving "friendly counsel" is commendable, but have you given your "conscientious objector" his due? "The question of peace and war has been settled." I agree with you and I am willing to abide by that. I shall place no straw in the way of success, *but*, for my country to say that *I* shall go and murder my brother, I deny it the right so to command me. Have you not failed to differentiate between matters of opinion and of conscience when you say that for me to take this position "is an insult to democracy"? You go further. You say: "In time of war this is the test: do you wish to have the enemy win the war?" That, dear sir, is never the test of a man's religious convictions regarding right and wrong.

My father fought with the Kaiser's party in 1870-71, but I have always denounced not only the philosophy of Germany, but that philosophy which has colored the whole program of the Prussian party. It is the whole Prussian system that says the state has a greater right to command a man's soul than has his own God-purified conscience that I rebel against, that you have so consistently defined. You, my friend, are the "apologist of tyranny and an ally of militarism."

FREDERIC H. VON DER SUMP.
Agawam, Massachusetts

The Independent has every respect for men who, like our correspondent, find it impossible under any circumstances to take human life. We cannot, however, rid ourselves of the conviction that when two nations are at war a citizen of one nation who refuses to take any part in assuring the victory to his own land is adding just that much to the strength of the enemy. To subtract from the man-power of the United States is, in effect, to add to the man-power of Germany, since Germany will assuredly excuse none of her subjects from doing his share in the work of conquest in which the nation is now engaged.

In your editorial on "Duty and the Conscientious Objector," I think you state truly—having been a reader of your journal for the past fifty years—that "The Independent has never taught the Prussian doctrine that obedience to the state comes before every other duty."

You justly cite the fugitive slave law of the past, and the laws punishing heretics as exceptions to this doctrine.

LONG ISLAND
PLEASURELAND

IF you crave sight and sound of surf; if you long for hills and woodland; if you yearn for quiet and pastoral surroundings; if you desire lakes, brooks and quiet waters; if you want a vacation place that takes in every pleasure of the great outdoors

Long Island is the Place

Just across the river from New York City, it is the Summer vacation place of millions.

Send ten cents to the General Passenger Agent, Long Island R. R., Pennsylvania Station, N. Y., for book which tells the whole story.

H. P. COSTELLO, Mgr.

May we not imagine a condition where the young man—referred to—is not a member of a religious organization with conscientious scruples against taking human life—or making preparation for it—or, perhaps, not a member of any church, but who has so understood the instructions of the Divine Teacher as to believe that he is explicitly forbidden to take human life. What is he to do?

He may have arrived at middle life and like Count Tolstoy have been familiar with camps and courts, but later have actually looked upon the face of his Lord and come to the place where the once brilliant military leader could turn the other cheek also.

Your editorial set me to thinking. I presume that is what your editorials are for. I am not a member of a church whose creed forbids military service, but many of all creeds and no creed are seeking sincerely to know the mind of the Great Teacher.

Neither do I think myself lacking in true patriotism. My grandfather fought in the War of 1812, tho he afterward became a Friend and I have served as acting assistant surgeon in the United States army.

DR. FORDYCE GRINNELL.
Pasadena, California

The American draft law, unlike the British, fails to make provision for conscientious objectors who are not already members of the Quaker or some similar church. But doubtless such can find other opportunities for national service if they are sincere in seeking it.

In an editorial entitled "Duty and the Conscientious Objector" in The Independent for May 12 you make a statement which I think in justice and fairness to the individual concerned you should retract.

The statement is made that Liebknecht is distinctly a pro-Ally. This mistaken conception undoubtedly is due to the fact that you do not understand the attitude which the international Socialist takes toward war. For I cannot believe that The Independent, even tho it has become rather militant, would wilfully misrepresent facts. Now your real Socialist, not the Charles Edward Russell kind, sees clear thru to the causes which underlie international war, and if he is class conscious or believes in the class struggle at all, he must, in order to be true to himself and his principles, object to participating in such a war as the United States has entered. Socialists have always held that a defensive war might be justified, but never an offensive one.

But now as to Liebknecht. He is not pro-Ally but pro-Socialist and there is a great difference in that distinction. He opposes the German Government because he lives in Germany. Let him speak for himself. In a letter written over a year ago on May 8, 1916, after he was imprisoned for his May Day speech, he explains his position very clearly, as follows:

"High treason is the veriest nonsense for an international Socialist. He knows of no hostile power which he could even think of 'aiding and abetting.' He is just as much revolutionist against every foreign capitalist government as against his own.

"He fights in the name of the international proletariat against international capitalism. He attacks it where he finds it and can effectively strike it; that is, in his own country. *In his own country in the name of the international proletariat, he fights his own government and his own ruling classes as the representatives of international capitalism.*"

SHELBY G. OGDEN.
Ann Arbor, Michigan

But, as our correspondent truly says, "Socialists have always held that a defensive war might be justified, but never an offensive one." If Liebknecht is a good Socialist, then, in opposing the German war policy he has condemned it as offensive. This is just what we and all our allies have contended.

NEW BOOKS

Recreation and the Church
By Herbert W. Gates
Play, games, and sports are the open doors to the real boy and girl, and they furnish the best opportunities for direct as well as indirect moral and religious training. A discussion of the principles and methods of recreational programs and their relation to the practical work of the church.
xiv 186 pages, cloth; $1.00, postage extra (weight 11 oz.)

Household Manufactures in the United States, 1640-1860
By Rolla M. Tryon
Many people still living can recall the system of manufacturing as it was at one time carried on in the family. A universal interest exists in the habits and conditions of life of our forefathers, and this volume places on exhibition the products of the family factory.
xii 406 pages, 12mo; $2.00, postage extra

Truancy and Non-Attendance in the Chicago Schools
By Edith Abbott and Sophonisba P. Breckinridge
This study of the social aspects of the compulsory education and child labor legislation in Illinois, made by two persons who, for nearly a decade, have been closely connected with social agencies of Chicago, is divided into two parts: Legal Principles: History of Compulsory Education Legislation in Illinois; and Present Conditions and Methods of Treatment.
xiii 472 pages, cloth; $2.00, postage extra (weight 1 lb. 10 oz.)

Standards of American Legislation
By Ernst Freund
Modern social legislation is discussed as a corrective measure for the shortcomings of the principles of common law. "Legislation ought to do what lawyers cannot" is the theme which the author develops. A set of principles and standards upon which corrective statutes should proceed is the constructive element of the book.
xx 328 pages, cloth; $1.50, postage extra

Unfair Competition
By W. H. S. Stevens
Mr. Stevens examines twelve methods of competition selected from the practices of modern corporations and trusts, and discusses an economic standard for judging their fairness under present legislation.
xi 266 pages, cloth; $1.50, postage extra

Wonderful New KOLON MOTOR

Used, praised, and endorsed by eminent physicians. By localized massage treatment and exercise of the abdomen and intestines it induces regular and natural action of the colon with none of the injurious effects of physics. Positively effective in constipation and helps to prevent the formation in the colon of thirty-seven poisons that cause auto-intoxication with all its attendant ills—headaches, backaches, colitis, neurasthenia, melancholia, dizziness, dyspepsia, skin disease, liver and kidney troubles—in fact, a large majority of all the maladies and disorders that afflict our generation. Attaches to any wall. Instantly adjustable to any height for adults or children.

5 Days' Trial Free

Be your own judge. See what the Kolon Motor will do for you. While this special offer lasts we will ship you one on five days' trial free—your money back if you decide not to keep it. Write now for particulars.

Valuable New Book "Colon Cleanliness" FREE

Just published—the most interesting, instructive and helpful book ever written on the subject of health and the vital importance of keeping the colon free from accumulations of putrefying, germ-infested, disease-breeding toxins. Fill out and mail the coupon below for free copy and our free trial offer.

THE MARKET PLACE

THE STOCK MARKET

At the beginning of the week, on the 4th, the market for stocks was a narrow one. A general decline of prices on the preceding Saturday had foreshadowed the additional net losses which were seen at the close of the day's business. As a rule, however, these were small, and for a few of the industrials net gains were reported. Railroad shares were firmly held, with slight changes. There was a general expectation that the companies would be permitted to increase their rates, owing to the strength of their arguments and their readiness to serve the Government in all possible ways. Several reports for April showed increases of gross revenue, but also decreases of net earnings, owing to the higher cost of labor and equipment. Tuesday the 5th, was a holiday.

The market was strong, broad (1,010,000 shares) and active on the 6th, owing partly to the orderly and successful registration of men for the army on the preceding day. Crop reports were favorable. Traders and investors were thinking about Secretary McAdoo's assertion that the country must continue to be prosperous because our European Allies and our own Government in the coming twelve months would buy here $10,000,000,000 worth of material and supplies, the products of farms, factories and mines. Unfavorable news from Russia had no weight, altho exchange on Petrograd fell to the lowest point reached during the war, and the 6½ per cent Russian bonds declined to 80. There were considerable net gains for the industrials and copper stocks. The weakness of motor shares was exceptional. More than one-fourth of the day's business was in Steel Corporation stock, with a net addition of ⅜. American Can advanced on the declaration of an extra dividend for the preferred. This, the first of its kind in four years, reduced the accumulated unpaid dividends to 7 per cent.

There was even greater activity on the 7th, when 1,275,695 shares were sold, but the upward movement was checked. Prices rose in the early hours. Good news from the western battle front, with a comparatively favorable report about British ships sunk by submarines and mines had some effect. But nearly all the gains were lost in the afternoon. Steel Corporation stock fairly indicated the character of the day's trading. The number of shares sold was 332,600, and an early gain of 2¼ was cut down until only ⅛ remained. There was no news to account for the reaction.

OUR GREAT FOREIGN TRADE

Germany's attacks upon the ocean commerce of her foes direct attention to the official record of our exports and imports. Exports from the United States were $530,000,000 in April. There was a steady increase last year, the highest point, $521,000,000, having been reached in December. Then came a sharp advance, in January, to $613,555,000. Immediately thereafter the trade movement was affected by the removal of all restraint from Germany's submarines, and in February the value of exports fell to $467,683,000. But the reduction was temporary, for in March the shipments rose to $554,000,000, and the decrease in April from these figures was only $24,000,000. If we turn to the imports we find that these in April, $254,000,000, were larger than those of any preceding month in six years, March excepted.

This Delightful Bran Dish

In magazines and newspapers, countless authorities are urging the use of bran.

It is Nature's laxative.

You need it daily, so make it a likable dish.

Pettijohn's is a dainty which everyone enjoys. Thousands of doctors advise it on that account.

Try it one week—note its effects. Then you'll never go without it.

Start tomorrow morning.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only. (1605)

DIVIDENDS

THE BALDWIN LOCOMOTIVE WORKS
Philadelphia, Pa., May 24, 1917.

The Board of Directors of the Baldwin Locomotive Works has declared the regular semi-annual dividend of three and one-half (3½) per cent. (three dollars and a half per share) on the preferred capital stock, payable July 1, 1917, to stockholders of record at the close of business June 9, 1917.

WILLIAM deKRAFFT, Secretary.

AMERICAN TELEPHONE AND TELEGRAPH CO.
THIRTY-YEAR FIVE PER CENT. COLLATERAL TRUST GOLD BONDS

Coupons from these bonds, payable by their terms on June 1, 1917, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street. G. D. MILNE, Treasurer.

THE J. G. WHITE MANAGEMENT CORP.,
43 Exchange Place, N. Y.
MANAGERS
THE MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION.

The Board of Directors of the MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION has declared a quarterly dividend of One Dollar and Fifty Cents ($1.50) per share on the Capital Stock of the Corporation, payable Monday, July 2, 1917, to stockholders of record at the close of business on Monday, June 18, 1917.

T. W. MOFFAT, Secretary.

THE ELECTRIC STORAGE BATTERY COMPANY,
Allegheny Avenue and 19th Street,
Philadelphia, June 6, 1917.

The Directors have declared a dividend of one per cent. (1%) from the net earnings of the Company on both Common and Preferred Stocks, payable July 2, 1917, to stockholders of record at the close of business on June 18, 1917. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

THE AMERICAN CAN CO.

A quarterly dividend of one and three-quarters per cent. has been declared upon the Preferred Stock of this Company, payable July 2, 1917, to stockholders of record at the close of business June 15, 1917, and a further dividend of one and three-quarters per cent. has been declared upon the Preferred Stock of this Company, payable July 2, 1917, to stockholders of record June 15, 1917. Transfer books will remain open. Checks mailed.

R. H. ISMON, Secretary & Treasurer.

Germany's submarines have not killed our foreign trade. If imports be added to exports the totals are as follows: February, the first month of ruthless submarine warfare, $667,162,000; March, $824,000,000; April, $784,000,000. In February many ships were held in port for a time, and thus the month's exports were reduced. But resumption of service in March disposed of February's shortage, and shipments in April were made at nearly the normal rate.

Our foreign trade has shown extraordinary growth. When the value of April's exports was ascertained, the Treasury Department saw that for the first time the shipments in twelve consecutive months had exceeded $6,000,000,000. If the figures for the ten months that ended with April be compared with those showing the trade of corresponding periods it appears that exports have risen from $2,045,000,000 in 1914, to $3,394,000,000 in 1916 and $5,167,000,000 in 1917. The import movement has been from $1,572,000,000 to $2,072,000,000, and the balance in favor of the United States for the ten months that ended with April was the great sum of $3,095,000,000.

GOLD GOING OUT

Some time ago, exports of gold to Japan began to attract attention. In twenty-one weeks, beginning on January 1, they amounted to $35,000,000. We can spare a considerable quantity of this precious metal, because we have about one-third of the world's entire supply. More than $1,250,000,000 of it has come to this country during the war. Exports of gold in May exceeded imports by $33,176,171, and the outward movement will continue, but the Government has on hand $3,088,711,272 and can regard the withdrawal of a few millions without anxiety.

Exports of gold now exceed imports for two reasons. The first is that the import movement has ceased. England and France are not sending gold to us by way of Canada because it is not needed here now for the settlement of their obligations. Provision for payment has been made by our Government's great loans to them. Loans to our Allies thus far amount to $845,000,000. The other reason is that the balance of trade against us requires the payment of gold to several countries, notably to Japan. In trade with the United States her exports largely exceed the imports. Gold pays for the excess. Imports of gold may not be resumed, and exports will continue, but they will be small in comparison with the great quantity held here.

IRON, STEEL AND TIN

The output of pig iron in May was 3,417,340 tons, or more than was produced in any preceding month, except last October, but the supply is insufficient, and demand at the steel mills raised the price of Bessemer iron last week to $50 a ton. One year ago it was $22. In the same time the price of other kinds of iron has advanced from $18 to $45. Steel companies are striving to fill orders with the least possible delay. Those from the Government stand first; our Allies are next to be served, and the railroads are third. For satisfactory war service they must have more cars and locomotives. What the Government needs for the new ships will be furnished promptly. One company is now making every week plates enough for three ships of 3000 tons, and another will soon be able to turn out every day enough for one ship of that capacity.

The use of tin plate for the canning of many products that are not perishable will be prevented, if possible, in order that there may be a sufficient supply for perishable food. Manufacturers will coöperate with the Government in the work of restriction. The demand for cans is the greatest ever known. Imported tin, with which the thin steel sheets are coated, is not easily obtained now. At the request of the Department of Commerce the American Iron and Steel Institute is to appoint a committee that will, in agreement with the British Government, allot the tin shipped to this country and assist in controlling the use of it.

MOTOR TRUCK EFFICIENCY

CONDUCTED BY JOHN CHAPMAN HILDER

MOTOR TRUCK OPERATING COSTS

THE following analyses of motor truck performance are made up chiefly of figures, but if you have a hauling problem you should find them extremely interesting figures.

Among other things these figures bring out the importance—overlooked by too many business men—of keeping accurate cost sheets covering their hauling and delivery operations.

It is surprizing how lax is the average firm in this regard. I have visited dozens of truck users with a view to getting their figures only to discover that there were no figures to get.

These were no small shopkeepers of the type who do everything by guesswork. They were the sort of firms who figure their overhead in a selling price list and all that sort of thing. They knew approximately how much they spent on their delivery systems, but they had not the slightest idea as to whether it was too much or too little.

It is quite likely that the general slackness with regard to motor truck figures is due in part to the lack of the standardized simple adaptable record system.

The need for such a system has been generally felt for a long time. The Motor Truck Club of America has advocated it and the far-sighted truck users have made suggestions. Within the next few weeks it is expected that the club will issue its recommendations as to a standardized record system. These recommendations will be published in an early issue of The Independent.

It is not often possible to obtain an authentic comparison between truck costs and horse figure costs as developed in one business. The following analysis gives just such a comparison. It was supplied by a Vermont firm dealing in coal, wood and feed, farm machinery, baled hay and straw, land tile and sewer pipe. The figures are taken from their office cost records. They have included every expense that is chargeable to delivery. The team figures are on a basis of one month (taking an average of each actual expense item for a period of six months). The truck figures are calculated on the same basis. "The team figures," writes the head of the firm, "are for our most efficient two-horse team, the least expensive to operate."

THE TWO-TON TRUCK

Average Monthly Expense—Six Months as Basis

EQUIPMENT COSTS

Two-ton truck complete	$2223.00
Depreciation, 20% year	444.60
Ins. theft and damage	105.00
Garage rental—year	48.00
License and tax	29.00
Fire insurance	24.00

OPERATING COSTS

	Per Month	*Per Day*
Driver's wages	$70.29	$2.34
Depreciation	37.19	1.23
Interest—6%	11.12	.37
Insurance	10.75	.35
Garage rental	4.00	.133
License and tax	2.42	.08
Gasoline, oils and greases	33.17	1.105
Repairs	00.00	.000
Extra supplies and fixtures	44.83	1.497
Total cost	$213.17	$7.105

FOUR DAYS' WORK

	Aug. 1	*Aug. 4*	*Sept. 2*	*Oct. 4*
Trips	4	3	1	2
Miles	86	50	36	41
Lbs. Day	14,000	11,000	4,400	8,900
Lbs. Trip	3,500	3,666	4,400	4,480
Hours	11	8½	3¾	5
Gals. Gas	10	6½	5	6
Pints Oil	2	1	1	1
Cost Ton	$1.01	$1.29	$1.36	$1.11
Cost Mile	$.225	$.142	$.083	$.100

TWO-HORSE WAGON

Average Monthly Expense—Six Months as Basis

EQUIPMENT COSTS

Two horses	$450.00
Wagon and sled	210.00
Harnesses and blankets	116.00
Depreciation at 20%	197.42
Stable rent—yearly	90.00
Insurance	10.92

OPERATING COSTS

	Per Month	*Per Day*
Driver and helper	$104.00	$3.466
Feed and bedding	31.92	1.064
Depreciation	12.25	.408
Interest at 6% on total inv.	4.38	.146
Insurance	.91	.030
Stable rental	7.50	.25
Shoeing	4.50	.150
Blankets	3.42	.114
Repairs	3.95	.131
Miscellaneous supplies	.55	.018
Hostler care extra	4.00	.134
Veterinary	.75	.025
Total cost	$178.13	$5.936

TWO DAYS' WORK

	Jan. 1	*Jan. 7*
Trips	1	1
Miles	36	30
Lbs. Daily	2700	3600
Hours	15	12
Cost Ton	$4.397	$3.298
Cost Mile	$.164	$.197

"Our comparative sheets show us that our two-ton truck, for an average of six months, has actually done 350 per cent more business than any of our double teams on the same grade of work. For these same six months it has cost us but 20 per cent more to operate our truck per month than to operate any of our two-horse teams."

On this basis their truck does as much work per day as 3½ teams and costs but 20 per cent more to operate than one team.

Cost of 3½ teams per day	$20.776
Cost of truck per day	7.105
Actual saving per day	$13.671
Allowing for extra help on truck	2.000
Saving over horse equipment	$11.671

A complete record of a single day's work, during which the truck covered eighty-six miles and delivered 2050 gallons of gasoline and kerosene, is also of interest. Here are the figures:

WORK DONE

Trips	4
Deliveries	25
Load per trip in pounds	3500
Total loads in gallons; in 10-gal. cans.	2050
Total loads in pounds	14,000
Ton-miles	75.25

DISTRIBUTION OF TIME	*Hrs.*	*Min.*
Standing time at plant	1	20
Standing time on delivery, including miscellaneous stops	2	30
Total standing time	3	50
Running time	7	10
Total of standing and running time	11	00
Average standing time per delivery		06
Average standing time per trip at plant		20

MILEAGE AND SPEED

Miles traveled	86
Round trip distance	21.5
Average speed in miles per hour	7.81

GASOLINE AND OIL CONSUMPTION

Gallons of gasoline consumed	10
Miles traveled per gallon of gasoline	8.6
Pints of cylinder oil used	2
Miles per pint of cylinder oil	43

COST FROM THEIR RECORDS

Cost per day—including helper	$9.105
Cost per ton hauled	1.30
Cost per ton-mile	.12
Cost per mile traveled	.10
Cost per 10-gallon can delivered	.04

A simple form of record that has been used with success is shown below. It covers all the essentials. You can probably adapt it to your business.

REMARKABLE REMARKS

EMPEROR WILLIAM—God will be with us further.

PRESIDENT YUAN—I am not afraid to die for the country.

COUNT REVENTLOW—Belgium can never become independent.

THEODORE ROOSEVELT—A cultural education must include the classics.

WOODROW WILSON—What you cannot find a substitute for is the classics.

W. H. TAFT—The classics are most helpful in the matter of correct English style.

GUGLIELMO FERRERO—It is even possible that the monarchies' last hour will strike.

FRANKLIN P. ADAMS—Be you brune or be you blond, now is the time to buy a bond.

H. G. WELLS—The Germans have been made into a kind of scientifically equipt Zulus.

VON BETHMANN-HOLLWEG—God has assigned to the German people a place in the world.

ORVILLE WRIGHT—The greatest danger of aeroplaning is not the flying, but the landing.

LORD CURZON — A patched-up peace means for us not only humiliation, but destruction.

DR. HENRY VANDYKE—The only way to get liberty for Germany is by licking her army.

GEORG LEDEBOUR, in the Reichstag—We must soon introduce a republic in Germany.

ETTORE JANNI—Germany has glorified as a supreme virtue the fact of renouncing every virtue.

ALLENA M. JONES—One of the sweetest flowers that grow within our borders is the violet.

HUDSON MAXIM—The quick-firing gun is the most beneficent implement of mercy ever invented.

MARY PICKFORD—I often think how much better it would be if love were not quite so blind.

EDWARD BOK—The American housewife's problem will be high prices and reduced income.

BILLY SUNDAY—It's harder to fool a sharp-eyed suitor than to put a pair of pants on a Billy goat.

EMPEROR CHARLES—I shall always be the just, affectionate and conscientious ruler of my dear people.

SECRETARY MCADOO—Our Western people may be a little short on rhetoric, but they are full of action.

NICHOLAS MURRAY BUTLER—It is probable that the greatest war in all history is approaching its end.

COLONEL GOETHALS—Birds are still nesting in the trees from which the great wooden fleet was to be made.

PROF. F. H. GIDDINGS—Money-making and fads invented by lunatics are the only things we take seriously.

SECRETARY DANIELS—Altho you cannot establish it there is no doubt of an armor plate trust all over the world.

SAMUEL GOMPERS—One of the first steps in organizing for efficient production is to abolish the flunkeys and valets.

CONIGSBY DAWSON—It's so easy to find excuses for not climbing to Calvary; sacrifice is always too noble to be sensible.

HON. E. M. HURLEY—My experience in Washington satisfied me that the members of Congress wish to do the right thing by the country.

KEEP THE SHOP FIRES BURNING

BY KNOWLTON P. DRYSDALE

With the entrance of the United States into the world conflict, there is no occasion to fear that business will suffer.

The mistaken idea that because the nation is at war, people should therefore skimp and deny themselves the necessities of a normal life, would, if followed, be calculated to bring about the very condition that it is most necessary to avoid.

To prosecute a war successfully requires money, and lots of it. The only source from which money can be obtained is from the people who have it. The only way that people can get money is by producing something, and exchanging that product for money. Then, the use of that money to purchase something which somebody else produces keeps it in circulation, encouraging production and furthering business.

There is more money in the country today than ever before in our history. The Government is preparing to raise several billions of dollars. But that does not mean that these billions are to be withdrawn from circulation.

Just the contrary is true. For the most part, this money will be raised from funds which have been inactive and every dollar of it will soon find its way into the channels of trade. Even the funds which are loaned to the European Allies will remain in our own country, and will be used to purchase war material.

The colossal purchases made in this country by the European Allies during the past two years have resulted in unexampled prosperity here.

The individual who thinks that he is helping his country's cause by practising unwise economies and encouraging others to do so, is doubtless well-meaning but misguided and his activities can tend only to weaken the situation.

The only economies which are at all justifiable are those which will serve to assist in prosecuting the war. In this list the most essential is the conserving of our food supplies. It is probably safe to say that the value of the foodstuffs wasted in the United States is enough to feed an army of a million men.

One of the important factors which have contributed to making ours the most prosperous country in the world, is the inclination of the great mass of our people to spend their money in providing themselves with the things they need. In this way, each has been instrumental in keeping his fellowman busy, and that fellowman in supplying his own wants, has enabled other fellowmen to supply their wants.

We shall continue to be clothed; we shall continue to build homes; we shall continue to supply ourselves with the thousand and one things which contribute to our needs.

Manufacturers will continue to keep their fires burning; they will continue to keep their men employed. The farmer will continue to buy implements and machinery. The building of roads so much needed, and other public improvements, will be continued. And it is well that it is so.

One of the best ways for us to show our patriotism is to do the things which will promote our country's general prosperity, and therefore place ourselves in a position to render the maximum aid to the Government in providing the means with which to prosecute the war to a successful conclusion in the shortest possible time.

NEW-YORK LIFE

INSURANCE COMPANY

346 & 348 BROADWAY . . NEW YORK CITY

SUMMARY OF 72d ANNUAL STATEMENT

JANUARY 1, 1917

New Paid Business $263,048,300.00
Of this total $239,090,873 was secured in the United States.

Total Income $138,559,395.79

Total Payments to Policy-holders $81,415,138.36
Of this total $19,551,361 was paid in dividends.

Invested During the Year in Bonds and Mortgage Loans $70,717,602.17
To pay 5.26%.

Added to Legal Reserves	$24,676,393.00
Market Value of Assets, Dec. 31, 1916	$866,988,841.57
Legal Liabilities	$728,226,426.34
Reserved for Dividends and Contingencies	$138,762,415.23
Outstanding Insurance	$2,511,607,274.00

Represented by 1,228,601 policies.

The actual mortality of the Company expressed in the per cent. which it bears to the expected death losses according to the tables of mortality adopted by the State for valuation purposes through a period of years is as follows:

1912 Actual death losses 76% of the "expected"
1913 Actual death losses 73% of the "expected"
1914 Actual death losses 73% of the "expected" (5 mos. of war)
1915 Actual death losses 73% of the "expected" (12 mos. of war)
1916 Actual death losses 71% of the "expected" (12 mos. of war)

Significant Facts: Mortality Rate reduced; Expense Rate reduced; Interest Rate increased; New Business increased.

The Company has subscribed for Ten Million Dollars of the Liberty Loan, and over 2,500 employees have subscribed for approximately $600,000.

The Company's new business during the first five months of 1917 was larger than that of the first six months of 1916.

A Journal of Civilization

FOOD CONTROL NOW!

THE President has got tired of waiting for Congress to stop bickering and squabbling over food control, and has acted. He has sent the following significant letter to Herbert Hoover, the National Food Administrator:

My Dear Mr. Hoover: It seems to me that the inauguration of that portion of the plan for food administration which contemplates a national mobilization of the great voluntary forces of the country which are ready to work toward saving food and eliminating waste admits of no further delay.

The approaching harvesting, the immediate necessity for wise use and saving not only in food but in all other expenditures, the many undirected and overlapping efforts being made toward this end, all press for national direction and inspiration. While it would in many ways be desirable to wait complete legislation establishing the food administration, it appears to me that so far as voluntary effort can be assembled we should not wait any longer, and therefore I would be very glad if you would proceed in these directions at once.

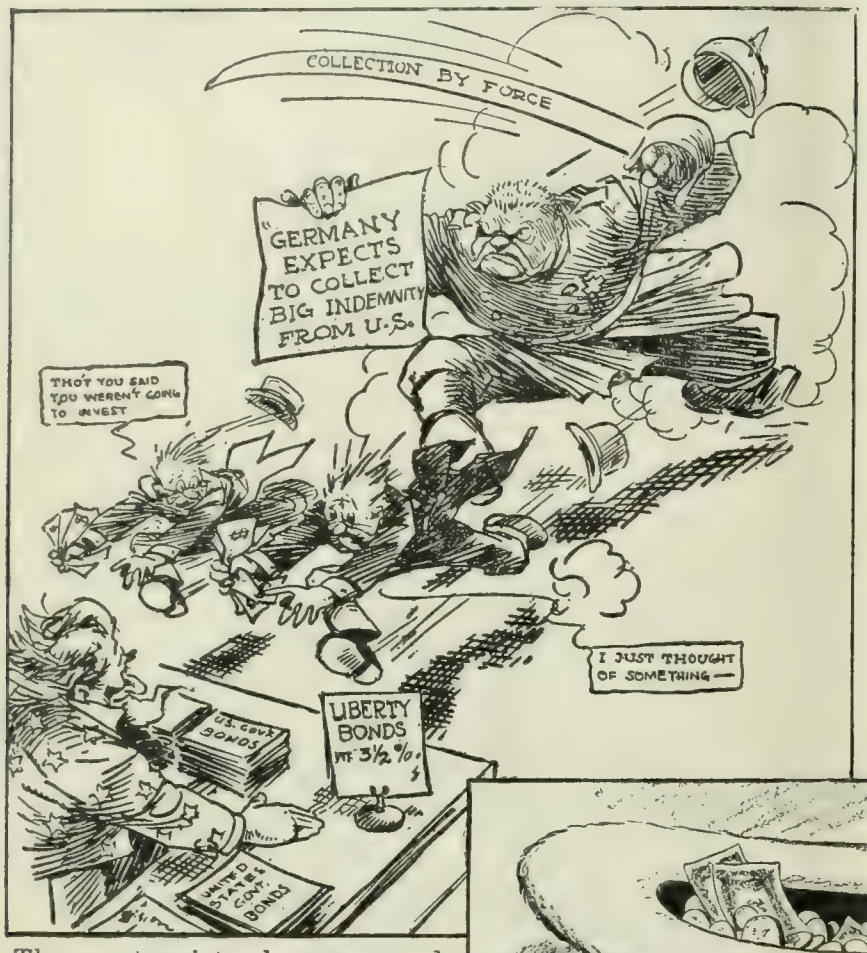
The women of the nation are already earnestly seeking to do their part in this our greatest struggle for the maintenance of our national ideals, and in no direction can they so greatly assist as by enlisting in the service of the food administration and cheerfully accepting its direction and advice. By so doing they will increase the surplus of food available for our own army and for export to the Allies. To provide adequate supplies for the coming year is of absolutely vital importance to the conduct of the war, and without a very conscientious elimination of waste and very strict economy in our food consumption we cannot hope to fulfil this primary duty.

I trust, therefore, that the women of the country will not only respond to your appeal and accept the pledge to the food administration which you are proposing, but that all men also who are engaged in the personal distribution of foods will coöperate with the same earnestness and in the same spirit. I give you full authority to undertake any steps necessary for the proper organization and stimulation of their efforts.

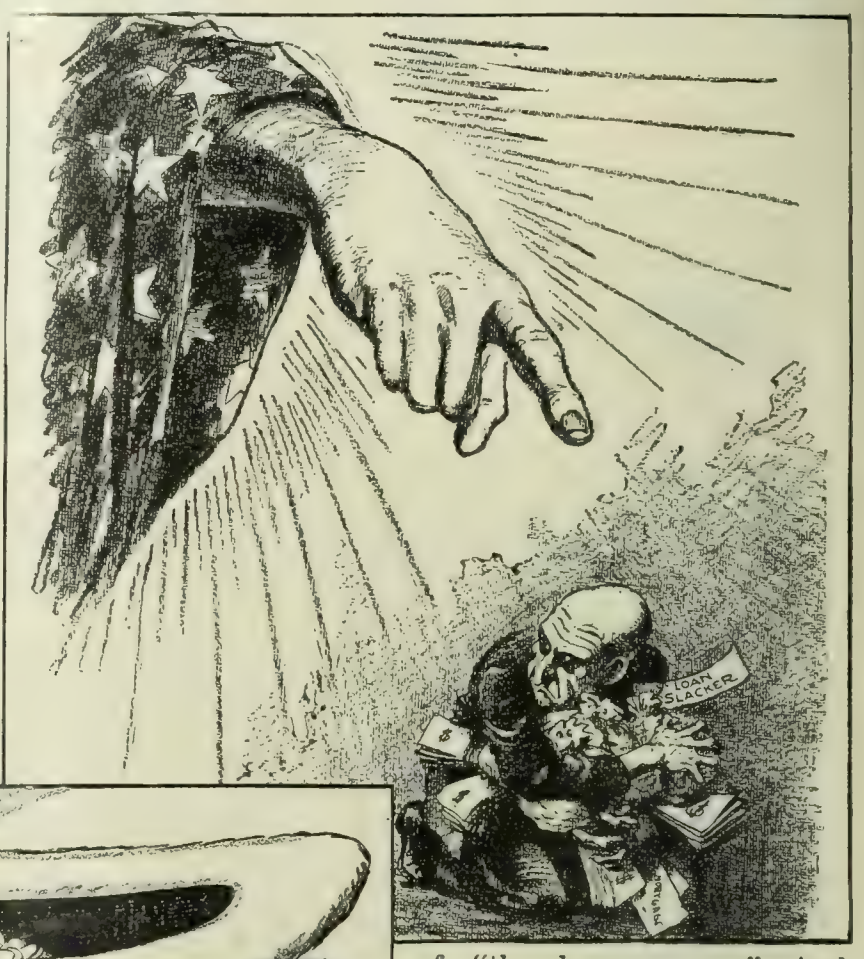
Cordially and sincerely yours,

WOODROW WILSON.

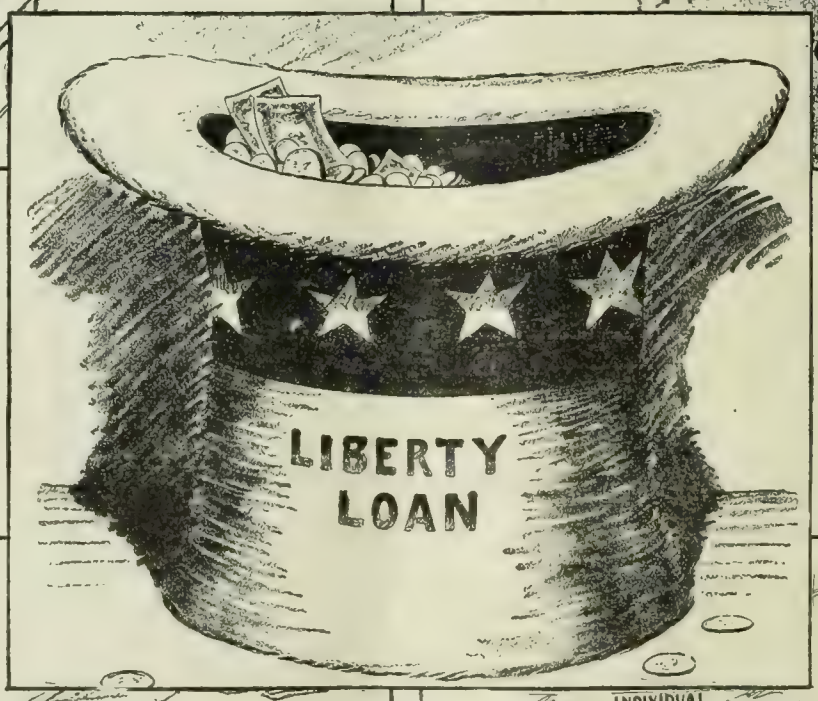
On another page we print the call to service in the conservation of food which Mr. Hoover immediately addrest to the women of the United States. This is admirable, but it is only a beginning. There are men concerned with the production and distribution of foodstuffs, to whom an appeal must be made in other terms than those of patriotic service. There are two irrefutable reasons for the regulation and conservation of our food supplies: one is the need of America, and the other is the need of our Allies in Europe. We have registered for military service ten million young men. They will be drawn, a million at a time, from their ordinary vocations and set at unproductive labor, that is, at drilling and fighting. They will have to be fully equipt and well fed. Another army of three times that number must be set to manufacturing perishable and unprofitable commodities, that is, munitions. Such a sudden and wholesale diversion of labor cannot be accomplished without a considerable dislocation of our industrial system and putting a severe strain upon our resources. Hitherto we have been making munitions at the expense of others for others to use; now we must spend our own money and send our own men.



Before the war the United States was fairly independent in the matter of food. We were getting a little short on meat, but still had grain enough and to spare. The first year of the war we had a bumper crop, the first billion-bushel crop of wheat that this or any other country had ever raised. Europe took three times as much of it as she had the year before. In 1916 the yield was less but the profit was more. It was the first billion-dollar crop of wheat that this or any other country had ever raised. What shall the harvest be in 1917? We cannot say with certainty, but we know that however large it is, it will not be enough to satisfy the hungry mouths in Europe as well as our own needs. But we must send them all we can. We must be loyal allies in commissary as well as in camp. We must share our rations with our comrades in arms.

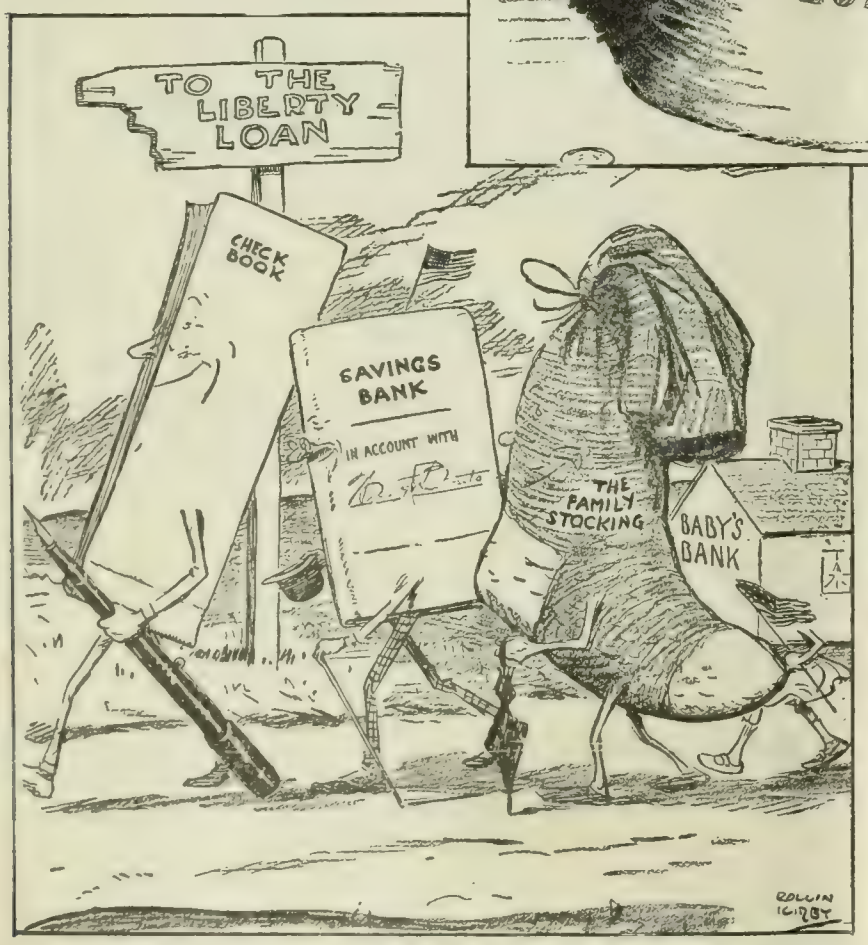


The English were glad to have Pershing appointed and sent over there, but what they are praying for is to have Hoover appointed and kept over here. They do not care whether the food gets to them in wooden ships or steel, so long as it comes, and comes soon. The U-boat is scotched but not killed. The British public is relieved to learn that only six per cent of the ships bringing grain are sunk, but this is still too heavy a drain to be long endured by a country that has been accustomed to import four-fifths of its breadstuffs. For lack of a food controller at the beginning of the war the already inadequate supply of home-grown food was allowed to fall off still further. The acreage of wheat in the United Kingdom was reduced by a quarter of a million in 1916. Then the Government took control and, to quote the words of the Premier in Parliament, "we brought under cultivation in that three or four months of rather feverish activity one million acres of fresh land." In 1918 he expects to have three million acres of fresh land under cultivation, and then England cannot be starved out no matter how much longer the war shall continue or how active the U-boats become.



But as the Premier points out: "If we die of starvation, there's an end of the war." It is our duty, then, to carry England over till the fall of 1918, and we cannot do this without careful management and economy. Growing lettuce in window boxes and potatoes in back yards is all very well, but it will not suffice to meet the necessities of ourselves or our Allies. No amount of individual enthusiasm and personal self-sacrifice can take the place of national organization for international needs. Unless the United States adopts the precautionary measures that every other belligerent has sooner or later found necessary, it will suffer as they did from a breakdown of the ordinary machinery of distribution. The natural law of supply and demand, on which we commonly rely, cannot act in the abnormal conditions of wartime. Speculation in foodstuffs will run wild

CARTOON COMMENT



WINNING OUR FIRST GREAT DRIVE

The cartoonists have earned no small share in the glory of our first big victory—the oversubscription by nearly a billion dollars of the $2,000,000,000 Liberty Loan. Ding in the New York *Tribune*, for instance, sugar-coats the moral, "Better a Liberty Bond than an indemnity bond," with a particularly entertaining sketch of "the human race." And there is no escaping the direct appeal of Nelson Harding's cartoon in the Brooklyn *Daily Eagle*. "Fill It to the Brim" is his slogan when Uncle Sam passes the hat! The unenviable position of a loan slacker is the point of the Baltimore *Star's* attack; patriotism points "The Fnger of Scorn"

There is an entertaining march of Liberty Loan recruits in Kirby's cartoon in the New York *World*. Ambrose in the Rochester *Post-Express* preaches a forceful sermon—"The Challenge" of Common Good to selfish Individual Interest

and the profiteer will reap a rich harvest here as he has abroad. To take one recent instance: A shipload of beans was bought in Burma for $185 a ton. Before the ship reached England the cargo was sold and resold until the price was raised to $450 a ton, and how much the consumer would have had to pay may be imagined. But here the Food Controller, Lord Devonport, stepped in and reduced the cost to a more reasonable figure.

Lord Devonport has broken down and given up his job because he could not regulate the national dietary by argument. He urged the people to adopt one meatless day a week, and they ate more bread. He advised them to cut down their consumption of bread to four pounds a week, and they ate six. He placarded the walls with posters and sent missionaries thru the country preaching economy and giving warning of a bread famine. The people listened, and did what Queen Marie Antoinette advised her people to do under similar circumstances—they ate cake. King George set an example of a frugal table in Buckingham Palace, and his appeal to the people was read from every pulpit. But all the people do not go to church, or else they do not obey all the injunctions they hear from the pulpit.

Lord Devonport's successor, Baron Rhondda, now president of the Local Government Board, will doubtless adopt more stringent measures, perhaps even the meal ticket system of Germany's Food Dictator, Herr von Batocki. Mr. Hoover's job will be more difficult than Devonport's or Batocki's, for he has a larger and less tractable population to deal with. But he can do much to save us from the distress that will result from a belated or ineffective control of the necessities of life.

Hoover can do the job if anybody can; but first Congress must give him the authority and the financial support. The passage of the Food Control bill lags disgracefully. Senators and Representatives talk blatant nonsense about "autocracy" and "tyranny." Meanwhile Mr. Hoover is doing the best he can. We are informed that he is spending his own money with magnificent generosity in the payment of assistants and clerks and all the inevitable expenses of an administrative office. Such a condition of affairs is disgraceful. Congress should, with the utmost promptness, give Mr. Hoover the indispensable authority and the necessary appropriation for the prosecution of his peculiar task. The President will doubtless use all the power of his personality and his position in urging Congress to this course. The public opinion of the country should back him up. The food situation cannot wait.

THE DOUBLE MENACE

CIVILIZATION is fighting for its life against two deadly foes. On the one side it is assailed by ruthless absolutism; on the other side it is assailed by anarchism. Each of these foes professes to be saving civilization from impending destruction by the other one. Civilization will not be safe until both of these enemies are slain.

For the moment attention and effort are necessarily centered upon the menace of absolutism. The people of the United States were loath to believe that an empire which enjoyed the reputation of leadership in enlightenment and efficiency was deliberately trying to achieve world domination and to stamp out free political institutions in both hemispheres. They know it now. They understand what the Kaiser has meant thru all the years in which he has reiterated that there is but one will for men to obey, and that that will is his will. They know that of all the moral monstrosities from Nero to Napoleon, and from Napoleon to the present time, William II is the most imperious, the most unscrupulous, the most ruthless, and the most blasphemous. They know that the plan which he, with his household, the militarists of his army, and the Junker landlords, had made to extend Prussian domination from Antwerp to the Persian Gulf was the real cause of the European war, the actual reason for the invasion and devastation of Belgium, for the destruction of Serbia, and for the massacre of the Armenians, and that the plan came perilously near to successful realization. They know that if the plan had succeeded the western hemisphere would have been attacked. They know that if it is not to succeed ultimately the plan must be utterly smashed, Germany be whipped to a finish, and the house of Hohenzollern be destroyed forever. Knowing these things, the United States, with Great Britain, France and Italy, will stay on the job until it is done.

But while it is being done another job must be taken in hand, and it must be continued after peace returns. In every country, and not only in Russia, where for the moment he is most mischievous, the anarchist is busy. The name is not too harsh. Not only the dynamiter and the preacher of sabotage, but also that type of ultra-pacifist including certain ministers of the Christian religion who preach resistance to governmental authority, are anarchists at heart. This creed of destruction has taken possession of multitudes of morone and semi-criminal characters in such organizations as the I. W. W. and, unhappily, in the ranks of school teachers and of college students. Many of these are well-intentioned persons, but they are childish and silly. They know nothing whatever about the realities of life; they have no sense of cause and effect.

The Government of the United States is doing exactly the right thing in laying the heavy hand of resistless authority upon these people. There are crises in history when the fool must be dealt with as the criminal is dealt with. The man who does not know that liberty cannot exist in this world apart from law and obedience must be prevented from destroying liberty by his folly.

Out of the desolation of war will come a stronger and saner civilization than any the world has yet seen. It will be a civilization no longer menaced on the one hand by absolutism, on the other hand by an un-social, irresponsible and reckless anarchism. But the achievement is to be a man's job. Happily, the American people now see, as the people of Great Britain, of France and of Italy also see, precisely what the undertaking is. That is why it is safe to predict that there will be neither an inconclusive peace nor any disintegration of the institutions which are the bulwark of liberty and law.

FROM CONSTANTINE TO ALEXANDER

GREEK history seems to be reversing itself. But the king who has been deposed is not Constantine of Constantinople, for in giving up his throne at Athens he has given up hope of the larger throne on the Bosporus to which he aspired, and the king who succeeds him cannot be called Alexander of Macedon, for Macedon is now occupied by eight alien armies and the king's writ does not carry north of Mount Olympus.

The royal Dane who now seeks refuge in the republic of Switzerland is the seventh of the kings in exile and one of the least lamented. His subjects rallied to his side last year in response to the slogan "He has kept us out of the war," but now that his course has, in spite of his efforts, resulted in bringing Greece into the war on very disadvantageous terms, they will not be so enthusiastic about him. If Greece had entered the war when she was first asked to she would have gained territory instead of losing it, and the battles could have been fought on enemy soil instead of Greek. The Allies offered Greece the Turkish islands in the Aegean, even part of the Turkish mainland, also the Epirus on the Adriatic. The island of Cyprus, which England had received from Turkey in 1878 on condition of keeping the Russians out of Constantinople, was offered to Greece in 1915 on condition that she assist in getting Constantinople for the Russians. But Constantine refused all these offers and as a consequence he has lost his crown and his people have been starved into compliance by the Anglo-French blockade. Italy has annexed and occupied the Epirus on the

pretense that it is "unredeemed Italy," altho it is inhabited by Greeks and has never belonged to Italy.

The Greeks in America will not regret the overthrow of Constantine, and Americans will share their feeling. We do not recognize Constantine's right to the Greek throne, because as republicans we do not believe that any king has a right to any throne. Our only regret is that the Allied Powers did not act earlier or go farther. Why set up a puppet king upon the vacant throne? Why did the Allies prevent Venizelos from attacking the dynasty last year? The liberals of England share the feeling of the Americans on this question and have deplored in Parliament the upholding of an alien dynasty by French and British arms.

The deposition of Constantine clears the way for an advance of the Allied armies against Bulgaria and Turkey. From the emphasis that President Wilson, in his message to Russia and his Flag Day speech, has laid upon the breaking of the Berlin-Bagdad chain as one of the chief American aims, we may surmise that the new American army is more likely to be sent to Salonica than to France. If so, they will fight with more heart for a Greek republic than for King Alexander's realm.

THE EFFEMINATE WEST

EIGHT states have now filled their quota of volunteers for army service. They are Idaho, Illinois, Indiana, Montana, Nevada, Oregon, Utah and Wyoming. Other states of this region are recruiting rapidly, but the Atlantic and Gulf states still lag behind.

A demonstration of this kind ought to put an end to the nauseating nonsense which has filled the Eastern dailies about the effeminacy and cowardice of Westerners. Because the West was doubtful of the wisdom of entering the European war it has had to submit to scorn, abuse, ridicule and contempt. Now when it comes to action the situation is reversed. The states that were jeered at as under "petticoat government" prove to be the most ready to answer to the call of the country. All the eight states on the roll of honor are equal suffrage states. The same is shown in Canada, where the provinces that are chivalrous enough to be just to the weaker sex are sending the largest proportion of volunteers to France. Before the war only two parts of the British Empire had established universal military training and these were the two where the women voted. "The Wyoming idea" of military training in high schools is now being advocated in the East, and Wyoming was the first state in the world to grant woman suffrage. The familiar charge that equal franchise makes squaws of the men is as manifestly false as the charge that it makes amazons of the women.

It would be well if the East could be made to understand that one reason why the West is reluctant to enter a war is because it feels that it will have to do more than its fair share. The common saying used to be: "The East is always getting the United States into trouble and then leaving it to the West to do the fighting." If this assertion is challenged, the Westerner would point to the Civil War when the Western states more than filled their quota by volunteering while Eastern rioters were resisting the draft, and to the Spanish War when the young men of the West answered with enthusiasm the call to the colors, while in New York City, which boasted of having "made the war," two regiments of the National Guard refused to serve. The British dominions have something of the same feeling as our West, that England involves the empire in war and then, in Kipling's phrase, she "fawns on the younger nations for the men that can shoot and ride." Where the fighting is hardest, in Gallipoli, at Arras or on the Somme, the names of Australians, New Zealanders and Canadians figure most in the despatches.

However exaggerated this feeling is, however unwarranted it may be, it nevertheless exists, and if Easterners refuse to recognize it they will have to reckon with it. If the Eastern newspapers keep up their customary jibes at the West during the war the rapidly widening breach between the two sections will seriously impair the unity of effort of the United States.

OUR PRESIDENT

WHEN the President of the United States addrest the Senate on January 22d proposing that the nations unite themselves into a League to Enforce Peace after the war, by which reason could be enthroned on earth buttressed by all available sanctions, moral, economic and physical, he translated the dreams of the poets, prophets and philosophers into the realm of practical statesmanship.

When the President of the United States stood before Congress on April 2d asking the Senate and the House of Representatives to declare a state of war to be in existence between the United States and Germany, he transfigured the issues for which the Allies were fighting into the single issue of democracy.

When the President of the United States addrest his fellow citizens in Washington on Flag Day, June 14th, he uttered the most effective and terrible indictment of the German Government that has yet been promulgated by any responsible statesman.

It is evident that Woodrow Wilson is emerging as the commanding statesman of the war. Is it finally to be the democrat Wilson against the autocrat William?

THE FLAG WE FOLLOW

President Wilson's Speech on June 14th

MY FELLOW CITIZENS: We meet to celebrate Flag Day because this flag which we honor, and under which we serve, is the emblem of our unity, our power, our thought and purpose as a nation. It has no other character than that which we give it from generation to generation. The choices are ours. It floats in majestic silence above the hosts that execute those choices, whether in peace or in war. And yet, tho silent, it speaks to us—speaks to us of the past, of the men and women who went before us and of the records they wrote upon it. We celebrate the day of its birth, and from its birth until now it has witnessed a great history, has floated on high the symbol of great events, of a great plan of life worked out by a great people. We are about to carry it into battle, to lift it where it will draw the fire of our enemies. We are about to bid thousands, hundreds of thousands, it may be millions, of our men, the young, the strong, the capable men of the nation, to go forth and die beneath it on fields of blood far away—for what? For some unaccustomed thing? For something for which it has never sought before? American armies were never before sent across the seas. Why are they sent now? For some new purpose for which this great flag has never been carried before or for some old, familiar, heroic purpose for which it has seen men, its own men, die on every battlefield upon which Americans have borne arms since the Revolution?

These are questions which must be answered. We are Americans. We in our turn serve America, and can serve her with no private purpose. We must use her flag as she has always used it. We are accountable at the bar of history and must plead in utter frankness what purpose it is we seek to serve.

It is plain enough how we were forced into the war. The extraordinary insults and aggressions of the Imperial German Government left us no self-respecting choice but to take up arms in defense of our rights as a free people and of our honor as a sovereign Government. The military masters of Germany denied us the right to be neutral. They filled our unsuspecting communities with vicious spies and conspirators and sought to corrupt the opinion of our people in their own behalf.

When they found that they could not do that their agents diligently spread sedition among us and sought to draw our own citizens from their allegiance—and some of these agents were

men connected with the official embassy of the German Government itself here in our own capital. They sought by violence to destroy our industries and arrest our commerce. They tried to incite Mexico to take up arms against us and to draw Japan into a hostile alliance with her—and that, not by indirection but by direct suggestion from the Foreign Office in Berlin. They impudently denied us the use of the high seas and repeatedly executed their threat that they would send to their death any of our people who ventured to approach the coasts of Europe. And many of our own people were corrupted. Men began to look upon their own neighbors with suspicion and to wonder in their hot resentment and surprise whether there was any community in which hostile intrigue did not lurk. What great nation in such circumstances would not have taken up arms? Much as we had desired peace it was denied us, and not of our own choice. This flag under which we serve would have been dishonored had we withheld our hand.

But that is only part of the story. We know now as clearly as we knew before we were ourselves engaged that we are not the enemies of the German people and that they are not our enemies. They did not originate or desire this hideous war or wish that we should be drawn into it; and we are vaguely conscious that we are fighting their cause, as they will some day see it, as well as our own. They are themselves in the grip of the same sinister power that has now at last stretched its ugly talons out and drawn blood from us. The whole world is at war because the whole world is in the grip of that power and is trying out the great battle which shall determine whether it is to be brought under its mastery or fling itself free.

The war was begun by the military masters of Germany, who proved to be also the masters of Austria-Hungary. These men have never regarded nations as peoples, men, women and children of like blood and frame as themselves, for whom governments existed and in whom governments had their life. They have regarded them merely as serviceable organizations which they could by force or intrigue bend or corrupt to their own purpose. They have regarded the smaller states in particular and the peoples who could be overwhelmed by force as their natural tools and instruments of domination. Their purpose has long been avowed. The statesmen of other nations, to whom that purpose was incredible, paid little attention; regarded what German professors expounded in their class rooms and German writers set forth to the world as the goal of German policy as rather the dream of minds detached from practical affairs, as preposterous private conceptions of German destiny than as the actual plans of responsible rulers; but the rulers of Germany themselves knew all the while what concrete plans, what well advanced intrigues lay back of what the professors and the writers were saying. and were glad to go forward unmolested, filling the thrones of Balkan states with German princes, putting German officers at the service of Turkey to drill her armies and make interest with her Government, developing plans of sedition and rebellion in India and Egypt, setting their fires in Persia. The demands made by Austria upon Serbia were a mere single step in a plan which compassed Europe and Asia, from Berlin to Bagdad. They hoped those demands might not arouse Europe, but they meant to press them whether they did or not, for they thought themselves ready for the final issue of arms.

Their plan was to throw a broad belt of German military power and political control across the very center of Europe and beyond the Mediterranean into the heart of Asia, and Austria-Hungary was to be as much their tool and pawn as Serbia or Bulgaria or Turkey or the ponderous states of the East. Austria-Hungary, indeed, was to become part of the Central German Empire, absorbed and dominated by the same forces and influences that had originally cemented the German states themselves. The dream had its heart at Berlin. It could have had a heart nowhere else. It rejected the idea of solidarity of race entirely. The choice of peoples played no part in it at all. It contemplated binding together racial and political units which could be kept together only by force—Czechs, Magyars, Croats, Serbs, Rumanians, Turks, Armenians—the proud states of Bohemia and Hungary, the stout little commonwealths of the Balkans, the indomitable Turks, the subtle peoples of the East. These peoples did not wish to be united. They ardently desired to direct their own affairs, and would be satisfied only by undisputed independence. They could be kept quiet only by the presence or the constant threat of armed men. They would live under a common power only by sheer compulsion and await the day of revolution. But the German military statesmen had reckoned with all that and were ready to deal with it in their own way.

And they have actually carried the greater part of that amazing plan into execution. Look how things stand. Austria is at their mercy. It has acted, not upon its own initiative or upon the choice of its own people but at Berlin's dictation ever since the war began. Its people now desire peace, but cannot have it until leave is granted from Berlin. The so-called Central Powers are in fact but a single Power. Serbia is at its mercy, should its hands be but for a moment freed. Bulgaria has consented to its will, and Rumania is overrun. The Turkish armies, which Germans trained, are serving Germany, certainly not themselves, and the guns of German warships lying in the harbor at Constantinople remind Turkish statesmen every day that they have no choice but to take their orders from Berlin. From Hamburg to the Persian Gulf the net is spread.

Is it not easy to understand the eagerness for peace that has been manifested from Berlin ever since the snare was set and sprung? Peace, peace, peace has been the talk of her Foreign Office for now a year and more; not peace upon her own initiative but upon the initiative of the nations over which she now deems herself to hold the advantage. A little of the talk has been public, but most of it has been private. Thru all sorts of channels it has come to me, and in all sorts of guises, but never with the terms disclosed which the German Government would be willing to accept. That Government has other valuable pawns in its hands besides those I have mentioned. It still holds a valuable part of France, though with slowly relaxing grasp, and practically the whole of Belgium. Its armies press close upon Russia and overrun Poland at their will. It cannot go further; it dare not go back. It wishes to close its bargain before it is too late and it has little left to offer for the pound of flesh it will demand.

The military masters under whom Germany is bleeding see very clearly to what point fate has brought them. If they fall back or are forced back an inch, their power both abroad and at home will fall to pieces like a house of cards. It is their power at home they are thinking about now more than their power abroad. It is that power which is trembling under their very feet, and deep fear has entered their hearts. They have but one chance to perpetuate their military power or even their controlling political influence. If they can secure peace now with the immense advantages still in their hands which they have up to this point apparently gained, they will have justified themselves before the German people; they will have gained by force what they promised to gain by it, an immense expansion of German power, an immense enlargement of German industrial and commercial opportunities. Their prestige will be secure, and with their prestige their political power. If they fail, their people will thrust them aside; a Government accountable to the people themselves will be set up in Germany as it has been in England, in the United States, in France and in all the great countries of the modern time except Germany. If they succeed they are safe and Germany and the world are undone; if they fail Germany is saved and the world will be at peace. If they succeed America will fall within the menace. We and all the rest of the world must remain armed as they will remain, and must make ready for the next step in their aggression; if they fail the world may unite for peace and Germany may be of the union.

Do you not now understand the new intrigue, the intrigue for peace, and why the masters of Germany do not hesitate to use any agency that promises to effect their purpose, the deceit of the nations? Their present particular aim is to deceive all those who thruout the world stand for the rights of peoples and the self-government of nations; for they see what immense strength the forces of justice and of liberalism are gathering out of this war. They are employing liberals in their enterprise. They are using men, in Germany and without, as their spokesmen whom they have hitherto despised and opprest, using them for their own destruction—Socialists, the leaders of labor, the thinkers they have hitherto sought to silence. Let them once succeed and these men, now their tools, will be ground to powder beneath the weight of the great military empire they will have set up; the revolutionists in Russia will be cut off from all succor or coöperation in western Europe and a counter revolution fostered and supported; Germany herself will lose her chance of freedom, and all Europe will arm for the next, the final, struggle.

The sinister intrigue is being no less actively conducted in this country than in Russia and in every country in Europe to which the agents and dupes of the Imperial German Government can get access. That Government has many spokesmen here, in places high and low. They have learned discretion. They keep within the law. It is opinion they utter now not sedition. They proclaim the liberal purposes of their masters, declare this a foreign war which can touch America with no danger to either her lands or her institutions, set England at the center of the stage and talk of her ambition to assert economic dominion thruout the world, appeal to our ancient tradition of isolation in the politics of the nations and seek to undermine the Government with false professions of loyalty to its principles.

But they will make no headway. The false betray themselves always in every accent. It is only friends and partizans of the German Government whom we have already identified who utter these thinly disguised disloyalties. The facts are patent to all the world, and nowhere are they more plainly seen than in the United States, where we are accustomed to deal with facts and not with sophistries. and the great fact that stands out above all the rest is that this is a people's war, a war for freedom and justice and self-government among all the nations of the world, a war to make the world safe for the peoples who live upon it and have made it their own, the German people themselves included, and that with us rests the choice to break through all these hypocrisies and patent cheats and masks of brute force and help set the world free or else stand aside and let it be dominated a long age thru by sheer weight of arms and the arbitrary choices of self-constituted masters, by the nations which can maintain the biggest armies and the most irresistible armaments—a power to which the world has afforded no parallel and in the face of which political freedom must wither and perish.

For us there is but one choice. We have made it. Woe be to the man or group of men that seeks to stand in our way in this day of high resolution when every principle we hold dearest is to be vindicated and made secure for the salvation of the nations. We are ready to plead at the bar of history, and our flag shall wear a new luster. Once more we shall make good with our lives and fortunes the great faith to which we were born, and a new glory shall shine in the face of our people.

THE STORY OF THE WEEK

$600,000,000 for Aircraft

The President is to ask of Congress a record-breaking appropriation for the development of a gigantic fleet of aircraft. The Council of National Defense, in coöperation with the War and Navy departments, has prepared a bill which is to be introduced this week. It calls for an appropriation of $600,000,000. Secretary Baker on Sunday issued the following statement in explanation of the plan:

"The War Department is behind the aircraft plans with every ounce of energy and enthusiasm at its command," Secretary Baker pledged.

"We can train thousands of aviators and build thousands of machines," he continued, "without interfering in the slightest with the plans for building up our armies and for supplying the Allies with food and munitions. To train and equip our armies and send them abroad will take time, however, and in the meanwhile we can be devoting to this most important service vast quantities of productive machinery and skilled labor which otherwise could not be contributing to the nation's cause in full proportion to its capacity.

"Every consideration points to the effectiveness of a highly developed air service in its relation to the part which the United States can play in putting an end to the war. It lives up to all America's traditions of doing things on a splendid scale; it will put us on our mettle from the point of view both of mechanical ingenuity and of individual daring and initiative.

"At the same time, compared with the transportation of an expeditionary force of infantry and artillery large enough to be of decisive value on the western front, it offers little or no difficulty. All thru the coming year we shall have to reckon with the shipping problem, and whatever aid we send abroad, whether in men or in supplies, must be calculated for securing as efficient a use as possible of available tonnage.

"The aircraft plan meets the demands of the situation. Under existing conditions of fighting, where the Allies and the Germans are fighting on practically even terms as regards manpower and aircraft, the addition which we can contribute to the Allied forces will be proportionately of far greater value than the immediate aid which we can furnish on land. According to the best obtainable information there are about 7,000,000 men on the western front today. The addition of a few infantry units, while of great moral value, would amount to little in forcing a decision. A few thousand trained aviators, however, with the machines for their use, may spell the whole difference between victory and defeat.

"The supremacy of the air, in modern warfare, is essential to a successful army. America must make sure that the Allies and not Germany secure the permanent domination of the air, and that within the year.

"It will take no more shipping space to send a thousand air pilots abroad than a thousand infantrymen; it will take no more space to send airplanes and motors than to send artillery. It is now certain that if we make the effort we can send enough of both men and machines within a year to be of great value, perhaps to turn the scale, all without handicapping our plans for the army which is to follow or hindering the vital flow of food and munitions.

"American airmen and airplanes may turn the tide—they furnish our supreme opportunity for immediate service on the fighting line."

THE GREAT WAR

June 11—Thirty-eight British vessels sunk during past week. American tank steamer "Petrolite" torpedoed.

June 12—Eduardo Dato, Conservative, becomes Premier of Spain. Constantine, King of Hellenes, abdicates in favor of his second son, Alexander.

June 13—Pershing arrives in Paris. London bombed by aeroplanes, 104 killed.

June 14—British take Turkish fort at Saliff on Red Sea. Zeppelin "L-43" destroyed over North Sea.

June 15—Blockade of Greece lifted. British take trenches beyond Messines.

June 16—Italians storm Corno Cavento, 11,000 feet high, in Trentino. Belgium Commission arrives in United States.

June 17—Two Zeppelins raid English coast; one of them burned up. Spanish Government concedes demands of the army.

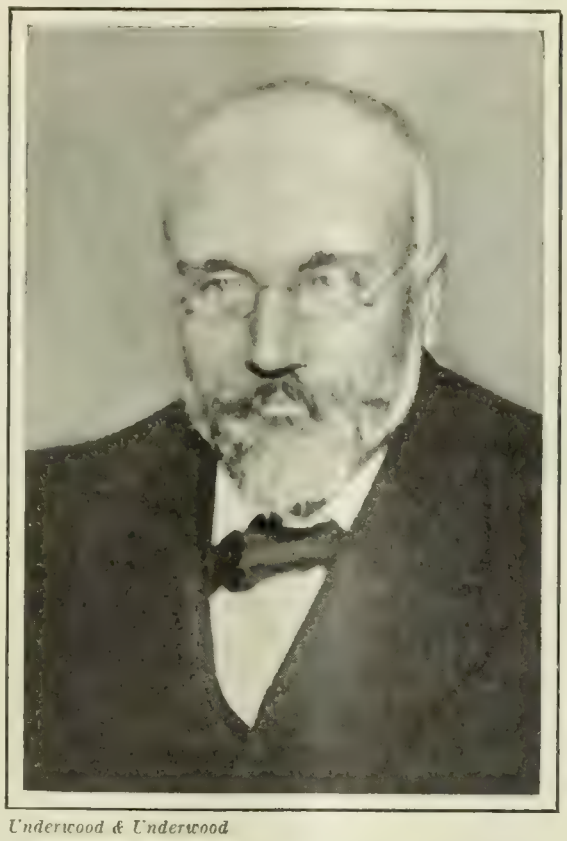
THE KING WHO HESITATED AND LOST

By special request of France, Russia and Great Britain, Constantine of Greece abdicated on June 12 in favor of his second son Alexander. Since August, 1914, the King of the Hellenes has tried to keep one foot on the road to war as Germany's ally and the other on the path of duty as indicated by Greece's treaty with Serbia. He has succeeded in reaching—Switzerland

Liberty Loan Oversubscribed

Official Washington is jubilant over the success of the first great American loan of the war. The task of the Government was to raise $2,000,000,000 by popular subscription before Friday noon, June 15. The entire sum could easily have been raised in that time by relying upon the banks and great business houses, but the administration desired to make the Liberty Loan a popular affair, and to that end conducted the greatest publicity campaign in the history of national finance. The loans of France, Germany, Great Britain and other warring nations presented a comparatively simple problem because these countries lay within the zone of actual fighting, and because even in peace times government bonds had been a popular form of investment. The people of the United States are thousands of miles from the war for the carrying on of which they were asked to give their money, and the majority of them had never invested a cent in government bonds before. The interest rate, 3½ per cent, was less than the average rate on the European war bond issues, and very much less than the average profit on good industrial investments in this country. Of course, considered merely as a question of investment, the Liberty Loan bonds had many advantages, such as absolute security and exemption from most forms of taxation, but to explain these points to the whole country required time.



In spite of all these obstacles the bonds were oversubscribed to the extent of some nine hundred million dollars. Secretary McAdoo, of the Treasury Department, announced that all small investors would get the full amount for which they applied, but the largest investors would have to be content with a part of their subscription. Only $2,000,000,000 will be taken in this loan, but persons who failed to take part in it or who failed to get the full amount of their subscription, will probably have an opportunity to invest in another loan which is planned a few months later than the present one. All of the federal reserve districts have either attained or closely approached their assigned quota, but some sections of the country, especially

where bond purchases were comparatively familiar to the people, subscribed far more than others. The second district, consisting of New York State, was expected to raise $600,000,000, but it actually subscribed more than a billion. More than half of the entire loan was raised within the last week of the publicity campaign.

Pershing in France The cordial reception given in England to Major General John T. Pershing and his staff was a good preparation for the popular enthusiasm with which they were greeted in France. When Pershing landed at Boulogne at 10 o'clock on the morning of June 13 he was met by General Dumas, in command of the northern region, who said "I salute the United States now united to the United States of Europe." When the party reached Paris it seemed as if the whole population were waving American flags and the automobiles were often stopped by the throng as they made their way thru the Rue de Lafayette to the Place de la Concorde. The rooms prepared for him in the Hotel Crillon here were decorated with captured German flags and a large portrait of President Wilson. General Joffre, who headed the French commission to the United States, will assist in the organization and training of the American troops. When the two men appeared together on the balcony they were greeted with a shout of "Vive Joffre who saved us from defeat! Vive Pershing who brings us victory!"

A Model Battle The capture of the salient south of Ypres by General Plumer on June 7 is called by a prominent French officer "a model of what a modern attack should be"; certainly no operations in the war have been more carefully prepared or exactly executed. For nearly two years Australian and British miners had been tunneling under the ridge between Wytschaete and Messines and some of the driftheads had been packed full of ammonal for a year waiting the electric spark that should set them off. The Germans knew almost the exact day when the attack was to be delivered and the points at which it was to be directed, yet the demoralization produced by explosion from below and the incessant rain of shells from above was so great that no serious attempt was made to reinforce or to recover them. On the contrary in the week since the assault the British have not only held the ground gained but have pushed forward several hundred yards on the seven-mile front. The British took 7432 prisoners, most of them in the first day and the captured munitions include 47 cannon, 242 machine guns and 60 trench mortars. The total British casualties are only 10,000, probably less than a third of German loss, altho the offensive party expects to lose more than the defensive.

The British introduced a new and frightful weapon called by the soldiers "oil cans." These are projectiles filled with some inflammable fluid that

THE MAN WHO MADE HIM HESITATE

If it had not been for Eleutherios Venizelos, Constantine might have cast his lot where his sympathy lay, with the Central Powers. It was the former Premier who fought the King until he was turned out of office, then organized a revolt and demanded the dethronement which has just been accomplished

ignites when the shell bursts and scatters fire in all directions. A correspondent describes the effect of the preliminary bombardment in these words:

More terrible to the unfortunate soldiers of the German army is the devilish punishment inflicted upon them during the past ten days, culminating on that day of the battle when every weapon for the slaughter of men, from the heaviest of high explosives to boiling oil and gas shells, was let loose upon them in one great tempest of destruction, which blew them out of the earth and off the earth, and frizzled them, and blinded them, and choked them, and mutilated them, and made them mad.

One German boy of not more than fifteen years of age was found yesterday lying in a shell hole by the side of a dead man who had been shot thru the temple, and he was a gibbering idiot thru fear. Not the only one. German officers say many of their men went raving mad under the strain of the British bombardment and tried to kill their comrades or themselves or fell into an ague of terror, clawing their mouths with all the symptoms of the worst shell shock.

Kirby in New York World

NEXT?

I remember those boys when they both had good jobs

Sir Douglas Haig, commander in chief of the British forces on the continent, issued a special order of the day congratulating General Plumer and the Second Army over the victory of Messines. He says that it is "an earnest of the eventful final victory of the Allied cause" and that it shows that "nothing can save the enemy from complete defeat and, brave and tenacious as the Germans are, it is only a question of how much longer they can endure repetition of such blows."

Russia Repels Separate Peace The Council of Workmen's and Soldiers' Delegates, which is now the dominant political force in Russia, has emphatically repulsed the offer by Prince Leopold of a separate peace with the Central Powers. The proclamation of the Council to the army says:

Russia has undertaken to unite the democracies of all fighting countries in the struggle against world autocracy, but her plan will never be realized if German Imperialism is able to utilize Russia's longing for peace, to disunite her from her Allies and ruin her army.

The Revolutionary Democracy of Russia is seeking a route to peace thru an appeal by the Government created by democratic Russia to the governments of its Allies and by means of an international conference of Socialists. Let the army by its energy and courage give power to the voice of democracy.

The replies of the British, French and American governments to the Russian proposals for a general peace without annexations or indemnities do not give satisfaction to the dominant party. They are disappointed at the British insistence upon the retention of the German colonies in Africa and the French insistence upon the recovery of Alsace-Lorraine and at President Wilson's insistence upon an overthrow of the German autocracy and the breaking up of the Berlin-Bagdad combination. The Russian Socialists had supposed that they were following out President Wilson's policy as exprest in his "peace without victory" speech of last year, but now it seems to them he has changed his attitude.

The American Commission has reached Petrograd by way of Vladivostok and is lodged in the Winter Palace. In his address to the Russian cabinet Mr. Root said:

One fearful danger threatens the liberty of both nations. The armed forces of a military autocracy are at the gates of Russia and the Allies. The triumph of German arms will mean the death of liberty in Russia. No enemy is at the gates of America, but America has come to realize that the triumph of German arms means the death of liberty in the world; that we who love liberty and would keep it must fight for it, and fight for it now when the free democracies of the world may be strong in union, and not delay until they may be beaten down separately in succession.

So, America sends another message to Russia—that we are going to fight, and have already begun to fight, for your freedom equally with our own, and we ask you to fight for our freedom equally with yours. We would make your cause ours and our cause yours, and with a common purpose and mutual helpfulness of a firm alliance make sure of victory over our common foe.

FEMININE ADVICE ON WAR

The nation finds it well worth having, therefore the Woman's Committee of the Council of National Defense. Its members are, left to right, Miss Maud Wetmore, Mrs. Josiah M. Cowles, Miss Ida M. Tarbell, Mrs. Stanley McCormick, Dr. Anna Howard Shaw, Mrs. Ira Couch Wood, Mrs. Carrie Chapman Catt, Mrs. Joseph R. Lamar, Mrs. Philip N. Moore

The Deposition of Constantine

The three Powers which held the destiny of Greece in their hands, Great Britain, Russia and France, having come to an agreement as to their action, and having in some way satisfied the claims of Italy, entrusted the execution of their mandate to Senator Jonnart, a former member of the French cabinet. M. Jonnart, as High Commissioner of the three Powers, repaired to Athens and promptly presented their ultimatum to Premier Zaimis, at the same time urging him to use his influence with the King to secure peaceable compliance and so avoid bloodshed. The joint note demanded the immediate abdication and departure from Greece of King Constantine and Crown Prince George, leaving the throne to his second son, Prince Alexander. The King complied within twenty-four hours and signed his abdication. Two thousand royalist troops were assembled ready to protect their sovereign, but Constantine bowed to the inevitable and requested them to remain. A large crowd of his devoted adherents gathered in front of the palace and tried to prevent the entrance of the Metropolitan when he came to administer the constitutional oath to the new King. Meantime the ex-King Constantine slipt out of a wicket gate in the back of the garden and took an automobile which carried him swiftly and secretly to the coast, where a French destroyer waited to convey him to Corfu. From here it is expected that a British battleship will take him to Denmark, whence his father came. Queen Sophia and the rest of the royal family, with the exception of Alexander, went into exile with him.

Resistance in any case would have been futile, for Commissioner Jonnart disembarked the troops and horses on the transports in the Piraeus, the port of Athens, on the pretext that it was bad for their health to remain longer on board. Athens was within range of the guns of the Allied battleships, as they had proved once before when Constantine was recalcitrant. At Salonica, the northern seaport of Greece, was the Allied army under General Sarrail, said to number 750,000 men. The Allies last year seized the Greek navy and in January disarmed the Greek army north of the Corinth Canal, altho it is rumored that the royalist troops held out 103,000 Mannlicher rifles by substituting 20,000 Gras rifles that had been purchased from France and 60,000 old Mausers captured from the Turks. The Greek people had been reduced to the verge of starvation by the strict blockade of the Greeks maintained by the Allies for the last four months. Their only hope of holding out against the coercion of the Allies lay in the grain fields of Thessaly, which will be ready to harvest in a month. The royalists threatened to burn the crops rather than let them fall into the hands of the Allies, but they were forestalled by the French who have occupied Thessaly with their troops.

The Causes of Constantine's Fall

The despatches from Europe announcing the deposition of the King of the Hellenes state that the United States was the deciding factor. This is what we said in an editorial, "A Greek Republic," in The Independent of May 19, but it is not made clear whether, if President Wilson was consulted on the fate of Greece, he approved of the substitution of one King for another in preference to the establishment of a republic. We assumed that the influence of the United States would naturally be thrown in favor of the latter alternative and in fact it had been intimated a month ago that the President was considering favorably the idea of recognizing the revolutionary government set up by ex-premier Venizelos with the assistance of the Allies at Salonica. But Venizelos is known to have desired the abolition of the dynasty, leaving it to the people of Greece to determine for themselves after the war what form of government should be established. It was, he says, the Allies that prevented him from attacking the dynasty and the British Government was accused by the French press with protecting the royal family in Greece because of its relationship to the British King. When this was intimated in Parliament, however, the Government indignantly denied it.

It seems more likely that the opposition to a Greek republic came from Italy rather than from Great Britain, Russia or the United States. Italy is said to have insisted that if the present dynasty were displaced an Italian prince, presumably the Duke d'Acosta, should be made King of the Hellenes. Perhaps it was to avoid this that the three protecting Powers compromised upon the second son of Constantine as likely to be compliant to their plans. In this way Venizelos can be put back in power at Athens without the dangers and bloodshed of a revolution.

The fact that Greece is a maritime nation and dependent upon her commerce not only for prosperity but for sustenance enabled the Allies to bring pressure to bear by simply blockading the coast. The German and Austrian submarines have sunk 102 Greek ships with a total tonnage of 300,000 tons. This left Greece with only 140 ships of 500,000 tons displacement which were held up by the Allies. According to the Greek Legation at Washington $20,000,000 worth of foodstuffs and supplies which had been purchased for Greece in the United States have been prevented from reaching that country by the Allies. Whenever any of the outlying islands espoused the Venizelist cause they were relieved from the blockade and allowed to import food. Under this inducement most of them have been won over. Many of the army too have joined Venizelos and are fighting with the Allied forces against the Bulgars. Now that the danger of being struck in the back by King Constantine is removed the Salonica forces may undertake a campaign for the regaining of Serbia and Rumania before the summer is over.

The action of Italy is mysterious, and we cannot say in how far it is approved by her Allies, for very little information as to the political movements in Italy is allowed to reach the outside world. All that is known is that Italy has declared a protectorate over Albania and is extending her occupation to the south over the districts of the Epirus inhabited by Greeks and claimed by the Greek Government. This extension of the Italian sphere of influence has been resisted by the forces of King Constantine and many conflicts have occurred. So we have the

curious situation that in northern Albania Italians are fighting in conjunction with the Greeks of the Venizelist faction against the Bulgars, while a few miles to the south Italians are fighting against the Greeks of the royalist faction.

Mid-day Raid on London The boldest and most terrible of the German air raids on England was committed on June 13. At noon a dozen aeroplanes flew up the Thames in echelon formations as far as London, where they wheeled and flew back. Altho the day was sunny, the aeroplanes flying at a hight of 17,000 feet could scarcely be seen with the naked eye and were out of range of the anti-aircraft guns on the London buildings. The London air fleet rose to engage them in battle, but within less than ten minutes the enemy had disappeared on their homeward flight and none of the machines was brought down.

The effects of the bombardment were appalling, for more than 500 civilians were killed or wounded. The number of killed was 104, of whom 16 were women and 26 children. Besides these 134 were seriously wounded and 269 slightly injured. The victims included 120 children maimed or killed. The congested portion of the city in the East End suffered most severely. One bomb struck the roof of a schoolhouse, passed thru two floors and then exploded in the room on the ground floor where there were 64 children under seven years old. Ten of these little children were instantly killed and all of the others more or less injured. Arms and legs were torn off and some of the bodies were so horribly mutilated that they could not be recognized. Another bomb struck a passenger train just ready to move out from the station and demolished the two foremost carriages.

The Question of Reprisal The recent German air raids on Folkestone and London with their shocking injuries inflicted upon innocent civilians will cause a renewed agitation of the demand for reprisals upon German cities. Lord Curzon and Milner of the Government, Lord Northcliffe of the *London Times*, Hall Caine and many other prominent persons have urged reprisals as the only means of checking the German atrocities. But whenever the British Government has adopted such measures objections have been raised by prominent ecclesiastics and others on the ground that attacks upon non-combatants were contrary to international law and to Christian ethics.

The Archbishop of Canterbury, speaking in the House of Lords on May 2, protested against the British air raids on the German town of Freiburg and said:

> Many thousands of the best and most thoughtful people in the country were resolved that, so far as civilians were allowed any say in the matter, they meant to support the prosecution of the war with all their power and with every sacrifice, but they meant to come out of it with untainted honor and with clean hands. Let it not be said that, because the Germans had sunk to the lowest form of infamy, we desired to do likewise; rather let it be said that we desired to leave them an unenviable monopoly of their infamous disregard of what was honorable and decent in warfare.

The Freiburg raids were carried out on April 12 and 14 by a flying squadron of British and French. Along with the bombs they dropt leaflets in the German language stating that it was an act of reprisal for the sinking of the British hospital ship "Asturias." In the raid, according to the German War Office statement, 11 persons were killed, 7 women, 3 civilian men and only 1 soldier, and 27 persons were injured including 17 women and 2 children. Those who are opposed to reprisals upon the German towns point out that such raids do not have a deterrent effect upon the Germans, but, on the contrary, increase their desire to inflict punishment upon England. The Germans themselves regard their raids as reprisals for the depredation done by the British and French airplanes earlier in the war. The aerial attack of the Allies' aeroplanes on Karlsruhe, July 22, aroused an outcry from a portion of the German press for the adoption of similar measures against England because of the large number of innocent victims. The bombs at Karlsruhe dropt in the midst of an assemblage of school children, killing 75 of them and wounded 79 more. Besides Freiburg and Karlsruhe the Germans report the killing of civilians including many women and children in the following towns: Düsseldorf, Friedrichshafen, Cologne, Cuxhaven, Saarburg, Munich, Kandern, and Lörrach.

The Canadian Crisis The Canadian Government has announced the terms of its bill for compulsory military service and has placed it before the House of Commons for consideration. Premier Borden in presenting the measure pointed out that Canada expected to furnish half a million men for service at the front and more than four hundred thousand men had volunteered. But at the present time volunteering was not able to supply the loss in the Canadian regiments thru casualties, which already amounted to ninety-nine thousand, and if Canada were not to play a decreasing part in the war many new enlistments would be necessary. The Government had decided that the way to secure an adequate supply of men was thru conscription, and Mr.

© *Underwood & Underwood*

ANOTHER OLD IDEA

First the steel helmet and now the battering-ram. The Germans are using it to destroy peasant cottages in the villages they evacuate. It saves powder and bombs. The French soldiers in the picture are studying the working of the machine

Borden emphasized that a failure to support and maintain Canada's strength on the firing line would be to betray the volunteers now there. "If what is left of four hundred thousand such men come back to Canada," he said, "with fierce resentment in their hearts, conscious that they have been deserted and betrayed, how shall we face them when they ask the reason? I am not as much concerned for the day when this bill becomes law as for the day when these men return, if it is denied."

The compulsory service bill resembles in its main outlines our own law. There is, however, no provision for a general registration. All Canadians from twenty to forty-five years of age are liable to service, but they are divided into ten classes which may be called up in rotation according to age and marital condition. Men engaged in certain nationally essential industries may be exempted from service. The penalty for refusal to serve in the army when summoned will be three years' imprisonment.

Conscription has deeply stirred the waters of Canadian party politics. The Conservative party as a whole will stand by the administration, but the Liberal party is hopelessly divided. Premier Borden hoped to rally the Liberal leaders to his war program and create a coalition cabinet, but his offers to various Liberals to enter the ministry have been refused and it now appears that he must undertake the great responsibility of carrying thru conscription with the present one party government. The compulsory service bill will have, however, the support of many Liberals from Ontario and the western provinces. Quebec is still strongly opposed. E. P. Patenaud has resigned his position in the ministry as Secretary of State because of his opposition to conscription and his position is that of most of the French Canadian leaders.

Northcliffe Arrives on Mission

Lord Northcliffe arrived at New York within a few days of the announcement that he was coming to America as permanent head of the British war mission. As with all the diplomatic visits to or from this country since we entered the war, the date of Lord Northcliffe's arrival was kept secret from the general public until he was here. Altho Lord Northcliffe is directly responsible to the British Cabinet and has full powers as chief of the war mission, he will devote his attention to the detailed business of coördinating the activities of the British organizations now in this country and will not be a diplomatic agent in the same sense as his predecessor, Mr. Balfour. He paid a brief visit to the Government at Washington, but took part in no such public receptions, tours and demonstrations as did the French and British missions on their first arrival.

The Italian war mission postponed its projected tour of the country because of the illness of the Prince of Udine. Signor Nitti, a member of the mission, will be probably designated as Italy's high commissioner to the United States. Russia also is expected to select a high commissioner to represent her in this country. The chief duty of the various commissions of the allied nations is to adjust the purchases of their respective governments so that in no case would they bid against each other or in any other way work at cross-purposes. Viscount Ishii, formerly Foreign Minister, will head the coming Japanese commission. Among other matters he will consult with the American Government as to the future status of China and the policies of Japan and the United States in relation to that country.

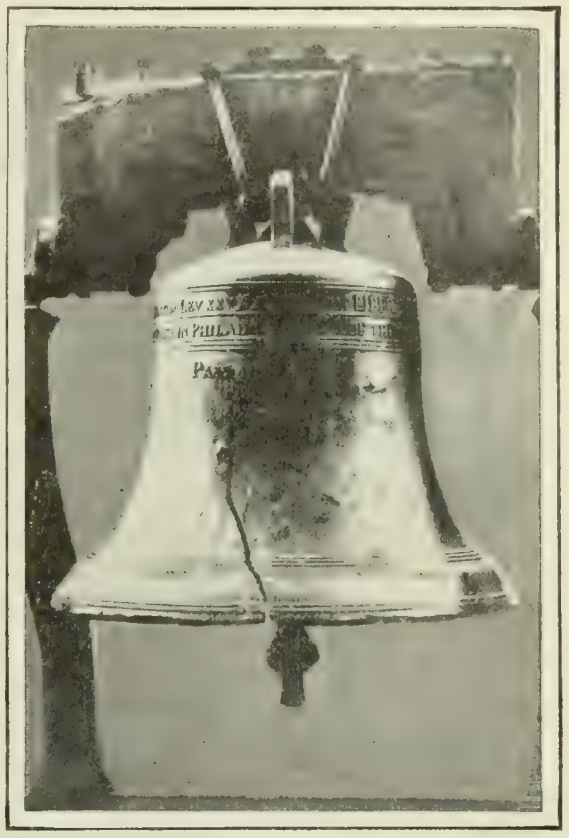
LINCOLN?

No, this is not the Great Emancipator reading The Independent, but Benjamin Chapin, who has devoted most of his life to the study and impersonation of Abraham Lincoln. Mr. Chapin has just finished a four reel photoplay of Lincoln's life, one of the best movies that has yet been produced

Wilson Discusses War Situation

On Flag Day, June 14, President Wilson made an important address which we publish in full on page 530. In substance it was an amplification of the message to Russia in which the President stated the aims of the United States in the Great War. In his speech President Wilson declared that "the military masters of Germany denied us the right to be neutral" and he explained this statement by referring to the hostile activities of the German secret service, the attempt to bar us from the highways of commerce by threats of murder and the intrigues of the German foreign office to ally against us Mexico and Japan. No nation under such circumstances could have avoided war, but once we entered the struggle against Germany we assumed the duty of frustrating the German plot to create a vast empire from the North Sea to the Persian Gulf which would menace the liberties of the whole world. The President pointed out that from the point of view of military geography the German dream was already practically achieved and that not only such conquered lands as Serbia but the allied states of Austria-Hungary, Bulgaria and Turkey had lost their independence and become the willing or unwilling servants of Berlin. With such present advantages, he concluded, the German peace movement is evidently a trick to conclude the war before the increasing strength of the Entente Allies robbed the military rulers of the

Central Powers of their chance of world dominion.



Big War Budget Passed Congress has passed the urgent deficiency bill carrying appropriations for $3,281,000,000; the largest sum ever authorized. More than two-thirds of this giant budget is for military and naval purposes, but $750,000,000 of it will go to the financing of the shipbuilding program of the administration. The bill was long held in conference by a deadlock between the House and the Senate on a comparatively minor item, the purchase of the Jamestown Exposition grounds for a naval base at Hampton Roads. The House of Representatives rejected the conference report because it contained this item which many Representatives regarded as "pork," altho the purchase had the approval of the Secretary of the Navy. The Senate insisted that the appropriation be reinserted in the measure after the House had stricken it out and sent the bill back once more to conference. At the urgent request of the President the House waived objection to the naval base appropriation and it was included in the final draft of the bill, altho the sum appropriated was slightly reduced. The bill includes provision for the pay of men now training for the officers' reserve corps.

Labor Backs Food Legislation No part of the present war legislation program of the administration, not even the new war taxes, has caused so much controversy in Congress as the measures for food control. Senator Reed of Missouri and some of his colleagues still profess terror lest Mr. Hoover the food administrator make himself a food dictator in the Prussian style by taking advantage of the wide range of powers granted in the proposed bills. But President Wilson has found a zealous ally in the American Federation of Labor. Mr. Gompers has issued a public letter to the labor unions urging them to bring pressure to bear on Congress to hasten the enactment of the needed legislation for the control of food prices. He pointed out that after the first of July the new crops would already be contracted for and measures of Federal regulation would fail of half their effect thru the delay. He exprest his belief that if food prices were permitted to rise further many workingmen would find it impossible to make a living. Representative Lever, Chairman of the House Committee on Agriculture, voiced the same thought when he declared that flour at $20 a barrel was already in sight and that such prices might mean bread riots in the big cities. Organized labor is not only determined to support the Lever bill but intends to see that it is carried into full effect. Thru its legislative committee the American Federation of Labor announced that it would insist that representatives of labor be appointed to all agencies, federal, state or local, which had anything to do with food administration. The Canadian Government will appoint a wheat commission to coöperate with the United States in handling the grain supply of the two countries in common.

Trade Legislation The espionage bill, which at last has passed the Senate and become law, contains no censorship provision and interest in it now chiefly centers in its embargo clause. This gives the President a wide range of discretion in stopping supplies which are likely to reach Germany thru neutral countries. A considerable measure of control over shipping is also granted the Federal Government by requiring licenses for export cargoes. It is believed that the United States will follow the British plan of "rationing" neutral nations which still have commercial relations with Germany, that is, to send them only enough of contraband commodities to meet their estimated necessities and leave nothing over for re-export to Germany.

The administration's bill for the promotion of export trade by legalizing joint selling agencies of American exporters and exempting them specifically from any construction of the anti-trust laws which might seem to forbid their organization passed the House of Representatives on June 13 by a vote of 240 to 29. A similar bill was proposed in the last Congress, but the session came to an end before final action could be taken on it in the Senate. Of course the United States needs little protection of its export trade during the present war conditions, but the measure is designed to meet the European competition which will arise after the war. Another important commercial measure before the Senate would grant the President power to determine the priority of shipments on common carriers. Many of the Senators are in favor of limiting this power to the shipment of military forces and supplies only, leaving the authority to determine the prior shipment of foodstuffs and other non-military commodities in the hands of the Interstate Commerce Commission.

America Over All The Council of National Defense has resolved to give the United States absolute mastery of the air even if it has to break all records of expenditure for military aviation. Congress is invited to consider an appropriation of $600,000,000 for aeroplanes and their utilization in addition to the $64,000,000 already voted. The importance of the aerial arm in modern warfare has been demonstrated over and over again in the course of miitary operations in Europe, and experts at Washington are convinced that victory is only possible to the side which enjoys supremacy in aircraft. Three types of planes are in demand: swift, light, high-flying battle craft; observation machines flying at intermediate levels to direct artillery fire and the movements of troops, and low-flying machines for bombing trenches and attacking submarines.

Underwood & Underwood

RINGING AGAIN FOR WAR

Not since 1776 has the Liberty Bell rung in wartime until at noon on June 13, when it rang a last call for subscriptions to the Liberty Loan. Wires, held open for the purpose, flashed the sound from Philadelphia all over the country

Prison for Draft Resisters While the Government is making ready the machinery for the selective draft, the police are busy rounding up those who failed to register. Up to the present time the authorities almost everywhere have been very lenient and have permitted those whom they arrested to register and go free in spite of the fact that they had violated the law. But those who refused to register after arrest have been held for a prison sentence in every case, since it is evident that such men were not merely neglectful of their duty but determined to defy the law. Among others who have come into conflict with the authorities were members of Emma Goldman's No-Conscription League who were arrested in New York. Louis Kramer, an anti-conscription agitator, was sentenced to a $10,000 fine, three years' imprisonment and deportation as an alien after the expiration of sentence. At the same time Morris Becker, one of his associates, received a sentence of one year and eight months in prison, and others refusing to register were punished with shorter terms of imprisonment.

Exact returns of the number of registered have come in very slowly, but it is apparent that more than nine and a half million men registered, which is within 5 per cent of the census estimate and proves that there were few evasions.

More than a million of those enrolled are aliens, and the indicated number of those who may be exempted for all causes is about five millions. Over 115,000 men have enlisted as volunteers since April and several states, of which the largest are Indiana and Illinois, have exceeded their quota of enlistments in the regular army.

THE DOCTORS AND NURSES OF BASE HOSPITAL NO. 4

FIRST AID TO THE ALLIES

BY HEBER BLANKENHORN

THE ship that took them out passed unnoticed. At an Atlantic port, somewhere in America, early in May, the liner left, utterly without flourish, just one of many slate colored, deep laden, unlabeled merchantmen braving U-boats these days. A long gun jabbed out over her stern. No American battleflag snapped aloft, to set a thousand harbor tugs whistling in salute as she sailed. Dun, grim, silent—and she carried the "first for France."

Aboard was the first unit of the United States Army—uniformed, carrying the American flag, under War Department orders—to go to the front, Base Hospital No. 4, two hundred and fifty-two strong. It was not merely the first of the army's forces off in this war. It was the first army unit that ever sailed in the history of the United States for service on the continent of Europe.

If John P. Holland had not carelessly invented the infernal submarine, Base Hospital No. 4 wouldn't have sailed so unostentatiously. There would have been a parade to the pier, godspeed speeches full of "firsts," hullabaloo down the bay, pictures in all the papers, wireless reports all the way over and kudos galore. The submarine has taken the pomp out of war, even in places three thousand milles away from the front.

Some there were at the pier, of course, who knew what was toward. They shouted gaily at the lieutenant-doctors, in spick and span khaki, lining the rail. They laughed and chaffed when the Red Cross sent to the ship two dozen silver-tipped swagger sticks for the officers. They cheered when a philanthropist hurried over the gangplank to hand $25,000 to the unit to broaden its work. Another hurrah went up for some snare drums rushed aboard.

Then the ship moved. The khaki-clad men began singing. It was the "Star Spangled Banner." Next they sang "Tipperary." Cheerers on the pier fell silent, thinking how many thousands of transports have sailed to "Tipperary" and how many will yet sail to the "Star-Spangled Banner."

Mr. Blankenhorn's inspiring story of the first army unit sent overseas by the American Red Cross has especial point in this week of the Red Cross campaign to gain a hundred million dollars of subscriptions for its war work.—THE EDITOR.

It was only a regiment of doctors going to a post nowhere near the firing line, with only submarines to face and slight chance of being bombed by an errant Taube once they were settled in France. But they were the first to answer the Allies' call for help and some were glad that America's first should be healers, not killers. Others were proud that the first call should find America perfectly prepared.

The first unit was mobilized and off in seven days. Five more hospital units followed hard at their heels. In all so far Colonel Jefferson R. Kean, Director General of Military Relief, has organized thirty-six base hospitals under the Red Cross to be mobilized with the army under War Department orders.

Ten thousand surgeons, nurses and attendants, this means, are under way for France. They will not all come back, as any one knows who has studied the casualty lists of the medical arm of the belligerents.

The percentages of casualties, according to the reports from the Allies as cited by Captain A. Lippincott, U. S. Signal Corps, run as follows: medical, infantry, artillery, air. The mortality rate among the doctors in official reports for a long time now has been actually the highest of the war. The normal ratio is 10 doctors to 1000 men. At present there is only one doctor to 1000 men in France.

The British army lost six hundred doctors in the battle of the Somme alone. As long as a year and a half ago the French army service became demoralized, between losses and inefficient organization. In the Russian army, with its peculiar system of "flying columns" of doctors who work right in the trenches, the mortality has been far higher in the medical service than in any other branch. In all the armies it is found that the doctors after three years in war work have spent themselves and must be relieved. American surgeons, conceded the best in the world, are now going by the thousand. It is estimated that the war will take at least twenty-five thousand American doctors and nurses.

The war surgeon's task is not inspiring to the popular mind. No "citations" in it, no headlines. It is gloomy, discouraging, an endless wade in the "backwash of war." Toilers in the hospitals get no acclaim in the communiques, not even a notice unless some attendant is killed, as was H. E. M. Suckley of Rhinebeck, New York, by a German avion dropping bombs eighteen miles back of the trenches last month at Salonika.

Without a thrill, without even the intoxicated heat of "going over the top" for a charge, without even a hate, the doctors struggle on at the most disheartening job in the whole business. Blasted men, gangrenous bodies, are about them always. They work in stench and moaning and horrible dying. Death is at their elbow day and night. If they succeed they see half their cures return wearily to the trenches, the other half, maimed, go home to drag out a useless existence.

If the doctor's lot is cheerless, the nurse's is almost unendurable. Pain never lets up in the long wards and the nurse is continually at the beck of torture. She has been overtasked as well in many of the hospitals of France. One nurse, one nurse's aid and a three-fingered orderly with an entire hospital of forty beds to care for unassisted, is not an unusual case. Nurse work is not romantic, just disgusting. Unless some are killed, as were two on their way to the front by a freakish shell aboard the "Mongolia," the nation thinks little about the Red Cross nurses' achievements.

With this before them the American doctors and nurses are going abroad so eagerly that the commander of No. 4 said on arriving in Great Britain that his people were "crazy to go into action."

Their enthusiasm grows out of their

© Brown Brothers
AN X-RAY UNDER CANVAS

splendid preparation. Colonel Kean began organizing over a year ago. Base Hospital No. 4 was recruited at Lakeside Hospital Cleveland, Ohio. Its doctors were all officers of the United States Medical Reserve Corps, and some had had "war" experience with the Guard on the Mexican border, while others had served in relief emergencies, such as the flood at Dayton and the like. Its director, the noted surgeon, Dr. George W. Crile, had gone to France for a time early in the war.

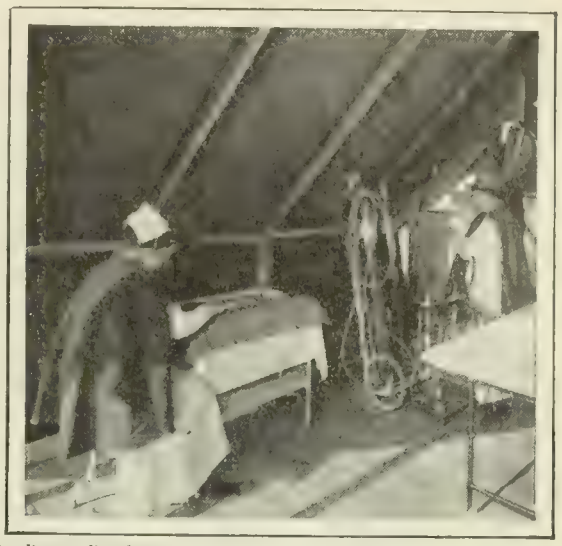
This unit accomplished a *tour de force* in mobilizing in a week. A base hospital is a complicated organization. Its two hundred and fifty members include twenty-five surgeons, sixty-five nurses, one hundred and fifty orderlies, recorders, attendants, cooks, mechanicians, launderers, electricians, etc., and its equipment for 500 beds when housed under canvas takes twenty-five or thirty tents. The first units for France did not need this equipment, as they were ordered to prepared hospitals. Many sorts of experts went—pediatrists, dentists, X-ray men, ophthalmologists, bacteriologists.

The Lakeside men did heroic things to tear themselves loose and be first off. Famous surgeons instantly sacrificed practises worth $100,000 a year.

Here is exactly what one young lieutenant did on five successive days: 1, he mobilized; 2, he married; 3, he hurried off to Philadelphia to read a scientific paper, the result of two years' research, before the Society of American Physicians; 4, he rushed back to Ohio to say "good-bye" to home; 5, he started east again—for the front. Like feats were accomplished by the other units, the Harvard, the Presbyterian-Columbia of New York, the Johns Hopkins, the Chicago, the Philadelphia, the St. Louis, all in the first call to the colors.

Their work is cut out for them. After the dressing stations in the trenches have slapped on "first aid" and the field hospitals back of the lines have operated the vital cases, the wounded pass thru the evacuation hospitals to the base hospitals.

Since hospital ships are being ruthlessly torpedoed these days the base hospitals must be in France and every "drive" from now on will tax them to the uttermost.



No. 4's men intend to do more than the "cut out" work. Major Crile, Major Lower and Major Hoover, the best known among them, would like to see what can be accomplished by quick operative work in the very trenches, dragging their anesthetics and knives into the dark of dugouts and mud of shell holes. Their reasoning is based on the fact that abdominal cases if not operated within four hours after the wound are usually fatal. They want to work out this grim arithmetic—whether by following up attacks right with the fighters the percentage of men saved will not be greater than the percentage of doctors killed. The problem, tho unpleasant, must be scientifically resolved.

They hope to do research work as well, with that $25,000 which Samuel Mather donated at the pier. One of them, who has been working on the origins of jaundice, had in his pockets reports of how France is suffering from a plague of jaundice due to trench rats. Out of war they will try to distill some essence of good for humanity.

No. 4, convoyed at the last by an American destroyer, reached England on May 17. Major Gilchrist, in command, found his force welcomed by a

ONE OF THE OPERATING TENTS

British general and his staff at a port decorated with American flags in the doctors' honor.

On to London, and humble No. 4 found itself lionized. Buckingham Palace invited its presence for the first reception of the sort that ever took place. Royalty democratically shook the hand of every man and woman and King George addrest them, saying: "We greet you as the first detachment of the American army to land on our shores."

In England No. 4 was face to face with the one thing it feared. The fear had come upon it an hour before sailing. They knew they were trained, they were drilled, they were all prepared—but they had no band. By the screaming eagle, what a fix! They hastily canvassed their administrative personnel recruited a few days before and discovered that of the one hundred and fifty, seventy-six were college boys, enlisted as privates, at fifteen dollars a month, volunteers to do the hardest, meanest work around a hospital. Some of them were runaways.

Of the seventy-six, a dozen were found who "could play anything." An officer rushed ashore and purchased half a dozen drums and as many fifes.

On the voyage over the sharked-up drum corps learned to play "Yankee Doodle"—but not at Buckingham Palace. Even for the frills of war they were competent and ready.

In France in the grim business of saving shattered men these 10,000 American doctors and nurses may in the next year work incalculable good for the race and make the name "American" blest among the nations of the earth.

New York City

OUR ARMENIAN ALLIES

BY CHARLES E. HUGHES

PROBABLY at no time in the history of the world have there been so many fatherless and motherless children as there are today. Tens of thousands, probably hundreds of thousands in Armenia, Syria, Caucasus, Persia, Mesopotamia and Palestine are not only without parents, but are without any strong parental government to give them the help and protection which orphan children of other lands enjoy.

American Consuls and missionaries cable the American Committee for Armenian and Syrian Relief almost daily regarding the situation. One message from the Russian Caucasus pleads for the support of 10,000 children at an average expense of two dollars per month per child. Another from Tiflis reports 40,000 children in one region waiting for an answer to a previous cablegram requesting help. Reports from other points indicate similar conditions. Among the many appeals it is possible for this committee to assume responsibility for only the most pressing cases, and it is upon these that the committee would focus the attention of the American people. Splendid help has been rendered the little ones in other lands, but these in Western Asia are no less human than those who have already been aided by American charity. It is the duty of Americans, as well as a privilege to respond to this great opportunity and keep alive the best civilization that Western Asia has developed.

All expenses of administration for this relief are met privately so that every dollar sent to the committee is used directly by their agents in purchasing food for the needy who, according to the best advices and from audited reports, receive the full benefit of the funds sent them.

Out of the horror and nightmare thru which these people have passed comes the gratifying word that we can be of assistance; that our efforts will prove availing, and that we can share with these orphan children the bounty which we, as Americans, have enjoyed for years. The work done by this committee has been most unselfish and effective under conditions of great personal sacrifice. May America respond to their appeals.

New York City

MUST ARMENIA PERISH?

BY FRED P. HAGGARD

The settling of the "Armenian Question" is a task for statesmen, but the feeding and rehabilitation of Armenia, which is being carried on by the American Committee for Armenian and Syrian Relief, is a task for every man and woman in America.—THE EDITOR.

A rug merchant's shop on Madison Avenue is a long way from Turkey, but it proved to be an open window thru which I beheld Armenia's wo from a new angle. Recognizing the man's nationality, I ventured to express my interest in his people. His reaction was immediate and his trembling voice and moist eye led me to suspect that his feeling was not due simply to race loyalty. Yes, there was more and he would tell me his story.

"It was nearly thirteen years ago that I came to America with my little Armenian bride. Business opened favorably for me and I prospered. When the time came to celebrate our tenth wedding anniversary, we talked over different plans, but at last I said, 'I have it! Instead of a celebration here with presents, I will send you and the children back home. We will not tell the old folks. You will surprize them.' So in the fateful summer of 1914 they sailed. I confess I cried. It was hard to be separated for the first time from my dear ones, but what joy would come to the aged parents! And then," and the man bowed in agony, "came the war! They had just arrived at their destination and I acted promptly, you may believe. The authorities at Washington were most kind. Thru the Embassy at Constantinople they located my wife and the children and forwarded money to them. I learned that my dear ones were well, but alas! I could not hear from them. More than two years have passed and still there is no personal letter, tho I am assured that they are still preserved. While they are not permitted to return, I have not lost hope that I shall see them again. But you can imagine my feelings in view of what I know is taking place all around them, that practically all the Armenians of the town where they are have been killed or driven away and that any day I may learn that they are no more—or worse!"

The haunting fear exprest by this one man rests like a nightmare upon thousands of Armenian homes in America, only in hundreds of cases the full story is known—their loved ones have perished or have been driven as exiles into the mountains or deserts, from which they may not live to return.

But Armenian homes are not the only ones in which anxiety and sorrow have found lodgment, as these are not the only people in Turkey who have suffered at the hands of the Turks. Syrians and Greeks have shared a like fate, and also the Jews who just now are seriously threatened in Jerusalem and its vicinity. It is estimated that more than one million Armenians, Syrians and Greeks, resident in the Sultan's dominions at the outbreak of the war, have been destroyed. Hundreds of thousands of others cannot be accounted for. Two and one half million are in a starving condition. A recent communication regarding one Syrian town of nearly 7000 people revealed the fact that eighty-five per cent of the population is missing. Hundreds of vil-

THE MISSIONARY SOUP KITCHENS HAVE SAVED MANY REFUGEES

"KASAB-KANA"—THE BUTCHER SHOP
A building in Erzinjhan where the Turks killed all Armenians unfit for hard labor

lages have been blotted out. Photographs show nothing but heaps of ruins and practically every pile contains the bones of the once happy dwellers.

The evident intention of the Turkish authorities was to exterminate these Christian races. "Turkey for the Turks" became a watchword of the leaders who thought it possible at last, once for all, while the powers were busily engaged elsewhere, to rid themselves of those who were so provokingly prosperous and who were, when harassed, able to secure sympathy from western nations.

The short sightedness of the Turks in this matter is almost incredible. While all other nations engaged in the war are doing everything in their power to conserve their resources, to anticipate the day of reconstruction, to train those made blind and lame by the war for later careers of usefulness, Turkey sets about the destruction of those of her own population upon whom alone she could depend for her commercial, mechanical and agricultural resources. For where the people dominant in numbers and authority were indolent, uneducated and non-progressive, these persecuted races of Christian ancestry were industrious, alert and eager for education. From their numbers were recruited the farmers, mechanics, merchants, lawyers, doctors and bankers of the empire. Turkey even went to the length of murdering Armenian and Syrian soldiers in her armies. Thousands of them perished miserably in their barracks. So it came about that "this once thriving and prosperous population; innocent, unoffending, industrious; possest of homes, of business property, farms and gardens; living in comfort and in many cases in affluence, were suddenly stripped of all possessions, driven from their homes and left to wander in the interior, or to find such livelihood as they could obtain in places already overcrowded and among people to whom they were strangers and where their coming seriously complicated an already well-nigh insoluble food problem."

Not Belgium, Serbia nor Poland has suffered as Armenia and Syria have suffered. In a history covering more than two thousand years, the last six hundred of which have been marked by almost constant persecutions, they have now reached the lowest depth of misery, want and wo. A catalog of the methods of torture and of extermination leaves little room for the imagination. Hundreds of authenticated cases under each of these various forms could be given. There was that finer play of "requisition." Receipts may or may not have been given, but never money.

One missionary telling of the gratitude of many Mohammedans for what the missionaries had done for their people, related how one Kurdish chieftain came secretly in the middle of a dark night to his besieged mission filled with refugees, to escort twelve girls from fourteen to seventeen years of age whom he had rescued from a gang of his fellows. While not a Christian, he "could not endure to see them destroyed."

This case was typical of many, for the rank and file of the people lived together in friendly, neighborly fashions without much thought of their religious or social differences. It will be recalled that one of the most striking features of the inauguration of the Young Turk movement in 1908 was the spontaneous and natural outbreak of joy on the part of all the people that at last it was possible officially and by law to mingle freely. Christians, Jews and Moslems embraced one another, drove in triumph thru the streets together and sat down at the same table in harmonious councils. This state of affairs exhibited the real spirit and attitude of the people. It represents their present disposition. Cruel autocracy has for the time triumphed over the better human instincts and practically compelled a reign of terror which naturally draws together the weak, the depraved, the murderous of all classes to prey upon the innocent and helpless.

When it came to the application of force there was nothing lacking—beating to death, torture by pulling out the finger nails or the hair, the cutting off of the tongue, nose or ear, and other nameless cruelties. Naturally the women and girls suffered most. Some escaped life in a harem by self destruction, while Dr. Clarence S. Ussher tells of an instance in which a father shot in turn his wife and daughters and then turned the weapon upon himself —all to prevent a worse fate.

Thousands died in massacres. Favorite methods were literal butchery,

"WEEPING FOR HER CHILDREN AND WOULD NOT BE COMFORTED"

burial alive and burning. To consummate the latter a house would be selected, the doors and windows fastened up, a hole made in the flat roof thru which the hapless people would be thrown until the house was filled. Buckets of oil were then poured over the struggling mass and the match applied.

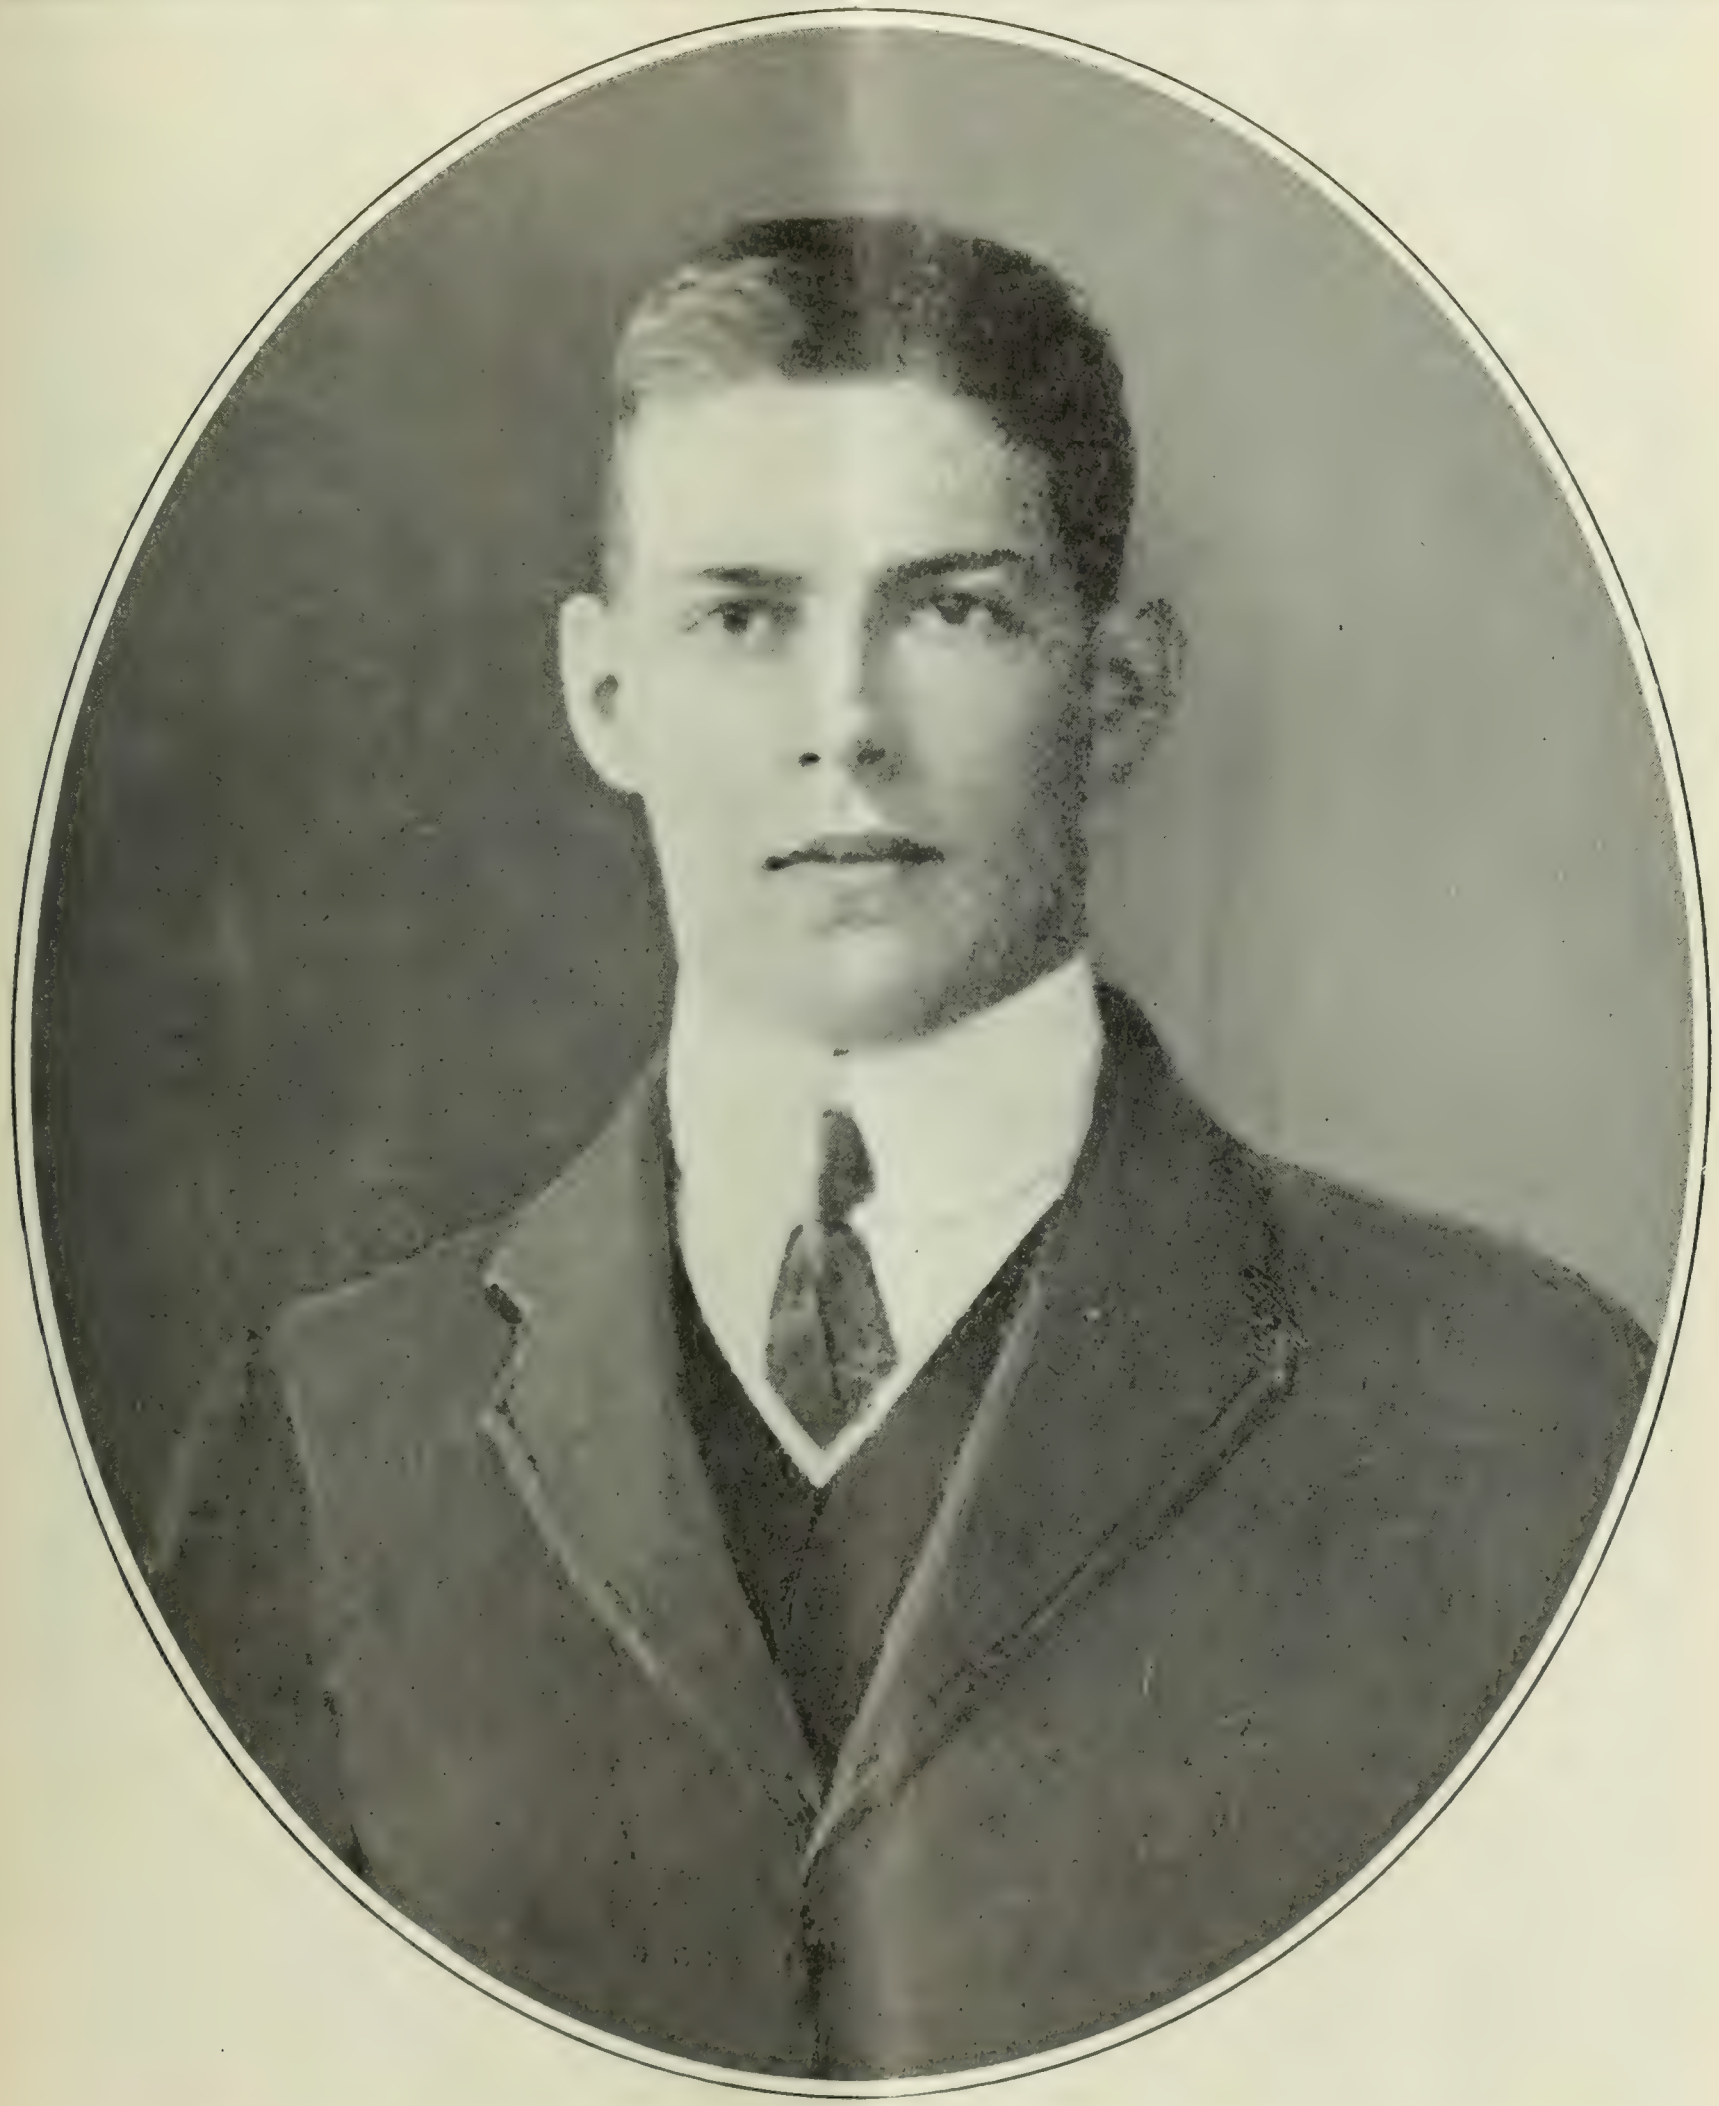
Naturally there were some forced conversions to Mohammedanism, for this step always secured immunity with promise of food, clothing and shelter. An interesting sidelight on this question was thrown by a letter recently received from an American at the headquarters of the Armenian and Syrian Relief Committee. The writer argued that the committee should urge wholesale denial of faith by the Armenians to save further trouble! But these people are not built that way. They have martyr's blood in their veins. In the case of many whose conversion was sought, days and even weeks elapsed while persuasive powers were employed to secure a change of heart. In all cases of ultimate failure of the proselyters, however, death or expulsion followed. The latter usually resulted in death since, even in the case of women, they were stripped absolutely naked and driven out to find shelter in the sand or among the rocks, foraging for food after nightfall, when their shame would be mercifully covered.

That which has distinguished the persecutions of this period from the many that have preceded it has been the deportations. The testimony regarding these is full and unimpeachable, including the report of Lord Bryce to Lord Grey, 1916. While it has been difficult to bring photographs out of the country enough are in existence to eliminate even the shadow of a doubt. First and last the deportations combined the cruelties of all the other methods mentioned. "Military necessity" was said to require concentration, so that populations of whole villages and towns and the residents of the Christian quarters of great cities were ordered to move. At first every courtesy was shown, the people were in many instances given time to pack up their belongings and even place them in carts. Guards were supplied, and then the caravans started. As a rule the men were left behind or otherwise separated from the women and children. So far as known few of these caravans reached their destinations. Individuals managed to escape, but the others suffered robbery, pollution, exhaustion, starvation, death by the roadside. After months the bleaching bones of these travelers may be seen along the main highways and the paths that lead to the wildernesses. Their sufferings may be imagined but not described. Never in the history of the world has there been anything like it. The very thought of it congeals the blood and arouses all the indignation of which men are capable.

THE ALLIES' CONTROL BRINGS RELIEF IN THE STRIPED AREAS OF THIS MAP, BUT MILLIONS ARE BEING STARVED AND MASSACRED TODAY IN THE DOTTED PORTION, WHERE THE TURKS HOLD POWER

From districts contiguous to friendly territories — for example, that portion of Armenia-in-Turkey which lies next to the Russian border—thousands escaped, in some cases under the protection of Russian soldiers who had come to the rescue. But even in these instances there was untold suffering. Many died, children were born on the road and, perhaps saddest of all, thousands of orphans are left to bear testimony to the sacrifice of mothers and fathers on the way.

Gruesome as this recital has been, not half the story has been told. Letters, pamphlets, photographs, reports and books by eye witnesses and investigators lie before me in profusion as I write. But further draft upon these sources is unnecessary. The case is established. Armenia's centuries-long persecution has reached its climax. Flesh and blood cannot endure more.



Is there any hope? Can the remnant be saved? Hope lies in the spirit of the race which, but for that, would long ago have become extinct. Even in those who still survive amid the scenes of their desolation that spirit remains unbroken. Furthermore, hundreds of thousands of the sons and daughters of Armenia and Syria, now living in western lands, comprize a fellowship whose love and loyalty have not failed and will not fail. These people will live. Their waste places will be rebuilt.

But while diplomats and statesmen are working on a solution of the "Armenian Question," and without doubt it will, this time, be a final and satisfactory solution, the duty of America is clear. It must feed the starving millions, it must get ready to rehabilitate them when the war is over. It is a gigantic but worthy task. Its accomplishment is entirely within our power.

THE DAY'S WORK AT PLATTSBURG

BY HERBERT REED

This is the third of "Right Wing's" articles on the officers' training camps. A day at Plattsburg is a strenuous affair, but not so much, Mr. Reed points out, because of the physical effort as because of the hard new mental problems which have to be tackled.—THE EDITOR.

THE dropping out of rather a large number of men marked the third week of the training of student officers at Plattsburg. There had been evidences in abundance that some of the candidates were unfit, or had become unfit under the strain of the work. There was evidence, too, that some of them should never have been sent to the camp. In the main, however, many of those dropt would "get by" almost any set of surgeons, for the simple reason that in the nature of these examinations the surgeons cannot have the individual under observation for any considerable length of time. The army surgeon, or for that matter the civilian surgeon who is called upon to pass on the candidates is hardly so well equipt as the average college athletic trainer. The reason is simple. Their day's work is along different lines and they have not the same opportunity for character study, or the knowledge of the nervous reactions of men to unaccustomed and prolonged combinations of mental and physical tests. It is in the standing of these tests that the trained athletes have been showing up so well so far. Especially is this true of the football men.

Football in the strict sense has not been a game for the last ten years. It has, within the rules, been a battle, and every man who coaches or trains players knows it. The result has been that the football men here have found themselves going thru a training that has been, in the broad sense, familiar to them. They do not worry, and worry has been the big trouble with many of the candidates. One can see it in the faces of many of them. In general the men here may be roughly divided into two classes, those who do not realize the seriousness of their undertaking, and those who, realizing it to the fullest, are beset with the fear that they may not come up to the mark. The fundamental steadying influence for both classes lies in work, and more work, and still more work. And in the measure that they have steadied down to the work is found the proof of their progress.

Now the average man at the camp believes that he is tired out when night falls because of the hard physical work he has been doing. That this has really very little to do with it may be gained from a study of the accompanying table, which sets forth the stop-watch record of an average day at this stage of the training. There is nothing in it that ought to wear out the average man of sound physique. Certainly less than three hours of actual physical work under orders ought not to take toll of any man. Nor does it. The men here too often do not realize that their day has also been one of hard thinking, of attempts to master problems which are rather strange to most of them, under conditions that are totally unlike those that have been encountered for the greater part of their lives.

It might also be added right here that it is difficult for any mature minded men who have had valuable and successful business experience to understand the ins and outs of army bookkeeping, with its innumerable duplications that must be sent to one department after another. They do not understand it, largely for the reason that they cannot bring themselves to believe in the system. It will have to be done, of course, since the discipline is inexorable. It is indeed that way with many things that loom up in the instruction. Much time is spent on certain operations which every man who has studied the making of this war knows are practically obsolete, or will be obsolete in another month. Yet the student officers are in camp to learn to teach, and things that might be quickly explained to them and then dropt, cannot be dropt, for the reason that they must be taught to the men of the draft.

After three weeks of this intensive training it might be supposed that the men in the mass would show unmistakable indications of having settled into their stride. These indications are in evidence, and the strongest of them is not always to be found in the quick falling in, the subconscious feeling of cadence and rhythm, the easy submission to discipline, etc. One of the best indications was the handling of the athletic meet on Memorial Day, and at this point I should like to have sportsmen everywhere realize that the greatest collection of amateur athletes to be found today in one place is at Plattsburg. The amateurism, for the first time in this country, by the way, was absolutely without question. To add to the flavor of the meet no records were broken. Uncle Sam's uniform made that impossible, for it was not designed for extreme specialization in the sports of diamond, track and field. So in all respects the meet, which included tennis by ranking players, baseball by college stars of the first magnitude, and track and field events in which picked men from many colleges competed, was marked one of the

SETTING UP DRILL—A SUCCESSION OF FOURTEEN HARD EXERCIZES IN SEVEN MINUTES

brightest days in American sport. But to return to the argument. There were literally thousands of khaki-clad spectators, who on the day that camp opened would have run wild over the field. These thousands, after three weeks of discipline were handled by one man with a megaphone. A small test, one might say, but a big one from the point of view of the officers who are training the war-leaders-to-be.

The shield has another side, however. It was plainly to be seen even after the first stretch of training that the student officers were still terribly dependent upon their regular army instructors. Several of these were called away, presumably to go to France with General Pershing, and with their departure there was a sudden falling off in the morale of their commands. In one case was this especially noticeable, for the company in question had been doing really splendid work and boasted as high a personnel as any unit in camp. This company was turned over to its reserve officers, who are conspicuously above the average of their class, yet even they could not bring the company to life. That there would be a recoil for the better after a time, it was safe to assume, but it apparently takes more than three weeks for a company, especially at the new war strength of nearly 200 men, to learn to go its own way with any degree of self-reliance. It became apparent, too, just at this time, that the reserve officers were not very effective considered as a whole, despite their undoubted loyalty to the work and their willingness. The exceptions could be counted on the fingers of one hand, and they were brilliant exceptions. Of them it may be said that they were born to their positions. The mass of these reserve officers can hardly be blamed for their failure as instructors and in the art of command. It is the system that made their commissions possible that is to blame, a system that is dead and gone, let us hope never to be revived.

In any estimate of the work done at Plattsburg it is well to keep constantly in mind that the drill regulations themselves are in process of reconstruction. It will be impossible to turn out finished officers in any case, and the instructors hope only to set the feet of the student officers in the right path, so that they themselves will continue to progress of their own initiative after they take up the burden of coaching other men. This is not an officers' hothouse. It is a place where a man's feet can be put under him firmly and where perception, judgment and the ability to handle men in new and unforeseen situations may be taught to him. He must work and fight mightily for himself, however.

There is one very serious criticism that I shall make here, and that is that it seems to me a serious mistake to lessen the stress on the bayonet work just at this time. There has been no drill so far that has served to bring home to the candidates so forcibly that they are here to learn to *fight* and to teach others to *fight* and not merely to drill. In this respect we might learn something from the Canadians, who do their bayonet work clad in protective armor. It is impossible to go thru the new bayonet exercize as it should be gone thru with without the serious risk of injuring one's opponent. One of the officers has devised a dummy that strikes back, that will batter the man who does not attack it according to instruction and with a considerable degree of fire. This is the nearest thing to actual combat bayonet exercize that has been developed here so far.

One of the curious developments of the training of the first three weeks has been the ready ability of the student officer to shoulder his 45-pound pack and his 11-pound rifle and set off singing and whistling for a practise march down the hard country roads; to come in still whistling and hungry for more hiking; only to keel over in a dead faint when asked to stand at attention for twenty minutes. At inspection the other day there were many cases of fainting. One of the most promising student officers in the camp quietly shut his eyes and "passed out." Everybody knew him to be a man of grit and determination who had done excellent work. He simply could not stand at attention for a given period, and so his chance has gone glimmering. Other cases there were of "sympathetic" collapse, familiar enough to any student of group psychology. In six cases out of ten if you ask a student officer what he finds hardest to do, what he most dreads, he will answer, "Standing at attention during a long inspection." And yet the position should be natural and easy. All of which goes to show that three weeks will no more harden the mental attitude than it will the muscles, and there will have to be a deal of mental hardening before we shall have worked our will with our enemy. Meantime Plattsburg is doing its share.

Plattsburg, New York

A PLATTSBURG TIME TABLE

Morning's march to the drill ground at quickstep (120 to the minute) wearing the pack. Total weight carried, including rifle, about 55 pounds. There are brief rests of varying duration between the bursts of marching as given in the following figures. The march timed was over stone roads. The figures: 1 m. 43 s.; 30 s.; 1 m. 6 s.; 2 m. 57 s.; 15 m. 3s.; 13 m. 37 s.; 3 m. 20 s.; 2 m. 56 s. (This last over rough field.) Total—41 m. 12 s.

Extended order drill including deployment and assembly, fire at will, and advance by rushes, still wearing the packs. (Occasional bits of close order work in column of squads and in platoon front necessary to reach firing line, included.) The figures: 1 m. 8 s.; 32 s.; 25 s.; 26 s.; 5 m. 32 s. Total—8 m. 3 s.

Formal guard mount, without packs. Figures based on one man. The watch was allowed to run during very brief halts, which were in the main at attention. The figures: 48 s.; 31 s.; 48 s.; 32 s.; 16 s.; 1 m. 47 s.; 8 m. 11 s.; 1 m. 9 s. Total—14 m. 2 s.

Posting and relief of sentries. Time taken out only when the relief was not at attention. The figures: 11 m. 37 s.; 2 m. 4 s.; 24 m. 30 s. Total—38 m. 11 s.

Return march from the drill grounds, with packs. and made without a halt. The figures: 24 m. 7 s.

March to and from signal practise, without packs. The figures: 3 m. 8 s.; 5 m. (including assembling at "Fall in.") Total—8 m. 8 s.

Physical ("Setting up") drill, fairly severe while it lasts. The figures: Arms bending and stretching, rising on toes, etc., but in the main upper body work, 35 s.; 27 s.; 25 s.; 19 s. Exercize for the legs, 14 s.; 17 s. Breathing, at same time raising body and spreading arms, 34 s.; 41 s. "Straddle" exercizes, body leaving the ground; violent motion for the whole body, 13 s.; 14 s.; 9 s. Body bending, 11 s.; 14 s.; 10 s. Kicking hand, knees stiff, 22 s. Full bend legs, 8 s. Full bend legs and rocking, 7 s. Abdominal (on back), 13 s. Full length, legs raising, 19 s. Body raising and lowering, 9 s. From back to sitting, to attention, 3 s. Leap frog, advance, 32 s. Leap frog, retire, 53 s. Total—7 m. 29 s.

Mess marching, assembling, and school call. The figures: 3 m. 20 s.; 2 m. 56 s.; 4 m. 32 s.; 1 m. 19 s.; 3 m.; 3 m. 40 s. Total—14 m. 47 s.

RECAPITULATION

	M.	S.
March to drill ground	11	12

An Advertisement by
THE PULLMAN COMPANY

Courtesy. In the introduction to the book of instruction for Pullman employes occurs the phrase: "The most important feature to be observed at all times is to satisfy and please passengers," and again, "the reputation of the service depends as much upon the efficiency of employes as upon the facilities provided by the Company for the comfort of its patrons."

Such personal service cannot be instantly developed; it can be achieved only through years of experience and the close personal study of the wide range of requirements of twenty-six million passengers.

To retain in the Pullman service experienced car employes of high personal qualifications, pensions are provided for the years that follow their retirement from active service, provision is afforded for sick relief assistance and increases in pay are given at regular intervals with respect to the number of years of continuous and satisfactory employment.

A further inducement in which civility and courtesy are counted of great importance, is the award of an extra month's pay each year for an unblemished record. As a result, a large percentage of Pullman conductors and porters are qualified by many years of experience to render passengers the highest type of personal service.

Organization for Efficiency

Organization for Efficiency consists in the proper choice of human material and working equipment.

Edward Earle Purinton, Director of The Independent Efficiency Service, tells you how to pick men.

The Plan and Purchase Department tells you what equipment to install, where to buy it and how to use it.

Independent Opinions

While some of our readers object to our "militancy" and our condemnation of the non-resistant, others protest against the publication of any pacifist articles nowadays:

Having in mind the fact that I have been for a long time an appreciative and loyal subscriber to The Independent and that my father was also a subscriber for a much longer period, I am reluctant to express any dissent respecting the conduct of this valuable journal. But a certain matter has stirred me to decided protest. I refer to an article by Dr. Jefferson in the number of May 26, entitled "What Must We Do?" I am surprized that such an article should have been published by The Independent without at least an editorial note of dissent.

I have had a pleasant acquaintance with Dr. Jefferson for many years: have been associated with him in the membership of several clubs, and I have admired him for well-recognized abilities and large usefulness, but I have been utterly unable to approve of his extreme and as it has seemed to me unreasonable pacifism. The article referred to seems to indicate the spirit of a disappointed man, who is determined to attempt justification of an extreme type of pacifism. He says:

"What must a man do who believes that there can be such a thing as a righteous war, but that this one is unrighteous; that war under certain circumstances can be justified, but that our entrance into this particular war is a lamentable and awful blunder?

"What, then must a man do who is convinced that his country has adopted the stupidest and costliest of all possible courses?"

Can it be that The Independent really desires to be used for that sort of thing in this crisis of our national life? Such words are liable to be regarded by some loyal persons as treasonable utterances in this time of national stress. Doubtless it would give encouragement to the enemy to know that a distinguished Christian leader in America holds or is responsible for publishing such views of our decision to enter the war. Will not such utterances, to use Dr. Jefferson's own language tend to "introduce confusion into the counsels of the nation, and help to break down the sovereignty which the Constitution has prescribed?"

Dr. Jefferson appears to divide all our citizens into two classes pacifists and militarists. No doubt we would feel compelled to admit that the overwhelming majority are militarists, as they approve of our choice of war at this time. He tells us that "a militarist is a man who believes that war is a good thing and that without it nations would stagnate and rot." But to attempt to make out that the loyal citizens of this republic who approve of the action of Congress in declaring war are militarists as described by Dr. Jefferson is as ridiculous as it is untrue. In Dr. Jefferson's view President Wilson must be our arch militarist who led the way to adopting "the stupidest and costliest of all possible courses."

GEORGE E. HALL.
Pasadena, California

It would be impossible for us to keep to our principles of "printing all sides" if we suppress all articles with which we did not

agree; nor is it always possible to explain wherein our own views differ from those of our contributors. But our readers will agree that whenever we do express our own opinions we do so in sufficiently plain and emphatic language. The publication of any article in The Independent simply means that we regard it as worth reading. That certainly applies to the views of such a distinguished divine as the Rev. Dr. Jefferson of the Broadway Tabernacle, or of such an eminent philosopher as the Hon. Bertrand Russell, formerly of Cambridge University.

I read with mingled amazement and regret an editorial in your issue of January 8 in which you express sedate indignation over the restraint put upon Bertrand Russell by the British Government. I read the article once; rubbed my eyes and read it again.

Your quotations from Mr. Russell's "Syllabus" indicate that he has an inflammatory conscience and a disposition to regard disagreement and rebellion as the highest human impulses. In spite of his splendid intellectual attainments he seems to be an English Copperhead.

The climax of your editorial, however, is the letter which you say Russell "smuggled over" to President Wilson. This extraordinary letter commences with the statement that a victory for the Allies is now impossible. He also states that the Allies lack the courage to admit that victory is impossible.

Then this latter-day patriot, after a series of pacifist platitudes, bluntly informs the President that it is his moral duty to force peace upon the governments involved in the struggle. In other words he urges the President to force an inconclusive peace, a peace that would leave Germany the virtual dictator of Europe.

In the course of this letter he says "The liberties which our ancestors won after centuries of struggle were sacrificed in a day." What sense do you wring from such a preposterous statement? Does he mean that fighting for liberty was a virtue in the past and a crime today?

Do you think that the smuggling of that letter to President Wilson against the wishes of his Government was the act of a patriotic and honorable citizen of Great Britain?

Believe me, Mr. Editor, I ask these questions more in sorrow than in anger and with the greatest respect. Usually your ideas of right and wrong are mine but I am so old-fashioned in my emotions that I am unable, without further light, to accept your glowing appreciation of the Hon. Bertrand Russell.

LEVIN J. CHASE.

Concord, New Hampshire

We must remind our indignant correspondent that we did not express any approval of all that Bertrand Russell has said, nor do we know of any one who agrees with him altogether. We do not question the necessity of the censorship or military discipline, and you may be quite right in thinking that Bertrand Russell's conduct is unpatriotic. We still believe, however, that it would have been much better policy to have let him have his say than to have attempted to suppress him as the Government has done. As for his statement that victory for the Allies is impossible, time alone can tell whether he was right or wrong but manifestly recent events have shown that victory will be more difficult than it was commonly supposed to be when his letter to President Wilson was written.

It was worth while to publish Mr. Russell's article if for no other reason than that it called forth so good a reply as the following:

When Germany made the drive for Paris, what would have been the result had the French and Belgians remained at home

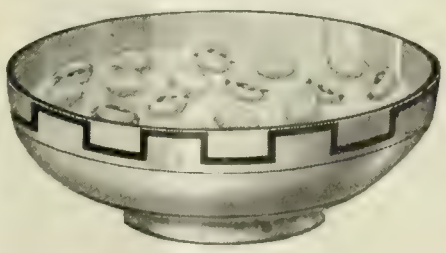
The Food That Seems Made For July

Were you asked to picture an ideal food for July—
It would be a whole-grain food—
A dish that's ever-ready—
A delightful dainty—
A food easy to digest.
And that would be Puffed Wheat or Puffed Rice.

Airy Whole-Grain Bubbles

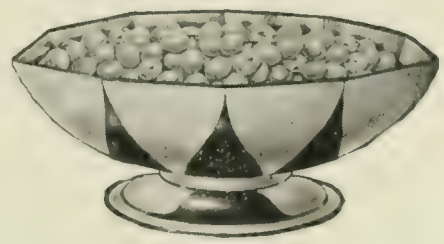
Here are bubbles of grain—thin, flimsy, toasted—puffed to eight times normal size.

They crush at a touch, and in melting away yield a fascinating flavor.



Every food cell is exploded, under Prof. Anderson's process. Digestion is easy and complete. Every atom feeds.

They are food confections, eaten all day long—not mere breakfast dainties. Mix with fruit, eat them dry, serve in every bowl of milk.



Every serving brings a whole-grain food of which folks get too little. And in a form where every granule counts.

These are the perfect grain foods, where the whole grain is fitted to wholly digest. And children revel in them. Keep plenty on hand in summer.

under Mr. Russell's doctrine of no military service and had sent a polite note of remonstrance to the Kaiser asking him to withdraw his armies because the men of France and Belgium would not resort to arms to protect home or country? Or, allowing that France and Belgium did fight, suppose England had said it would furnish no aid even tho Turkey joined Germany, and would not even protect its own commerce and citizens by force of arms—what then? No man understanding the German point of view and the ways of the unspeakable Turk can for a moment doubt the general result. Would it have been a stride toward peace and individual conscience?

A man who really needs his country, must live there, and really suffers with it, who realizes the cost of the safety in which he dwells, is an Englishman, German, etc., believing he has a right to his country just as the German has a right to his. To a man nationally unsexed, so to speak, by the very peace and luxury of the country that bore him, these homely truths mean little because he really has no country and can live anywhere he pleases. He should be transported as a pauper to Turkey or Armenia where he could work out a sure cure for an ennervated mind.

The vital weakness, I might almost say crime in the doctrine of individual right to refuse military and subsidiary service when a state of war actually exists and the citizens of a country are calling for help thru its medium of government, is here: It is the assertion that no citizen should be obliged to serve his country when he says his conscience objects; that he can enjoy the labor of his neighbors but need not share the suffering in helping them gain what profits him as well as them. This spells ruin of national life. Deborah cursed the people of Meroz who would take no part in the battle but profited by the defeat of the enemy just as those who had stood the sweat and blood of battle.

RAYMOND A. FOWLES.

Bolton, Connecticut

* *

In our issue of May 5 we exprest the fear that the break of the United States with Turkey would shut off the aid that Americans have been able to extend to the distrest peoples of Asia Minor. The following letter from the American Committee for Armenian and Syrian Relief is somewhat reassuring on this point:

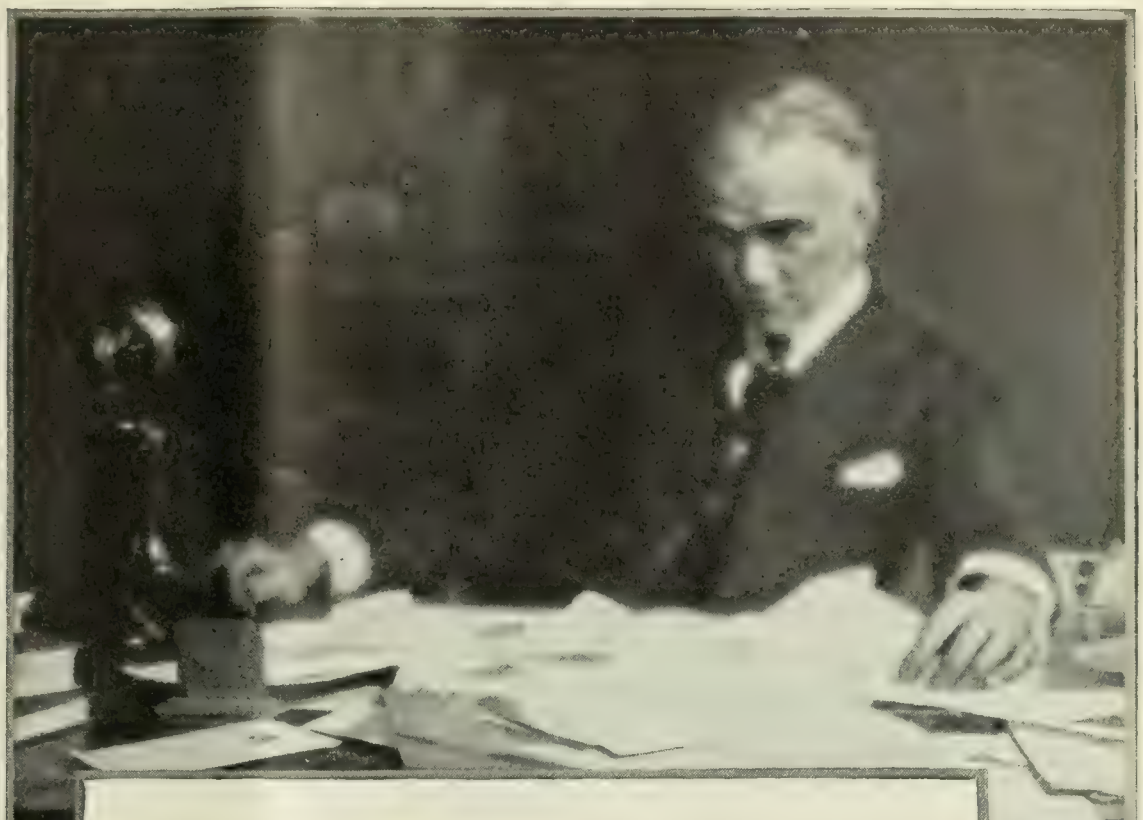
Two fields of need in Western Asia are under consideration. First, that within the Turkish Empire, and, second, that to which refugees from Turkey have fled.

The latter comprizes the Caucasus, Mesopotamia, Egypt, and the region about Salonika. In these, thanks to the Allies, the distribution of aid is not only unhampered, but encouraged and assisted. There are more needy people in the regions named than can possibly be provided for out of the funds coming into the treasury of the American Committee for Armenian and Syrian Relief. There is every reason, therefore, to urge people to continue their beneficence.

So far as the Empire of Turkey is concerned, confidential advices just received from Constantinople of unquestioned reliability assure us that the work of distribution is actually proceeding within that Empire. Even if war should be declared between Turkey and the United States and all Americans should leave Turkey, neutral agents will continue the work. As a matter of fact, however, many Americans are electing to remain. From many sources, the word comes that thousands of people in Turkey and the officials as a rule are kindly disposed toward the Americans and the work they are trying to do. A recent letter from a high authority states that Turkish officials have assured Mr. Elkus that there will be no declaration of war by Turkey.

FRED P. HAGGARD.

New York City



THE NEW BOOKS

WE AND THE WORLD

Readers of Mr. Weyl's latest book, *American World Policies*, will easily believe that he threw his whole heart and mind into it, and they will all in divers ways be well repaid for reading and even rereading it. It is full of information, readily used, full of striking passages, often brilliant, sometimes aggravating. We have as a nation been rapidly educated in world politics, and there is more education in store for us no doubt. Positive views are plenty as to what we can and should do to save ourselves and maybe save the world. Many readers will therefore differ from Mr. Weyl as to his premises, his facts and his conclusions, but all may thank him for the rousing quality of his writing. He finds America in two great camps, one wishing the nation to become a military and naval power impossible of conquest, the other believing with him that by international agreements war may be prevented. War, imperialism, industrial rivalry and concentration of economic power and capital are his chief topics. War he considers the result of economic struggles and ambition: imperialism he looks on as the fruit of expanding or hampered industries; industrial rivalry is the natural result of increased production which has made home markets narrow and created competition for world markets; the concentration of economic power fosters ambition and spurs the individual to spur the nation to trade competition with other nations even to the extent of war. All of which means that Mr. Weyl considers bad economics the supreme cause of international troubles.

Everybody will agree that war affects economics, but not that all wars are economic. To say that would be to say that patriotism is a mask for business. Again, would we all agree that "War has outgrown the fighting instinct and has become deliberate, businesslike and scientific?" But think a moment, has not every war been as scientific as its era? Mr. Weyl looks on the Civil War as economic, and even finds some large economic roots in the crusades. Imperialism certainly has a use for economics, but is imperialism nothing but economics? In short, is economics an element or is it a compound, an all including compound? The great conflagration that we are part of, does it not engulf practically all human interest and are not all human motives active in it? No one cause can account for everything in it and no single theory is wide enough to comprehend it all.

Industrial rivalry among nations surely comes whenever home markets are exhausted. And here Mr. Weyl finds the germ of war, and not here only, but in the industrial invasion, by which, thru underselling, even at a sacrifice, one nation kills the home market of another for some particular product, as when Germany, selling iron girders at home for 130 marks a ton, sells them in Italy for 75 marks a ton, or in England for 103 marks. This is commercial war, and verges to war absolute. Conces-

"I was nervously bankrupt—my last scintilla of nerve force expended!"

Offers courses for A. B. and A. M. Four laboratories, library, observatory, gymnasium, swimming pool. Liberal endowment makes possible very moderate charges. Officers and instructors, 60. Students from 35 states and countries. Address

WILLIAM A. WEBB, Pres., Box 46

sions in backward countries have the same trend.

Altho Dr. Weyl is strongly opposed to the methods of national expansion and trade rivalry yet he recognizes what most anti-imperialists ignore, the growing dependence of the temperate zones on the tropics and the necessity of developing, in some way or other, the backward nations and neglected areas of the world. His analysis of the fundamental forces that drive all progressive countries, however reluctant, into a colonial policy, shows a masterly grasp of statistics and keen insight into causes of historic movements.

In this commercial expansion, Mr. Weyl finds that the few, not the many, are benefitted; the rich grow richer and the poor continue to be poor and continue to wonder. Where this is the fact no doubt the individual will plot and strive to swing his nation to his interest. But would matters me different if individual wealth were limited? Would a great committee-managed, coöperative concern, neglect so clear a road to increase of market and of products for its members, or would a Socialist nation confine its activity to home markets and normal competition abroad? Or, if the nation were the manufacturer, would it not do much as its citizen corporations do now? Mr. Weyl seems to think not, but that an equalization of wealth would do away with competition and vicious individual ambition and that international agreements would do the rest. Here we think is the weakness of his book. By keeping his eye on the evils that he finds in great individual wealth, he passes too lightly by the ideals of mankind and nations. Patriotism, religion, custom, tradition, national pride, national hate, freedom, and finally, home, as each pictures it to himself—all these things exist. These, quite as much as economics, rouse the people, rich and poor alike. They are not cursory interests to most people, and most people are willing finally to defend by arms any assault upon them.

In the great maze of greed and conflicting policies Mr. Weyl finds a thread of justice and humanity and sense most clearly defined in the attitude of the United States toward Cuba, the Philippines, Mexico and Danish West Indies. The willingness to pay, to aid, and to refrain, a desire to be just and safe and helpful at the same time; despite details that we differ about, herein is our example to the world and our greatest power in it. Following this golden thread he finds these American policies and examples broaden and strengthen into full recognition by the world of war-wearied and war-horrified nations. While he fears the Monroe Doctrine, for it may be used in a guardian sense or in a conquering sense, he would have it in its best interpretation extended over all weaker or backward countries and embraced in concert by the great powers. All weaker nations could not be treated alike, but the concert of nations could protect all by preserving peace and compelling just trade opportunities with all and to all.

The accepted cures for war—treaties, arbitrations and alliances, cures that have failed, not always, but at times, go rather, says Mr. Weyl, to the cure of war than to the prevention and removal of causes of war. The proposed Anglo-Saxon Alliance would fail because it lacks the faith of the non-Anglo-Saxon nations; the Socialists have failed because they ignored the national interest in war; an almost universal desire for peace exists but there is lacking the knowledge and insight to direct it. Given this desire we must have the moral strength and unselfish sense of honor to drive it thru and hold it. Force is needed to compel peace, the force of a

league of nations and with that he would use a financial boycott and trade ostracism or isolation. These might injure some of the compelling powers who should be in some way recompensed for their losses. That is one of the problems of the League to Enforce Peace which shall formulate international polity including the freedom of the seas, blockade, contraband and trade laws. Peace, he says, cannot be negative—a mere abstention from war; it must be dynamic. For the great result he looks to America, at the settlement of the war, to give the key to progress and peace, and to advise or introduce a policy of internationalism which will bind the nations in mutual interest, and hasten the peaceful economic and political integration of the world. Whatever may be thought the practicality of the international imperialism he favors as a substitute for national imperialism all will agree that Dr. Weyl has written one of the most stimulating and enlightening books on our foreign policy that has been published during the war.

American World Policies, by W. E. Weyl. The Macmillan Company. $2.25.

A SCHOLAR AND A POET

A good sonnet sequence is always an intellectual achievement and fair critics will agree that George Edward Woodberry's sonnets on *Ideal Passion* are well wrought out, altho his diction is as remote from our modern poetry as his thought is remote from modern thought. These are sonnets of love so sublimated that it retains little of its warm humanity; so detached from the usual personal and racial meanings as to be mystical and austere. Mr. Woodberry's readers will of necessity, be kindred spirits to whom this type of idealism makes an appeal.

These and others will be attracted by a scholar's presentation of a scholarly character as given in *George Edward Woodberry—A Study of His Poetry*, by Louis V. Ledoux. This is an interesting biographical essay on this great modern New Englander, on the influences that have governed him and made his poetry what it is, thoughtful, philosophical, cultivated and also very acutely felt. The book includes a good bibliography of all of Mr. Woodberry's writings.

Ideal Passion Sonnets, by G. E. Woodberry. W. B. Symmes, 55 Liberty Street, New York. $1.50. *George Edward Woodberry*, by Louis V. Ledoux. The Poetry Review Company, Cambridge, Mass. $1.50.

GREAT BRITAIN TODAY

Arthur Gleason's account of affairs. *Inside the British Isles*, contains uncommonly keen analyses of certain aspects of the national characteristics there to be found. Thus, his grasp on the Irish problem in relation to the gulf of feeling and sentiment separating the Irish from the English people goes true to the very bone of the difficulty. His conviction that the mass of the English people are intensely English is a fact much overlooked of late by those so called leaders of intellectual thought, coquetting with French, Russian and what not foreign ideals. He contradicts the assumption of such leadership by another truism—the English people insist not only upon individual thinking, but upon stating their individual opinions wherever and whenever they feel inclined. The English are the most stubborn people on earth, not to be drilled to work German fashion, but only by convincing them that a task is worth while, for nothing will eradicate from their nature the play or sporting instinct. Democratic the English people are, but Mr. Gleason does not seem to have quite grasped the foundations of their democracy. Certain

Nujol the Internal Cleanser

Keep Fit—for Your Country

In this world crisis it is your duty, above everything else, to keep yourself in good condition. You can't serve your country in any capacity if you allow your health to run down.

The Nujol treatment will make *you* a national asset—not a liability. Take a little Nujol upon rising and retiring and it will remove waste matters and poisons (intestinal toxins) from your system, and keep your habits regular as clock work.

Nujol is not habit forming. (The longer you take it, the less you need it.) No griping, straining, upset stomach or weakening.

Nujol is absolutely pure and harmless, and is pleasant to take. Even the infant will enjoy it, and it will do as much for him as it does for his mother.

Nujol is sold in pint bottles only, bearing Nujol trademark, never in bulk.

Nujol is absolutely distinctive and individual. There is no other product on the market like it.

individual rights of home, certain traditional interests in common they interit from a long past. An attempt to subvert one of these rights will line up lords and commons, conservatives and radicals, to present a united front against inside or outside enemy. English history proves this with a vengeance.

Mr. Gleason puts the English people, together with the French and Americans, in the agnostic class, an extreme and possibly partizan view. If the churches have lost their hold (we note Mr. Lloyd George, a democrat in every fiber of him, preaches in a Baptist chapel), that is mainly the fault of the churches. It does not mean that the English have abandoned spiritual faith, but rather they are seeking some new revelation of it. More surely than any other writer, H. G. Wells is today speaking with the real voice of the English people, tho, as Mr. Gleason thinks, he may have lost his former narrower following. In summary, the book champions democratic control, and a closer union between the United States and the British Empire. But nowhere does Mr. Gleason mention Scotland, as a nation of his British Isles, and we're thinking he is likely to be reminded by some of his readers from North o' the Tweed that Scotland is a mighty important unit of the British Empire.

Inside the British Isles, by Arthur Gleason. The Century Company. $2.

A PLEASANT SPORT

An uncommonly attractive book is Frances Duncan's *Joyous Art of Gardening.* The spirit of the advice and running comment and of the quaint and charming pictures is given in a chapter title, Comfort in a Garden. There are words of warning as to pergolas, and a program for the conquest of the back fence, besides homage, too little paid nowadays, to the old-fashioned arbor and trellis.

How to set and prune trees, how to deal with the cold frame and the compost heap, come in for attention. Hardy borders are planned for sunny yards and shady and for northern exposure. Annuals and perennials and roses get their due. But the feature of the book is its treatment of details often overlooked or mistreated, and its emphasis on the unpretentious, restful qualities that lie within the compass of any plot, be it small or large.

The Joyous Art of Gardening, by Frances Duncan. Charles Scribner's Sons. $1.75.

UNTERMEYER AND HEINE

There are two usual ways of translating poetry from any language into any other: the translator may be very exact and literal, backing himself with a dictionary and the sublime confidence that his sole mission is to make his readers eager to turn to the original; or he may produce poems which were simply suggested, not written by the author he is endeavoring to transcribe. Sometimes a translator hits a happy medium. Louis Untermeyer's *Poems of Heinrich Heine* is one of the times. In the first place Mr. Untermeyer is a poet, in the second place he really understands German, which is something more than being able to translate it, and in the third place he very much admires Heine—and understands him, a fact which is evidenced not only by the translations but by the keen and illuminating preface. Heine's exquisite sentiment, his bitterness, his sudden turns of irony and scarcasm are sympathetically reproduced in the English versions. They hold closely to the rhythm and rime scheme of the originals, tho of course no translation can give the sounding beauty of the German, and occasionally the English is

forced a trifle to convey what the translator conceived to be Heine's exact meaning.

The book will give to those who do not read German a real knowledge of a great poet: it will please those who do read German because it is a true and faithful rendering; and it will take its place as something more than a translation, because, thanks to the introduction and the choice and arrangement of the poems it is an interpretative and critical essay.

Poems of Heinrich Heine. Translated by Louis Untermeyer. Henry Holt & Co. $2.

COMMUNITY QUESTIONS

Of the five stirring addresses that make Dr. George A. Gordon's *Appeal of the Nation*, all are worth reading, but that on our foreign-born citizens preaches an understanding sympathy that it were well if all native Americans could feel. (The Pilgrim Press, Boston, 75 cents.

Professor Laughlin founds his philosophy of *Latter Day Problems* on the bedrock of individual character, but he seems to ignore the compound interest rate at which power of any sort increases. His new edition has added chapters on capital, social discontent, monopoly of labor, economic liberty. (Charles Scribner's Sons, $1.50.)

The Barbara Weinstock lectureship of the University of California was held last year by Stanton Coit, whose study of social conditions and of the contrast between the accepted methods of "Monopolized Force" and the ideals of freedom and of justice is published under the striking caption *Is Civilization a Disease.* (Houghton, Mifflin Company, $1.)

Supplementary to Dr. Slingerland's "Child Welfare Work in Pennsylvania," comes a *Child Welfare Symposium*—twenty-five papers on various aspects of the problem. The papers are of unequal value, but all throw light on the dependent or neglected child, and upon the philosophy and the machinery built up for dealing with him. (New York: Russell Sage Foundation, 25 and 60 cents.)

A convenient manual of *Community Center Activities* has been compiled by Clarence A. Perry after general suggestions as to methods and personnel there is a classification of activities according to rooms or spaces available, with descriptions of activities for occasions and sample programs. This should be of constant aid to social workers, teachers and others engaged in community organization. (Russell Sage Foundation, 35 cents.)

The County is the first systematic study we have had of what H. S. Gilbertson calls the "dark continent" of American politics. Scouring the country he finds county misgovernment and corruption to chill one's blood. The political student and worker will find this book truly useful, the more so if he keep in mind how easy it is whenever a bad spot is found in officialdom to assault the governmental system. (National Short Ballot Organization, New York, $2.)

Mary S. Gardner's well considered, thoroly informed treatment of *Public Health Nursing* is inspiring reading. This is a merciful work, everywhere needed. In it the scientific and the human elements must blend equally, and business methods must lie behind sacrifice. One finds here information as to the forms of organization at present in use in this country and abroad. (The Macmillan Company, $1.75.)

For an inspiring record of fearlessness, fair dealing, intelligence and skill one should read *Justice to All*, the story of the Pennsylvania police, by Katherine Mayo. The murder, never punished, of a brave young workman in New York State was the inspiration of the book. One wishes every legislator of every state might read how a small body of honest, courageous trained men have made life safe thruout a wide and often lawless region and roused public spirit and respect for law wherever they are known. When every state has such a force there will be an end

THE GROWTH OF MY BUSINESS
PROVES
THE QUALITY OF MY CIGAR

Exact Size

Just about four years ago I started selling my J. R. W. cigar. At the end of the first year I was selling approximately 90,000 cigars. Today I am selling over 2,000,000.

When you consider that each one of my cigars is smoked in a super-critical manner the real merit of my J. R. W. is proven. It is a mild, mellow smoke that delights all who try it.

A Real Value

My J. R. W. cigar is a 10c cigar that you are getting for 5c. It is an exceptional cigar value.

I am able to offer it to you at the price I do simply because I eliminate all intermediate profits. The cigar goes direct from me to you. There are no salesmen's profits, no store upkeep, no dealer's profits. You pay for nothing but straight tobacco goodness.

My Offer

Don't trust my taste or the taste of thousands of J. R. W. smokers. Convince yourself first that the J. R. W. is *your* cigar.

Simply send me 10c to partially cover packing, revenue and postage and I will send you my cigar to try. After you have smoked the first five and you like them, send me your check for $2.60 for the full fifty, otherwise they have cost you nothing. Write for this delightful smoke today.

to the stories that now disgrace our papers of onslaughts on negroes and other races and other outbreaks of mob spirit. (G. P. Putnam's Sons, $2.50.)

Two of the special industrial studies of the Cleveland Survey were made by Edna Bryner. In *Dressmaking and Millinery* the conditions in these industries are described from the economic as well as from the working point of view and the provisions for training for these trades are examined as to their adequacy. Recommendations as to school work in sewing are of general interest. In the volume on *The Garment Industry* similar problems are considered for the clothing trade. (Russell Sage Foundation 25 cents each.)

THE GREAT WAR

The *International Military Digest Annual* is a compilation under convenient headings of extracts from current magazines and books, making accessible a mass of up to date information on all sorts of topics related to the war. (Cumulative Digest Corporation, $2.)

We live in France as we read Helen MacKay's *Journal of Small Things*. Unconnected daily happenings are set down in sketches of a page or two in length. They are infinitely sad, but they are beautiful and written with delicacy, simplicity and faithfulness. (Duffield & Co., $1.35.)

Six papers by President Wilson, beginning with the message of January 22 to the Senate on the League to Enforce Peace and ending with the message to the American people after the declaration of a state of war, are reprinted in a handy little book entitled *Why We Are at War*. (Harper and Brothers, 50 cents.)

International Realities, by Professor Brown, of Princeton, sets forth the practical possibilities of International Law. It is no dispassionate study as proved by such headings as Ignominious Neutrality and Dangers of Pacificism, but in pointing out the tasks immediately practical, especially in relation to South America, it is suggestive and inspiring. (Charles Scribner's Sons, $1.40.)

Pacifism, as the keynote of the church of tomorrow, is *The Challenge* which Rev. Frederick Lynch throws down to the Christian world. In an effective way he sets forth the doctrine as the logical outcome of the teachings of Jesus. Unless this message is fearlessly proclaimed by the church, the author believes that Europe will turn elsewhere for spiritual guidance at the close of the great war. (F. H. Revell & Co., $1.25.)

The whole series of papers collected under the title *The Wars of Democracy* is of value to American readers. These give the views of Lord Bryce, Mr. Asquith, Professor Murray, Lloyd-George and others, Belgian, French, English, on topics uppermost in all minds. But of especial interest to us today are the two on the Battle of Jutland and the Freedom of the Seas, by Arthur J. Balfour. (Doubleday, Page & Co., $2.)

A History of the Great War, by Sir Arthur Conan Doyle, carries us from the "Breaking of Peace" to the "Winter Lull of 1914." As a painstaking record of facts the author has produced a valuable contribution to this period of the war. If neither in style nor descriptive power a great historical work, it will suffice for those who prefer their literature served after the manner of a quick lunch counter. The work treats mainly, tho not wholly, of events within the British sphere of operations. (G. H. Doran Company, $2.)

As Count Charles de Souza tells us in *Germany in Defeat*, the Germans were beaten down and out at the Marne. He is angry with those "Allied chroniclers" who "fell in with the view of the Wolff Bureau" in asserting that the Germans had considerable fight in them left. The Allies could have smashed the Germans all to smithereens then and there, only they preferred to play the slower and less costly game of "advanced positions." Count Souza knows, too, all about the psychological errors made by the Russian commanders. (E. P. Dutton & Co., $2.)

The Immediate Causes of the Great War, as shown in the diplomatic correspondence, has been set forth with fairness by Oliver Percy Chitwood. The treatment is brief, clear and readable, and the reader is left to judge for himself on the facts presented, as to the blame due the different parties to the conflict. (Thomas Y. Crowell Company, $1.35.)

A. D. McLaren, an Australian who had lived seven years in Germany, gives us in *Germanism from Within* careful studies of various phases of German social and political thought. Far indeed from any shade of pro-Germanism, he yet believes some elements in the German nature are misconstrued. For example, even the severe Prussian is not a pure materialist. Of this the universal German devotion to the Christmas festival is evidence. (E. P. Dutton & Co., $3.)

Tho *Grapes of Wrath*, by Boyd Cable, is written in fiction form. The author's soldier record places it upon the level of an accurate description of scenes and emotions which any soldier of the present war would recognize. The story is true to war in the purely fortuitous part of life or death on a modern battlefield. Any certainty, even probability, is entirely out of reckoning. It is when Mr. Cable's characters go Over the Top that he gives us a series of powerfully written pictures. (E. P. Dutton & Co., $1.50.)

BUSINESS

An authoritative, technical study of the *Financial Administration of Great Britain*, the country of the best budget system in the world, has been prepared by Professors Lindsay, W. F. Willoughby and W. W. Willoughby, for the Institute for Government Research. (D. Appleton & Co., $2.75.)

Henry Foster Adams approaches *Advertising and Its Mental Laws* from the standpoint of the mental effect an advertisement has as a sales factor. The theoretical and the practical sides of advertising are both considered and the features that make for efficiency in advertising. Much valuable experimental data is included. (The Macmillan Company, $1.50.)

The Farm Mortgage Handbook, by Kingman Nott Robins, describes the best practises of those institutions serving in the field of rural credit before the passage of the Rural Credits Act. The book is valuable to the investor desiring to invest in farm mortgages but gives no information about the operation of the Rural Credits Act. (Doubleday, Page & Co., $1.25.)

Edwin Walter Kemmerer has devoted years of study to modern currency problems. His most recent book, *Modern Currency Reforms*, contains a series of five essays dealing with the currency problems of India, Porto Rico, the Philippines, the Straits Settlements and Mexico. To the advanced student this work offers stores of information and carefully developed theory. (The Macmillan Company, $2.40.)

Ernest A. Dench, in his volume on *Advertising by Motion Pictures*, deals with a new publicity medium. Despite a curious belief in the values of slang as a medium for imparting information and ideas, the subject is comprehensively and authoritatively treated. The author points out some of the utilities of such advertising and outlines its wide application. Data as to cost are added. (The Standard Publishing Company Cincinnati, $1.50.)

How to Advertise, by George French, considers a theme that is interesting, both academically and practically. Of course the advertiser is vitally concerned with anything that saves waste and makes for efficiency. Mr. French frankly confesses that no infallible formula has yet been devised, but what he says of advertising as a business force is both authoritative and helpful. The citation of concrete examples, good and bad, increases the book's value. (Doubleday, Page & Co., $2.)

WAR TRADES

EXPERIENCE has taught England that certain lines of business are essential in war as in peace, or even more important. They are called War Trades. Is your business on this list?

You can help the Nation in no more practical way than by conducting your business skilfully, economically, efficiently—by studying conditions and by carefully planning ahead.

You should know what appliances are best fitted to save time, labor, supplies and material in your office or your factory; and your knowledge on these points should be exact. In War Trades there is no room for guesswork.

You can stop waste by using efficient methods. You can get the utmost out of your business at the lowest cost by installing the proper machines and labor saving systems. It is a problem of fitting the system to your business.

If you are anxious to solve this problem with a minimum expenditure of your own time and effort, consult The Independent's Plan and Purchase Department of Business Equipment.

The advice of our expert counsellors and the exact information of our complete files are at your service.

Whether you want a factory conveyor system or a double-action paper clip, whether your needs are simple or intricate, our Plan and Purchase Department will tell you—without charge—how to meet them.

We have many acknowledgments of help given to managers thruout the country. Can we help you?

Write for our Business Equipment check list. The coupon below will bring it by return mail.

THE WORK OF THE TRUST COMPANY

BY LUIGI CRISCUOLO

THE most obvious function of a trust company—banking is apt to obscure the many other facilities it has to offer the public. A trust company is organized under the laws of the state wherein it is located and is subject to the supervision of the banking department of that state. This supervision is usually very stringent, but it is supplemented by careful scrutiny on the part of the company's board of directors and, in the case of trust companies located in the large financial centers, by the local clearing house association.

Trust companies are organized for profit and issue shares of stock having a specified par value, upon which dividends are paid when earned and declared. As in any corporation, the stockholders are the partners and elect a board of directors to manage the company's affairs, who in turn appoint officers to do the greater part of the actual detail work. Directors are usually men of prominence in the community, representing the various industries and professions.

The trust company does an ordinary banking business, receiving deposits subject to check, etc., but in all cases also has what is known as a *trust department;* the company acts as fiscal agent for corporations, has a safe deposit department where valuables and securities may be kept, a reorganization department which attends to the details of corporations undergoing financial reorganization or readjustment, a foreign department, a real estate and property management department, etc.

A trained specialist is at the head of each department, so that a person availing himself of the services of a trust company, particularly in the larger cities, can feel that he has employed the best talent that is procurable. With all of these facilities in one organization, the trust company is able to offer its depositors valuable advice in all matters pertaining to finance, investments, real estate, trusts, etc.

BANKING

THE purely banking function of the trust company consists of receiving deposits subject to withdrawal by check; issuance of interest-bearing certificates of deposit; domestic and foreign drafts and letters of credit; lending of money on promissory notes which are either secured by deposit of appropriate collateral or endorsed by persons who are known to be financially responsible, etc. Interest may be, or may not be, paid upon deposits subject to check, depending upon the size of the account or the arrangement made when the account is opened. Trust companies in the large cities pay from two to three per cent interest, while in smaller centers three and one-half or better is often paid. In the large trust companies in financial centers, however, interest is only paid on balances of five hundred or one thousand dollars or more.

Aside from the accounts of individuals and business men, trust companies handle the accounts of large corporations, institutions, municipalities and states, and are depositaries for funds of the United States Government and foreign governments. In this manner large sums of money that are not immediately needed by such depositors are available for the requirements of business men. An account with a trust company is an opening wedge for a depositor to secure the confidence and advice of men who are trained in many branches of business which should be of particular value to young men who are just starting a career. Trust companies welcome the accounts of young and ambitious business men, however small the amount may be. A New York City trust company official told me not long ago that the account of one young business man had grown in a few years from a few hundred dollars to over twenty-five thousand dollars. While the account of a few hundred dollars was not carried at a profit, it paid in the long run to accept it, as it soon grew to profitable proportions.

PERSONAL TRUSTS

TRUST companies are authorized by the laws of many states to act as trustees in various capacities. A trust company can act as trustee or executor under a will, as custodian of securities held in escrow, as guardian of minors, as depositary under a court order, as trustee under a deed of trust for minors or incompetents, etc. A man makes a will and appoints his best friend his executor. The friend may have sound judgment, or may not have, but he is in any case not a *permanent* agent or trustee, and not always available, for he may become incapacitated thru illness or otherwise and the estate neglected; or he may die, and the courts be required to appoint an administrator who may be totally unknown to the testator.

An individual executor may be prest for funds for personal use and be tempted to use the funds of the estate entrusted to him. He may make investments, in perfectly good faith which may turn out badly; this is particularly likely in cases where the trust allows discretionary powers. A trustee should possess integrity, responsibility, sound judgment, a knowledge of the duties to be performed, and be an experienced man of affairs. But, more important than these, he should be in a position to safeguard his trust *without hindrance or interruption.* This is a physical impossibility in the case of an individual, but it is a possibility in an organization.

A trust company has an organization that has been trained for years—in a rather cold blooded manner, we will say—to deal with matters of this sort. But, if for personal reasons a testator wishes a friend or relative to have an eye over his affairs, and yet prefers that the brunt of the responsibility should be laid upon an organization, he can appoint the trust company as co-trustee along with his friend or relative. This precaution is particularly warranted to relieve a woman executrix of a great deal of routine work of a more or less technical nature, which she could not attend to without legal advice and, incidentally, without considerable added expenditure. The cost of such trusteeships is fixed by statute in many states, and is a small charge considering the service rendered.

CORPORATE TRUSTS

THE trust company acts as fiscal agent for corporations trustee under a mortgage on real property or pledge of securities, depositary for securities of corporations undergoing reorganization, registrar and transfer agent for stocks and bonds, etc.

A large part of the work of the great trust companies in financial centers like New York, Boston, Chicago, St. Louis, etc., consists in acting as fiscal agent for railroad, industrial and public utility corporations and for governments, states and municipalities. In this manner the enormous details incidental to the transfer of stocks and bonds and registration of securities are handled by the trust company under one roof, with a minimum of lost motion, rather than by the individual corporations. The amount of labor saved by corporations of whose shares thousands are sold and transferred each day on the stock exchanges, is enormous.

A large and well-known corporation wishes to borrow money to increase its plant or buy new properties; it executes a first mortgage on its entire property for a million dollars, we will say to a trust company which permits the issuance, against the mortgage, of one thousand coupon bonds of a thousand dollars each. The bonds are sold to the public thru a firm or firms dealing in such securities. The property thus legally belongs to the trustee for the bondholders until all of the bonds have been paid off. The mortgage will contain certain covenants on the part of the corporation to safeguard the interests of the bondholders, such as: prompt payment of principal and interest when due; payment of taxes and assessments, income taxes and fire insurance premiums; maintenance of property, etc. In default of which covenants, the trustee is empowered to seize the property for the benefit of the bondholders and sell it or operate it, as may be deemed best.

REORGANIZATION

TAKE the case of a corporation which must undergo reorganization or financial readjustment of some sort. Previous to the formulation of a plan of reorganization, a group of prominent financial men will form a protective committee for the securities in default or in jeopardy and will request the deposit of securities under the provisions of a deposit agreement. The depositary is usually a well known trust company, an officer of which is also appointed to serve on the protective committee. The trust company issues as depositary, its certificates of deposit for the securities and these certificates of deposit are usually listed on the stock exchange where the original securities were listed. The certificates of deposit are negotiable and pass by delivery, but are in registered form in many cases.

The trust company will also act as the medium for the issuance of new securities, for the lending of money to the reorganization committee pending the payment of subscriptions or assessments by security holders, for the receiving of subscriptions on new securities and assessments on the old ones. In fact it attends to all details of the reorganization plan after it has been passed upon by a legislative or public service board. In the case of large railroad, industrial or public service corporations these details involve a mass of routine work which no individual corporation could attend to without impairing its own organization.

The trust company has a great many facilities to offer the individual business man or woman corporation or firm which the national bank or state bank cannot offer because such services are not provided for in their charters. It is hoped that this article will enlighten the readers of The Independent as to what sort of facilities a trust company has to offer that may be of individual interest to them.

Transportation

"The railways are the arteries of the nation's life."

EVERY business man, manufacturer, farmer, shipper, investor, savings depositor, life insurance holder, is directly concerned in railroad transportation.

The value and importance of the railroads to the entire country in war or peace make their welfare at all times a matter of the greatest consequence.

The questions of efficient regulation and fair compensation are of paramount importance. The public interest demands the maintenance of railroad credit in order to insure service adequate to the needs of commerce and industry.

A better understanding of these questions and cooperation among the many interests involved will help to solve these problems.

We have prepared an analysis of the railroad situation, outlining its problems and their possible solution, which we shall be glad to send upon request.

PEBBLES

A display of flags is not enough. We must win by hard hitting, and not by bunting.—*Brooklyn Eagle.*

"Waiter, bring me $40 worth of ham and eggs."

"We don't serve half-portions, Sir."—*Life.*

Window cleaners are putting up their prices. So we shall have to pay more, not only for our pleasures, but also for our panes.—*London Opinion.*

The Russian people, however, will soon find out that it takes more than a little thing like a revolution to rid the country of grafters.—*Nashville Southern Lumberman.*

"It is indeed hard," said the melancholy gentleman, "to lose one's relatives."

"Hard!" snorted the gentleman of wealth. "Hard! It is impossible!"—*London Passing Show.*

First Subway Director—We may have to provide more seats.

Second Subway Director—Nonsense! Simply have "The Star-Spangled Banner" played on all cars.—*Life.*

"You ought to forgive your enemies."

"I may eventually," replied Senator Sorghum. "But I should like to give them a lesson beforehand, so that they will know my forgiveness is generous and strictly voluntary."—*Washington Star.*

"Why do you consider women superior to men in intelligence?"

"A bald-headed man buys his restorer by the bottle, doesn't he?"

"Er—yes."

"Well, a woman doesn't waste time on a hair-restorer; she buys hair."—*London Passing Show.*

Country Lady—I've been expecting a packet of medicine by post for a week and haven't received it yet.

Post Office Clerk—Yes, madam. Kindly fill in this form and state the nature of your complaint.

Lady—Well, if you must know, it's indigestion.—*Passing Show.*

Mrs. Grummell entered the taxidermist's with a stuffed parrot in her hands.

"Do you remember the bird you stuffed for me last autumn?" she asked. "Well, the work was so badly done that the feathers are simply falling out."

"Ah, madam," said the man, "that is a triumph of art. We stuff our birds so well that they moult at the proper season."

A Philadelphia divine was entertaining a couple of clergymen from New York at dinner. The guests spoke in praise of a sermon their host had delivered the Sunday before.

The host's son was at the table and one of the New York clergymen said to him:

"My lad, what did you think of your father's sermon?"

"I guess it was very good," said the boy, "but there were three mighty fine places where he could have stopped.—*Chicago Herald.*

At a New York recreation center a teacher once noticed a little boy sitting on a bench and holding in his hand a large sandwich consisting of bread, ham and dill pickles. From time to time the little boy would lift up a corner of the top layer of the sandwich, take out a small shred of ham or a minute piece of dill pickle, put it in his mouth, and arrange the sandwich exactly as it had been before. He did this many, many times, until finally, opening the sandwich for another bite, he discovered with evident disappointment that the filling was entirely gone.

"Why don't you eat it, Isadore?" asked the teacher.

Isadore looked up with large, serious eyes and answered, laconically, "'Tain't mine."—*Everybody's.*

What to Read about Greece

Another nation is taking a step toward democracy and lining up against Germany. To see why Greece has been so loth to join the Allies one must understand something of the whole Balkan question and something of the Greek people themselves.

Greeks in America, by Thomas Burgess. (Sherman, French, Boston, $1.35.) There are some 300,000 Greeks come to live in this land. This book deals with matters nearly as important to us as to them—how they fare, what they do, what they think.

Greece of the Hellenes, by L. M. J. Garnett. (Scribner, New York, $1.50.) A comprehensive handbook, dealing with the race, religion, politics, social life, modern literature, as well as the art treasures. Issued just after the Balkan Wars.

Days in Attica, by H. D. Bosanquet. (Macmillan, New York, $2.) A book of travel dealing mainly, and attractively with the ancient treasures of Greece but with much by the way on the country and the islands before 1914.

The Heart of the Balkans, by Demetra Vaka. (Houghton, Mifflin, Boston, $1.50.) Immensely interesting sketches of the different peoples, especially the women, of Albania, Montenegro, Serbia, Bulgaria and Greece, by a Greek woman who knows the Balkans well and her own land thoroly.

Tales of a Greek Island, by J. D. Dragoumis. (Houghton, Mifflin, $1.35.) Charming stories descriptive of life on the island of Crete.

Man of Athens, by J. D. Dragoumis. (Houghton, Mifflin, Boston, $1.50.) An interesting story of social life in modern Greece.

The New Map of Europe, by H. A. Gibbons. (Century, New York, $2.) A most excellent setting forth of the whole Balkan situation with the Greek share in it, during and at the close of the Balkan and Italo-Turkish Wars.

The Balkans, a Laboratory of History, by W. M. Sloane. (Eaton & Mains, New York, $1.50.) A study of the peoples, as well as of the political complications that caused the Balkan War and that had their share in the disasters of the present war and led to the situation in Greece.

Eleftherios Venizelos, Life and Work, by C. Kerofilas. (Dutton, New York, $1.25.) A biography of the great leader of Greece whom one must know if one would know the Greece of the last twenty years.

Greece in Her True Light, by E. Venizelos. (Sakellarios & Xanthaky, 56 West Thirtieth Street, New York, $2.) Addresses and letters by the Greek leader to King Constantine and the people during the war.

ARTICLES. *National Geographic Magazine*, October, 1915 (Greece of Today). *North American Review*, February, 1916 (Greece and the Powers). *Unpopular Review*, April, 1916 (Absolute Democracy). *Century*, March, 1917 (Blundering in Greece). *New York Times Current History*, January, 1917 (Belgium and Greece). *Independent*, October 9, 1916 (Paradox of Greece), May 19, 1917 (Greek Republic). *World's Work*, December, 1915 (Behind the Greek and Bulgarian Scenes). *Outlook*, January 17, 1917 (White Island), December 27, 1916 (Greece, Democracy or Autocracy?). *Review of Reviews*, November, 1916 (Venizelos, the Foremost Greek). *Contemporary Review*, November, 1916 (Civil Strife in Greece). *New Europe*, November 9, 1916 (Absolutism in Greece and Our Treaty Rights).

THE MARKET PLACE
A REVIEW OF FINANCE AND TRADE

INDUSTRIES, CROPS AND STOCKS IN A WAR YEAR

SINCE the beginning of the year, prices of railroad shares have declined, the net losses for those best known in the market ranging between 2 and 15 points. In most cases the downward movement does not appear to have been either accelerated or checked by our declaration of war in the early days of April. On the other hand, the prices of a large majority of the industrial stocks have advanced. For these there were gains before the war declaration, and additions were made after it. Shares of motor companies have been an exception to the rule. In the first months of the year, investors were saying that earnings of the manufacturers had been affected by the steadily increasing cost of their raw material and by delay in the delivery of it. After the nation decided to fight, and when Congress began to provide for the expenses, it was seen that the industry must pay new taxes, and that the burden of general taxation, compelling economy, might cut down sales of cars. While the railroad companies' gross revenue was large, their net earnings did not show a similar increase, owing to the high cost of operation. This was due mainly to the wage additions required by the eight-hour law and the advanced prices of rolling stock. Market values of shares also suffered some depression on account of the continued selling of stocks which had been owned abroad. The shares of steel companies have been very strong, because of the industry's prosperity.

IN the field of production and trade there has been nothing of greater interest than the movement to increase supplies of food and regulate distribution of them. Our wheat crop last year, 640,000,000 bushels, was a small one. About 620,000,000 are required for home consumption. When the Government's report showed that 12,437,000 acres of winter wheat, or nearly one-third of the seeded area, had been lost, and predicted that only 366,000,000 bushels would be harvested in the winter wheat states, the farmers who sow wheat in the spring were urged to increase their acreage. They added only 6 per cent, and the Government now sees a crop, both winter and spring, of only 656,000,000 bushels. Mr. Hoover, chosen for the office of Food Administrator, says our European Allies in the coming year must import 540,000,000 bushels of wheat and 300,000,000 of fodder grain, and expect to obtain the greater part of this quantity in the United States and Canada.

As our supply of wheat on hand will be exhausted, in all probability, at harvest time, and what is needed abroad cannot be exported unless consumption at home is greatly reduced, it is expected by many that control of the wheat crop will be assumed by the Government. The price of wheat at Chicago advanced rapidly from $2 a bushel (April 4) to $3.25, and then trading in futures was forbidden. The advance was due not to speculative manipulation, but chiefly to purchases by European governments. While the daily reported prices for future months are lower than they were some weeks ago, about $3 a bushel must be paid for grain immediately delivered.

Neutral countries in Europe, Norway, Sweden, Denmark, Holland and Switzerland, as well as our Allies in war, need and ask for American wheat, but our Government, using the power granted by recent legislation, may withhold it from them, for two reasons, first, because we may not be able to spare enough to satisfy the wants of our Allies, and, second, because these neutral countries have been, and three of them still are, selling food to Germany.

WHEN it became known that so much winter wheat had been lost, a great planting campaign was begun. Crops of corn, oats, barley and rye will be very large, and for all vegetables there is a very considerable increase of acreage, including an addition of 25 per cent for potatoes. Land heretofore idle, thousands of back yards, and the strips adjoining railroad tracks have been utilized. A shortage of farm labor has drawn into the service a great number of school boys. State governments, railroad companies and local committees have helped the farmers in many ways. In several places a minimum profitable price for the products has been guaranteed by new local corporations. President Wilson recently assured a delegation of farmers that the National Government would save them from loss by such a guarantee. The Department of Agriculture will strive to provide the labor needed in harvest time by means of agents in every country. The new supply of foodstuffs will be abundant but probably not excessive. Exports are very large. The weekly shipments of wheat from this country and Canada have recently been doubled. In the two weeks that ended on the 14th they amounted to 17,037,000 bushels.

Our iron and steel industry had been stimulated and enlarged by the foreign war demand before the United States became a belligerent nation, and now to this demand has been added a new one at home for war material. The industry's output grew to 42,773,000 tons last year, from 32,150,000 in 1915, and only 23,513,000 in 1914. Last year's steel exceeded the same year's output of pig iron by 3,000,000 tons, this quantity of old metal having been used. There was not enough pig iron made in 1916, and the monthly product this year is not sufficient. The shortage accounts for a sharp upward movement in the price of iron during the last few weeks, sales having been made at $53 a ton. Iron of the same kind was sold a year ago for $22.

The development and multiplication of munition factories in England has not relieved the pressure upon our steel mills. Great quantities of crude steel are needed abroad, and it is possible to fill orders from our own railroad companies and those of Italy, France and Russia only after long delay. Russia now asks for 40,000 cars and 2000 locomotives but has placed orders for only one-fourth of this rolling stock. All of it is sorely needed in Russia, and our commission of engineers, now in Petrograd, has urged the manufacturers to supply it promptly. But if the cars and locomotives were ready there would be no ships to carry them across the Pacific, or the 350,000 tons of war material piled up at our Western ports. The demand for ships, caused mainly by the destruction of nearly one-tenth of the world's merchant tonnage, accounts in part for the pressure to which the steel industry is subjected. From many countries there has been a call for the steel plates of which the best ships are made, and now there are added our Government's orders for such material. It is estimated that the Shipping Board's contracts will soon require from 1,200,000 to 1,500,000 tons of plate, as its plans involve the construction of 3,000,000 tons of shipping in eighteen months. Japan wants American ship plates and cannot get them. The old price of such plates has been multiplied by four, and there are orders on hand for delivery a year hence.

It was reported a few weeks ago that our Government might decide to assume control of the steel mills, but no action of that kind will be necessary, for all that is required will be supplied before the orders of other buyers are filled, and large concessions in prices have been made by the manufacturers. Prices to all purchasers except the Government are very high, three or four times those prevailing before the war, and wages have been increased by about 45 per cent in the last year and a half, but the supply of workmen is inadequate, and it will be reduced by the selective draft for military service.

The iron and steel industry was never before so great or so effectively conducted, and those who control it are ready to assist the Government to the best of their ability. This is true of other metal industries. The copper companies sold 45,510,000 pounds of their metal to the Government at half price, and are now supplying 100,000,000 pounds more at 25 cents a pound, or about 7 cents under the market rate. Price concessions have been made by the producers of zinc, aluminum and lead. Brass manufacturers have undertaken to do the Government's work without profit. The equipment, growth and capacity due to the stimulus of a great foreign demand are now at the service of the nation. We are fortunate in the condition and attitude of our great manufacturing industries, as well as in the assurance of large new supplies of foodstuffs.

WOOLEN and cotton mills have been running to the limit of their capacity altho supplies of wool are not easily obtained, and the price of cotton is the highest known in forty years. These industries have received large orders from the Government. Cotton was sold in New York on the 12th at 25¼ cents a pound. A sharp advance was caused by the Government's report, which showed that the condition of the growing plants in the last week of May was only 69.5, the ten years' average having been 79. Cold weather killed the plants in large tracts. According to unofficial estimates, acreage has been reduced by 3½ per cent. But while the cotton crop will not be a large one, the Southern farmers have planted for a considerable increase of grain and vegetables.

Reports of our foreign trade continue to be quite satisfactory. The reduction in February, which was the first month of ruthless submarine warfare, proved to be only temporary, and the totals for March

and April were much larger. Export figures for April showed that shipments from this country in twelve consecutive months has for the first time exceeded $6,000,000,000, the balance in our favor, or the excess of exports over imports, having been about $3,700,000,000. Such trade gains as these help our people to respond promptly when the Government asks for a loan. On the 15th the time for subscriptions to the great Liberty Loan of $2,000,000,000 expired, and the Treasury Department published the cheering news that at least $500,000,000 more than $2,000,000,000 had been offered.

DIVIDENDS

THE AMERICAN BRAKE SHOE AND FOUNDRY COMPANY

NOTICE OF DIVIDENDS ON PREFERRED AND COMMON STOCK

The third installment of 2% of the 8% dividend upon the outstanding preferred stock and of 1¾% of the 7% dividend upon the outstanding common stock of The American Brake Shoe and Foundry Company, which were declared on December 12, 1916, will be payable on June 30, 1917, to stockholders of record at 3 o'clock P. M. on June 22, 1917.

The board of directors of said company has also declared the following extra dividends upon its outstanding preferred stock:

1% payable in cash and 5% payable in U. S. Government 3½% Liberty Bonds of 1917 on June 30, 1917, to stockholders of record at 3 o'clock P. M. on June 22, 1917; and 1% to preferred stockholders of record at 3 o'clock P. M. on June 22, 1917, for the purpose of enabling the company on their behalf to make contribution of the same to the purposes of the Red Cross Association.

Checks for 3% on the preferred stock and 1¾% on the common stock, and 5% in evidences of Liberty Bonds will be mailed, together with printed consents to be signed by the preferred stockholders authorizing the company to contribute on their behalf 1% to the Red Cross Association. GEORGE M. JUDD, Secretary.

Dated, New York, June 12, 1917.

THE AMERICAN AGRICULTURAL CHEMICAL COMPANY
New York, June 14, 1917.

A quarterly dividend of one and one-half per cent. on the Preferred Stock of this Company (No. 48), and a quarterly dividend of one and one-quarter per cent. on the Common Stock (No. 23) have been declared, payable July 16, 1917, to stockholders of record at the close of business on Friday, June 22, 1917.

THOMAS A. DOE, Treasurer.

MOTOR

To give up your car, or to refrain from buying one, if you can afford it, is false economy.

True economy is to operate your car at its highest efficiency and at the lowest possible upkeep cost.

Write to The Independent Passenger Car Service, 119 West 40th Street, New York, for advice on how to cut the cost of upkeep.

ECONOMY

A Number of Things

BY

EDWIN E. SLOSSON

I see that the examining officers at the recruiting stations exclude from the army any men "with bellicose veins." Probably a vein of humor or enlarged artilleries would also debar from enlistment.

*
* *

"When the mice are away the cats will play." How true these old saws are! Have you ever seen a bunch of chaperons in another room by themselves, a bevy of schoolma'ams after the children have left, a carful of clergymen coming home from a conference, a platoon of policemen away on a picnic, a benchful of judges just off the bench?

*
* *

Fame knocks at my door in the following fashion:

Even if you would brush aside all the arguments presented in favor of this beautifully gold embossed and in phosphorescent blue leather bound volume, it still retains one, a very strong one: This volume is adorned with the inalterable likeness of your person.

This is a strong argument, but on the wrong side. If anything were needed to keep me from the temptation to "sign the attached order blank" it would be this. A likeness in my case is a caricature and the idea of an "inalterable likeness" is unendurable. I could not sleep nights with this phosphorescent volume gleaming at me from the center table. I would not mind an alterable likeness, one that I could touch up a bit once in a while to look more like how I would look if I looked more like what I am; or one that automatically alters as the years went on, improving with the original and changing the style of clothes and cut of the hair to suit the prevailing fashion. My only consolation is in these lines of Spenser's:

For of the soul the body form doth take.
For soul is form and doth the body make.

Surely the innate nobility of my nature must in the course of time begin to show thru on the outside. For the last half century I have been living in hopes of this and I do not yet despair, altho neither my mirror nor my photographer has so far given me the least encouragement.

*
* *

Now when airships have come to be an important factor in the war it is interesting to recall that the early efforts at aerial navigation met with ridicule and contempt. Benjamin Franklin, however, was one of the few farsighted men who saw in the balloon a promising future. In 1783 he wrote thus to Sir Joseph Banks of the Royal Society of London:

The improvement in the construction and management of the balloons has already made a rapid progress and one cannot say how far it may go. A few months since the idea of witches riding thru the air upon a broomstick and that of philosophers upon a bag of smoke would have appeared equally impossible and ridiculous. These machines must always be subject to be driven by the winds. Perhaps mechanic art may

DIVIDENDS

United Shoe Machinery Corporation

At a meeting of the Directors of the United Shoe Machinery Corporation, held this day, the regular quarterly dividends of 1½% (37½c per share) on the Preferred stock and 2% (50c per share) on the Common stock were declared; also extra dividends on the Common stock of 4% ($1.00 per share,) payable in "Liberty Loan," 15-30-year, 3½% Gold Bonds of the United States (with fractions adjusted in cash) and of 10% in Common stock. All dividends are payable to stockholders of record at the close of business June 19, 1917. The regular dividends on Preferred and Common stock are payable on July 5, 1917, and the extra dividends on Common stock are payable on July 5, 1917, or as soon thereafter as the necessary warrants and certificates can be prepared. The regular and "Liberty Bond" dividends are payable out of surplus existing prior to March 1, 1913. The stock dividend represents a capitalization of surplus arising from a revaluation of capital assets. L. A. COOLIDGE, Treasurer.
June 13, 1917.

UNITED FRUIT COMPANY

DIVIDEND NO. 72

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable on July 14, 1917, to stockholders of record at the close of business June 23, 1917.

The transfer books do not close.

JOHN W. DAMON, Treasurer.

THE ELECTRIC STORAGE BATTERY COMPANY,
Allegheny Avenue and 19th Street,
Philadelphia, June 6, 1917.

The Directors have declared a dividend of one per cent. (1%) from the net earnings of the Company on both Common and Preferred Stocks, payable July 2, 1917, to stockholders of record at the close of business on June 18, 1917. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

UTAH COPPER COMPANY
120 Broadway
New York, June 8th, 1917.

The Board of Directors of Utah Copper Company have declared for the quarter ending June 30th, 1917, a dividend of $1.75 per share and a capital distribution of $1.75 per share, payable June 30th, 1917, to stockholders of record at the close of business on June 15th, 1917.

The books for the transfer of the stock of the Company will remain open.

C. K. LIPMAN, Asst. Secretary.

RAY CONSOLIDATED COPPER CO.
25 Broad Street, New York, June 8th, 1917.

The Board of Directors of Ray Consolidated Copper Company has declared, for the quarter ending June 30, 1917, a dividend of fifty cents per share and a capital distribution of fifty cents per share, payable June 30, 1917, to stockholders of record at the close of business on June 15, 1917.

E. P. SHOVE, Treasurer.

PACIFIC GAS AND ELECTRIC CO.
COMMON STOCK DIVIDEND NO. 11.

A meeting of the Board of Directors has been called for 12 o'clock noon, June 30, 1917, for the purpose of declaring a quarterly dividend (No. 11) at the rate of $1.25 per share upon the Common Capital Stock of this Company, payable on July 16, 1917, to stockholders of record at 12 o'clock noon, June 30, 1917. Checks for the dividend will be mailed. The transfer books will not close, and owners desiring checks payable to themselves should have stock certificates issued in their own names on or before the last mentioned date.

D. H. FOOTE, Secretary of the
PACIFIC GAS AND ELECTRIC COMPANY.
San Francisco, Cal., June 9, 1917.

THE NEW YORK CENTRAL RAILROAD CO.

EDWARD L. ROSSITER, Treasurer.

UNITED STATES STEAMSHIP COMPANY.
June 12th, 1917.

A regular dividend of one per cent. and an extra dividend of one half of one per cent. has been declared on the capital stock of this Company, payable July 1st, 1917, to stockholders of record on the books of this Company at the close of business on June 16th, 1917.

N. H. CAMPBELL, Treasurer.

AMERICAN TELEPHONE AND TELEGRAPH CO.

THIRTY-YEAR FIVE PER CENT. COLLATERAL TRUST GOLD BONDS

Coupons from these bonds, payable by their terms on June 1, 1917, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street. G. D. MILNE, Treasurer.

find easy means to give them progressive motion in a calm and to slant them a little in the wind.

From this it seems that Franklin anticipated a semi-dirigible airship, altho it was not until the invention of the gasoline motor that this became practicable. He ascribes the backwardness of Englishmen in this field to their innate fear of seeming foolish:

I am sorry this experiment is totally neglected in England, where mechanic genius is so strong. . . . Your philosophy seems to be too bashful. In this country we are not so much afraid of being laughed at. . . . It does not seem to me a good reason to decline prosecuting a new experiment which apparently increases the power of man over matter, till we can see to what use that power may be applied. When we have learned to manage it, we may hope some time or other to find uses for it, as men have done for magnetism and electricity, of which the first experiments were mere matters of amusement. This experiment is by no means a trifling one. It may be attended with important consequences that no one can foresee. We should not suffer pride to prevent our progress in science.

Whether Franklin was right or wrong as to the reason for it, the British neglect of aeronautics continued up to the beginning of the present war, when France led the world in aeroplanes and Germany in dirigibles. In the last two years England has caught up on aeroplanes tho she has yet no match for the Zeppelins.

*
* *

I got ten calendars last Christmas. All sorts. They are variously adorned with college buildings, pretty girls, poetical quotations, historical dates, scriptural texts, advice as to investments, flags of the Allies, first aid to the injured, and other useful and ornamental things. Some of them hang on the wall until they fall down. Some of them stand on a tripod until they tip over. Some of them I carry in my pocket until they drop out. Some are worth more. Some are worthless.

But not one of them is the sort of calendar I want. All I want is a calendar that will tell me what day it is. A clock tells you what time it *is*. A calendar only tells you what time it would be if you knew what time it was. If you know the day of the month it will give you the day of the week. If you know both the week and the day of the week it will give you the day of the month. But it is of no use whatever to the man who is wondering "Let's see, is this Thursday the twelfth or Friday the thirteenth."

This is a serious matter. A man may imperil his immortal soul by eating meat on Friday, carrying an umbrella on Saturday or fishing on Sunday, according to his faith. There is a lot of information on my calendars that I would trade off to get the one bit of information I want. I never cared whether the Old Man in the Moon faced one way or the other. I never had occasion to use the Dominical Number or the date of the battle of Bergen-op-Zoom. I never cared whether I was living under Leo or Virginia. But I have lost friends and dinners and lecture engagements and theater tickets because I made a mistake in dates.

I have a flopper calendar on my desk. But I forget whether I flopped it over the night before or left it till morning. Sometimes the wind flops it. Sometimes my wife does the flopping. Sometimes we all three do it, then I find half the week gone and nothing done yet. It ought to be easy enough to invent a calendar that would shed its leaves as regularly as a tree does but diurnally instead of annually. There are calendar clocks, but most of them never learn that simple rime, "Thirty days hath September," etc., and the best of them go crazy on Leap Year.

I wish that next Christmas my relatives

1917

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against Marine and Inland Transportation risk and will issue policies making loss payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the Company has insured property to the value of $29,903,820,962.00
Received premiums thereon to the extent of - - $301,565,931.44
Paid losses during that period - $149,414,735.48
Issued certificates of profits to dealers - - - - - - - $94,086,050.00
Of which there have been redeemed $86,410,870.00
Leaving outstanding at present time $7,675,180.00
Interest paid on certificates amounts to - - - - - - - - - - $23,871,310.65
On December 31, 1916, the assets of the Company amounted to - - - - - - - - - - - - $17,458,990.74

The profits of the Company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

and friends and the insurance, printing, and trust companies would club together and get me a calendar that will work.

*
* *

Once upon a time there lived a king of Edessa by name of Augarus. He went to Rome to negotiate a treaty, but did not find it so easy to get away, for the Emperor Augustus found him such a good talker—or perhaps such a good listener—at any rate such an agreeable companion that he would not let Augarus go home. His Imperial Majesty was doubtless incapable of conceiving the possibility of anyone's preferring some other place to Rome and it would have been highly untactful as well as unsafe in Augarus to have hinted that he wanted any other society than that of the Emperor. So Augarus devised a plan by which the Emperor should discover for himself the existence of nostalgia.

Then King Augarus began to extend his hunting trips in a longer radius about home and to catch the animals alive instead of killing them. And with each animal he gathered up some of the soil of the region where it was captured. One day he contrived an entertainment in the hippodrome. First he had the samples of earth he had collected spread down on different parts of the arena and then, telling the Emperor where each came from, he had the animals let loose together in the middle of the hippodrome. And each animal, as soon as he was released nosed out his native land and went over to it and lay down there. But I had better give the rest in the words of Procopius of Caesarea who tells the story:

> And Augustus looked upon the performance carefully for a very long time and he was wondering that nature untaught makes animals love their native land. Then Augarus, suddenly laying hold upon his knees, said, "But as for me, O master, what thoughts dost thou think I have, who possess a wife and children and a kingdom, small indeed but in the land of my fathers?" And the Emperor, overcome and compelled by the truth of his saying, granted him not at all willingly that he should go away.

I wonder if any zoölogist has ever repeated this experiment. I should like some better authority than Procopius of Caesarea writing five hundred years later, before I accepted it as a scientific fact. Nevertheless there are many human beings who profess to have this instinct, so we have to account for it or at least for their belief in its existence. Kipling puts it prettily in his poem on Sussex:

> God gave all men all earth to love,
> But, since our hearts are small,
> Ordained for each one spot should prove
> Beloved over all;
> . . . . . .
> Each to his choice, and I rejoice
> The lot has fallen to me
> In a fair ground—in a fair ground—
> Yea, Sussex by the sea.

Chesterton manifests even more strongly marked symptoms of philopatridomania. He makes a theology out of it as he does out of everything. His Manalive says:

> I think God has given us the love of special places, of a hearth and of a native land, for a good reason. Because otherwise we might worship eternity, the largest of the idols, the mightiest of the rivals of God. . . . If there is a house for me in heaven it will either have a green lamp-post and a hedge, or something quite as positive and personal as a green lamp-post and a hedge. I mean God bade me love one spot and serve it and do all things however wild in praise of it, so that this one spot might be a witness against all the infinities and sophistries, that Paradise is somewhere and not anywhere, is something and not anything. And I would not be so very much surprized if the house in heaven had a green lamp-post after all.

Personally I expect something better to look at in Heaven than a green lamppost. I'm afraid I should get tired of it "when I've been there ten thousand years, bright shining as the sun." Even Manalive ran around the world to get away from that home of his, or rather to get back to it.

We must admit that nostalgia exists tho we may doubt whether it is either an instinct or a virtue. My own opinion is that it is a disease, a disease of the imagination. Which is not the same thing as saying that it is an imaginary disease. I know of many cases where a permanent cure has been effected by going back home. Easterners in the West, immigrants from Europe, are always talking about and longing for their native land—until they go back there once, then they usually find it an unendurable place to live in. What they really longed for was to rejoin a vanished circle of friends or return to an earlier phase of their lives, both impossibilities.

There is, of course, a pleasurable sensation in revisiting a place where one has lived as there is in opening an old book or looking at a childhood picture. But isn't it even more interesting to go to a new place? If it were not for the awkwardness of it I should prefer to eat at a different table every meal, sleep in a different room every night, live in a different house every week, move to a different city every month and go to a different country every year. Of course, such a peripatetic life is impossible or at least inconvenient because one could not take his business, belongings and friends around with him but it is the sort of life I should long for rather than a sedentary existence. Man is a mobile animal. He is born with two legs and he has made himself wheels and wings that he may travel. His habitat is the world. A tree must grow where the seed was cast but man may range from pole to pole. By so ranging he can find the place that suits him best, but the chances are a million to one that it will not be where he was born or where any of his ancestors lived. Confucius was a sensible fellow. When one kingdom did not suit him he packed up and moved to another, saying "The bird chooses the tree, not the tree the bird."

Nostalgia, being a disease of the imagination, is a superstition. Like other superstitions it has been revived by the war and is now epidemic. It is commonly confused with patriotism, altho it is altogether different and often quite the opposite. Patriotism means a willingness to serve one's country, but one's country is the country one has chosen out of all others to live in and serve, not necessarily one's natal land. On the contrary, the natal or ancestral land is for most Americans the country they or their forefathers were anxious to get away from.

It is very important just now to call attention to the mobility of man because the most absurd and abhorrent proposals are being seriously put forward as solutions to the problem of peace. It is proposed to put the Poles in Poland, the Czechs in Bohemia, the Jews in Palestine, the Serbs in Serbia, the Irish in Ireland, the Italians in Italy and so forth. All strays are, it appears, to be lassoed and put into the corral which is to be fenced off by international law and remain their immutable and inalienable domain forever and ever.

Fortunately the plan is as impossible as it is wicked. You could not do it if you chained every man to a post by the leg. They would break the chains, leap the fences and run around until they got all mixt up again. No people will stay put if it can possibly get away. Man is naturally a cosmopolite and it is only by the power of poverty, authority and false sentiment that he can be kept stationary and segregated. Sooner or later he is bound to burst his bonds and regain his freedom of movement.

CHARTERED IN 1830

NEW YORK LIFE INSURANCE & TRUST COMPANY · 1830 · PROTECTION FOR WIDOWS, CHILDREN AND OLD AGE

New York Life Ins. and Trust Co.

52 WALL STREET, NEW YORK

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

THE WOMEN'S CALL

FOOD ADMINISTRATOR HOOVER SUMMONS THE WOMEN OF AMERICA TO THE COLORS

The registration of the woman power of the country is to begin July 1 and continue until July 15, and every woman is expected to register in the force that will conserve the supply of food. This is the program of organization issued by Food Administrator Herbert Hoover tonight, following the direction of President Wilson.

The registration will be carried on by practically every woman's club thruout the country. The clubs will coordinate their efforts thru the Woman's Committee of the Council of National Defense.

Every woman who registers will be asked to tell how many are in her family. On a window of every household that becomes a unit in the league for food conservation will be hung the emblem of food administration—the shield of the United States surrounded by wheat stalks.

Mr. Hoover's statement is as follows:

As requested by the President, we ask every woman in the United States engaged in the personal control of food to register for actual membership in the food administration, thus entering directly into the national service. We shall later on ask various classes of men likewise engaged in food preparation and distribution to also volunteer to the national service in their various branches.

We must enter a period of sacrifice for our country and for democracy. Many must go into battle, but many can only remain at home. The world's food supply is short and many must suffer. We have the major burden of feeding the whole world. Food must be managed and transported in our own country and to our Allies in such a way as to get the most out of it. Those who remain at home can also help and can "fight by helping the fighter fight" and can "serve by saving."

Since food will decide the war, each American woman can do a real national service by protecting the food supply of the nation. Ninety per cent of American food consumption passes thru the hands of our women. In no other field do small things, when multiplied by our 100,000,000 people, count for so much. A single pound of bread saved weekly for each person will increase our export surplus of wheat 100,000,000 bushels, and an average saving of two cents on each meal every day for each person will save to the nation for war purposes $2,000,000,000 per annum.

The proper assurance of the food to our Allies will not only encourage them, but it will maintain them in war. Without a larger margin from our abundant food supply, only to be secured by individual effort and volunteer sacrifice, the war will be prolonged and thousands of lives not only of men, but also of women and children, needlessly lost. The guiding hand of women in the home can alone control in this matter.

Furthermore, this is not alone a war question. The high prices which are bearing so hard on the poor and the more moderate wage-earners in this country are partially due to the shortage of supplies in the world market, and the saving in consumption and waste which can be made will lessen the prices to those of our own people, which must be our first solicitude. In all of the arrangements which we plan to make during the forthcoming year for the supply of our allies, we will bear the first regard to our own people, that they shall have plenty, provided that they eat wisely and without waste.

All effort at saving must be directed toward the great national and international situation. These efforts must also be made in unison and by all of us. Therefore, the groundwork of direction must be national in character, calculated not only to effect national economy but also to serve the war interests of the country as a whole. These directions will require supplement, from time to time, of local character, and we propose in the first instance to send out directions to each member directly, and after legislation is completed and the food administration is erected to cooperate with the state governments by decentralizing administration as far as possible into their hands thru the various food committees.

Inasmuch as before legislation is completed the food administration has no representatives thruout the country, the National Council of Defense is kindly requesting all the State Councils of Defense, with the assistance of the Women's Committee of the National Council of Defense, to undertake the registration. This registration will begin July 1 and will continue intensively for fifteen days, and will consist simply in asking every woman in the country to volunteer in this important service by signing and mailing to the Food Administrator, Conservation Division, Washington, the following pledge:

I am glad to join you in the service of food conservation for our nation, and I hereby accept membership in the United States food administration, pledging myself to carry out the directions and advice of the Food Administrator in the conduct of my household, in so far as my circumstances permit.

We not only want the name and address, but we want the number of persons in the household. We want to know whether the household employs a cook, whether it has a garden, and we want to know the occupation of the breadwinner. There are no fees or dues to be paid. The Food Administration wishes now to have as members all of those actually handling food in the home. On receipt of the pledge we will send out preliminary instructions and a household tag to be hung in the window. The insignia of the Food Administration will consist of the national shield, surrounded by heads of wheat, and we hope to have the shield displayed in every home in the United States.

We have the promise of support from many hundreds of women's organizations in the recruiting of our members and the women's committee plan to take upon themselves much of the responsibility for this work.

With the assistance of various trained women in the country, we are formulating committees on domestic economy, and from leaders in the subject of nutrition we are organizing committees on food conservation and utilization, and we propose with their advice to furnish information from time to time to the members of administration as to the manner in which they can best serve the national interests in food conservation.

We have six general principles of instruction:

First—**To save the wheat.** If we eat as usual from our harvest this year we will have little more than enough for our own supply, but we can divide with our Allies if each individual makes some sacrifices by eating at least one wheatless meal a day, substituting corn bread or other cereals.

Second—**We want to save the meat,** for our cattle and hogs are decreasing, and we must send to our Allies, so we wish every householder to buy less, to serve smaller portions and to allow no waste.

Third—**We wish to save the fats.** We consume three times the fats that are necessary for nutrition, and we need them now for war. We wish no butter used in cooking; we want less butter served on the table; we want less lard, bacon, and other pork products used.

Fourth—Any deficiencies in food supply, by economy along the above line, can be amply covered by **increasing the use of fish, potatoes, beans, peas, turnips, cabbage and vegetables generally, corn, buckwheat, rye and rice,** which we will have in abundance this harvest.

Fifth—**We want to save transportation.** Our railways are unable to meet the war pressure for munitions, men, and coal, so that we wish every one to consume products of local origin as far as possible, to buy from the local miller, the local packer, buy and eat vegetables grown near home. Aside from eating an increased proportion of these commodities in order to save on the staples, it is extremely important that any surplus of these commodities shall be preserved or well stored for winter use.

Sixth—**We preach and want every one to preach "the gospel of the clean plate,"** to buy less foodstuffs, to serve smaller portions and to see that nothing of value goes into the garbage can.

A MESSAGE FROM THE FRONT

AN American surgeon in France writes thus to his college class at its twentieth reunion:

"The Great War has engulfed me and I cannot be at the Reunion in June! This must carry my salutation to the boys. This is my message to the Class. Yesterday morning, with the other officers of our unit, I stood at salute while for the first time in history in an active war zone the grand old Stars and Stripes were taken out beside the Union Jack—on the same flag pole and at the same hight. Side by side they have billowed in the brilliant sunlight since, the proud symbol of the reunion of two great nations split by war from a common nation, reunited by bloodshed into a single race with a single vision that can see only one ideal, Christian Democracy for the world.

"There are those of you who have tried to cling to the peace ideal. I don't mean to preach, but you remember that there was a time when Christ himself gave it up and scourged the money changers from the Temple. Who can fail to see therein foreshadowed the duty of the Twentieth Century to scourge from our midst the barterers of human life and happiness, the reactionary despotism which never plays the game save with the cards properly stacked.

"I cannot tell you what a satisfaction it is to me that the light dawned in my vision a bit ahead of My Country's and that now she has justified the inspiration. Tell the boys from me that they don't know half the good reasons there are and that we see over here in the thick of things for them to go into the business heart and soul ready to make any sacrifice in their power to help stop this hideously awful wastage and destruction of our beautiful old earth. Every one of us *must* get into the harness and pull, and that right away, as he never pulled before or thought he could. You would see better from here than there that there is no peace till we have forced it, so the quicker we get down to our shirtsleeves the better."

REMARKABLE REMARKS

MARY PICKFORD—I love babies.

SAMUEL GOMPERS—Avaunt, you shirkers!

ISRAEL ZANGWILL—I love going to Ellis Island.

EDWARD BOK—Every American woman is on trial.

SECRETARY MCADOO—Taxation is going to be higher.

HOMER RODEHEAVER—One cigaret will kill a cat.

BARON ROSEN—Russia is on the edge of a precipice.

EMMA GOLDMAN—We would rather be shot than shoot.

CHARLIE CHAPLIN—The funniest thing is striking contrast.

EX-KING CONSTANTINE—I never cared much for my throne.

HANS WAGNER—The old fever got me again and I couldn't resist.

JEANNETTE RANKIN—Today women plumbers are not uncommon.

GENERAL PERSHING—We know what we are doing and what we want.

ED. HOWE—Southern girls are not as good looking as Northern girls.

EMPEROR WILLIAM—How long this may last must depend on God's will.

GOVERNOR MCCALL—Some folks say that I was the original Progressive.

EX-PREMIER VENIZELOS—I reject all ideas of reconciliation firmly, flatly, finally.

VICTOR L. BERGER—Our Chief Executive is the only autocracy left in the world.

WINTER RUSSELL—Give me liberty from killing my fellow men or give me death.

BILLY SUNDAY—A woman must love something, but I don't call a pet dog something.

GENERAL VON DITNURTH—I hope that in this war we have merited the title of barbarians.

RUDYARD KIPLING—There are only two divisions in the world today—human beings and Germans.

JOHN BASSETT MOORE—Every nation is the sole guardian of its own honor, whatever that may be.

THEODORE ROOSEVELT—I keep my good health by having a very bad temper kept under good control.

HERR WITTING, Head of the Deutsche Bank—We want no quarter from England; we shall give none.

ORVILLE WRIGHT—In a very few years, I think, the flying machine will do all the work the special train does now.

LUTHER BURBANK—If you happen to get a new idea, don't build a barbed wire fence around it and label it yours.

PRIMA DONNA BORI—When your young daughter refuses to have flowing locks any longer, be sensible about the matter.

JOHN BARRETT—It now looks as if all Latin America would align themselves with the United States and its European allies.

MAJOR-GENERAL SHOMEI NONAKU—The way to secure peace is not to sing about it, but overcome the disturber of it.

REAR ADMIRAL PEARY—In the comparatively near future the air service will be more important than the army and navy combined.

GEN. LEONARD WOOD—People talk of this being the last great war while there is not the slightest earthly chance of its being such.

DAVID JAYNE HILL—The people of Germany are more loyal to the Emperor than the Democratic Party is to President Wilson.

PAUL ROHRBACH—To display leniency toward England is now but to commit an act of treason against the future of the German Empire.

"CHICK" EVANS—My own golf set consists of a driver, brassie, spoon, cleek, midiron, jigger, mashie, niblick, stopam and several putters.

AMBASSADOR PENFIELD—Diplomats of the old style used to go about and sit on red velvet cushions and devote themselves to attending social functions.

JUST A WORD

Do you always count the calories you eat? Do you even know you should? For it's not how much food you eat or how it tastes that really matters; the calories it contains are the important point. And now that war has forced us to consider food conservation and efficient eating the more we know about those elusive calories the better! The Life Extension Institute of New York tried the experiment recently of feeding the proper amount and proportion of calories to a dozen policemen for three weeks. And it worked so well that they let a group of editors try it for one luncheon. Dr. Slosson, Literary Editor of The Independent, has packed a lot of valuable information into his entertaining story of that "square meal." We shall publish it shortly.

Drawn for The Independent by W. C. Morris

HOLD THE FORT! I AM COMING!

The Independent
WITH WHICH IS INCORPORATED
HARPER'S WEEKLY
A Journal of Civilization

THE COUNTRYSIDE

TO live and work efficiently is the supreme concern of the American countryside today. The great national cause demands it; no less truly individual welfare compels it.

The Independent Corporation has been serving the interests of efficient living thru its two publications—The Independent (with which is incorporated Harper's Weekly) presenting to its large family a consistent service looking to personal and industrial efficiency; and The Countryside (Suburban Life) placing before its own smaller group the principles and practise of household and community efficiency, especially as they concern the suburb and the town.

These two services necessarily overlap. Divided, they have proved their value to thoughtful men and women all over the country. United, they will be still more effective.

BEGINNING with the issue of August 4, 1917, The Countryside, which was acquired by the Independent Corporation last November, will be published as a monthly section of The Independent—a magazine within a magazine.

On the first Saturday in every month the regular weekly issue of The Independent, with the usual editorials, news analyses, staff correspondence, articles, pictures and departments, will contain also, as a special feature, this "inner magazine," The Countryside.

In this section will be found the same kind of material that The Countryside now contains. Efficiency in the garden, in building and furnishing and equipping the house, in landscape design, in horticulture, in poultry-raising, and in the broad and important field of good town-keeping will be presented, in seasonable succession, to the combined audience of The Independent and The Countryside, by means of authoritative articles, helpful departments and striking pictures.

The Countryside Shop, a service which has proved its value in the last half-year, will be conducted as an auxiliary of The Countryside Department, in conjunction with the now famous Efficiency Service of The Independent, on which it is patterned.

THE contributors to The Countryside and the expert counsellors of The Countryside Shop are authorities in their chosen fields.

Aymar Embury II on Architecture, Harold D. Eberlein on Furniture, Churchill Ripley on Rugs, George Leland Hunter on Interior Decoration, J. Horace McFarland on Civic Improvement, Harold A. Caparn on Landscape Design, Professor Hugh Findlay on Gardening, E. I. Farrington on Poultry, Anna Barrows on Garden and Kitchen, Frank A. Waugh on Trees and Shrubs, are a few of those who help make The Countryside Department as it will be presented from month to month in The Independent.

The Countryside as a part of The Independent will keep its own individuality and perform its own functions; in its own special way it will reinforce The Independent's broad campaign for National Efficiency.

TO the present subscribers of The Countryside will come not only the monthly Countryside Numbers of The Independent but all the regular weekly issues as well. The subscribers of The Independent are receiving a periodical of ever-extending scope along closely related lines. Those who know it have learned to look to it, not only for the swiftest periodical news and picture service in America and for its sensible handling of vital issues, presenting both sides of disputed questions, but also for the suggestive treatment of special problems which concern the business man, the woman at home and the public-minded citizen of every town and state. The larger usefulness which The Independent now acquires in the field of countryside living rightly belongs in its plan of service, and will, we believe, appeal strongly to both its old and its new readers.

By this forward step The Independent adds appropriate and valuable elements to its well-grounded service to the American people.

A WRONG WAY WITH CROOKS

DISCLOSURES like this of the failure of the New York police to get hold of the Ruth Cruger case and to hold the murderer are disheartening, but they should have one good consequence. Society at the present time, and in particular American society, is following a wrong way with crooks. Already it is disastrous, and as surely as the more spectacular dangers of absolutism and of anarchy, it will imperil our civilization unless we make an entirely new departure.

Thru a mistaken leniency we are permitting crooks to become numerous enough, strong enough, and well enough organized to imperil not only individual life and property, but also social order and the supremacy of law. Anarchism itself would cease to be perilous if once the crooks were weeded out of it.

In former centuries the criminal was dealt with in heartless brutality. Fiendish tortures were invented to make capital execution and lesser punishments as dreadful as possible. Imprisonment was often worse than death. A vindictive vengeance manifested itself in the whole attitude of law-abiding society toward the malefactor. In nothing has a moral improvement of mankind been more clearly shown than in the growth of humane feeling toward the criminal element in society, and in the mitigation of retributive punishment.

Unhappily, however, much fallacy and a great deal of inefficiency have crept into our present penology, and a good deal of our humanitarianism is childish or worse. A class of vain-minded and self-advertising humanitarians has grown up which is noisy and mischievous in its meddling with problems which it does not in the least understand. Its contention that earlier methods did not prevent or even greatly repress crime is quite true; but it fails to observe, or refuses to admit, that the new-fangled methods also are to a great extent a failure.

If the crook is to be eliminated our dealing with him must be neither brutal nor lenient. It must be in all essential respects like our best modern procedure with the victims of contagious disease. When a case of the plague, or of the smallpox, or of diphtheria appears in a crowded quarter we do not content ourselves with saying of the sick person, "Poor chap! he isn't to blame; he is only unfortunate." We do say this, but also we see to it, if we can, that he does not hand on his bad luck to other victims and spread pestilence thruout the community.

Granting that a criminal is a victim of heredity and environment and that he should not be subjected to retributive tortures, society should see to it that he does not transmit his evil heredity and that he is not permitted to go at large as a carrier of moral contagion. His line should be cut off and he should be kept in perpetual quarantine.

Our failure to adopt this common-sense course and to carry it out with all necessary sternness is in the highest degree non-humanitarian, and it has become exceedingly perilous. Dreadful as have been the sufferings visited upon offenders, they have never been comparable to the anguish that has been inflicted upon innocent families and that is now every day repeated and multiplied by the atrocious villainies perpetrated by unpunished devils.

That fact is bad enough, but another one associated with it is worse. Crooks at large are not isolated units of criminality. They work together. They work with unscrupulous business and property interests; they corrupt the police and obtain police protection; they invade municipal governments and legislative assemblies. This conjoint activity with men that are themselves able to keep out of the clutches of the law, and even to make and to administer law, is the real menace and it has become exceedingly serious. It will have to be taken in hand with energy and that, we fear, will not be done until the public is awakened to the true character of a false and ill-informed but widespread and active type of humanitarianism which has a stronger sympathy with criminals than with the innocent and the honest who suffer from their depredations.

MAKE WAY FOR PROHIBITION

IN passing the Food Control bill the House of Representatives added to it an amendment prohibiting the manufacture from food products of beer, wine and distilled liquors. The amendment also gives to the President discretionary powers to commandeer for redistillation into alcohol any stock of liquors now in the storehouses.

This is a splendid amendment. If we are to do our share in the winning of the Great War we must not continue to turn food into alcoholic drink. We must not go on spending our man-power in riotous wastefulness thru the drinking of alcohol. We cannot win this war without the most rigid economy and the most high-powered efficiency. Neither economy nor efficiency has a more deadly enemy than drink.

The passage of this amendment by the House is a fine accomplishment. But there are lions in the path. It may be possible for the selfish interests involved to kill the amendment in the Senate. It may be possible for them to emasculate the amendment by making it apply only to distilled liquors and not to beer. The argument that the drinking of beer, with its two or three per cent of alcohol, really does no serious harm is speciously attractive. But the experience of those communities which have tried the prohibition of distilled liquors unaccompanied by the prohibition of beer shows that the thing will not work. Also the best evidence on the subject from scientific and medical sources is that the habitual drinking of beer carries with it a tremendous menace to health and efficiency. To prohibit the manufacture and sale of distilled liquors would be to do something. But if we fail to prohibit the manufacture and sale of beer as well we shall do little in comparison with the great things that we might do.

One great question confronts the whole public: Are we going to do every possible thing that we can to win the war? If we are to answer this question in the affirmative we must go to prohibition at once and completely.

The present point of danger is the Senate. If you believe in War Prohibition here and now write or telegraph your Senator at once. The Senate will do what the country wants if the Senators are told what it is in sufficiently certain tones. When you write or telegraph do not forget to demand beer prohibition as well as the prohibition of distilled liquors. To win this war we must not do anything half way.

THE SITUATION IN FRANCE

WE can now see more clearly than before the meaning of Hindenburg's strategy in spontaneously retiring from the Somme front the last of February. When the German trenches were discovered to be deserted and the Allies were able to advance and occupy without resistance Bapaume, Péronne and Noyon which they had striven in vain to reach the year before it was said that the Germans were on the run and might soon be driven out of France. When the air scouts reported that the Germans had established themselves on a new line some twenty miles back it was confidently predicted that this line would be speedily reached and smashed since it could not have been so strongly fortified as the old line.

As a matter of fact neither the French nor the British have yet been able to deliver an effective blow against the so-called "Hindenburg line" in the four months since the Germans withdrew to it. Nobody knows how strong are Laon, La Fère and San Quentin, the key fortresses of the Hindenburg line, because they have not been tested. What the Allies did do was to attack the ends where the new line joined on to the old; the British with considerable success, the French with very little. The assault of Vimy ridge by

the Canadians was a brilliant victory, but this was ground that the French and British were fighting for in 1915.

The line east of Arras against which the British are directing their drive is not the Hindenburg line at all but, according to the earlier statements of the British military experts, a branch or shunt, known as the "Wotan line," serving to connect the true Hindenburg or "Siegfried line" with the old line at Lens. This Wotan line, according to the same authorities, runs north and south between Drocourt and Queant, that is to say, about eight miles east of the old German position in front of Arras. It was supposed to be a temporary line designed to shield stronger positions to which the Germans would fall back when the Wotan line became untenable. But the British have not even reached this line and for all their courageous endeavors of the last few months they are not much more than half way to it.

It seems then from the London dispatches—and we have no other source of news nowadays—that the Germans have been more successful in maintaining their ground in France and Belgium than they anticipated and that the new lines to which they withdrew in February are still virtually intact. Whether their losses have been greater than they anticipated or can endure cannot be said, yet this, rather than the shifting of lines on the map, will determine victory.

WHEN THE RUSSIANS WERE HERE BEFORE

THE welcome now being given to the Russian Commission to the United States recalls to mind that when last we were plunged in a terrible war Russia stood by our side. It was in the darkest period of the Civil War, when the Confederacy seemed unconquerable, when our commerce was being swept from the sea by British-built raiders, and Napoleon III was intriguing against us in Mexico, when the draft riots had assumed such proportions that the English papers spoke of them as "The Rebellion in the North," and when our Government feared that the French Empire and the British Kingdom were preparing for joint intervention in behalf of the enemies of the Union. No wonder, then, that the arrival of a Russian fleet at New York and another at San Francisco revived the hopes of the Government and aroused the people to wild enthusiasm. The squadron anchored in the Hudson off Trinity Church consisted of three screw frigates and two screw sloops under the command of Admiral Lisovski. It was known these warships had left Kronstadt because they feared that they would be bottled up in the Baltic if France and England joined in a war upon Russia as they had a few years before. The Russian navy had in fact been trapped in just this way in the Crimean War, when St. Petersburg looked in vain for an American fleet to come to the rescue. So the Czar decided to put the Russian fleet in New York harbor where it would be free to do what they had then hoped that the United States would do, attack the British and French fleets from behind.

It was rumored that Admiral Lisovski had "sealed orders" by which he was to join his fleet to the American in case France and Great Britain espoused the cause of the Confederacy. Looking back in our files to the fall of 1863 we find both The Independent and Harper's Weekly discussing the probability of a defensive and offensive alliance between Russia and the United States. The reason for it was the same as later led France to conclude such an alliance, namely, they feared the powers that lay between. The ruling classes of France and England were hostile to the United States, tho the lower classes of both countries were friendly. Today it is acknowledged even by the Conservatives that the French and British governments were, as Lord Salisbury exprest it, "putting their money on the wrong horse" in their antagonism to Russia and the United States in the fifties and sixties. Now that France is a republic and England is liberal, both countries can join hands wholeheartedly with Russia on the east and America on the west.

On another page of this issue we republish from Harper's Weekly of October 17 and November 21, 1863, two of the illustrations of the visit of the Russians. That of the fleet is one of those double-page wood cuts, 21 by 17 inches, for which Harper's was famous, and which make it the most interesting of contemporary records of the war. In lieu of the picture of the procession up Broadway, we reprint a paragraph quoted from the *Times:*

> After the procession has passed Union Square, and wheeling fairly into the vast current of Broadway, the scene became splendidly animated. The moving pageant rolled in a glittering stream down the broad thorofare between banks of upturned human faces. the trappings of the equipages, the gold and silver epaulets of the Muscovite guests and the sabres, helmets and bayonets of the escort reflecting back in unnumbered dazzling lines the glory of the evening sun. The cavalcade advanced to the joyous time of exulting martial music like the vanguard of a conquering host returning to the metropolis of its power, and there was a proud and gratified feeling evidently in the hearts of the vast concourse assembled to greet it, that would have been befitting to the most important triumphs at home. Far as the eye could reach down the great central avenue of our imperial city, the sidewalks were packed with human beings, and the balconies and windows—nay, in some instances, the very roofs of the buildings above them—were beset with eager multitudes, the general surface of this animated borderwork richly varied and enameled, as it were, thruout its length, with groups of richly attired beauty. Above nearly every building gayly fluttered the Stars and Stripes, some in standards of immense size and others tricked off with scores of little Russian flags, waving and sporting in the breeze side by side with our own national colors. By-the-way, it may be remarked that the great Autocracy and the great Republic had the scene all to themselves, no other nation being represented even in bunting—a significant incident of the ovation.—*From Harper's Weekly of October 17, 1863.*

What reporter of the reception that New York gave to Mr. Balfour, General Joffre and Prince Udine has dared attempt such fine writing as this? Would that we had space to reproduce the still more gorgeous descriptions of the ball in the Academy of Music, and the supper of the "Soiree Russe" served in the adjoining Irving Hall. The menu takes up half a column, fifty-seven varieties of viands—by actual count—from "Snit-mitch a la Russe" and "Pates de canvas-back ducks" to "Charlotte Siberienne" and "Pouding Nesselrode." On the tables were Washington and Peter the Great, President Lincoln and Alexander II and other "devices rare and ingenious, all sweetly worked out" by Delmonico's confectionery artists. As the *Herald* man says:

> These viands and ornamental pieces did not appear in their native state; their presence was connected with combinations of jellies, sugar roses, winged doves, and pyramidal canopies. For a slice of boned turkey you had to throttle an eagle, pluck a flower, raze some evergreens, or remove an abutment or turret of congealed maple. Carving was thus dispensed with, and the spoon superseded the knife. As the ovation and ball is one which may leave its traces on centuries to come, we give, for the sake of history, an account of the principal edibles used, viz:

But we must refer the historian of "centuries to come" to the files, for we can merely mention that among these edibles were 12,000 oysters, 250 turkeys and 3500 bottles of wine. The toilets occupy another column, and here again we must wonder at the lavishness of our ancestors. The diamonds worn by the ladies at the ball were valued at a million dollars by all the reporters.

Naturally there were some who pointed out that the million spent on the "ovation, collation and ball" should instead have been given to the Sanitary Commission, and that such extravagant festivities were out of place when the boys in blue were dying in the trenches or starving in Southern prisons, and when the Government was having hard work to raise money for munitions. But this display was not altogether due to vanity. Its obvious purpose was to show the King of England that New York would make more fuss over a Russian admiral than it had over the Prince of Wales, and to prove to the Czar of Russia that the United States was an ally worth having.

THE STORY OF THE WEEK

House Passes Food Control Bill

President Wilson and Food Controller Hoover won an important victory for the cause of food conservation on June 23 when the House of Representatives voted 365 to 5 in favor of the Lever bill granting the administration extensive powers over the production and distribution of foodstuffs. Those who voted against the final passage of the bill were Representatives McLemore, Slayden and Young, all Democrats from Texas, and Meeker of Missouri and Ward of New York, Republicans. The real test of strength came when the drastic prohibition amendments were considered. Representative Barkley, of Kentucky, succeeded in writing into the bill a section providing that: "No person shall use any foods, food materials or feeds in the production of alcohol, except for governmental, industrial, scientific, medicinal or sacramental purposes, or of alcoholic beverages." Large supplies of liquor are now held in reserve in bonded warehouses and so are not affected by any prohibition of the manufacture of alcohol for beverage purposes, but another amendment, fathered by Representative Webb, of North Carolina, empowers the President to requisition and purchase any existing supplies of alcohol or distilled spirits which he may need for the manufacture of munitions "in so far as such use or redistillation would dispense with the necessity of utilizing products and materials suitable for foods and feeds in the future manufacture of alcohol." Every attempt to limit the prohibitory provisions of the bill to highly alcoholic liquors or to exempt beers and light wines from their operation was defeated. The debate on prohibition was very heated and certain epithets which excited Representatives hurled at each other across the floor of the House were stricken from the *Congressional Record.*

THE GREAT WAR

June 18—British Admiralty reports the loss of twenty-two merchant vessels during preceding week. Americans in ambulance service in France now number 1000.

June 19—House of Commons passes bill giving vote to women over thirty. Russian Socialists repudiate separate peace.

June 20—Germans attack French at Vauxaillon. British Government releases Sinn Fein prisoners.

June 21—Naval mutiny at Sebastopol. Italian Commission given public reception in New York.

June 22—Count Clam-Martinitz, Austrian Premier, unable to form cabinet. Belgian Commission received by Senate.

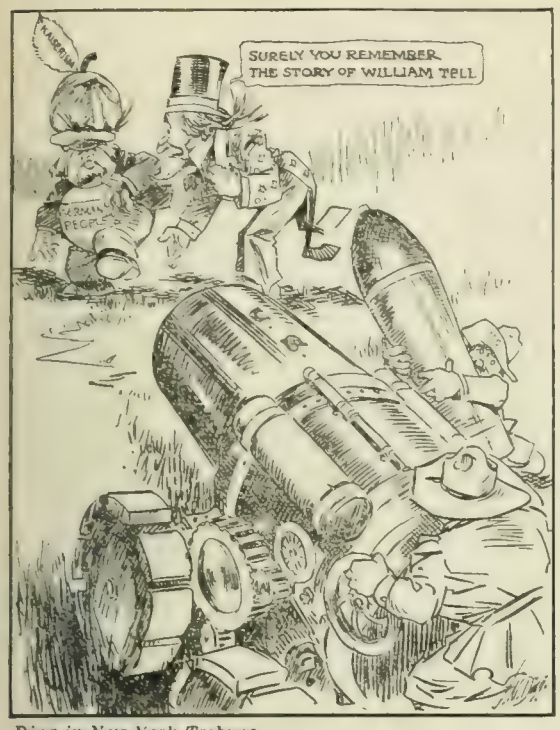
June 23—Food control bill passes House. Russian Commission received by House.

June 24—Seydler made *pro tem.* Austrian Premier. French regain most of Monkey Mountain.

The fight against the Lever bill has been sharper in the Senate than in the House of Representatives and several details remain to be adjusted in conference before the final enactment of the bill by both branches of Congress. To win friends for the measure, Mr. Hoover spoke to the Senators and answered questions by them. He pointed out that the prices of foodstuffs in the United States were in many cases higher than the prevailing prices in the European countries which had food administration, and he estimated that the nation was paying $50,000,000 a month for the one article of flour in excess of what should have been paid under proper food regulation. President Wilson took a personal interest in the contest over the food control bill and wrote to a Congressman "that those who oppose the measure ought very seriously to consider whether they are not making themselves responsible, should they succeed, for the oppressive price of food in the United States."

Aspects of Conservation

Mr. Hoover has made public his plan for enlisting the housewives of America in his campaign for food conservation. Altho Congress had not yet given a legal basis to the control of the food supply by the administration, President Wilson saw no reason why the purely voluntary part of conservation should wait. In July all the women of America who are connected in any way with the preparation of food will be asked to enroll as volunteers in the work of food administration at least in so far as their own homes are concerned. Food economy will be explained to the public in many ways, thru women's organizations, educational motion picture films, summer schools, the public schools which open in the autumn, volunteer work of household economy experts and many other public and private agencies. As a preliminary piece of advice, Mr. Hoover issued several general rules to guide consumption in the home. He urged that wheat bread be omitted from one meal each day; that as little meat be used as possible; that the amount of fats used be decreased; that fish, garden vegetables, corn, buckwheat, rye and rice be used in place of the foods which it is necessary to save; that foods of local origin be used as far as possible in order to save transportation; that nothing fit to eat be permitted to go into the garbage can, and that surplus fruit and vegetables be preserved or stored for winter. The Commercial Economy Board of the Council of National Defense has supported this appeal by announcing that after July 10 bakers will be expected not to receive returned stale bread.



The Entente Allies are greatly worried by the increased demand for foodstuffs which comes from the neutral nations of Europe. From 1911 to 1915 the wheat imported by the principal neutrals increased about ninefold, and other grains were in proportionate demand. Much of this grain must have been reëxported to Germany, altho it is probable that the needs of the nations concerned must have been somewhat greater in war time than before. England then adopted the stringent measure of "rationing" the neutrals by forbidding foodstuffs to reach them in excess of their estimated needs. Under the export control act the United States will assist in the rationing policy, not as England did by intercepting shipments on the seas, but by placing an embargo on excessive exports from this country.

Mayor Thompson in Trouble

Chicago is talking of the possibility of impeaching Mayor Thompson. On June 22 the City Council refused to confirm the members of the school board whom he had appointed, and the contest between the Mayor as President of the Council and several opposing aldermen resulted in a scene of wild disorder and a hasty adjournment of the Council. Some of the old members of the school board have refused to recognize the new appointees and as a result rival school board meetings were summoned. Mayor Thompson ascribes the opposition to the new school board as due to corrupt politicians who had been permitted under the old board to divert school funds from their legitimate use. There are others who say that the school fight is only a pretext to secure the Mayor's impeachment which was really desired on the ground that he had been outspoken in his opposition to the war and had refused to invite the French and British visiting commissions to Chicago or to take any part in the campaign to raise the Liberty Loan. The formal charge against the Mayor is abuse of power in adjourning the meeting of the City Council when he found it hostile to his appointees.

Austrian Cabinet Falls

The Austrian premier follows the Hungarian premier out of office and in neither country has a man been found who can command the support of a parliamentary majority. The opposition is substantially the same in both cases, that is, the demand of the minor nationalities for equal rights and autonomy. Count Tisza, the Hungarian premier, lost his position because he refused to sanction a more liberal suffrage. Count Clam-Martinitz, the Austrian Premier, lost his position because he could not conciliate the Poles, who are not satisfied with the increased measure of self-government accorded to them by the new emperor, but demand virtual independence for Galicia. A Polish deputy in the Reichsrat denounced the Government for its op-

Ding in New York Tribune

REMEMBER WILLIAM TELL!
Uncle Sam assures the German people: "We're just shooting at the apple"

pression of the Polish provinces and declared that more than 30,000 Poles had been hanged by order of the German Government. The succeeding speaker was also denouncing the treatment of Polish suspects when he was interrupted by the German deputy Heine, who shouted: "They haven't used rope enough. All of them ought to have been hanged!" At this the Polish and Slavic deputies made a rush at Heine and the session broke up in disorder. A temporary government of inconspicuous personages under Dr. von Seydler has been formed.

The Bloody Angle There has been no action of importance during the past week and such engagements as have taken place are worthy of consideration chiefly as indicative of where the next blow will be struck. The British have confined their efforts to clearing out the trenches beyond the Wytschaete and Messines ridge which they recently captured by undermining it. The next sector south of this extending to Armentieres has been abandoned by the Germans who have retired behind the river Lys, thus shortening their line and getting in front of them, instead of behind them, the marshes of the Lys.

But more interest attaches to what is going on along the French front and particularly in the angle about Laon which has for nearly three years been pointing at Paris like a pistol. The attempt of the French under Nivelle to clear the Germans out of this corner by attacking both sides of it was disappointing, and Nivelle was superseded in the general command by Pétain. The ground gained by the French spring offensive was small considering the tremendous preparations that had been made for it. In the two months since no serious inroads in the German lines have been made by the French, and now the Germans have taken the offensive either to forestall the French in a renewal of their drive on Laon or possibly with the hope of breaking thru the French lines. The bombardment of Reims has been resumed and some two thousand shells dropt into that unhappy city, to no apparent purpose and with little loss of life, since the civilian population was mostly removed last spring. East of Reims the Germans have also delivered some attacks, but apparently their chief attention is directed toward the Chemin des Dames, or Ladies' Road, running west from Reims to the Laon angle. On June 20 a surprize attack was delivered here against a French position on Monkey Mountain near Vauxaillon with a picked body of "storm-troops," composed of Rhineland, Hannoverian and Brunswick regiments. They succeeded in breaking the front line of the French, but were able to hold only a small part of the ground they had gained. The Germans' claim of "more than 160 prisoners and 16 machine guns" sounds very small compared with the thousands of prisoners and hundreds of guns taken by the British and French in their recent offensives.

Sinn Feiners Freed All of the prisoners taken in the Irish rebellion of Easter Monday have been released by the British Government.

It is hoped that this generous action of the British Government may so conciliate the Sinn Feiners that they will participate in the Irish convention, with which they have hitherto refused to have anything to do. Both those who favor and those who oppose the convention have sent commissions to the United States to influence Irish opinion here.

The released rebels were received in Dublin with wild enthusiasm which later in the night degenerated into riotous demonstrations and led to two arrests. Sinn Fein songs were sung, recruiting posters were torn down and the flag of the Irish republic hoisted over the ruins of the postoffice, which was the headquarters of the rebels during the Dublin riots.

The Government also freed Count Plunkett, who was recently elected to Parliament by the Sinn Fein party and who was arrested with other Sinn Feiners for holding a meeting in Dublin on June 9 to protest against the continued imprisonment of the Dublin rebels. In attempting to prevent this meeting a police inspector was knocked down and killed. In a Sinn Fein riot at Cork on June 24 two men were killed.

The Power of the Air The new feature of the 1917 campaign is the development of aeroplane from a scouting service to a fighting arm. The arrival of a hundred American aviators is particularly welcomed by the French and it seems that here is our chief opportunity for service during the summer and fall. Aviators can be trained quicker than soldiers and aeroplanes are more readily made than artillery. American aviators in unlimited numbers could be employed in raiding the German bases and lines of communications, but the proposal made in the London press that Americans be sent to bombard the interior of German towns in reprisal for the German raids on Folkestone and London will not at present appeal to the American people who, like the British people up to a few weeks ago, do not regard such measures as fair fighting.

The Germans are adapting their favorite tactics of mass formation to the air and are sending out aerial armies of fifty or more machines at a time. The British are showing marvelous pluck and enterprize in individual activities, especially in swooping down upon marching troops and showering them with bullets from their machine guns at close range. As a sample of the new method of warfare one picturesque exploit may be quoted from the Associated Press despatches:

> One young British pilot, who bids fair soon to rival the record made by the late Captain Ball, emulated the latter a few days ago by deliberately "sitting" over a German airdrome, some twenty miles within the enemy lines, and smashing one by one four machines which came up to attack him. When he began hovering above the place he saw seven machines in the airdrome with engines running. He engaged the first one that left the ground when it was only sixty feet up, and it fell a complete wreck.
>
> Diving at the second machine which rose the British pilot drove it squarely into a tree. Two machines then left the ground together, so the Britisher thought it best to get a little more hight before attacking the pair. He climbed to 1000 feet and then, after a brief three-cornered fight, saw both his adversaries go down within 300 feet of each other. After this exploit the khaki pilot returned safely, but with his machine considerably shot up by machine gun fire from the ground.

GREASE PAINT FOR DEFENSE

The Italians fighting in the high Alps have two enemies: sun-burn and the Germans. Faces and hands smeared with blackened grease make them impervious to one, and snow white uniforms, nearly invisible to the other

The Exiled King Constantine, once King of the Hellenes, and his family, with the exception of his second son Alexander, who was made King in his place, were conveyed to Messina by an Allied flotilla and then took train thru Italy to Switzerland. At Lugano he was welcomed by Prince and Princess von Bülow and other prominent Germans, but he found the town unfriendly to him and will probably go on to Germany.

The Kaiser is said to have been highly chagrined at this unceremonious banishment of his brother-in-law and sent him the following telegram:

I have heard with wrath of the infamous outrage committed by our common enemies upon you and upon your dynasty. I assure you that your deprivation can be only temporary. The mailed fist of Germany, with further aid from Almighty God, will restore you to your throne, of which no man by right can rob you.

The armies of Germany and Germany's Allies will wreak vengeance on those who have dared so insolently to lay their criminal hands on you. We hope to welcome you in Germany at the earliest opportunity. A thousand cordial greetings from your

WILLIAM.

The Intentions of the Allies In order to reassure the Greek people M. Jonnart, the High Commissioner of the three protecting powers, issued a proclamation from which we quote:

France, Great Britain and Russia desired the independence, greatness and prosperity of Greece. They intend to defend the brave little land they have liberated against the united efforts of the Turks, Bulgarians and Germans. They are here to checkmate the maneuvers of the hereditary enemies of the kingdom. They will put an end to the repeated violations of the Constitution, of treaties and the deplorable intrigues which led to the massacre of soldiers of the Allies.

Yesterday Berlin was in command of Athens and was gradually leading the people under the yoke of the Bulgarians and Germans. We resolved to reëstablish the constitutional rights and unity of Greece. The protecting powers therefore demanded the abdication of the King.

The liberty and prosperity of every one will be safeguarded. This is a new era of peace and labor which is opening before you. Know that, respectful of the national sovereignty, the protecting powers have no intention of forcing upon the Greek people general mobilization.

Long live Greece, united and free!

In our last issue we raised the question of whether the United States had been consulted by the Allies in regard to their action in Greece because, it seemed to us, that if this had been done President Wilson would have favored the establishment of a republic in Greece as desired by the American Greeks, rather than the enthronement of Alexander as King. The same question was asked in the House of Commons and the British Foreign Office replied that the United States had not been consulted on the matter.

Greece Under Alexander As soon as Constantine had abdicated the Allies lifted the blockade and allowed food ships to come in to the Piraeus, thus relieving the famine from which the Greek people had suffered for several months. The French troops marching down from Macedonia have occupied Thessaly, which contains the grain fields whose possession before the harvest was deemed necessary to the Allies. The people of Thessaly since the French occupation have declared for Venizelos, who now commands a Greek army fighting on the side of the Allies against the Bulgars in Macedonia.

As soon as Athens can be made safe for him it is expected that Venizelos will be brought back to the capital and restored to his office of premier. If parliament is reconvened it will probably not be the present parliament, as the Venizelists are poorly represented in it, for they regarded it as illegal and generally refused to participate in the election. But the old Chamber of Deputies, dissolved unconstitutionally by King Constantine in November, 1915, may be called into session by the Allies on the ground that it is still the legal body. This chamber is pro-Venizelist and may be relied upon to make the constitutional changes demanded by the Allies to limit the power of the King.

The first proclamation of the new sovereign shocked the Allies because he pledged himself to carry out the brilliant policy of his revered father. It was feared from this that Alexander might not prove as tractable as had been expected, but he seems since to have made his peace with the protecting powers. Thirty-one of the leading adherents of the late King, including an ex-premier, an ex-foreign minister, and the chief of the General Staff, have been expelled from Greece, and a hundred other persons of prominence, including three former premiers, two bishops and many officers, have been sent away from Athens "to places where they can be kept under surveillance." It is believed that by these measures any movement in favor of the deposed ruler may be held in check.

It is not known yet whether the three protecting powers intend to bring Greece into the war or even whether they intend to start an offensive movement from Salonica this summer at all. There are as yet no signs of it and the withdrawal of the British troops from the eastern side of the Struma River might be interpreted to mean the contraction of the Macedonian front if not the evacuation of Salonica.

But the retirement is explained as due to the desire of getting the troops out of this malarial district during the summer months. When the British crost the Struma last year it was expected that they would be able to drive the Bulgars out of the Rupel forts east of the river which King Constantine surrendered to them. But the Bulgars still hold the forts as well as the port of Kavala, and it seems probable that no attempt will be made to expel them this year.

Russia to Continue the War Altho Russia is still in an anarchical condition and it is impossible to say what will be the dominant power, the disposition to make a separate peace with Germany seems to be waning. The Duma past in secret session a resolution "that the safety of Russia and the maintenance of the liberties which have been attained lie in an immediate offensive in close coöperation with Russia's allies." General Alexis Brusiloff, who has been appointed commander in chief of the Russian armies, is said to be preparing to renew the war on the Galician front, tho doubtless it will be difficult to conduct a campaign since military discipline has broken down and the transportation system of the country is disorganized.

The congress of Soldiers' and Workmen's Delegates meeting in Petrograd, after earnest pleading by Minister of War Kerenski and Minister of Posts Tseretelli, past unanimously a resolution approving of the Provisional Government and demanding an immediate reorganization of the army and the resumption of hostilities.

Still more encouraging is action of the congress in approving by a vote of five to one of the expulsion by the Provisional Government of the Swiss Socialist Robert Grimm, who came to Russia with what purported to be an authorized statement of Germany's peace terms. According to him Germany was willing to renounce all territorial gains.

Mrs. Emmeline Pankhurst, the leader of the British suffragets, is in Petrograd to explain to the men and women of the new republic that British democracy is in hearty support of the war.

When Rear Admiral Glennon and the other naval officers of the American commission to Russia went to Sebastopol to see what were the prospects for operations on the Black Sea they found themselves in the midst of a mutiny. The anarchists who started the rebellion of the Baltic fortress of Kronstadt had transferred their activities to Sebastopol, and the sailors of the fleet at their instigation had deposed their commander, Admiral Koltchak, and arrested other officers.

SURMOUNTING ANOTHER ALPINE DIFFICULTY

The men who fight on the Trentino front are learning three-dimensional warfare even on land. This observation post holds the record for hight and incessibility

Trouble in Spain

As the leading neutral nation of the world, now that the United States has gone into the war, Spain is distracted over the question of determining in what direction her duty and her interests lie. The country is divided and the question seems more likely to be settled by civil war than by argument. The court, the clericals, the conservatives are pro-German. The liberals, the industrial classes and the King are pro-Ally. Like the United States Spain has had reason to complain of infringements upon her maritime rights by both sides. The British have restricted her commerce. The Germans have sunk her ships. When the "San Fulgencio" was sunk by a U-boat Count Romanones, the Liberal Premier, sent a vigorous note of protest to Germany, virtually threatening to break off diplomatic relations. He warned the King that by not taking a firm stand in opposition to Germany Spain was losing her leadership of the Hispanic world, for the South American republics were following the United States.

But Count Romanones was unable to carry his party or his cabinet with him so he resigned and on April 19 was replaced as Premier by Marquis Prieto, also a Liberal, tho less inclined to depart from neutrality in favor of the Allies. Prieto, however, could not hold his power for a month and therefore the King was forced to turn to the conservatives. Eduardo Dato, who was Premier before Romanones, was again called upon to head the Government. But the real leader of the conservatives is ex-Premier Maura, who recently came out as a pronounced anti-Ally and demanded that England cede Gibraltar and France Tangier so Spain should command both sides of the Strait. The Spanish have never become reconciled to the British possession of Gibraltar, and this feeling was intensified a couple of weeks ago when the long-range guns of Gibraltar, in trying to hit a German submarine entering the Strait, fired into the Spanish city of Algeciras, just across the bay. Since Dato's accession little news has been allowed to be sent out from Spain, and there are all sorts of rumors afloat as to what is happening inside the kingdom. Catalonia demands independence. Movements are also on foot for the establishment of a republic and union with Portugal.

The army threatened to revolt because of the inefficiency and corruption of the Government which is charged with promoting court favorites and with wasting the funds appropriated for equipment. The officers and soldiers of the garrison at Barcelona and elsewhere formed "defense committees" to protect their own interests, and Premier Dato was obliged to recognize them and has promised the reforms desired.

Italian Commission on Tour

The Italian diplomatic mission has been "swinging around the circle" visiting the chief cities in the eastern sections of the United States and everywhere receiving a greeting comparable in cordiality to the welcome which we accorded to the British and the French war missions. During their entertainment in Chicago the Italian commission visited the stockyards, which enabled them to examine at first hand one of the chief sources of the meat supply upon which our Allies are now so largely dependent. Guglielmo Marconi, the inventor of wireless telegraphy, spoke of the great strain of the war upon the resources of Italy. He said that, altho a nation with but a third of the population of the United States, Italy had for more than two years supported an army of more than three million men. In New York, where there is a very large Italian element in the population, the visitors were received with great popular enthusiasm. Mayor Mitchel and President Butler of Columbia University extended the official welcome of the city to the Prince of Udine and his colleagues.

On June 19 the Russian diplomatic mission, headed by Ambassador Bakhmetieff, reached Washington. The military, naval and diplomatic members of the Russian commission will remain in Washington for the present in consultation with President Wilson, but the experts in munitions manufacture and transportation of supplies who are connected with the mission will go to New York, perhaps to arrange for the purchase of what Russia will need for the promised offensive against Germany.

Belgian Mission in Washington

Another visiting commission has arrived in this country under the usual veil of secrecy. On June 16 Baron Moncheur, former Belgian Minister to the United States, arrived at an Atlantic port with the rest of his diplomatic staff and proceeded to Washington to convey the good will of King Albert and his countrymen to President Wilson. Among the members of the commission were General Leclercq and Major Osterrieth of the Belgian army, Count D'Ursel and the bank expert M. Carlier. The main purpose of the mission is diplomatic, as the machinery for carrying on relief work in Belgium by means of American aid is already in complete working order. In the personal letter which the Belgian envoys brought with them King Albert exprest his gratitude for the "incomparable generosity" of the American people. Baron Moncheur paid a tribute to Mr. Hoover for his good work on the relief commission and described Germany's attempt to ruin the industries of Belgium so that the nation could not regain its commercial position even if liberated by the result of the war. President Wilson pledged the honor of the United States that we would not rest from the war until Belgium was restored to its place among the nations of the earth. The commission will visit various American cities.

Germany Against Haiti The Imperial German Government has handed passports to the diplomatic representative of the little negro republic of Haiti who presented a note to Foreign Secretary Zimmermann protesting against Germany's submarine campaign and demanding its cessation. The announcement from the German foreign office remarks that "the demands were couched in an unusual form and demanded fulfilment within a period which would not allow even time for examination." This step brings Haiti one degree nearer to war with Germany and complete alliance with the United States, already virtually its protector. Cuba has voted the appropriations and war bond issue recommended by President Menocal.

The republic of Uruguay has exprest official approval of the stand taken by Brazil against unrestricted submarine warfare. The note takes the position "that any act perpetrated against one of the countries of America in violation of the precepts of international law as universally recognized shall constitute an offense against all of them." Further to show on which side Uruguayan neutrality leans, the Government has invited that portion of the United States fleet which is in Brazilian waters to pay a friendly call to an Uruguayan port.

U-Boats Again Active From the decrease in the shipping losses reported in the latter part of May it was assumed by some that the U-boat menace was over, but the last two weeks are back nearly to the worst of the April weeks. For the week ending June 17 twenty-seven British vessels of more than 1600 tons and five of lesser tonnage were sunk. In only two of the twenty weeks since the Germans began their submarine campaign has the loss in ships of the larger class been greater than this. The British Admiralty no longer reports the names or tonnage of the vessels destroyed, but if these are up to the average the total loss for the week would be 140,000 tons. Figured in the same way the total losses to British shipping since February 17 would amount to 1,760,000 tons. This means that more ships have been sunk in four months than were built in the whole world during last year. Two Italian steamers and five sailing vessels and five small French vessels are also reported lost during the past week.

Obviously such a rate of losses cannot be endured indefinitely even tho the American shipyards get busy at repairing them. How long the Germans can keep it up depends upon how many of their submarines are sunk and this information the British Admiralty does not give to the public. But we know that the British and American destroyers are actively hunting down the U-boats and with considerable success. The Allied naval forces in Irish waters have been put under the general command of Vice Admiral William S. Sims of the American Navy during the short absence of the British commander-in-chief.

SHAKING THE SPANISH THRONE

It is difficult nowadays to get any real news of what is happening in Spain. But this photograph of 20,000 people at a pro-Ally mass meeting in Madrid proves at any rate that war sentiment is running high

Steel or Wood? The increased activity of the German submarines, which are now sinking shipping at an estimated rate of nine million tons a year, has revived the demand for a large fleet of wooden merchant ships in spite of the recent adverse decision of General Goethals. The shortage of ships is blamed for the slight decrease in imports during May as compared with the high figures for March and April. Imports from Italy and from France showed the most significant decline. The first two vessels which have been chartered by the Shipping Board have been assigned to the Russian trade route by way of Archangel, thus relieving one of the many calls upon the British merchant marine which hitherto has been responsible for supplying Russia with coal and other commodities. Archangel will be ice-bound in winter and such aid as is to reach Russia by that route must be sent at once.

Contracts for steel have been approved by the Shipping Board at the rate of fifty-six dollars a ton. This is nine dollars a ton lower than the price obtained by the Navy Department. The steel plants accepted the price for the present but refused to commit themselves to it for the future in making contracts with the shipbuilders since steel plate can now be sold to the general market at ninety-five dollars a ton.

A Call to the Colors In order to bring the regular army up to its full wartime strength President Wilson issued a public proclamation on June 20 urging immediate enlistment. He designated the week of June 23 to 30 as recruiting week for the regular army and asked for 70,000 enlistments within the seven days. At

the time the proclamation was given to the public there had been over 121,000 volunteers since the first of April, leaving a shortage of nearly 70,000. At the existing rate of enlistment the full complement of the army could have been filled within less than ten weeks, but the President wished to speed up the process so that all the raw recruits of the army might start training at once and be ready for service at the front as soon as possible. The total enlisted strength of the navy practically equaled the number of volunteers for the regular army since we entered the Great War. The construction of the sixteen great army encampments which are being prepared for the training of the drafted army has been impeded by so many difficulties of detail that it is now considered improbable that they will be ready for the entire first contingent of drafted men by September first. This delay makes it the more imperative that the regular army be completely mobilized in the meantime.

The Red Cross Campaign Another call has been made on the generosity of the American public. No sooner had the great campaign for the Liberty Loan concluded than the Red Cross started to raise a hundred million dollar fund. The publicity work for the cause was scientifically handled; each town was assigned a definite sum to raise and "teams" of prominent men solicited gifts under the direction of campaign committees. Many cities reached their assigned quota almost immediately, and within five days after the opening of the eight-day publicity campaign seventy-seven million dollars, or more than three-fourths of the required total, was already pledged. The purpose of the Red Cross fund is to care for the wounded and sick of the American Army, which would otherwise be a charge on the nation's war chest, and to relieve the suffering of the soldiers of other nations and of the civilian population in the war zone.

The Stranger in Our Midst The Bureau of the Census announces that there are at the present time 4,662,000 residents of the United States who were born in Germany or in the territory of one of Germany's allies. Slightly more than half of this number are Germans by birth, but the number of unnaturalized aliens from Austria-Hungary is very much greater than the number of "alien enemies" from Germany. The reason for this is that nearly 90 per cent of the men over twenty-one resident in this country and born in Germany have been naturalized. The official ruling that alien enemies are not to be allowed within half a mile of places of military importance, such as armories and munitions plants, has been found impracticable in the large cities where the greater part of the ordinary residence or business districts are within half a mile of some forbidden spot. The authorities have therefore issued permits to all well-disposed alien enemies who find it necessary to enter the prohibited zones for their daily business and have hitherto been chary about enforcing the law in its full rigor even when the person concerned has neglected to procure a permit. The period of grace granted for the obtaining of permits is, however, at an end and it is probable that the law will be more strictly applied in the future.

Is There a Lumber Plot? The Federal Trade Commission has brought charges of conspiracy against 116 Middle Western lumber companies. The investigation was started on evidence furnished by mail order houses who charged that the lumber men had adopted illegal methods of competition to put them out of business. Not only in order to prevent such secret deals for the raising of prices but also to reduce the news print paper shortage which would in any case exist under present war conditions, the commission has requested Congress to pass emergency legislation regulating the paper industry. The recommendations of the commission include the pooling of the products of all paper mills in the hands of a Government agency to be equitably distributed at a price based on cost of production plus a fair profit per ton and urge that Canada be invited to cooperate with the United States in the scheme of regulation.

Another recommendation of the Federal Trade Commission is for a Government pool of the coal and coke industry and that the producers of the various grades of fuel be paid their full cost of production plus a uniform profit per ton, with due allowance for quality of product and efficiency of service. As the report of the commission summarized the present situation, "the coal industry is paralyzing the industries of the country, and the coal industry itself is paralyzed by the failure of transportation."

To cope with the transportation difficulty, the Senate approved on June 16 the Newlands railroad bill, commonly known as the priority bill, which empowers the President "to direct that such traffic or such traffic shipments of commodities as may be essential to the prosecution of the war shall have preference or priority in transportation."

The Income Tax Question The Senate Finance Committee is still toiling over the new war taxes to put them into satisfactory form and so adjust the burden of the war as to disturb business as little as possible. The committee has decided that the income tax rates in the bill as it left the House of Representatives are altogether too high and so it has killed the retroactive income tax, the high super tax rates placed on incomes of more than forty thousand a year by Representative Lenroot and the special tax on war munitions. The excess profits tax under the Senate plan will be based on average earnings for three years before the war instead of on profits above fixed rate of 8 per cent as in the present bill. These changes are in line with the recommendations of a committee of the national Chamber of Commerce, which has worked out a complete program of taxation and secured its indorsement by a large majority of the members of the chamber by means of a general referendum. The Senate Finance Committee has approved a rate of $60 per hundred pounds on foodstuffs used in making distilled liquors. An amendment was offered to the war revenue bill providing that in computing net income upon which the income tax is based all gifts to religious, charitable, scientific or educational organizations may be deducted.

Paul Thompson

A MILLION TO ONE!

Campaign clocks and thermometers no longer excite New York, but during Red Cross Week everybody watched with interest the progress of this sign up Fifth avenue. It started at the bottom and worked up—a block for every million dollars subscribed—until it finally reached 100th street

A Billion Dollar Treasury Year The Treasury Department announces that for the current fiscal year the receipts of the Federal Government have for the first time in American history passed the billion dollar limit. This is an increase of $355,000,000 over the receipts for last year. The increased income taxes account for much of this difference, but not for the whole of it as customs receipts and internal revenue duties on commodities were also abnormally large. If the revenue receipts are any indication, the consumption of whiskey, beer and tobacco was greater than ever before.

The returns from the Liberty Loan subscription have come in so slowly that the Treasury authorities have de-

layed their announcement of the manner in which bonds applied for will be assigned. The total subscription to the loan is placed at about $3,000,000,000, an amount in excess of the highest official estimates and 50 per cent more than was required. Subscriptions have been reported from everywhere between the northernmost settlements of Alaska and the Panama Canal Zone.

The Stock Market At the beginning of the week, on the 18th, stock market prices declined sharply, a majority of the industrial shares losing from 2 to 4 points. More than one-quarter of the day's transactions were in Steel Corporation stock, which showed a net reduction of 3¼ at the close. The main causes of depression were the Government's action concerning the prices of certain products, and reports indicating that control would soon be extended to cover a broad field. Secretary Daniels had ordered the producers of coal and oil to supply the Navy's wants at prices to be fixed by the Federal Trade Commission. The quantity of coal involved was said to be 1,750,000 tons, while 50,000,000 barrels of oil would be required. Investors were expecting that the new taxes would largely reduce the profits of industrial companies. The Senate had improved the House bill by cutting out retroactive income taxes and the ten per cent duty on imports now in the free list, but it was estimated that it would increase the House tax on excess profits by $200,000,000. The rise of the interest rate on call loans to 6 per cent exerted a restraining influence. Some feared that the rate would be higher in the following week, when the first instalment of subscriptions to the $2,000,000,000 loan would be due, and provision must be made for heavy payments on account of dividends and interest. On the 19th the downward movement continued for a time, and then recovery so affected prices that only slight net changes were shown at the close, except in the stocks of motor companies. For these there was a gain ranging from 2 to 4 points, owing to reports that the manufacturers would make the airplanes for which the Secretary of War will, it is said, ask Congress to appropriate $600,000,000.

There was more news on the 20th about the fixing of prices and the reduction of profits by the Government. The Federal Trade Commission's plans for the control and operation of railroads, so far as the transportation of coal and some other products is concerned, with an allowance of "normal profits," were not regarded with favor, and nearly all issues showed weakness. Railroad losses were fractional. Of the 878,000 shares sold, 281,000 were those of the Steel Corporation, for which there was a net reduction of ¾. On the 21st, however, in a narrower market, prices advanced. There was better news from Russia. The upward movement continued on the 22d, altho additional reports from Washington were like those which had caused a decline. It was said that Mr. Denman, chairman of the Shipping Board, would ask the Federal Trade Commission to fix the prices of steel products for all buyers, to prevent a sensational advance which might take place on account of the Government demand for a large part of the output. And it was announced that a Senate Committee had decided to inquire concerning the prices of all metals and of coal. The rate for call loans was still 6 per cent. But at the close of the day there were gains for a large majority of the stocks. One point was added to the price of the shares of the Steel Corporation, whose profits may be cut down. In the five full days, 28 per cent of the Exchange transactions were in the shares of this company.

High Prices for Cotton No favorable news about the growing cotton plants has followed the Government's report which showed that condition was only 69.5 in May, the lowest ever known in that month, the ten years' average having been 79. The price has been rising, and on the 22d it was 26¼ cents a pound. Not very long ago planters were urged to "hold their cotton for 20 cents," those figures not having been reached. The upward movement is due not to speculation but to trade demand and the prospect of a small crop. Our own mills are using large quantities. Supplies abroad are small. An advance of $18 a bale, to 40 cents a pound, at Liverpool on the 19th, caused the closing of the Exchange there on the following day. It may be reopened soon, but sales for future delivery probably will be forbidden. For lack of the raw material, working time in the English mills may be reduced. Employees regard the situation with anxiety. It is said that their wages have been increased by only 25 per cent., while the cost of food has been doubled.

FRENCH AVIATORS WHO WILL HELP THE AMERICAN EAGLE LEARN TO USE ITS WINGS

These aviators, sent from France to instruct American airmen, are inspecting a New York aviation training station in company with American officers and aeronautic men. They are, from left to right: Lt. de Mandrot; Henry Woodhouse, governor of the Aero Club of America; Lt. Marquisan; Rear Admiral Bradley A. Fiske, U. S. N.; Lt. Montriol; Allan R. Hawley, president of the Aero Club of America; Capt. Fitzgerald; Lt. Ducas; Lt. Rader, of the U. S. Air Service; Lt. Mairesse; Lt. Nasser; and Lt. Lemaire

THE THIRD DIMENSION IN WAR

BY PARK BENJAMIN

NO new invention for the destruction of the German U-boats which are blockading the British coast, nor for effectively protecting ships against them, has as yet come to light, nor does there now appear any more chance of such discoveries being made than has existed ever since the war began. The resurrections, and re-resurrections, and re-re-resurrections of old ideas, of course, have been legion. In France twenty thousand plans have been offered to the Government, out of which ninety-seven per cent went immediately into the waste basket. Of the remaining three per cent, held for further examination, but one-third were thought worth considering, and from these last nothing appears to have materialized. In this country the mail is crammed with letters on the subject to the War Department, and the Navy Department, and the Commission for Technical Research, and the Council for National Defense, and the Naval Advisory Board; and now comes a "Submarine Defense Association," composed of men of shipping and allied interests, "to act as a sort of clearing house for any protective ideas which may be submitted." And the professional "wizards" who were "going to invent" are gradually fading out of the lime-light. Like Glendower, they said they "could call spirits from the vasty deep." But their answer to Hotspur's query, "Will they come when you do call for them?" turns out to be only watchful waiting. You can't make people invent, nor hens lay eggs, because of an urgent public demand, nor by the aid of debating societies which are organized to excite their enthusiasm.

Meanwhile the sinking of British merchant ships continues. When more than thirty of over 1600 tons are destroyed, apprehensions rise, and when the total falls to sixteen or eighteen, apprehensions diminish. In the four months following the inception of under-water ruthlessness 1,745,000 tons are reported to have been lost. A distinguished English naval expert, now in this country, figures that if this state of things should continue, Britain's condition will be critical by about December, 1918.

At present not only are we apparently not advancing toward any inventive solution of the problem, but we are beginning to doubt some of the expedients hitherto depended on. What, for instance, is it supposed large numbers of little boats armed with one-pounder guns or other pea-shooters of the kind can do against the new German submarines carrying six-inch rifles, reaching displacements up to 5000 tons, having armored turrets and protective decks, capable of speeding nearly twenty-five knots per hour on the surface, and having a range of action of 18,000 miles? A German U-boat recently chased the armed steamer "Moreni" in a running fight and captured her by gun fire at four miles range! Perhaps it is not a wholly unmixt evil that a lot of promoters who managed to get contracts from the Navy Department to build portions of our future mosquito fleet are reported as failing in their obligations.

NOW why is it that we, who are issuing steadily 800 patents a week for new inventions, are still seeking a solution of the problem? Why a tendency, of late revealing itself, to get around it by trying to find ways of making the endangered ships invisible to their assailants thru excursions into the field of optics? Is it possible that we have not fully realized a condition which lies at the root of the whole matter and which differentiates this war from every other which has hitherto been waged? Do we understand that its one distinguishing characteristic—saving its magnitude—is that every great achievement, so far as this, has depended on novel material rather than on men, has been done in three dimensions and not in two? The only two-dimensional novelty today are the "tanks," and the Italian *condotti* built them and hired them out to whoever had the money to pay for them, nearly four hundred years ago. And even these we have not carried to apparently possible limits; for tanks as big as battleships, similarly armed and armored, which could smash thru cities as the present caterpillars now knock down villages, are not so far below the horizon.

TWO-DIMENSIONAL weapons, like ships, travel only in horizontal planes; three-dimensional weapons act vertically as well as horizontally. The submarine is formidable, not because it projects torpedoes thru the water—every battleship can do that—but because it can dive down and so render itself invisible, besides selecting a depth which will ensure a hit below the water-line of the attacked surface vessel. It is three-dimensional. The great Belgian fortresses were believed—and rightly so—to be impregnable to the fire of modern high powered artillery which delivers its projectiles almost in a straight line from the muzzle. The German 42-centimeter howitzers, which shattered the steel turrets as if they were of glass, threw their bolts high in the air, and so dropt them on the tops of the huge inverted bowls. Three-dimensional attack again. The so-called "barrage fire" which now precedes the infantry assault goes over the heads of the advancing columns to fall in rear of the trenches, and so cut off the escape of the men therein. Curtains of exploding shells are thus used to stop men exactly as the firemen use curtains of water spray to isolate burning buildings.

© E. Muller, Jr.

TH

"THE SHIPS HAVE A THOUSAND EYES TO MARK WHERE WE C

E

IE MIRTH OF A SEAPORT DIES WHEN OUR BLOW GETS HOME"

Three dimensions once more. And the Zeppelins and aeroplanes which drop bombs and torpedoes from the sky—again three dimensions.

If three-dimensional warfare is here, and has come to stay, does it not logically follow that the answer to a three-dimensional weapon is another three-dimensional weapon? Submarines, until we find a way whereby they can see one another, cannot fight submarines under water. Therefore we must go to the air, and of all three-dimensional craft today the most efficient is the aeroplane, and that efficiency is steadily increasing. It is the natural enemy of the submarine as the fish-hawk is of the fish. The sole difference is that the fish-hawk is aeroplane and dejectile in one. Is it not a vital problem, therefore, how to develop and apply the aeroplane to the direct destruction of submarines? All naval strategy teaches that the best place to attack an enemy's fleet is at the base from which it emerges, and before it can scatter. Therefore we want aeroplanes—and lots of them—stationed off the German submarine bases, regularly organized to keep their stations, air-worthy as ships are sea-worthy, and capable of pouring dejectiles upon the U-boats as they go out or when they attempt, after exhaustion of food, fuel, mines or torpedoes, to return.

THE worst thorn in the British side is at Zeebrugge on the Belgian coast. The British danger zone in the North Sea, a huge mine field swept along its outskirts by destroyers and other surface vessels, dominates the German coast, leaving but two passages for vessels, one off Jutland and the other off Holland, and Belgium. Zeebrugge, which lies outside of the danger zone, is distant only about seventy-five miles from the mouth of the Thames. It has an artificial harbor formed by a curved mole or breakwater extending out into the North Sea, behind which the submarines may safely lie. There are also extensive facilities for repair and equipment, and it has been reported that parts of submarines made to standard forms in many factories thruout Germany are here sent to be assembled to form the completed vessels. Since the port came into the hands of the Germans it has, of course, been extensively fortified. Almost from the outset of the war it has been intermittently bombarded, but this has necessarily been done by vessels of light draft, since the adjacent water is not deep enough to permit the approach of heavily armed ships. There have also been attempts by aeroplanes to attack the harbor and submarines sheltered therein, but these efforts have been mainly frustrated by aircraft guns on shore. It appears to be generally conceded that if the German submarines could be prevented from using Zeebrugge as a base, a long step toward getting rid of them would be made, for the next available station is apparently at Wilhelmshaven, the distance of which from the British coast is about four times greater than that of Zeebrugge measured in a straight line, and considerably further if the Dutch coast be followed. As the North Sea is constantly swept by British craft of all kinds, and has besides the before mentioned British mine field, the risk which a submarine incurs in crossing it is much greater than is represented by the increased distance. Off Zeebrugge for about five miles the depth of the water is small. The Government charts show that the soundings at low water of ordinary spring tides in some places are as little as about fourteen feet. The range of the tides on this coast is very irregular. In Ostend it reaches nineteen feet; to the eastward it becomes less. Roughly it may be taken as some thirteen feet in the vicinity of Zeebrugge, which is to be added to the charted depth. Even, however, with this increase allowed for, the maximum depth of water may, for our present purposes, be taken as thirty feet, in which a submarine is visible from an aeroplane. This being the case, it is not necessary for the aeroplane to come directly over the harbor at Zeebrugge or within the range of aircraft guns. On the contrary, she might be stationed well beyond the five-mile line and still be able to see her prey. At this distance, and especially at high elevations, it would be practically impossible for the heavy guns of coast fortifications to hit her, or even to do any effective execution among a fleet of such air vessels. As targets they would be difficult to see, especially if the weather were at all hazy. Their rapid movements and their abrupt changes in elevation would necessitate constant changes in the setting of gun sights, so that to hit them might well baffle the skill of the most experienced pointers.

FROM such a fleet of aeroplanes, submarines once discovered under the surface could be followed and bombs literally rained upon them, and not only bombs, but self-propelled torpedoes, for any air fleet of the kind would certainly include Admiral Fiske's torpedo-planes, which the Germans themselves are now using. Here again the shallowness of the water deprives the submarine of one of her best safeguards. She cannot dive out of sight. She cannot dive deep enough to protect herself from the horizontally moving torpedoes which the torpedo-planes can launch, which can be set for any depth and have the whole vertical section of the submarine as their target. She cannot avoid them by going down, unless she goes into the mud, and she cannot avoid them by going up to the surface because that makes her still more visible, and besides an easy prey to the cordon of destroyers and other like vessels which will, of course, be present at a safe distance from the guns of the fortifications.

It is true that after nightfall or during very thick weather the submarines might pass out unseen, but the same conditions which thus favor them also favor the aeroplanes, for the latter then can come close in to the harbor with very little danger from gunfire and concentrate their bombs and torpedoes practically at the outlet thru which the submarines must emerge.

A heavy gale might temporarily drive the air fleet away, but the resulting rough sea, especially in such shallow water, would be dangerous to the U-boats, which cannot stand possible pounding on the bottom, and would not be at all likely to take the risks involved.

AS Admiral Fiske has recently pointed out, an aeroplane blockade of this kind would have to be systematically organized, so that an adequate force would always be present, except when the weather interfered, as above noted. To reach the station from the English coast would require barely an hour's flight. Fleets of fifty aeroplanes each could relieve one another every four hours. Each should include aeroplanes arranged to drop bombs upon the submarines, torpedo-planes carrying automobile torpedoes, which could be set scurrying under water in all directions, and finally, armored and armed fighting aircraft designed to meet the similar German aeroplanes, which would, of course, be sent to attack the blockaders. The cordon of destroyers, light draft monitors and the like, kept outside the five-mile limit, could also maintain the watch, and if larger German warships attempted to reach them thru the narrow and intricate channels among the shoals bordering the coast, the torpedo-planes could interpose an effective barrier to any effort of that kind.

Zeebrugge has here been chosen as an illustration. Submarines seeking to traverse the narrow passage off Jutland and thus to get from Cuxhaven, Wilhelmshaven and other bases to the open sea between Norway and the Orkney Islands, north of Scotland, and so to the Atlantic and their cruising zone, could equally be dealt with by air fleets.

WE are about to build thirty thousand aeroplanes for use abroad, and it is proposed that we shall ultimately expend six hundred million dollars on this weapon. There is nothing as effective or more likely to exert a decisive influence on the war which we can produce so quickly. What the inventors can do is to give us new and better aeroplanes. Send in plans for these and let naval construction and submarine shields alone. Give us lighter engines yielding maximum power with minimum weight—and so on thru all the details of construction. We want aeroplanes on land in numbers sufficient to overwhelm the German air fleets, and so blind the German armies. We want them at sea to kill the U-boats at their bases—and before they can escape.

And so, with all our strength, let us create the Air-power of the United States.

New York City

CRISIS WEEK AT PLATTSBURG

BY HERBERT REED

TRAINING of the officers-to-be of the New Army reached a definite stage in the fourth week at Plattsburg. There was a bridge to be crost, and it was crost. Personally, I believe it was the biggest bridge of the lot. It was the bridge of doubt. Uncertainty of the future had hung like a cloud over the encampment. In the ranks and out of them, and in the ramifications of those ranks in civil life, ramifications that extend into not alone the home, but the home area of every man undergoing the present intensive training, there had been a growing feeling that the definite objective of the present movement toward the making not merely of officers, but of *good* officers, had not been made clear. There had been a feeling that because of some governmental whim, or perhaps even some whim of the old army, impossible conditions would have to be met by the candidates for commissions—conditions out of the sphere of that common sense that has been supposed to be the basic principle of modern military training. Fear feeds on fancy, and fancy seldom on fact. The fear that obsessed the Plattsburg, and I have no doubt other camps, was that there was to be a wholesale weeding out of men who had made many and very real sacrifices to take their chance. Had such a thing occurred there would have been deep and serious hurt to men whom their country could not well afford to hurt. But it was not to occur, and it was never intended that it should occur. At last that has been realized.

It was in the course of this fourth week that men began to loom up out of the ranks for their chance in command of a fighting unit—and it must be remembered that under the new conditions the fighting unit of today is swelled beyond all peace experience, beyond all bushwhacking—beyond all the experiences of "little" wars, the "little wars" that were made by the relatively little populations of former times. We are to have a new kind of army. For it we need a new kind of officer. And my observation of the work here convinces me that we shall get him. We shall get him out of competition of the finest description.

ALL of which leads to an understanding of the fruition of this camp fear—by no means a new thing—the fear that dismissal from this keenest and most dramatic competition means disgrace (a hard word) at home and in that home area which I have already tried to emphasize. The process of elimination and consolidation goes on its remorseless way, and I believe that many of the men who have "dropt out" here have come to the conclusion that they should never have "dropt in." That in itself goes far toward settling the "policy" of the new method of selection of officers whether of the New Army or the Reserve Corps. It means that the man who must leave Plattsburg or the other camps can go home with his head up. He has been convinced not that he was unfit to serve his country, but that he was not fitted to serve it in the capacity that appealed to him. And the mere fact that he displayed enough initiative to seek command should be everlastingly in his favor.

Among some of the older men, with experience of sorts in the military line, men who had given up a great deal to put themselves to the test, the fear of failure had never been rampant. Something of their influence spread, little by little, thru the ranks. As I write it is beginning to tell, and tell heavily. Some of the earlier dropt men from the encampment were perhaps bitter about it. The later home-farers have been not even philosophical about it. They have been enthusiastic, ready to return to their homes and do what they could.

NOW in many cases this apprehension, this fear, led to a slowing up in the work. There were many evidences of stage fright in this fourth, and to my mind critical, week. Those who have followed the highest forms of amateur sport are familiar with that stage of preparation in which the men are downright sick of the technique of the game. It was inevitable that that stage had to be gone thru in the military game. It remained for the coaches, in this case the military instructors, to bring their men thru by tact and perseverance. And they seem to have done so, backed now by a statement of policy from the War Department that leaves practically no loophole for misunderstanding.

In one way the last rainy Sunday was an unmixt blessing. It gave the student officers a chance to get together, away from the barracks, to stay together, and to compare notes from the vantage point of a few hours of absolute detachment from the obsession of the work immediately in hand. There was a thrashing out of this first month's work that would have been illuminating to the unawakened country at large. It was a cooler, more matter of fact, more searching period than a sun-washed holiday, considered merely as a holiday, would have been. Immediately thereafter came the consolidation and reorganization of which I have spoken, the definite selection of the men who preferred to cast their lot with the artillery, and the settling down of the camp instruction to the handling of infantry, which is the great problem of the New Army.

Up to that time there had been painful evidences of the "slump" in the day's work. I shall take for example one company from New York, which shall be nameless here. It was drilling one cloudy morning on the parade ground at the post, in close, and in the simplest forms of open order. Its platoon leaders had been chosen because of previous military experience, in some cases extending over a period of more than five years. It was in a sad tangle thruout the drill period. The platoon leaders were palpably, and it seemed, hopelessly, incompetent. It was not that they did not have a knowledge of the formations, but that they seemed helpless to correct their own mistakes in the judgment of distances. There was no initiative in them. They were smitten with stage fright as with the ague. Their showing was not even as good as in the first week's training. But for heartening words from their commander they would have been lost utterly. They were on the edge of panic. And that tendency toward panic, I have no doubt, was superinduced by the uneasy feeling of the "crisis week" of training. To their rescue came their commander. "I don't expect you to be right," he cried. "But give your orders so that I can hear them. And when you find yourself astray try to get your men back into place at double time. At any rate, *do* something, and let me hear what you are doing." In the end he had to promote men from the ranks.

THERE was still another difficulty to be surmounted. That was the inequality of ability among Reserve Officers who already held commissions, or who had recently gained them. Some of these men had been commissioned after the most cursory examination, others after three days of the real thing. It was natural that in ability they should be wide apart. It was natural that in some cases they would resent criticism of their mistakes, and in others that they would invite the freest sort of criticism. Some were "book officers," pure and simple, others had a very real reason for their rank. I have watched the Reserve Officers rather closely, and I have come to this conclusion—some of them I would gladly follow anywhere, and others I would not accompany across the street. We might be run over. Such is the gulf between the two classes.

I think it is safe to say, after a month's observation, that the fundamental fault, too late to cure, of these first training camps, lies in the immaturity of too many of the candidates, a fault apparently recognized by the War Department in its preparations for the second series of camps. "Youth will be served" is an ancient and overworked saying. But Youth has yet to learn how to serve. And Youth has yet to convince me here at Plattsburg—in the mass. Officers in the New Army are going to need mental stature. You who follow these notes—how many among your young friends, even outside the exacting military field, have it?

Plattsburg, New York

IF YOU CAN'T EAT IT—DRY IT!

BY ROSCOE C. E. BROWN

ASSOCIATE IN JOURNALISM AT COLUMBIA UNIVERSITY

THE experts of the Department of Agriculture have estimated that fifty per cent of the fruit and vegetable production of the United States is usually wasted. The observer innocent of statistics will not be disposed to question the estimate when he thinks how often he has seen vegetables spoiling in gardens prolific beyond the immediate needs of their owners, and apples left to rot in orchards, because markets were not convenient, or prices then quoted were too low. If even a moderate part of this waste can be avoided nobody need want. And it can be avoided if our households and communities will revive the habit of saving fruit and vegetables for winter use in the simplest and most economical way. They call it dehydration now when they do it by machinery in factories. But it is essentially the old housewife's art of drying. It can be advantageously practised wherever there are perishable crops in excess of immediate needs.

War promises again to make thrift fashionable, and if true thrift is to be achieved in the conservation of food, dehydration must be resorted to on an extensive scale. It is cheaper than any other method of preserving perishable fruits and vegetables, and by it a larger proportion of these crops can be saved. It is simple, its cost is slight and its product is reduced to the lowest terms of weight and bulk. It can perfectly preserve fruit and vegetables for an indefinite time with all their flavor, mineral salts and heat and nutriment values unimpaired. Above all, it can save, in a most compact form and at the least cost, large quantities of food which would not under any conditions be canned and which otherwise would be left to rot in the gardens.

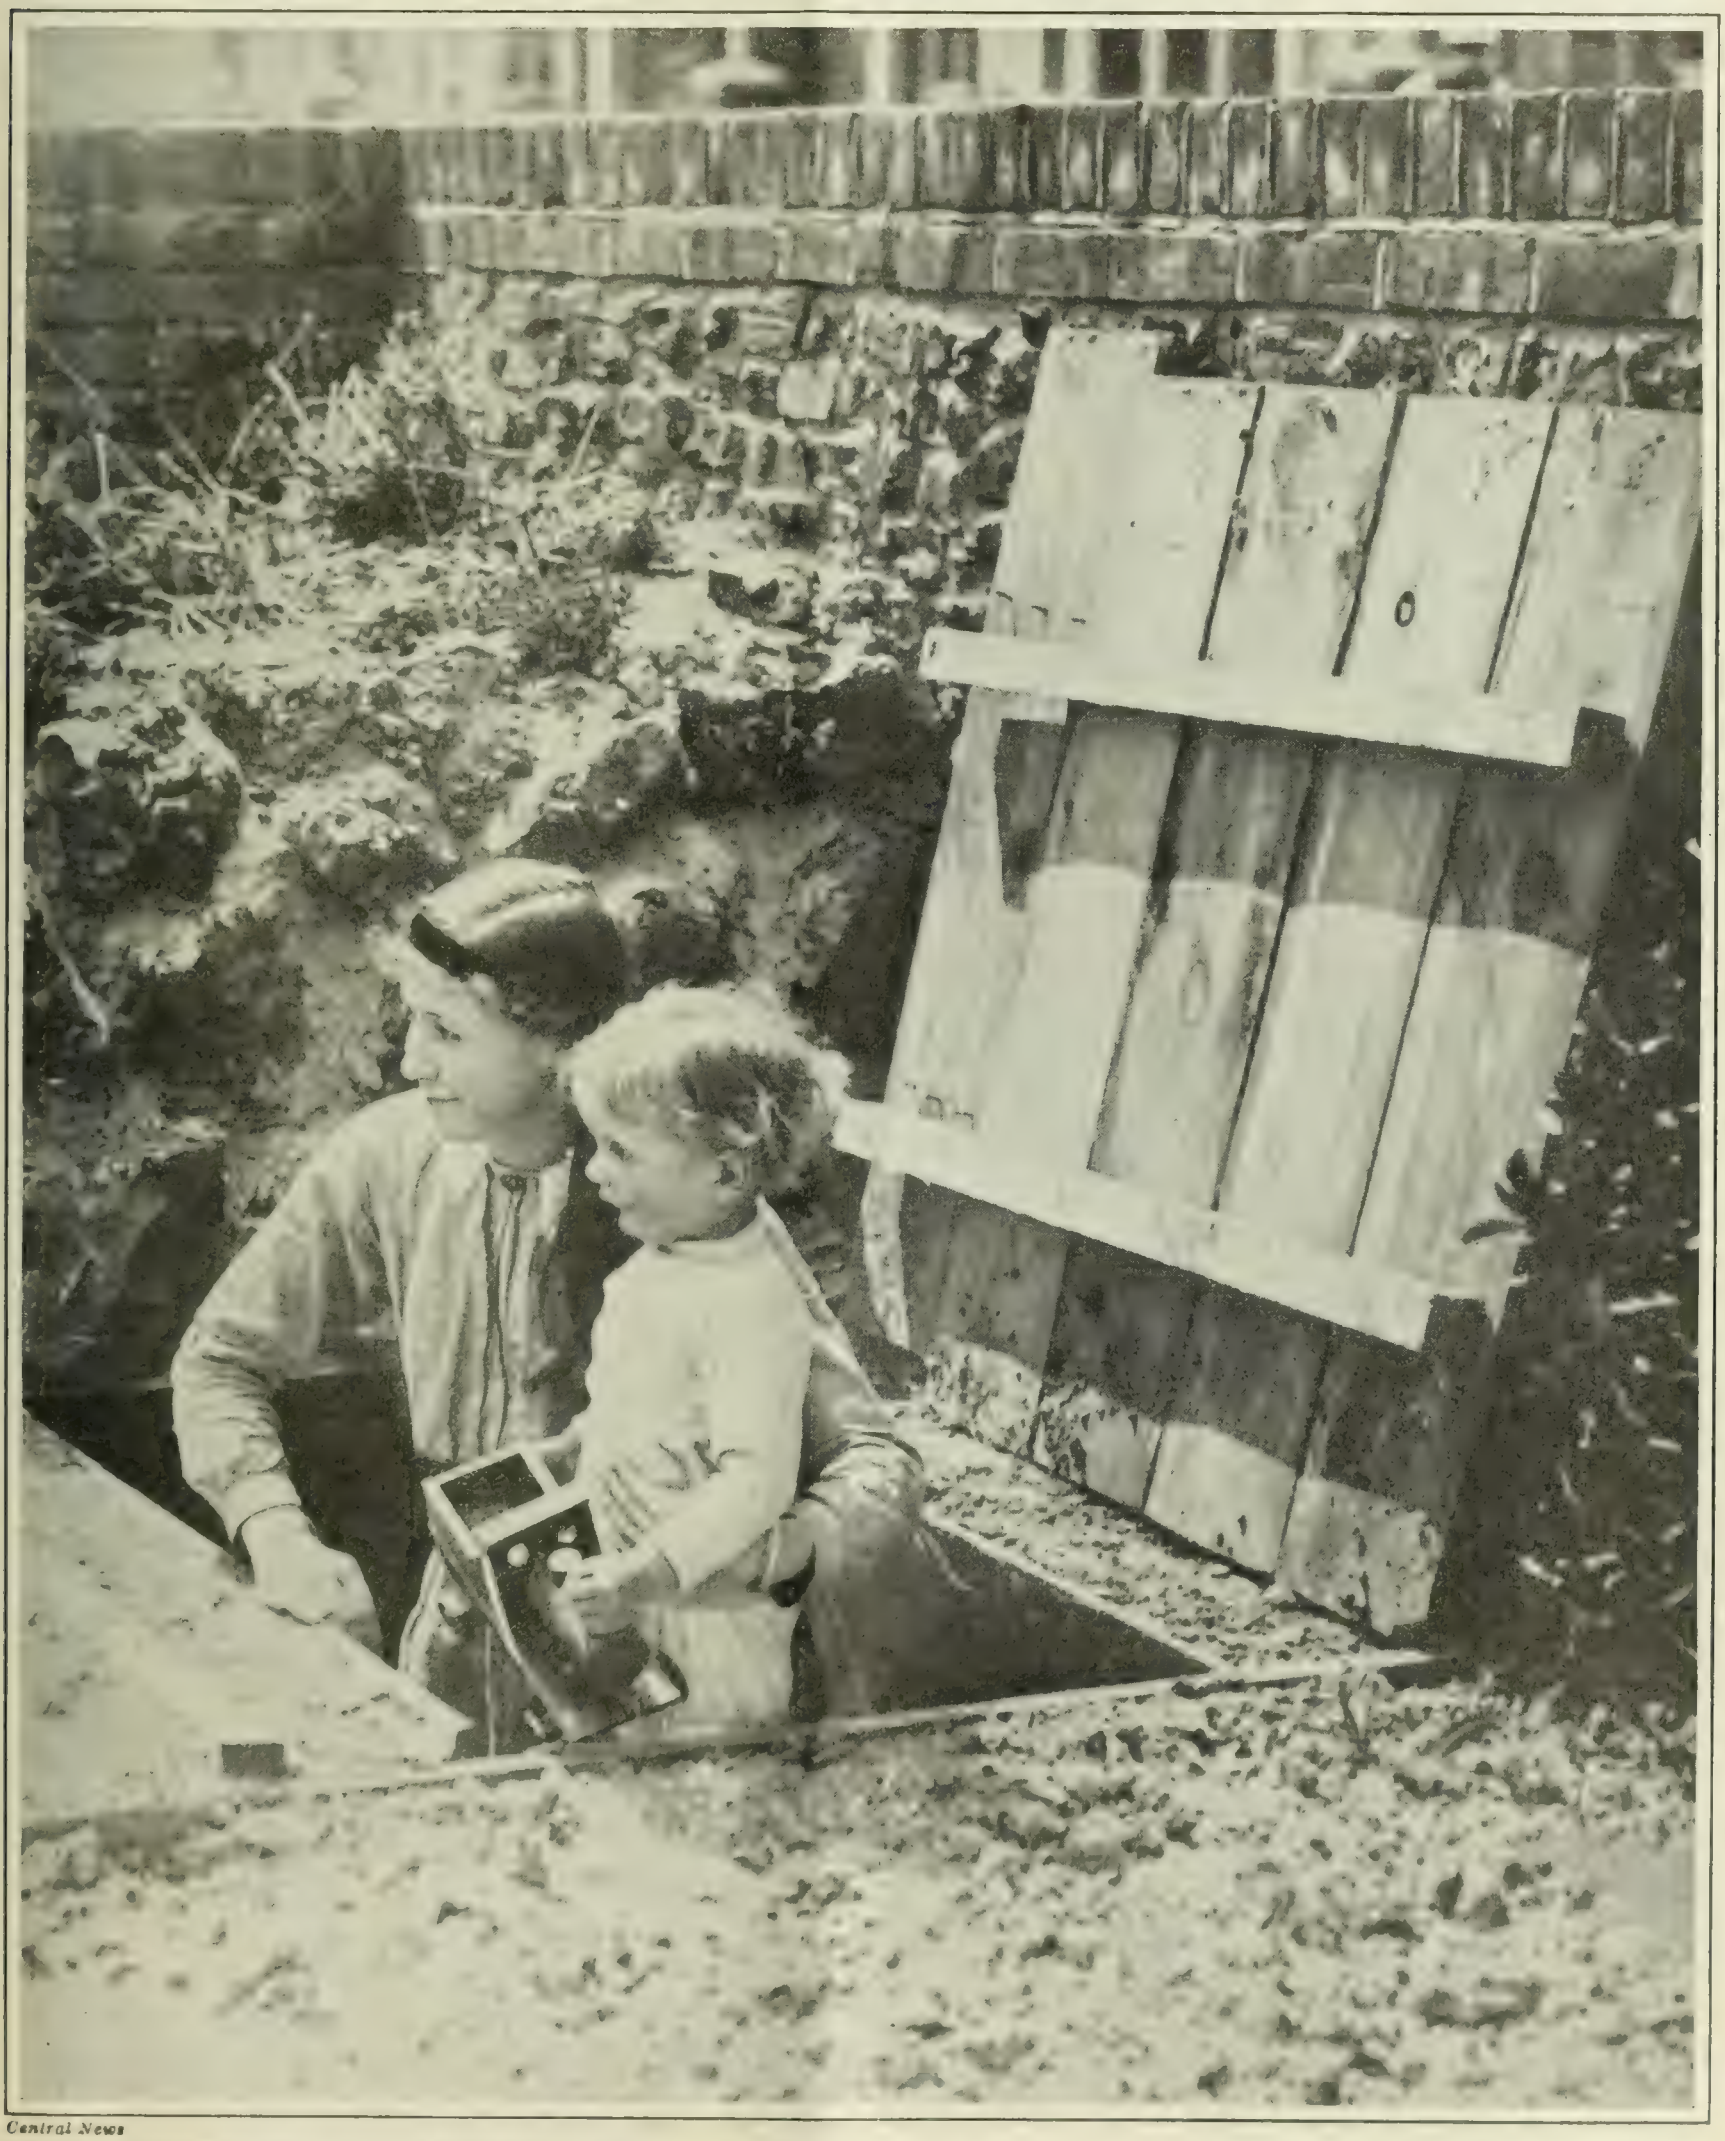
Almost every garden has its surplus of apples, pears, plums, cherries, peaches, berries, peppers, tomatoes, green peas, green corn, lima beans and string beans which could easily be saved. Carrots, cabbage, potatoes, onions, turnips and spinach are dried on a large scale in commercial factories, especially in Europe, and they may be found in the markets here. They would be more popular than they are if their merits were better known.

THE problem of preserving food by dehydration presents itself in three different aspects: drying by large commercial plants: drying by small plants, such as have long been employed for the evaporation of apples; and drying in the home, either with small machines purchased in the market or with home-made apparatus.

It is to be hoped that the Department of Agriculture or some of our experiment stations will soon issue a thoro discussion of drying in its domestic and commercial phases, with detailed instructions concerning processes, otherwise there is danger of discouragement thru unsuccessful experimentation. Moreover if amateur dryers should thru mistaken enthusiasm put on the market produce not up to the best standards of flavor and appearance and not properly safeguarded against worms and mould, the whole drying process might be discredited and the work for food conservation set back.

THE large commercial plant has been highly developed in Europe, and, before the outbreak of the war, 425 establishments were operating in Germany. In the last three years additional plants have been established wherever there was a surplus of perishable farm products to be preserved. In the United States there are four companies which manufacture and operate large dehydrating plants. They are: The Webster Products Company, 90 West street, New York City; the American Dehydrating Company, Waukesha, Wisconsin; the Dri-Fresh Company, Portland, Oregon; the Ever Fresh Company, Ogden, Utah. Some of these have several factories. A plant costs about $25,000 and utilizes the labor of from fifteen to seventy-five persons. The product is largely exported to Europe and South America and is used by the Allied armies. Except for potatoes and soup vegetables, the stock in the American market is practically exhausted for the season. These plants dry potatoes, carrots, turnips, spinach, string beans, tomatoes, onions, cabbage, soup vegetables, apples, peaches, raspberries and rhubarb. When soaked in water for periods varying according to the character of the product, they resume their natural form, and when boiled compare favorably with fresh fruits or vegetables. Manufacturers have put their product on the American market to a limited extent but the demand has so far been slight. The best American processes are superior to the German. Dehydration is accomplished partly by means of rarefied air at a comparatively low temperature. Thus the moisture is drawn from the plant without producing any chemical change in the tissues. Most of the foreign processes call for some cooking and drying at a high temperature, which impairs color, flavor and sometimes nutritive value. The best American product resumes its original form and color after it has reabsorbed the evaporated water. Favorable reports have been made by the Navy Department of tests with these fruits and vegetables.

The German Army ration includes 250 grams of dehydrated vegetables daily, and the Austrian, 140 grams. This food is called "herbswuerst" and consists of a mixture of dehydrated onions, carrots, potatoes, cabbage, spinach and beans. The congestion of shipping and the high prices of tin and glass suggest the desirability of the United States resorting to dehydration to supply its fighting forces with vegetables and fruit which will keep indefinitely and which have all the health-giving qualities of the fresh products. If this should be done the large dehydrating plants would have to be multiplied either by the Government or by private enterprize, but until a larger market is assured such plants are not likely to be built.



Small evaporators, suitable for installation in barns or storehouses, can be purchased at prices ranging from $75 to $650. The smallest one will dry from five to eight bushels a day and is six feet long. The largest will handle 150 bushels in twenty-four hours, and will occupy a one-story building or shed 20 by 26 feet. Such apparatus is suitable for commercial drying by individuals or communities where a steady supply of produce is available. Villages or groups of farmers who have fruit or vegetables that would otherwise be wasted might well combine for coöperative drying in this way. Doubtless many plants now used only for fruit in the early fall could be utilized for the preservation of vegetables in the summer. The development of dehydration along these lines must depend on the creation of a market which, wholesale grocers say, will surely come if war continues another year.

HOME drying, however, is subject to no such limitations. The country or village family with a surplus of garden truck has only to take counsel with itself to conserve the food that will make it largely independent of the canneries and steadily mounting prices. In just the measure that each family does this it conserves the nation's food supply. Just so far as we prevent the present garden waste, we relieve the drain on staple and canned goods which are needed to supply our own people and our allies in the war. The Department of Agriculture recently sent out descriptions of five different types of home-made driers. One is a mere tray covered with netting for sun drying. Boxes of trays are made to be heated on the kitchen stove or by alcohol or oil lamps. There are also boxes in which the evaporation is aided by fans run by electrical or other convenient power. In addition to the home-made apparatus, the Department calls attention to several types of manufactured driers suitable to the home kitchen. They come as low as $6. Some of the mail order houses carry driers in stock.

The war finds us behind in other preparations. The planting season is nearly over. The chance to increase crops this year is limited. But there is time to save all the crops that we grow. Immediate preparation for drying of all our surplus fruits and vegetables is a most important step toward food preparedness.

We look to these representatives of new Russia to straighten out some of the complications of Russia's present position. In the center of the group are Lieut. Gen. Koop (left), and Ambassador Boris Bakhmeticff, who heads the mission

TELL THE PEOPLE!

THE CHAUTAUQUA IDEA IN WAR WORK

THERE are one hundred million people in the United States. Perhaps one million of them, during the course of the next twelve months, will be found on the other side of the ocean fighting in the trenches on behalf of the other ninety-nine millions.

While one out of every hundred people is thus translating the national ideals into warfare, it becomes tremendously important that the other ninety-nine, many of whom are also hard at work somewhere in the national organization for war, shall understand exactly why he is there, just what they are called upon to do in coöperation with him, and precisely for what ideals the whole grim enterprize is pursued.

The work of enlightening these ninety-nine out of every hundred people—some of them children in years and some of them children in outlook—is being done of course by a multiplicity of agencies, among which the magazines and the newspapers play a big role, but in spite of the dominant influence of the printed page, the power of the platform is still so great a factor in shaping public opinion that this force, too, must be used for the spread of patriotic intelligence.

With the idea of enlisting and utilizing all these means of publicity in the work of getting into the mind of America the fundamental principles for which this war is being fought and those which must shape and direct our national life after peace comes as well, the National Security League at its conference in Washington last January completed a Committee on Patriotism Thru Education, for the stated purpose of "bringing to the American people a clear understanding of national problems and policies." Prof. Albert Bushnell Hart, of Harvard, is chairman of the committee which is carrying out this program. Associated with him are Henry J. Allen of the Wichita *Daily Beacon*, Wichita, Kansas; Arthur E. Bestor, president of Chautauqua Institution; Dr. Shailer Mathews, dean of the School of Religion at the University of Chicago; S. Stanwood Menken of the National Security League; Mrs. Philip North Moore of St. Louis, representing the National Council of Women; Thomas F. Moran of Purdue University; Calvin W. Rice of the American Society of Mechanical Engineers.

SINCE Chautauqua and the Chautauqua Idea have provided for millions of Americans the machinery thru which ideas are effectively presented, both thru the printed page and from the platform, to audiences ready and eager to receive them, it is natural enough that the immediate campaign of this committee centers in the Chautauqua Institution. During the week of the Fourth of July, two gatherings at Chautauqua will carry forward the broad plan. A conference of representatives of organizations engaged in education in patriotic service will hold its sessions on Monday, July 2, Tuesday, and Wednesday, the Fourth. Since most of the important universities and colleges of the country have already pledged their coöperation in the "campaign of patriotic education," this conference promises to be broadly representative and may be expected to react constructively on collegiate education.

During the whole week a speakers' training camp will also be held. From this camp it is expected that men who are effective on the platform before an audience will go out to carry thru a stumping tour of the whole country. Ready-made audiences of many thousands will be provided by the national and state conventions of numerous organizations. Over a thousand appeals for this sort of hospitality are being made and organizations representing a membership of ten million people have already promised their coöperation in assuring these volunteer speakers plenty of hearers.

FOR men who are going to stump a nation of such size, with national problems of such gravity, it becomes exceedingly important that the preliminary training shall be broad-minded and authoritative. It is interesting to notice, therefore, that the list of speakers at these conferences includes such names as those of Franklin K. Lane, Secretary of the Interior; Franklin D. Roosevelt, Assistant Secretary of the Navy; Dr. Franklin H. Martin of Chicago, chairman of the Medical Division of the Council of National Defense; Ida M. Tarbell, who will talk on "The Fear of Efficiency"; Mrs. Percy V. Pennybacker, for four years president of the General Federation of Women's Clubs, who will talk on "Women's Service in the War"; Senator James W. Wadsworth, Jr., of New York; Senator James Hamilton Lewis, of Illinois; George Creel, director of the Bureau of Public Information; Dr. Harry E. Fosdick, of Union Theological Seminary; Dr. Elmer B. Bryan, president of Colgate University; Mrs. George T. Guernsey, president-general of the Daughters of the American Revolution, and Professor Hart. What these men and women have to say in the way of general interpretation of our foreign policy and our domestic needs will be reinforced by organized study on the part of the speakers who are going to pass these ideas on to others.

The program of the camp announces that it will deal with the "meaning of the war and the means necessary for its conduct, together with a general understanding of the economic, industrial and international problems of this country during and after the war. In connection therewith, consideration will be given to governmental and individual efficiency." When this is applied in detail to the stump-speaking programs, the result is a series of interesting addresses which are intended to emphasize particularly four topics: First, the cause of our participation in the war; second, the importance of universal military and naval training; third, a description of modern warfare; fourth, personal and national efficiency in production, industry and government.

IN general this program, together with other plans under way, means that Chautauqua asserts once more its capacity and responsibility for national leadership and that the Institution assumes a definite function in relation to the whole intellectual mobilization and organization of the country.

Since its foundation in 1874 Chautauqua has been one of the most potent factors in the development of the national spirit. It has had a large part in making the public opinion which rules the country today. There will be no greater forum in the United States this summer for the discussion of problems now before the country, both in its domestic mobilization and in its relations to the world at large, than that which Chautauqua provides.

To those acquainted with the spirit of the Institution this position is of course axiomatic. Chautauqua would not be true to itself if it did not, in a time of crisis like this, come forth with some great contribution to the national undertaking. The educational institutions of the country, indeed, thru their personnel and organized machinery, are assuming a relation of utmost importance to the whole campaign of national awakening and preparation. No other one of them, perhaps, stands so close to the people as Chautauqua.

It has been announced that the Chautauqua program of the summer as a whole will be constructively patriotic in character. In the Schools all Red Cross courses will be offered; in the clubs and various organizations attention will be given to questions of food conservation, problems of mobilization, and all the manifold matters which are now engaging the attention of Americans everywhere. But this conference is the most important single demonstration of the part which Chautauqua is to play in patriotic education during the summer.

It is a big job to analyze the causes of our war and to suggest means which will effectively increase our national efficiency. The men who propose to devote themselves to this work will need all the help that Chautauqua hospitality, thru these conferences, is making accessible for them.

The parting gift—

A Vest Pocket Kodak.

It is monotony, not bullets that our soldier boys dread. No fear, when the time comes, they will uphold bravely the traditions that are dear to every loyal American heart. But in the training camps and during the months of forced inaction there are going to be some tedious, home-sick days—days the Kodak can make more cheerful.

Pictures of comrades and camp life, pictures of the thousand and one things that can be photographed without endangering any military secret will interest them, and will doubly interest the friends at home. Tens of thousands of brave lads in the camps and trenches of France are keeping their own Kodak story of the war—a story that will always be intense to them because it is *history* from their view-point. And when peace comes it will make more vivid, more real *their story of their war* as they tell it again and again to mother and sister and wife and little ones.

The nation has a big job on its hands. It's only a little part, perhaps, but a genuine part of that job to keep up the cheerfulness of camp life, to keep tight the bonds between camp and home. Pictures from home to the camp and from camp to the home can do their part.

There's room for a little Vest Pocket Kodak in every soldier's and sailor's kit. The expense is small, six dollars. The cheerfulness it may bring is great. They are on sale by Kodak dealers everywhere.

THE NEW BOOKS

THE CENTRAL EUROPE SCHEME

Readers of The Independent must have been surprized a few weeks ago when the Washington correspondents announced that our Government had recently discovered a German scheme for the consolidation of the lands lying between the Baltic and the Persian Gulf, surprized, we should say, not at the information but that anybody should consider it news, for they had been reading about it for the last ten years. But whether news or not it is undeniably one of the chief issues of the war and one in which America is deeply concerned if we may judge from the fact that President Wilson made it the theme of his message to Russia and of his Flag Day speech.

The most concrete and readable altho not necessarily the most authoritative and probable version of the plan is that given in Friedrich Naumann's *Mittel-Europa*. We discust this remarkable book and its author in our editorial of September 25, 1916, on "The New Era of Industrial Organization," and in our issue of March 5, 1917, we gave a map showing that the European-Asiatic combination had actually been effected under stress of war and a road broken thru from Antwerp to Bagdad. Now fortunately the work is accessible in English for Mr. Knopf has included it among his "Borzoi Books," and it should be read by all who want to see for themselves, rather than thru enemy glasses, just what Germany is striving for.

Two things strike the reader as he opens Pastor Naumann's volume. One is that tho written in the midst of war and dealing with the issues that caused the war it is entirely free from rancor, hatred and contempt. The second is that it treats the problem as an economic question and pays little attention to the political and dynastic difficulties involved. He believes that it is necessary for Germany and Austria-Hungary to form an industrial and commercial unit, a super-state, Central Europe, Mid-Europe or Centralia, whatever it may be called—if it ever comes into existence—lying between the Slavs and the Latins and connecting Europe and Asia. He does not say much about the minor states adjacent, Holland, Denmark, Switzerland, Greece, etc., altho we know it is the general German expectation that these countries will be, more or less willingly, drawn into the Central Europe trust. He also declines to look beyond the Dardanelles, so long as fighting troops are occupying the trenches at Gallipoli, altho we know that German ambitions extend as far as Bagdad and beyond.

But Germany cannot stand alone when all the other nations are forming larger combinations. A country of only 70,000,000 with no chance for expansion must become a "satellite nation" or enter into one of the great combinations. Naumann would prefer union with liberal England than with autocratic Russia, but rather than either he would have Germany form a combination of her own by joining with Austria and Hungary. He admires the English

method of administration where, as he says: monarchical, aristocratic and democratic contrivances are employed according to requirements and just as seems serviceable, as a ship is constructed according to requirements out of iron, wood, copper and canvas. The English elasticity consists in this: that what we call principles, it regards as working methods, an instructive, calm adaptability amongst its leading men, combined with an unshakable self-confidence.

This is his characterization of our own country:

The great American State works in yet another way. It is the most non-military great human organism that has ever existed. A business State in virtue of a detached geographical position and a popularly intelligible doctrine of democratic principles. Its strength lies in the truly rational division of competence between municipal, county, State and Federal governments. The concept of majority rule prevails everywhere as a matter of course, and justifies itself as State machinery on the whole in spite of all the troublesome accessories which must be taken with it as part of the bargain. For with an unconditional principle of majority rule the formation of a majority becomes a profitable business, and thus, according to our feeling, commercialism enters much too strongly into politics, makes parties into business undertakings and materializes the finest ideals. But the American can live politically even with these methods of his, for, as we have already said elsewhere, he has the voyage across the ocean behind him, is a modern utilitarian, and wants above all neat, transparent formulae. He is essentially lacking in political mysticism. His State gods too are excessively human. He will have no mysterious, moral, joint ego. His morality is private, not political. The State is a Clearing House for interests. He maintains the State by limiting the concept of State.

Summing up all three of the great world states he says, "the Russian is based mostly on coercion and the American on free-will; England stands between the two." But it is rash to write books nowadays. Russia now is not lacking in free will, and has perhaps too little coercion. America can no longer be called non-military and it has more coercion than any of us like. And Austria-Hungary, under its new ruler, seems more inclined to split up into minor nationalities than to emerge into a super-state.

But let Herr Naumann state his own case:

Before the organization of humanity, the "United States of the World," can come into existence, there will probably be a very long period during which groups of humanity, reaching beyond the dimensions of a nation, will struggle to direct the fates of mankind and to secure the product of its labor. Mid-Europe comes forward as one such group, and that indeed a small one: vigorous but lean!

Sovereignty, which formerly was a possession widespread amongst the nations of the earth, concentrates itself more markedly as time goes on in but a few places. There only remain a limited number of central points amongst mankind where government is really exercized: London, New York, Moscow (or Petersburg) stand firm. It is still doubtful whether or no an East Asiatic world-center will grow up in Japan or China. It is at least very questionable whether or no India or Africa will ever produce such a central point of the first importance. The same thing applies to South America. The future significance for mankind of any East Asiatic and South American centers that may possibly arise is not, however, at present a question of practical politics for general history. But, on the other hand, the question whether or no a separate center in Mid-Europe can maintain itself between Russia and England is even now being fought out with all the energies of Europe and with endless bloodshed. The human group Mid-Europe is playing for its position in the world. If we lose the fight we shall probably be condemned for ever to be a satellite nation. If we are half victorious, then we shall be obliged to fight again later. If we win a lasting victory we shall lighten the task for our children and grandchildren, for then Mid-Europe will be entered in the Domesday Book of the coming centuries. . . .

Round about the satellite States there still exists a certain mass of unorganized national material, which has either not hitherto desired inclusion, or for some reason or other has not arrived at it; asteroids or comets, which for the most part call themselves neutral because they belong to no sun. In their way they are a very old political family, much older than the conquering super-national syndicate States, for they represent the old small middle class in the family of nations. But at some time or other each of them will be swept away into the satellite relationship, for it seems imposible that an

Trade Mark  Adopted 1916

$10. THRIFT BONDS

A convenient and simple system for the promotion of Thrift; fully matured after five years of careful and conservative investigation of the small investment field.

Thrift Bonds are distributed through employers and merchants; the number of stores that sell them is increasing daily.

Thrift Bonds are 3% certificates of ownership in Governmental obligations held by the Equitable Trust Company of New York as Trustee.

They are absolutely safe.

Thrift Bonds will be accepted at par in exchange for Bonds of the Liberty Loan, when issued, with no charge to holders except transportation, premium and accrued interest, if any, at the date of the exchange.

Correspondence with Banks, Employers and Merchants is especially invited.

It cannot explode.

15c 25c 50c $1.
At all druggists.

Shoes made with "F. B. & C." white, bronze and fancy colored kids are cleaned with Carbona Cleaning Fluid.

ancient small Power should endure uninjured through the centuries in the midst of a world of concentrated Great Sovereignties of immense bulk.

To the formation of this fourth World State Mid-Europe, and to the making of it livable, Naumann calls all of the factors that have made Germany great, her scientists and philosophers, her captains of industry and organized workingmen, her religious and political leaders, her artists and agriculturists, her Kants and Krupps, her Bismarcks, Bebels and Ballins.

Such a world state as he depicts would not be a world menace but—Herr Naumann is not the Kaiser and *Das grössere Mitteleuropa* as worked out by the Pan-Germanists would bear little resemblance to the Utopian vision of the Lutheran divine and liberal-minded socialist.

Central Europe, by Friedrich Naumann. A. A. Knopf. $3.

STORY BOOKS

If Wishes Were Horses, by Countess Barcynska, is a story of a self-made man who is a reproach to his maker, one of the sinners who never get caught and punished, one of the "men higher up. (E. P. Dutton & Co., $1.50.)

Eleanor Hallowell Abbott has written an entertaining little narrative called *The Stingy Receiver*, which describes a rich woman who has made a life work of giving and is disappointed because the recipients have never told her of their pleasure in any generous, spontaneous way. (The Century Company, $1.)

Hamlin Garland's collection of Wild West stories, *They of the High Trails*, recommended by Colonel Roosevelt, gives us a series of interesting narratives of grub stakers, gold diggers, cowboys and outlaws. And it may be said of the book that careful twentieth century children may safely recommend it to their parents! (Harper and Brothers, $1.35.)

Why did Muriel Hine write *Autumn?* I do not know. It has to do with several charming people who seem unable, either by sin or by virtue, to solve their problems practically, ethically or sentimentally. Puppets of circumstance are they, whose perfervid loves play havoc with them. One wishes that they were all set to earning their living! (John Lane Company, $1.40.)

Greater Than the Greatest, by Hamilton Drummond, is a harmless romance of the thirteenth century, describing the conflict between Frederick, Emperor of Sicily and Pope Gregory IX. The book has to do with a great problem—the problem of the relations between church and state, but it lacks imaginative power, and so makes no deep impression. (E. P. Dutton & Co., $1.50.)

Constance Skinner, the poet of Indian life, has written a novel entitled *Good Morning Rosamond!* which has to do with a young widow's emergence from the spiritual bondage in which she has been kept by the two maids, old retainers in the home of her husband. The book is farce comedy in novel form preserving the classic unities, "one time, one place, one action." (Doubleday, Page & Co., $1.35.)

Vesprie Towers is an exceedingly sentimental novel by Theodore Watts-Dunton. The great estate of an old English family, a marvelous topaz, a beautiful maiden, Violet Vesprie—note the name—and a rainbow are involved in a maze of mortgages, kissing games, London boarding houses and ancient superstitions, from which the maiden finally emerges with a young man—the "Vesprie Luck." (John Lane Company, $1.35.)

Jan and Her Job, by L. Allen Harker, is an excellent story of the solution of a grave family problem by a strong, sound, lovable woman. Several big-hearted, fine-fibred men, several interesting and charming women and two irresistible children are white lights of personality that make the one necessary and successful cad of a villain seem like a dark spot on the sun. (Charles Scribner's Sons, $1.50.)

SPEND YOUR VACATION

4,000 Feet Above the Sea

At Virginia's Most Celebrated Mountain Resort

Skyland, on Famous Stony Man Mountain

Always cool. No mosquitoes; 500 testimonials; 15 acres of vegetables, herd of tuberculin-tested cows, lambs, mutton, chickens and eggs from Skyland's mountain farms.

Dancing, Tennis, Fine Orchestra, Magnificent Scenery. Fifty open wood fireplaces.

A special feature at Skyland is the livery stable of saddle horses. Radiating from Skyland and connecting the neighboring peaks, canyons and mountain streams are numerous well-graded trails, affording opportunities to ride under conditions which can be found nowhere else east of California.

(25 cents per share), upon the Capital stock of the Company, payable July 31, 1917, to stockholders of record at the close of business June 30, 1917.

H. F. BAETZ, Treasurer.

New York, June 20, 1917.

What to Read about Choruses, Pageants, Plays

The picturesque success of the Macdougal Alley festa in New York, recently, reminds us that after all there is going to be plenty of time for much beside drilling, weeding and knitting. Singing and acting are as great fun as ever, and will be worth while, whether to raise money for the Red Cross, foster community spirit, or entertain a group of young folks—and their elders.

Music and Life, by T. W. Surrette. (Houghton, Mifflin, Boston, $1.25.) How to get people to sing, and why, are questions discussed by Professor Surrette, who is one of the most enthusiastic and successful leaders in the community music movement.

Community Drama and Pageantry, by M. P. Beegle and J. R. Crawford. (Yale University Press, New Haven, $2.50.) Much experience in staging plays and pageants make these authors authorities. They give clear and full advice on setting, rehearsals, costumes, color, and especially on the dance. A most valuable work.

Costumes and Scenery for Amateurs, by C. D. Mackay. (Holt, New York, $1.75.) Very simple and economical are these plans for play setting. There are most helpful descriptions of costumes typical of countries and periods, and conventional stage scenery.

How to Produce Amateur Plays, by Barrett H. Clark. (Little, Brown, Boston, $1.50.) An uncommon amount of space in this practical book is devoted to a discussion of just the best way to train the actors and carry on the rehearsals.

How to Produce Children's Plays, by C. D. Mackay. (Holt, New York, $1.20.) Of value to all those choosing plays and training children for amateur performances. There is a chapter on the "child-audience" and lists of suitable plays for outdoor and indoor settings.

Fairy Operettas, by Laura E. Richards. (Little, Brown, Boston, $1.) Very ingenious arrangements of little plays. The words are set to popular airs, so that with some one to play the well known tunes any group of youngsters can readily work up the dramas.

St. Nicholas Book of Plays and Operettas, first and second series. (Century, New York, $1 each.) These plays appeared originally in St. Nicholas. They are printed with the music for the songs and with stage and costume directions.

PAMPHLETS. *Plays for Audiences.* (Drama League of Boston, 101 Tremont street, Boston, 25 cents.) *Plays for Amateurs*, arranged by J. M. Clapp. (Drama League of America, 140 South Dearborn street, Chicago, 25 cents.)

ARTICLES. *Century*, July, 1915 (Little Country Theater). *Country Life*, March, 1915 (Garden Theaters. *New Republic*, June, 1915 (Open Air Performances). *Woman's Home Companion*, December, 1916 (Play Producing for Amateurs). *Atlantic*, May 1916 (Community Music). *Annals of American Academy*, September, 1916 (Spread of Community Music Idea.) *North American*, July, 1916 (Pilgrimage to Quietude, the Norfolk Musical Festival). *Review of Reviews*, September, 1916 (Drama for Rural Communities). *Good Housekeeping*, March, 1917 (Making Believe—Children's Educational Theater.)

Help Save the Nation's Food

on the economical, time-tried

"Granger" EVAPORATOR

The most practical evaporator for domestic use.

Every year in the city and on the farm thousands of dollars worth of foodstuffs go to waste. This year your country demands economy of you. See to it that all you cannot use now is saved for the future. Eliminate the fuss, worry and expense of other methods—EVAPORATE.

No Sugar, No Jars, No Cans

Use a "Granger"—the biggest little Evaporator made. Twenty thousand satisfied customers can testify to its service. "Granger" evaporated fruits and vegetables are delicious; retain all the natural flavor much better than canned goods. Many city, as well as country, housewives this year will use this simple and satisfactory method of practicing economy for Uncle Sam.

Granger Evaporated vegetables are most wholesome and are easily prepared for serving. Evaporated fruits make the most wonderful desserts, cakes and pies. And remember this method is the simplest and most economical for everyone. Get your "Granger" today. Save the surplus from your garden or buy fruits and vegetables when they're cheap and evaporate them.

Works equally well in the kitchen or the orchard, on coal, gas or oil stove, cannot burn the food and requires no watching. Made in two convenient sizes. Popular prices that anyone can afford. Ask for the "Granger" at your favorite store—if they cannot furnish—write direct.

18"x 26" 1 to 2 bus. capacity, $6
24"x 36" 2 to 4 bus. capacity, $12

WAR WITHOUT TAX

on Food, Labor or Industry

Will you think or pay? The Nation creates all land values—justice demands their use for National Defense—not for private gain. Tax on land values alone with no other taxes whatever will provide entire annual national budget—even five billion dollars. Will force idle land into use. Increase crops. Stimulate industry. Reduce taxes for 95% of the people. Will not raise prices or reduce production.

Booklet free. NATIONAL SINGLE TAX LEAGUE, Cincinnati. Dept. K

Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence, removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—$10.00, $12.00 and $15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

NATIONAL EFFICIENCY
CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

HOW THE COLLEGES ARE DOING THEIR BIT

IN the aggregate college efforts represent a very substantial contribution to the national cause as will be seen from the brief descriptions here printed. For reason of space it is only possible to include a small proportion of the hundreds of universities and colleges, but the examples given show how quickly and with what admirable adaptability our educational institutions have remodeled their work to meet the country's need.

Atlanta University, Atlanta, Ga. Has offered its buildings and grounds to the Government. Fifty students and two professors have volunteered for the negro training camp.

Boston University, Boston, Mass. Has sent an ambulance to France. Established a farm unit at Sharon, Mass., College of Business Administration, provides free instruction for those women who need preparation to take the places of men giving up clerical and secretarial positions.

Bryn Mawr College, Bryn Mawr, Pa. Courses in special training in Red Cross work, in civilian relief, in business office work, in accounting and business methods, and in motor repairing. The students have planted a twenty acre farm—five acres in potatoes, five acres in sweet corn, ten acres of general garden truck.

Carnegie Institute of Technology, Pittsburgh, Pa. Has plans for special courses in shop and laboratory work, in connection with military drill.

The College of the City of New York, New York City. New courses in engineering—telegraphy, telephony, radio engineering, surveying, topographical drawing—all stressed with reference to military science. In the eight weeks' summer session, there will be special courses for nurses and ambulance drivers.

Columbia University, New York City. In the extension courses instruction has been given in many lines of military and naval service—trench warfare, map reading, map making, radio telegraphy, camp sanitation, practical navigation and electrical naval auxiliaries. In general service, vegetable gardening, food conservation, economical home cooking, food preservation, emergency cooking, dressmaking, knitting, home nursing, care of children, first aid. All these with added courses giving women instruction in banking and other business affairs will be renewed early in July.

Hampton Normal and Agricultural Institute, Hampton, Va. Coöperates with the white and negro citizens of Virginia's Lower Peninsula in plans for home defense and preparedness. The Virginia Agricultural Council of Safety has secured thru Hampton the active coöperation of 350,000 Virginia negroes in carrying out its state-wide plans for increasing and conserving the food supplies. Thru a Hampton graduate, some fifty agents are teaching girls and women how to grow and how to can fruits and vegetables. The Institute has published "Garden Hints" for general distribution thruout the South.

University of Kansas, Lawrence, Kansas. The University Extension Division offers lectures, conferences and demonstrations to community institutes, on all items of home economics, surveys for resources and abilities for Red Cross or military service, for agricultural and preserving work.

University of Illinois, Urbana, Ill. An extra military instruction course has been elected by 400 students. One hundred and fifty women students have elected the hospital service course. The College of Commerce has at the request of the Government established courses in military store keeping, ordnance work, and the work of the Quartermaster's Corps. An aviation school, a course in city planning and a course in training for bandmasters are among other activities.

Indiana University, Bloomington, Ind. Among suggested services are, instruction applying to war conditions in many lines, including agriculture, food preservation, army cooking, dinner-getting classes with store and factory girls, special institutes thruout the state, and extension work with housewives. A League of American Citizenship has been organized in the city of Bloomington.

Iowa State College of Agriculture, Ames, Iowa. Issues a large number of notably valuable pamphlets on practical matters, as "Corn and Its Uses," "Household Conservation of Food—Textiles—Health—Home Management," "Care and Feeding of Chicks," "Home Preservation of Eggs," "Emergency Meals at Low Cost," "Uses of Sour Milk," "Leftover Foods."

Massachusetts Institute of Technology, Boston, Mass. The faculty has established an extensive course in naval architecture, and at the request of the Government, a school of aeronautics. By a questionnaire, the Institute has assembled information about the technological training and experience of the alumni. Every student has a year of military science and drill under supervision of a U. S. A. officer.

Mechanics Institute, Rochester, N. Y. In the extension courses, household arts, Red Cross work, domestic science and automobile instruction are included.

Michigan Agricultural College, East Lansing, Mich. In addition to coöperation in its extension division with the War Preparedness Committee of the State of Michigan, additional courses emphasize the importance of vegetable and fruit preservation and canning. The senior girls will be fitted to go out as teachers of the latest and most practical methods.

University of Michigan, Ann Arbor, Mich. The members of the faculty will carry on an educational campaign during the summer and fall, to arouse people to the needs of the national situation. In coöperation with the State Agricultural College, they are working for the conservation of potato and other crops. In the extension service special courses are given in road making, electrical lighting and wiring, visual signalling, pathology and bacteriology with special consideration of the new diseases and infections incident to modern methods of warfare.

University of Missouri, Columbia, Mo. The extension service has new bulletins on the farm kitchen, canning in glass by the cold pack method, feeding the baby, feeding the children, and many other subjects. dealing in a practical way with problems especially affecting those who stay at home.

Northwestern University, Chicago, Ill. Infantry drill and tactics, daily, for some three hundred men, many of whom are now in the Officers' Reserve Corps camp at Fort Sheridan. A hospital unit was organized, which has recently gone into service with a personnel of 200 to 250 people. An American Red Cross Ambulance (employing 91 persons who have had regular drill under an army officer) is about to report for immediate service. A group of 21 students has crost the ocean and are now at work under Y. M. C. A. directions, in army training camps and prison camps of Europe. The young women students have attended classes in first aid, home nursing, knitting, sewing, and gardening.

Ohio State University, Columbus, Ohio. Coöperating with the Ohio branch of The National Council of Defense, many men from the university have been active in forming plans to make Ohio produce the greatest amount possible of agricultural products. The census of all girls in the university has been taken, with classification of their abilities. Ten senior girls will lecture on canning thruout the state this summer. Over 100 canning groups have been organized. An aviation [illegible] has been established on the campus.

University of Pennsylvania, Philadelphia, Pa. In the Summer School there will be a course in first aid. In the Dental School, training to fit dentists for the army is offered, and in the Wharton School, a course on the Quartermaster's Department has been established—all being open to regular students, and students specially admitted.

Smith College, Northampton, Mass. In the new term there will be coöperation among the Departments of Botany, Chemistry and Zoology, in giving a course in hospital laboratory technic, designed to provide the practical training necessary for assistance to physicians in war hospital laboratories.

Stevens Institute of Technology, Hoboken, N. J. The entire student body has been under military drill. Commencement was advanced to permit students to go to various camps.

Syracuse University, Syracuse, N. Y. The Summer School from July 9 to August 17 has many useful courses, including home nursing, first aid, physical education and studies which enable women to take the places of men.

Teachers College, Columbia University, New York. Many valuable pamphlets have been issued dealing with economical cooking, selection of inexpensive food, recipes for the use of corn meal, and the whole matter of simple dietetics, with the planning of nutritious and wholesome meals at low cost.

Tuskegee Normal and Industrial Institute, Tuskegee, Ala. In addition to influencing an increase of truck growing among its graduates and the communities in which they live, the school has increased its own acreage of food crops, allowing a great deal of land to be used by neighboring farmers, free of rent.

Utah Agricultural College, Logan, Utah. To better serve the present agricultural crisis, the three-term system was adopted, which enables the entire curriculum to be opened to the farmer boy. The National Preparedness Train has been conducted in coöperation with universities in neighboring states.

University of Wisconsin, Madison, Wis. Thru the Extension Division, practical garden and home economics information has been distributed thruout the state. The division is ready, by means of practical demonstrations, advice and conference, to be of service in any community thruout the state.

Yale University, New Haven, Conn. There is a well organized Reserve Officers' Training Corps. It is expected that a similar course for training junior officers for the navy and merchant marine will be opened soon.
